Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet at vacuum cylinder, and hydraulic lines at master cylinder. Disconnect pushrod from pedal and wires from stop light switch. Remove nuts from U-bolt retaining pedal pivot bracket to steering column and remove pedal and bracket (with stop light switch assembly attached). Remove clutch pedal and steering column seals at floorboard. On Hydra-Matic cars, remove screws retaining power brake unit to floor pan and remove mounting plate with power unit attached. On Synchro-mesh cars, remove screws retaining power unit to mounting plate (power unit will rest on frame) Remove screws attaching mounting plate to floor pan and remove mounting plate, "jockeying" it as necessary to clear clutch pedal. Remove power unit. *CAUTION*—Do not carry or support brake unit by pushrod as pushrod may be pulled out of cylinder.

MISC. MECHANICAL

Windshield Wiper: Vacuum or electric type.
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: Harrison. *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See 'Power Top Controls" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motors in each window. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Six-way electric type. Fore & Aft, Up & Down, and Tilting movement provided through three switches and two motors. *See "Power Seat Adjusters" in Miscellaneous Section.*

► *"TRIPLE CARBURETOR" & "EXTRA HORSEPOWER" ENGINE NOTE:* Specifications for special equipment used on these engines (Carburetors, Distributors, Camshaft, etc.) are included in data below.

MODEL IDENTIFICATION

Model	Model Designation
Chieftain	57-27
Super Chief	57-27
Star Chief ①	57-27
Star Chief	57-28

① - 2-Seat Station Wagons only (2 Dr. & 4 Dr.).

SERIAL & ENGINE NUMBER: Numbers are the same. Located on left front hinge pillar post and on machined pad on front of R.H. Cyl. bank. *NOTE* - Production Engine No. located on front of block near R.H. edge of timing chain cover, for factory usage.

► *ENGINE COMPRESSION RATIO NOTE:* Compression ratio indicated by mark stamped on Serial No. pad as follows: "L" in circle - 8.5-1. No mark 10-1.

► *SERIAL NUMBER NOTE:* Engine and serial number (Example P757H 1001) includes following identification data in sequence:

Assembly Plant	Model ①	Model Year	Trans. Type ②	Serial No.
See below	7	57	H	1001

① - **7** - (27 Series). **8** - (28 Series).
② - **H** - (Hydra-Matic). **S** - (Synchro-mesh).

Assembly Plant Designations

P - Pontiac	**K** - Kansas City
C - South Gate	**L** - Linden
W - Wilmington	**A** - Atlanta
F - Framingham	**T** - Arlington

TUNE-UP

COMPRESSION PRESSURE: (8.5-1 Hd.) 140-150 lbs., (10.0-1 Hd.) 155-165 lbs. at cranking speed of 155-165 RPM. Lowest cylinder must not be less than 80% of highest cylinder.

VALVE TAPPET CLEARANCE: All Engines with Hydraulic Lifters - None in service.
Extra HP. Engine with Mechanical Lifters - .018" COLD, All Valves.

MANIFOLD HEAT CONTROL: Thermostatic coil type in right hand exhaust manifold outlet. Valve must operate freely.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAPS: .035" (.033-.038").
Spark Plugs - AC No. 45 Std. (AC No. 44 Extra HP Engines). 14 mm. Torque to 25 ft. lbs.

COIL: Delco-Remy 1115087 (Std.), 1115099 (Extra HP Engines with Synchro-mesh Trans.).
Ignition Current - (1115087) 1.2 amps. idling, 3.5 amps. stopped; (1115099) 1.8 amps. idling, 4 amps. stopped.
Resistor - Delco-Remy (1115087 Coil) 1935134, 1.40-1.62 Ohms. (1115099 Coil) 1931385, .27-.29 Ohms.

► *COIL RESISTOR NOTE:* Resistor is connected in lead between ignition switch and coil. Resistor is by-passed during cranking by second lead from ignition switch to coil side of resistor.

DISTRIBUTOR: Delco-Remy.

Application	Delco-Remy No.
Std. Engine	1110871
Triple Carb. Eng.	1110871
Extra HP Eng. (Hydra-Matic)	1110871
Extra HP Eng. (Synchro-mesh)(Early)	1110888
Extra HP Eng. (Synchro-mesh)(Later)	1110897
Fuel Injection Eng.	1110894

► *DISTRIBUTOR NOTE: Different types used as follows:*
Models 1110871 & 1110894 - External adjustment "window" type.
See "Delco-Remy Window Distributor" in Electrical Section.
Models 1110888 & 1110897 - Double breaker type with conventional distributor cap (not window type). Vacuum spark control not used (centrifugal weight advance only).
Condenser - Delco-Remy 1932004 (All Distributors).
Capacity - .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988 (1110871 & 1110894 Distr.), No. 1918148 (1110888 & 1110897 Distr., Two used.).
Breaker Gap (1110871 & 1110894) - *NOTE* - When cam angle correctly set (see below), breaker gap will be correct (.016").
Breaker Gap (1110888 & 1110897) - .014-.018".
Cam Angle (1110871 & 1110894) - 28-32°. Set to 30°.

► *BREAKER GAP AND CAM ANGLE NOTE:* Setting cam angle at 30° will provide .016" breaker gap.
Cam Angle (1110888 & 1110897) - Adjust each set of points to 29°±1° with other set of points blocked open with .025" thick insulator. Cam angle for both sets of points operating together will be 34°± 1°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance (1110871 & 1110894)

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
7.5-9.5	1000	15-19	2000
12-14	2125	24-28	4250

Automatic Advance (1110888)

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	500	0-4	1000
5-7	1000	10-14	2000
6-8	1325	12-16	2650

Automatic Advance (1110897)

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.5	525	1-5	1050
7-9	1050	14-18	2100
8-10	1400	16-20	2800
9-11	1800	18-22	3600

Vacuum Spark Control: Delco-Remy 1116126 (1110871 & 1110894). *NOTE* - No vacuum control used on 1110888 or 1110897.

Vacuum Advance (1110871 & 1110894)

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6-8
10-12	20-24	14-15¾

IGNITION TIMING

► *TRIPLE CARBURETOR & EXTRA HP ENGINE HARMONIC BALANCER NOTE:* These cars **and early production air conditioned cars with standard engine** have three timing marks on harmonic balancer as follows: 10° BTDC, 6° BTDC and TDC.

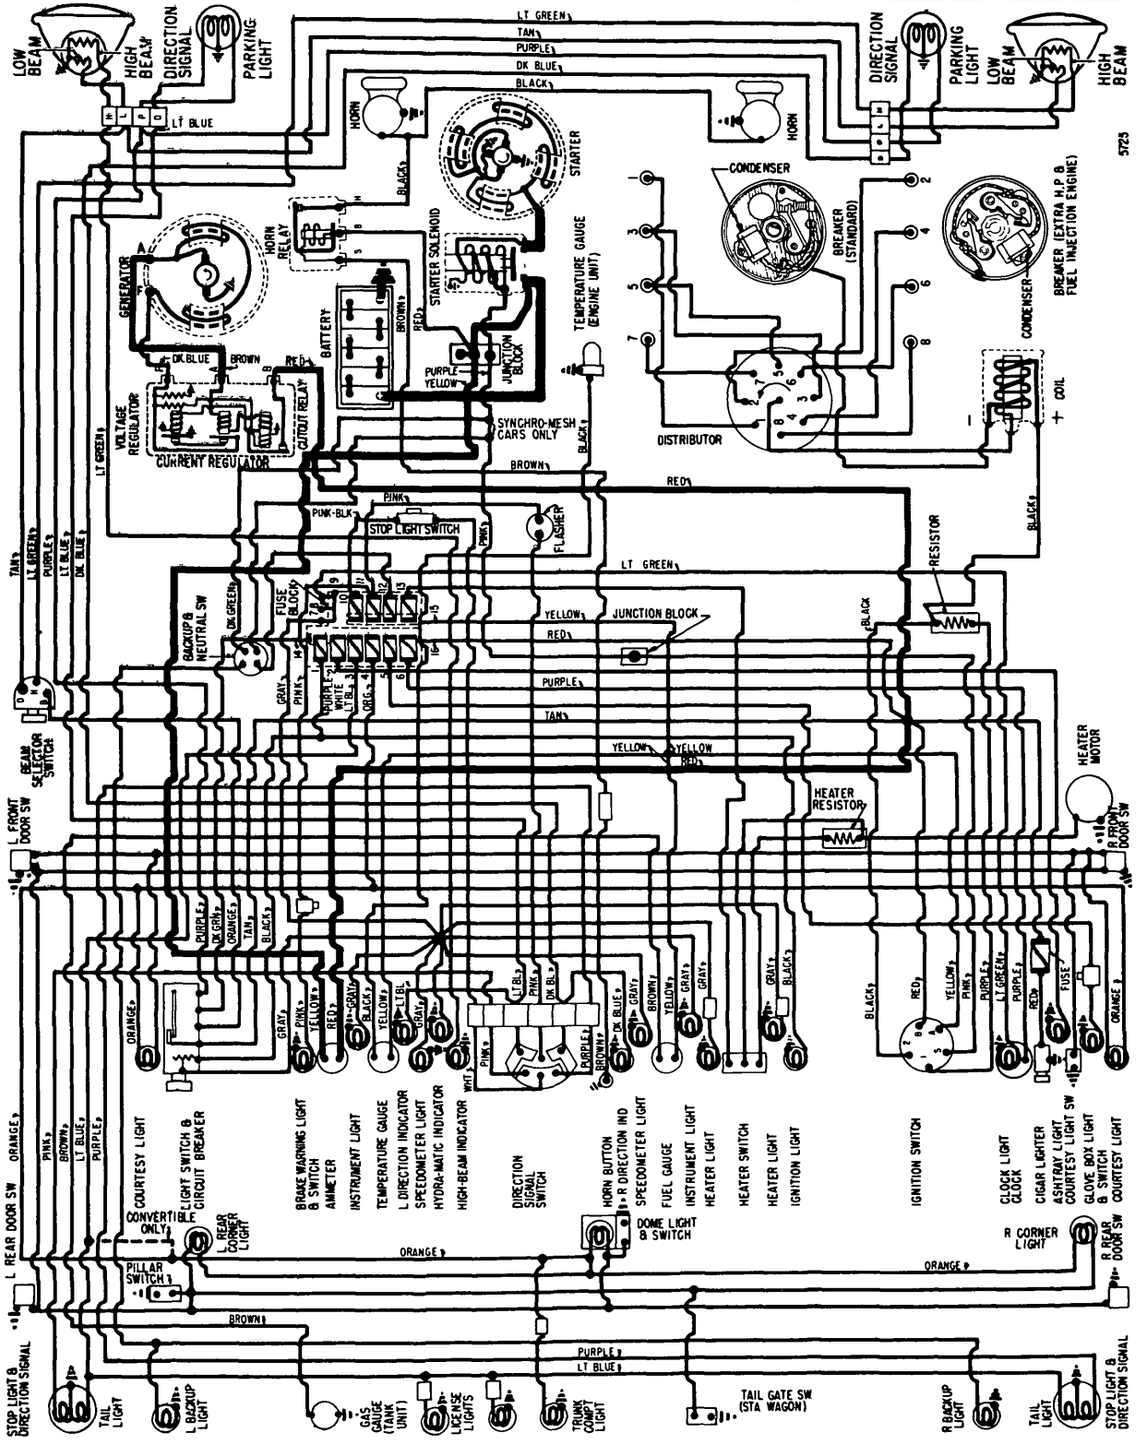
Engine	Std. Ign. Setting
Std. Eng. (Std. & A.C.)	6° BTDC at 430-450 RPM
Triple Carb. Eng. ①	6° BTDC at 430-450 RPM
Extra HP Engine ②	10° BTDC at 630-670 RPM

① - Hydra-Matic Drive Cars.
② - Synchro-mesh Cars only. (Hydra-Matic same as Triple Carb. Engine).

► *TIMING CAUTION:* Set timing with engine at operating temperature and idling at indicated RPM **with vacuum line disconnected.**
Timing Marks (All Std. Engines & All Late Production Std. Engines with Air Conditioning) - Two marks on harmonic balancer, TDC and 6° BTDC. Pointer on timing sprocket cover aligned with correct mark on harmonic balancer.
Timing Marks (All Triple Carb. and Extra HP Engines and Early Production Std. Engines with Air Conditioning) - Three marks on harmonic balancer, TDC, 6° BTDC and 10° BTDC. Pointer on timing sprocket cover aligned with correct mark on harmonic balancer.

CARBURETOR

► *CARBURETOR APPLICATION: Used as follows:*



Model	Carb. Type
Chieftain	Rochester 2-Barrel
Super & Star Chief	Carter or Rochester 4-Barrel
Triple Carb. Option	Three Rochester 2-Barrel
Extra HP Engines	Three Rochester 2-Barrel
Special	Rochester Fuel Injection

► *AIR CLEANER NOTE: Replaceable Paper Element type used with Triple Carburetor Option and Extra Horsepower models. See AIR CLEANER below.*

► *FLOODING CORRECTION NOTE (ALL CARBS.): See individual carburetor stories in Carburetion Section.*

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC DRIVE CARS): With engine and transmission at normal operating temperature, idle speed correctly set *(see carburetors below)*, and transmission selector lever in "N" (Neutral) or "P" (Park), proceed as follows: Loosen both nuts on throttle control transmission rod trunnion. Stop engine and install Linkage Adjusting Pin J-2544 through holes in throttle control lever and bracket. With idle adjusting screw seated against its stop, adjust length of carburetor throttle rod at trunnion so gauge pin is free in hole. Tighten locknuts and recheck freeness of gauge pin. Push throttle control transmission rod down until throttle control outer lever touches end of travel. *CAUTION - Top locknut must not touch trunnion.* Hold throttle control transmission rod and tighten upper and lower trunnion locknuts. Shorten throttle control transmission rod by backing off trunnion rear nut two full turns. Tighten front locknut and remove gauge pin. Loosen locknut on throttle control intermediate rod trunnion and adjust intermediate rod to allow ¼" clearance

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

between accelerator pedal rod lever and underside of rubber bellows at toeboard. Tighten trunnion locknut.

ROCHESTER 2GC 2-BARREL

Rochester 2GC 7009832 (S.M.), 7009831 (Hydra-Matic).

►*ROUGH IDLE AND SURGE CORRECTION:* Install new venturi cluster No. 7011561 (replaces 7010603) on Synchro-mesh cars, and modified venturi cluster 7010575 on Hydra-Matic cars. *NOTE* - Letter "A" on carburetor tag of Hydra-Matic and "D" on Synchro-mesh cars indicates modification has been made in production.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - 1½ turns open from lightly seated position. Turn screws out for richer mixture.

Idle Speed - 450-470 RPM in Neutral (Synchro-mesh), 430-450 RPM in Drive Range (Hydra-Matic), 500-520 RPM (Air Conditioned Cars - with compressor OFF).

Float Level - 1 15/64" ± 1/32" (Gauge J-6629) from bottom of float to gasket on cover with needle valve seated (invert bowl cover assembly and place gauge over float).

Float Drop - 1 29/32" ± 1/8" from gasket on cover to bottom of float at free end with float hanging freely below bowl cover.

Fast Idle: No separate adjustment required (will be correct if hot or slow idle speed correct).

Automatic Choke Setting: Centered (at Index).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2GC Carburetor" in in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 4GC 7009829 (S.M.), 7009830 (Hydra-Matic).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels teed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Mixture & Idle Speed Setting - Same as for Rochester 2GC (above). Idle mixture screws on primary side

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC-4-Barrel" Carburetors in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 2506S. New design 4-barrel downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Mixture & Idle Speed Setting - Same as for Rochester 2GC (above). Idle mixture screws on primary side

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Carter AFB 4-Barrel" Carburetors in Carburetion Section.*

"TRIPLE CARBURETORS"
(Rochester 2GC)

Engine	Rochester Carburetor No. Front	Center	Rear
Hydra-Matic Optl.	7011351	7011350	7011352
Extra HP Engine Ⓒ....	7011351	7011500	7011352

Ⓒ - Synchro-mesh cars only. Hydra-Matic cars use same carburetors as listed for "Hydra-Matic Optl."

For compl te adjustment data on these carburetors (including linkage adjustment to insure corr ct synchro-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

nization), see "Pontiac Triple Carburetors" in Carburetion Section.

ROCHESTER "RAMJET" (Optional)

See "Rochester Ramjet Fuel Injection" in Carburetion Section.

AIR CLEANER: Oil-wetted type (Std.), Heavy Duty Oil-bath type (Optl.), Replaceable Paper Element type (Triple Carb. & Extra HP. Engines).

►*PAPER ELEMENT TYPE AIR CLEANER CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

FUEL PUMP PRESSURE: 4-5 lbs. at 450-1000 RPM.

►*FUEL PUMP DRIVE NOTE:* Pump drive eccentric on forward end of camshaft has bushing (.010" clearance on eccentric) for pump drive. Bushing must be installed with flanged end toward camshaft sprocket.

CARB. EQUIPMENT

Fuel Pump: AC No. 4123 (Early), No. 4417 (Later). Fuel & Vacuum (With Vacuum Wipers). No. 4328, Fuel only (With Electric Wipers).

►*FUEL PUMP PRODUCTION CHANGE:* Two types of Fuel & Vacuum pumps used. Early type has 5/16" pipe fittings. later type has 3/8" fittings.

►*FUEL PUMP DRIVE NOTE:* Pump drive eccentric on forward end of camshaft has bushing (.010" clearance on eccentric) for pump drive. Bushing must be installed with flanged end toward camshaft sprocket.

Pressure - 4-5 lbs. at 450-1000 RPM.

Fuel Filter: Two used, one as part of Fuel Gauge Tank Unit, the other at inlet side of carburetor.

See "Fuel System Notes" in Pontiac Special Data.

Gasoline Gauge: AC Electric type.

Dash Unit - AC No. 1518594.

Tank Unit - AC No. 1518394 (Exc. Sta. Wgn.), No. 1518812 (2-door Sta. Wgn.), No. 1518813 (4-door Sta. Wgn.).

See "Fuel Gauges" in Carburetion Section.

BATTERY

Synchro-mesh Cars - Delco No. 2SMR53. 12 volt, 9 plate, 53 ampere hour capacity (20 hr. rate).

Hydra-Matic Cars - Delco No. 558. 12 volt, 9 plate, 60 ampere hour capacity (20 hr. rate).

Heavy Duty - Delco No. 3SMR72. 12 volt, 11 plate, 72 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engine Ground - Battery ground extends from fender to engine block.

STARTER

Delco-Remy 1107661. Armature - 1932185.

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	① Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

① - Includes Solenoid.

Starting Switch: Delco-Remy Solenoid No. 1119798 (no relay) mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No. 1116533. Neutral Safety & Back-up Switch Delco-Remy No. 1998129 used with Hydra-Matic Trans.

Neutral Safety & Back-up Light Switch: Delco-Remy No. 1998129 located at lower end of steering column. Connected in starter circuit so that starter operates only when selector lever is in "N" Neutral or "P" park positions.

Adjustment - *See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Application as follows:

Model	Generator No.	Armature No.
Standard 25 Amp.	1100304	1928952
Special 25 Amp.	1100333	1928952
Air Cond. 35 Amp.	1102073	1932900
A.C. Special 35 Amp.	1102071	1932900
Heavy Duty 35 Amp.	1102070	1932900
H.D. Special 35 Amp.	1102079	1932900
Heavy Duty 40 Amp.	1102074	1935778
H.D. Special 40 Amp.	1102077	1935778

Performance Data

Generator	Amperes	Volts	RPM
1100304, 333	25	14.0	2570
1102070,71,73,79	35	14.0	2510
1102074, 77	40	14.0	2320

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs.

Field Current - 1.5-1.62 Amps. (1100304,333); 1.69-1.79 Amps. (1102070,71,73,79); 2.66-2.86 Amps. (1102074, 77), at 12 volts (80°F).

Belt Adjustment: ¼" deflection with approximately 8 lbs. (Std.), 14 lbs. (Air Cond.), pressure midway between generator and fan pulleys

REGULATOR

Delco-Remy No.	Used with Generator
1119000	1100304,333
1119002	1102070,71,73,79
1119163	1102074,77

►*1119163 REGULATOR NOTE:* This type regulator has double contacts for voltage regulation.

►*NOTE - Specifications below are "Normal Settings".*

Cutout Relay

Cuts In - 11.8-13.5 volts (hot).

Contact Gap - .020".

Air Gap - .020" (with contacts just closed).

Voltage Regulator

Setting (1119000 & 1119002) - 13.8-14.8 volts at 125° (ambient temperature).

Setting (1119163) - 14.0-14.6 volts (operating on lower contacts). .3-.5 volts Lower (operating on upper contacts).

Contact Gap (1119163) - .016".

Air Gap - .080" (1119163) .075" (Others) with armature pressed down to point where contacts just touching.

Checking & Adjusting - *See "Delco-Remy 12 volt Regulators" in Electrical Section.*

Current Regulator

Setting (1119000) - 23-27 amps. (hot).

Setting (1119002) - 32-37 amps. (hot).

Setting (1119163) - 37-42 amps. (hot).

Air Gap - .075" with armature pressed down to point where contacts just touching.

Checking & Adjusting - *See "Delco-Remy 12 volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Autronic Eye: *See Electrical Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-Up Light Switch: Located on steering column and actuated by gearshift lower lever.

FUSES: Fuses listed below (except as noted) are located on a fuse block behind instrument panel on dash to left of steering column. Circuits numbered on wiring diagram and fused as follows:

1) 4 Ampere. Ignition & Instrument Panel lights.
2) 7.5 Ampere. Ash Tray & Fender Ornament lights.
3) 7.5 Ampere. Tail & License Plate lights.
4) 7.5 Ampere. Dome, Courtesy & Trunk lights.
5) 7.5 Ampere. Glove Compt. & Underhood lights.
6) 7.5 Ampere. Clock Motor & Spot light.
7) 7.5 Ampere. Air Cond. & Compass lights.
10) 7.5 Ampere. Stop Light & Air Cond.
11) 7.5 Ampere. Directional Signal & Brake light.
12) 7.5 Ampere. Radio & Back-Up light.
13) 7.5 Ampere. Heater & Rear Defroster.

Electric Antenna - 14 Ampere. Located in fuse holder above fuse block.

Air Conditioner - 30 Ampere. In addition to Stop Light fuse. Located in holder in lead between BAT terminal of Voltage Regulator and Air Conditioner relay.

LIGHTING THERMOSTATIC CIRCUIT BREAKER: 22 Ampere, located in lighting switch.

Horn Relay: Delco-Remy 1116920.

Air Gap - .014", **Point Opening** - .027".

Closing Voltage - 5.0-9.5 volts.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for Access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8, Valve-in-head. All engines are basically the same with modifications as indicated.

Engine	Bore	Stroke	Displacement	Rated HP
All	3.94"	3.56"	347 cu. ins.	49.6

Engine	Compr. Ratio	Developed HP
Chieftain ①	8.5-1	227 at 4600 RPM
Chieftain ②	10.0-1	252 at 4600 RPM
Super & Star Chief ①	8.5-1	244 at 4800 RPM
Super & Star Chief ②	10.0-1	270 at 4800 RPM
Triple Carb. Optl. ②	10.0-1	290 at 5000 RPM
Extra HP Engine	10.0-1	317 at 5200 RPM

① - Synchro-mesh Cars. ② - Hydra-Matic Cars.

Compression & Vacuum Reading - *See TUNE-UP.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Trav l):* Two compression ratios used. 10.0-1 (Hydra-Matic), 8.5-1 (Synchro-mesh). Use 97 octane ratio (Research Method), with 10.0-1 compression ratio. Use 90 octane ratio with 8.5-1 compression ratio. *NOTE* - 10.0-1 compression ratio can be reduced to 7.8-1 by installing recessed piston & pin assembly. Standard piston furnished in three sizes - 3.936" part No. 524154, 3.937" No. 524155, 3.938" No. 524156. Choose piston to obtain .0007-.0017" clearance between skirt of piston and cylinder bore.

ENGINE REMOVAL: *S "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove right and left engine side aprons. Remove two idler lever support screws and lower the steering linkage. Disconnect exhaust crossover pipe at left exhaust manifold and from exhaust pipe at right exhaust manifold connector, remove crossover pipe by jockeying it out. Remove flywheel housing front shield and housing lower cover.Loosen crankcase ventilator outlet pipe and swing brace out of the way.

CYLINDER HEAD: *Se "Cylinder Head & Manifold" in Pontiac Sp cial Data.*

►*CYLINDER HEAD REMOVAL NOTE:* On cars with defroster No. 7 pushrod cannot be removed. Raise pushrod and tape it in place, then remove pushrod with cylinder head.

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Special Data.*

PISTONS

Aluminum alloy, tin plated, with steel band for added strength and to control expansion. Pin is offset to right side of engine 1/16".

►*PISTON NON-INTERCHANGEABILITY CAUTION:* Different pistons used in Low (8.5-1) & High (10.0-1) compression engines identified as follows: Low Compression-Piston heads dished or recessed and pistons marked "L" on rear side near pin boss (do not confuse this mark with two "F" marks on opposite pin boss indicating front side of piston). High Compression - Pistons have flat head.

Removal - Pistons and rods removed from above.

R placem nt Pistons: Furnished Std. (3.936", 3.937", 3.938"), and .005", .010", .020", .030" Oversize in both Flat Top or Recessed Head.

Fitting New Pistons: Clearance is .0007-.0017" at bottom of skirt. Fit pistons with .0015" X ½" feeler. Pull to withdraw feeler should be 8-15 lbs.

Installing Pistons: Install pistons with notch in piston head and "F" mark at piston boss toward front of engine. *See Rod Installation.*

PISTON PINS

Floating type, with lock ring at each end.

Diam ter - .9803-.9807". **Length** - 3.13".

Pin Fit in Piston - .0000-.0004" loose with pin and bosses clean and dry. When clearance is at mean limit (.0002") pin can be inserted with light hand pressure, when at low limit (.0000") considerable pressure will be required (pin can be tapped into place with brass drift).

Pin Fit in Rod - .0001-.0006" loose, with pin and bushing dry.

Replacement pins: Furnished in Std. and .001", .003" Oversize.

PISTON RINGS

Upper compression ring is chrome plated, lower compression ring is lubrited. Both compression rings are taper faced and have either a chamfer or a step on inside diameter of top side.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.078"	.010-.020"	.0015-.003"
Compr. (2)	.078"	.008-.020"	.0015-.0035"
Oil	.181-.188"	.015-.055"	.0025-.0095"

Installing Rings: Step or chamfer on inside diameter of compression rings must be upward.

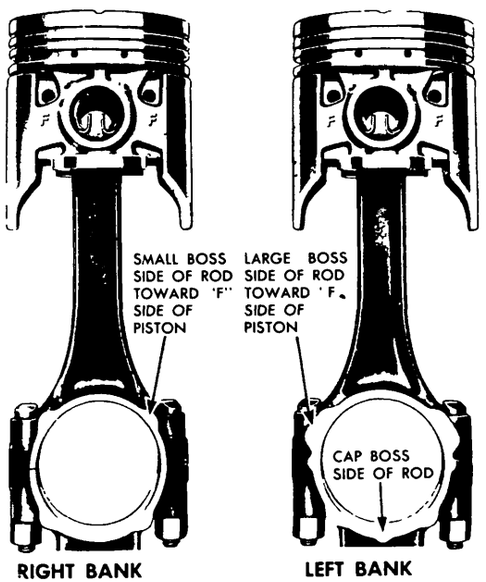
Replacement Rings: Std. and .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length - 6.623-6.627" (center-to-center).

Crankpin Journal Diameter - 2.2488-2.2498".

Connecting Rod Upper Bushing (Piston Pin) Removal & Installation - *See "Connecting Rods & Bearings" in Pontiac Special Data.*



Lower Bearing - Replaceable precision type.

Clearance - .0009-.0029" (new).

Sideplay - .006-.011".

Replacement Bearings: Std. size, .001", .002" Undersize.

Installing Rods: Install rods **2-4-6-8 (right bank)** with machined boss at lower end of rod toward the **rear.** Install rods **1-3-5-7 (left bank)** with boss toward the **front** of engine. When installed, machined bosses on rods will face each other. *See Pistons above.*

PONTIAC PISTON & ROD ASSY.

CRANKSHAFT

Journal Diam ter - 2.623-2.624". Five bearings.

Bearings - Durex, steel backed inserts. No shims.

Clearance - .0005-.003" (Exc. rear), .0008-.0033" (rear).

End Thrust: Taken by No. 4 (rear center) main bearing.

End Play - .0035-.0085".

Replacement Bearings: Furnished Std. and .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *S "Crankshaft & Main Bearings" in Pontiac Special Data.*

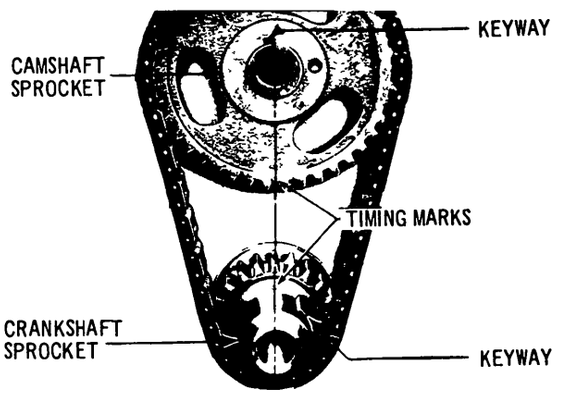
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

►*STANDARD ENGINE NOTE:* Different camshafts used on Synchro-mesh (8.5-1) & Hydra-Matic (10.0-1). Engines identified by figure stamped on forward end of camshaft, Synchro-mesh - 0, Hydra-Matic - 2.

Journal Diameter - 1.8987-1.8997". Five bearings.



Clearance - .0015-.0030". **Endplay** - .003-.007".

End Thrust - Taken by thrust plate behind camshaft sprocket. Replace if worn or grooved.

Timing Chain: Length - 60 links.

Timing Chain Installation - *See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks are adjacent and in line across shaft centers.

PONTIAC VALVE TIMING MARKS

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

Engine Front Cover Removal: *See "Engine Front Cov r" in Pontiac Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data.*

VALVES

►*VALVE ADJUSTMENT NOTE: Because of design, it is no longer necessary to initially adjust the tapp t cl arance when cylinder head or valve system is disturbed. See "Rocker Arms" below.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Tappet Clearance: .018" Int. & Exh. Cold (Extra HP Eng. with mechanical lifters). None in service (Hydraulic Lifters) Others.

Valves	Head Diam.	Stem Diam. ①	Length
Intake	1.88"	.3415-.3422"	5.35"
Exhaust	1.60"	.3410-.3417"	5.34"

Valves	Seat Angle	Lift	Stem Clearance
Intake	30° ②	③	.001-.0027"
Exhaust	45° ②	③	.0015-.0032"

① - Std. See "Replacement Valves" below.
② - Valve Face Angle: Intake 29°, Exhaust 44°.

③ Valve Lift

Engine	Intake Lift	Exhaust Lift
Synchro-mesh (8.5-1)	.373"	.373"
Hydra-Matic (10.0-1)	.373"	.409"
Extra HP (Hydr. Lifters)	.411"	.411"
Extra HP (Mech. Lifters)	.435"	.435"

Valve Seat Width - Intake 3/64-1/16", Exhaust 1/16".

Replacement Valves: Furnished Std. and .001" (Yellow), .003" (Red), .005" (White) Oversize. Color inked on top of valve head.

Valve Stem Oil Seal: Neoprene seal installed in second groove on valve stems (under valve locks).

Valve Spring Shields: Cup shaped shield used over upper end of valve spring on all cars except late Extra HP engines. *NOTE* - This shield not necessary for high speed operation on these engines.

Checking Valve Stem Length: *See "Valve System" in Pontiac Special Data.*

Valve Springs: Inner and outer springs used.

Standard & Triple Carb. Optl. Engine

Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
23-29 lbs.	1.483"	55-61 lbs.	1.533"
54-60 lbs.	1.153"	98-106 lbs.	1.203"
Extra HP Engine (Hyd. Lifters)			
32 lbs.	1.48"	60 lbs.	1.52
96 lbs.	1.08"	128 lbs.	1.11"
Extra HP Engine (Mech. Lifters)			
55 lbs.	1.48"	60 lbs.	1 52'
120 lbs.	1.06"	131 lbs.	1 10"

Valve Guides: Cast integral with cylinder head. When valve stem clearance excessive, ream guides using Valve Guide Reamer J-5830-1 (.003"), J-6621 (.005"). *NOTE* - When installing .005" oversize valves, use .003" reamer first then follow with .005" reamer and always reface valve and valve seat after reaming valve guide.

Valve Clearance in Guide - .001-.0027" (Intake), .0015-.0032" (Exhaust). Oversize reamers ream guide to provide these clearances

►*VENTED INTAKE VALVE GUIDE* Intake valve guide vented to atmosphere near upper end by hole drilled through head. Valve stem is relieved at this point.

Valve Lifters: Hydraulic lifters standard all models, Mechanical lifters optional on Extra HP engine.

Hydraulic Lifter: **Diameter** - .8424-.8427". **Length** - 2.000". **Clearance (In Lifter Boss)** - .0013-.0028".

Hydraulic Lifter Overhaul - *See "Valve System" in Pontiac Special Data.*

Rockers Arms: Mounted individually on studs pressed into cylinder head.

Installation of Rocker Arm to Stud - Tighten rocker arm stud nut to 15 ft. lbs. torque. This will insure correct position of rocker arm in respect to pushrod and valve stem.

Rocker Arm Stud Replacement - *See "Valve System" in Pontiac Special Data.*

Rocker Arm Lubrication: Oil from cylinder head oil galleries flows through hollow rocker arm studs to 1/16" hole at upper end of stud to lubricate ball seat and flows through groove in ball to fill rocker arm. Oil flows from hydraulic lifter boss through hollow pushrods for pushrod end lubrication.

Oil Passage Plug Removal & Installation - With rocker arm cover removed, insert easy-out in hole in plug, turn counterclockwise and pull out. Coat plug with gasket paste and drive in place with flat piece of metal or hard wood until plug is flush with outer surrounding surface.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE.* Valve timing below is correct with lifter on end of ramps on cam (Hydraulic Lifters), or with .023" tappet clearance (Mechanical Lifters).

Synchro-mesh (8.5-1) Engine

Intake - Opens 22° BTDC. Close 67° ALDC.
Exhaust - Opens 63° BLDC. Close 27° ATDC.

Hydra-Matic (10.0-1) Engine

Intake - Opens 22° BTDC. Close 67° ALDC.
Exhaust - Opens 69° BLDC. Close 31° ATDC.

Extra HP (Hyd. Lifters)

Intake - Opens 29° BTDC. Close 74° ALDC.
Exhaust - Opens 82° BLDC. Close 31° ATDC.

Extra HP (Mech. Lifters)

Intake - Opens 27° BTDC. Close 63° ALDC.
Exhaust - Opens 59° BLDC. Close 31° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Pontiac Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. when changing filter element.

Normal Oil Pressure: 35-45 lbs. above 40 MPH.

Pressure Regulator - In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.

Pump Overhaul - *See "Oiling System" in Pontiac Special Data.*

Oil Filter: Full Flow type. Replace element every 15,000 miles or once a year. Use only AC PF-122 filter element.

Crankcase Ventilation: Filter element in oil filler caps in each rocker arm cover, and ventilator pipe at rear of engine. Clean filter elements every 2,000 miles by plunging in gasoline or kerosene. *NOTE* - Filter element for outlet pipe available as an accessory.

►*VENTILATOR OUTLET PIPE CAUTION:* If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed down into cover beyond the two locating points on pipe. Excessive oil consumption at high speeds will result.

Oil Pressure Gauge: AC No. 1508548. Not electric.

COOLING

Water Capacity: Without Heater - 21½ qts.
With Underseat Heater - 23 qts.
With Air Conditioning - 22½ qts.
With Underseat Heater & Air Cond. - 23¾ qts.

Pressure Valve: AC No. RC-6 (13 lbs. less Air Cond.), AC No. RC-15 (15 lbs. with Air Cond.). Radiator filler cap.

Thermostat: Pellet type 170° thermostat in water outlet passage in intake manifold.

Water Pump: Packless, sealed ball bearing shaft Serviced as an assembly

Temperature Gauge: AC Thermo-gauge. Electric type.
Dash Unit - AC No. 1513276.
Engine Unit - AC No. 1513130.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck. Model 10.5A9. Assembly No. 361423 (Std.), No. 361452 (Bonneville). Single plate.
See "Borg & Beck" in Clutch Section.
Clutch Disc - Borg & Beck No. 284814 (All Models).

Pedal Adjustment: Adjust stop screw on pedal to provide 4 3/8-4 5/8" between bottom of pedal and floor mat. Set clutch fork to countershaft rod to provide ¾-1 1/8" free movement of clutch pedal.

Overcenter Spring Adjustment - Remove overcenter spring, spring extension, and pushrod. Loosen lock screw which clamps spring lever to countershaft. Install Gauge J-5819, inserting pins which are closest together into holes in overcenter spring link and lever from which pushrod was removed. Then, while applying rotation to clutch countershaft to hold clutch pedal against stop, rotate overcenter spring lever until third pin in gauge can be inserted into overcenter spring lever. Tighten lockscrew securely, and replace spring, spring extension, and pushrod.

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (*CAUTION* - Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same manner to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member. Lower clutch assembly out of car.

Clutch Installation Note - Position clutch disc so that long end of hub is in flywheel and cover assembly marks line up with marks on flywheel. Use spare transmission main drive gear in spline of driven disc to insure proper alignment and tighten cover bolts one turn at a time until tight. Coat entire outer diameter of release bearing support with high melting point wheel bearing grease. Do not overlubricate. Confine grease to inner diameter only of release bearing. Use new gasket and install support and bearing. Install bearing support spring washer. Coat release fork fingers and release fork ball fulcrum with same type grease and install fork. Lockwasher must be under screw fastening fork ball fulcrum to clutch housing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Own. All helical gear type.
See "Pontiac Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Disconnect speedometer cable, gearshift selector rod, and control rod.

2) Disconnect rear universal joint (use wire or rubber band to keep trunnions from slipping off spider). Pull propellor shaft off transmission.

3) Remove shift lever spring yoke and extension to remove upper transmission capscrew. Remove shift lever screw (lever in neutral) and remove lever.

4) Remove transmission outer lever to remove lower transmission capscrew. Remove other upper capscrew and install guide pins in upper capscrew positions. Remove lower capscrew, slide transmission back on guide pins with rear bearing support in frame "X" member until main drive gear is free and lower transmission to floor.

Installation Note: Use guide pins in two upper transmission capscrew positions to avoid damage to clutch release bearing tubular support when sliding transmission into position.

HYDRA-MATIC DRIVE

"Strato-Flight" Dual Coupling. Four speed automatic transmission and fluid coupling.

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

Lubrication - Check fluid level every 2000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type "A".

Checking Fluid Level - Check level with transmission warm and engine idling with selector lever in "P" or "N" position. Maintain level at "Full" mark on dipstick.

Capacity - 9 qts. refill, 11½ qts. after overhaul.

Throttle Linkage Adjustment: *See CARBURETOR above.*

► *OTHER HYDRA-MATIC SERVICE DATA: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Saginaw, Needle bearing type.

► *CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload (must be readjusted after nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

Replacement Universal Joints - Propellor shafts will only be furnished with front and rear universal joints as an assembly.

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.

Axle Identification - Ratio can be identified by color marking on ends of axle shaft or a code number stamped on pad on differential carrier. *See Code No. & Color Markings in table below.*

Axle Ratios & Code Markings

Model	Ratio	Code No.	Color
S-M (Std.) All	3.42-1(41-12)	8	Gray
(Hills) All	3.64-1(40-11)	6	Blue
(H.D.) S-28	3.90-1(39-10)	4	Red
H-M (Std.)	3.23-1(42-13)	9	Brown
(Plains) ①	3.08-1(40-13)	0	Yellow

① - Sedans & Catalina Coupes.

Backlash - .003-.012" (new), .012" (used).

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

► *CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (not refillable). Service by replacement.

Model	Front	Rear
Standard	5522515	5524031
Taxi, Police, H.D	5352226	5513346

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil spring.
See "Pontiac" in Suspension & Wheel Alignment Section.

Kingpin Inclination - 1°20' at 0° camber.

Caster - Neg. 1°±½°.

Camber - Pos. ½°±½°.

Toe-In - 0 to 1/16".

Toe-Out on Turns - Outer wheel 20°, Inner wheel should be 22.5°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (In Line). *See "Saginaw (In Line)" Power Steering in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

Drum Diameter - 12" (front), 11" (rear).

Wheel Cyl. Diameter - 1 1/16" (front), 15/16" (rear).

Lining Width & Length

	Front Wheel	Rear Wheel
Primary	2.25" X 10.05"	1.75" X 9.29"
Secondary	2.25" X 12.92"	1.75" X 11.93"

Lining Thickness - 13/64".

Clearance - Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: Forward of brake pedal on engine side of fire wall.

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to 7/8" from gasket surface of filler neck.

Power Brakes: Moraine or Bendix Vacuum Power Unit.
Moraine - *See "Moraine Power Unit" in Brake Section.*
Bendix - *See "Bendix Power Unit (Hydraulic Reaction Control)" in Brake Section.*

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to within ½" of top of filler cap opening

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet at vacuum cylinder, and hydraulic lines at master cylinder. Disconnect pushrod from pedal and wires from stop light switch Remove nuts from U-bolt retaining pedal pivot bracket to steering column and remove pedal and bracket (with stop light switch assembly attached). Remove clutch pedal and steering column seals at floorboard On Hydra-Matic cars, remove screws retaining power brake unit to floor pan and remove mounting plate with power unit attached. On Synchro-mesh cars, remove screws retaining power unit to mounting plate (power unit will rest on frame). Remove screws attaching mounting plate to floor pan and remove mounting plate, "jockeying" it as necessary to clear clutch pedal Remove power unit. *CAUTION*—Do not carry or support brake unit by pushrod as pushrod may be pulled out of cylinder

MISC. MECHANICAL

Windshield Wiper: Vacuum or electric type
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: Harrison *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section*

Power Top Control: Hydro-Lectric with reversible pump motor *See "Power Top Controls" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motors in each window *See "Power Window Regulators" in Miscellaneous Section*

Power Seat Adjusters: Six-way electric type Fore & Aft, Up & Down, and Tilting movement provided through three switches and two motors *See "Power Seat Adjusters" in Miscellaneous Section*

►*JACKING & HOISTING CAUTION (ALL MODELS): B - for jacking or hoisting, s "Jacking & Hoisting Pr - cautions" in Suspension & Wh el Alignm nt S ction*

MODEL IDENTIFICATION

Model	Model Designation
Bonneville (All)	58-25
Chieftain (Convertible)	58-25
Chieftain (Others)	58-27
Star Chief (Station Wagon)	58-27
Star Chief (Others)	58-28
Super Chief (All)	58-28

SERIAL NUMBER: Located on left front door hinge pillar post. *NOTE* - Number (example below) includes identification data.

① ② ③ ④ ⑤
P 8 58 H 1001

① - Assembly Plant - **P** Pontiac, **C** South Gate, **W** Wilmington, **F** Framingham, **K** Kansas City, Kan., **L** Linden, **A** Atlanta, **T** Arlington.
② - Model - **5** - 25, **7** - 27, **8** - 28.
③ - Model Year - 1958.
④ - Type Transmission - **H** Hydra-Matic, **S** Synchro-Mesh.
⑤ - Beginning vehicle number.

ENGINE NUMBER: Stamped on machined pad on front of right bank of cylinder block. *This number is same as Serial Number.*

►*8.6-1 COMPRESSION RATIO IDENTIFICATION NOTE: "L" inside a circle on serial number pad on engine block indicates 8.6-1 compression ratio engine.*

TUNE-UP

COMPRESSION PRESSURE: (8.6-1 ratio) 150-160 lbs (10.0 & 10.5-1 ratios) 180-190 lbs. at cranking speed of 155-165 RPM. Lowest cylinder must not be less than 80% of highest cylinder.

VALVE TAPPET CLEARANCE: None in service, hydraulic.

MANIFOLD HEAT CONTROL: Thermostatic coil type in right hand exhaust manifold outlet. Valve must operate freely.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".
Spark Plugs - AC No 45 Std No 44 used on later production 10 0-1 Synchro-mesh and 10 0-1 Hydra-Matic police cars Use No 43 for high speed operation

COIL: Delco-Remy 1115084 (Std.), 1115099 (Triple 2-Bbl. Carb.).
Ignition Current - 1.2 amps. idling, 3.5 amps. stopped.
Resistor - Delco-Remy 1940096. 1.40-1.62 ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead between ignition switch and coil. Resistor is bypassed during cranking by second lead from ignition switch to coil side of resistor.

►*COIL WIRE INTERFERENCE CORRECTION:* Coil primary wire may interfere with carburetor throttle linkage, holding carburetor open and fraying wire insulation. To correct, rotate coil in bracket to obtain proper clearance, or splice 5" extension to coil wire and attach to secondary wire with a grommet (part no. 494104).

DISTRIBUTOR: D lc -R my - External adjustment "Window" Type distributor. *See"D lco-R my (Window Type) Distributors" in Electrical Section*

Distributor Application

Engine Model	Delco-Remy No.
8 6-1 Ratio ①	1110924
10 0-1 Ratio (Early)	1110913
10 0-1 Ratio (Later)	1110943
10 5-1 Ratio (Triple 2-Bbl Carbs)	1110925
10 5-1 Ratio (Fuel Injection)	1110897

① - Identified by letter "L" stamped on serial number pad on engine block. Other engines not stamped.
Condenser - Delco-Remy 1932004 **Capacity** - .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988 (Exc. 1110897 Distr.). 1918148 (1110897 Distr., Two used).
Breaker Gap (Exc. 1110897) - *NOTE* - When cam angle correctly set (see below) breaker gap will be correct (.016").
Breaker Gap (1110897) - .014-.018".
Cam Angle (Exc. 1110897) - 28-32°. Set to 30°.
Cam Angle (1110897) - Adjust each set of points to 29° ± 1° with other set of points blocked open with .025" thick insulator. Cam angle for both sets of points operating together will be 34° ± 1°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance (1110924)

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	375	0-4	750
10-12	1000	20-24	2000
11-13	1450	22-26	2900
13-15	2300	26-30	4600

8-10	1400	16-20	2800
9-11	1800	18-22	3600

Vacuum Spark Control: Delco-Remy 1116136(Exc.1110897). *NOTE* - No vacuum control used on 1110897.

Vacuum Advance (1116136)

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6-8
9-11	18-22	13-15

IGNITION TIMING

Setting - 6° BTDC *CAUTION* - Set timing with engine at operating temperature and idling at indicated RPM **with vacuum lin disconnected.**

►*IGNITION TIMING NOTE* The above timing setting (6° BTDC) is for operation on regular fuels (8.6-1 ratio engine), and for premium fuels (10 0-1 & 10.5-1 ratio engines). Under no circumstances should ignition timing be retarded to allow for use of regular fuel in a 10.0-1 or 10.5-1 ratio engine, or retarded later than 0° for any situation.
Timing Marks - Two marks on harmonic balancer, TDC and 6° BTDC. Pointer on timing sprocket cover aligned with correct mark on harmonic balancer.

CARBURETOR

►*CARBURETOR APPLICATION· 8.6-1 & 10.0-1 ratio engines use one Rochester 2GC 2-Barrel or on Carter AFB 4-Barrel carburetor. 10.5-1 ratio ngin s us thr Rochester (two 2G & one 2GC) carbur tors or Rochester "Ramjet" Fuel Injection NOTE - On Rochest r 4GC 4-Barrel Carburetor used on s m lat cars*

►*CARBURETOR PRODUCTION CHANGE (CARS WITH ONE 2-BARREL CARBURETOR):* New Rochester 2GC carburetors, having an idle air bypass type idle system are now being used in production. The throttle stop-screw formerly used for hot idle adjustment is not used on the later carburetors Later type carburetors are identified by a spring loaded idle air bypass screw located in main body at rear of carburetor. *S "Rochest r 2GC" (below) for idle speed s tting.*

►*THROTTLE LINKAGE INTERFERENCE (NO TRANSMISSION FORCED DOWNSHIFT) CORRECTION.* **1) Hydra-Matic with one 2-barr l carbur t r** - Carburetor throttle lever may interfere with carburetor-to-fuel pump vacuum line. Bend line downward to secure clearance.
2) All Cars - Accelerator control lever may be too close to intake manifold. **Do n t** adjust linkage to provide more clearance This will lessen proper accelerator pedal travel. To correct, bend lever in a vise to obtain 8" (Hydra-Matic), 7.96" (Synchro-Mesh) distance between hole for throttle control rod and center of slot for for cross shaft

►*THROTTLE LINKAGE BINDING CORRECTION & ASSEMBLY CAUTION NOTE - Carburetor lever end of carburetor throttle rod must have a countersink on both sides* Carburetor throttle rod must be installed as follows
Single 2-Barrel Carburetor - Rod Part No 531176, is used Install with offset and cotter pin toward outside of car
Triple Carburetors - Rod, Part No 531176 is used Install with offset toward center of car and cotter pin toward outside of car
Single 4-Barrel Carburetor - Rod, Part No 531177,is used Install with offset toward outside of car and cotter pin toward center of car

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC DRIVE CARS): With engine and transmission at normal operating temperature, idle speed correctly set *(see carburetors below),* and transmission selector lever in "N" (Neutral) or "P" (Park), proceed as follows Loosen both nuts on throttle control transmission rod trunnion Stop engine and install Linkage Adjusting Pin J-2544 through holes in throttle control lever and bracket. With idle adjusting screw seated against its st op, adjust length of carburetor throttle rod at trunnion so gauge pin is free in hole. Tighten locknuts and recheck freeness of gauge pin. Push throttle control transmission rod down until throttle control outer lever touches end of

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

travel. *CAUTION - Top locknut must not touch trunnion.* Hold throttle control transmission rod and tighten upper and lower trunnion locknuts. Shorten throttle control transmission rod by backing off trunnion rear nut two full turns. Tighten front locknut and remove gauge pin Loosen locknut on throttle control intermediate rod trunnion and adjust intermediate rod to allow ¼" clearance between accelerator pedal rod lever and underside of rubber bellows at toeboard. Tighten trunnion locknut.

THROTTLE RETURN CHECK ADJUSTMENT (Cars with Hydra-Matic and 4-Barr l Carburetors): Make carburetor fast idle adjustment, then stop engine. Rotate fast idle cam so that fast idle screw rests on highest step of fast idle cam. Clearance between contact screw and contact on throttle lever should be 1/8" on conventional idle carburetors, 3/32" on idle air bypass carburetors *NOTE - This supersedes previous specification of 1/8" on idle air bypass carburetors* Adjust by turning contact screw *CAUTION - Hold sleeve next to diaphragm brack t from turning while making adjustment*

ROCHESTER 2GC 2-BARREL

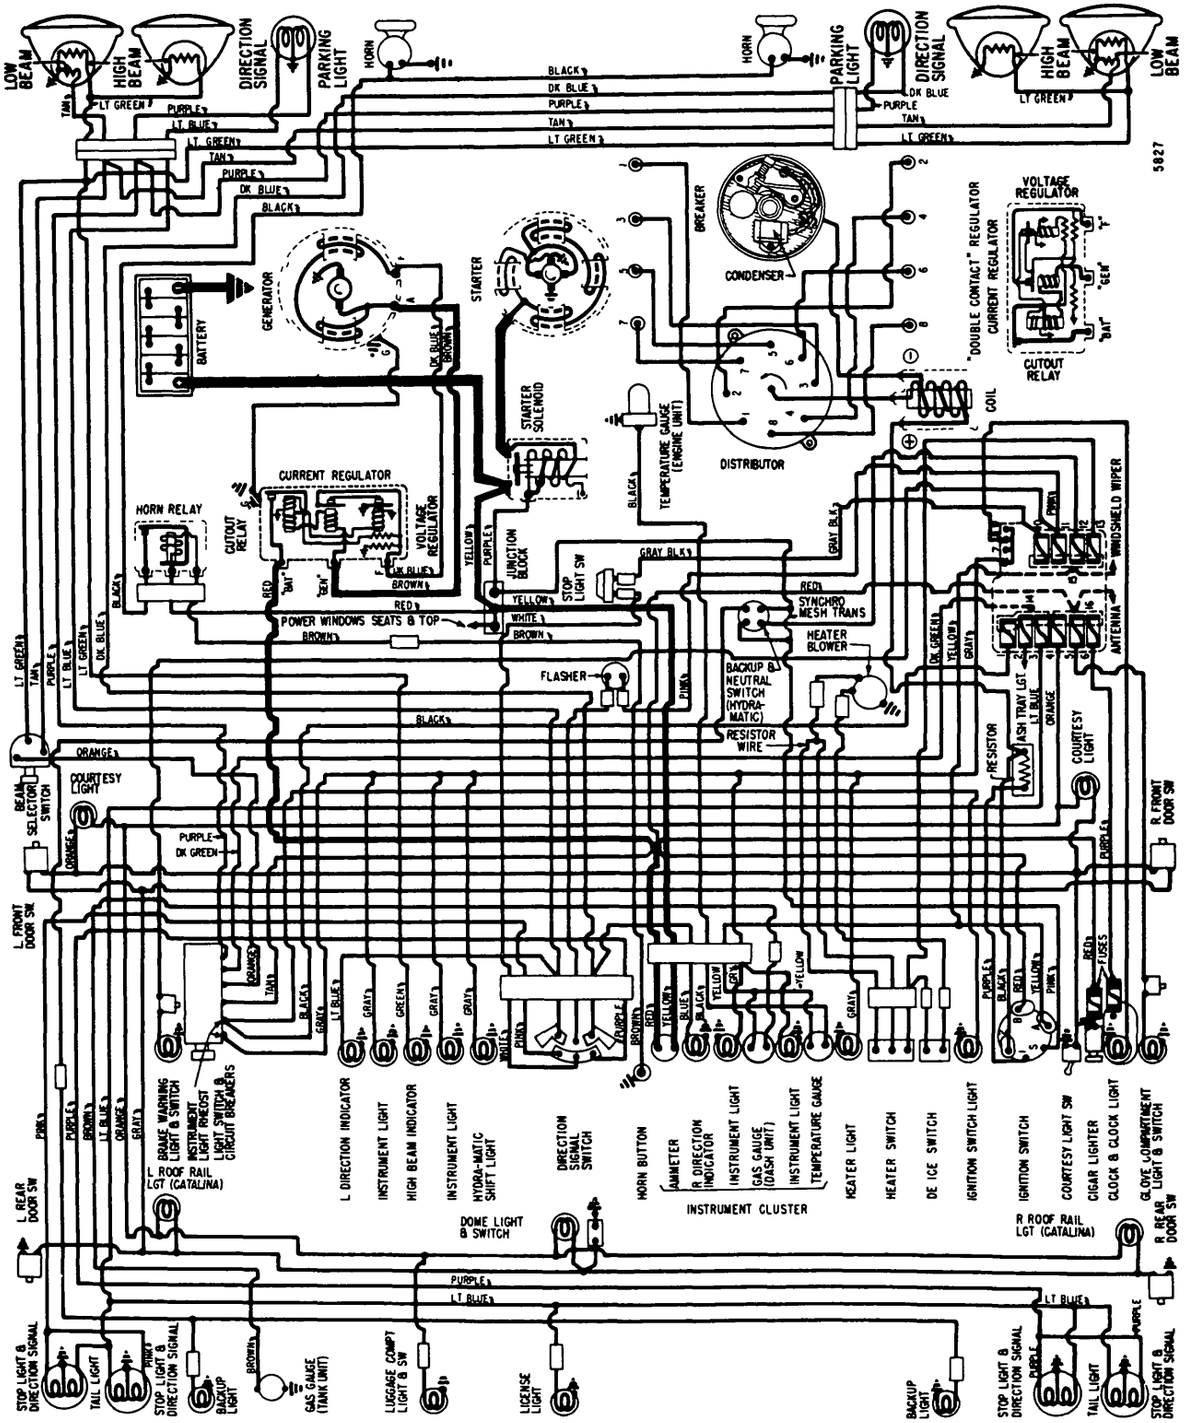
R ch st r 2GC 7011703 (E a r l y Synchromesh), 2GC 7012703 (Lat Synchr -mesh), 2GC 7011702 (Early Hydra-Matic), 2GC 7012702 ,(Late Hydra-Matic).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT Barr l f ds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

►*2GC CARBURETOR PRODUCTION CHANGE:* Late type carburetors, Part Nos. 7012702 & 7012703, have an idle air bypass type idle system. Idle speed adjustments (hot idle) are made with the idle air bypass screw located on main carburetor body at rear of carburetor. The former t h r o t t l e stopscrew has been eliminated. A fast idle screw is provided on these carburetors and fast idle adjustments must be made after correct hot idle speed has been obtained.

►*ROUGH IDLE AND STALLING CORRECTION: Caused by gum build-up in throttle bores. Correction similar to 4-barrel carbur tors. S e "Carter AFB 4-Barrel Carbur tors" in Carburetion Section*

►*FUMP LINK BINDINC CORRECTION* On early cars to correct binding between outer pump lever and pump link, install new pump link and clip, Part No 7013192.



Idl S tting - 1½ turns (7011702 & 7011703), 1 turn (7012702 & 7012703) open from a lightly seated position. Turn screws out for richer mixture.

Idl Sp d - 450-470 RPM (Synchro-mesh), 480-500 RPM (Hydra-Matic, with selector lever in either "Dr" position). 540-560 RPM (Air Conditioned Cars, with air conditioning turned off).

►*IDLE SPEED ADJUSTING NOTE (Cars with "Idle Air Bypass" Type Carbur tors):* As a preliminary setting, open the idle air bypass screw 2 turns from a lightly seated position, then, with engine at normal operating temperature, choke fully open, adjust idle air screw to obtain proper engine RPM (see above). Adjust mixture screws for highest engine RPM, then reset idle air screws for proper idle speed. *NOTE* - Recheck idle mixture setting after adjusting idle air screws.

Float L v l - With air horn inverted, g a s k e t in place and needle seated, there should be 11/16" clearance be-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tween bottom of float seam at toe end and air horn gasket. Use Gauge J-7292. To adjust bend float arm.

Float Drop - 1 29/32" from gasket on cover to bottom of float at free end with float hanging freely below bowl cover.

Fast Idle (7012702 & 7012703): With hot idle speed and mixture properly adjusted, move fast idle cam so highest step is under end of fast idle screw. Adjust fast idle screw to obtain an engine speed of 2700 RPM.

Automatic Choke Setting: Centered at Index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

Fast Idle (7011702 & 7011703): No separate adjustment required (will be correct when hot or slow idle speed correct).

►*OTHER DATA See 'Rochester 2GC Carburetors" in Carburetion Section*

CARTER AFB 4-BARREL

Carter AFB, No. 2751S (Early Synchro-mesh), 2768S, SA (Later Synchro-mesh), 2740S (Early Hydra-Matic), 2767S, SA (Later Hydra-Matic)

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrels feed Cyls 2 3-5-8, LEFT barrels feed 1-4-6-7*

►*ROUGH IDLE AND STALLING CORRECTION* Caused by gum build-up in throttle bores *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

►*PART THROTTLE SURGE CORRECTION* Install richer step-up rods *See "Carter AFB 4-Barrel Carburetors' in Carburetion Section*

►*GASOLINE ODOR, ROUGH IDLE, FLOODING CORRECTION* Due to loose plugs on carburetor *NOTE* - Carburetors with red stain on air adjusting screw or code dated "B" or later do not require modification *See "Carter AFB 4-Barrel Carburetors". in Carburetion Section*

►*AIR CONDITIONED CAR STALLING CORRECTION.* Caused by inability to reach 540-560 RPM idle speed with bypass idle air screw *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

Idle Setting - ½-2 turns open Turn screws out for richer mixture

Idle Speed - 450-470 RPM (Synchro-mesh), 480-500 RPM (Hydra-Matic, with selector lever in either "Dr" position), 540-560 RPM (Air Conditioned Cars, with air conditioner turned off)

Throttle Linkage Adjustment (Hydra-Matic): *See CARBURETOR above*

►*OTHER DATA See 'Carter AFB 4-Barrel Carburetors" in Carburetion Section*

ROCHESTER 4GC 4-BARREL

Rochester 4GC 7011701 *NOTE - These carburetors may not have any Model Number designation but may be identified by Idle Air Bypass Adjusting Screw located on throttle body*

Idle Setting - For preliminary setting, turn Idle Air Bypass adjusting screw out 2 turns, turn each idle mixture adjusting screw out 1 turn With engine thoroughly warmed up (choke valve wide open and fast idle inoperative), adjust air screw for idle speed of 480-500 RPM with selector lever in "Drive" Adjust both idle mixture screws for best idle and highest RPM Reset air screw for correct idle speed of 480-500 RPM, recheck idle mixture screws for smoothest possible idle *CAUTION - Idle compensator valve must be closed when making this adjustment*

►*OTHER DATA See "Rochester 4GC 4-Barrel Carburetor" in Carburetion Section*

"TRIPLE CARBURETORS"
(Rochester 2G & 2GC)

Engine & Trans.	Rochester Carburetor No. Front	Center	Rear
Synchro-mesh	7011705	7011709	7011707
Hydra-Matic	7011705	7011706	7011707

NOTE - Front & Rear carburetors are 2G, Center is 2GC

►*THROTTLE VALVES HANGING OPEN CORRECTION* On early cars caused by throttle closing spring on end carburetors wedging between throttle lever and boss on throttle body Correct by bending horizontal tang of spring so distance from top of spring to end of tang is 5 16" *NOTE* - Modification necessary only when clearance between lever and boss with throttle valves wide open is more than 030"

Idle Speed - Same as conventional carburetors (see above)

For complete adjustment data on these carburetors (including linkage adjustment to insure correct synchronization), see "Rochester Triple Carburetors" in Carburetion Section

ROCHESTER "RAMJET"
(Fuel Injection)

Rochester No. 7014880 (Optional). *See "Rochester Ramjet Fuel Injection" in Carburetion Section*

Idle Speed - Same as conventional carburetors (see above)

CARB. EQUIPMENT

Fuel Pump: AC No. 4410 (Fuel Injection), No 4488 (Others) Fuel & Vacuum

►*FUEL PUMP DRIVE NOTE* Pump drive eccentric on forward end of camshaft has bushing (010" clearance on eccontric) for pump drive Bushing must be installed with flanged end toward camshaft sprocket

Pressure - 5¼-6½ lbs at 450-1000 RPM

Fuel Filter: Two used, one as part of Fuel Gauge Tank Unit, the other at inlet side of carburetor.

Gasoline Gauge: AC Electric type

Dash Unit - AC No 1518952

Tank Unit - Used as follows

Model	AC No.
All (Exc Sta Wgn & Air Cond)	1518972
All Air Cond (Exc Sta Wgn)	5640146
Sta Wgn (Exc Air Cond)	1518973
Sta Wgn Air Cond	5640147

See "Fuel Gauges" in Carburetion Section

AIR CLEANER: Oil wetted type (Std). Replaceable Paper Element type (Std on Triple Carburetors, Fuel Injection, Air Suspension, Optional on others)

►*AIR CLEANER (DRY TYPE) CAUTION Replace every 10,000 miles or sooner if needed DO NOT clean, shake, oil or re-use*

BATTERY

Delco. Used as follows

Synchr-mesh Cars - No 458 12 volt, 9 plate, 53 ampere hour capacity (20 hr rate)

Hydra-Matic Cars - No 558 12 volt, 11 plate, 63 ampere hour capacity (20 hr rate)

Extra Duty Battery - No 670 12 volt, 11 plate 72 ampere hour capacity (20 hr rate)

Battery Ground - Negative

Engine Ground - Battery ground extends from battery to battery support bracket to left cylinder head

STARTER

Delco-Remy No. 1107661 (Synchr-mesh), No. 1107700 (Hydra-Matic).

Armature - Delco-Remy 1932185 (1107697), 1941888 (1107700).

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs. minimum.

Performance Data - 1107697

Torque	RPM	Volts	① Amperes
0 Ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107700

Torque	RPM	Volts	① Amperes
0 Ft. lbs.	4700-5400	10.6	80-120
	Lock	2.0	290-370

① - Includes Solenoid

Starting Switch: Delco-Remy Solenoid No 1119798 (Synchro-mesh) No 1119986 (Hydra-Matic) mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No 1116533 Neutral Safety & Back-up Switch Delco-Remy No 1998664 used with Hydra-Matic transmission

Neutral Safety & Back-up Light Switch: Delco-Remy No 1998664 located at lower end of steering column Connected in starter circuit so that starter operates only when selector lever is in "N" or "P" positions.

Adjustment - *See "Dual-Coupling Hydra-Matic Drive" in Transmission Section*

GENERATOR

Delco-Remy No. 1102107 (Std.), 1102104 (Air Cond.), 1102105 (Heavy Duty).

Armature - Delco-Remy No 1939837 (1102104 & 1102105), 1923535 (1102107)

►*GENERATOR VIBRATION CORRECTION* Install rear bracket and support brace Part No 531743, as follows Remove generator through bolts and lockwashers (discard washers) Position rear bracket on commutator end frame, install through bolts and tighten EQUALLY to 80 in lbs Install brace over cylinder head No 2 bolt hole in lower row with new cylinder head bolt and tighten to 95 ft lbs Check fan belt adjustment and route No 2 spark plug wire over brace

Performance Data

Generator	Amperes	Volts	RPM
1102107	30	14.0	2240
1102104, 5	40	14.0	... .2600

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 Ozs.

Field Current - 1.69-1.79 amps. (1102107), 2.66-2.86 amps. (1102104, 5) at 12 volts (80° F).

Belt Adjustment: ¼" deflection with approximately 7-8 lbs. (Std.), 10 lbs. (Air Cond.) pressure midway between generator and fan pulleys.

REGULATOR

Delco-Remy No. 1119001 (Std.), 1119602 (Air Cond. & Heavy Duty).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*1119602 REGULATOR NOTE:* This type regulator has double contacts for voltage regulation.

►*NOTE: Specificati ns below are "Normal" s ttings.*

Cut ut Relay

Cuts In - 11.8-13.5 volts (1119001), 11.8-13.0 volts (1119602), hot.

C ntact Gap - .020".

Air Gap - .020" with contacts just closed.

V ltage Regulator

S tting (1119001) - 13.8-14.8 volts at 125°F. (ambient temperature).

S tting (1119602) - I3.8-14.6 volts (operating on upper contacts. .1-.3 volts lower (operating on lower contacts).

C ntact Gap (1119602) - .016".

Air Gap - .075" (1119001), .067" (1119602) with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in El ctrical Section.*

Curr nt Regulator

S tting (1119001) - 27-33 amps. (hot)

Setting (1119602) - 37-42 amps. (hot)

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Seri s Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section*

MISC. ELECTRICAL

►*INSTRUMENT CLUSTER SHORTING CORRECTION:* Be sure that all wire connectors are installed toward center of cluster to prevent grounding on edges of instrument panel.

►*STOP LAMP FAILURE CORRECTION:* May be caused by improperly positioned direction signal switch. Switch must be centered on steering column. To insure proper installation, proceed as follows: Bend a .090" diameter wire into a "U" so height is 2" and loop is 1.58" long. Insert wire into holes on face of switch and tighten attaching screws. If wire enters holes freely, switch is positioned properly.

H adlamps: Dual headlights (4-Headlight System) Std. *See "4-Headlight System" in Electrical Section.*

Dir cti n Signal: *See El ctrical Section. NOTE* - Direction signal switch mounted on steering column just below instrument panel bracket.

Autr nic Ey : *See Electrical Section.*

Lighting Switch R m val: Remove one battery cable from battery. Pull headlight switch knob to "ON" position. Push latch button on side of switch assembly and pull out switch knob assembly Screw bushing from switch assembly allowing switch to be removed from instrument panel

St p Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-up Light Switch: Located on steering column and actuated by gearshift lower lever.

CIRCUIT BREAKERS: Used as follows:

22 Amp r - Protects head, parking, tail, and beam indicator lights, Located on headlight switch. *NOTE-* Tail lights also protected by 7.5 ampere fuse.

Cigar Light r - Protected by either a fuse or a circuit breaker in back of lighter.

FUSES: *NOTE* - Fuse block located on passenger side of dash, above and to left of steering column. A spare 7.5 amp. fuse is attached to a clip at bottom of fuse block.

14 Ampere - Protects heater motor and air conditioning relay switch. On fuse block.

14 Ampere - Protects stop lights.On fuse block. *NOTE-* Changed from 7.5 ampere.

7.5 Ampere - Protects tail and license lights. On fuse block.

7.5 Ampere - Protects direction signals. On fuse block.

7.5 Ampere - Protects back-up lights and radio. On fuse block.

7.5 Ampere - Protects body and trunk lights. On fuse block.

7.5 Ampere - Protects clock and spot light. On fuse block.

7.5 Ampere - Protects glove compartment and underhood lights. On fuse block.

7.5 Ampere - Protects ash tray light. On fuse block.

4 Ampere - Protects all instrument lights. On fuse block.

3 Ampere - Protects windshield wipers. Located in holder above fuse block.

1 Ampere - Protects clock. Located on back of clock housing. *NOTE - Two fuses protect clock (see above).*

1 Ampere - Protects fuel injection cold enrichment heater. Located in holder on engine side of dash above distributor.

Horn Relay: Delco-Remy 1116920.

Air Gap - .014". **Point Opening** - .027".

Closing Voltage - 5.0-9.5 volts.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for Access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, valve-in-head. All engines are basically the same. 8.6-1 ratio engines have recessed pistons, 10 0-1 & 10 5-1 ratio engines have flat top piston Different cylinder heads used on Triple Carburetor and Fuel Injection (10.5-1 ratio) engines.

►*CYLINDER HEAD IDENTIFICATION MARKS:* "X" stamped to left of center cylinder head bolt hole and casting number indicates Triple Carburetor equipment "XX" indicates Fuel Injection "O" stamped to right of center bolt hole indicates heavy duty valve springs.

Engine	Bore	Stroke	Displacement	Rated HP
All	4 1/16".	3 9/16"	370 cu. ins.	52.8

Engine Type	Compr. Ratio	Dev. HP
2-Bbl. Carb. (S.M. Trans.) ①	8.6-1	240⑥
4-Bbl. Carb. (S.M. Trans.) ②	8.6-1	255⑥
2-Bbl. Carb. (H.M. Trans.) ③	10.0-1	270⑦
4-Bbl. Carb. (S.M. & H.M. Trans.)④	10.0-1	285⑦
3 2-Bbl. Carbs. ⑤	10.5-1	300⑦
Fuel Injection (H.M. Trans.) ④	10.5-1	310⑧

① - Standard on Chieftain & Super Chief.
② - Standard on Star Chief & Bonneville.
③ - Optional on Chieftain & Super Chief.
④ - Optional on all models.
⑤ - Optional on all models with Synchro-mesh or Hydra-Matic transmission.
⑥ - At 4500 RPM. ⑦ - At 4600 RPM. ⑧- At 4800 RPM.

Compression & Vacuum Reading - *See TUNE-UP.*

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel):* Use Premium Fuel with 10 0-1 & 10.5-1 compression ratios Use Regular Fuel with 8.6-1 compression ratio. *NOTE* - 10.0-1 & 10 5-1 compression ratios can be reduced by installing recessed piston & pin assembly Standard piston furnished in three sizes - 4.061" Part No. 531147, 4 062" No. 531148, 4.063" No. 531149. Choose piston to obtain .0007-.0017" clearance between skirt of piston and cylinder bore

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove right and left engine side aprons Remove two idler lever support screws and lower the steering linkage. Disconnect exhaust crossover pipe at left exhaust manifold and from exhaust pipe at right exhaust manifold connector, remove crossover pipe by jockeying it out. Remove flywheel housing front shield and housing lower cover.Loosen crankcase ventilator outlet pipe and swing brace out of the way.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Pontiac Special Data.*

►*CYLINDER HEAD REMOVAL NOTE:* On cars with defroster No. 7 pushrod cannot be removed. Raise pushrod and tape it in place, then remove pushrod with cylinder head.

Choke Heat Tube Replacement - *See "Cylinder Head & Manifold" in Pontiac Special Data.*

►*VIBRATION DAMPER PRODUCTION CHANGE & REPLACEMENT CAUTION (AIR SUSPENSION CARS):* Only Vibration Damper, Part No. 529184 (later type), and Fan Pulley Part No 524763, MUST be used to prevent belt misalignment Compressor may be moved ¾" to rear if necessary to obtain alignment

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Special Data.*

PISTONS

Aluminum alloy, tin plated, with steel band for added strength and to control expansion. Pin is offset to right side of engine 1/16".

►*PISTON NON-INTERCHANGEABILITY CAUTION:* Different pistons used in Low (8.6-1) & High (10.0-1 & 10.5-1) compression engines identified as follows: Low compression piston heads dished or recessed and pistons marked "L" on rear side near pin boss (do not confuse this mark with two "F" marks on opposite pin boss indicating front side of piston). High compression pistons have flat head

Removal - Pistons and rods removed from above.

Replacement Pistons: Furnished Std (4 061", 4 062" & 4.063"), and 005", .010", 020" 030" Oversize in both Flat Top or Recessed Head

Fitting N w Pistons: Clearance is .0007-.0017" (.0022-.0027" on Police Cars after Engine No. 199783) at

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

bottom of skirt Fit pistons with .0015" or .0025" x ½" feeler. Pull to withdraw feeler should be 8-15 lbs.

Installing Pistons: Install pistons with notch in piston head and "F" mark at piston boss toward front of engine. *See Rod Installation.*

PISTON PINS

Pin is press fit in rod

Diameter - 9800- 9804" **Length** - 3 25"

Pin Fit in Piston - 0003- 0005" loose with piston bosses and pin clean and dry *NOTE* - Piston and pin must be at room temperature and pin must fall from piston by its own weight

Pin Fit in Rod - 0008- 0016", press fit

Piston Pin Removal & Installation - *See "Piston Pins" in Pontiac Special Data*

Replacement Pins: Furnished in Std , 001" 003" Oversize

PISTON RINGS

Upper compression ring is chrome plated, lower compression ring is lubrited Top compression ring is taper faced and has a step or chamfer on inside diameter of top side Lower compression ring may have step or chamfer on inside diameter of top side Oil ring has chrome plated rail faces

Ring	Width	End Gap	Side Clearance
Compr (1)	078"	016-.026"	0015-.0030"
Compr (2)	078"	013 025"	0015- 0035"
Oil (3)	184"	015- 035"	0015- 0085"

Installing Rings - "T", dot or "TOP" marks toward top of piston

Replacement Rings: Std , 005", 010", 020" and 030" Oversize

CONNECTING RODS

Length - 6 63" (center-to-center)

Crankpin Journal Diameter - 2 2488-2 2498".

Lower Bearing - Durex 100A, steel-backed, replaceable precision type, no shims.

Clearance - 0009- 0029" (new)

Sideplay - .006-.011"

Replacement Bearings: Std , 001" and 002" Undersize

Installing Rods: Pistons have "F" marks and one notch (10 0-1 & 10 5-1 ratios), two notches (8 6-1 ratio) on front Install rods so that LARGE machined boss at lower end of rod on same side as "F" mark and notch in piston (Left bank cyls 1-3-5-7), on opposite side of piston from "F" mark and notch (Right bank cyls 2-4-6 8) Install assemblies in engine with "F" marks and notches on piston toward front of engine and oil groove in lower end of rod toward center of engine.

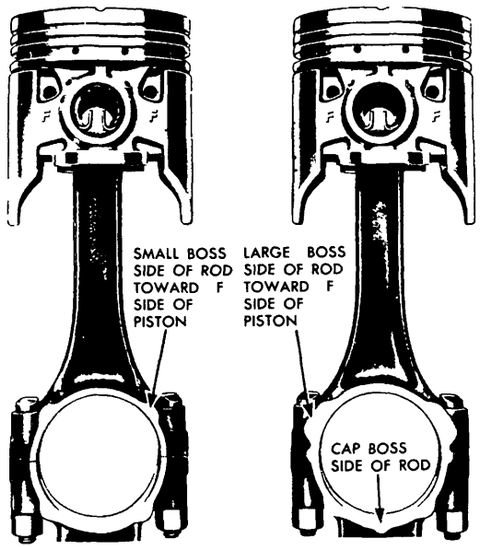
CRANKSHAFT

Journal Diameter - 2 623-2 624" Five bearings

Bearings - Durex 100A, steel-backed inserts precision type no shims

Clearance - 0005- 0025" (Front) 0005- 003" (Front Center Center and Rear Center) 0008- 0033" (Rear)

End Thrust: Taken by No. 4 (rear center) main bearing.



End Play - .0035 .0095'.

Replacement Bearings: Furnished Std. and .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Pontiac Special Data.*

Vibration Damper Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

PONTIAC PISTON & ROD ASSY.

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE* Different camshafts used on 8 6-1 and 10 0-1 and 10 5-1 ratio engines Identified by number stamped on forward end of camshaft, 8 6-1 - 0

Journal Diameter - 1 8987-1 8997" Five bearings

Clearance - 0015- 0030" **Endplay** - 003- 007"

End Thrust - Taken by thrust plate behind camshaft sprocket Replace if worn or grooved

Timing Chain: Length - 60 links **Width** - 1" **Pitch** - 375"

►*TIMING CHAIN REMOVAL CAUTION* **Do not rotate crankshaft with timing chain out of engine.** Damage to valves, pistons, or both will result due to piston striking valve To rotate camshaft with timing chain off, crankshaft must be positioned so pistons are 45° before or after TDC to avoid damage

Camshaft Setting: Both sprockets marked "O" Mesh chain with sprockets turned so that marks are adjacent and in line across shaft centers

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data*

Engine Front Cover Removal: *See "Engine Front Cover" in Pontiac Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters

Valve	Head Diam.	Stem Diam.	Length
Intake	1 88"	.3412-.3419"	①5.31"
Exhaust	1 60"	.3407-.3414"	②5.30"

① - 3 Carbs. or Fuel Injection 5.35".

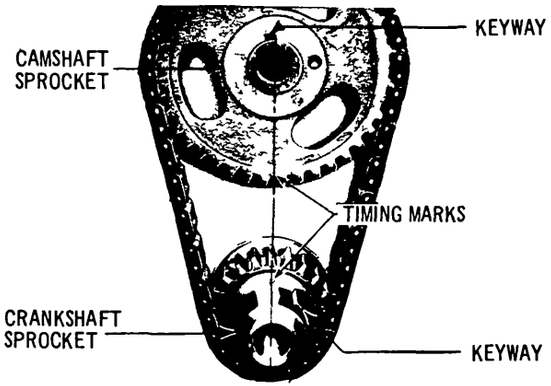
② - 3 Carbs. or Fuel Injection 5.34".

Valve	Seat Angle	Lift	Stem Clearance
Intake	③30°	373"①	0016- 0033"
Exhaust	③45°	373"②	0021- 0038"

① - 8 6-1 Compr ratio engines 407" (others)

② - 8 6-1 Compr ratio engines 411" (others)

③ - Face angle - 29° Intake, 44° Exhaust



Valve Seat Width - Intake 3/64-1/16", Exhaust 1/16".

Replacement Valves: Furnished Std. and .001" (Yellow), .003" (Red), .005" (White) Oversize. Color inked on top of valve head.

Valve Stem Oil Seal: Neoprene seal installed in second groove on valve stems (under valve locks).

Valve Spring Shields: Inverted cup over upper end of outer valve spring (under spring retainer cup)

Checking Valve Stem Length: *See "Valve System" in Pontiac Special Data*

PONTIAC VALVE TIMING MARKS

Valve Springs: Inner and outer springs used

8.6-1 & 10.0-1 Compr. Ratio Engines ①

Inner Spring		Outer Spring	
Pressure	**Length**	**Pressure**	**Length**
Open 57 lbs.	1.153"	Open 102 lbs.	1.203"
Closed 26 lbs.	1.483"	Closed 58 lbs.	1.533"

① - Exc. 285 HP Engine with Synchro-mesh transmission.

3 Carb. & Fuel Inj. Engines ②

Inner Spring		Outer Spring	
Pressure	**Length**	**Pressure**	**Length**
Open 96 lbs.	1.08"	Open 131 lbs.	1.12"
Closed 32 lbs.	1.48"	Closed 62 lbs.	1.52"

② - Also includes 285 HP Engine with synchro-mesh trans.

Valve Guides: Cast integral with cylinder head. When valve stem clearance excessive, ream guides using Valve Guide Reamer J-5830-1 (.003"), J-6621 (.005"). *NOTE* - When installing .005" oversize valves, use .003" reamer first then follow with .005" reamer and always reface valve and valve seat after reaming valve guide.

Valve Stem Clearance in Guide: 0016- 0033" (Intake), 0021 0038" (Exhaust) Oversize reamers ream guide to provide these clearances

►*VENTED INTAKE VALVE GUIDE* Intake valve guide vented to atmosphere near upper end by hole drilled through head Valve stem is relieved at this point

Hydraulic Lifters: Standard on all models

Diameter - 8424-.8427" **Length** - 2"

Clearance in Lifter Boss - 0013- 0028"

Hydraulic Lifter Overhaul - *See "Valve System" in Pontiac Special Data*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Installation of Rocker Arm Stud - Tighten rocker arm

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

stud nut to 15 ft. lbs. torque. This will insure correct position of rocker arm in respect to pushrod and valve stem.

Rocker Arm Stud Replacement - *See "Valve System" in Pontiac Special Data.*

Rocker Arm Lubrication: Oil from cylinder head oil galleries flows through hollow rocker arm studs to 1/16" hole at upper end of stud to lubricate ball seat and flows through groove in ball to fill rocker arm. Oil flows from hydraulic lifter boss through hollow pushrods for pushrod end lubrication.

Oil Passage Plug Removal & Installation - With rocker arm cover removed, insert easy-out in hole in plug, turn counterclockwise and pull out. Coat plug with gasket paste and drive in place with flat piece of metal or hard wood until plug is flush with outer surrounding surface.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

8.6-1 Compr. Engines

Intake - Open 22° BTDC, Close 67° ALDC.
Exhaust - Open 63° BLDC, Close 27° ATDC.

10.0-1 & 10.5-1 Compr. Engines

Intake - Open 30° BTDC, Close 63° ALDC.
Exhaust - Open 77° BLDC, Close 25° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Pontiac Special Data.*

Crankcas Capacity: 5 qts. refill. Add 1 qt. when changing filter element.

N rmal Oil Pr ssur : 35-45 lbs. above 40 MPH.

Pr ssur R gulat r - In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.

Pump Ov rhaul - *S "Oiling System" in Pontiac Special Data.*

Oil Filt r: Full Flow type. Replace element every 15,000 miles or once a year. Use only AC PF-122 filter element.

Crankcas V ntilati n: Filter element in oil filler caps in each rocker arm cover, and ventilator pipe at rear of engine. Clean filter elements every 2,000 miles by plunging in gasoline or kerosene. *NOTE* - Filter element for outlet pipe available as an accessory.

►*VENTILATOR OUTLET PIPE CAUTION:* If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed down into cover beyond the two locating points on pipe. Excessive oil consumption at high speeds will result.

Oil Pr ssur Gaug : AC No. 1508697. Not electric.

COOLING

Wat r Capacity: As follows:

Mod l	Capacity (Qts.)
Synchro-mesh Std.	21 2
Synchro-mesh with Heater	22.3
Hydra-Matic Std.	21.1
Hydra-Matic with Heater	22.2
Hydra-Matic with Heater & Air Cond.	22.5

Pr ssur Valv : Radiator filler cap 12-15 lbs. Std cars (Pontiac No. 850800), 14-17 lbs. Air Cond. cars (No. 861050).

Th rm stat: Pellet type. In water outlet passage in intake manifold. 170° Std. (Pontiac No. 3138868), 180° Optl. (No. 3136185), for use with permanent type anti-freeze.

Water Pump: Packless, sealed double row ball bearing shaft. Serviced as an assembly.

Temperature Gauge: AC Thermo-gauge. Electric type.
Dash Unit - AC No. 1513500.
Engine Unit - AC No. 1513462.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 11A9. Cover Assembly B.&B. No. 361476, with Long Driven Member No. 289302. All Models, Std. & Heavy Duty.
See "Borg & Beck" in Clutch Section.

Pedal Adjustment: Adjust pedal stop bracket under instrument panel to provide 5½-5¾" pedal height between bottom of pedal and floor mat. Disconnect pedal pushrod from linkage by removing clevis pin. Position Clutch Linkage Gauge, Tool J-7277, between frame and rear end of overcenter lever. With pedal tight against stop bracket, adjust clevis up or down so clevis pin enters freely. Remove tool and adjust fork rod to provide ½-¾" pedal freeplay

Removal: Remove transmission (see "Transmission Removal" below) and clutch housing bottom cover. Disconnect return spring and remove fork and fork ball support. Remove release bearing. *CAUTION - Bearing lubricated for life. Do not degrease.* Mark cover and flywheel to maintain proper balance at reinstallation. Loosen cover bolts evenly one turn at a time, then remove. Move clutch assembly away from bottom of flywheel, remove driven member, then remove cover and pressure plate from car.

Clutch Installation Note - Position clutch disc so that long end of hub is in flywheel and cover assembly marks line up with marks on flywheel. Use spare transmission main drive gear in spline of driven disc to insure proper alignment and tighten cover bolts one turn at a time until tight. Coat entire outer diameter of release bearing support with high melting point wheel bearing grease. Do not overlubricate. Confine grease to inner diameter only of release bearing. Use new gasket and install support and bearing. Install bearing support spring washer. Coat release fork fingers and release fork ball fulcrum with same type grease and install fork. Lockwasher must be under screw fastening fork ball fulcrum to clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. All helical gear type. Std. & Heavy Duty types used.
See "Pontiac Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*SHIFT LEVER HANGING UP & HARD SHIFTING CORRECTION:* Install new lever guides, Part No. 531751 upper, No. 531752 lower, on mast jacket where shift levers extend outward. Shift lever key on gearshift tube must be free of burrs and chips. If not, replace both tube and key. Remove Hydra-Matic interlock plate on upper steering gear shaft bearing housing if so equipped. This plate may make shifting impossible.

R m val: Remove propeller shaft assembly (*s "Propell r Shaft R moval" below). NOTE - On h avy duty transmission front propeller shaft connected to yok flange at transmission. On standard transmission yok slides on main shaft.* Disconnect speedometer cable and control linkage. Remove upper mounting bolts and install Aligning Studs, Tool J-1126. Remove lower bolts and remove transmission by sliding on aligning studs until shaft clears clutch.

HYDRA-MATIC DRIVE

"Strato-Flight" Dual Coupling. Four speed automatic transmission and fluid coupling.

►*SHIFT LEVER INDICATOR DISENGAGEMENT CORRECTION:* On early cars, install Retainer, Part No. 531775, on control rod bracket. Install with needle nosed pliers with indicator in "Dr, left".

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

Lubrication - Check fluid level every 2000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type "A".

Checking Fluid Level - Check level with transmission warm and engine idling with selector lever in "P" or "N" position. Maintain level at "Full" mark on dipstick.

Capacity - 9 qts. refill, 11½ qts. after overhaul.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Saginaw. Needle bearing type. Three used.

►*CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload which must be readjusted whenever nut is loosened.

Replacement Universal Joints - Universal joints furnished with new propeller shafts. Universal joint repair kits and parts can be obtained separately.

Lubrication - Disassemble and repack every 25,000 miles.
See "Propeller Shaft Removal" below.

PROPELLER SHAFT

Two-piece propeller shaft with three universal joints used. Center bearing and support mounted on a bracket inside frame tunnel.

Removal: Loosen bolts holding center bearing and bracket to frame bracket. *CAUTION - Note number of shims under bracket and reinstall as found to insure proper alignment of propeller shaft.* Remove U-bolts and lock plates from rear axle drive pinion flange. On heavy duty transmission disconnect front universal joint from yoke flange at transmission. Hold bearings on journals with wire or rubber band. Remove stone and splash shield from front of frame tunnel. Remove complete drive line assembly by sliding rearward out of frame tunnel.

Prop ller Shaft Alignm nt & C nt r B aring Ass mbly: *S "Prop ll r Shaft Not s" in Pontiac Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

Own. Semi-floating, hypoid gear (Std.), Safe-T-Track (Optl.). *See "Pontiac Hypoid" and "Spicer Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

Axle Identification - Ratio can be identified by color marking on ends of axle shaft or a code number stamped on pad on differential carrier. Standard axles identified by **white** paint, Safe-T-Track axles by **green** paint in addition to ratio color. *See Code No. and Color Markings in table below.*

NOTE - Safe-T-Track axle shafts are 1/8" shorter than standard axle shafts.

Axle Ratios & Code Markings

Model	Ratio	Code No.	Color
S-M (Std.) All	3.42-1(41-12)	8	Gray
(Hills) All	3.64-1(40-11)	6	Blue
(H.D.) S-28	3.90-1(39-10)	4	Red
H-M (Std.)	3.23-1(42-13)	9	Brown
(Plains) ①	3.08-1(40-13)	0	Yellow

① - Sedans & Catalina Coupes.

Backlash - .005-.010".

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line will be damaged). Pull shaft with Puller J-942-1 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Remove axle shafts and disconnect rear propeller shaft at companion flange. Drain oil, remove capscrews, and remove assembly.

►*CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut is loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, not refillable. Serviced by replacement.

Shock Absorber Application

Model	Front	Rear
Std. Suspension	5535575	5535580
Air Suspension	5535573	5535579

FRONT SUSPENSION

Independent. New "Ball-joint" type with spherical ball joints between upper and lower control arms. *See "Pontiac Front Suspension" in Suspension & Wheel Alignment Section.*

►*CRACKING NOISE CORRECTION: See "Pontiac Front Suspension" in Suspension & Wheel Alignment Section.*

Kingpin Inclination - 4°50' at 0° camber.

Caster - Neg. ½° ±½°.

Camber - Pos. ½° ±½°.

Toe-In - 0-1/16" measured 9" above floor.

Toe-Out on Turns - With right wheel turned 20° to right from straight ahead position, left wheel should be turned 18° to 19°.

REAR SUSPENSION

Coil springs with one upper and two lower control arms.

See "Pontiac Rear Suspension" in Suspension & Wheel Alignment Section.

AIR SUSPENSION

Rubber air springs replace all four coil springs. Optional on all models.

See "Pontiac Air Suspension" in Suspension & Wheel Alignment Section.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (In Line). *See "Saginaw (In Line)" Power Steering in Steering Section.*

►*OIL LEAK BETWEEN POWER STEERING PUMP & AIR SUSPENSION COMPRESSOR CORRECTION:* **Remove hose clip under bolt head and install copper washer, Part No. 5685606.**

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*PARKING BRAKE CABLE CAUTION:* Cable must be clipped away from junction block on firewall to prevent shorting and burning. Install Clip, Part No. 530235, if necessary.

►*PARKING BRAKE LEVER INTERFERENCE CORRECTION:* Pedal pad may rub on air inlet grille. Correct by inserting 3/8" plain washers between lever bracket and support at lower bolt nearest lever. *Do not bend lever.*

Drum Diameter - 12" (front), 11" (rear).

Wheel Cyl. Diameter - 1 1/16" (front), 15/16" (rear).

Lining Width & Length

	Front Wheel	Rear Wheel
Primary	2.25" X 10.05"	1.75" X 9.29"
Secondary	2.25" X 12.92"	1.75" X 11.93"

Lining Thickness - 13/64".

Clearance - Adjusting screw backed off 12 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: Forward of brake pedal on engine side of firewall.

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" from gasket surface of filler neck.

Brake Pedal & Stop Light Switch Adjustment: Adjust pedal stop bracket to give 5½-5¾" pedal height from bottom of pedal pad to floor mat. Stop lights must operate after ½" pedal travel. Reset pedal stop and bracket separately to correct. Then adjust length of master cylinder pushrod to give 1/64-1/32" clearance between forward end of pushrod and socket seat in master cylinder piston. Tighten locknut. *CAUTION - Do not lengthen pushrod beyond clearance specifications. Primary cup of master cylinder must be completely clear of compensating port.*

Power Brakes: Moraine or Bendix Vacuum Power Unit.

Moraine - *See "Moraine Power Unit" in Brake Section.*

Bendix - *See "Bendix Power Unit (Hydraulic Reaction Control)" in Brake Section.*

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" of top of filler cap opening.

Removal of Power Unit - Disconnect pushrod at brake pedal, vacuum hoses from vacuum exhaust tube, and pipe from master cylinder hydraulic port (cover all openings). Remove power cylinder from adapter plate on firewall. Remove power brake unit from mounting plate and remove unit. *CAUTION - Don't carry or support brake unit by pushrod as it may be pulled out of plunger.*

MISC. MECHANICAL

Windshield Wiper: Vacuum or electric type.

See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: Harrison. *See "Frigidaire & Harrison" Air Conditioning in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motors in each window. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Six-way electric, with memory control unit and "easy entry" feature. *See "Power Seat Seat Adjusters" in Miscellaneous Section.*

►*JACKING & HOISTING CAUTION (ALL MODELS) Before jacking, hoisting, towing or working under car, see "Jacking & Hoisting Cautions" and "Pontiac Air Suspension" in Suspension Section*

►*PUSH STARTING CAR CAUTION Car CANNOT be started by pushing because rear oil pump has been eliminated in 1959 Hydra-Matic transmissions*

MODEL IDENTIFICATION

M del	Model Designation
Catalina	21
Star Chief	24
Bonneville Safari (Station Wagon)	27
Bonneville	28

SERIAL & ENGINE NUMBER: Stamped on plate on left front door hinge pillar post and on triangle pad on front of right bank of engine (See also Engine Production Code Number below) Number (example below) includes identification data as follows

① ② ③ ④
1 59 P 1001

① - Model 1 - 21, 4 - 24, 7 - 27, 8 - 28 *See Table above*

② - Model Year - 1959

③ - Assembly Plant **P** Pontiac, **C** South Gate, **W** Wilmington, **F** Framingham, **K** Kansas City, **L** Linden, **A** Atlanta, **T** Arlington

④ - Beginning vehicle number for each prefix combination

Engine Producti n Code Number: Near right edge of timing chain cover (early cars), on same location as Serial & Engine Number (later cars – see above) *Do not confuse this number with Serial & Engine Number*

►*ENGINE IDENTIFICATION NUMBERS AND LETTERS·* Twenty-two different engine combinations used Symbols identifying engines and components as follows

D cal (Early Cars) - Indicates various engines components and other equipment combinations Located on carburetor side of left rocker arm cover

Code L tters (Later Cars) - Same as decal above but stamped in front of Engine Production Code Number

E - Indicates 420-E economy engine Stamped on front face of right cylinder bank on upper left (inboard side), and cast also on intake manifold following manifold casting number

4 - Indicates 4-bolt main bearing caps In same location as E above

L - Indicates 8 6-1 compression ratio Stamped on front face of right cylinder bank next to timing cover

X - Indicates 7 8-1 export compression ratio *In same place as L above*

X - Indicates 10 5-1 compression ratio Stamped on one of cast pads on cylinder head near center exhaust port *Do not confuse with 7 8-1 X*

O - Indicates heavy duty valve springs Stamped in same place as 10 5-1 X

TUNE-UP

►*TRIPLE CARBURETOR ENGINE CUTTING OUT AT WIDE OPEN THROTTLE CORRECTION (EARLY)* If interference occurs between front to rear carburetor link and ignition coil resistor terminal with throttle wide open, remove resistor and coil, and straighten coil mounting bracket front tab so that resistor can be positioned to eliminate interference with throttle link

COMPRESSION PRESSURE· (8 6-1 ratio) 160–170 lbs , (10 0-1 & 10 5-1 ratios) 200-210 lbs at cranking speed of 155-165 RPM Lowest cylinder must not be less than 80% of highest cylinder

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters

MANIFOLD HEAT CONTROL: Thermostatic coil type in right exhaust manifold outlet Valve must operate freely

►*MANIFOLD HEAT CONTROL PRODUCTION CHANGE (4-Bbl Carb Cars)* To correct fast idle cam not releasing fully in cold weather and for general improved operation, new thermostatic coil spring has been installed effective Engine Production Number 20345 Earlier cars with new spring have daub of white paint on right cylinder head New spring, Part No 531972, identified in **free position** by outer tang being 154°±6° counterclockwise from horizontal line through inner tang at 70°F

IGNITION

►*ENGINE MISS IN COLD WEATHER CORRECTION* Caused by oxidized distributor contact points To correct, install a new set of points and a new Coil Resistor, Delco-Remy No. 1933400 Resistor has 1 8 ohm capacity and is of light blue ceramic material

FIRING ORDER: 1-8-4-3-6-5-7-2

Cylinders - RIGHT BANK 2-4-6-8 LEFT BANK 1-3-5-7

SPARK PLUG GAP· 033- 038" Set at 035"

Spark Plugs - AC No 45S (AC No 44 on Police Cars) 14 mm Torque to 25 ft lbs

COIL: Delco-Remy 1115118

Ignition Current - 1 2 amps idling, 3 5 amps stopped

Resistor - Delco-Remy 1944395 1 40-1 62 ohms

►*COIL RESISTOR NOTE* Connected in lead between ignition switch and coil Bypassed during cranking by second lead from ignition switch to coil side of resistor

►*RESISTOR INTERFERENCE NOTE (3 Carb Cars)* Resistor may interfere with front-to-rear carburetor link To correct, straighten coil mounting bracket front tab so resistor can be repositioned

DISTRIBUTOR· Delco-Remy 1110941 (First 7000 Cars except 420E Engine), 1110943 (All 420E Engines and All Cars after first 7000) *See "Delco-Remy Window Distributors in Electrical Section*

Condenser - Delco-Re my 1932004 **Capacity** 18- 23 mfd

Contact Point Set - Delco-Remy 1931988

Breaker Gap - Gap (016") will be correct when cam angle correctly set

Cam Angl - 28-32° Set at 30° Will give 016" breaker gap

Br aker Arm Spring T nsi n - 19-23 ozs

R tati n - Counterclockwise viewed from above

Automatic Advanc

Degrees Distr	RPM	Degrees Eng.	RPM
Start	400	0-4	800
4-6	750	8-12	1500
7-9	1000	14-18	2000
8-10	1450	16-20	2900

Vacuum Spark Control: Delco-Remy 1116147 (1110941 Distr), 1116136 (1110943 Distr)

Vacuum Advance - 1116136

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6-8
10	20	13-15

Vacuum Advance - 1116147

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	7-9
9	18	12 75-15 0

IGNITION TIMING

Setting - 6° BTDC *CAUTION* - Set timing with engine at operating temperature and idling at indicated RPM **with vacuum line disconnected.**

►*IGNITION TIMING NOTE* The above timing setting (6° BTDC) is for operation on regular fuels (8 6-1 ratio engine), and for premium fuels (10 0-1 & 10 5-1 ratio engines) Under no circumstances should ignition timing be retarded to allow for use of regular fuel in a 10 0-1 or 10 5-1 engine, or retarded later than 0° for any reason

Timing Marks - Two marks on harmonic balancer, TDC and 6° BTDC Pointer on timing sprocket cover aligned with correct mark on harmonic balancer

CARBURETOR

►*CARBURETOR APPLICATION Carter and Rochester carburetors used as follows*

Model	Carburet r
Catalina & Star Chief Std	One Rochester 2-Bbl
Catalina & Star Chief Optl	One Carter 4-Bbl
420E Engine Option	One Rochester 2-Bbl
Bonneville	One Carter 4-Bbl
Special Option (420A Engine)	One Carter 4-Bbl
Special Option	Three Rochester 2-Bbl

CRUISE CONTROL: *See Pontiac Magi-Cruise in Carburetion Section*

►*FAST IDLE CAM NOT RELEASING FULLY CORRECTION See "Manifold Heat Control Valve Production Change" under TUNE-UP above*

►*ERRATIC THROTTLE RETURN CORRECTION* Install accelerator control return spring in second (middle) hole of bracket on dash *NOTE* - Effective Engine Production No 113971, this change made on all cars in production

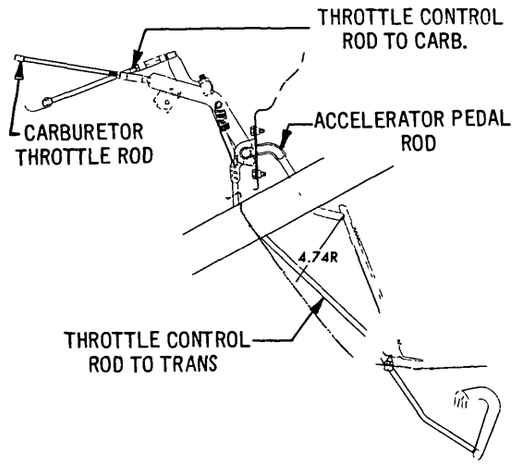
►*THROTTLE LINKAGE PRODUCTION CHANGES FOR IMPROVED PERFORMANCE* Effective Engine Production No 113971, the following changes were made 1) Accelerator pedal height increased from 4 7/8" to 5 3/16"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

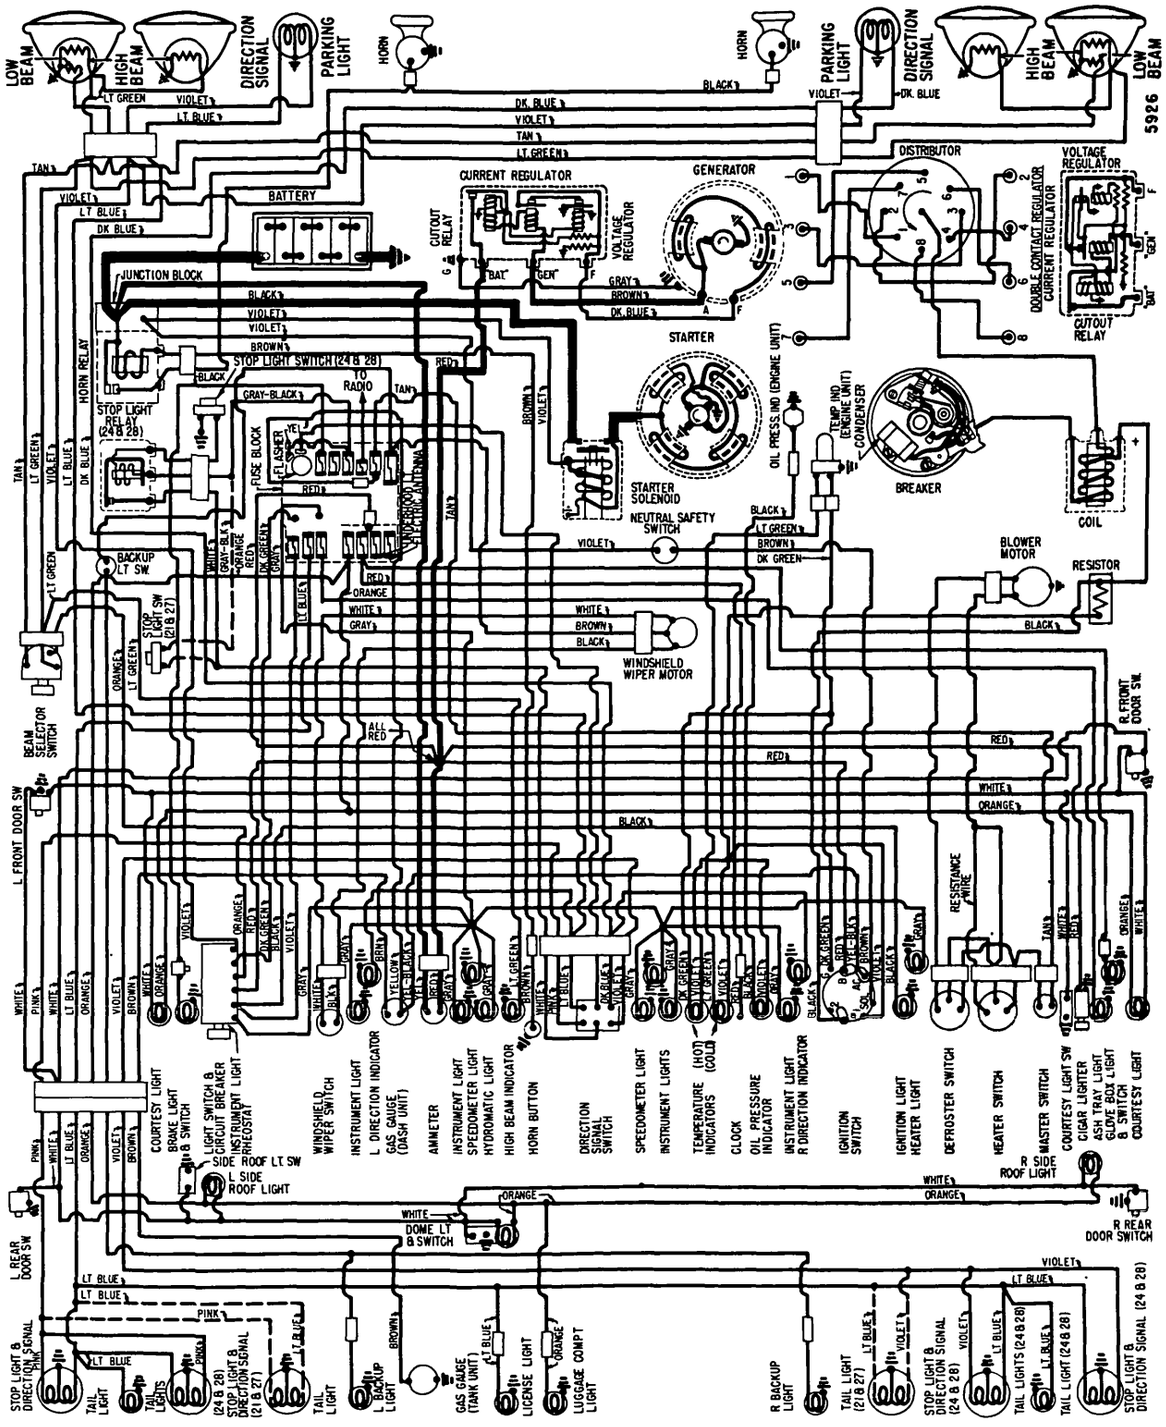
2) Longer carburetor throttle rod on 4-barrel cars. Rod identified by black finish.

3) New extension assembly to relocate pivot stud at carburetor on 4-barrel cars.



4) New Throttle Return Check with shorter actuating screw (needed because of new extension).

CAUTION - The above parts MUST NOT be interchanged with early parts.



THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC CARS): With engine and transmission at normal operating temperature, idle speed correctly set *(see carburetors below)*, proceed as follows: Loosen both nuts on transmission throttle control rod trunnion. Stop engine and install Linkage Adjusting Pin J-7687 through holes in throttle control lever and bracket. *NOTE - On 4-barrel carburetor cars, remove throttle return check or install Holding Tool J-6342-01 over return check.* Close throttle valves fully and loosen locknut on transmission throttle control rod. Adjust length of rod so pin will enter holes freely. Tighten locknut, but leave pin in place. Push transmission throttle control rod down until throttle control outer lever reaches end of its travel. *CAUTION - Upper locknut must not touch trunnion.* Hold rod and tighten upper and lower trunnion locknuts finger tight. Then shorten rod by backing off lower nut 2½ turns. Tighten upper nut securely. Remove gauge pin. Loosen locknut on carburetor throttle rod and adjust rod so there is 4 7/8" (early cars), 5 3/16" (later cars - see *"Production Changes" above*) clearance between spherical end of pedal rod (at accelerator pedal) and floor pan.

THROTTLE RETURN CHECK ADJUSTMENT (Cars with Hydra-Matic and 4-Barrel Carburetors): Make carburetor fast idle adjustment, then stop engine. Rotate fast idle cam so that fast idle screw rests on highest

CONTINUED ON NEXT PAGE

PONTIAC HYDRA-MATIC THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

step of fast idle cam Clearance between contact screw and contact on throttle lever should be 093" (use a 3/32" drill rod as a gauge). Adjust by turning contact screw *CAUTION - Hold sleeve next to diaphragm bracket from turning while making adjustment*

ROCHESTER 2GC 2-BARREL

Car Mod l	Rochester No.
Early 420E Engine (Hydra-Matic)	7013069
Later 420E Engine (Hydra-Matic)	7015062
Early Standard Engine (Hydra-Matic)	7013061
Later Standard Engine (Hydra-Matic)	7015070
All 420E Engines (Synchro-mesh)	7013075
All Standard Engines (Synchro-mesh)	7013060

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barr l f ds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7*

►*ROCHESTER 2GC FLOAT PRODUCTION CHANGE & FLOAT LEVEL SETTING CAUTION (7013060 & 61 Carb)* Later carburetors (with letter "K" punched in brass tag or code dated "B9" or later) have floats with different buoyancy and require different float setting *See Float Setting below*

►*ROCHESTER 2GC METERING JET SIZE PRODUCTION CHANGES (7013069 & 75 Carb) See "Rochester 2GC" Carburetors and Jet Specifications in Carburetion Section*

Idl S tting - Initial setting 2 turns open from a lightly seated position Turn screws out for richer mixture

Idl Sp d - 480-500 RPM Synchro-mesh & Hydra-Matic in either "DR" position, 540-560 RPM Air Conditioning "OFF" and Hydra-Matic in either "DR" position

►*IDLE SPEED ADJUSTING NOTE (Cars with 'Idle Air Bypass" Type Carburetors)* As a preliminary setting open idle air bypass screw 2 turns from a lightly seated position, then with engine at normal operating temperature, choke fully open, adjust idle air screw to obtain proper engine RPM (see above) Adjust mixture screws for highest engine RPM, then reset idle air screws for proper idle speed *NOTE* - Recheck idle mixture setting after adjusting idle air screws

Fl at L v l (7013060, 61, 70) - With air horn inverted, gasket in place and needle seated, there should be 11/16"±1/16"(Early Carbs - Gauge BT-160), 5/8"±1/16" (Later Carbs - Gauge BT-173) between bottom of float seam at toe end and air horn gasket Later carburetors can be identified by "K" stamped in brass tag or by "K" stamped in brass tag or by date code number "B-9" or later

Fl at L v l (7013069, 62, 75) - With air horn inverted, gasket in place and needle seated, there should be 11/16"±1/16" clearance between bottom of float seam at toe end and air horn gasket Use Gauge BT-169

Fl at Dr p (All Models) - 1¾" minimum from gasket on cover to bottom of float at free end with float hanging freely below bowl cover *(NOTE* - This setting supersedes 'earlier specification of 1 29/32") Use Gauge BT-160 or BT-173 (7013060 & 61 Carb), BT-169 (7013069 & 75 Carb)

Fast Idl (7013060, 61, 70): 037" (Gauge BT-170) With hot idle speed and mixture properly adjusted, move fast idle cam so highest step is under end of fast idle screw Adjust fast idle screw to obtain an engine speed of 2700 RPM

Fast Idl (7013069, 62, 75): No separate adjustment required (will be correct when engine idle speed set)

Automatic Choke Setting: Centered at index

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA: See "Rochester 2GC Carburetors" in Carburetion Section*

CARTER AFB 4-BARREL

Carter AFB No. 2819S (Early Hydra-Matic), 2976S (Later Hydra-Matic), 2820S (All Synchro-mesh).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls 2-3-5-8, LEFT barrels feed 1-4-6-7.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air Bypass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed on slow idle*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

TRIPLE CARBURETORS (Rochester 2G & 2GC)

	Rochester Carburetor No.		
Engine & Trans.	Front	Center	Rear
Synchro-mesh	7013063	7013067	7013065
Hydra-Matic	7013063	7013064	7013065

Idle Speed - Same as conventional carburetors (see above)

For complete adjustment data on these carburetors (including linkage adjustment to insure correct synchronization) see "Rochester 2G & 2GC" in Carburetion Section

CARB. EQUIPMENT

Fuel Pump: AC No 4480 Fuel only

Pressure - 5¼-6½ lbs at 450-1000 RPM

See "Fuel Pumps" in Carburetion Section

Fuel Filter: Two used, one as part of Fuel Gauge Tank Unit, the other at inlet side of carburetor

Gasoline Gauge: AC Electric type

Dash Unit - AC No 5640287

Tank Unit - Used as follows

Model	AC No.
All (Exc Sta Wgn & Air Cond)	5640329
All Air Cond (Exc Sta Wgn)	5640330
Sta Wgn (6 Pass Type, Exc Air Cond)	5640209
Sta Wgn (9 Pass , Exc Air Cond)	5640357
Sta Wgn (6 Pass , Air Cond)	5640210
Sta Wgn (9 Pass , Air Cond)	5640358

See "Fuel Gauges' in Carburetion Section

Air Cleaner· Oil wetted type standard (except 3 carb cars) Dry filter element type standard on 3 carb cars, optional on others

►*DRY CLEANER CAUTION Replace element every 15,000 miles or sooner if needed DO NOT clean, shak , oil, or re-use*

BATTERY

Delco. Used as follows

Synchro-m sh Cars - 2SMR53, No. 458. 12 volt, 9 plate, 53 ampere hour capacity (20 hr rate) *NOTE* - Air Conditioned cars use 558 battery

Hydra-Matic Cars - N . 558. 12 volt, 11 plate, 63 ampere hour capacity (20 hour rate) *NOTE* - All cars equipped with air conditioning use 558 model battery regardless of engine or transmission

Extra Duty Battery - 3SMR72, No 670, 12 volt, 11 plate, 72 ampere hour capacity (20 hour rate)

Battery Ground - Negative, to battery support bracket and engine

Engine Ground - Battery ground extends from battery to battery support bracket and engine

STARTER

Delco-Remy No. 1107661 (Synchro-mesh), No. 1107735 (Hydra-Matic). *NOTE* - Starter 1107735 used on Synchro-mesh cars Decal 532972, 77, 79, 81 and Code Letters G, FP, AL, AN, and all Air Conditioned Cars

Armature - Delco-Remy 1932185 (1107661), 1941888 (1107735)

Drive - Overrunning clutch (solenoid pinion shift)

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs minimum

Performance Data - 1107661

Torque	RPM	Volts	Ⓒ Amperes
0 Ft lbs	3600-5100	10 6	65-100
	Lock	3 5	300-360

Performance Data - 1107735

Torque	RPM	Volts	Ⓒ Amperes
0 Ft lbs	4700-5400	10 6	80-120
	Lock	2 0	290-370

Ⓒ - Includes Solenoid

Starting Switch: Delco-Remy Solenoid No 1119798 (Synchro-mesh), No 1118811 (Hydra-Matic) mounted on starter and controlled by Ignition & Starter Switch

Neutral Safety & Back-up Light Switch: Delco-Remy No 1998705 located at lower end of steering column Connected in starter circuit so that starter operates only when selector lever is in "N" or "P" positions

Adjustment - *See "Dual - Coupling Hydra-Matic Drive" in Transmission Section*

GENERATOR

Delco-Remy 1102142 (Std. Early), 1102163 (Std.Late), 1102164 (Std. Later), 1102143 (Air Cond. & H.D.).

Armature - Delco-Remy 1923535 (1102142 Gen), 1939837 (1102143 Gen)

►*STANDARD GENERATOR PRODUCTION CHANGES.* Different generators used in production as follows **1st Type (Part No. 1102142)** has sleeve bearing in an aluminum end frame **2nd Type (Part No. 1102163)** has a ball bearing in a cast iron end frame **3rd Type (Part No. 1102164)** has a ball bearing and an aluminum end frame Armatures for second and third types are hollow with different diameter and length to accommodate ball bearing *Electrical specifications for ALL generators are the same*

►*GENERATOR 1102142 (BUSHING TYPE) CONVERSION TO BALL BEARING TYPE* Install all parts furnished in package, No 1948320 (Commutator End Frame Assembly, Bearing Adapter, Ball Bearing, Washer, and rivets) *When this conversion made, install new name plate designating generator as No 1102163*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*GENERATOR SHORT CORRECTION:* Short may occur when brown wire is caught between end of battery terminal screw and fender skirt. Correct by repairing punctured insulation and rerouting wire. Grind terminal screw down.

►*GENERATOR HUM CORRECTION:* Heater hose support No. 534681 replaces No. 533687 in cases where generator hum is objectionable. *NOTE* - It is not necessary to disconnect hose. Spread loop on bracket and fit over hose.

►*CHARGING CIRCUIT FUSE CAUTION: A fuse may be installed in charging circuit at battery terminal of regulator. Check for blown fuse when diagnosing Generator, Battery, or Regulator trouble. For installation of this fuse on cars not so equipped, see "Chassis Wire Harness Shorts Correction" under MISC. ELECTRICAL below.*

Performance Data

Generator	Amperes	Volts	RPM
1102142	30	14.0	2240
1102163,4	30	14.0	2240
1102143	45	14.0	2520

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 28 ozs.

Field Current - 1.69-1.79 amps (1102142, 163, 164), 2.66-2.86 amps. (1102143) at 12 volts and 80°F.

Belt Adjustment: Std. - ¼ deflection with approximately 5-6 lbs. pressure midway between pulleys; or 70-75 lbs. pressure with Burroughs Gauge.

REGULATOR

Delco-Remy 1119001 (Std.), 1119600 (Air Cond. & H.D.). *NOTE - Regulator 1119600 is "Double Contact" type.*

►*NOTE: Specifications below are "Normal" settings.*

►*CHARGING CIRCUIT FUSE CAUTION: A fuse may be installed in charging circuit at battery terminal of regulator. Check for blown fuse when diagnosing Generator, Battery, or Regulator trouble. For installation of this fuse on cars not so equipped, see "Chassis Wire Harness Shorts Correction" under MISC. ELECTRICAL below.*

Cutout Relay

Cuts In - 11.8-13.5 volts (1119001), 11.8-13.0 volts (1119600), hot.

Contact Gap - .020".

Air Gap - .020" with contacts just closed.

Voltage Regulator

Setting (1119001) - 13.8-14.8 volts at ambient temperature of 125°F.

Setting (1119600) - 13.8-14.6 volts at ambient temperature of 125°F operating on upper contacts. .1-.3 volts lower operating on lower contacts.

Contact Gap (1119600) - .016".

Air Gap - .075" (1119001), .067" (1119600) with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy Double Contact Regulators" in Electrical Section.*

Current Regulator

Setting (1119001) - 27-33 amperes (hot).

Setting (1119600) - 38-45 amperes (hot).

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy Double Contact Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*CHASSIS WIRE HARNESS SHORTS CORRECTION:* To eliminate damage to any wiring harness resulting from sticking cutout relay points, mount fuse No. 1945171 (copper colored mounting screw and brown ceramic insulator) on battery terminal of regulator. To install, remove screw and wire keeper from "Bat" terminal of regulator. Attach fuse to terminal using long screw extending through fuse assembly. Attach the disconnected lead to terminal of fuse.

Headlamps: Dual headlights (4-Headlight System) Std. *See "4-Headlight System" in Electrical Section.*

Direction Signal: *See Electrical Section. NOTE* - Direction signal switch mounted on steering column just below instrument panel bracket.

Autronic Eye: *See Electrical Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "ON" position. Push latch button on side of switch assembly and pull out switch knob assembly Screw bushing from switch assembly allowing switch to be removed from instrument panel.

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-up Light Switch: Located on steering column and actuated by gearshift lower lever.

►*BACK-UP LIGHT FAILURE CORRECTION ON SYNCHRO-MESH CARS:* Cause may be improper positioning of switch on steering column. If actuating lever does not contact switch lever or move it to ON position when shift lever is in reverse, correct by loosening switch attaching screw and moving switch clockwise on steering column until proper contact is made by levers to operate lights. Tighten switch screw. If levers still do not make sufficient contact to operate switch after repositioning, bend actuating lever as required to operate lights. After adjustment make sure movement of shift lever into second does not actuate switch.

CIRCUIT BREAKER: 22 Ampere - Headlights, Parking lights, High Beam Indicator. On lighting switch.

FUSES: *NOTE - All fuses located in fuse block inpassenger compartment, on left side of car.*

25 Ampere - Back-up lights, Windshield Wiper & Washer. *NOTE - Windshield wiper motor also has an internal circuit breaker.*

14 Ampere - Tail & License lights..

14 Ampere - Dome, Courtesy & Trunk lights.

14 Ampere - Direction Signals & Indicator and Stop lights.

14 Ampere - Ash Tray & Cigar Lighter lights.

14 Amp r - Parking Brake Warning light.

14 Amp r - Heater Blower Motor & Speedometer Warning Control.

14 Amp r - Glove Box light & Clock.

14 Amp r - Spotlight & Underhood light.

4 Ampere - Lighting Rheostat and ALL instrument panel and dial lights.

Cigar Lighter - Fuse or circuit breaker on forward end of lighter housing.

Horn Relay: Delco-Remy 1116970

Air Gap - .014". **Point Opening** - .027".

Closing Voltage - 5.0-9.5 volts

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for Access to Engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8, valve-on-head. All engines are basically the same with modifications and optional equipment as indicated. *See "Engine Identification Numbers and Letters" under MODEL IDENTIFICATION above. Reference will be made to Decal or Letter Code to indicate on which engines various items will be found.*

►*420A ENGINE NOTE:* These engines are Decal 532979, 72, 77, 81 & Letter Code AL, AN, AK, AM.

►*420E ENGINE NOTE:* These engines are Decal 531936 & Letter Code ES, ET, ER.

Engine	Bore	Stroke	Displacement	Rated HP
All	4 1/16"	3 3/4"	389 cu. in.	52.8

Engine ①	Compr. Ratio	Developed HP
420E (2-bbl., H-M) ②	8.6-1	215 at 3600 RPM
Std. (2-bbl, S-M) ③	8.6-1	245 at 4200 RPM
Std. (2-bbl., H-M) ④	10.0-1	280 at 4400 RPM
Std. (4-bbl., S-M) ⑤	8.6-1	260 at 4200 RPM
Std. (4-bbl., H-M) ⑥	10.0-1	300 at 4600 RPM
Std. (3 Carbs.) ⑦	10.5-1	315 at 4600 RPM
420A (4-bbl., S-M or H-M) ②	10.5-1	330 at 4800 RPM
420A (3 Carbs.) ⑦	10.5-1	345 at 4800 RPM

① - S-M - Synchro-mesh; H-M- Hydra-Matic.
② - Optional on all cars.
③ - Catalina & Star Chief Std.
④ - Catalina & Star Chief Optl.
⑤ - Bonneville Std. ⑥ - Bonneville Optl.

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove air cleaner and engine fan. On air suspension cars, drain radiator and remove upper radiator hose. Drain crankcase. Disconnect exhaust pipes at manifolds. On single exhaust system, disconnect crossover pipe. Remove two rear oil pan screws holding flywheel housing front shield to cylinder block. Remove shield from housing. Remove crankcase ventilator pipe and cleaner. Remove flywheel housing lower cover. Disconnect clutch linkage. Remove frame bolts from right idler arm bracket. Remove front and rear engine mount-to-frame nuts. Loosen Hydra-Matic oil filler tube bracket. Raise engine at bell housing so there is 3¾-4" clearance between oil pan and rear upper

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

edge of engine support crossmember Remove oil pan screws and remove pan

CYLINDER HEAD: *Se "Cylinder Head & Manifold" in Pontiac Sp cial Data.*

►*CYLINDER HEAD REMOVAL NOTE:* On cars with defroster No. 7 pushrod cannot be removed. Raise pushrod and tape it in place, then remove pushrod with cylinder head.

Ch k Heat Tube Replacement - *See "Cylinder Head & Manifold" in Pontiac Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Sp cial Data.*

PISTONS

Aluminum alloy, tin plated, with steel band for added strength and to control expansion. Pin is offset to right side of engine 1/16".

►*PISTON NON-INTERCHANGEABILITY CAUTION.* Different pistons used in Low (8.6-1) & High (10.0-1 & 10.5-1) compression engines identified as follows Low compression piston heads dished or recessed and pistons marked "L" on rear side near pin boss (do not confuse this mark with two "F" marks on opposite pin boss indicating front side of piston). High compression pistons have flat head *PRODUCTION CHANGE NOTE* - Pistons on later engines have cast relief below oil ring groove but are completely interchangeable with earlier type

Removal - Pistons and rods removed from above

Replac m nt Pist ns: Furnished Std (4 061", 4,062" & 4 063"), and 005", 010", 020", 030" Oversize in both Flat Top or Recessed Head

Fitting New Pistons: Clearance is 0007- 0017" at bottom of skirt (exc 420A & Police Cars - 0022-.0027") Fit pistons using 0015" feeler ½" wide With piston and cylinder wall clean and dry, pull to withdraw feeler should be 8-15 lbs (for 0007- 0017" clearance)

Installing Pistons: Install pistons with notch in piston head and "F" mark at piston boss toward front of engine. *S e Rod Installation.*

PISTON PINS

Pin is press fit in rod

Diamet r - 9800 9804" **Length** - 3 25"

Pin Fit in Piston 0003- 0005" loose with piston bosses and pin clean and dry *NOTE* - Piston and pin must be at room temperature and pin must fall from piston by its own weight

Pin Fit in Rod - 0008- 0016", press fit

Piston Pin Removal & Installation - See *"Piston Pins" in Pontiac Special Data*

R plac m nt Pins: Furnished in Std 001" 003" Oversize

PISTON RINGS

Upper compression ring is chrome plated, lower compression ring is lubrited Top compression ring is taper faced and has a step or chamfer on inside diameter of top side Lower compression ring may have step or chamfer on inside diameter of top side Oil ring has chrome plated rail faces

Ring	Width	End Gap	Side Clearanc
Compr (1)	078"	016 026"	0015- 0030"
Compr (2)	078"	013 025"	0015- 0035"
Oil (3)	184"	015 035"	0015 0085"

Installing Rings - "T" dot or "TOP" marks toward top of piston

Replacem nt Rings. Std 005" 010" 020" and 030" Oversize

CONNECTING ROD

Length - 6 63" (center to-center)

Crankpin Journal Diameter - 2 2492-2 2502"

Lower Bearing - Durex 100A, steel-backed, replaceable precision type, no shims

Clearance - 0005- 0025"

Sideplay - 006 011"

Replacement Bearings: Std , 001" and 002" Undersize

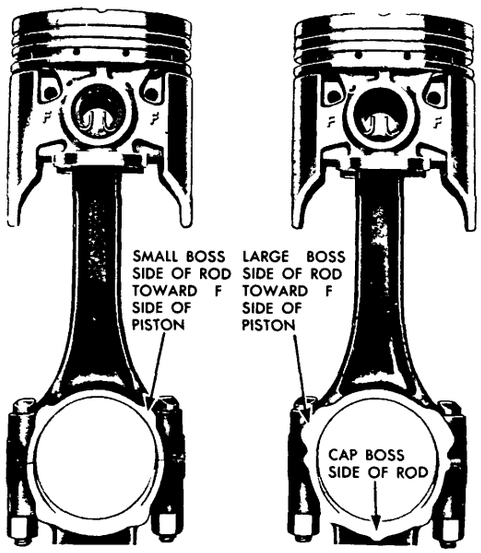
Installing Rods: Pistons have "F" marks and one notch (10 0-1 & 10 5-1 ratios) two notches (8 6 1 ratio) on front Install rods so that LARGE machined boss at lower end of rod on same side as "F" mark and notch in piston (Left bank cyls 1-3 5-7), on opposite side of piston from "F" mark and notch (Right bank cyls 2-4-6 8) Install assemblies in engine with "F" marks and notches on piston toward front of engine and oil groove in lower end of rod toward center of engine

CRANKSHAFT

Journal Diameter - 3 000" Five bearings

Bearings - Durex 100A, steel-backed inserts, precision type, no shims

Clearance - 0005- 0025" (Front), 0005- 003" (All Others)



End Thrust: Taken by No. 4 (rear center) main bearing.

End Play - .0035-.0085".

Replacement Bearings: Furnished Std. and .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Pontiac Special Data.*

PONTIAC PISTON & R D ASSY.

Vibration Damp ner R moval & Installati n: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION & APPLICATION NOTE* Different camshafts used and identified by number stamped on end of shaft as follows **Synchro-mesh Camshaft** - 0 **Hydra-Matic Camshaft** - 4 (Used on some synchro-mesh cars Decal 532972, 79, Code Letters G & FP) **420A Camshaft** - 6 (Decal 532977,78, 81, 82, Code Letters AL, AN, AK, AM) **420E Camshaft** - 1 (Decal 531936, Code Letters ES, ET, ER)

Journal Diameter - 1 8987-1 8997" Five bearings

Clearance - 0015- 003"

End Thrust - Taken by thrust plate behind camshaft sprocket

Endplay - 003- 007"

Timing Chain: Length - 60 links **Width** - 1" **Pitch** - 375"

►*TIMING CHAIN REMOVAL CAUTION* **Do not rotat crankshaft with timing chain out of engine** Damage to valves pistons or both will result due to piston striking valve To rotate camshaft with timing chain off, crankshaft must be positioned so pistons are 45° before or after TDC to avoid damage

Camshaft Setting: Both sprockets marked "O" Mesh chain with sprockets turned so that marks are adjacent and in line across shaft centers

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data*

Engine Front Cover Removal: *See "Engine Front Cover" in Pontiac Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data*

VALVES

►***1959-EARLY 1960 PONTIAC INTAKE VALVE VENT NOTE:*** **To prevent excessive wear caused by abrasives entering the small holes drilled in cylinder head (to vent the intake valve guides), the manufacturer recommends that a tapered steel plug, Part No. 534989 be installed. Insert plugs in vent holes (4 per head) and tap in flush with casting. On air conditioned cars it is not necessary to install a plug in vent hole located under the compressor. Later 1960 engines (after Oct. 15, 1959) will not have the vent holes.**

Tappet Clearance· Zero lash, hydraulic lifters

Valve	Head Diam	Stem Diam.	Length
Intake	1 88"	① 3407- 3414"	③ 5 28"
Exhaust	1 60"	② 3402- 3409"	④ 5 27"

Valve	⑥ Seat Angle	Lift	Stem Clearanc
Intake	30°	⑤	0016- 0033"
Exhaust	45°	⑤	0021- 0038"

① - Supersedes 3412- 3419"
② - Supersedes 3407- 3414"
③ - 3 Carbs & 420A Eng 5 33"
④ - 3 Carbs & 420A Eng 5 31"

⑥ - **Face Angle - 29° Intake, 44° Exhaust**

Valve Seat Width - Intake 3/64-1/16", Exhaust 1/16"

Replacement Valv s - Furnished Std and 001" (Yellow), 003" (Red), 005" (White) Oversize Color inked on top of valve head

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Stem Oil Seals: Used on all valves as follows:
Oil Shield - Inverted cup over upper end of outer valve spring (under spring retainer cup). *Omitted on 420A Engines.*
Oil Seal - Neoprene seal installed in second groove on valve stem (under valve locks).

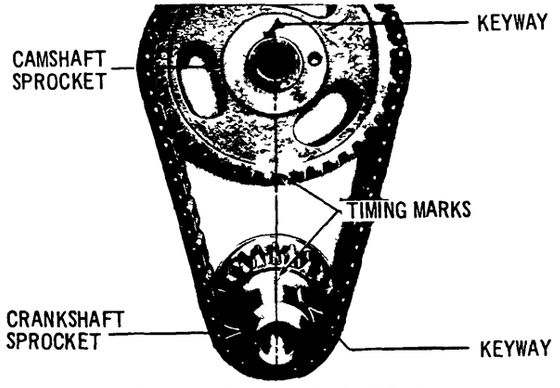
Valve Stem Length Checking: *See "Valve System" in Pontiac Special Data.*

Valve Springs: Inner and outer springs used on all engines.

Spring Specifications - 420E Eng. Camshaft

Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
Open 57 lbs..	1.15"	Open 104 lbs.	1.19"
Closed 26 lbs.	1.48"	Closed 60 lbs.	1.52"

Spring Specifications - Synchro-mesh Camshaft



Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
Open 60 lbs.	1.11"	Open 109 lbs.	1.15"
Closed 26 lbs.	1.48"	Closed 60 lbs.	1.52"

Spring Specifications - Hydra-Matic Camshaft

Closed 32 lbs.	1.48"	Closed 62 lbs.	1.52"

PONTIAC VALVE TIMING MARKS

Valve Guides: Cast integral with cylinder head. When valve stem clearance excessive, ream guides using Valve Guide Reamer J-5830-1 (.003"), J-6621 (.005"). *NOTE* - When installing .005" oversize valves, use .003" reamer first then follow with .005" reamer and always reface valve and valve seat after reaming valve guide.

Valve Stem Clearance in Guide: 0016-.0033" (Intake), 0021-.0038" (Exhaust). Oversize reamers ream guide to provide these clearances

►*VENTED INTAKE VALVE GUIDE:* Intake valve guide vented to atmosphere near upper end by hole drilled through head Valve stem is relieved at this point.

Hydraulic Lifters: Standard on all models.
Diameter - .8424-.8427" **Length** - 2".
Clearance in Lifter Boss - .0013-.0028".
Hydraulic Lifter Overhaul - *See "Valve System" in Pontiac Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Installation of Rocker Arm to Stud - Tighten rocker arm stud nut to 15–25 ft. lbs. torque. This will insure correct position of rocker arm in respect to pushrod and valve stem.

Rocker Arm Stud Replacement - *See "Valve System" in Pontiac Special Data.*

Rocker Arm Lubrication: Oil from cylinder head oil galleries flows through hollow rocker arm studs to 1/16" hole at upper end of stud to lubricate ball seat and flows through groove in ball to fill rocker arm. Oil flows from hydraulic lifter boss through hollow pushrods for pushrod end lubrication.

Oil Passage Plug Removal & Installation - With rocker arm cover removed, insert easy-out in hole in plug, turn counterclockwise and pull out. Coat plug with gasket paste and drive in place with flat piece of metal or hard wood until plug is flush with outer surrounding surface.

VALVE TIMING

See Camshaft Setting under CAMSHAFT above.

420E Engine Camshaft
Intake Valves - Open 14° BTDC. Close 58° ALDC.
Exhaust Valves - Open 48° BLDC. Close 24° ATDC.

Synchro-mesh Camshaft
Intake Valves - Open 22° BTDC. Close 67° ALDC.
Exhaust Valves - Open 63° BLDC. Close 27° ATDC.

Hydra-Matic Camshaft
Intake Valves - Open 30° BTDC. Close 63° ALDC.
Exhaust Valves - Open 77° BLDC. Close 25° ATDC.

420A Engine Camshaft
Intake Valves - Open 29° BTDC. Close 74° ALDC.
Exhaust Valves - Open 82° BLDC. Close 31° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Pontiac Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. when changing filter element.

Normal Oil Pressure: 30-40 lbs. at 2600 RPM.
Pressure Regulator - In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.
Pump Overhaul - *See "Oiling System" in Pontiac Special Data.*

Oil Filter: Full Flow type. Replace element every 15,000 miles or once a year. Use only AC PF-122 filter element.

Crankcase Ventilation: Filter element in oil filler caps in each rocker arm cover, and ventilator pipe at rear of engine. Clean filter elements every 2,000 miles by plunging in gasoline or kerosene. *NOTE* - Filter element for outlet pipe available as an accessory.

►*VENTILATOR OUTLET PIPE CAUTION:* If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed down into cover beyond the two locating points on pipe. Excessive oil consumption at high speeds will result.

Oil Pressure Indicator: Warning light on instrument panel controlled by pressure switch on engine. Light goes on when ignition turned on, goes out when oil pressure reaches 5 lbs.±1.5 lbs.
Engine Unit - AC Pressure Switch No. 1508753.

COOLING

Water Capacity: As follows:

Model	Capacity in Qts.
Synchro-mesh Std.	21.4
Synchro-mesh with Heater	22.4
Hydra-Matic Std.	21.3
Hydra-Matic with Heater	22.3
Hydra-Matic with Heater & Air Cond.	22.3

Pressure Valve: Radiator filler cap. AC No. RC-6 12-15 lb. type (Std.), No. RC-15 14-17 lb. type (Air Cond. Cars).

Thermostat: Pellet type. In water outlet passage in intake manifold. **170° Std. (Pontiac No. 3148225), 180° Optl. (No. 2149016), for use with permanent type anti-freeze.**

Water Pump: Packless, sealed double row ball bearing shaft. Serviced as an assembly.

Temperature Gauge: New two-light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes off when engine temperature reaches 113°±2°F, RED light remains off during normal engine operation but will come on when engine temperature reaches 238±2°F. *NOTE* - Red light will light up when ignition switch turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine is started). *See Miscellaneous Section.*
Engine Unit - Delco-Remy 1998189 (Std.- 238°), 1998707 (Air Cond. Cars - 244°).

CLUTCH

Borg & Beck. Pontiac No. 531842 (Std.), 532403 (Heavy Duty). Single plate, semi-centrifugal, dry disc type.
Driven Disc - Pontiac No. 531969 (All).

►*CLUTCH PEDAL STICKING CORRECTION:* Caused by forward end of clutch fork-to-countershaft control rod interfering with clutch housing. Correct by grinding off end of control rod assembly sufficiently to clear housing

►***1959 PONTIAC POWER-LOCK (PLATE CLUTCH TYPE) DIFFERENTIAL CLUTCH PACK REPLACEMENT NOTE:* Replacement clutch packs containing the new type "Belleville" (dished) plates are available in Kit, Part No. 535595 (two required). For installation procedures, see *"Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.***

Pedal Adjustment: Pedal free travel should be 5/8". To adjust, loosen adjusting nut locknut on clutch

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fork rod at clutch fork, turn adjusting nut to remove all freeplay (release bearing contacting clutch pressure plate levers), then back off adjusting nut 3½-3¾ turns which will provide correct free travel of 5/8". Tighten locknut to 60-120 in. lbs. torque. Check pedal height.

Pedal Height Adjustment - Top of pedal pad should be 6¼" above floor mat (*NOTE* - This is lowered setting for operating comfort – original setting of 6¾-7" may be preferred to maintain maximum pedal reserve). To adjust, loosen pedal rod upper trunnion jam nuts and adjust as required. Tighten jam nuts to 60-120 in. lbs. torque when adjustment completed. *NOTE - See Brake Pedal Adjustment also.*

Removal: Remove transmission (see "Transmission Removal" below) and clutch housing bottom cover. Disconnect return spring and remove fork and fork ball support. Remove release bearing. *CAUTION - Bearing lubricated for life. Do not degrease.* Mark cover and flywheel to maintain proper balance at reinstallation. Loosen cover bolts evenly one turn at a time, then remove. Move clutch assembly away from bottom of flywheel, remove driven member, then remove cover and pressure plate from car.

Clutch Installation Note - Position clutch disc so that long end of hub is in flywheel and cover assembly marks line up with marks on flywheel. Use spare transmission main drive gear in spline of driven disc to insure proper alignment and tighten cover bolts one turn at a time until tight. Coat entire outer diameter of release bearing support with high melting point wheel bearing grease. Do not overlubricate. Confine grease to inner diameter only of release bearing. Use new gasket and install support and bearing. Install bearing support spring washer. Coat release fork fingers and release fork ball fulcrum with same type grease and install fork. Lockwasher must be under screw fastening fork ball fulcrum to clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. Standard & Heavy Duty types. *NOTE* - Standard and Heavy Duty Transmissions are of different design. *See "Pontiac Synchro-mesh" in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Remove propeller shaft assembly (see *"Propeller Shaft Removal" below). NOTE - On heavy duty transmission front propeller shaft connected to yoke flange at transmission. On standard transmission yoke slides on main shaft.* Disconnect speedometer cable and control linkage. Remove upper mounting bolts and install Aligning Studs, Tool J-1126. Remove lower bolts and remove transmission by sliding on aligning studs until shaft clears clutch.

HYDRA-MATIC DRIVE

"Strato-Flight" Dual Coupling. Four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

Lubrication - Check fluid level every 2000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level - Check with transmission warm and engine idling with selector lever in "P" or "N" position. If fluid level is below lower ball of "dumbbell" marking on lower end of dipstick (marked "Add Oil"), add fluid to bring level up to upper ball of dumbbell (marked "Full - Hot Oil"). Approximately 1 pint required to raise level from lower ball to upper ball. DO NOT overfill. *NOTE* - If level checked with transmission COLD, fluid level should be approximately at lower end of dumbbell and should rise to upper ball as oil temperature rises.

Capacity - 9 qts. refill, 11½ qts. after overhaul.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual Coupling Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Saginaw. Needle bearing type. Three used.

►*CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload which must be readjusted whenever nut is loosened.

Replacement Universal Joints - Universal joints furnished with new propeller shafts. Universal joint repair kits and parts can be obtained separately.

Lubrication - Disassemble and repack every 25,000 miles.

See "Propeller Shaft Removal" below.

PROPELLER SHAFT

Two-piece propeller shaft with three universal joints used. Center bearing and support mounted on a bracket inside frame tunnel.

Removal: Loosen bolts holding center bearing and bracket to frame bracket. *CAUTION - Note number of shims under bracket and reinstall as found to insure proper alignment of propeller shaft.* Remove U-bolts and lock plates from rear axle drive pinion flange. On heavy duty transmission disconnect front universal joint from yoke flange at transmission. Hold bearings on journals with wire or rubber band. Remove stone and splash shield from front of frame tunnel. Remove complete drive line assembly by sliding rearward out of frame tunnel.

Propeller Shaft Alignment & Center Bearing Assembly: *See "Propeller Shaft Notes" in Pontiac Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear type. "Safe-T-Track" Differential is optional.

See "Pontiac Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

Axle Identification - Axle ratio indicated by **color** mark on end of axle shaft and by **code number** stamped on pad on differential carrier flange (lower right side). Safe-T-Track differential axles are identified by tag near oil filler plug.

Axle Ratios & Code Markings

Synchro-mesh Cars

Model	Ratio	Code No.	Color
Std. (Exc. 420A)	3.23-1 (42-13)	9	Brown
Std. (420A Eng.)	3.64-1 (40-11)		
Econ. Option	3.08-1 (40-13)	0	Yellow
Perf. Option	3.42-1 (41-12)	8	White

Hydra-Matic Cars

Std. (Exc. 420E)	3.08-1 (40-13)	0	Yellow
Std. (420E Eng.)	2.87-1 (43-15)	7	Orange
Econ. Option	2.87-1 (43-15)	7	Orange
Perf. Option	3.23-1 (42-13)	9	Brown

Backlash - .005-.009".

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line will be damaged). Pull shaft with Puller J-942-1 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Remove axle shafts and disconnect rear propeller shaft at companion flange. Drain oil, remove capscrews, and remove assembly.

►*CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut is loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, not refillable Serviced by replacement.

Shock Absorbers (Pontiac Nos.)

Model	Front	Rear
Sedans & Coupes (exc. Air Susp.)	5543750	5543751
Hardtop (exc. Air Susp.)	5543756	5543751
Station Wagon (Exc. Air Susp.)	5543756	5543754
Convt. (exc. Air Susp.)	5543757	5543758
Taxicab & Police (exc. Air Susp.)	5543757	5543758
Air Susp. Cars (exc. Convt.)	5543752	5543753
Heavy Duty (exc. Air Susp.)	5535591	Ⓒ 5535592

Ⓒ - Not used on Station Wagon models.

FRONT SUSPENSION

Independent. "Ball-joint" type with spherical ball joints between upper and lower control arms.

►***1959 PONTIAC "CRACKING" NOISE ON HARD TURN CORRECTION:* This noise can be eliminated by installing a piece of 5/8" heater hose filled with lubricant, over the stop on lower control arm. Cut hose long enough so it extends 1/16–1/8" beyond end of stop.**

See "Pontiac Front Suspension" in Suspension & Wheel Alignment Section.

Kingpin Inclination - 4°50' at 0° camber.

Caster - Neg. 1½°±½°.

Camber - Pos. ¼°±½°. Camber on left side should be ¼° greater than on right side.

Toe-In - 0" to 1/16" measured 9" above floor.

Toe-Out on Turns - With inner wheel turned 20°, outer wheel should be turned 19°.

REAR SUSPENSION

Coil springs with one upper and two lower control arms.

See "Pontiac Rear Suspension" in Suspension & Wheel Alignment Section.

AIR SUSPENSION

Rubber air springs replace all four coil springs. Optional on all models.

See "Pontiac Air Suspension" in Suspension & Wheel Alignment Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Manual Saginaw Ball Bearing Worm & Nut Recirculating ball worm and nut

►*1959 PONTIAC HARD STEERING (WITH BRAKES APPLIED) CORRECTION:* **Adjust steering column to instrument panel so the coupling pins extend 030—090" through the flex coupling. To do this, loosen jacket at instrument panel and locate it upward to provide the proper clearance.**

See Saginaw Ball Bearing Worm & Nut Steering Gear in Steering Section

Power Steering Saginaw (Rotary Valve) integral type *See Saginaw (Rotary Valve) Power Steering in Steering Section*

►*POWER STEERING DUST SEAL CHANGE TO CORRECT OIL LEAKS* To correct leaks at adjuster plug install new steering gear adjuster plug seal furnished in Service kit No 5687183 *See Saginaw (Rotary Valve) Power Steering in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See 'Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal· *See "Saginaw Ball Bearing Worm & Nut' in Steering Section*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment) Hand brake applies rear wheel service brakes
See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section

Drum Diameter - 11" front & rear
Master Cylinder Bore Diameter - 1"
Wheel Cylinder Bore - 1 3/16" (front), 1" (rear)
Braking Power - 58 5% Front, 41 5% Rear

Lining: Molded asbestos, riveted to shoes
Thickness - 220"

Lining Width & Length

Shoe	Front Wheel	Rear Wheel
Primary	2 5" x 9 29"	2 0"x9 29"
Secondary	2 5" x 11 94"	2 0"x11 94"

Clearance - Adjusting screw backed off 12 notches from point where wheel can just be turned by hand

Standard Master Cylinder: Forward of brake pedal on engine side of firewall

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" from gasket surface of filler neck

Power Brakes: New Bendix or Moraine Power Units
See "Bendix Hydraulic (Disc) Reaction Type" or "Moraine Hydraulic (Diaphragm) Reaction Type" Power Units in Brake Section

►*POWER BRAKE VACUUM CHECK VALVE BRACKET NOTE (Cars with 3 Carbs)* Bracket Part No 533680 with offset to provide clearance between check valve and hose and brake operating mechanism must be used

►*POWER BRAKE PEDAL HEIGHT CHANGE* Pedal height was raised from 3¼" to 3¾" to provide greater separation of brake and accelerator pedals

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" of top of filler cap opening

Removal of Power Unit - Disconnect pushrod at brake pedal vacuum hoses from vacuum exhaust tube, and pipe from master cylinder hydraulic port (cover all openings) Remove power cylinder from adapter plate on firewall

MISC. MECHANICAL

Windshield Wiper: Electric type Single-speed (with separate motor driven washer), or Two-speed type (with washer unit mounted on wiper motor)
See "Windshield Wipers" in Miscellaneous Section

Air Conditioning: Harrison *See "Air Conditioning" in Miscellaneous Section*

Power Top Control: Hydro-Lectric type *See "Power Top Controls" in Miscellaneous Section*

Power Window Regulators: Electric type with individual motor in each window Power rear window available on Station Wagons *See "Power Window Regulators" in Miscellaneous Section*

Power Seat Adjuster: Electric Six-way type with individual motor for each seat action (3 used) *See "Power Seat Controls" in Miscellaneous Section*

►*JACKING & HOISTING CAUTION (ALL MODELS) Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wh l Alignment Section*

►*STARTING CAR BY PUSHING CAUTION Car CANNOT be started by pushing because there is no rear oil pump in 1960 Hydra-Matic transmission*

MODEL IDENTIFICATION

S ri s	①Series Designation
Catalina	21
Ventura	23
Star Chief	24
Bonneville Safari (Station Wagon)	27
Bonneville	28

① - First two digits of series and body style designation following "60" year number under STYLE on body identification plate

SERIAL & ENGINE NUMBER: Stamped on plate on left front door hinge pillar post and on triangle pad on front of right bank of engine near water pump outlet hose (See also Engine Production Code Number below) Number (example below) includes identification data

① ② ③ ④
1 60 P 1001

① - Series 1 - 21, 3 - 23, 4 - 24, 7 - 27, 8 - 28
② - Model Year - 1960
③ - Assembly Plant P Pontiac, S South Gate, W Wilmington, K Kansas City, L Linden, D Doraville, A Arlington
④ - Beginning vehicle number for each prefix combination

Engin Pr ducti n C d Number: On triangle pad on front *of right bank of engine Do not confuse this number with S rial and Engine Numb r*

►*ENGINE IDENTIFICATION LETTER CODE* Twenty different engine combinations used Letter code (A2, P4 etc) stamped on small pad directly below Engine Production Code Number Letter code indicates various items of equipment used in a particular engine and will be listed in following data

TUNE-UP

COMPRESSION PRESSURE: (8 6-1 ratio) 160-170 lbs , (10 25-1 & 10 75-1 ratios) 200-210 lbs at cranking speed of 155–165 RPM Lowest cylinder must not be less than 80% of highest cylinder

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters

MANIFOLD HEAT CONTROL: Thermostatic coil type in right exhaust manifold outlet Valve must operate freely and anti-rattle spring must be installed in a downward position

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7

SPARK PLUG GAP: 035" (033 038")

Spark Plugs - AC No 45 or 45S (Std), No 44 or 45S (Police Cars) 14 mm Torque to 25 ft lbs

►*SPARK PLUG NOTE* Use new type 45S plug with extended shell

COIL: D lc -R my 1115131. *CAUTION - Use only this coil on 1960 models and do not use this coil on past models*

Ignition Current - 2 1amps idling 3 4 amps stopped

R sist r - Resistor Wire No 1944395 Integral part of wiring harness, composed of a stainless steel wire, plastic coated and covered with a glass braid Connected in circuit between coil and spliced to Ign 1 terminal of ignition switch at temperature and oil indicator feed Bypassed during cranking by second lead from ignition switch

DISTRIBUTOR: Delco-Remy No. 1110965 or 1110971 (8.6-1 ratio), 1110964 or 1110970 (10.25-1 & 10.75-1 ratios). "Window" type with external adjustments *See "Delco-Remy (Window Type) Distributors" in Electrical Section*

Condenser - Delco-Remy 1932004 **Capacity** 18- 23 mfd

Contact Point Set - Delco-Remy 1931988

Breaker Gap - Gap (016") will be correct when cam angle correctly set

Cam Angle - 28-32° Set at 30° Will give 016" breaker gap

Breaker Arm Spring Tension - 19-23 ozs

Rotation - Counterclockwise viewed from above

Automatic Advance - 1110965 & 971

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	450	0-4	900
6-8	1050	12-16	2100
9-11	1800	18-22	3600

Automatic Advance - 1110964 & 970

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
4-6	750	8-12	1500
7-9	1000	14-18	2000
8-10	1450	16-20	2900

Vacuum Spark Control - Delco-Remy 1116167 (1110964 & 970 Distr), 1116167 or 1116136 (1110965 & 1116173)

Vacuum Advance - 1116173 & 1116136

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6-8
10	20	13-15

Vacuum Advance - 1116167

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	10-12
10	20	16 75-18 75

IGNITION TIMING

Setting - 6° BTDC *CAUTION* - Set timing with engine at operating temperature and idling at indicated RPM **with vacuum line disconnected.**

►*IGNITION TIMING NOTE* The above timing setting (6° BTDC) is for operation on regular fuels (8 6–1 ratio engine), and for premium fuels (10 25-1 & 10 75-1 ratio engines) Under no circumstances should ignition timing be retarded to allow for use of regular fuel in a 10 25-1 or 10 75-1 engine, or retarded later than 0° for any reason

Timing Marks - Two marks on harmonic balancer, TDC and 6° BTDC Pointer on timing sprocket cover aligned with correct mark on harmonic balancer

CARBURETOR

►*CARBURETOR APPLICATION Carter and Rochester carburetors used as follows*

Model	Carburetor
All Models (Exc Bonneville)	Rochester 2-Bbl
Bonneville	Carter AFB 4-Bbl
All Models (Optional)	Rochester Triple 2-Bbl

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC CARS): With engine and transmission at normal operating temperature, idle speed correctly set (*see carburetors below*), proceed as follows Loosen both nuts on transmission throttle control rod trunnion Stop engine and install Linkage Adjusting Pin J-7687 through holes in throttle control lever and bracket *NOTE - On 4-barrel carburetor cars, remove throttle return check or install Holding Tool J-6342-01 over return check* Close throttle valves fully and loosen locknut on transmission throttle control rod. Adjust length of rod so pin will enter holes freely Tighten locknut, but leave pin in place Push transmission throttle control rod down until throttle control outer lever reaches end of its travel *CAUTION - Upper locknut must not touch trunnion* Hold rod and tighten upper and lower trunnion locknuts finger tight Then shorten rod by backing off lower nut 2½ turns Tighten upper nut securely Remove gauge pin Loosen locknut on carburetor throttle rod and adjust rod so there is 5 14" clearance between spherical end of pedal rod (at accelerator pedal) and floor pan Tighten locknut

THROTTLE RETURN CHECK ADJUSTMENT (Cars with Hydra-Matic and 4-Barrel Carburetors): Make carburetor fast idle adjustment, then stop engine Rotate fast idle cam so that fast idle screw rests on highest step of fast idle cam Clearance between contact screw and contact on throttle lever should be 093" (use a 3/32" drill rod as a gauge) Adjust by turning contact screw *CAUTION - Hold sleeve next to diaphragm bracket from turning while making adjustment*

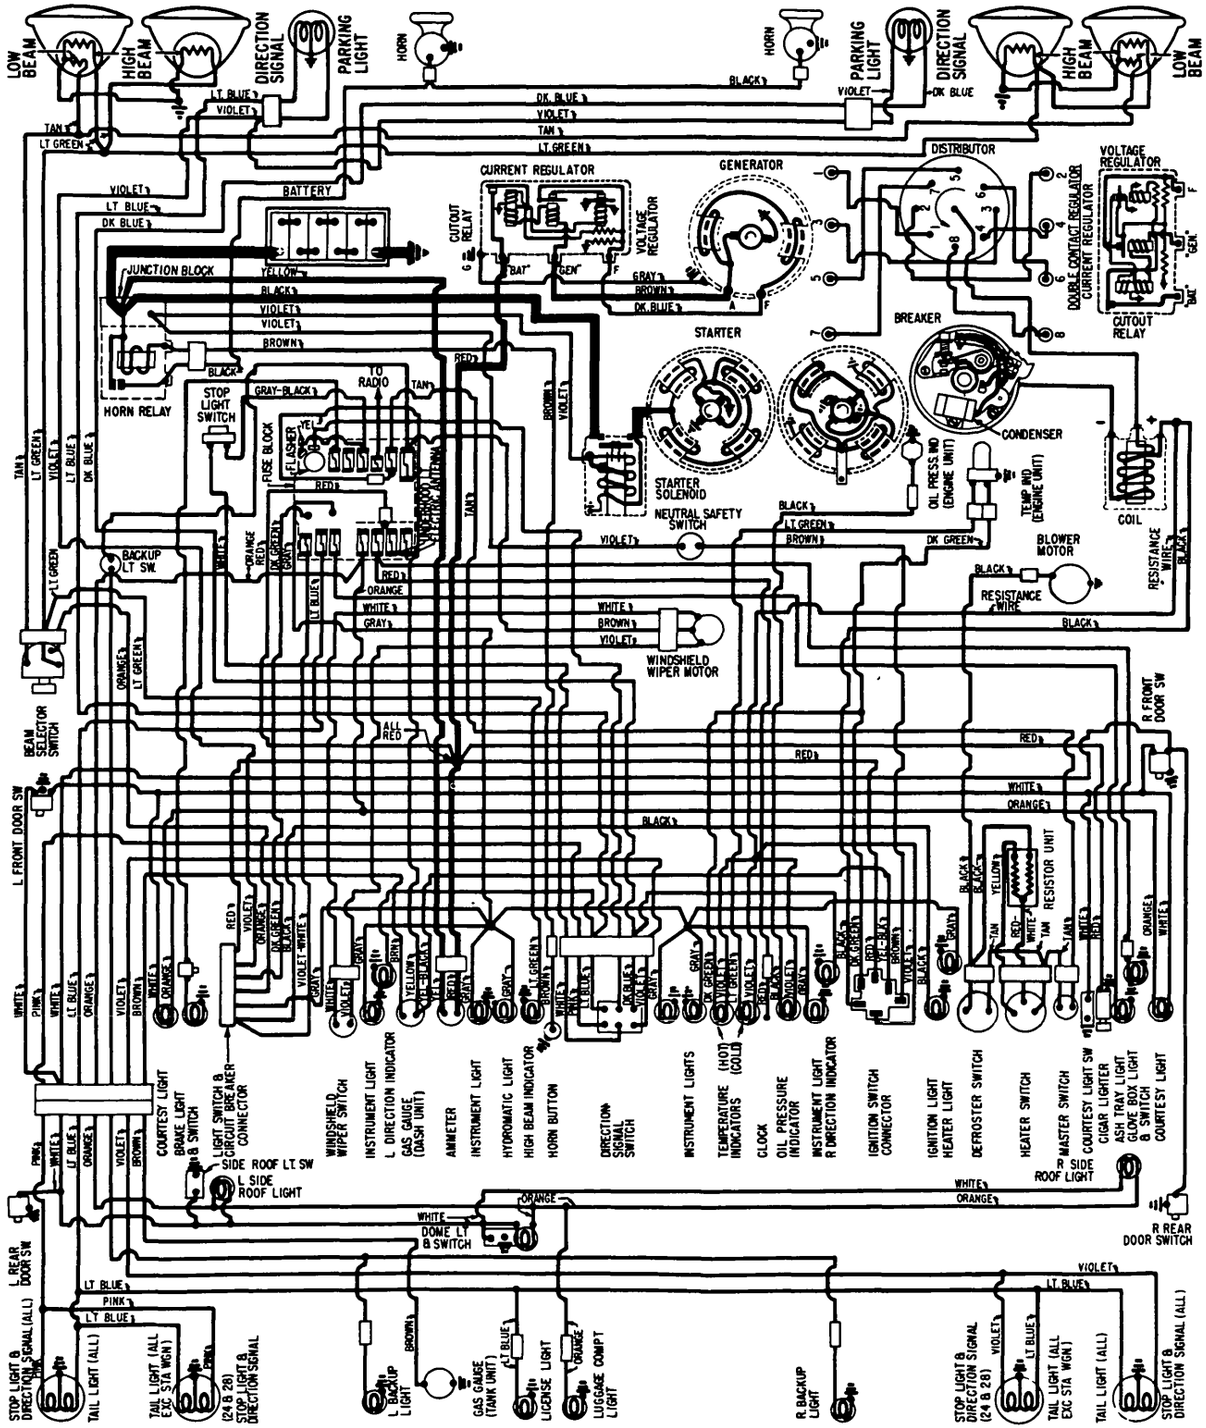
ROCHESTER 2GC 2-BARREL

Rochester 2GC 7015073 (Synchro-mesh Trans.). 7015070 early, 7015072 later (Std. Engine, Hydra-Matic Trans), 7015062 (425E Engine Hydra-Matic). Dual downdraft type *NOTE* - 7015070 & 7015072 carburetors have "Idle Air Bypass" idle speed adjustment

►*2GC CARBURETOR IDENTIFICATION NOTE* Color of tag denotes carburetor used with each transmission type Black (Synchro-mesh), Brass (Hydra-Matic)

►*2GC CARBURETOR HIGH SPEED ACCELERATION STUMBLE CORRECTION* Stumble at speed of 50 MPH or above can be corrected by repositioning air cleaner intake tube 30-40° to the right of engine centerline *NOTE* - On Air Cond Cars, cleaner can not be repositioned to this extent

►*2GC CARBURETOR STICKING CHOKE CORRECTION* Caused by burr at upper bend of fast idle link or burr around hole for link where it enters fast idle lever To correct, remove link and dress down burrs to remove all bind



►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyls 2-3-5-8, LEFT barrel feeds 1-4-6-7*

Idle Setting - Initial setting 2 turns open from a lightly seated position Turn screws out for richer mixture

Idle Speed - 480-500 RPM Synchro-mesh & Hydra-Matic in either "DR" position, 540-560 RPM Air Conditioning "OFF" and Hydra Matic in either "DR" position

►***IDLE SPEED ADJUSTING NOTE (7015070, 72 Carbs. with "Idle Air Bypass")*** **For first setting, open idle** mixture screws and idle air bypass screw 2 turns from a lightly seated position, then with engine at normal operating temperature, choke fully open, carburetor off fast idle, adjust idle air screw to obtain proper engine RPM (see above) Adjust mixture screws for highest engine RPM, then reset idle air screws for proper idle speed *NOTE* - Recheck idle mixture setting after adjusting idle air screw

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fl at L v l - With air horn inverted, gasket in place, and needle seated, there should be 11/16"±1/16" clearance (7015062 & 7015073), 5/8"±1/16" clearance (7015070, 72) between bottom of float seam (sharp edge) at toe end and air horn gasket. Use Gauge BT-176, Pontiac No. J-8557 (7015062, 73 Carbs.), BT-177, Pontiac No. J-8556 (7015070, 72 Carbs.). To adjust, bend float tang.

Float Drop - 1¾" (All Carbs.) from bottom of float at free end to gasket on cover with float hanging freely below bowl cover. Use Float Level Gauge (setting indicated by scribed line on gauge leg).

Fast Idle (7015070, 72): With hot idle speed and mixture properly adjusted, move fast idle cam so highest step is under end of fast idle screw. Adjust fast idle screw to obtain an engine speed of 2700 RPM.

Fast Idle (7015062 & 7015073): No separate adjustment required (will be correct when hot or slow idle speed correct).

Automatic Choke Setting: Centered at index.

Throttle Linkage Adjustment: *S CARBURETOR abov .*

►*OTHER DATA: See "Rochest r 2G & 2GC Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB No. 2975S (Synchr -m sh), 2976S (Hydra-Matic), 3010S (Special Equipm nt).

►*ACCELERATION FLAT SPOT OR STUMBLE CORRECTION:* Caused by collapsed "S" link (connecting pump lever and plunger), or by turned leather on pump plunger. Correct by replacing "S" link or pump plunger. *NOTE* - Lower end of link must point toward air horn to avoid contact with bowl cover casting.

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barr ls f d 1-4-6-7.*

►*IDLE SPEED ADJUSTMENT NOTE (AFB No. 2975S, 2976S): Idle Air Bypass scr w on throttl body is us d to adjust idle speed. Throttl valv s ar normally closed on slow idle.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Carter AFB 4-Barr l Carburetors" in Carburetion Section.*

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Carter AFB 4-Barrel Carbur t rs" in Carburetion Section.*

TRIPLE CARBURETORS
(Rochester 2G & 2GC)

Engine & Trans.	Roch st r Carbur t r N . Fr nt	C nt r	R ar
Synchro-mesh	7013063	7015068	7013065
Hydra-Matic (Early)	7013063	7015066	7013065
Hydra-Matic (Later)	7013063	7015076	7013065

Idle Speed - Same as other models (see Rochester 2GC data above).

For complete adjustment data on these carburetors (including linkage adjustment to insur correct synchronization), see "Rochester Tripl Carbur tors" in Carburetion Section.

CARB. EQUIPMENT

Fu l Pump: AC No. 4512. Fuel only.

Pr ssur - 5¼-6½ lbs. at 500-1000 RPM.

Se "Fuel Pumps" in Carburetion Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fuel Filter: AC No. GF-61P. Located near fuel pump in line between pump and carburetor Replace at 15,000 mile intervals or yearly.

Gasoline Gauge: AC Electric type.

Dash Unit - AC No. 5643163

Tank Unit - Used as follows

Model	AC No.
All (Exc. Sta. Wgn. & Air Cond.)	5640329
All Air Cond. (Exc. Sta. Wgn.)	5640330
Sta. Wgn. (6 Pass. Exc Air Cond.)	5640209
Sta. Wgn. (9 Pass Exc Air Cond.)	5640357
Sta. Wgn. (6 Pass Air Cond.)	5640210
Sta. Wgn. (9 Pass. Air Cond.)	5640358

See "Fuel Gauges" in Carburetion Section

Air Cleaner: Standard - Oil wetted type Service Spring and Fall or every 10,000 miles. *NOTE - In dusty areas, service very 2,000 miles or oftener.* Clean by immersing element in gasoline or kerosene and reoiling with engine oil

Heavy Duty - Paper element type, replace or clean every 15,000 miles or yearly *CAUTION* - Clean by blowing air on inner circumference of filter element

►*POLYURETHANE ELEMENT NOTE & CLEANING CAUTION*· Plastic type May be used to replace other elements and may be found on cars in service. Clean element by removing it from screen and washing in solvent (such as kerosene at room temperature) and squeezing dry (*CAUTION - DO NOT wring dry*). Dip element in SAE 10W-30 oil, squeeze to remove excess oil, reinstall element on screen with sealing edges evenly overlapping the screen

BATTERY

Delco . Used as follows

Synchro-mesh Cars - 2SMR53, No. 458. 12 volt, 9 plate, 53 ampere hour capacity (20 hr rate).

Hydra-Matic Cars - No. 558. 12 volt, 11 plate, 63 ampere hour capacity (20 hr rate)

Extra Duty Battery - 3SMR72, No. 670. 12 volt, 11 plate, 72 ampere hour capacity (20 hr rate)

Battery Ground - Negative, to battery support bracket & engine.

STARTER

Delco-Remy No. 1107661 (8.6-1 ratio, exc. 425E Eng. with Air Cond.); No. 1107777 (All Others).

Armature - Delco-Remy 1932185 (1107661 Starter), No 1941888 (1107777 Starter).

Drive - Overrunning clutch (solenoid pinion shift)

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 35 ozs minimum

Performance Data - 1107661

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107777

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3900-5400	10.6	80-120
	Lock	2.0	290-370

Ⓒ - Includes Solenoid

Starting Switch: Delco-Remy Solenoid No 1119798 (Synchro-mesh), No. 1114257 (Auto Trans.) mounted on starter and controlled by Ignition & Starter Switch

Neutral Safety & Back-up Light Switch: Delco-Remy No. 1998705 located at lower end of steering column. Connected in starter circuit so that starter operates only when selector lever is in "N" or "P" positions.

Adjustment - *See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy No. 1102203 or 204 (Std.), No. 1102200 (Optional), No. 1102143 (H.D. & Air Cond.).

►*30-40 AMPERE GENERATOR ENDPLATE ASSEMBLY NOTE:* The two spring bushings must be in place when reassembling endplates with 5/16" bolts.

►*CHARGING CIRCUIT FUSE CAUTION: Battery charging circuit is protected by a 45 amp. fuse (Std. Reg.), 60 amp. fuse (Double Contact Reg.) clipped to "BAT" terminal of generator regulator Check for blown fuse when diagnosing generator, regulator or battery failure.*

Armature - Delco-Remy 1946931 (1102203 & 204 Gen.), 1946719 (1102200 Gen.), 1939837 (1102143 Gen.)

Performance Data

Generator	Amperes	Volts	RPM
1102203, 204	30	14.0	2240
1102200	35	14.0	2630
1102143	45	14.0	2520

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 28 ozs.

Field Current - 1.69-1.79 amps (1102203, 204, 1102200), 2.66-2.86 amps (1102143) at 12 volts and 80°F

Belt Adjustment: ¼" deflection with approximately 5-6 lbs pressure midway between pulleys, or 70-75 lbs. pressure with Burroughs Gauge

REGULATOR

Delco-Remy. Used as follows·

Regulator	Generator
1119001 or 1119263	1102203, 204
1119002 or 1119264	1102200
1119623	1102143

NOTE - Regulator 1119623 is "Double Contact" type.

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*

►*REGULATOR CAUTION· Regulators must be used with generators as indicated above DO NOT interchange regulators.*

►*REGULATOR ADJUSTMENT NOTE:* Regulators (except Double Contact type) may be "Post Type" design with nylon adjusting nuts above Voltage & Current Regulator units for air gap adjustment

NOTE - Specifications below are "Normal" settings.

Cutout Relay

Cuts In - 11.8-13.5 volts (Exc. 1119623), 11.8-13.0 volts (1119623), hot

Contact Gap - .020".

Air Gap - .020" with contacts just closed

Voltage Regulator

Setting (Exc. 1119623) - 13.8-14.8 volts at an ambient temperature of 125°F

Setting (1119623) - 13.8-14.6 volts operating on upper contacts. 1-3 volts lower operating on lower contacts. At an ambient temperature of 125°F.

Contact Gap (1119623) - .016" (upper contacts) with lower contacts just touching.

Air Gap - .075" (Exc. 1119623), .067" (1119623), with armature pressed down to point where contacts just touch

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119001 & 1119263) - 27-33 amps. (adjust to 30 amps.) hot.

Setting (1119002 & 1119264) - 32-37 amps. (adjust to 35 amps.) hot.

Setting (1119623) - 38-45 amps hot.

Air Gap - .075" with armature pressed down to point where contacts just touch.

Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*LOCKING TYPE ELECTRICAL CONNECTORS CAUTION:* It will be necessary to straighten "Finger Clips" press in on "Thumb Release", remove "Wire Clip" or lift up on "Locking Tab" before attempting to separate connectors.

Directional Signals: *See Electrical Section.*

"Guide-Matic" Headlight Control: *See Electrical Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "ON" position Push latch button on side of switch assembly and pull out switch knob assembly Screw bushing from switch assembly allowing switch to be removed from instrument panel.

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-up Light Switch: Located on steering column and actuated by gearshift lower lever.

CIRCUIT BREAKER: 22 Ampere - Headlights, Parking lights, High Beam Indicator. On lighting switch.

FUSES: *All fuses located in fuse block in passenger compartment, on left side of car. Fuses placed to right of names.*

25 Ampere - Windshield wiper & washer. and back-up lights.

14 Ampere - Tail and license lights.

14 Ampere - Direction signals and stop lights.

14 Ampere - Dome & courtesy lights, and trunk light.

14 Ampere - Lighter and ash tray lights.

14 Ampere - Glove box light and clock

14 Ampere - Spot and Underhood lights.

14 Ampere - Power antenna.

14 Ampere - Safeguard speedometer and heater motor.

14 Ampere - Parking brake warning light.

4 Ampere - All instrument panel lights (including rheostat).

4 Ampere - Radio.

Cigar Lighter - Fuse or circuit breaker on forward end of lighter housing.

Horn Relay: Delco-Remy 1116970

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8, valve-in-head. All engines are basically the same with modifications

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and optional equipment as indicated. *See "Engine Identification Letter Code" under MODEL IDENTIFICATION above. Reference will be made to Letter Code to indicate on which engines various items will be found.*

►*425A ENGINE NOTE:* These engines are Letter Codes F4, M4, F1, M1.

►*425E ENGINE NOTE:* This engine is Letter Code E3.

ℂ - S-M- Synchro-mesh; H-M - Hydra-Matic.
② - Optional on all cars.
③ - Catalina, Ventura & Star Chief Std.
④ - Bonneville Std.
⑤ - Std. Bonneville, Optional Others.

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove fan, drain radiator and remove radiator hoses. Place car on jack stands and drain oil. Disconnect crossover and exhaust pipes at exhaust manifolds, and remove crossover pipe. Remove flywheel housing front shield and housing lower cover. Disconnect clutch linkage. Disconnect right idler arm bracket from frame. Remove front engine mount bolts and loosen rear mount bolts. Disconnect oil cooler lines from clips on timing gear cover. Loosen Hydra-Matic oil filler tube bracket. Install a 1958 front engine support on timing gear cover to use as a lifting pad and raise engine with a screw type jack so oil pan clears upper edge of front crossmember. Remove pan.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Pontiac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Special Data.*

PISTONS

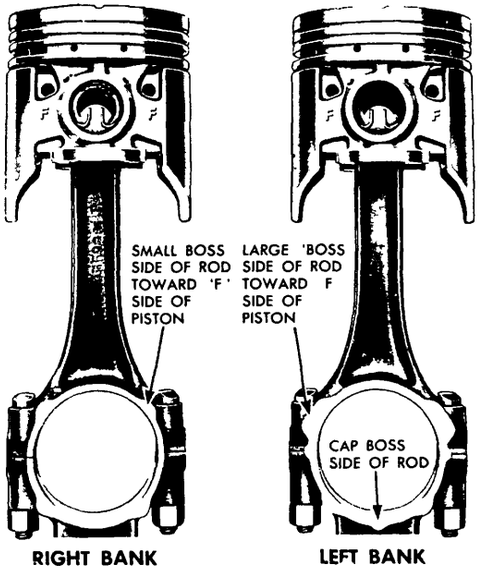
Aluminum alloy, tin plated, with piston pin offset 1/16" to right. *See "Piston Note" below.*

►*PISTON NOTE:* Various types used as follows:

Low Compression (8.6-1 Ratio) - Pistons have recess or dish in head and are identified by TWO notches at front of piston head and mark "L" on rear piston pin boss. *These pistons must not be used in 10.25 & 10.75-1 ratio engines.*

High Compression (10.25 & 10.75-1) - Two types used (later type has vertical steel strut in place of radial band and does not have cast relief under oil ring groove). Pistons have valve clearance reliefs on head and are identified by ONE notch at front of piston head. Both types interchangeable and later type was intermixed in production starting with Engine No. 68163 (used exclusively beginning Engine No. 112800).

1959 Type High Compression Pistons - Used in complete sets in some engines. These engines identified by "X" stamped after engine number.



Removal - Pistons and rods removed from above.

Piston Clearance - .0007-.0013" (Std. Eng.), .0022-.0027" (Police, T425A & Three 2-Bbl. Carb.), measured perpendicular to pin boss (pin removed) and 3/16" below oil pocket.

Installing Pistons: Install pistons with one notch (High Comp.) two notches (Low Comp.) in piston head and "F" mark on piston pin boss toward front of engine. *See Rod Installation.*

Replacement Pistons: Police, T425A & Three 2-Bbl. Carb. - Furnished Std. (4.060", 4.061", 4.062" "Flat Top") and .005", .010", .020", .030" Oversize.

All Others - Furnished Std. (4.061", 4.062", 4.063" "Flat" or "Recessed" Top) and .005", .010", .020", .030" Oversize.

PONTIAC PISTON & ROD ASSY.

PISTON PIN

Pin is press fit in rod.

Diameter - .9802". **Length** - 3.25".

Pin Fit in Piston - .0003-.0005" loose. Piston must turn freely on pin.

Pin Fit in Rod - .0008-.0016" press fit.

Piston Pin Removal & Installation - *See "Piston Pins" in Pontiac Special Data.*

Replacement Pins: Furnished Std. and .001", .003" Oversize.

PISTON RINGS

Compression rings are cast iron, taper faced. No. 1 has thick chrome, No. 2 has Lubrite finish. Oil ring is segmented spring steel with chrome face on rails.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.078"	.016-.026"	.0015-.0030"
Compr. (2)	.078"	.013-.025"	.0015-.0035"
Oil	.184"	.015-.035"	.0015-.0085"

Installing Rings - Step or chamfer on upper compression ring and letter "T", dot, or word "TOP" on lower compression ring toward the top.

Replacement Rings: Std. and .005", .010", .020", .030" Oversize.

CONNECTING ROD

Length - 6.63" (center-to-center)

Crankpin Journal Diameter - 2.2492-2.2502".

Lower Bearing - Durex 100A, steel-backed, replaceable precision type, no shims.

Clearance - .0005-.0025".

Sideplay - .006-.011"

Replacement Bearings: Std., .001" and .002" Undersize.

Installing Rods: Pistons have "F" marks and one notch (10.0-1 & 10.5-1 ratios), two notches (8.6-1 ratio) on front. Install rods so that LARGE machined boss at lower end of rod on same side as "F" mark and notch in piston (Left bank cyls. 1-3-5-7), on opposite side of piston from "F" mark and notch (Right bank cyls 2-4-6-8). Install assemblies in engine with "F" marks and notches on piston toward front of engine and oil groove in lower end of rod toward center of engine.

CRANKSHAFT

Journal Diameter - 3.000". Five bearings.

Bearings - M-400 (No. 4) Durex 100-A (Others). Steel backed inserts, precision type, no shims.

Clearance - .0005-.0025" (Front), .0005-.003" (All Others).

End Thrust: Taken by No. 4 (rear center) main bearing.

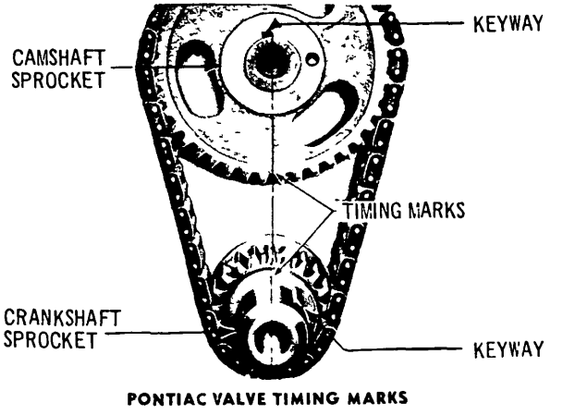
End Play - .0035-.0085".

Replacement Bearings: Furnished Std. and .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*



CAMSHAFT

►*CAMSHAFT IDENTIFICATION & APPLICATION NOTE:* Different camshafts used on these engines identified by number stamped on end of shaft as follows:

Early 425E & All Synchro-mesh Engines	1
Later 425E Engines (Hydra-Matic)	0
Hydra-Matic Engines (exc. 425A) ℂ	4
425A Engine	6

ℂ - Also used on Synchro-mesh Engines C4, M4, P4.

CONTINUED ON NEXT PAGE

PONTIAC VALVE TIMING MARKS

CONTINUED FROM PRECEDING PAGE

Journal Diameter - 1.8987-1.8997". Five bearings.
Clearance - .0015-.0030".
End Thrust - Taken by thrust plate behind camshaft sprocket.
Endplay - 003-.007",
Timing Chain: Length 60 links. **Width** .88" (Morse), 1" (Link Belt). **Pitch** .375".
►*TIMING CHAIN REMOVAL CAUTION:* **Do not rotate crankshaft with timing chain out of engine.** Damage to valves, pistons or both will result due to piston striking valve To rotate camshaft with timing chain off, crankshaft must be positioned so pistons are 45° before or after TDC, to avoid damage.
Camshaft Setting: Both sprockets marked "O". Mesh chain with sprockets turned so that marks are adjacent and in line across shaft centers.
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Pontiac Special Data.*
Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data.*

VALVES

►***1959-EARLY 1960 PONTIAC INTAKE VALVE VENT NOTE:*** **To prevent excessive wear caused by abrasives entering the small holes drilled in cylinder head (to vent the intake valve guides), the manufacturer recommends that a tapered steel plug, Part No. 534989 be installed. Insert plugs in vent holes (4 per head) and tap in flush with casting. On air conditioned cars it is not necessary to install a plug in vent hole located under the compressor. Later 1960 engines (after Oct. 15, 1959) will not have the vent holes.**

Tappet Clearance : Zero lash, hydraulic lifters

Valve	Head Diam	①Stem Diam.	Length
Intake	1.88"	.3407-.3414"	②5.32"
Exhaust	1.60"	.3402-.3409"	③5.30"

Valve	Seat Angl	Lift	Stem Clearance
Intake	30°④	⑥	0016-.0033"
Exhaust	45°⑤	⑥	.0021-.0038"

① - Std Valve. Also furnished with .001", .003", .005" (Int & Exh), plus .015" (Int. only) Oversize Stems.
② - 5.35" on 425A Engine or 3-Carburetor Option
③ - 5.34" on 425A Engine or 3-Carburetor Option.
④ - Valve Face Angle 29°
⑤ - Valve Face Angle 44°
⑥ - Synchro-mesh & Early 425E Camshaft .33", Later 425E Camshaft .373". H-M & 425A Camshaft .40".
Valve Seat Width - 3/64-1/16" Intake, 1/16" Exhaust.
Replacement Valves: Furnished Std .001", .003", .005" (All Valves), plus .015" (Int only) Oversize stems.
Valve Stem Oil Seals: Used on all valves as follows:
Oil Shield - Inverted cup over upper end of outer valve spring (under spring retainer cup). *Omitted on 425A Engines.*
Oil Seal - Neoprene seal installed in second groove on valve stem (under valve locks)
Valve Stem Length Checking: *See "Valve System" in Pontiac Special Data.*
Valve Springs: Single or double (Inner and outer) springs used as follows **Spring Specifications**

Synchro-mesh Eng. & Early 425E Camshaft

Valve	Pressure	Length
Closed	80 lbs	1.53"
Open	171 lbs	1.20"

Later 425E Camshaft

Inner Spring		Outer Spring	
Pressure	Length	Pressur	Length
Closed 26 lbs.	1.48"	Closed 58 lbs.	1.53"
Open 57 lbs.	1.15"	Open 102 lbs.	1.20"

Std. Hydra-Matic Eng. Camshaft

Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
Closed 26 lbs.	1.48"	Closed 60 lbs.	1.52"
Open 64 lbs.	1.08"	Open 114 lbs.	1.12"

①Special Heavy Duty Springs

Inner Spring		Outer Spring	
Pressure	Length	Pressure	Length
Closed 32 lbs.	1.48"	Closed 62 lbs.	1.52"
Open 96 lbs.	1.08"	Open 131 lbs.	1.12"

①- Used on Police Cars, Code Letters P1 & P4, Special Option, Code Letter C4, and 425A Engines, Code Letters F1, F4, M1, M4.

Valve Guides: Cast integral with cylinder head. *NOTE* - "Vented" intake valve guide not used on engines produced after October 15, 1959. *See "ROUGH ENGINE IDLE, VACUUM LEAKS & VALVE TRAIN NOISE CORRECTION (Early Cars)" below.*
Valve Stem Clearance in Guide: .0016-.0033" (Int.), .0021-.0038" (Exh.). Oversize reamers ream guides to provide these clearances.
►*ROUGH ENGINE IDLE, VACUUM LEAKS & VALVE TRAIN NOISE CORRECTION (Early Cars):* Caused by excessive valve stem and guide wear on cars with vented guides. To correct, install tapered steel plug Part No. 534989 (lots of 25) in vent holes in cylinder head (four per head). Air Cond. Cars do not require plug in vent hole under compressor. Install oversize valve stem, using Valve Guide Reamer J-5830-1(003"),J-6621 (.005"), J-5830-2 (.015") oversize in sequence.
Hydraulic Lifters: Standard on all models
Diameter - .8424 .8427" **Length** - 2"
Clearance in Lifter Boss - .0013-.0028"
Hydraulic Lifter Overhaul - *See "Valve System" in Pontiac Special Data*
Rocker Arms: Mounted individually on studs pressed into cylinder head.
Installation of Rocker Arm to Stud - Tighten rocker arm stud nut to 15-25 ft. lbs. torque.
Rocker Arm Stud Replacement - *See "Valve System" in Pontiac Special Data.*
Rocker Arm Lubrication: Oil from cylinder head oil galleries flows through hollow rocker arm studs to 1/16" hole at upper end of stud to lubricate ball seat and flows through groove in ball to fill rocker arm. Oil flows from hydraulic lifter boss through hollow pushrods for pushrod end lubrication.
Oil Passage Plug Removal & Installation - With rocker arm cover removed, insert easy-out in hole in plug, turn counterclockwise and pull out. Coat plug with gasket paste and drive in place with flat piece of metal or hard wood until plug is flush with outer surface.

VALVE TIMING

See "Camshaft Setting" and "Camshaft Identification & Application Note" under CAMSHAFT above.

①Synchro-mesh & Early 425E Camshaft
Intake Valves - Open 14° BTDC Close 58° ALDC.
Exhaust Valves - Open 48° BLDC. Close 24° ATDC.

④Later 425E Camshaft
Intake Valves - Open 22° BTDC. Close 67° ALDC.
Exhaust Valves - Open 63° BLDC. Close 27° ATDC.

②Hydra-Matic Camshaft
Intake Valves - Open 30° BTDC. Close 63° ALDC.
Exhaust Valves - Open 77° BLDC. Close 25° ATDC.

③425A Engine Camshaft
Intake Valves - Open 29° BTDC. Close 74° ALDC.
Exhaust Valves - Open 82° BLDC. Close 31° ATDC.

① - Camshaft marked "1". ② - Camshaft marked "4".
③ - Camshaft marked "6". ④ - Camshaft marked "0".

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Pontiac Special Data.***
Crankcase Capacity: 5 qts. refill. Add 1 qt. when changing filter element.
Normal Oil Pressure: 30-40 lbs. at 2600 RPM.
Pressure Regulator - In oil pump body. Not adjustable.
Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.
Pump Overhaul - *See "Oiling System" in Pontiac Special Data.*
Oil Filter: Full Flow type. Replace element every 15,000 miles or once a year. Use only AC PF-5 filter element.
Crankcase Ventilation: Filter element in oil filler caps in each rocker arm cover, and ventilator pipe at rear of engine. Clean filter elements every 2,000 miles by plunging in gasoline or kerosene. *NOTE* - Filter element for outlet pipe available as an accessory.
►*VENTILATOR OUTLET PIPE CAUTION:* If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed down into cover beyond the two locating points on pipe. Excessive oil consumption at high speeds will result.
Oil Pressure Indicator: Warning light on instrument panel controlled by pressure switch on oil filter pad. Light goes on when ignition turned on, goes out when oil pressure reaches 5 lbs.±1.5 lbs

COOLING

Water Capacity: 21½ qts. Add 1 qt. for heater.
Pressure Valve: Radiator filler cap. 12-15 lbs. (Std.), 14-17 lbs (Air Cond.).
Water Pump: Packless, sealed double row ball bearing shaft. Serviced as an assembly.
Thermostat: Pellet type, in water outlet passage in intake manifold. 170°F (Pontiac No. 3148225) Std., 180°F (No. 3149016) Optl. for use with permanent anti-freeze.
Temperature Gauge: Two-light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes off when engine temperature reaches 113°±2°F, RED light remains off during normal engine operation but will come on when engine temperature reaches 238°±2°F *NOTE* - Red light will light up when ignition switch turned to "Start" position but should go out when key returned to running position (this tests bulb and circuit each time engine is started). *See Miscellaneous Section.*
Engine Unit - Delco-Remy 1998189 (Std.-238°), 1998707 (Air Cond. Cars - 244°).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck 11A9W. Assembly No. 365100 (Std.), No. 361485 (Heavy Duty). Single plate, semi-centrifugal, dry disc type.

►*SERVICING NOTE:* Manufacturer recommends that clutch cover assembly and driven member be serviced by replacement.

Driven Disc - Borg & Beck No. 289302.

Pedal Adjustment: Pedal free travel should be ¾". To adjust, loosen adjusting nut locknut on clutch fork rod at clutch fork, turn adjusting nut to remove all freeplay (release bearing contacting clutch pressure plate levers), then back off adjusting nut 3½ turns (5 turns with new driven plate) to provide correct free travel. Tighten locknut to 60-120 in. lbs. Check pedal height.

Pedal Height Adjustment - Distance from under surface of pedal pad to floor pan should be 6 3/8-6 5/8". To adjust, loosen pedal rod upper trunnion jam nuts and adjust rod as required. Tighten locknut to 60-120 in. lbs. torque.

Removal: Remove transmission (see "Transmission Removal" below) and clutch housing bottom cover. Disconnect return spring and remove fork and fork ball support. Remove release bearing. *CAUTION - Bearing lubricated for life. Do not degrease.* Mark cover and flywheel to maintain proper balance at reinstallation. Loosen cover bolts evenly one turn at a time, then remove. Move clutch assembly away from bottom of flywheel, remove driven member, then remove cover and pressure plate from car.

Clutch Installation Note - Position clutch disc so that long end of hub is in flywheel and cover assembly marks line up with marks on flywheel. Use spare transmission main drive gear in spline of driven disc to insure proper alignment and tighten cover bolts one turn at a time until tight. Coat entire outer diameter of release bearing support with high melting point wheel bearing grease. Do not overlubricate. Confine grease to inner diameter only of release bearing. Use new gasket and install support and bearing. Install bearing support spring washer. Coat release fork fingers and release fork ball fulcrum with same type grease and install fork. Lockwasher must be under screw fastening fork ball fulcrum to clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. 3-Speed Standard & Heavy Duty types or 4-Speed "Close-Ratio" used.

See "Pontiac Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Remove propeller shaft assembly (see *"Propeller Shaft Removal" below). NOTE - On heavy duty transmission front propeller shaft connected to yoke flange at transmission. On standard transmission yoke slides on main shaft.* Disconnect speedometer cable and control linkage. Remove upper mounting bolts and install Aligning Studs, Tool J-1126. Remove lower bolts and remove transmission by sliding on aligning studs until shaft clears clutch.

HYDRA-MATIC DRIVE

Dual-Coupling, four-speed, hydraulically controlled automatic transmission of same design used previously.

►*DIPSTICK OIL LEVEL NOTE:* Dipstick oil level mark on some early cars measured 19 5/32" from top of cup to center of top-ball of dipstick "dumbbell". Later dipstick measured 18 27/32". *Fill transmission having* early dipstick to 5/16" above full mark.

►*SHIFT CONTROL SPLASH SHIELD RATTLE CORRECTION:* Caused by flexing or drumming of shield. To correct, dimple early type shield to firm up metal or replace shield with Part No. 536464 having more ribbings.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

Lubrication - Check fluid every 2,000 miles, drain and refill every 25,000 miles. Use Automatic Transmission Fluid Type, "A" Suffix "A", or Type "A" with no Suffix.

Checking Fluid Level - Check fluid level with engine running at idle speed, **engine and transmission at normal operating temperature,** and selector lever in "P" (Park) position. *NOTE - Only 1 pint of fluid is required to bring level from "Add" to "Full" marks on dipstick. DO NOT overfill.*

Capacity - 9 qts. refill, 10½ qts. after overhaul.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Dual-Coupling Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Saginaw. Needle bearing type. Three used.

►*CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload which must be readjusted whenever nut is loosened.

Replacement Universal Joints - Universal joints furnished with new propeller shafts. Universal joint repair kits and parts can be obtained separately.

Lubrication - Disassemble and repack every 25,000 miles. *See "Propeller Shaft Removal" below.*

PROPELLER SHAFT

Two-piece propeller shaft with three universal joints used. Center bearing bracket and support assembly attached to frame bracket inside frame tunnel.

Removal: Loosen bolts securing center bearing and bracket to tunnel bracket a few turns. Remove "U"-bolts and lock plates from rear axle drive pinion flange. On heavy duty transmission cars, disconnect front universal joint from yoke flange at transmission. Hold bearings on journals with wire or rubber bands. Remove stone and splash shield from front end of frame tunnel. Remove complete drive line assembly by sliding it rearward out of frame tunnel. *CAUTION - Note number of shims under bracket and reinstall as found to insure proper alignment of propeller shaft.*

Propeller Shaft Alignment & Center Bearing Assembly: *See "Propeller Shaft Notes" in Pontiac Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear type. "Safe-T-Track" Differential is optional.

See "Pontiac Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

Axle Identification - Axle ratio indicated by **color** mark on end of axle shaft and by **code number** stamped on pad on differential carrier flange (lower right side). Safe-T-Track differential axles are identified by tag near oil filler plug.

Axle Ratio	Code	©Color
2.69-1 (43-16)	2	Red
2.87-1 (43-15)	7	Orange
3.08-1 (40-13)	0	Yellow
3.23-1 (42-13)	9	Brown
3.42-1 (42-12)	8	White
3.64-1 (40-11)	6	Blue

© - Safe-T-Track axles have additional color Green.

Backlash - .005-.009".

Axle Shaft Removal: Raise body to provide clearance and remove wheel. Clean dirt from end of housing to protect wheel bearing and remove brake drum. Remove bearing outer retainer bolt nuts. Use Puller J-942-1, if necessary, to remove axle shaft. *CAUTION - DO NOT dislodge backing plate or brake pipe may be damaged.*

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Remove axle shafts and disconnect rear propeller shaft at companion flange. Drain oil, remove capscrews, and remove assembly.

►*CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut is loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable. Serviced by replacement.

Shock Absorbers (Pontiac Nos.)

Model	Front	Rear
Pass. Car ©	5552311	5552312
Conv. Cpe.	5552346	5552347
4-Dr. Vista Hd. Top	5552313	5552314
Sta. Wgn. Std.	5552313	5552315
Taxi-Pol. & H.D. Ch.	5532346	②5552320

① - Exc. the following. ② - Sta. Wgns. 5552315.

FRONT SUSPENSION

Independent. "Ball-joint" type with spherical ball joints in upper and lower control arms.

See "Pontiac Front Suspension" in Suspension & Wheel Alignment Section.

►*VIBRATION & SHAKE CORRECTION:* Caused by loose upper shock absorber mounting stud nut. Draw nut down until it bottoms on ends of threads, then torque to 60-120 in. lbs.

Kingpin Inclination - 4°50' at 0° camber.

Caster - Neg. 1½°±½°.

Camber - Pos. ¼°±½°. Camber on left side should be ¼° greater than on right side.

Toe-In - 0" to 1/16" measured 9" above floor.

Toe-Out on Turns - With inner wheel turned 20°, outer wheel should be turned 19°.

Wheel Bearing Adjustment: Tighten adjusting nut to 27 ft. lbs. torque and rotate hub to insure seating of all parts, back off nut until it can be turned with the fingers, then tighten nut to 25-35 **In. Lbs.** torque. If slot in nut does not line up with cotter pin hole in spindle, **tighten** nut just enough to align nearest slot with hole, install cotter pin. *CAUTION - DO NOT exceed 110 In. Lbs. tightening torque to align slot.*

REAR SUSPENSION

Coil springs with one upper and two lower control arms.

See "Pontiac Rear Suspension" in Suspension & Wheel Alignment Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" Steering Gear in Steering Section.

Power Steering: Saginaw (Rotary Valve) integral type.
See "Saginaw (Rotary Valve) Power Steering" in Steering Section.

►*POWER STEERING OIL LEAK CORRECTION:* If unit leaks oil at filler cap vent when steering turned without pump running, install later production flow control valve, Part No. 5688755, having a slot in one end (pumps with this valve installed have daub of yellow paint at rear of filler neck).

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" Brakes in Brake Section.

►*BRAKE ADJUSTMENT NOTE:* Early type has adjustable anchor pin, later type has fixed anchor pin eliminating anchor pin adjustment.

►*BRAKE FLUID PIPE CHAFING CORRECTION (Early Cars):* Pipe may chafe where it passes between frame and body on 122" WB. chassis. To correct, install special protector sleeve Part No. 535584 (used on later cars).

►*FRONT BRAKE SUPPORT PLATE & GASKET CHANGE:* Support plate flanged area (around steering knuckle) eliminated and new gasket serviced with removable center section. Remove center section after plate installed.

Drum Diameter - 11" front & rear.
Master Cylinder Bore Diameter - 1".
Wheel Cylinder Bore - 1 3/16" (front), 1" (rear).
Braking Power - 58.5%. Front, 41.5% Rear

Lining: Molded asbestos, riveted to shoes.
Thickness - .220".

Shoe	Lining Width & Length Front Wheel	Rear Wheel
Primary	2.5" x 9.29"	2.0"x9.29"
Secondary	2.5" x 11.94"	2.0"x11.94"

Clearance - Adjusting screw backed off 12 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: Forward of brake pedal on engine side of firewall.

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" from gasket surface of filler neck.

Power Brakes: New Bendix or Moraine Power Units.
See "Bendix Hydraulic (Disc) Reaction Type" or "Morain Hydraulic (Diaphragm) Reaction Type" Power Units in Brake Section.

Checking Fluid Level - Maintain fluid level in master cylinder reservoir to within 1" of top of filler cap opening.

Removal of Power Unit - Disconnect pushrod at brake pedal, vacuum hoses from vacuum exhaust tube, and pipe from master cylinder hydraulic port (cover all openings). Remove power cylinder from adapter plate on firewall.

MISC. MECHANICAL

Windshield Wiper: Electric type. Single-speed (with separate motor driven washer), or Two-speed type (with washer unit mounted on wiper motor).
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioning: *"Frigidaire & Harrison". See "Air Conditioning" in Miscellaneous Section.*
Power Top Control: Hydro-Lectric type. *See "Power Top Controls" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motor in each window. Power rear window available on Station Wagons. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjuster: Electric. Four & Six-Way types used. Six-Way has "Single Motor" or "Three Motor" types. Three motor type has individual motor for each basic seat movement.
See "Power Seat Controls" in Miscellaneous Section.

ENGINE

1954 PACKARD MODELS

ENGINE REMOVAL: Remove hood assembly. Disconnect and remove battery. Drain cooling system and remove radiator core. (NOTE—Radiator core, cradle, grille and front fenders may be removed as an assembly). Disconnect propeller shaft and remove transmission (see Transmission Removal). Use a jack or auxiliary support beam to support rear end of engine while transmission is being removed. Remove carburetor air cleaner, and crankcase ventilator tube. Disconnect heat indicator sending unit lead wire. Disconnect wire at oil pressure indicator sending unit. Disconnect electrical leads at generator, starter and ignition coil. Disconnect clutch linkage and remove clutch torsion shaft bearing bracket from upper flywheel housing. Remove engine front support insulator-to-upper bracket attaching nuts. Using an engine lifting bracket and a chain hoist, raise engine off support insulators. Remove auxiliary support beam from frame and remove engine.

Installation—Reverse removal instructions and note the following: Lower and locate engine in its approximate position by allowing the pilots in the support insulators (front) to protrude through the center hole in engine front support bracket.

1954 STUDEBAKER MODELS

ENGINE REMOVAL: Drain cooling system and crankcase, and remove radiator inlet hose. Remove wiring junction block and horn relay from fan shroud. Pry open wiring harness clips and move harness out of way. Remove fan blades and pulley. Remove cap screws which hold radiator core to support, remove core. Disconnect Climatizer hoses (if so equipped) from water pump and cylinder head. Disconnect and remove battery. Remove carburetor air cleaner, fuel pipe between pump and carburetor. Disconnect fuel pipe-to-pump, and oil pressure gauge flexible couplings, windshield wiper hose (if used), and electric cables. Separate horn cable at connector. (On V8 remove spark modifier pipe between distributor and carburetor, remove distributor.) Disconnect accelerator cross shaft. Remove upper stud nuts from engine front support insulators. Disconnect engine ground strap from right front engine support bracket. Disconnect flexible coupling in fuel line. Remove exhaust pipe flange-to-manifold nuts and U-clamp at clutch or converter housing bracket. Lower pipe off manifold studs. (On V8 remove exhaust cross-over pipe.) Disconnect front propeller shaft from transmission companion flange and remove propeller shaft stud nuts. Slide propeller shaft assembly rearward on slip yoke splines. Tape bearings to hold in place. Move shaft to one side as far as possible and tie in position. Disconnect transmission linkage and remove speedometer cable and pinion from transmission case. Disconnect rod from clutch release shaft lever. Remove two screws holding clutch operating shaft, bracket and bearing assembly to transmission case and pull bracket and bearing assembly off shaft. (**Automatic Drive**) Remove four engine rear support screws which hold insulators to converter housing. (**Standard or Overdrive**) Remove two bolts which hold insulator and cage assembly to engine rear support crossmember. Turn wheels to right to clear oil pan. (On Champion replace center, No. 1, cylinder head cap screw with engine lifting eyebolt.) (On V8 attach sling to intake manifold and hoist.) Slowly hoist engine up and forward until transmission clears rear support crossmember, remove engine.

1955-56 PACKARD MODELS

ENGINE REMOVAL: *(NOTE—On Synchro-mesh cars, Engine and transmission can be removed as an assembly providing front fenders and grille are first removed).*

1) Drain engine oil pan. Remove hood assembly and drain cooling system. Remove radiator core. Disconnect heater hose at cylinder head and remove water pump and manifold assembly. Remove battery and carburetor air cleaner.

2) Remove coil, bracket, distributor cap and ignition wiring as an assembly. Remove carburetor assembly. Disconnect power brake vacuum line at power cylinder (if car so equipped). Disconnect vacuum hose at windshield wiper motor. Disconnect flexible fuel pump line.

3) Remove generator assembly. Disconnect wire leads to water temperature and oil pressure indicator sending units. Disconnect engine ground wire at dash. If car equipped with Power Steering, remove screws at pump bracket and place pump pressure lines and hose assembly out of way.

4) Remove valve tappet cover vent tube. Remove starting motor and flywheel housing lower cover. Disconnect exhaust pipe from exhaust manifold. Drain transmission oil pan and remove transmission filler tube assembly. Disconnect oil cooler lines at transmission. Loosen transmission rear support bracket, *but d n t remove bolts.* Support transmission using a block of wood and a jack. Disconnect throttle control valve linkage at transmission.

5) Remove converter clutch housing to flywheel retaining nuts, and bell housing to flywheel housing capscrews. Disconnect front motor supports at frame. Install a flexible lifting cable or rope around intake manifold and attach a chain fall or hoist. Clamp or wire converter to transmission case to keep converter from sliding out of transmission. Raise engine and slide forward to clear transmission and slide out of chassis.

1955-60 STUDEBAKER 6 CYL. MODELS

ENGINE REMOVAL: *NOTE*—If same engine block is to be reinstalled, engine should be disconnected at junction of clutch housing or torque converter housing

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

(torque converter should be disconnected from engine drive plate so that converter will remain on transmission splines when engine removed). If new block to be installed, clutch housing or converter housing can be removed with engine, after removing transmission (this will allow housing alignment to be checked before engine reinstalled).

1) Remove hood and upper air deflector. On sedans and station wagons, remove radiator core. Disconnect Climatizer hoses (if so equipped) from water pump and cylinder head elbows. On coupe and hardtop models, remove fan blade assembly and fan shroud. Disconnect and remove battery and remove carburetor air cleaner.

2) Disconnect windshield wiper hose and oil pressure gauge line from the flexible coupling. Disconnect cables from generator, starter solenoid, ignition coil, and heat indicator engine unit

3) Remove cotter key and take out clevis pin connecting accelerator cross shaft to bellcrank rod. Remove lower stud nut from engine front support insulators and disconnect engine ground strap from right front engine support bracket

4) Remove exhaust pipe flange to manifold nuts, remove U-clamp at clutch or converter housing bracket, and lower exhaust pipe off manifold studs. Remove starter motor. On coupes and hardtops turn front wheels all the way to the right. On sedans and station wagons, disconnect one end of the front tie rod, remove shaft from steering bellcrank and remove bellcrank out of way to provide clearance for oil pan. Disconnect gas tank to fuel pump line at flexible coupling.

5) Remove center (No. 1) cylinder head capscrew and replace it with an engine lifting eyebolt. Attach lifting device and raise engine just enough to take weight off front supports.

6) On Automatic Drive models, disconnect wire from anti-creep switch and disconnect accelerator bellcrank to transmission rod. Remove converter housing lower plate, and disconnect torque converter from torque converter drive plate *(see "Studebaker Automatic Transmission" in Transmission Section).*

7) Remove clutch housing to engine bolts and drive out clutch housing dowel pins. Raise engine slightly and move it forward sharply to break it loose from clutch housing. Continue to push engine forward until transmission spline clears clutch assembly, then lift engine out of car.

1955-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

ENGINE REMOVAL: *NOTE*—If same engine block is to be reinstalled, engine should be disconnected at junction of clutch housing or torque converter housing (torque converter should be disconnected from engine drive plate so that converter will remain on transmission splines when engine removed). If new block to be installed, clutch housing should be removed with the engine for checking alignment. On cars with air conditioning, remove compressor mounting bracket and compressor as an assembly without disconnecting refrigerant lines (see Compressor Removal under "Studebaker Air Conditioning" in Miscellaneous Section). Move assembly to position on front of right fender, being careful to keep compressor crankcase lower than compressor cylinder head, so that oil will not leak into chamber above compressor pistons.

1) Remove hood, upper air deflector and fan shroud. Disconnect and remove battery. On sedan and station wagon models, remove radiator core and water pump manifold. On coupe and hardtop models, remove fan blade assembly. Disconnect Climatizer hoses (if so equipped) from water manifold Remove generator and fan belt.

2) Remove starter and remove exhaust crossover pipe. On sedan and station wagon models, remove steering bellcrank shaft. On coupe and hardtop models, turn steering gear all the way to left to provide clearance.

3) Remove carburetor air cleaner, fuel pump to carburetor pipe, and the spark modifier pipe. Unhook spark plug wires, remove spark plug cable support brackets from rocker arm cover, remove distributor clamp screw and remove distributor Disconnect fuel pump inlet line at flexible coupling, and disconnect any vacuum connections at intake manifold.

4) Disconnect oil pressure gauge line at flexible coupling and disconnect wires at heat indicator gauge and ignition coil. Disconnect accelerator pushrod at throttle control bellcrank. On cars equipped with overdrive, disconnect wire at kick-down switch. On cars with Automatic Drive, disconnect the wire at anti-creep switch and disconnect accelerator bellcrank to transmission rod at bellcrank. Remove converter drive plate to torque converter bolts *(see "Studebaker Automatic Transmission" in Transmission Section).*

5) Remove upper stud nuts from engine front support insulators and disconnect engine ground strap. Place a sling under intake manifold, attach hoist and raise engine just enough to take weight off engine supports. Remove clutch housing to engine bolts and take off the clutch housing front cover plate.

6) If clutch housing to be removed with engine, remove transmission. Remove the two capscrews holding clutch operating shaft, bracket, and bearing assembly to transmission case. Remove cotter key and clevis pin from inner end of clutch operating shaft sleeve and move clutch operating shaft away from clutch release shaft.

7) On models equipped with Automatic Transmission, remove the four engine rear support insulator capscrews which hold insulators to converter housing. On models equipped with overdrive or standard transmission, remove the two bolts which hold insulator and cage assembly to engine rear support crossmember.

8) On coupe and hardtop models, turn wheels to right to move steering bellcrank off to the side to provide additional clearance for oil pan. Push engine sharply forward to disengage clutch housing dowels. Continue to push engine forward until transmission spline is clear, then raise engine out of car.

OIL PAN

1954 PACKARD MODELS

OIL PAN REMOVAL: Place car to position hoist over engine. Disconnect steering idler lever support from frame side rail and lower steering linkage. Remove flywheel housing lower cover and take out oil pan screws. Lower oil pan and if necessary, rotate crankshaft to place counterweights up for clearance (use pry bar at flywheel housing engaging teeth on flywheel). If pan requires additional clearance, attach hoist to front of engine (do not disturb front engine support bolts), raise engine just enough to relieve load on support, pan should then come out.

1954 STUDEBAKER 6 CYL. MODELS

OIL PAN REMOVAL & INSTALLATION: ***NOTE—it is not necessary to remove engine to remove oil pan.***

Removal: Remove oil level gauge Raise car and support it with stands, and drain oil from crankcase On 1953 Long Wheelbase models, swing wheels to right and remove oil pan screws and remove pan. On other models, disconnect tie rods and reach rod from steering bell-crank Remove retaining pinch bolt and remove bell-crank from shaft. On 1950-52 models, remove shaft and bracket assembly from bell-crank and swing bell-crank to left as far as possible If necessary, remove front splash pans for access to front screws in oil pan. Remove screws and oil pan

Installation: Filler block should be removed for proper installation of oil pan side gaskets Remove the four filler block block-to-engine plate screws and remove filler block. If filler block adheres to front engine plate gasket, use a thin spatula and carefully separate gasket and filler block If gasket is damaged, cut away exposed section, then cut the amount required from a new gasket and fit it into place Clean oil pan and mounting flanges of block. Apply Perfect Seal or its equivalent to flanges and position new side gaskets Place filler block on front plate and install a screw in one of the upper holes Using a hardwood stick, pry upward against filler block and install opposite screw Install two remaining screws and tighten until heads of screws just engage lock washers With all gaskets in position, install oil pan After tightening oil pan screws securely, tighten the four support-to-filler block screws Install front splash pan

1954 STUDEBAKER V8 MODELS

OIL PAN REMOVAL: Support car on jacks and drain the oil. Disconnect one of the battery cables and remove the starter. Disconnect one end of the right tie rod and the reach rod from the steering bellcrank. Remove the steering bellcrank shaft and bracket and swing the bellcrank out of the way to the left side of the car. Remove the exhaust crossover pipe. Remove oil pan screws and drop the pan.

Installation Oil Pan Gaskets: The front filler block must be removed to install the side pan gaskets. Remove the four screws holding the filler block to the timing gear cover, and using a thin spatula carefully separate the filler block from the timing gear cover gasket. If this gasket is damaged, cut away the exposed portion of the gasket and then from a new gasket, cut the required amount and fit it to the timing gear cover using Perfect Seal or its equivalent Clean oil pan and oil pan mounting flanges of the block Apply sealer to the flanges and place new gaskets on the side flanges. Place filler block against timing gear cover and install a screw in one of the upper holes. Using a hardwood stick, pry upward against the filler block and install the opposite upper screw. Install the remaining two

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

screws and tighten until the heads just touch the lock washers. With all the gaskets in position install the oil pan and tighten the pan screws evenly. Then tighten the four timing gear cover-to-filler block screws.

1955-57 STUDEBAKER 6 CYL. MODELS

OIL PAN REMOVAL (CHAMPION): Remove oil level gauge. Raise car and support it with stands, drain oil, and remove splash pans. On sedans, and station wagons, swing wheels to right to move steering bellcrank out of the way. Remove oil pan screws and remove pan.

1955-56 PACKARD MODELS

OIL PAN REMOVAL: Drain engine oil and remove screws attaching steering idler lever to frame and lower steering linkage. Remove engine oil level indicator. On cars not equipped with the dual exhaust system the crossover pipe from left to right banks must be removed, on cars with dual exhaust, remove left exhaust pipe. Remove starting motor and flywheel lower housing. Remove attaching screws and washers and remove oil pan.

1955-57 STUDEBAKER V8 MODELS

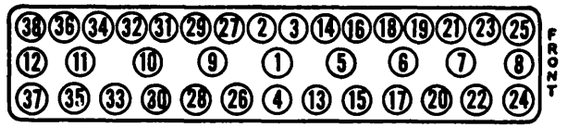
OIL PAN REMOVAL (COMMANDER & PRESIDENT): Remove oil level gauge and adapter tube. Disconnect one battery cable. Raise car, drain oil and remove starter. On coupe and hardtop models, swing wheels to right to move steering bellcrank out of way On sedans and station wagons, remove steering bellcrank assembly. Remove exhaust crossover pipe. Remove oil pan cap screws and remove pan.

1955-60 STUDEBAKER MODELS
1957-58 PACKARD MODELS

INSTALLATION (ALL MODELS): For installation of oil pan, the filler block must be removed. Remove the four screws holding filler block to engine front cover (V8), or to engine front plate (6 Cyl.). With a thin spatula or putty knife, carefully separate filler block from engine front cover gasket (V8) or engine front plate gasket (6 Cyl.). If this gasket is damaged, cut away the exposed portion of the gasket. Then cut the required amount from a new gasket and fit it in place as necessary using Perfect Seal or its equivalent to secure gasket in place Clean oil pan mounting flange on block, install new pan side gaskets on block using Prefect Seal or equivalent to retain gaskets *(NOTE* - Forward end of side gaskets seal filler block) Apply sealer to threads of four timing gear cover-to-filler block capscrews, place filler block in position against timing gear cover and install one upper screw, then pry upward against filler block and install other upper screw *(NOTE* - This will compress gasket and align filler block) Install remaining filler block screws, tighten all screws until heads just contact lockwashers Install oil pan and tighten all pan screws evenly to correct torque Then tighten the four timing gear cover-to-filler block screws to correct torque *See Tightening Specifications*

CYLINDER HEAD & MANIFOLD

ALL MODELS



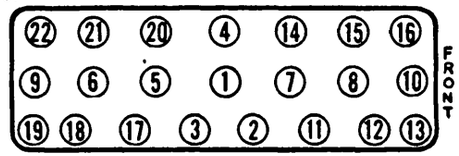
CYLINDER HEAD GASKET: Coat lower face of gasket and face of cylinder head with Perfect Seal gasket cement before installing (use sparingly and see that it does not enter screw holes and water passage openings).

1954 PACKARD MODELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

Cast Iron Heads—With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

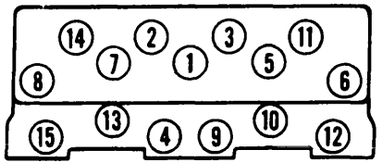
Aluminum Heads—With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.



1954 PACKARD CYLINDER HEAD

1954-60 STUDEBAKER 6 CYL. MODELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all capscrews (additional tightening may be necessary for correct tension).

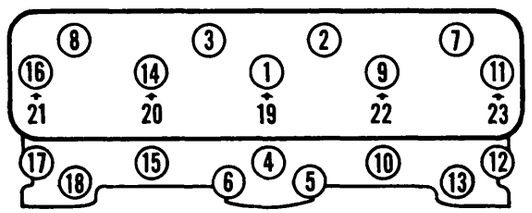


Tightening Torques—*See "Tightening Specifications" above.*

STUDEBAKER 6 CYL. CYLINDER HEAD

1955-56 PACKARD MODELS

CYLINDER HEAD: Removal—Drain cooling system. Remove generator (if removing right bank head), or fan belt (if removing left bank head). Remove fan, water pump, and manifold assembly. Remove air cleaner. Remove ignition coil and bracket, disconnect ignition cables and place the coil and wiring out of way. Remove carburetor and intake manifold assembly. Remove valve cover and remove bolts attaching rocker lever shaft to cylinder head, and lift off the rocker lever shaft assembly Disconnect exhaust manifold from exhaust pipe. Remove cylinder head bolts. Install Cylinder Head Lifter J-4159 in the front and rear spark plug holes and lift off cylinder head. *NOTE*—To remove right bank head it will be necessary to remove heater and oil level indicator. On cars equipped with Twin Ultramatic Transmission the filler tube assembly will have to be removed. On removing the left bank head, the oil filter and bracket will have to be loosened from cylinder head, On cars equipped with Power Steering the bracket bolts will have to be removed and pump and hose assembly will have to be moved out of way



1955-56 PACKARD CYLINDER HEAD

Installation: Clean gasket surfaces of cylinder head and engine block. Coat gasket with Perfect Seal No. 3 and install on block. Install cylinder head over dowels (dowels are drilled for oil return from rocker arm chamber). Install flat washers on head bolts and start the five medium length bolts in center holes of head. Install valve pushrods making sure they engage in sockets in valve lifters, and carefully install rocker shaft lever assembly. The two end rocker shaft mounting brackets are doweled to line up with bosses on cylinder head *(NOTE* - Left Front and Right Rear brackets provide oil lead to hollow rocker arm shafts for rocker arm lubrication). **Install four longest bolts in rocker arm brackets, engage pushrods in rocker arm sockets and tighten bolts evenly. Install short cylinder head bolts along lower edge of cylinder head. Tighten all bolts in sequence shown in diagram to correct torque (see Tightening Specifications).**

STUDEBAKER V8 MODELS

CYLINDER HEAD INTERCHANGEABILITY (RIGHT TO LEFT BANK): Both cylinder heads are identical (water pump ports are provided at front and rear of all heads). It is necessary to block off the rear port not in use with a dummy plate and gasket. *NOTE*—Heat indicator engine unit must be mounted in the water outlet opening cover plate at rear of the left bank cylinder head.

►*AIR CONDITIONED CAR CAUTION:* When removing cylinder head, air conditioning compressor must first be removed from its mounting bracket. *See "Stud bak r Air Conditioning" in Miscellaneous Section.*

1954-60 STUDEBAKER V8,
1957-58 PACKARD CYLINDER HEAD

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1954-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

CYLINDER HEAD INSTALLATION: Clean all threads using a tap and die. Check head for warping *(NOTE–* If necessary, head can be planed 015 ' Apply gasket compound to gasket and install. *(CAUTION–Be sure main oil gallery-to-rocker arm assembly oil passage at rear of the right bank (on front of left bank) is not blocked by gasket).* Install cylinder head on the hollow dowel. Dip capscrews in engine oil and install the nine short screws in the two outer rows of holes and the five medium length screws in the center row of holes and tighten finger tight. Install rocker arm assembly (see "Rocker Arm Assembly"). Install and tighten long head screws finger tight. Insert rocker arm assembly capscrews through rocker arm brackets. Tighten all cylinder head capscrews in correct sequence as shown in diagram Tighten water pump manifold screws alternately until they are tight.
Tightening T rques– *See "Tightening Specifications" above.*

ORIGINAL BORE & PISTONS

1954 PACKARD MODELS

ORIGINAL BORE & PISTON SIZES: Mark stamped on piston head and cylinder block indicate size variation in relation to nominal size. (See below).

Piston Mark Location—Stamped in piston head.

Cylinder Bor Mark Location—Stamped on top left face of cylinder block.

NOTE—Piston and Bore marks should correspond on engines that have neither been bored nor honed.

PISTON & BORE MARKING
(FOR SIZE VARIATION)

AA—.00025" Under Nominal Size.
A—Nominal Size
BB—.00025" Over Nominal Size.
B—.0005" Over Nominal Size.
CC—.00075" Over Nominal Size.
C—.001" Over Nominal Size.
DD—.00125" Over Nominal Size.
D—.0015" Over Nominal Size.

NOMINAL SIZE

Bore	Piston	Bore
3 1/2" ..	3.49875-3 49900"..	3.49975-3 50000"

►.020" Oversize Bore Engines—Marked by ★ following engine serial number.

1954 STUDEBAKER MODELS

ORIGINAL BORE & PISTON SIZES: Bore Sizes: Marked by figure stamped on top face of cylinder block next to each cylinder bore as follows

Champion

Mark	Size
0	3 000"
05	3 0005"
1	3 001"
15	3 0015"
2	3 002"
25	3 0025"

Commander V8

Mark	Size
50	3.375"
55	3 3755"
60	3 376"
65	3 3765"
70	3 377"

Original Pistons—Stamped with size of cylinder bore in which pistons are installed.

Replacement Pistons—Stamped figure on top indicates actual size of piston. Pistons furnished std. & .002", .004", .010", .015", .020", .030" oversize.

1955-60 STUDEBAKER MODELS
1957-58 PACKARD MODELS

ORIGINAL BORE & PISTON SIZES. Cylinder bore sizes are marked by a figure stamped on top face of cylinder block next to each cylinder bore as indicated below. Replacement pistons corresponding to these sizes are available under the part number for standard size pistons. The oversize is marked on the top of each piston. *NOTE–When replacing pistons in an engine which has been in use, the cylinder bore markings can no longer be used as a guide. It is important that pistons be selected to fit the cylinder bore. See "Fitting Pistons" on car model page.*

Cylinder & Piston Markings: Cylinder bores may vary in size from Standard to 0025" oversize in increments of 0005" Champion bore sizes vary from 3 000" (stamped "0"), to 3 0025" (stamped "25"). V8 engine bore sizes vary from 3 5625" (stamped "25"), to 3 5645" (stamped "45")

PISTONS

1954 PACKARD MODELS

REPLACEMENT ALUMINUM ALLOY & CAST IRON PISTONS:—Finished aluminum alloy or cast-iron replacement pistons are stamped on head with decimal figure (.005, .010, etc.) indicating nominal oversize and one or two letters (AA, A, BB, B, CC, C, DD, D) which indicates the actual size variation (in 00025" steps) of the piston from indicated nominal oversize. See oversizes listed below and size variations for each letter (in table).

NOTE—This system of marking makes it possible to order a finished piston (using number and letter) for any particular bore size within these limits.

Piston Oversizes (Figures Stamped on Piston Head)—Furnished in Standard size and the following oversizes: .003", .005", .010", .015", .020", .030", .040".

PISTON MARKING (FOR SIZE VARIATION)
(Letters Stamped on Piston Head)
For All Models and Piston Oversizes

AA—.00025" Under marked size.
A—Same as marked size.
BB—.00025" Over marked size.
B—.0005" Over marked size.
CC—.00075" Over marked size.
C—.001" Over marked size.
D—.00125" Over marked size.
DD—.0015" Over marked size.

PISTON PINS

1954 PACKARD MODELS

PISTON PIN BUSHING INSTALLATION: Two-piece bushing used in rod. Use Piston Pin Bushing Replacement Set J-2555 (consists of: Remover, Replacer, Plate, Burnisher), and Piston Pin Bushing Reamer J-874-18. Press old bushings out with Remover and arbor press. *(CAUTION*—Each half of bushing must be installed and burnished separately so that oil channel formed between inner ends of bushing halves will not close up). Install one half of bushing flush with outer end of rod, then using Plate of tool under end of rod, push Burnisher through from inner end of bushing. Install second half of bushing and burnish in place from inner end working through bushing half already in place. Ream bushing for size-to-size fit with piston pin using Reamer J-874-18. Check pin fit as follows:

Piston Pin Fit in Rod Bushing—With lower bearing inserts and cap installed on rod, insert piston pin in rod, clamp pin in vise with lead jaws placing rod in horizontal position. Rod should hold in this position, but should fall down of own weight when tapped down by hand.

1955-56 PACKARD MODELS

PISTON PIN BUSHING (IN CONNECTING ROD) INSTALLATION· After pressing old bushing out with an arbor press, install new bushing so that it is flush with both sides of rod Position Burnisher Tool J-6055 in bushing, then applying plate of the tool under the rod, push burnisher through bushing with an arbor press. After bushing has been burnished, and before reaming bushing, the oil hole in bushing should be drilled using a 3/16" drill

1954-60 STUDEBAKER MODELS
1957-58 PACKARD MODELS

PISTON PIN REMOVAL & INSTALLATION: Use Tool J-1293-A (6 Cyl.), J-1293-C (V8).

Removal–Place rod and piston assembly on assembling fixture. Remove lock nut and star washer from clamp screw, and by tightening lock nut on other end of clampscrew, loosen clampscrew in hole in connecting rod Remove clampscrew from rod, slide piston and rod off piston pin

Installation - Place piston pin on assembling fixture, slide piston and connecting rod into position on pin *(CAUTION* - Make certain piston and rod are in correct relative positions) Insert piston pin clampscrew in rod so that nut will be installed on slotted side of piston (Champion Rods Nos 1 3, 5, All rods on V8), or on solid side of piston (Champion Rods Nos 2, 4, 6) Make certain that flat on clampscrew mates with flat on pin Install star washer and nut Tighten nut to correct torque *See Tightening Specifications*

PISTON RINGS

1954 PACKARD MODELS

TRIPLE ACTION PISTON RING SETS: Service Sets.—These rings furnished in packaged sets for all models and should be installed on aluminum pistons only as directed below. CAUTION—Do not use these rings with Cast Iron pistons.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Ring—Spring expander type oil ring used consisting of top and bottom rails with a spring assembled between two rails. Two tabs in each rail engage a loop in spring expander when assembly installed in ring groove. Install ring on piston as follows: Place lower rail with locking tabs up (45° to right of thrust face or left side of piston) on piston slightly below lower ring groove. Insert spring expander in oil ring groove with end gap centered on thrust or left side of piston. Install upper rail in ring groove with locking tabs down so as to engage first loop in spring to left of spring end gap. Move lower rail up into ring groove with tabs in rail engaging first loop in spring expander to right of spring end gap. Press upper and lower rails down firmly on spring so that rails are properly seated on spring and are free in groove.

#2 Compression Ring—Assemble ring in #2 ring groove with groove on outer edge down.

Top Compression Ring—Assemble ring in top ring groove with groove on inner edge up.

CRANKSHAFT & MAIN BEARINGS

1954 PACKARD MODELS

CRANKSHAFT FRONT SEAL: Installed on front end behind timing chain cover. To replace seal remove radiator core, vibration dampener (puller J-2636 for fluid type dampener), and timing chain cover. Remove old seal and install new seal over end of shaft. Place cover aligning arbor over end of shaft, install cover and tighten cover screws. Insert feeler gauge between arbor and hole in cover, run gauge around arbor, if clearance not uniform, loosen cover screws and shift cover until clearance uniform.

1954 PACKARD MODELS

REAR MAIN BEARING OIL SEAL REPLACEMENT (Engine in Car): Raise car on stands at all four corners, keeping engine in its normal position and on a level plane. Remove transmission and oil pan. Remove rear main bearing cap. ***Do not remove other main bearing caps.*** Loosen each main bearing cap attaching screw just enough to "break loose" each screw from its tightened position. Alternately back off each main bearing cap screw ½ turn at a time until crankshaft has been lowered evenly ½". Remove rear main bearing seal (upper) from its groove in crankcase, using a pointed tool. Remove seal from rear main bearing cap, and remove the wooden side seals. To install upper seal, first form it to shape using the lower bearing cap. With a round wood block, 2¾" diameter, press seal into bearing cap with an arbor press. After seal has been shaped, feed it up into upper groove around crankshaft. When seal has been positioned, tighten each bearing cap attaching screw alternately ½ turn to raise crankshaft evenly to its normal position. Rotate crankshaft to burnish seal into position. Continue tightening bearing cap screws until torque of 90-95 ft. lbs. is obtained. Cut off ends of seal flush with split line of bearing. Form seal into lower bearing groove in same manner as with upper seal. While holding seal in position with round wood block and arbor press, trim end of seal so that 1/16" of seal extends above bearing split line at each end. Install bearing cap and torque to 90-95 ft. lbs. Install wood side seals in bearing cap by driving them into grooves in cap, then trim them off flush with bearing cap. Install oil pan and transmission.

1954 STUDEBAKER V8 MODELS

►*V8 ENGINE OIL LEAK AT REAR OF ENGINE:* May be caused by step on rear bearing cap interfering with oil pan and preventing pan from compressing gasket properly Check step on right rear corner of bearing cap and eliminate interference by grinding step down to a depth of 1/8" or even with crankcase flange (start grinding at rear of cap and extend relief forward to approximately center of capscrew boss).

1955-56 PACKARD MODELS

CRANKSHAFT: Removal (With Engine in Car)—Remove transmission. Drain cooling system and remove radiator core. Drain and remove engine oil pan. Remove water pump and manifold assembly. Remove fuel pump. Remove engine vibration dampener, engine front cover, timing chain and sprockets. Remove oil and vacuum pump assembly. Remove spark plugs. Disconnect connecting rods and push piston assemblies up into cylinder bores so that crankshaft can be removed without interfering with connecting rods. Remove front and rear main bearing caps. Support crankshaft at front and rear journals and remove the three intermediate bearing caps. Carefully lower crankshaft and flywheel assembly.

Installation: Install new rear main bearing seals in upper crankcase and in bearing cap (See Rear Main Bearing Oil Seal Installation below). Install new front crankshaft seal in engine front cover. Reverse removal procedure indicated above.

1955-56 PACKARD MODELS

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Apply Lubriplate to groove in bearing cap and install oil seal. Using Oil Seal Installer J-3048-A and a hammer, drive seal into place With seal still in place, trim ends of seal flush with surface of cap. To install upper half of seal in crankcase, remove crankshaft and install in same manner as for bearing cap.

1954-59 STUDEBAKER MODELS

1957-58 PACKARD MODELS

REAR MAIN BEARING OIL SEAL INSTALLATION: *NOTE*—Seal assembly consists of three types used together (1) Cork Seals between sides of bearing cap and block, (2) Neoprene seals in groove in face of bearing cap, (3) "Brummer" type seal on crankshaft journal (installed in block and bearing cap). Install seals as follows

Neoprene Seals—Place new seals in cross grooves of bearing cap with inner end of seal not more than 1/16" from inner end of groove, press seals firmly and uniformly into grooves and trim outer ends flush with sides of bearing cap. *CAUTION*—Seals must not be more than 1/16" from inner edge of bearing cap and must not be so long as to interfere with Brummer seal.

"Brummer" Type Seal—Remove old seal, thoroughly clean seal channel just forward of rear flange by using a swab saturated with alcohol or similar solvent, dry channel thoroughly. Blunt the sharp edge of the flange on which the seal is mounted using the flat side of a screwdriver blade or similar tool (this will prevent scuffing inner edge of seal during installation). Install seal DRY as follows Insert upper half between crankshaft and block at the rear flange with the wiping lip of the seal pointing forward or away from the flywheel, work seal around crankshaft until ends are horizontal and in line with the bearing cap face (see V8 Engine Note below), use great care to avoid scuffing the soft center sealing cushion at the bottom of the seal groove. Install lower half of seal on bearing cap flange, oil wiping edge of seal and crankshaft journal, install bearing cap and tighten bearing cap bolts to correct torque.

Cork Seals—After bearing cap installed, drive new cork seals down into grooves between sides of bearing cap and block (use drift and light hammer). *CAUTION*—Use care not to split or damage these seals.

Oil Leak Check—After installing new seals, run engine for approximately 45 minutes, then check for oil leaks.

►*V8 ENGINE NOTE:* To facilitate installation of the upper half of the Brummer seal, the three intermediate bearing cap screws can be loosened two turns. *CAUTION*—Do not loosen these intermediate bearing caps more than indicated or front bearing may be damaged.

1960 STUDEBAKER MODELS

►*REAR BEARING CAP SEAL PRODUCTION CHANGE & INSTALLATION NOTE:* Later cars have Brummer seal with integral cross seals. No Neoprene seals are used. Install seal in usual manner, with cross seals in cap grooves and trimmed flush with cap.

REAR MAIN BEARING OIL SEAL INSTALLATION: Loosen intermediate bearing cap screws 2 turns nly to aid installation. Install seals as follows:

Neoprene Seals - Install in cap grooves so inner ends are flush or not more than 1/32" from inner ends of grooves. Trim outer ends flush with cap.

Brummer Seal - With seal grooves in block and cap clean and dry, blunt sharp edge of flange at rear of block and carefully insert seal in block so wiping lip of seal contacting crankshaft points away from flywheel. Trim ends flush with block. Install seal in bearing cap and align with block seal. Apply oil to wiping edge of seal and install bearing cap making sure exposed part of seal smoothly straddles rear flange of bearing cap.

Cork Seals - Drive into grooves between sides of cap and block. Do not damage or split seals. Tighten intermediate bearing caps.

►*LEAK TEST NOTE:* After new seals installed, run engine for 45 minutes before checking for leaks.

VIBRATION DAMPENER

1955-56 PACKARD MODELS

VIBRATION DAMPENER: Removal—Drain cooling system, remove radiator core and top splasher Remove fan assembly. Remove vibration dampener retainer screw and washer and if car is equipped with Power Steering or Air Conditioning, remove the drive pulleys by prying them off dampener assembly. Install center adapter J-5992-2 in threads of crankshaft. Install screw assembly J-5995-3 in remover body J-5992-1 and remove dampener.

Installation: Lubricate oil seal in engine front cover, and position dampener over crankshaft and tap it into

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

place by tapping it with a rawhide hammer. Assemble Vibration Dampener Installer J-5992 by placing the 3/4" nut on screw assembly J-5992-3 and slide spacer J-5992-4 over screw assembly. Start screw in end of crankshaft and tighten until it bottoms in the threads. With one end of the spacer against dampener, turn nut on screw until dampener hub bottoms the crankshaft oil slinger against a shoulder on the crankshaft. Install Power Steering and/or Air Conditioning Pulleys, retainer washer and screw. Tighten retainer screw to 130-150 ft. lbs.

1954-60 STUDEBAKER MODELS
1957-58 PACKARD MODELS

VIBRATION DAMPENER & PULLEY ASSEMBLY: (Removal)—Remove fan shroud. Straighten edges of capscrew lock plate and remove vibration dampener capscrew and washer. Remove the six nuts from bolts in fan belt pulley hub and remove capscrew lock plate, pulley, and vibration dampener from bolts.

Installation—When assembling rubber cushions and dampener flywheel, be certain the cushions are seated in dampener to assure proper vibration control. Dampener and pulley must be assembled with bolt holes aligned. When installing vibration dampener on bolts, place lock plate against rubber cushion with mark on lock plate facing away from flywheel and pointing toward "IGN" mark on flywheel. Then install dampener on bolts so "IGN" mark is approximately aligned with keyway in hub. When pushing dampener on the bolts, lockplate prevents rubber cushion from being pushed out of flywheel holes. Place pulley on bolts and install capscrew lock plate (be sure lockplate is not installed on the offset bolts as it will interfere with installation of one of the nuts). Install and tighten vibration dampener nuts to 13-17 ft. lbs.

ENGINE FRONT COVER

1955-56 PACKARD MODELS

ENGINE FRONT COVER: Removal—Remove vibration dampener (see above), and water pump manifold assembly. Disconnect and remove fuel pump. Remove screws attaching front cover to block, loosen engine oil pan, remove cover.

Installation: Using a new gasket, install engine front cover in place and start capscrews in threads, *but do not tight n.* Lubricate oil seal in cover, and install vibration dampener assembly, using hub on dampener as a pilot to align front cover. Complete installation by reversing removal procedure.

1955-56 PACKARD MODELS

ENGINE FRONT COVER OIL SEAL (CRANKSHAFT FRONT SEAL) INSTALLATION: Remove engine front cover (see above), drive out old seal with a hammer and punch, being careful not to damage cover. Install a new seal using tool J-5983, pressing seal into place with an arbor press.

1954-60 STUDEBAKER 6 CYL. MODELS

ENGINE FRONT COVER: Removal—Remove fan shroud, radiator core, and vibration dampener. Using Puller Set HM-925, remove the crankshaft pulley (use HM-925-12 to prevent damage to crankshaft threads). Take out cover retaining screws and bolts and remove the cover.

Engine Front Cover Seal (Crankshaft Front S al) Installation: Install new felt oil seal in cover, using hub of crankshaft pulley to seat it in recess in cover.

Engine Front Cover Installation: Install cover on engine using a new gasket. Install all the retaining bolts, leaving them finger tight so cover can center itself as the crankshaft pulley is installed. Using Pusher Set J-4704, press crankshaft pulley into position. Tighten cover bolts and screws securely and install vibration dampener, radiator core and shroud.

1954-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

ENGINE FRONT COVER: Removal—Drain cooling system and remove fan shroud and radiator core. Remove fan belt and power steering belt (if so equipped). Remove fan blade assembly and take off the water manifold. Remove fuel pump to carburetor pipe and remove fuel pump. Remove vibration dampener and fan pulley hub (on Power Steering cars a second pulley is used). Remove cover screws and remove cover.

Engine Front Cover Seal (Crankshaft Front Seal) Installation: Remove felt oil seal with an ice pick and clean out the recess in cover before installing new seal *(NOTE—Do not remove the four self tapping screws holding the seal retainer plate in position).* Install a new seal and wet it with clean engine oil. Insert crankshaft pulley hub to locate seal in center position.

Engine Front Cover Installation: Install cover on engine, using a new gasket, and install cover screws, but do not tighten. Using Pusher Set J-4704, install crankshaft pulley hub to locate hub and center cover properly. Tighten cover screws. Install fuel pump and the fuel pump to carburetor pipe. Assemble and install vibration dampener and tighten retaining screws to proper torque. Install water manifold assembly using new gaskets, and replace fan blade assembly. Install fan belt and adjust it to proper tension. Install power steering belt (if so equipped) and adjust it to proper tension. Install radiator core and fan shroud.

CAMSHAFT & BEARINGS

1954 PACKARD MODELS

CAMSHAFT REMOVAL: Remove cylinder head, raise front end of car and place stands under front suspension. Remove right front wheel from hub and drum, and right front fender splash apron cover plate. Disconnect and remove fuel pump and oil pump. Remove valve spring chamber cover. Raise valve with lifter HM-536. DO NOT REMOVE VALVE LOCKS. Insert two blocks of wood between valve head and block to hold valves open (wood block should be approximately ⅜" thick, ⅛" wide, 1" long). Raise all valves and block them up with similar blocks of wood. Lift valve tappets up by hand, retaining them with spring-loaded type clothespins. Remove camshaft thrust plate from front end of engine block. Carefully remove camshaft, rotating it as it is withdrawn, to prevent scoring or damaging bearings.

Camshaft Bearing Removal & Replacement: Remove oil pan and camshaft (see Camshaft Removal above). Drive out old camshaft bearing using a smooth faced drift of smaller diameter than outside diameter of bearings. Replace new bearings by using similar drift with larger outside diameter than outside of bearings. CAUTION—Be sure oil holes in bearings line up with passages in block.

Cleaning & Inspection—Clean camshaft, and inspect cams and bearing surfaces for wear, scores, or pits. Inspect oil pump drive gear for nicks, scores, pits or wear. Camshaft to bearing clearance should be .001-.003". If tappets removed (see Hydraulic Valve Lifters, below).

Camshaft Installation: Reverse removal procedure, and check camshaft endplay (see Car Pages for Camshaft Endplay specifications). If endplay not within limits, replace camshaft thrust plate.

1954 STUDEBAKER 6 CYL. MODELS

CAMSHAFT (Removal—With Engine Out of Car): Remove vibration dampener assembly, and then remove fan drive pulley, using Universal Puller HM-925. Remove timing gear cover, and using Universal Puller, remove crankshaft gear (do not remove camshaft gear). Remove cylinder head, valves, and valve springs, and oil pump, and invert engine so lifters will not interfere with camshaft removal. Remove capscrews and lockwashers attaching timing gear thrust plate to cylinder block. Remove camshaft carefully to avoid damaging bearings.

Installation—Reverse removal procedure outlined above. Adjust camshaft endplay (see Camshaft Endplay following). Make sure that camshaft and crankshaft gears are aligned with marked tooth on camshaft gear meshed between two marked teeth on crankshaft gear.

1954 STUDEBAKER V8 MODELS

CAMSHAFT (Removal): Turn crankshaft until timing marks show "IGN" mark directly under pointer on timing gear cover, and the distributor rotor is in the No. 6 firing position. Remove rocker arm assemblies, push rods, and valve lifters. Remove timing gear cover. Turn camshaft just enough to expose thrust plate retaining screws (do not remove camshaft gear), and remove thrust plate screws (turn camshaft back to align timing marks of the two gears). Remove gear and shaft as a unit. CAUTION—After camshaft removed, be very careful not to disturb position of distributor rotor.

Installation—Install camshaft, positioning "O" mark on camshaft gear between timing marks on crankshaft gear. Check distributor rotor to make sure it is pointing directly to rear (No. 6 firing position). Turn camshaft to expose thrust plate screw holes in block. Position thrust plate and install capscrews and lockwashers. Check camshaft endplay (see Camshaft Endplay following): Install timing gear cover, valve lifters, rocker arm assemblies and pushrods.

1955-56 PACKARD MODELS

CAMSHAFT: Removal (With Engine in Car)—Drain and remove radiator. Remove fan, water pump and manifold assembly. Remove air cleaner, ignition coil, carburetor and intake manifold. Remove vacuum line to distributor, disconnect ignition cables and place out of way. Remove distributor. Remove valve rocker covers, the

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

four rocker lever shaft capscrews (both banks), and lift off shaft assemblies. Remove upper valve tappet cover and breather tube, and remove the lower cover. Remove pushrods and hydraulic lifters (keeping them in sequence so they will be installed in the same location). Remove vibration dampener (see above). Drain engine oil and remove oil pan. Remove engine front cover (see above). Pry off oil slinger from end of crankshaft. Remove fuel pump drive eccentric. Rotate engine to line up marks on camshaft and crankshaft sprockets so marks are adjacent and in line across shaft centers. Remove the sprockets by alternately prying on them and slide chain and sprocket assembly off the shafts. Remove the three camshaft retainer plate screws and remove plate and camshaft spacer. Carefully pull camshaft forward into the radiator grille far enough to clear engine block, taking care not to damage camshaft or bearings.

Installation: Reverse removal procedure and note the following: Install camshaft gear about 1/16" beyond a position flush with camshaft end, to allow mounting of fuel pump eccentric.

1955-60 STUDEBAKER 6 CYL. MODELS

CAMSHAFT REMOVAL (Champion): *NOTE–Camshaft can be removed with the engine in the chassis by removing fender, grille, and radiator core as an assembly.* Remove cylinder head, manifold assembly and valve cover plates. Take out valve locks, valves and valve spring retainers. Turn cylinder block over so that valve lifters will fall free of camshaft. If engine not removed from car, tie or block valve lifters so they will not interfere with cam lobes during removal. Remove oil pan, oil pump, and oil pump drive shaft. Remove vibration dampener, fan drive pulley and engine front cover. Unless camshaft is to be replaced, it is not necessary to remove camshaft gear. Turn crankshaft until camshaft thrust plate cap screws are visible through spokes of timing gear. Remove capscrews and lockwashers retaining thrust plate and carefully slide camshaft and gear out of cylinder block, being careful not to nick or scratch camshaft journals, lobes, or bearings.

1955-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

CAMSHAFT REMOVAL (Engine in Car): As follows: Turn crankshaft until timing mark shows directly under pointer on engine front cover and distributor rotor is in the No. 6 firing position (in this position the timing mark on the camshaft gear is aligned between the marks on the crankshaft gear). On coupe and hardtop models, remove the fan shroud. On all models remove the radiator core, fan blade assembly and water manifold. Remove rocker arm covers, rocker arm assemblies and pushrods. Remove carburetor and intake manifold assembly. Remove breather pipe, valve lifter cover, and take out the valve lifters. Remove fuel pump and take off engine front cover (see "Engine Front Cover" above). Turn camshaft just enough to expose thrust plate retaining screws and remove screws. Turn gear back to align timing marks of the two gears. Remove camshaft and gear as an assembly, being careful not to damage camshaft bearings. *CAUTION–With camshaft r moved, d not mov crankshaft or disturb position of distributor rotor.*

1954-60 STUDEBAKER 6 CYL. & V8 MODELS
1957-58 PACKARD MODELS

CAMSHAFT ENDPLAY: Endplay regulated by thickness of spacer installed on camshaft directly behind timing gear and is equal to amount by which thickness of spacer exceeds thickness of thrust plate bolted on cylinder block. When installing new parts, measure both thrust plate and spacer with a micrometer, select parts so that endplay is .003-.006" (1952-58 Champion); .005-.007" (1951-54 V8); .003-.006" (1955-58 V8). The endplay is the difference in thickness of spacer and thrust plate, with the thrust plate being the thicker.

TIMING CHAIN

1955-56 PACKARD MODELS

TIMING CHAIN: Removal–Remove engine front cover (see above). Pry off oil slinger from end of crankshaft and remove fuel pump eccentric. Rotate engine to line up marks on sprockets so marks are adjacent and in line across shaft centers. Remove sprockets by alternately prying on them and slide chain and sprocket assembly off the shafts.

Installation: Install camshaft and crankshaft sprocket keys being sure they are properly seated in keyways. Rotate engine crankshaft to bring No. 1 cylinder to firing position. Slide crankshaft sprocket part way on the crankshaft and assemble camshaft sprocket in chain, locating and lining up the "O" marks on the sprockets in line with camshaft and crankshaft centers. Position chain on crankshaft sprocket and start camshaft sprocket on camshaft. Using a rawhide hammer, alternately tap both sprockets into proper position. Camshaft gear must be installed about 1/16" beyond a position flush with end of camshaft for installation of fuel pump eccentric. Complete installation by reversing removal procedure.

TIMING GEARS

1954-60 STUDEBAKER 6 CYL. & V8 MODELS
1957-58 PACKARD MODELS

TIMING GEAR REMOVAL: Remove engine front cover (see above). Remove gear retaining screw, lock, and flatwashers. On V8 engines remove fuel pump cam and lockplate. With Puller HM–925 (6 Cyl.), J–8111 (V8), remove camshaft gear. Remove crankshaft pulley key and oil slinger and remove crankshaft gear with Tool J–8111 (All Engines.) Use Adapter Plug HM–925–12 to protect crankshaft threads.

VALVE SYSTEM

1954-60 STUDEBAKER 6 CYL. MODELS

►*OIL LEAKAGE OR SEEPAGE AT VALVE COVER PLATE CORRECTION (All Engs. before No. S-82962):* Leakage at lower edge of valve cover plate (when not due to defective gasket or improperly tightened cover bolts) can be corrected by removing cover and installing aluminum plugs, Studebaker No. 1549330 in each of the valve lifter oil holes in the cylinder block. Use small punch to drive plugs in tight and flush with the cylinder block. *NOTE - Th s plugs used in producti n beginning Engin No. S-82962 (Lat 1959).*

VALVE TAPPET ADJUSTMENT
1955-56 PACKARD MODELS

VALVE TAPPET ADJUSTMENT: *NOTE–Ch cking must be done with no oil in compr ssion chamb r of tapp t and the plunger completely bottomed, with tapp t on base circle of cam.* With piston on compression stroke and both valves closed, press downward on the pushrod end of rocker arm to compress plunger spring and force plunger to its bottom position. While still holding down on rocker arm, measure the lash. The clearance between valve stem end and rocker arm tip should be .050" to .210".

VALVE STEM SEALS
1954 STUDEBAKER V8 MODELS

VALVE STEM SEAL TESTING: Using vacuum equipment on distributor analyzer, remove valve covers and rocker arm assembly. Wipe excess oil from top of valve spring retainers. Adjust vacuum control on analyzer to indicate 15" with hose closed off. Using a high tension cable nipple as an adapter on the end of the vacuum hose, place adapter in center of valve spring retainer, over valve stem. Vacuum on gauge should read 15" if seal is in good condition. *NOTE–* A fast check of seals can be made by compressing a small vacuum cup over valve spring retainer. If there is leakage, vacuum cup will not stay compressed.

VALVE SPRINGS
1954-57 STUDEBAKER 6 CYL. MODELS

VALVE SPRING INSTALLATION: Springs should be installed with closed-coil end of spring upward.

Valve Lifter Tension Spring. Consists of 'U' shaped flat spring installed so as to engage lower end of valve stem and upper end of lifter (spring tension keeps lifter on cam lobe). Make certain that tension springs in place when valves and springs installed.

1954 STUDEBAKER V8 MODELS

VALVE SPRING ASSEMBLY INSTALLATION: Install dampers on "closed coil" end of spring so that damper fingers contact sides of spring. Place springs on valve stem so damper is next to the cylinder head. Install the valve spring retainers on the springs making sure the retainers with the skirts are on the intake valves. Compress the spring until the retainer is past the inner groove of the valve stem far enough to permit installing the rubber seal. Place the keepers in position and slowly release the spring.

►*CAUTION*—Always install new rubber seals whenever valve springs have been removed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE GUIDES

1955-56 PACKARD MODELS

CHECKING VALVE STEM CLEARANCE: After valves have been removed from head, and with valve stems and guides clean, install valve in respective guide bore and measure side-to-side play crosswise to the cylinder head using a dial indicator or thin strips of feeler gauge material placed between stem and guide bore. If clearance is greater than .004" (intake), or .005" (exhaust) guides should be reamed and oversize valves installed.

1955-56 PACKARD MODELS

VALVE GUIDE REAMING: Four oversize reamers are available in Valve Guide Set J-6042 which will provide the desired clearance of .001-.002" (Intake), and .002-.003" (Exhaust) between stem and guide. After checking clearance, select the proper oversize reamer and pilot for the oversize valve to be installed.

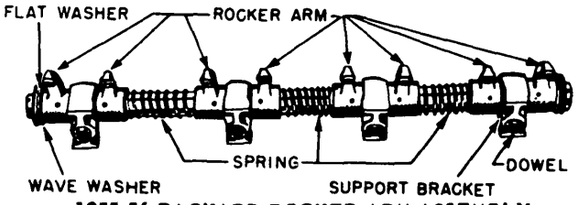
1954-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

VALVE GUIDE REMOVAL AND INSTALLATION: Valve guide tool J-4673 is used to remove and install the valve guides. Drive guide out of cylinder head from the combustion chamber side.

►*NOTE:* **Intake and exhaust valve guides *not* interchangeable. Intake guides are longer.**

Installation—Coat valve guide lightly with white lead and start chamfered end into cylinder head from the combustion chamber side. Place the installing plate on the face of the head so that the long side of the plate is paralliel to the end of the head and the bore of the plate centered over the guide bore. The plate is marked "Intake" on one side and "Exhaust" on the other side. Be sure that the exposed mark of the plate corresponds to the valve guide being installed so that the depth of the counterbore of the plate will control the depth to which the guide is driven into the head. Insert the driver through the plate and into the guide. Drive the guide into the head until the shoulder of the driver contacts the bottom of the counterbore in the plate.

ROCKER ARMS



1955 PACKARD MODELS

►*IMPROVED OIL CONTROL ROCKER ARM SHAFT PRODUCTION CHANGE & CORRECTION ON EARLY CARS:* Three types of rocker arm shafts have been used in production with different number and size of rocker arm oil holes. For all replacement use, use LATEST type shaft, Part No. 440466, which may be identified by ALL oil holes being of the same size (.062").

1955-56 PACKARD MODELS

ROCKER ARM AND SHAFT: Disassembly—Remove rocker arm and shaft assembly from cylinder head. Remove cotter pins, and flat and wave washers from end of shaft. Remove rocker arms, springs and supports, keeping all parts in order so they can be replaced in original position.

Inspection: Clean and inspect all parts, making sure that all oil holes are open. Inspect shaft and arms for wear. Inspect rocker arm radius at valve stem end, and if worn replace the rocker arm. Inspect plugs at each end of shaft for tightness.

1955-56 PACKARD ROCKER ARM ASSEMBLY

Reassembly: Reverse disassembly procedure and note the following: Rocker arm shaft must be assembled with the grooved oil hole in the downward position, or facing the cylinder head.

►***CAUTION: There is a right and left rocker arm and if reversed in assembly they will not properly contact the valve stem.***

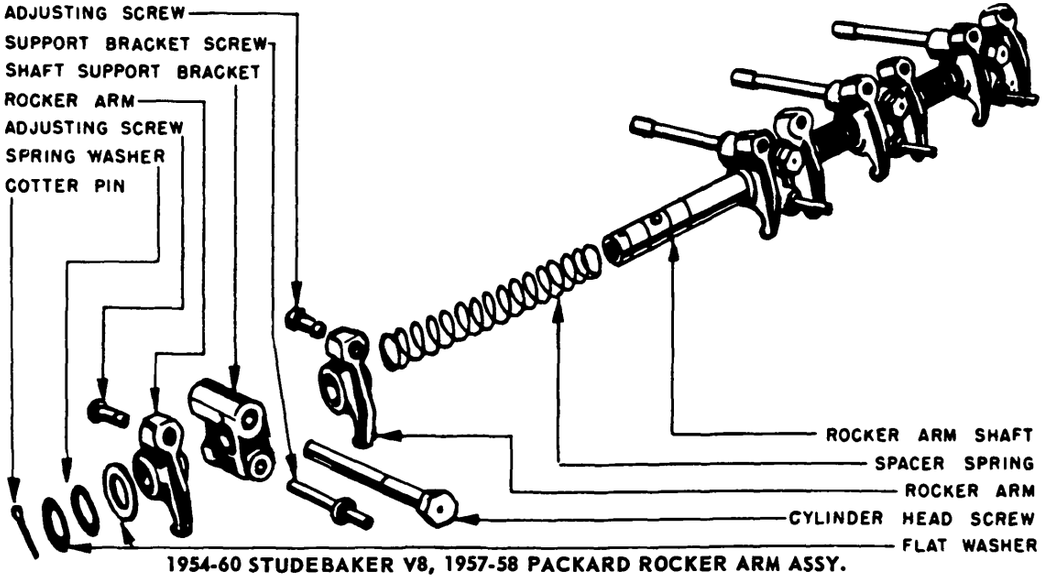
1954-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

ROCKER ARM ASSEMBLY: Two identical hollow steel shafts (ends plugged) are used. Four removable supports doweled to each shaft with cylinder head capscrews. Three springs used to position rocker arms against supports. Lubrication is supplied by oil from the main oil galleys to a passage in the cylinder head which leads the oil up around the relieved capscrew shank in the rocker arm front support on the left bank and the rocker arm rear support on the right bank. The bracket is drilled to connect the capscrew hole with the rocker arm shaft hole. The oil flows under pressure to the rocker arms and through holes drilled in the rocker arms to the adjusting screws and through the center of the adjusting screws to the push rods.

►*DISASSEMBLY CAUTION:* Mark rocker arms, brackets, and the rocker arm shaft so that they can be reassembled in their original position.

Reassembly—Make certain the oil holes and grooves in the rocker arm shaft and the oil holes in the brackets rocker arms and adjusting screws are clean. Check rocker arms and shaft clearance which should be .0005" to .0025". Test springs. It should require 9-1/2 to 10-1/2 lbs. to compress springs to 2-1/32". If not within these limits, replace spring. Assemble all parts in order as shown in illustration observing the following points: Adjusting screw end of rocker arm must be on same side of shaft as cylinder capscrew groove in shaft and oil groove side of shaft must be at bottom of rocker arm. When assemblies installed on cylinder head, flat side on end of rocker arm shaft should be toward rear of engine (right bank), toward front of engine (left bank).

VALVE LIFTER



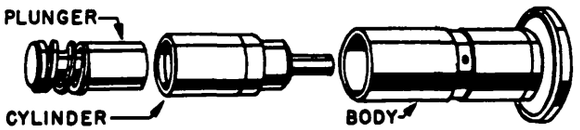
1954 PACKARD MODELS

HYDRAULIC VALVE LIFTERS ("Wilcox-Rich"): Mushroom type lifters, removed from below with camshaft out of engine. Lifter is composed of three major units: tappet body, cylinder, and plunger. Oil is introduced to lower part of lifter body from main oil pressure system, and then through a ball check valve to cylinder below plunger.

Removal: Remove camshaft (see Camshaft Removal above), and oil pan. Lifters can then be removed from below.

Disassembly: ***(CAUTION—Plungers and cylinders are selectively fit at the factory and must not be interchanged. Disassemble one unit at a time to avoid mixing parts).*** To remove plunger from cylinder, twist plunger in a direction that would "wind-up" the

CONTINUED ON NEXT PAGE



1954-60 STUDEBAKER V8, 1957-58 PACKARD ROCKER ARM ASSY.

Form 33 B

CONTINUED FROM PRECEDING PAGE

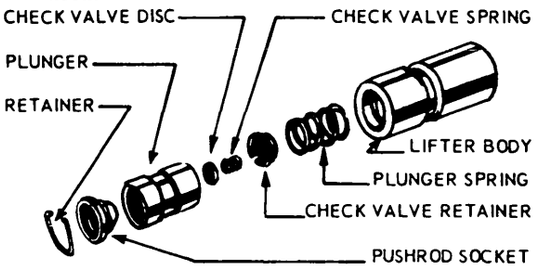
spring and pull outward at the same time. If plunger is stuck in cylinder, clean all carbon and varnish from lifter and then insert a match in oil inlet hole at bottom of lifter and raise check valve ball, allowing oil to drain out. If lifter remains stuck, soak in a carbon solvent.

1954 PACKARD HYDRAULIC LIFTER

Cleaning & Inspection: Clean all lifter parts in clean solvent and check for scoring, burrs, wear or foreign matter. Blow parts dry with compressed air.

Testing: Make sure there is no oil on lifter parts, then with cylinder held upright in one hand, start plunger into cylinder with the other. Depress plunger and release it quickly. Plunger should yield slightly to finger pressure but should "kick-back" immediately upon release of pressure. If it does not, place finger over oil inlet hole and repeat the test. If "kick-back" does not occur on second test, thoroughly re-clean lifter to eliminate the possibility of dirt causing check valve to leak. Again check lifter, and if "kick-back" is not felt, it must be assumed that lifter check valve is damaged. Replace entire hydraulic unit.

Reassembly: Clean plunger and cylinder, and blow completely dry with air. Avoid touching plunger with fingers to prevent oil film, and place plunger in cylinder, pushing it down until air escapes, then place unit in lifter body. CAUTION—It is important to keep plunger and cylinder assembly free of oil, as a dry assembly will bleed quicker and prime quicker, eliminating excessive noise when engine first started.



Initial Adjustment (after Valves Ground or New Parts Installed): Check the take-up reserve of each hydraulic valve lifter after valves and valve seats have been refaced or new lifter parts installed. Remove hydraulic plunger and cylinder from lifter body (valve springs and retainers removed from valve stems). Bring piston of cylinder to top of its compression stroke (this must be done on each cylinder when checking the respective valves) which will place lifters on heel of cam lobe. Check valve clearance by inserting Plug Gauge of Hydraulic Gauge Set J-4540 or J-2553 (which ever required) in lifter body. Check clearance between gauge plug and valve stem (with valve held down on seat) using feeler gauge supplied with gauge set. **Clearance should be .030" to .070".** If under .030", grind off end of valve stem with valve refacer. NOTE—Feeler gauge marked "GO" and "NO GO."

►*CAUTION*—When checking other valves, make certain piston for that cylinder is at top of compression stroke.

1955-56 PACKARD MODELS

►*TOOL J-5978 & J-5978-A TOOL NOTE:* Two types of lifters used. Tool J-5978 can be used with early type lifter. Tool J-5978-A must be used with later type lifter and can be used with early type. New valve lifters have narrower oil groove in body and groove is raised slightly. If Tool J-5978-A not available, Tool J-5978 can be reworked as follows for use with later type lifter. Grind two ears of lower jaw down to a 5/32" thickness (grind away lower surface of jaw) and back 5/8". Use Adapter J-5978-6 with modified tool.

HYDRAULIC VALVE LIFTERS: Removal—Remove valve rocker covers and rocker arm shaft mounting bracket bolts and lift off rocker arm shaft assembly. Remove upper valve tappet cover and breather tube and then remove lower valve tappet cover. Remove pushrods and hydraulic valve lifters keeping pushrods and lifters in sequence so they can be replaced in the same relative position. *NOTE*—Lifters can be removed from block with Valve Lifter Remover J-5962 or a wire hook.

1955-56 PACKARD HYDRAULIC LIFTER

Disassembly: Press down on valve pushrod socket and use a pair of needle nose pliers to remove the lock ring. Remove pushrod socket, plunger, and plunger spring. Remove check valve assembly from plunger being careful not to lose the small flat valve and coil spring. *(CAUTION–Disassemble one lifter at a time to avoid mixing plungers and bodies. These parts are selectively fitted and must not be interchanged).* Use clean solvent and thoroughly wash all parts. Remove any varnish or gum deposits.

Inspection: Inspect plunger and walls of body for scratches (if plunger or body are scratched, replace complete unit). Try the plunger for fit in body. If check valve assembly removed from plunger, inspect flat disc valve, spring and seat.

Reassembly: Reverse disassembly procedure. See illustration for correct sequence.

Testing: Use a clean container deep enough to cover the lifter assembly (in an upright position). Fill container with clean kerosene. Remove the pushrod socket and place lifter in kerosene in an upright position, allowing it to fill up. Remove lifter and replace pushrod socket. Place lifter assembly between jaws of checking tool (see J-5978 & J-5978-A Tool Note below) Check leakdown by depressing the tool. A decided resistance should be felt. If plunger collapses immediately, the lifter should be checked again. Replace if no resistance felt.

1954-60 STUDEBAKER 6 CYL. & V8 MODELS 1957-58 PACKARD MODELS

VALVE LIFTER INSTALLATION: Thoroughly clean lifter bores in cylinder block and inspect for smoothness. With lifter and bore clean and dry, check lifter fit and select correct lifter size. Lifters furnished Std., .001", .005" oversize. See ".005" Oversize Lifter Installation" below.

Checking Lifter Fit in Bore—When properly fitted, the valve lifter should just slide into place from its own weight. If .001" oversize lifter does not restore proper clearance, bore must be reamed to .005" oversize, and .005" oversize lifters installed.

1954-60 STUDEBAKER 6 CYL. & V8 MODELS 1957-58 PACKARD MODELS

OVERSIZE VALVE LIFTER INSTALLATION: Special reamers required for reaming engine block bores .005" oversize as follows: 32L-STB (6 Cyl.), 1356-STB (1954 V8), 1352-STB (1956-60 V8). These reamers will provide correct lifter to engine block clearance.

OILING SYSTEM

►*1959 STUDEBAKER LARK 6 CYL. OIL PRESSURE INDICATOR LIGHT STAYING ON AT IDLE SPEED CORRECTION:* On cars with PB-50 type oil filter, install oil filter inlet Pipe Nipple, Part No. 1549669,, which has a .0456" restriction. *NOTE* - Before installing the nipple make sure proper grade of oil is used and that engine idle speed is properly adjusted.

ENGINE LUBRICATION

STUDEBAKER 6 CYL. ENGINES

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, and valve lifters. All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted externally on right side of crankcase draws oil through floating oil strainer and intake pipe in crankcase which terminates at inlet port in pump mounting base. Oil from pump flows through outlet passage in pump body and mounting pad directly to main oil gallery which extends longitudinally along right side of crankcase (oil pressure regulator is located in crankcase at forward end of this oil gallery). At rear of engine, a transverse passage connects main oil gallery with lifter oil gallery which also extends entire length of engine block on inner side of lifter chamber. Oil is distributed through these oil galleries as follows:

Crankshaft & Camshaft Bearings - Lubricated through drilled passages in each crankcase web extending from main oil gallery to camshaft bearing bore and then down to corresponding main bearing bore (rear camshaft bearing is lubricated from passage connecting main oil gallery to lifter oil gallery).

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in connecting rod when this hole lines up with crankpin oil hole.

Valve Lifters - Each lifter lubricated through short oil passage extending from lifter oil gallery to lifter bore.

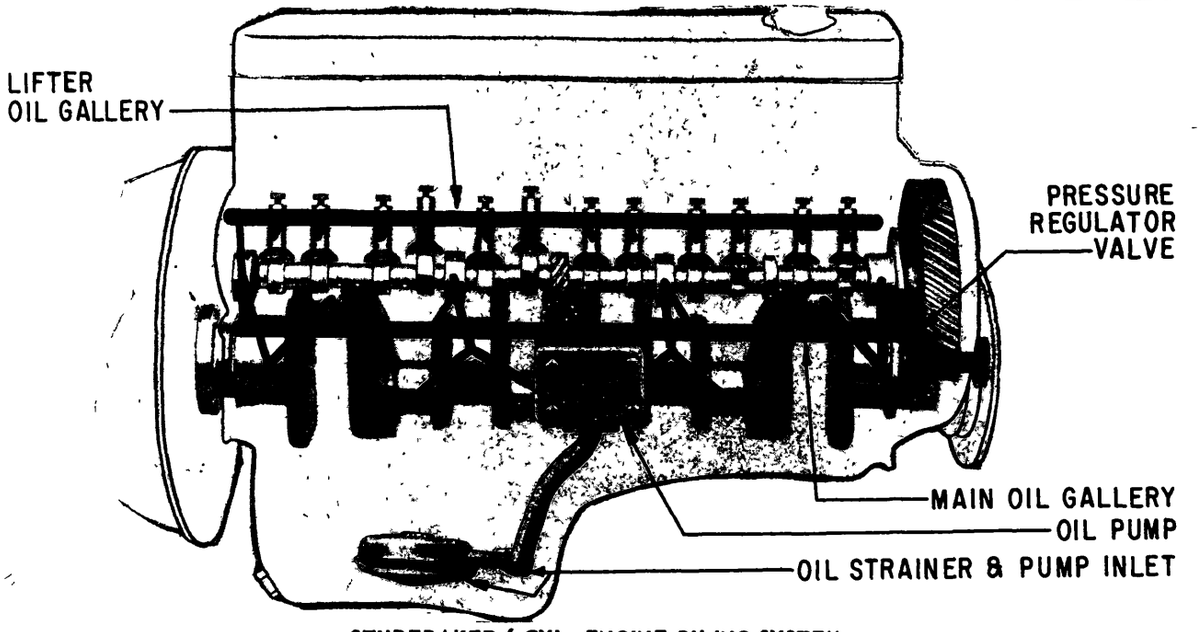
Timing Gears - Lubricated by oil return from pressure regulator valve. Valve bypass port discharges into channel formed by groove in front of block behind engine front plate through which oil is directed onto timing gears. *NOTE* - Small bleed hole in valve plunger provides lubrication for gears at low speeds when pressure regulator valve is closed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

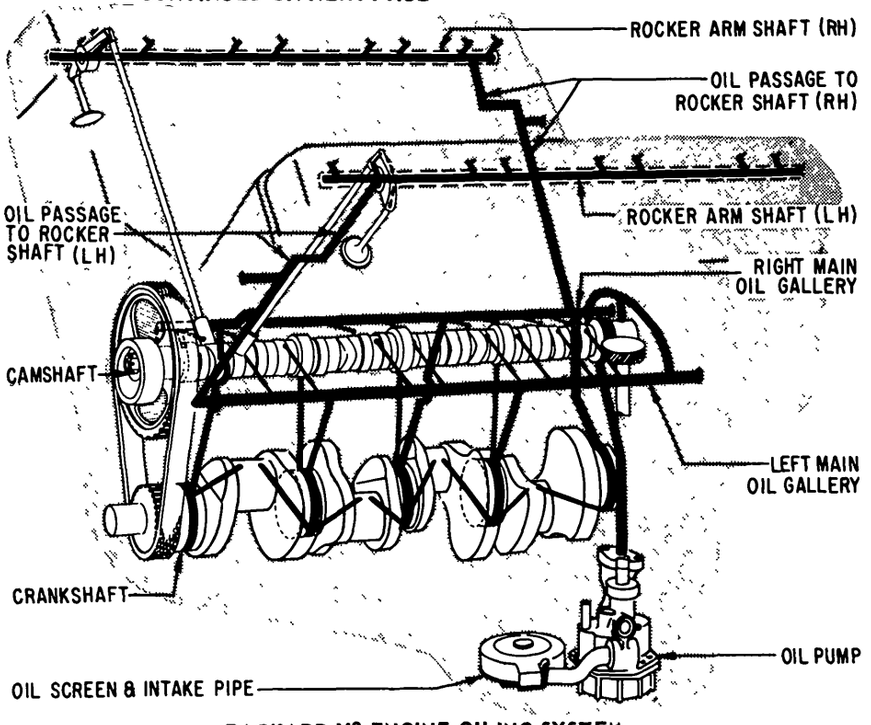
STUDEBAKER V8 ENGINES

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, valve lifters, and valve mechanism on cylinder head. All other parts are lubricated by oil spray or oil return flow.



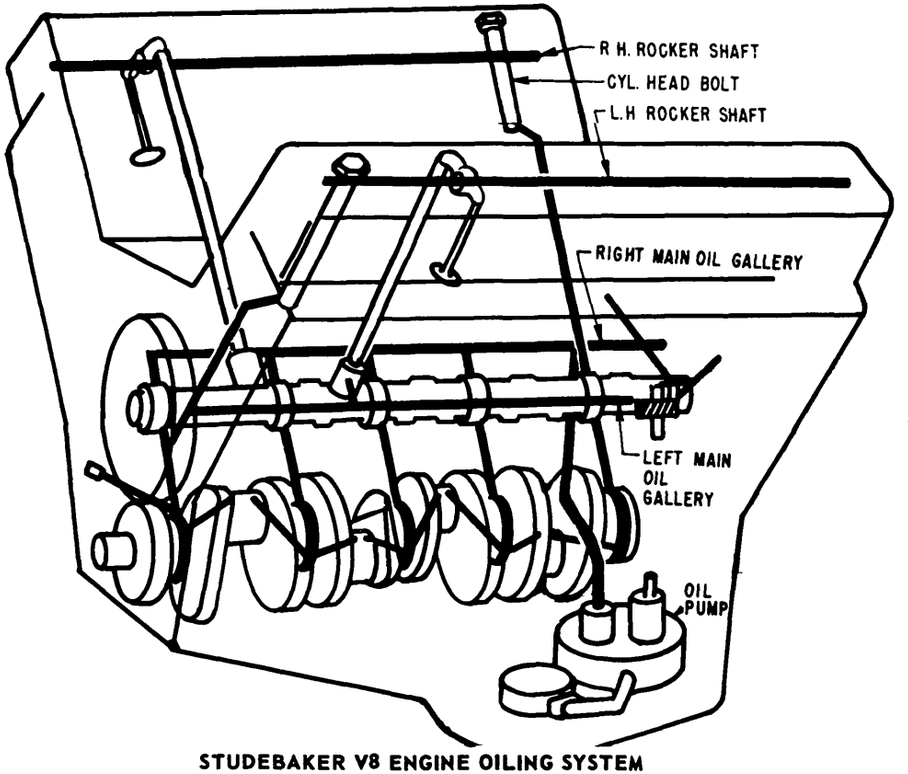
OPERATION: Gear type oil pump mounted on rear main bearing cap in crankcase draws oil through floating oil strainer and intake pipe mounted on pump body and delivers oil through passages in rear bearing cap and engine block to rear end of right main oil gallery which extends along entire length of engine. At forward end of the engine, two intersecting cross-passages connect the right main oil gallery with the left main oil gallery which also extends along entire length of the engine. Oil is distributed from these oil galleries as follows:

Crankshaft & Camshaft Bearings - Lubricated through drilled passage in each crankcase web extending from **right hand** main oil gallery to corresponding camshaft and crankshaft bearings. *NOTE* - Rear camshaft bearing is lubricated by separate cross-passage from right main oil gallery.



Connecting Rods - Crankshaft is drilled and each connecting rod bearing is lubricated through drilled hole in shaft from adjacent main bearing.

Pist ns & Pins - Lubricated by oil spray thrown on cylinder wall from spray hole in lower end of connecting rod when this hole registers with oil hole in crankpin.



CONTINUED ON NEXT PAGE

STUDEBAKER 6 CYL. ENGINE OILING SYSTEM

PACKARD V8 ENGINE OILING SYSTEM

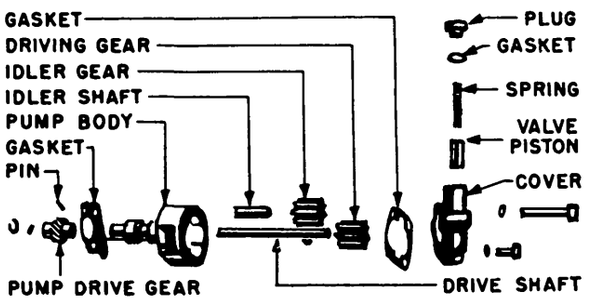
STUDEBAKER V8 ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

Valv Lifters - Lifters are lubricated through short vertical passage leading from adjacent main oil gallery.
Rocker Arms, Pushrods, & Valves - Drilled passages in block at forward end of left main oil gallery (for left bank), and at rear end of right main oil gallery (for right bank) extend up to matching passages in cylinder head and rocker shaft support brackets (front bracket on left head, rear bracket on right head). Passage in head and support bracket is around relieved shank of cylinder head bolt which passes thr ugh bracket. Oil flowing through this passage enters hollow rocker arm shaft through angle passage in bracket. Drilled holes in shaft and in rocker arm and tappet adjusting screw provide lubrication for rocker arm, pushrod socket, and valve tip. Drain hole at rear end of each cylinder head and matching passage in block drain excess oil back into lifter chamber (drain hole in head is through hollow dowel). An oil return hole in the lifter chamber permits oil to drain back into oil pan. *NOTE* -Early engines had drain hole at each end of each cylinder head.
Timing Gears - Lubricated by oil bypassed by pressure regulator valve (pressure regulator mounted on right front corner of engine block and oil return passage directs oil on timing gears). Valve plunger has small bleed hole to provide lubrication for gears at low speeds when regulator valve is closed.
Camshaft Gear Thrust Face - Groove in front camshaft bearing permits oil to flow out and through hole in camshaft thrust plate. Two grooves in front face of plate distribute oil over face of thrust plate on which camshaft gear hub rides.
Distributor Drive Shaft & Gear - Lubricated through passage from rear of rear camshaft bearing.

OIL FILTER: Partial flow type mounted on bracket on cylinder head. Oil inlet line is connected to drilled hole at front of left cylinder head and filter outlet pipe returns oil to crankcase filler pipe.

PACKARD V8 ENGINES



DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, hydraulic lifters, and rocker arm assemblies. All other parts are lubricated by oil spray or oil return flow.

OPERATION: Gear type oil pump mounted on rear main bearing cap in crankcase draws oil through floating strainer and inlet pipe attached to pump body and delivers oil up through a passage in the pump body, bearing cap, and crankcase directly to the rear end of the right hand main oil gallery which extends along the full length of the engine block. A cross-passage at the rear of the engine connects right main oil gallery with left main oil gallery which extends full length of engine block on left side. Oil is distributed from these galleries as follows:
Crankshaft Bearings - Lubricated through drilled passages in crankcase webs by which oil is fed from main oil galleries to each crankshaft bearing as follows: Nos. 1,3,5 - Right Bank Oil Gallery; Nos. 2 & 4 - Left Bank Oil Gallery.
Camshaft B arings - All camshaft bearings except No. 5 (rear) are lubricated from corresponding main bearing through vertical passages in crankcase webs. Rear camshaft bearing is lubricated directly from main oil gallery line through short vertical passage above bearing bore.
C nnecting Rods - Crankshaft is drilled and each connecting rod bearing is lubricated through drilled hole from adjacent main bearing.
Pistons & Pins - Lubricated by oil spray thrown on cylinder wall by same cylinder of opposite bank. Spray hole consists of groove in bearing cap through which oil is sprayed when this groove lines up with oil hole in crankpin. *NOTE* - Rods must be installed with this groove upward toward camshaft to effect this cross-lubrication.
Valve Lifters - Lifters are supplied with oil through short passage from adjacent main oil gallery.
Rocker Arms, Pushrods, & Valves - Drilled passages in block at forward end of left main oil gallery (for left bank) and at rear end of right main oil gallery (for right bank) extend up to matching passages in cylinder head (passage in head is around relieved shank of cylinder head bolt). Passage in head extends to rocker arm shaft bracket mounting bolt hole (front bracket left bank, rear bracket right bank) through which oil flows into hollow rocker arm shaft. Drilled holes in shaft and passages in rocker arm provide lubrication for rocker arms, pushrods, and valves. Drain holes are provided in cylinder head and block for oil drainage back to oil pan (hole consists of drilled dowel in front end of head (right bank), rear end of head (left bank).
Timing Chain & Sprockets - Grooved channel and spray hole in camshaft retainer plate provide lubrication for chain and sprockets from forward end of right main oil gallery (camshaft retainer plate acts as cover for forward end of main oil galleries). Fuel pump eccentric is lubricated similarly by spray hole in retainer plate.

OIL PUMP

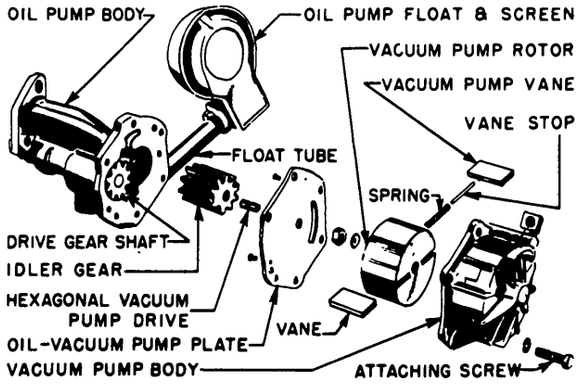
1954 PACKARD MODELS

OIL PUMP: Removal—Set engine in firing position for #1 cylinder (6° BTDC.), remove distributor cap and mark rotor position on distributor housing. Wi h pump cover off, mark pump driving gear position on pump body (check to this mark when re-assembling since pump must be rotated 180° on some cars to clear frame when removing pump from engine).

1954 PACKARD OIL PUMP ASSY.

Disassembly: Remove pump cover and gasket. Place a straight-edge across pump body, and with a feeler gauge, measure clearance between pump gears and straight-edge. Clearance should be .002" or less. Clearance between gears and pump body should be .005" or less. Holding hand under pump body, rotate drive shaft until driven gear falls out. Drive out driving gear retaining pin and press out drive gear. Driving gear may be pressed from shaft if necessary.
Reassembly: Assemble shaft and drive pump gear and install in oil pump body. Press drive gear on shaft until endplay of shaft measures .003-.010". Measure this clearance between drive gear and pump body, using a feeler gauge. If a new pump drive shaft installed, drill a ⅛" hole through drive gear and shaft, install pin and peen it over on both ends. Install oil pump idler gear. Lubricate pump with clean engine oil and install pump cover, using a new gasket. Torque attaching screws to 25-30 ft. lbs. Clean and inspect relief valve by removing valve piston, spring, and plug from pump cover. Check piston for scores and for improper seating. Check pump cover for dirt or foreign material and clean thoroughly. If necessary crocus cloth can be used to polish relief valve piston.
Installation: Correct engaging position of pump drive is with driving blade in pump drive gear parallel with camshaft, and punch mark on end of drive gear at top. Reassemble to marks made at time pump removed, and with engine in firing position for No. 1 cylinder. If pump does not engage slot in distributor shaft, remove pump and turn pump drive one tooth and reinstall, making certain that distributor is at No. 1 firing position.

1955-56 PACKARD MODELS
1956 STUDEBAKER GOLDEN HAWK



►*NOTE:* Studebaker Golden Hawk has a cover plate on bottom of oil pump in place of the vacuum pump used on Packard Models.

OIL PUMP: Removal—Remove engine oil pan. Disconnect vacuum pump line to crankcase. Remove the two screws attaching oil pump to rear main bearing cap and remove oil pump, vacuum pump and strainer assembly.
Disassembly: Remove screws attaching vacuum pump to oil pump body and remove vacuum pump. Do not lose the small hexagonal drive. Remove idler gear. Remove pin from shaft and drive off sleeve. Remove upper and lower oil pump driving shaft and gear. If necessary, press shaft out of gear. If necessary to to remove the float assembly, the tube can be unscrewed from pump.
Inspection: Wash all parts in clean solvent and blow dry with air. Inspect float for leaks. Inspect strainer. Inspect pump shaft and gears for wear, scores or pits. Check clearance between gears and pump housing using a feeler gauge. This clearance should not exceed .005". Check gear endplay using a straightedge across gears and housing. Endplay should not exceed .003". Check clearance between shaft and body. Clearance should not exceed .003". Inspect pressure relief valve piston for scores. Inspect relief valve spring. Free length of spring should be approximately 3-19/64". When compressed to 1-3/8", pressure should be 9—9-1/2 lbs. Inspect pump cover for wear. Dress down on a surface plate if necessary.
Reassembly: If float and suction tube removed from pump body, special care should be taken when installing to see that suction tube is tight in threads of pump body, and that float is properly positioned. To position

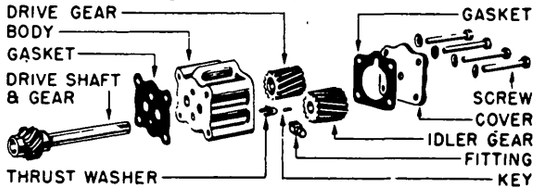
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

float and tube (vacuum pump must be removed), measure the distance between machined face of pump housing and top edge of float. This distance must be 3/4" *(CAUTION–When positioning float, do not unscrew tub to position float, but continue one more turn).*

1955-56 PACKARD OIL & VACUUM PUMP ASSY.
1956 STUDEBAKER GOLDEN HAWK OIL PUMP ASSY.

Install key in pump shaft keyway and press driving gear on shaft until flush with bottom of gear. Install upper and lower shafts and gear in pump body. Install sleeve on shaft. Install pin in sleeve and stake both ends of pin. Install idler gear and hexagonal drive in end of gear. Position vacuum pump on oil pump body to line up with dowel pins and install attaching screws.



Installati n: Start oil pump driving shaft in hole in rear main bearing cap and turn shaft to engage mating end on distributor shaft. Start the two screws and lockwashers and tighten screws to 25-30 ft. lbs. Connect vacuum pump line to crankcase. Install engine oil pan.

1954-60 STUDEBAKER 6 CYL. MODELS

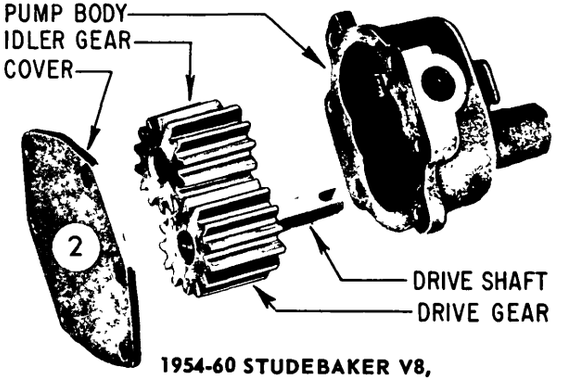
OIL PUMP: R m val & Disassembly–Disconnect oil pressure pipe. After removing four cover screws and washers, remove pump body cover, gasket and idler gear. Remove drive gear using tool J-2959. Remove Woodruff key and horseshoe shaped thrust washer to permit removal of oil pump body and gasket. If it is necessary to remove pump drive shaft and gear, the oil pan must be removed. Turn crankshaft away from No. 1 TDC position (to provide clearance between counterweight and engine block). Remove distributor and push oil pump drive shaft inward, and remove it from the crankcase. To remove gear from oil pump drive shaft, press out the gear-to-shaft pin and then press shaft out of gear.

Insp cti n: Inspect pump cover for flatness and deep scratches or score marks. Check clearance between oil pump gears and pump body by placing a .005" feeler gauge between teeth of oil pump gear and body on each side of pump. The pump should be locked tight. The total clearance should not exceed .010". If pump gears can be rotated with the two .005" feelers in place, the pump body is worn and should be replaced. Check gears for smoothness, deep scratches and score marks. Replace all defective parts. Clearance between end of gears and cover plate must not exceed .007". To check this clearance, the lower ends of the gears should be exactly flush with the lower surface of pump body when gears are resting against the upper part of pump body. A new gasket .004-.006" thick, when compressed will provide proper clearance.

Installation & Reassembly: *(CAUTION–If oil pump drive shaft removed, install EXACTLY as described below to obtain correct ignition timing).*

STUDEBAKER 6 CYLINDER OIL PUMP

Oil Pump Drive Shaft Installation - Install drive shaft, temporarily engaging camshaft gear and oil pump drive gear with crankshaft turned away from No. 1 TDC position (necessary to provide clearance at crankshaft center counterweight). Then turn the crankshaft until No. 1 piston is on compression stroke and "UDC 1-6" mark on vibration dampener is directly under pointer on engine front cover. Slide the oil pump drive shaft away from camshaft to disengage the camshaft gear and turn drive shaft until keyway is pointing directly upward when the two gears start to engage. Pull the shaft into position so that the two gears fully mesh (the drive shaft will rotate so that the keyway is toward rear of engine). Install distributor to hold oil pump drive shaft in position while installing remainder of pump assembly (with slot in end of distributor shaft engaged, rotor should line up with No. 1 terminal in distributor cap).



Oil Pump Assembly–Dip each part of pump in clean engine oil before assembly. Place a new gasket and oil pump body over pump shaft and install horseshoe washer, woodruff key, and drive gear. Install idler gear, new cover gasket, and pump body cover. Secure entire assembly in place with the four cover screws. Remove oil pressure pipe fitting from pump body and prime pump with clean engine oil. Install fitting and oil pressure pipe.

Oil Strainer & Suction Pipe - Furnished as an assembly (strainer is stationary type). To remove this assembly, take out suction pipe flange-to-block capscrew, lift assembly off, remove flange gasket. Use new gasket when installing assembly.

1954-60 STUDEBAKER V8 MODELS
1957-58 PACKARD MODELS

►*NOTE:* For 1956 Golden Hawk Oil Pump, *see 1955-56 Packard Models.*

OIL PUMP: R m val–Remove oil pan and take out the two oil pump retaining nuts and lockwashers. Slip pump assembly off mounting pad studs and remove gasket.

1954-60 STUDEBAKER V8, 1957-58 PACKARD OIL PUMP ASSY.

Disassembly: If necessary to remove oil suction pipe and strainer, use pipe wrench to turn pipe out of pump body *(NOTE* - Strainer is fixed type and is furnished as an assembly with the suction pipe). Remove cover screws and pump body cover. Remove idler gear, drive gear and shaft *(NOTE* - Do not disassemble drive gear and shaft). Clean oil strainer with solvent and dry it thoroughly.

Inspection: Inspect pump cover for deep scratches or scores and for flatness. Check clearance between oil pump gears and pump body by placing a .005" feeler gauge between teeth of oil pump gear and body on each side of pump. If pump gears can be rotated with the two .005" feelers in place, the pump body is worn and should be replaced. Check gears for smoothness, deep scratches and score marks. Replace all defective parts. With weight of gears resting against upper part of pump body, place a straightedge across face of pump body and measure distance between gear face and straightedge. This clearance should not exceed .007".

Reassembly: Place drive gear and shaft assembly in pump body. Install idler gear on idler shaft. Install pump body cover and cover screws (no gasket is used between body and cover. Then proceed as follows:

1954-55 Models - Insert pipe of floating oil strainer in cover inlet, with ears of strainer flange straddling projection on cover inlet and install 1/8" cotter key.

1956-57 Models - Insert pipe of floating oil strainer in cover inlet (finger tight) and set strainer at proper position. Hold assembly with strainer up against upper stop. Lower surface should be parallel with and 1 7/8" below cover. Scribe marks on pump and pipe, then use pipe wrench to tighten pipe with marks in line.

1958-60 Models - Install oil strainer and pipe assembly by threading pipe into pump body. Use pipe wrench and tighten to 30 ft. lbs. torque with strainer parallel to cover. *CAUTION - DO NOT back pipe out to align strainer.*

Installation: Clean all trace of old gasket off pump mounting flange and rear bearing cap pad. Install a new gasket and position slot in pump drive gear shaft so it will mate with tongue of the oil pump drive shaft

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and coupling, and install pump on mounting studs. Install nuts and lockwashers and tighten securely to 13-17 ft. lbs.

COOLING SYSTEM

1958 PACKARD HAWK

FAN NOISE REDUCTION & IMPROVED COOLING CORRECTION (Packard Hawk before Serial No. 58L-1465): To correct complaints of fan noise or overheating, ALL of the modifications listed below should be made. *These changes were made in production on cars beginning with Serial No. 58L-1465.*

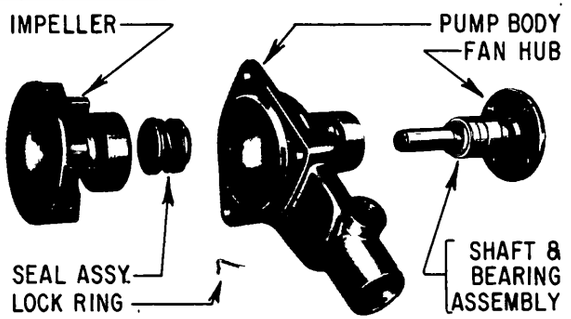
1) Upper Air Deflector Openings. Open hood and prop it up securely (do not use regular hood support rod). Mark off two 3" x 5" openings in upper air deflector (one each side of center hood lock plate), cut these openings with a hacksaw blade or cutting tool, (air deflector is fiber glass).

2) Radiator Upper Air Baffle Assembly (Part No. 1328378). Install this baffle on upper air deflector, using two rear outer upper deflector attaching screws (located at opposite ends of radiator core) and rear grille support screws (located at end of hood lock plate) to attach baffle. Route wiring harness through baffle openings and secure it in clips provided.

3) Four-Blade Fan Assembly (Part No. 535257). Remove original five-blade fan assembly and replace it with the above four-blade type *See Overheating Correction*

OVERHEATING CORRECTION (Packard Hawk beginning Serial No. 58L-1465): To correct complaints of overheating in hot climates, or in congested traffic operation, on these cars with modified fan and air deflectors *(See "Fan Noise Reduction &, Improved Cooling Correction" above),* replace four-bladed fan assembly No. 535157), with five-blade fan assembly (original equipment on first cars).

1956-58 STUDEBAKER MODELS
1959-60 STUDEBAKER HAWK MODELS



RADIATOR & FAN SHROUD REMOVAL & INSTALLATION: Shroud (Coupe & Hardtop) - Drain radiator and remove inlet hose. Remove wiring junction block from fan shroud. Pry open wiring harness clips and move harness out of way. Remove fan-to-hub screws and remove fan blades. Remove four capscrews holding shroud to radiator core support and remove fan shroud. To install, reverse removal procedures.

Radiator (All Models) - Drain cooling system disconnect battery and tie up hood. Remove horn relay and headlamp junction block screws, and free wires across top of shroud from clips. Except on Champion models, remove gasoline pipe clip screw. If car has power steering, free upper hose from hose support. Remove fan blade assembly. Disconnect upper and lower hoses from radiator. Remove screws and remove radiator core. To reinstall, reverse removal procedure.

WATER PUMP

1954-60 STUDEBAKER 6 CYL. MODELS

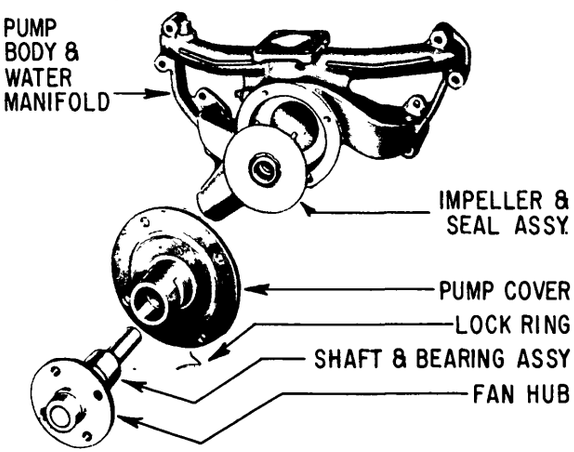
WATER PUMP: Removal - Drain cooling system, remove fan belt, fan blades and pulley. Disconnect heater hose and generator adjusting arm. Disconnect radiator-to-pump hose. Remove water pump.

STUDEBAKER 6 CYLINDER WATER PUMP

Disassembly: Remove bearing lock ring, place pump in an arbor press and press shaft, bearing and hub assembly through impeller and front of housing. Press hub from shaft.

Reassembly: Press new hub on shaft until flush with end of shaft. Install shaft and lock ring in housing. Use new seal and impeller and press impeller on shaft to obtain .015-.031" clearance between impeller and housing (rotate shaft when checking clearance).

Installation: Reverse removal procedure.



1954-60 STUDEBAKER V8 MODELS
1955-58 PACKARD MODELS

WATER PUMP: Removal - Drain cooling system, remove belt and fan and pulley. On Hawk, remove fan shroud (see below). Remove pump-to-manifold screws and remove water pump.

Disassembly: Remove bearing lock ring and press hub, shaft and bearing assembly out through front of housing. Press hub from shaft.

Reassembly: Use a new hub and press on shaft until flush with end of shaft. Install shaft in housing, install new seal in impeller. Press impeller on shaft until flush with end of shaft. Impeller-to-housing clearance should not exceed .090".

Installation: Reverse removal procedure.

STUDEBAKER V8 ENGINE WATER PUMP

IGNITION NOTES

1954-60 STUDEBAKER V8 MODELS (EXC. 1956 GOLDEN HAWK) 1957-58 PACKARD MODELS

DISTRIBUTOR DRIVE SHAFT ASSEMBLY: Removal - Turn crankshaft until "IGN" mark on vibration dampener is directly under pointer on engine front cover and distributor rotor is in line with No. 1 spark plug terminal of cap. Remove cap from distributor housing and carburetor air cleaner from carburetor. Disconnect wires and vacuum line. Remove distributor clamp capscrew and lift distributor out.

Installation: The "IGN" mark on vibration dampener must be directly beneath pointer. Position distributor so that spark modifier is to front and pointing slightly toward right. Turn rotor approximately 30° clockwise and insert the oil pump drive shaft and coupling into cylinder block opening. When the teeth on the distributor shaft gear contact the teeth on the camshaft gear, the rotor will turn counter-clockwise, and as the teeth mesh, the distributor assembly will seat on the cylinder block. At the same time the tongue of the oil pump drive shaft will enter the groove of the oil pump shaft. The rotor will now point directly forward and be in line with the No. 1 terminal of the distributor cap. (NOTE—Very slight misalignment may cause difficulty in engaging the oil pump drive shaft tongue with the groove of the oil pump shaft). After the distributor gear is in mesh with the camshaft gear, the engine may be cranked to give proper alignment. Maintain a light pressure on the distributor while cranking the engine to facilitate the engagement. Install distributor clamp and capscrew. Connect wiring and check ignition timing.

1955-56 PACKARD 1956 STUDEBAKER GOLDEN HAWK

DISTRIBUTOR DRIVE SHAFT ASSEMBLY: Removal - Turn crankshaft until ignition mark on vibration damper is directly under 5° mark and distributor rotor is in line with No. 1 spark plug terminal of cap. Unsnap retainer springs and remove distributor cap from housing. Remove carburetor air cleaner. Disconnect coil-to-distributor cable at distributor. Disconnect spark modifier pipe. Remove distributor clamp capscrew and clamp. Lift distributor out of block.

Installation: Line up ignition indicator mark on vibration damper with 5° timing mark with No. 1 cylinder on firing stroke. With distributor cap removed, insert distributor to engage oil pump drive shaft by turning distributor rotor. With rotor pointing at right cylinder bank, select proper tooth so that when distributor is placed in full mesh with the camshaft gear, rotor will be pointing to the right bank and 37° rearward from the transverse line. This will also be the position for the No. 1 spark plug wire terminal. **Line up, but d n t conn ct spark modifier pipe.** After distributor is in its bottom position, install retainer clamp, washer and screw. Install distributor cap, making sure that each of spark plug wires is tight in cap. Install coil-to-distributor cable. Before installing spark modifier pipe, check ignition timing and adjust. Install spark modifier pipe.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FUEL SYSTEM NOTES

1954 STUDEBAKER V8 MODELS

►**FUEL PUMP SUPPORT BRACKET PRODUCTION CHANGE:** Several changes have been made during production as follows:

Support Change (Beginning Eng. No. V-96218): Part No. 531650. design changed to provide for closer or dowel fit of attaching bolts to provide uniform location of pump on support for better control of pump stroke.

Support Gask t Change (Beginning Eng. No. V-97480): New gasket, Part No. 531640, which is .007" thick used to insure support being firmly bolted in place and to provide desired fuel pump stroke. This gasket should always be used with Support No. 531650.

CAUTION—Whenever this No. 531640 gasket used with previous type fuel pump support, make certain that support is not positioned too close to block which **might result in excessive fuel pump stroke and damage to the pump.**

1954 STUDEBAKER V8 MODELS

FUEL PUMP SUPPORT BRACKET CHECKING: Check support to assure correct fuel pump stroke as follows: Place support on flat surface and measure height from bottom of support perpendicularly to line across bottom of pump mounting holes. This distance must be 4 35/64". *CAUTION*—Gasket No. 531640 (.007" thick) must be used when installing support on engine.

Fuel Pump Push Rod Checking—When support removed, check push rod for straightness and evidence of scoring.. If rod scored, polish scored areas until rod slides freely in guide bore. If rod bent, replace with new rod No. 529123.

CLUTCH NOTES

1954 PACKARD MODELS

CLUTCH PEDAL OVER-CENTER SPRING: New adjustable type over-center (booster) spring. Adjustment provided at spring eye-bolt nut (front end of spring) and by turn buckle type pedal-to-relay lever link (controls over-center point). To adjust, proceed as follows:

Clutch Pedal Linkage Adjustment: Check over-center eye bolt (should be 1 5/8" from end of bolt to head of nut—adjust if necessary). Back off locknut and adjusting nut on rod at throwout lever and unhook pedal retracting spring from throwout lever. Adjust pedal-to-relay lever link turnbuckle so that over-center spring will pull pedal down after pedal moved down one inch from toeboard (make certain throwout lever does not contact adjusting nut and locknut backed off above). Hook pedal retracting spring to throwout lever. Adjust pedal for 1¼-1⅜" free play at pedal pad. Check over-center spring hold-in position by pulling pedal to floor and hooking spring at bend in pedal arm. Adjust eye bolt nut to hold pedal down with seven lbs. pull on scale.

1954 STUDEBAKER MODELS

►***CLUTCH PEDAL REWORK (To Prevent Spring Breakage):*** Hook of clutch pedal pull-back spring tends to open each time pedal is depressed, rather than slip in groove of anchor stud, causing spring end of hook to bend a slight amount and eventually causing spring wire fatigue and hook breakage. To prevent recurrence of condition with a new spring, it is necessary only to reduce contact area between anchor stud and the hook by cutting away the metal of the stud as follows: Start two 30° chamfers at two opposite ridges of hexagonal stud ½" from shoulder, and toward end of stud. Cut these chamfers equally to a point where a ⅛" thick section of the grooved end of the stud remains when metal toward end of stud and on each side of ⅛" section is cut away.

PROPELLER SHAFT NOTES

1954-55 STUDEBAKER MODELS

PROPELLER SHAFT ALIGNMENT CHECKING (To Correct Vibration): Check propeller shaft with dial indicator at three positions as follows: Front end of shaft, center of shaft, and rear end of shaft. For accuracy, shaft should be sandpapered at all positions, and measurements should be taken approximately 1½" back of welded joint on shaft. Maximum run-out for the front propeller shaft is .010" at any of the three positions. Maximum run-out for rear shaft is .010" (front & rear end), and .015" at the center. Check transmission and differential flanges by checking run-out of propeller shaft at the flange. Note amount of run-out and mark high side on propeller shaft. Change shaft location 180° in flange and again check shaft run-out. If run-out follows position marked on shaft and is approximately the same amount of run-out, it can be assumed that flange is satisfactory. If run-out remains on same side of flange as formerly, although not necessarily in the same amount, it can be assumed flange is causing the run-out. If checking indicates that shaft run-out is not within limits indicated above, replace shaft, flange, or both.

1956-57 STUDEBAKER MODELS
1957 PACKARD MODELS

PROPELLER SHAFT & SUPPORT BEARING ASSEMBLY: Propeller shaft is a two unit type (separate front & rear shafts) with intermediate bearing in Support Assembly on frame crossmember.

Propeller Shaft & Support Bearing Removal: Mark yokes of universal joints to assure original position at reassembly. Disconnect rear propeller shaft from rear axle companion flange. Remove shaft support stud nuts, lock washers, and plain washers. Disconnect front propeller shaft from transmission companion flange. Remove bearing cups and bearings or tape them securely in place on joint crosses. Then move assembly rearward, slipping the shaft support off the cushions and threading the front shaft rearward through center crossmember.

Installati n—Reverse removal procedure.

R ar Shaft R m val: Straighten ear of lockplate, loosen grease washer nut and unscrew it from shaft. Mark universal joint flange and rear axle companion flange to assure original position and balance at reassembly. Remove U-bolts holding rear joint bearing cups and cross to rear axle flange. Shift shaft forward and separate joint by prying with a suitable bar between companion flange and universal cross. Hold bearing cups on the cross while separating joint to avoid dropping cups and spilling bearings. Then remove bearing cups and bearings or tape them securely in place on cross. Slide shaft rearward, slipping end of slip yoke out of splines of front shaft. To remove grease washer nut from slip yoke, first remove cork grease washer and washer retainer from within the nut and slide nut off slip yoke. Cork grease washer and washer retainer are split to facilitate removal.

Installation—Reverse removal procedure. Tighten U-bolts and nuts to 20-22 ft. lbs. torque.

Front Shaft Removal: Remove rear shaft and shaft support assembly. Mark front shaft universal joint flange and transmission companion flange. Remove U-bolts holding joint bearing cups and cross to transmission companion flange. Separate joint by prying with suitable bar between companion flange and universal cross. Hold bearing cups on cross while separating joint to avoid spilling bearings. Remove bearing cups and bearings or tape them in place on the cross. Then slide rear end of shaft out of crossmember and remove from chassis.

Installation—Reverse removal procedure. Tighten U-bolts and nuts to 20-22 ft. lbs. torque.

Support Bearing Servicing: Bearing is sealed type (prepacked with lubricant) **and must never be washed in gasoline or other solvents.**

►*CAUTION: Do not re-install support bearing which has been washed in gasoline or solvent.*

Support Bearing Removal: Remove rear shaft. Remove lock plate and spacer from projecting end of front shaft, and remove shield. Remove shaft support stud nuts, lockwashers, and plain washers. Slide bearing and support assembly off front shaft and support cushions. Remove dust shields from front shaft. To remove support bearing from support use a suitable tube which will fit the outer race of the bearing and, with an arbor press, remove the bearing. NOTE—Use care not to damage bearing seal.

Installation—Reverse removal procedure. NOTE—Press bearing into support so that it is laterally centered in the support. Install dust shields on front shaft with concave side of shield against shoulder on shaft. If shaft support cushions removed, be sure to install studs in same holes from which removed.

CONTINUED FROM PRECEDING PAGE

1958 STUDEBAKER & PACKARD HAWK MODELS

PROPELLER SHAFT NOISE CORRECTION: Caused by interference between front end of propeller shaft and body floor pan clearance tunnel (All Models) or center arm rest attaching screws (Packard Hawk) *NOTE* - Later cars (after Serial Nos listed below) have production changes to correct these conditions and corrections will not be required

1) Interference between propeller shaft and body floor pan clearance tunnel (Silver Hawk before Serial No. 7211198, Golden Hawk before Serial No. 6104735, Packard Hawk before Serial No. 1181). With car standing on floor or supported by all four wheels on hoist, check clearance between propeller shaft and all points in floor pan clearance tunnel Clearance must be 5/16" minimum Mark all points of insufficient clearance, then remove propeller shaft and bump out these points to secure at least 5/16" clearance *NOTF* - Later Golden Hawk and Packard Hawk cars have 3¼" diameter propeller shaft (reduced from 3½") to provide greater clearance (All Silver Hawk propeller shafts are 3¼" diameter)

►*RFPLACEMENT PROPELLER SHAFT NCTE (Golden Hawk & Packard Hawk):* This 3¼" propeller shaft (see above) Part No 1544461, is interchangeable with previous 3½" type and will be furnished for service

2) Interference between propeller shaft and center arm rest attaching screws (Early Packard Hawk). On these cars, screws attaching right side of center arm rest to floor pan may extend through far enough to interfere with propeller shaft Correct by removing screws and drilling out screw holes to take 3/16" bolts Install bolts from below with bolt heads on underside of floor pan Use lockwashers under nuts and cut off ends of bolts flush with nuts after nuts have been tightened *NOTE* - On later cars, extensions are welded on attaching screw tabs which lower the attaching screws approximately 1 23/32" so that no interference with the propeller shaft can occur

1958 STUDEBAKER SCOTSMAN MODELS

DRIVE LINE VIBRATION CORRECTION (Early Scotsman with Overdrive Transmission): A "rhythmic beat" vibration at 32-40 MPH in overdrive can be corrected by installing 2° wedge shims at spring seats on rear axle to change rear universal joint angularity as directed below *NOTE - Cars beginning Serial No. G-1408561 have changed spring pad angle on rear axle housing and do not require this correction. These cars marked by yellow paint on one spring pad.*

Wedge Shim Installation - Raise car to remove load from rear springs, support car under both frame side rails Disconnect rear shock absorbers and loosen rear spring clip nuts. Install 2° wedge plate (1 5/8" wide) between spring and spring pad on axle with thick end of wedge plate to front of car Tighten spring clip nuts to 47-50 ft lbs torque and connect shock absorbers

1959-60 STUDEBAKER MODELS

►*UNIVERSAL JOINT "PHASE ANGLE" & PROPELLER SHAFT REPLACEMENT CAUTION:* Shaft assemblies with **different** phase angles used with each rear axle model. Specifications for some propeller shafts may appear the same but they MUST NOT BE INTERCHANGED. Phase angles are as follows:

1959 Models

Car Model	Rear Axle Model	Phase Angle
6 Cyl. (Exc. Taxi)	23—1	0°
6 Cyl. (Exc. Taxi) Ⓒ	23—1	9°
6 Cyl. Taxi	44—3	12°
V8 (Exc. Taxi & Sta. Wgn.)	23—1	0°
V8 Taxi & Sta. Wgn.	44—3	12°

Ⓒ — Later W6 Sedans & Station Wagons with Overdrive. *See "Production Changes" below.*

1960 Models

Rear Axle Model	Phase Angle
23	0°
44	12°

►*1959 PROPELLER SHAFT PRODUCTION CHANGES & RECOMMENDED CORRECTION FOR "RHYTHMIC BEAT" NOISE IN DRIVE LINE (6 CYL.):* New propeller shaft assembly with 9° phase angle used in production on Overdrive cars as follows: **W6 Sedans** — Part No. 1547663 at Serial No 59S—86244; **D4 &D6 Station Wagons** — Part No. 1547662 at Serial No. 59S—88600. New shaft used to correct vibration and noise. If conditions encountered on other models with Overdrive (exc. Hawk & Taxi), install new shaft assemblies (use Shaft 1547663 for F & J models). *NOTE — New shafts must be installed as follows:*

1) Raise car on hoist and make sure clutch housing-to-rear engine plate bolts and capscrews are tight. Remove rear universal joint U-bolt nut and U-bolt and remove propeller shaft assembly.

2) Install new shaft and be sure retaining strap for rear universal joint bearing caps is in notches of rear axle companion flange.

3) Install U-bolts and nuts and tighten **not to exceed 10—12 ft. lbs.** Then check universal joint angles as detailed below.

DRIVE LINE ALIGNMENT: Raise rear wheels off floor and put transmission in neutral. Clean shaft with sandpaper. With dial indicator measure runout of propeller shaft at front, center and rear, while turning shaft slowly by hand. *NOTE — Make end measurements about 1½" back from weld joint.* Maximum runout should be .010" at front or rear and .015" at center. If not within limits check flanges of transmission and differential. Measure shaft runout and end nearest flange and mark flange at highest runout. Disconnect universal joint, rotate flange 180° and reassemble Check runout again. If high side of runout is still on same side, flange is at fault. If rotating flanges does not correct runout, replace shaft and/or flanges.

DRIVE LINE ANGLE CHECKING & ADJUSTMENT: Check angles with level gauge or protracter. *NOTE — Manufactur r r comm nds us f sp cial Protract r Gaug J—7181 for b st r sults.* With car at normal road load, proceed as follows:

Front (Engine-to-Pr pell r Shaft) Angl : Raise car with weight supported on all wheels. Jounce car to allow springs to equalize. Do not move car body while measuring angles. Place Gauge on clean surface on bottom of propeller shaft so pendulum is free to swing. Rotate protractor to bring 90° mark under pointer. Without disturbing protractor position, place Gauge up against starter housing so pendulum is free and read the number of degrees that pointer is away from the 90° mark. This reading indicates front universal joint angle. This angle should be 4-5°. To change angle, add or remove shims at engine rear support insulators.

Rear (Propeller Shaft-to-Rear Axle Pini n Shaft) Angl : With Gauge protractor set as for front angle check, place Gauge vertically against forward edge of differential housing in back of rear universal joint. GAUGE MUST NOT TOUCH PINION BEARING OIL SEAL. Allow pendulum to swing free and come to rest. The degrees pointer is away from 180° mark on protractor is the rear universal joint angle. This should be 4½-5½°. *NOTE - This r ading should b ½ gr at r than for front angle for b st p rf rmance.* To change angle, add or remove wedge type shims (thick end to front of car) at axle pad and rear springs.

SHOCK ABSORBER NOTES

1957-58 STUDEBAKER & PACKARD MODELS

SHOCK ABSORBER "CHUCKLE" OR SIMILAR NOISE CORRECTION (1957-58 CARS): On rear shock absorbers, check and correct alignment (see below) and rubber bushings can be replaced using new parts as follows:

Shock Abs rb r Bushings

Part	Stud bak r Part N .
Bushing (Upper & Lower Rear)	419932
Bushing (Lower Front)	419932
Sleeve (Upper Rear)	1544480
Sleeve (Lower Rear)	1544479

Shock Absorber Alignment (R ar): Raise car by wheels or axles so that it remains in road load position Disconnect rear shock absorbers at spring clip plates Bend shock absorber mounting ear on spring plate so that ear is positioned 90° to spring plate Replace original lower mounting bolt with new bolt, Part No G181678 (7/16-20 x 3"), install Spacer, Part No 524832 (½" wide), between shock absorber mounting sleeve and spring plate Check shock absorber alignment. When hanging free, shock should be adjacent to spacer, Correct by bending crossmember in area of upper mounting as required Connect shock absorber and tighten lower mounting bolt to 45-50 ft lbs torque

►*NOTE:* Front shock absorbers with forked type lower mounting bar cannot have bushings changed and must be replaced if noise develops.

Shock Absorber Bushing Installation (R ar): With the shock absorber removed from the car, press out old sleeve and bushing. Dip new bushing in gasoline and install by using pliers to twist bushing into place in shock absorber eye. Press sleeve in place in bushing (use new sleeve if original sleeve damaged).

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION Use extreme care when disconn cting any part of air conditioning equipment or lines. See "Frigidaire Air Conditioning" in Miscellaneous S ction.*

►*ELECTRICAL EQUIPMENT NOTE:* Auto-Lite Equipment used on Clipper Special (5400), Clipper Deluxe (5401), and Commercial (5433). Other models use Delco-Remy Equipment.

MODEL IDENTIFICATION

M d l	Chassis Symbol
Clipper Special	5400
Clipper DeLuxe	5401
Cavalier	5402
Patrician	5406
Clipper Super	5411
Commercial (359 cu. in.)	5413
Custom	5426
Packard	5431
Commercial (288 cu. in.)	5433

SERIAL NUMBER: Stamped on plate mounted on left front door pillar post.

ENGINE NUMBERS: Stamped on left side of engine opposite #8 cylinder.

TUNE-UP

COMPRESSION PRESSURE: All cylinders should be equal within 10 lbs.

VACUUM READING: 18-21" at idling speed.

VALVE TAPPET CLEARANCE (5400, 5401, 5411, 5433): .007" Intake, .010" Exhaust. Engine warm.

VALVE TAPPET CLEARANCE (Others): Hydraulic lifters used. No adjustment required.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. No adjustment required.

IGNITION

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .023-.028".

Spark Plug—Champion J8. 14mm.

AUT -LITE

COIL: Aut -Lit CR-4001A.

Igniti n Curr nt—1.5 amperes idling, HOT.

DISTRIBUTOR: Aut -Lit IGP-4502E.

C nd ns r—Auto-Lite IG-2671K. **Capacity** .20-.25 mfd.

C ntact P int Set—Auto-Lite IGP-3028KS.

Br ak r Gap—.015-.019". Set maximum gap to .017".

Cam Angl —27°±3°. Do not exceed gap limits to obtain dwell.

Br ak r Arm Spring T nsi n—17-20 ozs.

R tati n—Counter-clockwise viewed from above.

IGNITION TIMING

Setting—(5400, 5401, 5411, 5402, 5433) 6° BTDC. **(5431, 5406, 5426, 5431)** TDC. *NOTE*—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting (below).

Timing Mark—"# 1 UP.DC" with fifteen 1° graduations ahead of mark.

Fuel Compensator Setting: Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.

CARBURETOR

CARTER 2-BARREL

Carter WGD (5400, 5433) 986S. (5401, 5411) 2102S. Dual downdraft types with Carter Climatic Control.

Idl S tting—1/2 to 1 1/2 turns open. Turn screws out for richer mixture.

Idl Spe d—400-450 RPM. (Std. & Overdrive), 375 RPM. (Ultramatic).

Float Level—13/64" between top of float and bowl cover (Gauge T109-39), with bowl cover inverted and needle seated.

Accelerating Pump—No seasonal adjustment.

Fast Idle Setting With thermostatic coil housing, gasket and baffle plate removed, crack throttle valve and hold choke valve closed. Then close throttle. There should now be .023" clearance (Gauge T109-189) between throttle valve and bore of carburetor (side opposite idle ports). Adjust by bending choke connector rod at lower angle.

Automatic Choke Setting: Set one point rich.

►*OTHER DATA: See "Carter WGD" Carburetor in Carburetor Section.*

Fuel Pump Pressure: 3½-5½ lbs.

CARTER 4-BARREL

Carter WCFB (5402) 2103S & 2142S, (5406, 5413, 5426, 5431) 2112S. Four-barrel downdraft types with Carter Climatic Control.

Idle Setting—(2103S) 1¼-2¼ turns open, (2112S) ¾-1¾ turns open, (2142S) 1-2 turns open. Turn screws out for richer mixture.

Idle Speed—400-450 RPM. (Std. & Overdrive, 375 RPM. (Ultramatic).

►*OTHER DATA: See "Carter WCFB" Carburetor in Carburetor Section*

Fuel Pump Pressure: 4-5 lbs.

CARB. EQUIPMENT

Fuel Pump: (5400, 5401, 5411, 5433) Carter M2049S, **(Others)** AC No. 1539920.

Pressure—(Carter) 3½-5½ lbs., (AC) 4-5 lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric "CV" (constant-voltage) type with voltage regulator. *See MISC. ELECTRICAL for regulator data.*

Dash Unit—(5400, 5401, 5411) K-S No 46595, (Others) K-S No. 46570.

Tank Unit—K-S No 44517

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

(5400, 5401, 5402, 5411, 5433) Auto-Lite 2L-100, National 2L-S-100, or Willard SW-2L-100. 6 volt, 17 plate, 100 ampere hour capacity.

(5406, 5413, 5426, 5431) Auto-Lite 2FH-120, National 2F-S-120, or Willard HW-2F-120. 6 volt, 17 plate, 120 ampere hour capacity.

Battery Ground—Positive.

Engine Ground—Left front of engine.

STARTER

AUTO-LITE

Auto-Lite MCL-6129. Armature - MCH-2028.

Drive—Bendix No. A1792.

R tati n—Counter-clockwise at commutator end

Brush Spring T nsi n—42-53 ozs

CONTINUED ON NEXT PAGE

P rformanc Data–MCL-6129

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8 ft. lbs.	Lock	2.0	410

Starting Switch: Auto-Lite SST-4010. Magnetic switch. Key starting. See *"Starter Controls" in Electrical Equip. Section.*

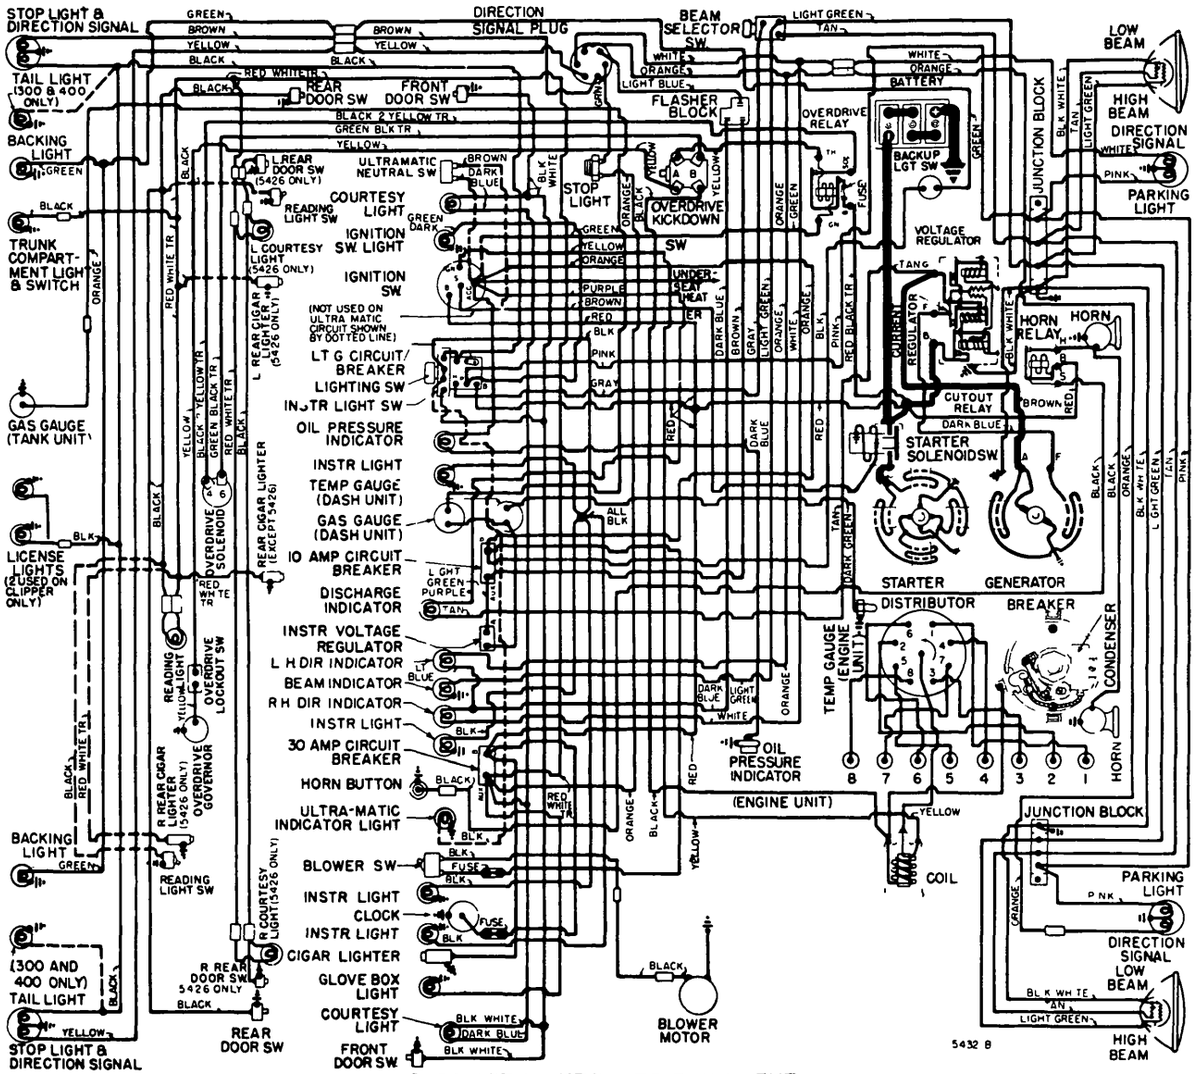
Ultramatic Neutral Safety & Backup Light Switch: See *Delco-Remy Starter data below.*

DELCO-REMY

Delco-Remy 1108027. Armature–1917855.

Drive—Delco-Remy 1873789. Overrunning clutch (solenoid pinion shift)

Rotation—Counter-clockwise at commutator end



Brush Spring T nsi n—24-28 ozs

Performance Data–1108027

Torque	R.P M	Volts	Amperes
0 ft lbs	5500	5.65	70
12 ft lbs	Lock	3.15	570

Starting Switch: Delco-Remy 1118136. Key starting with solenoid pinion shift. See *"Starter Controls" in Electrical Equip. Sect.*

Neutral Safety Switch: Mounted on left side of transmission case Connected in starter control circuit so that starter operative only with selector lever in "N" or "P" positions

CARS WITH AUTO-LITE EQUIPMENT

GENERATOR

AUTO-LITE

Auto-Lite GGW-6003A. Armatur –GGW-2006F.

Performance Data (Aut -Lit)

Amperes	Volts	Cold - R.P.M. - Hot
0	6.4	870-970 950-1050
40	8.0	1800-2000 2150-2350
45①	8.0	1925-2125 2350-2550

①—Do not operate at higher output and do not operate at this voltage without ventilating fan.

Brush Spring Tension—35-53 ozs. with new brushes.

Field Current —1.4-1.5 amperes at 5.0 volts (70° F).

Motoring Current—4.8-5.3 amperes at 5.0 volts (70° F.) with field terminal grounded to frame.

Rotation—Counter-clockwise at commutator end

Belt Adjustment: Loosen two generator bracket screw nuts 2-3 turns. Loosen generator strap screw, then loosen generator-to-water pump screw. Place Tool J-4714 over the head of the generator bracket front screw and rotate the tool clockwise until the arm of the tool contacts edge of generator drive end plate. Using torque wrench with a 7/8" socket over the tool, rotate the wrench clockwise and move the generator outward until 15 ft. lbs torque is indicated on the scale The adjusting strap to generator screw should be tightened to hold the generator in this position while maintaining the 15 ft. lbs. torque.

DELCO-REMY

Delco-Remy 1102778. Armatur –1921621.

Performanc Data–1102778

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2450

①—Not maximum. See Regulator.

Brush Spring Tension—28 ozs.

Field Current—1.87-2.0 amperes at 6.0 volts

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Same as Auto-Lite (above).

REGULATOR

AUTO-LITE

Auto-Lite VBE-6102A (for Auto-Lite GGW-6003A Gen.)

Cutout R lay

Cuts In—6.3-6.8 volts.

Cuts Out—4 1-4 8 volts

Contact Gap—.015" minimum

Air Gap— 031-.034" (check at hinge end of core).

Voltage Regulat r

Setting—7.2-7.5 volts at 70° F. *after 15 minutes operation charging at 1/2 maximum rate.*

Air Gap—.048-.052" with contacts just opening (check at brass armature stop pin).

Checking & Adjusting—*See Electrical Equip. Section.*

Curr nt Regulat r

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*

Test A	Op rating Amp r s	Test B
52 amperes		45 (43-47)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

T st A—After 15 minutes operation charging at 1/2 maximum rate.

T st B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).

Air Gap—.048- 052" with contacts just opening.

Ch cking & Adjusting—*See Electrical Equip. Section.*

DELCO-REMY

Delc -R my 1118829 (for Delco-Remy 1102778 Gen.) New "1118825 Series" regulator.

►*REGULATOR NOTE Checking procedure is different than for pr vious models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equip. Section. All sp cifications are "Normal" settings.*

Cutout Relay

Cuts In—6.4 volts (hot).

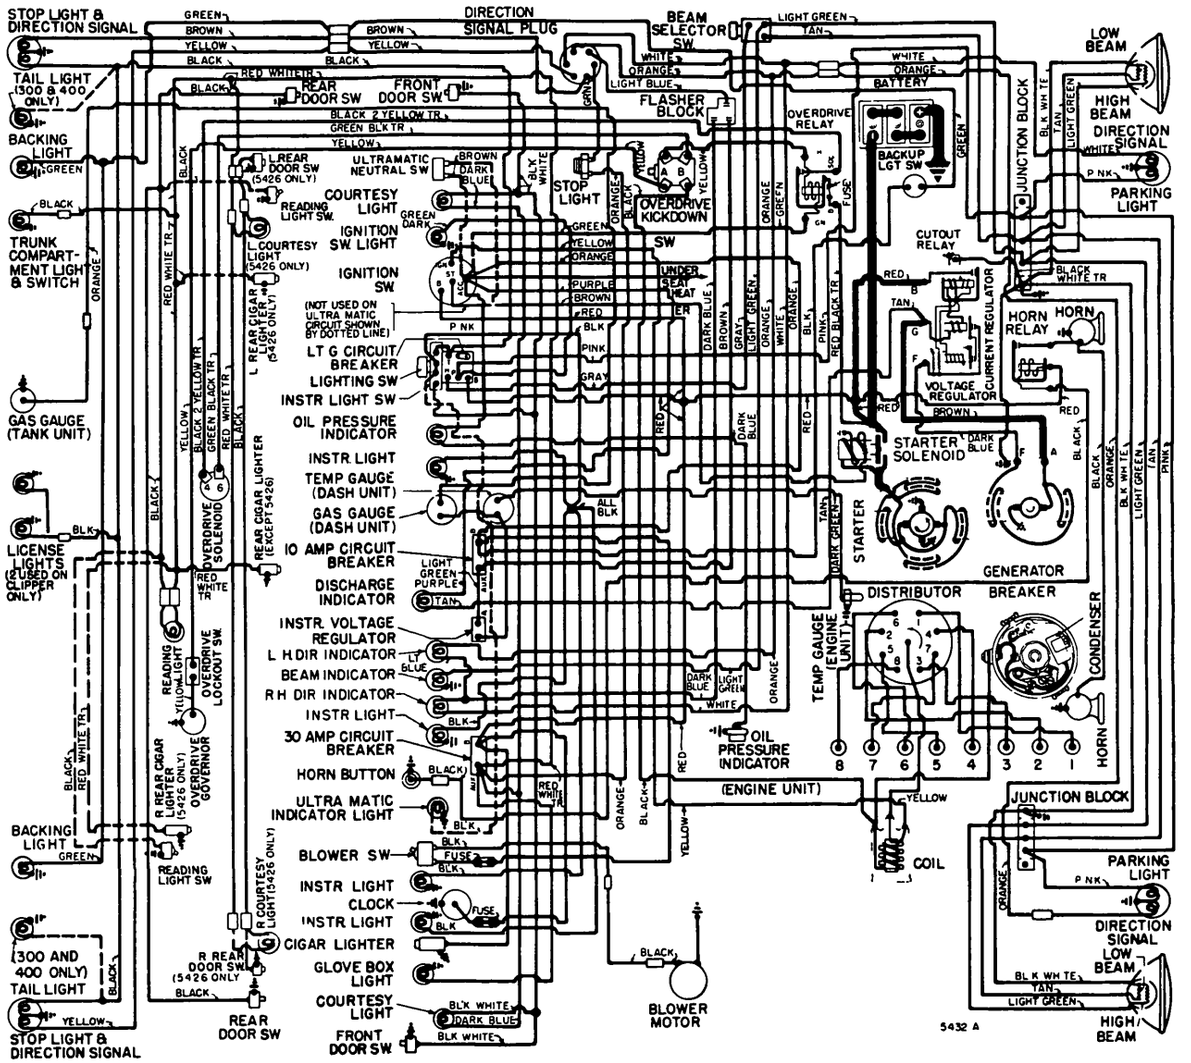
C ntact Gap—.020"

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.3 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.



Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amperes (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

5400, 33	39.2	150 at 4000 RPM.	7.7-1
5401, 11	39.2	165 at 3600 RPM.	8.0-1
5402	39.2	185 at 4000 RPM.	8.0-1
5406, 13, 26, 31	40.6	212 at 4000 RPM.	8.7-1

Compression & Vacuum Reading—*See TUNE-UP.*

►*HYDRAULIC VALVE LIFTERS Standard on all engin s except 5400, 5401, 5411, & 5433.*

PISTONS

Autothermic strut type, aluminum alloy.

Original Bore & Pistons—*See Packard Special Data.*

Weight—(5400, 01, 02, 11, 33) 25.5 ozs. (Others) 25 7 ozs Includes rings, pin and locks

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance .0005-.001", ¾" from bottom of piston Insert 0015" x 1/2" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10-16 lbs. NOTE—Piston should hold in any portion of bore of own weight but should move with one or two finger pressure (cylinder bore vertical)

►*NOTE:* Cylinder bore out-of-round limit 004", taper limit 010'

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*PISTON SKIRT EXPANDER NOTE:* If cylinder diameter over .006" greater than piston skirt diameter (measured beside upper end of skirt slot) skirt expanders should be installed.

►*RING GROOVE NOTE:* Check ring grooves by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear is excessive and piston should be replaced. Check top groove when testing.

Installing Pistons: Slot toward camshaft.

PISTON PINS

Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

Diameter—7/8". Length—3 1/64"

Pin Fit in Piston—Palm push fit at 160° F. (heat piston in water only).

Pin Fit in Rod—Finger push fit.

Replacement Pins: Std., .003", .006" Oversize.

PISTON RINGS

Models 5400, 5401, 5402, 5411, 5433

Ring	Width	End Gap	Side Clr.
Compr. (#1, #2)	.0925-.0935"	.0054-.0207"	①
Oil	.1860-.1865"	.0054-.0207"	①

Models 5406, 5413, 5426, 5431

Ring②	Width	End Gap	Side Clr.
Compr. (#1)	.0775-.078"	.0084-.0247"	①
Compr. (#2)	.0775"-.0785"	.0084-.0247"	①
Oil	.1860-.1865"	.0084-.0247"	①

①—With new ring installed in top groove (greatest wear in this groove), insert .006" feeler in this groove. If feeler can be inserted 1/16", side clearance is too great and piston should be replaced.

②—Top compression ring is chrome type.

Replacement Rings: Furnished in sets Std. .020", .030", .040" Oversize.

Installing Rings: Install top (#1) compression ring and oil ring with ring gap opposite slotted side of piston and midway between piston pin bosses. Install lower (#2) compression ring with gap toward slotted side of piston and midway between piston pin bosses.

CONNECTING RODS

Length—(5400, 5433) 7 15/16". **(Others)** 7 11/16". Measured center to center. *CAUTION*—5400, 5433 rods **not interchangeable** with others.

Weight—(5400, 5433) 36.5 ozs. **(Others)** 36 ozs.

Crankpin Journal Diameter—2.250".

Lower Bearing—Shimless precision, steel backed. No adjustment. Replace bearings.

Clearance—.0005-.0025". **Endplay**—.003-.011".

Replacement Bearings: Std., .001, .002", .020" Undersize.

Installing Rods: Oil hole toward camshaft.

CRANKSHAFT

Journal Diameter—2.7465". (5400, 01, 02, 11, 33) Five bearings. (Others) Nine bearings.

Bearings—Interchangeable, shimless, precision. No adjustment. Replace bearings.

Clearance—.0005-.0025".

Replacement Bearings: Std., .001", .002", .020" Undersize.

End Thrust: Taken by center bearing.

Endplay—.0035-.0085".

CAMSHAFT

Five bearing.

Bearings—Steel-backed babbitt lined bushings.

Clearance—.001-.003".

End Thrust—Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Timing Chain: Morse. **Width**—1". **Pitch**—.375". **Length**—58 links.

Camshaft Setting: Install chain and sprockets together with "O" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES

Tappet Clearance: (5400, 01, 11, 33) .007" Intake, .010" Exhaust, engine warm. **(Others)** None (hydraulic lifters).

Valves	Head Diameter	Stem Diameter	Length
Intake	1 51/64"①	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.0005-.0031"
Exhaust	45°	.342"②	.0024-.005"

①—Head Diameter 1 43/64" on 5400, 01, 02, 11, 33.

②—Lift .337" on 5402 exhaust valve.

Valve Springs: Single spring used on all valves. Intake and exhaust springs interchangeable. Shakeproof type washer between top of valve spring and cylinder block seat.

Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	60-66 lbs.	1 3/4"
Open	135-145 lbs.	1 13/32"

Valve Guides: If guides to be removed with lifters in engine, use Valve Guide Remover J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel through valve chamber, then break off lower end, finally driving remainder of guide out. If lifters out, guide can be driven down and out without breaking. To install, press guide into block with upper end 31/32" below top of block, using Valve Guide Driver J-2577. This gauge properly positions guides when gauge seated in block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counter-bored.

Valve Lifters (5400, 5401, 5411, 5433): Conventional mushroom type (Standard). Hydraulic type (Optional). Standard type removed from below with camshaft out. To remove Hydraulic type see below.

Valve Lifters (Others): Wilcox-Rich "Zero Lash" hydraulic type (mushroom type body). Hydraulic unit can be removed from above. Lifter body removed from below with camshaft out.

Diameter—.6236-.6239". **Clearance in Block**—.0001-.0016".

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

5400, 5433 Valve Timing

Intake Valves—Open 15° BTDC. Close 45° ALDC.

Exhaust Valves—Open 50° BLDC. Close 9° ATDC.

5401, 5411 Valve Timing

Intake Valves—Open 10° BTDC. Close 50° ALDC.

Exhaust Valves—Open 45° BLDC. Close 14° ATDC.

5402 Valve Timing

Intake Valves—Open 10° BTDC. Close 48° ALDC.

Exhaust Valves—Open 48° BLDC. Close 9° ATDC.

5406, 5413, 5426, 5431 Valve Timing

Intake Valves—Open 22° BTDC. Close 65° ALDC.

Exhaust Valves—Open 55° BLDC. Close 15° ATDC.

Valve Timing Check (5400, 5401, 5411, 5433): Set No. 1 intake valve tappet to .0125" (cold) and turn engine over until No. 1 intake valve just begins to open. Valves are properly timed and the camshaft and crankshaft sprockets properly related when the No. 1 intake valve starts to open at 15° (5400, 5433), 10° (5401, 5411) BTDC as indicated on timing scale on vibration damper.

Valve Timing Check (Others): Turn engine over until No. 8 exhaust valve has fully opened and continue turning the engine until valve is nearing its closed position. At this time, tappet plunger should not be able to be turned by finger pressure. While maintaining steady finger pressure to turn plunger, turn engine over until plunger suddenly "breaks loose" (plunger can be turned). At this point valve is closed. Pointer should register 9° (5402), 15° (5406, 5413, 5426, 5431) as noted on vibration damper.

►*VALVE TIMING NOTE:* If valves open or close in excess of 8° before or after their specified opening or closing positions, the camshaft and crankshaft sprockets are not properly related. *See "Camshaft Setting" under CAMSHAFT above.*

OILING SYSTEM

Crankcase Capacity: 7 quarts. One quart additional when filter changed.

Normal Oil Pressure: 40 lbs. at normal driving speed.

Pressure Regulator Valve—In oil pump cover. Not adjustable.

Oil Pressure Indicator—Red light on left side of instrument panel. Lighted when oil pressure less than 10 lbs. (lights when ignition turned on, goes out when pressure exceeds 10 lbs.).

Oil Pressure Switch (Engine Unit)—King-Seeley 47140. Contacts open when pressure exceeds 10 lbs.

Oil Pump: Gear type mounted externally on right side of engine.

Oil Filter: Purolator P-70. Optional on 5400, 5401, 5411. Standard on other models. Replace filter element every 8000 miles or more often as required.

Replacement Filter Element—AC P-31C or C-316.

Crankcase Ventilation: Filter element in oil filler cap (air intake). Outlet pipe in valve compartment in rear.

COOLING

Water Capacity: 20 quarts (20 2/3 quarts with heater).

Pressure Valve: Radiator filler cap. 12 lb. type.

Thermostat: "Capsule" type. In cylinder head water outlet flange. Starts to open 167-173°F. (Standard), 177-182°F. (Optl.).

Water Pump: Centrifugal, belt driven, packless type. *See "Water Pumps" in Packard Special Data.*

Pump Removal—Disconnect hose from water pump. Remove nut and washers attaching battery ground cable to water pump. Remove screws holding water pump to front face of engine cylinder block. Lift pump out.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Temperature Gauge: King-Seeley "CV" (constant voltage) electric type with Gauge Voltage Regulator. See *MISC. ELECTRICAL for regulator data.*

Dash Unit—(5400, 5401, 5411) K-S No. 46597, **(Others)** No. 46573. **Engine Unit—**K-S No. 44225.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Synchro-mesh Transmission Cars. (5400, 5433) Long Model 10CF-TI, Assy. No. 267954, (Others) Long Model 11CF-10½TI, Assy. No. 268349.

See "Long Clutches" in Clutch Section.

Clutch Disc No. —Long (10CF-TI) 287952, (11CF-10½ TI) 287951.

Pedal Adjustment: 1¼-1½" free travel. Adjustment nut rod at throw-out lever.

Removal: Remove transmission (See Transmission Removal following). Remove flywheel lower housing, clutch release bearing and sleeve. Mark clutch cover plate and flywheel. Loosen capscrews that attach clutch cover to the flywheel in succession (to release tension evenly) until clutch cover is free. Remove clutch cover and pressure plate and clutch driven plate from flywheel housing. Remove clutch shaft pilot bearing using tool J-164 or J-489.

SYNCHRO-MESH TRANSMISSION

Own. See *"Packard Synchro-mesh" in Transmission Section.*

Removal: Disconnect speedometer cable, gear shift rods from levers on transmission case, and propeller shaft at rear universal joint. Remove propeller shaft completely by slipping the front universal joint flange off the transmission main shaft. *(CAUTION—*Wire or tape the two bearings of the universal joints together to prevent them from falling off). Support rear of engine with a jack. Remove rear engine support mounting and support cross members. Remove cap screws attaching transmission to flywheel housing. Using two pilots in the bolt holes, slip the transmission to the rear, so that the clutch release bearing pull-back spring may be unhooked. Remove transmission.

OVERDRIVE

Warner Type AS8-R11. Planetary gear type with solenoid operation

See "Warner R11" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting overdrive control

ULTRAMATIC DRIVE

Own. Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control.

►*TESTING & TROUBLE SHOOTING: See "Ultramatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level—*(CAUTION—Fluid must only be checked at normal operating temperature and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position).* Stop engine, check level by removing dipstick from filler hole on left side of transmission(accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

Capacity—Approximately 12 qts. *Use only Packard Ultramatic Drive or any Type "A" Transmission Fluid which has an AQ-ATF number embossed on container.*

►*OTHER "ULTRAMATIC" SERVICE DATA: See "Ultramatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer (Cross Type), **Detroit Universal** (Ball & Trunnion Type), **Mechanics** (Cross Type).

►*CAUTION:* Rear universal flange nut controls rear axle pinion bearing preload which **must be adjusted whenever nut is loosened.** *See "Packard Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type with Hotchkiss Drive.

See "Packard Hypoid" in Rear Axle Section.

Standard Axle Ratios

Model	Std. O.D. Cars	Ultramatic
5400, 5402, 5431	3.9-1	4.1-1	3.54-1
5401, 5411	3.9-1	4.1-1	3.23-1
5406			3.54-1
5413	4.54-1	4.7-1	4.36-1
5426	4.1-1	4.55-1	3.9-1
5433	4.55-1	4.55-1	4.1-1

Optional Axle Ratios (Exc. 5426)

Standard	Overdrive	Ultramatic
4.1-1	3.9-1	3.23-1, 3.54-1
	3.54-1	3.9-1, 4.1-1

Backlash—.004-.008".

Carrier Removal: Remove axle shafts (see Axle Shaft Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with a 2x4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier mounting nuts, lift carrier assembly out.

Axle Shaft Removal: Remove wheel and brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal).

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under, at both wheels if over .050" to secure .004-.007" endplay.

Endplay—.004-.007".

SHOCK ABSORBERS

Delco or Monroe. Direct acting hydraulic type. Serviced by replacement.

FRONT SUSPENSION

Independent. Coil spring and direct acting shock absorbers. *See "Packard" in Front Suspension Section.*

Kingpin Inclination—(5413, 5433) 2°30'. **(Others)** 5°50'.

Caster—(5413, 5433) Neg. 2°±½°. **(Others)** Neg.1°±½°.

Camber—0° (Pos. ¾° to Neg. ¼° range).

Toe-In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

Turning Radius—Inside wheel at 23¾° with outside wheel at 20°.

STEERING

Manual: Gemmer. Worm and three-tooth roller.

See "Gemmer Worm & Roller" in Steering Section.

Power Steering: Bendix. Linkage type.

See "Bendix Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Bendix hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See "Bendix Hydraulic" in Brake Section.

Lining Width	Front	Rear
5400, 5401, 5411	2½"	2"
5402, 5406, 5426, 5431	2¼"	2"
5413, 5433	2½"	2¾"

Lining Thickness—(5413, 5433) ¼". **(Others)** 3/16".

Lining Length (per shoe)	Primary	Secondary
5400, 5401, 5411	9 5/16"	12"
5402, 5406, 5426, 5431	11 1/2"	13"
5413, 5433	13" (Fr.)	13" (Fr.)
5413, 5433	14 3/4" (Rr.).	14 3/4" (Rr.)

Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.

Standard Master Cylinder: On bracket on left side of frame near transmission support.

Checking Fluid—Access hole in front floor pan at left corner of driver's seat.

Removal—Disconnect brake lines from master cylinder. Disconnect push rod at pedal. Remove gearshift selec-linkage bell crank from mounting bolt stud. Remove mounting bolts and master cylinder.

Power Brakes: Bendix Easamatic. Combination power cylinder and hydraulic master cylinder unit..

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Check level every 1000 miles. If level not up to full mark, add brake fluid.

Removal of Power Unit—Disconnect hose line and electrical wiring from power unit (raise hydraulic line above level of junction assembly to prevent fluid leakage). Disconnect and remove brake and accelerator pedals. Remove steering column grommet retainers, slide grommet up out of way. Remove carpet retainers and fold back carpet. Remove cover plate screws, then remove power brake and cover as an assembly, take out mounting screws and remove power brake from cover.

MISC. MECHANICAL

Windshield Wipers: Vacuum type, cable operated. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Frigidaire. *See "Frigidaire" Air Conditioning in Miscellaneous Section.*

Window Regulators, Safety Control, Convertible Top Control: Hydro-Lectric type (hydraulic type with motor driven pump supplying oil under pressure). *See "Hydro-Lectric Top Controls" and "Hydro-Lectric Window & Seat Regulators" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
1954	15G
1955 ①	16G6

①—Early & Later Series. *NOTE*—Late series cars are "Ultra-Vista" models except for Coupe & Hardtop.

SERIAL NUMBER: Located on left front door pillar post.

Starting Serial Numbers

Assembly Plant	1954	1955 Early	1955 Late
South Bend	G-1274001	G-1316501.	G-1326201
Los Angeles	G-927401	G-932501.	G-933601
Hamilton	G-753301	G-758201	G-759101

ENGINE NUMBER: Stamped on pad at upper front left corner of engine block.

Starting Engine Numbers

Assembly Plant	1954	1955
South Bend	1090001	1138001
Los Angeles	1090001	L-101
Hamilton		C-60501

►*1954 ENGINE NUMBER NOTE: Letter "A" following engine number indicates crankshaft main bearing journals are .005" Undersize.*

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM. Variation limit between cylinders should not exceed 10 lbs.

VACUUM READING: 17-18" at idle speed.

VALVE TAPPET CLEARANCE: .016" cold (Intake & Exhaust).

MANIFOLD HEAT CONTROL: Automatic thermostatic type.

Checking Thermostatic Coil Spring—With outer end of coil free from anchor, and valve closed (counterweight up), hook end of coil spring should be 90° clockwise from anchor post at 70°F.

IGNITION

FIRING ORDER: 1-5-3-6-2-4

SPARK PLUG GAP: .030" Limits 028-.033"

Spark Plug—Champion J7 Tighten to 25-30 ft lbs

COIL: Auto-Lite CR-6007.

Ignition Current—1½-2½ Amps idling, 5-6 stopped

DISTRIBUTOR: Auto-Lite IAT-4010 (Early 1954), IAT-4201 (Late 1954 & 1955).

Condenser—IAT-3076L (IAT-4010), IAT-2015L (IAT-4201).

Capacity—.21-.25 mfd.

Contact Point Set—Auto-Lite IGW-3028AS.

Breaker Gap—.020".

Cam Angle—38-40°.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

►*DISTRIBUTOR SETTING & TIMING NOTE See "Oil Pump Removal & Installation Change" under ENGINE below*

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

Vacuum Spark Control· Auto-Lite. Integral type

Vacuum Advance

Distr Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4
1	2	4 7/8
4	8	7 1/2
8	16	11 1/8
9	18	12

IGNITION TIMING

Setting—2° BTDC

Timing Mark—On vibration damper "IGN" mark in line with pointer (left side of timing cover)

Timing—Disconnect vacuum advance pipe at carburetor. Install plug in carburetor With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer.

CARBURETOR

Throttle Linkage Adjustment (Automatic Transmission): Adjust engine idle speed to 500-550 RPM (with engine at normal operating temperature, choke valve in wide open position and fast idle inoperative).

1) Disconnect accelerator cross shaft-to-bellcrank rod by removing clevis pin at cross shaft end of rod. Disconnect wire at Anti-Creep Switch on cross shaft bracket.

2) Hold contact plate on cross shaft lever firmly against end of Anti-Creep Switch, measure distance between contact plate and cross shaft bracket. If this measurement not ¼", adjust switch by loosening locknut and turning switch in or out of bracket, tighten locknut after correct ¼" clearance secured.

►*NOTE:* If ¼" clearance cannot be secured by adjusting switch, disconnect accelerator cross shaft-to-transmission rod at transmission end and check push rod and cross shaft for interference. *Do not bend contact plate or cross shaft bracket to secure correct switch setting.*

3) Connect accelerator cross shaft-to-bellcrank rod by installing clevis pin but **do not** install cotter pin at this time. Make certain that carburetor throttle valve in fully closed position (stopscrew on low end of fast idle cam and choke valve wide open).

4) With accelerator control fully released and carburetor throttle in fully closed slow idle position, check position of spring-loaded swivel on accelerator bellcrank end of carburetor throttle rod. Swivel should be close to, **but not touching** the swivel sleeve on carburetor side of rod. If swivel position not correct, disconnect accelerator cross shaft-to-bellcrank rod clevis, adjust clevis on rod until carburetor rod swivel position is correct. Tighten clevis locknut, connect bellcrank rod and install clevis cotter pin.

5) Place selector lever in Park "P" position. Set adjusting tool J-4391 at maximum length, hook one end of tool over cross shaft lever to which the transmission rod is connected, hook opposite end of tool over upper right rear corner of battery box, (this will rotate lever and partially open carburetor throttle). Shorten tool length by turning the turnbuckle until carburetor throttle valve is just wide open (at this point further movement will compress spring on throttle rod without changing throttle position). Leave tool in place to hold throttle linkage in this position if "Accelerator-to-Governor Linkage" is going to be adjusted.

CARTER WE

Model	Carter No.
1954 (Early)	989SA
1954 (Late)①	2108S
1954 (Late)②	2190S
1955 (All Models)	2108S

①—Except 2-Door & 4-Door Custom Sedan, after approximately Feb. 15, 1954

②—2-Door & 4-Door Custom Sedan after Feb. 15, 1954.

Idle Setting—½-1½ turns open. Turn screw out for richer mixture.

Idle Speed—550-600 RPM (Std. Trans. & Overdrive). 500-550 (Automatic Trans.).

Float Level—3/8" (Gauge T-109-80) measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover inverted.

Accelerating Pump—No seasonal adjustment.

Fast Idle: .046" throttle valve opening with choke closed To check, crack throttle valve, hold choke closed, measure on side opposite idle ports using gauge T109-158 Adjust by bending connector rod

Unloader Adjustment: After fast idle adjusted, hold throttle valve wide open and close choke valve as far as possible Clearance between lower edge of choke valve and air horn wall should be 3/16" (Gauge T109-28) Adjust by bending arm on choke trip lever (use Tool T109-214)

Automatic Choke Setting: Set 1 point lean.

Throttle Linkage Adjustment (Automatic Trans.): *See "Carburetor" above.*

►*OTHER DATA: See "Carter WE Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. (1954), 4-5½ lbs. (1955).

CARB. EQUIPMENT

Fuel Pump: AC No. 527 (1954), N. 4156 (1955). Fuel only.

Fuel Pump Pressure—4-5 lbs. (1954), 4-5½ lbs. (1955). *See "Fuel Pumps" in Carburetion Equipment Section.*

Gasoline Gauge: Stewart Warner Electric Type.

Dash Unit—Studebaker No. 532593 (1954), 536929 (1955).

Tank Unit—Studebaker No. 525548 (2-Dr & 4-Dr., and Landcruiser). No. 532261 (Hardtop, 5-Pass. Coupe & Station Wagon).

See "Fuel Gauges" in Carburetion Equipment Section.

1954 MODELS

CONTINUED FROM PRECEDING PAGE

C ntact Gap– 015" minimum (armature against stop pin)

Air Gap–.048-.052" with contacts just touching

Checking & Adjusting–See *Electrical Equip. Section.*

MISC. ELECTRICAL

H adlamps: Sealed beam. See *Electrical Equip. Section.*

Direction Signal: See *Electrical Equip. Section*

Lighting Switch Removal: (Toggle type)–Remove retaining nut. Remove lower panel cover screws and covers. Slide toggle switch back through panel and disconnect wires **(Knob type)–**Use stiff wire to remove spring from back side of switch knob and pull knob from shaft Remove bezel nut and shove switch assembly back through panel and remove wires

Stop Light Switch Location: Inner side of left frame rail just forward of steering gear housing, except on Power Brake equipped cars, where it is screwed into rear end of power unit, located under hood on left front fender apron

FUSES: Overdrive–30 ampere on overdrive relay
Fog Lights–30 ampere in feed wire
Clock–2 ampere in feed wire
Direction Signal–14 amperc in flasher feed wire
Heater (Ultra-Vista Models)–20 amp. on heater switch
Defroster (Ultra-Vista Models)–20 amp on switch

CIRCUIT BREAKER: Capacity and location as follows:
Lighting (Ultra-Vista Models)–30 amp. on main light switch
Lighting (Except Ultra-Vista Models)–30 amp. on bracket attached to dash behind instrument panel
Body & Stop Lights (Ultra Vista Models)–20 amp. on back side of instrument panel
Body & Stop Lights (Except Ultra-Vista Models)–20 amp. on bracket attached to dash behind instrument panel.
Heater & Defroster (Except Ultra-Vista Models)–20 amp on bracket attached to dash behind instrument panel

HORNS: Sparton (Types A & B), Delco-Remy or Auto-Lite used. **Low Note** horn standard, **High Note** horn accessory

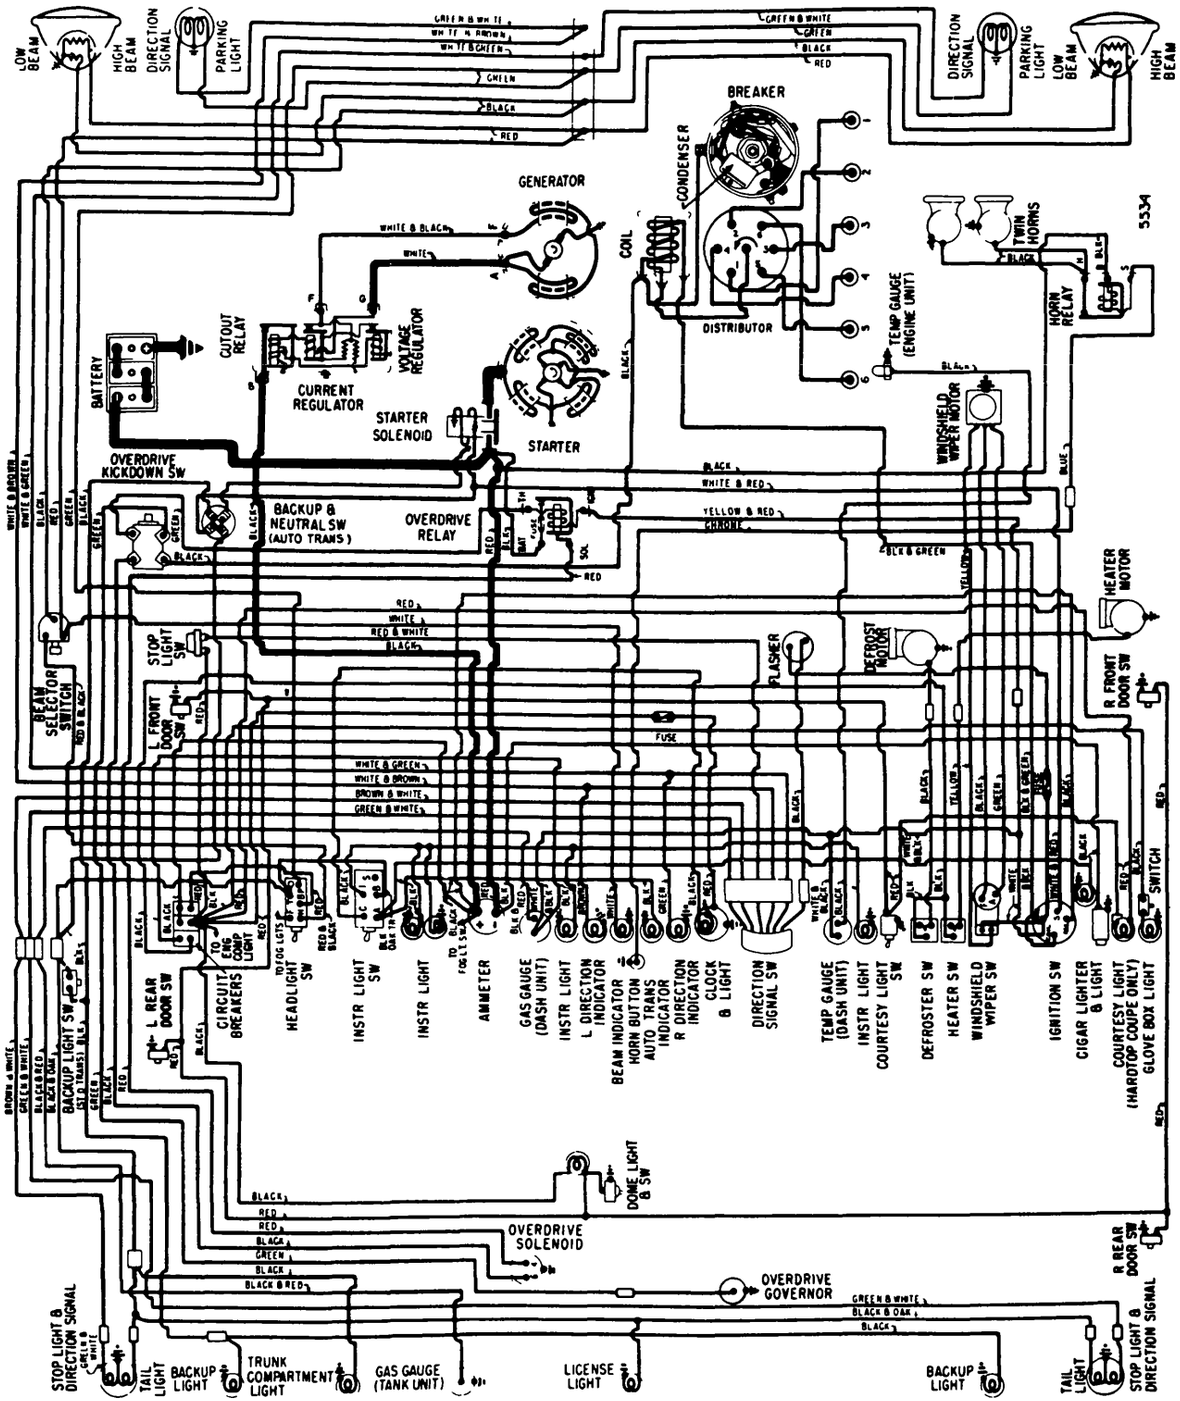
	Low Note	High Note
Sparton (Studebaker Nos) Type A	674005	674006
Sparton (Studebaker Nos.) Type B	536769	536768
Delco-Remy Nos.	1999683	1999684
Auto-Lite (Can.) Studebaker Nos	530209	530208

Horn Relay: Delco-Remy 1116775

ENGINE

ENGINE SPECIFICATIONS: Own. 6 cyl. "L" head.

Model	Bore	Stroke	Displacement
1954	3"	4"	169.6"
1955	3"	4 3/8"	185.6"



Model	Compr.Ratio	Rated HP	Developed HP
1954	7.5-1	21.6	85 at 4000 RPM
1955	7.5-1	21.6	101 at 4000 RPM

Compression & Vacuum Reading–See *TUNE-UP*

►*OIL SEEPAGE AT VALVE COVER PLATE CORRECTION: See "Oiling Syst m" in Stud baker Sp cial Data.*

OIL PAN REMOVAL: Se *"Oiling Syst m" in Stud bak r Sp cial Data*

CONTINUED ON NEXT PAGE

1955 MODELS

CONTINUED FROM PRECEDING PAGE

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data*

PISTONS

Aluminum alloy, tin plated, cam ground and "T" slotted. Three ring type.

►*NOTE: 1955 pistons are 5/16" shorter than 1954 pistons and the side of the pistons have been cut away to provide clearance for the connecting rod and crankshaft. Do not use 1954 pistons in 1955 engines.*

Original Bore & Pistons—*See "Original Bore & Pistons" in Studebaker Special Data.*

Removal—Piston and rods removed from above.

Fitting New Pistons: Clearance—Selective feeler fit Use feeler 1" wide, 002" thick, and 12" long inserted on camshaft side of cylinder bore Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore Pull required to remove feeler with properly fit piston should be 11 to 16 lbs

Replacement Pistons: Std. .010", .020", .030" and 040" Oversize

Installing Pistons: Install piston in cylinder bore with "T" slot away from camshaft side *See Rod Installation*

PISTON PINS

Pin is locked in rod by tapered pin and locknut

►*PISTON PIN LOCKSCREW WASHER CHANGE: Early type washers were internal tooth, later production uses external tooth washer.*

Diameter—.7491-.7495". **Length** 2 625"

Clearance in Piston—0001-0003" (selective fit) Light thumb push fit at 70°F

Piston Pin Removal & Installation—*See "Piston Pins" in Studebaker Special Data*

Replacement Pins: Std. & 0025", .005" Oversize

PISTON RINGS

1954 Models

Ring	Width	End Gap	Side Clearance
Compr.#1	3/32"	.007-.017"	.002-.006"
Compr.#2	1/8"	.007-.017"	.002-.006"
Oil	5/32"	.007-.017"	.0015-.006"

1955 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	002-.005"
Compr #2	1/8"	007-017"	002-005"
Oil	5/32"	.007-017"	0015-004"

Replacement Rings: Std., .020", 030", & .040" Oversize, in sets

Installing Rings: Top compression ring has step at the inside which must be installed up Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point

CONNECTING RODS

Length—(Center-to-center) 6 3/8". **Weight**—19.04 ozs.

Crankpin Journal Diameter—1.81175-1 81275"

Bearings—Steel backed, Microbabbitt lined, no shims

Clearance—.0005-.002"

Side Play—.005-.009"

Replacement Bearings: Std., .001", 002", 005", .010" & .020" Undersize

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod Insert tapered end of clamp screw toward heavy boss on rod With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6)

►*REPLACEMENT ROD NOTE:* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders

CRANKSHAFT

Journal Diameter—**(1954)** 2.4370-2.4375", **(1955)** 3.0623-3.0628". Four bearings.

►*1954 MAIN BEARING NOTE: Letter "A" following engine number indicates crankshaft main bearing journals are .005" Undersize.*

►*1955 FRONT MAIN BEARING CAP REMOVAL NOTE:* Remove engine front plate cork gasket and turn crankshaft until No. 1 rod journal is at 5 o'clock position or downward and toward camshaft. Separate bearing cap from block and swing end that is away from camshaft toward rear of engine, crossing the crankshaft cheek. Turn free end of bearing cap toward cylinder bore, and at the same time bring other end over crankshaft. Relieved bearing cap and crankshaft provide for this procedure.

►*MAIN BEARING CAPSCREW NOTE:* Lock wire not used with plain capscrew

Clearance—.0005-.0025"

Replacement Bearings: Std., .001", .010", .020", and .030" Undersize

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal

End Play—.003-.006"

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data*

CAMSHAFT

Journal Diameters—**(1)** 1.7475-1.7478", **(2)** 1.7162-1.7170", **(3)** 1.6857-1.6865", **(4)** 1.6232-1.6240".

Bearings—Steel backed babbitt lined bushings

Clearance—No 1—.0007-.0022", Nos. 2,3,4—0010-.0027"

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub) Tighten capscrews alternately a few turns at a time to prevent distortion of plate

End Play—.003-.006"

►*1954 TIMING GEAR COVER LEAK CORRECTION:* When replacing cover, use four screws, Part No. 1-0512 (1/8" shorter than standard screws) at top of cover to prevent bottoming of screws before cover is securely sealed.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data*

Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub

Backlash—.001-.003"

Replacement Gears—Camshaft gear furnished in two sizes Standard & High limit Crankshaft gear furnished standard size only

Camshaft Setting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance: .016" cold Intake & exhaust

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	0015-0035"
Exhaust	45°	11/32"	0015-0035"

Valve Seat Width—1/16-3/32'

►*1954 VALVE COMPARTMENT COVER PRODUCTION CHANGE:* Effective at Engine No. 1106516, new valve compartment covers, gaskets and screws are being used to prevent distortion that might result in oil leaks. New gaskets and screws can be used with original covers.

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced

Valve Springs: Install springs so that flanged edge of retainer fits over flat surface of lower coil spring Tongue on lower side of retainer must fit in groove in spring retainer lock

Valve Spring Specifications—93-103 lbs. ± 10% when compressed to a length of 1 5/16"

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar

Valve Lifters: Mushroom type Remove from below with camshaft out of engine

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., .001" & .005" Oversize.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC. Closes 49° ALDC.

Exhaust Valves—Open 54° BLDC. Closes 10° ATDC.

Valve Timing Check—Adjust No. 1 Intake valve at .020" cold. Rotate engine until No. 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft. Valve timing will be correct if lifter stops moving as above marking is directly below pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 qts. refill.

Normal Oil Pressure: 40 lbs. at 1400-1600 RPM (1954 & early 1955); 25-50 lbs. at 40 MPH (Late 1955). *See Production Change Note below.*

►*1955 OIL PUMP PRESSURE PRODUCTION CHANGE:* Beginning with Engine No. 1165924 (So. Bend), L-1550 (Los Angeles), C64038 (Canada), a heavier oil pump relief valve spring, Part No. 536670 entered production and was made available for service replacement on previous models. *See "Normal Oil Pressure" above.*

Pressure Regulator Valve: On lower right front corner of engine. For access, remove engine front cover bolt. If spring is weak replace it, do not stretch spring.

Oil Pressure Indicator—Studebaker No. 536923. Not electrical.

Oil Pump: Helical gear type. Mounted on right side of crankcase.

Pump Removal, Overhaul & Installation—*See "Oiling System" in Studebaker Special Data.*

Oil Filter: Partial Flow. Replace filter cartridge at 5000-6000 mile intervals. Change more often in dusty areas.

Replacement Filter Element—Studebaker No. 520829 (F3 Filter); No. 520830 (F4 Filter); No. 196646 (F4 Filter, Waste Type).

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe replaceable.

COOLING

►*1954 FAN SHROUD REWORK ON HARDTOP & COUPE (To prevent interference with radiator core): See "Radiator" in Studebaker Special Data.*

Water Capacity: 10 qts. (11½ qts. with heater).

Pressure Valve: Radiator filler cap. (1954) Studebaker No. 531826 (stamped "7" opens at 7 lbs.). (1955) Studebaker No. 536502 (opens at 13 lbs.).

Thermostat: Studebaker No. 531470 (opens at 155°), No. 532017 (opens at 177°).

Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*

Pump Removal—Remove shroud, *See "Cooling System" in Studebaker Special Data.* Loosen generator and remove belt. Remove fan-to-hub capscrews and remove fan blades and pulley. Disconnect Climatizer hose, and generator adjusting arm. Disconnect outlet hose and remove mounting capscrews.

Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*

Temperature Gauge: Electric type.

Dash Unit—(1954) Studebaker No. 532597; (1955) 536930.

Engine Unit—Studebaker No. 532579.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck 8A7. Assembly No. 980 (1954). 9A7. Assembly No. 1365 (1955). Single plate dry disc type. **Clutch Disc No.**—Borg & Beck 382276.

►*1954 CLUTCH PEDAL REWORK (To prevent spring breakage): See "Clutch Notes" in Studebaker Special Data.*

Pedal Adjustment: Free Travel ½-1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

►*HILL-HOLDER NOTE:* Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever.

Housing Removal: Remove oil level gauge and tube. Remove starter mounting screws (only) and tie starter and cables up out of the way. Remove floor plate and clutch housing top capscrews. Remove transmission. *See "Transmission Removal" under Transmission.* Disconnect pedal rod at operating shaft-to-release sleeve, pull operating shaft out, remove sleeve. Remove two bolts holding rear engine support insulator cage to crossmember. Support engine at rear of oil pan (use block of wood on jack to protect oil pan). Remove crossmember. Remove two clutch housing bolts releasing exhaust pipe support bracket. Loosen clamp bolt and swing bracket out of way. Remove remaining housing bolts and remove housing. *NOTE*—Remove dowel bolts first.

►*INSTALLATION CAUTION:* Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts. Draw dowel bolts in place by tightening the nuts—**do not drive them into place.**

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS1-T96 (Std.), AS24-T96 with R10 type Overdriv .

See "Warner Synchro-mesh Transmission" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*1954 HARD SHIFTING (FROM LOW TO 2ND GEAR) CORRECTION: See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from the transmission case. Then move case rearward until main drive pinion clears clutch pressure plate and remove unit from car.

NOTE—On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10. Governor controlled, solenoid operation with throttle controlled "kick-down".

See "Warner R10 Overdrive" in Transmission Section.

►*OVERDRIVE PRODUCTION CHANGE:* Reverse lockout switch discontinued, affecting the shift rail, control shaft assembly and the use of different overdrive housing. Complete units are interchangeable

Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on".

See "Studebaker Automatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check Oil Level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

Checking Fluid Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dipstick gauge. Add oil to bring level up to "Full" mark on dipstick

Capacity—9½ quarts. *Use Automatic Transmission Fluid Type A (in containers with "AQ-ATF" symbol).*

►*OTHER AUTOMATIC TRANSMISSION DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft)

Propeller Shaft & Support Bearing: Two shafts used 1) Front shaft with intermediate universal yoke bolted on rear end (no slip-joint)
2) Rear shaft with slip-joint on forward end at intermediate universal

Propeller Shaft & Support Bearing Removal & Servicing—See *"Propeller Shaft" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive.

See *"Spicer Hypoid" in Rear Axle Section*

Axle Ratios

Transmission	Std. Ratio	Opt. Ratio
Synchro-mesh (1954-55)	4.10-1	4.56-1
Overdrive (1954)	① 4.56-1	②
Overdrive (1955)	4.56-1	4.10-1, 4.88-1
Automatic	③	④

①—4.27-1 (1954 2 Dr. & 4 Dr. Custom). 4.88-1 (1954 Sta. Wgn.).

②—4.56-1, 4.10-1, 4.88-1 (2 Dr. & 4 Dr. Custom) 4.10-1, 4.27-1, 4.88-1 (Others except Sta. Wgn.).

③—4.10-1 (1954), 3.54-1 (1955).

④—3.54-1 (1954), 4.56-1 (1955).

NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew and also on gears

Backlash—.003-.006" Shim adjustment

Axle Shaft Removal: Remove wheel, remove wheel hub (use puller J-1644-B) Take out backing plate retaining bolts, remove outer oil seal Pull backing plate out over end of axle shaft and wire plate to frame (*CAUTION*—Do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with puller HM-931

Rear Axle Assembly Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts Place car on stands on frame just ahead of rear springs, Remove wheels, hubs and drums Disconnect hand brake cable, take out backing plate bolts from backing plates free hydraulic brake line from axle housing clips (do not disconnect brake line from wheel cylinders) Disconnect rear universal Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick)

End Play—.003-.006"

SHOCK ABSORBERS

Direct Acting type. See table below

1954 Models

U.S. Cars	Front Studebaker Nos.	Rear
Standard	535318	534320
Heavy Duty (Houde)	532746	532747
Heavy Duty (Monroe)	530508	532751
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Std. (Exc. Cpe. & Hardtop)	532742	532750
Std. (Cpe. & Hardtop)	532743	532750

1955 Models

U.S. Cars	Front	Rear
Standard	535403	534964
Heavy Duty (Houde)	532746	532747
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Standard	535401	534965
Heavy Duty	530508	532751

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within coil springs

See *"Studebaker" in Front Suspension Section*

Kingpin Inclination—5¼°.

Caster—Neg 1°—Neg. 2½°. Not more than ¾° variation between wheels

Camber—0° to Pos 1°. ½° more camber favored on drivers side

Toe-In—1/16" to 1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for wheel straight ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm are parallel. **RHD Car Note**—Make toe-in adjustment at left hand tie rod

Toe-Out on Turns—With outer wheel at 20°, Inner wheel should be turned 22½-23½°

►*FRONT END NOISE CORRECTION:* Install hardened washer, Studebaker No 1539073 between inner shaft boss of lower control arm assembly and hug nuts, to prevent movement at this point Late production cars have these washers installed

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller Types.

See *"Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section*

Power Steering: Saginaw. Integral type

See *"Saginaw (G.M.) Power Steering" in Steering Section*

Steering Linkage: See *"Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: See *"Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section*

Steering Gear Removal: See *"Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section*

BRAKES

Wagner Lockheed Hydraulic Self-centering (With Bendix type shoes) Parking lever applies rear wheel brakes.

See *"Wagner Lockheed Self-centering" in Brake Section.*

Drums—Diameter (Front) 10", (Rear) 9"

Wheel Cylinder Diameter—1" (Front), 7/8" (Rear 1954), 13/16" (Rear 1955).

►*1954-55 PARKING BRAKE LEVER CLIP (IN REAR WHEEL BRAKE ASSEMBLY) BREAKING OFF CORRECTION:* This is due to incorrect assembly of shoe return springs The proper method is to assemble rear shoe return spring to shoe and its spring retainer first, then assemble the front shoe return spring.

►*1955 FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 1/4" thick, (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeal. This lining is applied the full length of the shoe and is marked "secondary" and "top" and should be installed as marked.

►*1955 PRIMARY REPLACEMENT CAUTION:* Early models may have either short or long primary lining installed. When relining, the primary lining must be the same length for both front wheels and for both rear wheels.

Lining Width & Length	Front Wheel	Rear Wheel
Primary Shoes	2" x 10 29/32"	2" x 9 27/32"
Secondary Shoes	2" x 10 29/33"	2" x 9 27/32"

Thickness—3/16" (except 1955 model front wheel secondary which is 1/4").

Clearance—Lock shoes against drum then turn adjusting screw back eight notches or more as required.

Hill Holder: Used on Synchro-mesh Trans. Cars. See *"Hill-holder" in Brake Section for data*

Anti-Creep: Used on Automatic Trans. Cars. See *"Anti-creep" in Brake Section for data*

Standard Master Cylinder: On frame left side rail at base of brake pedal

Checking Fluid—Access hole in front floor pan at left corner of drivers' seat. Fluid should be maintained at level ½" below top of filler opening

Removal—Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap Remove brake pedal pullback spring by unhooking it first from frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod Disconnect fluid line or lines at rear of master cylinder (NOTE—Hill-holder equipped cars have one line, Automatic Drive cars have two lines) Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder

Power Brakes: (1955 Models)—Hydrovac Power unit used in conjunction with standard master cylinder and located under hood on left front fender apron.

See *"Hydrovac Power Unit" in Brake Section.*

Removal—Disconnect vacuum and brake lines, stop light wires, remove power unit-to-bracket bolts.

►*POWER BRAKE CONTROL CHANGE FOR SOFTER BRAKE ACTION (First Cars):* 7/16" control valve installed in production starting with Serial No. G-1334649 to give softer brake action. Conversion kit No. 537939 is available for use on early production cars that were equipped with 3/8" control valve. *NOTE—Use this conversion kit on factory installed power brake units ONLY. Not recommended for use with power brakes.*

MISC. MECHANICAL

Windshield Wipers: Trico. Vacuum link and crank type (Standard) **Auto-Lite or Redmond.** Electric (Optional).

See *"Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electrical, with reversible motors in each window. Individual switches at each door and master switch on left front door. See *"Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type.

See *"Power Seat Adjusters" in Miscellaneous Section*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconn cting any part of air conditioning quipm nt or lin s f r acc ss to engine, see "Air C nditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
1954 Commander	5H
1954 Land Cruiser	5HY
1955 Commander	16G8
1955 President	6H
1955 President Speedster	6HK7

NOTE - Late Series 1955 Models are "Ultra-Vista" models, except for Coupe & Hardtop.

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers - As follows:

Assembly Plant	1954 Models	First Number
South Bend		8354901
Los Angeles		8836801
Hamilton, Ont.		8956741

1955 Commander

Assembly Plant	Early Series	Late Series
South Bend	8380601	8397201
Los Angeles	8841201	8843001
Hamilton, Ont.	8957601	8958101

1955 President

Assembly Plant	Early Series	Late Series
South Bend	7150001	7155401
Los Angeles	7805001	7805901
Hamilton, Ont.	7900001	7900201

ENGINE NUMBER: Stamped on cylinder block to left and in front of oil filler pipe.

Starting Engine Numbers

Model	South Bend	Los Angeles	Canada
1954 Models..	V-282501	V-282501	V-282501
1955 Comm.	① V-312701	② V-312701	③ VC-5701
1955 Pres.	P-101	PL-101	PC-101

① —Second series engine number starts at V-331101.
② —Second series engine number starts at VL-101.
③ —Second series engine number starts at VC-6201.

TUNE-UP

►*1955 COMMANDER & PRESIDENT V8 HARD STARTING:* On early cars, this may be caused by fuel pump not priming quickly (due to valve warpage). On cars with fuel pump code dated before J-5-1 or J-5-2, improved fuel pump, Studebaker No. 535541, can be installed when this trouble experienced. All pumps code dated J-5-1 or J-5-2 and later are of this improved type.

COMPRESSION PRESSURE: 120-140 lbs. at 150 RPM.

VACUUM READING: Steady 18-20" idling at 8 MPH.

VALVE TAPPET CLEARANCE: (1954) .021-.023" All valves (Engine Hot). .023-.025" All valves (Engine Cold). Self-locking tappet screws used. *NOTE* - Clearance setting instruction plates no longer used.
(1955) .023-.025" engine hot, .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic thermostatic type located on right bank exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylind rs—RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7,

SPARK PLUG GAP: .033-.038".
Spark Plug—Champion H-11, 14mm. Tighten to 25-30 ft. lbs.

COIL: Delco-Remy 1115392.
Ignition Current—2-1/2 amps. idling, 4-5 amps. stopped.

DISTRIBUTOR: Delco-Remy 1110839.
Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1918148.
Breaker Gap—.013".
Cam Angle—28-34° (with .013" gap).
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	1-5	700
2-4	400	4-8	800
10-12	1050	20-24	2100
15-17	1450	30-34	2900

Vacuum Spark Control: Delco-Remy 1116058. Integral type.
Plunger Travel—11/64—3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum ("of HG)
Start	0	4-6
7-8	14-16	10.5-12.5

Distributor Removal & Installation: See *"Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Model	Std. Ign. Setting
1954 All	4° BTDC
1955 Comm. (Early Series)	4° BTDC
1955 Comm. (Late Series)	8° BTDC
1955 President & Speedster	8° BTDC

Timing Mark—"IGN" mark on vibration dampener.
Timing—Line up "IGN" mark on vibration dampener with pointer at left side of engine front cover, *after vacuum advance pipe has been disconnected and plugged at carburetor connection.*

►*IGNITION TIMING CAUTION: The manufacturer recommends that no attempt be made to time the engine except with a suitable timing light and that the timing mark on vibration dampener be directly under the pointer. DO NOT SET TIMING BY THE "PING" METHOD.*

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg 2-Barrel Carburetor used on Commander and Carter 4-Barrel Carburetor used on President Models. NOTE—A Carter 4-Barrel Carburetor is optional equipment on Commander 1955 Models.*

►*1954 COMMANDER HESITATION OR LIGHT MISS AT 30-45 MPH. WITH CONSTANT THROTTLE (Cars with Stromberg Code 6-112 & 6-113 Carburetors):* If not corrected by careful tune-up of engine, this condition may be caused by a lean-limit carburetor and can be corrected by installing slightly richer Main Metering Jet. *See "1954 Stromberg WW (Studebaker)" in Carbur tor S ction.*

►*POROUS FUEL BOWL CAUTION:* Excessive cranking to start engine or indication of wetness of manifold or spark plugs may indicate a porous fuel bowl. *To ch ck, s Stromb rg "WW" Carbur tor in Carbur tor S ction.*

►*ENGINE RACING WHEN BRAKES APPLIED CORRECTION: Adjust throttl linkag xactly as utlin d below. This condition is caus d by to tight s tting f throttle linkage.*

►*1954 STATION WAGON THROTTLE LINKAGE RETURN SPRING INSTALLATION CORRECTION:* On a few station wagon models before Serial No. 8355631, throttle linkage return spring may have been incorrectly installed resulting in throttle not returning to idle position when accelerator released. Stronger of two springs (with opening close to spring's coil) should be attached to throttle shaft. Spring with 1" straight section between open end and spring coil should be connected to bellcrank at rear of engine block.

THROTTLE LINKAGE ADJUSTMENT (SYNCHRO-MESH & OVERDRIVE MODELS): Loosen stop screw at throttle cross shaft bracket on firewall, then making sure that carburetor throttle adjusting screw is on low step of choke cam, turn throttle adjusting screw as required to obtain an idle speed of 550 RPM. Turn stop screw in bracket until throttle actuating spring is taut and the idle adjusting screw just starts to move away from choke cam, then back off screw **n full turn** and secure with locknut. To adjust kick down switch, open throttle to full open position and turn kick down adjusting screw until pad on adjusting screw contacts plunger of kickdown switch.

THROTTLE LINKAGE ADJUSTMENT (AUTOMATIC DRIVE MODELS): With throttle valve closed and idle adjusting screw on low step of fast idle cam, adjust engine idle speed to 550 RPM. Adjust anti-creep switch until actuating spring is taut and the idle adjusting screw just starts to move away from fast idle cam, then back off the anti-creep switch **3 r 4 turns.** Position fast idle cam so that the adjusting screw contacts fourth step on cam. Adjust throttle return check screw so it just contacts tab on throttle lever arm. *Use a wrench t h ld shaft when turning throttle check screw.* Hold accelerator pedal in the full wide open position without extending actuating spring, and turn transmission governor control lever on side of transmission forward until resistance of detent is felt. Adjust ball joint until stud is properly aligned with hole in governor lever.

►**Throttle Actuating Spring Not :** Throttle actuating spring is preloaded and acts as a rod until 8-1/2 lbs., or more tension is applied. In all positions from closed to wide open throttle the spring remains solidly coiled. A bracket mounted under left rocker arm cover has four holes for spring adjustment.

STROMBERG WW

Model	Str mberg C d N.
1954 Comm. & Land Cruiser (Early)	6-112-B
1954 Comm. (Late)	6-112-C
1954 Land Cruiser (Late)	6-113
1955 Comm. (Early)	6-112-C, D, E, F
1955 Comm. (Late)	6-115
1955 Comm. Ultra-Vista (Auto. Trans.)	6-116

NOTE - Throttle Return Check used on Auto. Trans. Cars.

CONTINUED FROM PRECEDING PAGE

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barr l f eds Cyl. 1-4-6-7, LEFT barr l 2-3-5-8.*

Idle S tting–Initial setting, 1-3/4 turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idl Speed - 550-600 RPM (Synchro-mesh), 500-550 RPM (1954 Auto. Trans.), 550-600 RPM (1955 Auto. Trans.) with selector lever in Neutral "N" position on Auto. Trans. Cars.

Fl at L v l–3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool T-24733 (Studebaker No. KMO-269-S5).

Acc lerating Pump–Center hole–Normal Setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idl S tting: With choke valve fully closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required.

Unload r Adjustm nt: With choke valve tightly closed, open throttle valves to point where throttle lever stop rests against stop on throttle body. The choke valve should open sufficiently to allow a No. 1 drill to be inserted between choke valve and inner wall of air horn. Adjust as necessary by bending throttle lever ear which contacts choke lever.

Aut matic Ch k Setting: Centered (arrow on edge of cover aligned with boss on air cleaner end of housing).

Thr ttl Linkag Adjustm nt: *See "Carburetor" above.*

CARTER WCFB

M d l	Carter No.
Synchro-mesh	2219S, SA
Automatic Drive	2214S, SA
All Models	2330S

►**R plac m nt Carbur t r N te**–2219SA can be used to replace 2214S, SA, when used with Carter Unitized Pkg. 202-81U (Throttle Return Check Assembly).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels f ed Cy. 1-4-6-7, LEFT barrels 2-3-5-8.*

►*EXCESSIVE FUEL CONSUMPTION CORRECTION: May be caus d by impr p rly installed air cleaner-to-carbur t r gask t. S "Carter WCFB Carburetor" in Carburet r Secti n.*

►*STALLING ON SHARP LEFT TURN CORRECTION: Se "Cart r WCFB 4-Barr l Carburetors" in Carburetion S ction.*

Idl Setting–1/2–1-1/2 turns open. Turn screws out for richer mixture.

Idl Sp d–550-600 RPM (all models).

Thr ttl Linkage Adjustm nt: *S "Carbur tor" abov .*

Fu l Pump Pr ssur : 4-5 lbs.

►*OTHER DATA: S "Cart r WCFB Carbur tor" in Carbur tor S ction.*

CARB. EQUIPMENT

Fuel Pump: (1954) AC No. 9647. (1955) Carter No. 2211S. Diaphragm types. *NOTE - For 1954 pump installation, see "Fuel System" in Studebaker Special Data.*

Pressure - 4-5½ lbs.

See "Fuel Pumps" in Carburetion Section.

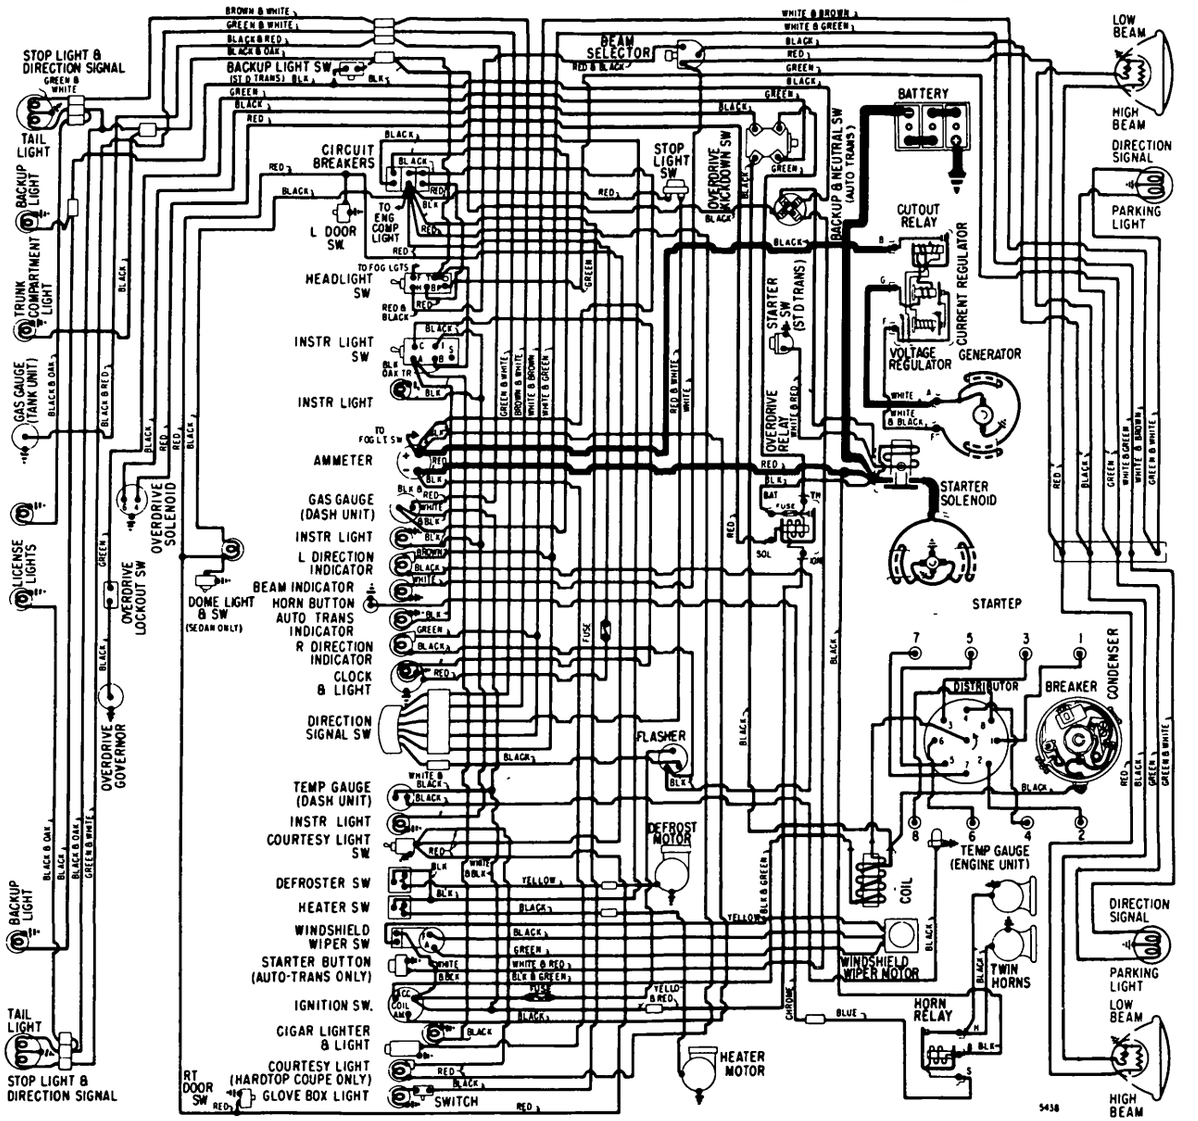
Gasoline Gauge: Stewart-Warner Electric Type.

Dash Unit - (1954) Studebaker No. 532593.

(1955 Exc. Speedster) Studebaker No. 536929.

(1955 Sp dst r) Studebaker No. 536838.

Tank Unit - (1954) Studebaker No. 525548 (exc. Coupe & Hardtop). No. 532261 (Coupe & Hardtop).



(1955) Studebaker No. 425548 (2-Dr., 4-Dr., and Land Cruiser). No. 532261 (Hardtop, 5-Pass. Coupe and Station Wagon).

See "Fuel Gauges" in Carburetion Section.

BATTERY

Willard HDW-1-100. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

Battery Ground–Positive.
Engine Ground–Right front of engine.

STARTER

Delco-Remy 1107115 (Std. Trans.), 1107116 (Automatic Drive).
Armature–Delco-Remy 1878077.
Drive–Bendix "Folo-thru" type. No. A3281.
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: (1954) Magnetic switch, Studebaker No. 532874 (exc. Coupe & Hardtop). No. 530039 (Coupe & Hardtop) Mounted on Dash and controlled by manual switch.
Starting Switch: (1955) Delco-Remy 1494, internal ground, magnetic type controlled by combination Ignition and Starting Switch. Turn key full right to start engine.
Automatic Transmission Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in neutral position.
Neutral Safety Switch Adjustment–*See "Studebaker Automatic Transmission" in Transmission Section.*

GENERATOR

Delco-Remy 1102778. Armature–No. 1921621.

Performance Data

	Amperes ①	Volts	RPM
Cold	45	8.0	2450

① –Not maximum output. See Current Regulator.

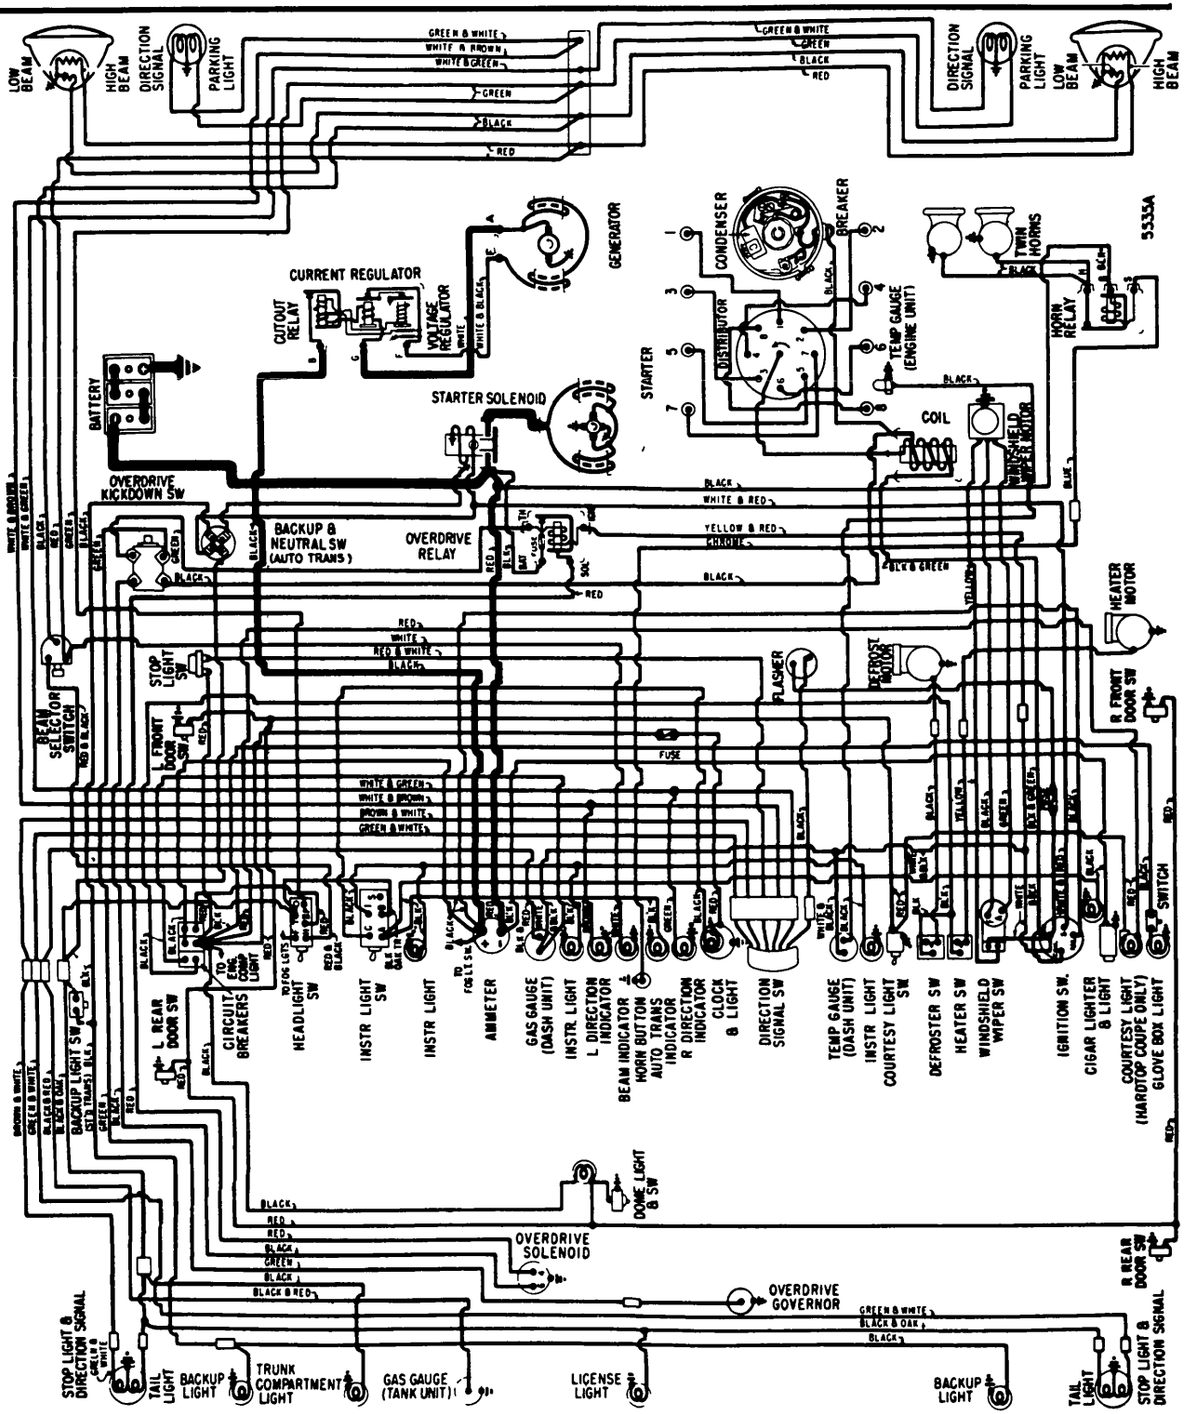
Brush Spring Tension–28 ozs.
Field Current–1.87-2.0 amperes at 6.0 volts (80° F).
Rotation–Counter-clockwise at commutator end.
Belt Adjustment: Hook spring scale to belt midway between generator and fan pulleys. Adjust tension on belt so that pull of 14 lbs. on scale will lift belt 1/2".

REGULATOR

Delco-Remy 1118950. *NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*
►*EARLY 1954 MODEL NOTE: If Delco-Remy 1118730 Regulator found on early cars, see "Delco-Remy 1118700 Series Regulator" in Electrical Equipment Section.*

Cutout Relay

Cuts In–5.9-6.7 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).



Voltage Regulator

Setting–6.9-7.4 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–See *Electrical Equip. Section.*

Current Regulator

Setting–42-47 amperes (hot)
Air Gap–.075" with contacts pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Direction Signal: *See Electrical Equipment Section.*

Lighting Switch Removal: Toggle Type—Remove switch retaining nut. Push switch sleeve back into panel and disconnect wires from switch.

Push-pull Type—With a pointed tool, lift spring in back side of switch knob and remove knob from shaft. Remove bezel nut and bezel plate. Push switch out of instrument panel and remove wires.

Stop Light Switch Location: On inner side of left frame rail just forward of steering gear housing. *NOTE*—If stop light switch removed it is necessary to bleed front brakes after re-installing switch.

FUSES: Overdrive - 20 amp. (1954), 30 amp. (1955). On Overdrive Relay.

Fog Lights—30 amp. in feed wire.

Radio—14 amp. in feed wire.

Clock—3 amp. in feed wire.

Direction Signal—14 amp. in flasher feed wire.

Heater (Ultra-Vista Models)—20 amp. on heater switch.

Defroster (Ultra-Vista Models)—20 amp. on defroster switch.

CIRCUIT BREAKERS: Capacity and location as follows:

Lighting (Ultra-Vista Models)—30 amp. on main light switch.

Lighting (Except Ultra-Vista Models)—30 amp. on bracket attached to dash behind instrument panel.

Body & Stop Lights (Ultra-Vista Models)—20 amp. on back side of instrument panel.

Body & Stop Lights (Except Ultra-Vista Models)—20 amp. on bracket attached to dash behind instrument panel.

Heater & Defroster (Except Ultra-Vista Models)—20 amp. on bracket attached to dash behind instrument panel.

HORNS: Three horns used on President Models, two horns used on Commander Models.

Make	Studebaker Part No. ①Low Tone	②High Tone
Delco-Remy (1954 Models)	1999683	1999684
Sparton (Comm. & Pres.)	③ 674005	674006

Delco (Comm. only)	531757	531756
Auto-Lite (Comm. Canada)	530209	530208

① —Left Horn. ② —Right Horn.
③ —Sparton (Stude. No. 537015), Center horn on Pres. models.

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*ENGINE PRODUCTION CHANGES: "Early" & "Late" Series cars have different engines as listed below.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, Valve-in-head.

1954 Models

Engine	Bore	Stroke	Displacement
All	3 3/8"	3 1/4"	332.6 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
All	7.5-1	36.4	120 at 4000 RPM

1955 Models

Engine	Bore	Stroke	Displacement
Pacesetter ①	3-9/16"	2-13/16"	224.3 cu. ins.
Wildcat ②	3-9/16"	3-1/4"	259.2 cu. ins.
Bearcat ③	3-9/16"	3-1/4"	259.2 cu. ins.
Passmaster ④	3-9/16"	3-1/4"	259.2 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
Pacesetter ①	7.5-1	40.6	140 at 4500 RPM
Wildcat ②	7.5-1	40.6	175 at 4500 RPM
Bearcat ③	7.5-1 ⑤	40.6	162 at 4500 RPM
Passmaster ④	7.5-1 ⑤	40.6	185 at 4500 RPM

① —Early Series Commander. ② —Early Series Pres.
③ —Late Series Commander. ④ —Late Series President.
⑤ —8.0-1 Optl. Equipment.

Compression & Vacuum Reading: *See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*

►*PISTON REPLACEMENT CAUTION: "Early Series" Commander (short stroke engine) pistons are not interchangeable with other 1955 engines. These pistons are longer than used in other engines and would cause damage to engine.*

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance is selective fit. With piston inverted, slotted side away from camshaft, and with bottom of piston about 1" below top of block, insert a .002" x 1" x 12" feeler on camshaft side of piston. Pull to withdraw feeler should be 8-13 lbs. *NOTE*—This supersedes previous fitting specification of 11-16 lbs. pull.

Replacement Pistons: Std. size, .010", .020", .030", .040" oversize.

Installing Pistons: Install piston on rod with slot on same side as nut on piston pin clampscrew (away from oil squirt hole in rod). Install piston in cylinder with slot toward left side of engine (all pistons). *See Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut. *NOTE*—The internal tooth "shakeproof" lockwasher has been replaced in production with an external tooth lockwasher.

Diameter—.8741-.8745". **Length**—2-7/8".

Clearance in Piston—.0001-.0003" or light finger push fit at room temperature (70°F).

Replacement Pins: Std. size, .0025", .005" oversize.

Removal & Installation: *See "Piston Pins" in Studebaker Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.008-.016"	.0025-.006"
Oil	3/16"	.008-.016"	.002-.006"

Replacement Rings: *See Studebaker Special Data.*

Installing Rings: Install rings with chamfered side of compression rings upward.

CONNECTING RODS

Length (Center-to-Center)—6-5/8". **Weight**—23.71 ozs.

Crankpin Journal Diameter—1.99925-2.00025".

Lower Bearing—Interchangeable. Steel backed, micro-babbitt lined type. No shims.

Clearance—.0005-.002". **Sideplay**—.007-.012".

Replacement Bearings: Std. size, .001", .005", .010", .020" undersize.

Installing Rods: Number on rod and bearing cap must be on same side and rod installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods) and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear (right bank), toward front (left bank).

►*NEW (UNMARKED) ROD NOTE: Hold rod upright with oil hole toward you. Narrow part of offset will be to right on rods for right bank, and to left for rods on left bank.*

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

CRANKSHAFT

►*MAIN BEARING CAPSCREW LOCKWIRE PRODUCTION CHANGE: The lockwire used in main bearing capscrews is not used in later production engine.*

Journal Diameter—2.4995-2.5000".

Clearance—.0005-.0025".

Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal.

Endplay—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

►*VIBRATION DAMPER NOTE:* Vibration damper flywheel marked H-4 or 6H (underlined) are interchangeable. Those marked 6H are replacements for H-4 when supplies of latter are exhausted.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CAMSHAFT

►*CAMSHAFT REPLACEMENT CAUTION: Cast Iron and Forged Steel Camshafts furnished for service replacement. Different type valve lifters required for each type. See "Valve Lifters" below.*

Journal Diameters—(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".

Bearings—Precision type, steel backed babbitt lined.

Clearance – .00075-.00225" (No. 1), .001-.00275" (Others).

End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.

Endplay - .005-.007" (1954), .003-.006" (1955).

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.

Backlash—.001-.003".

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

Engine Front Cover Removal: *See "Engine Front Cover" in Studebaker Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance - (1954) .021-.023" All valves (engine hot). .023-.025" All valves (engine cold).
(1955) .023-.025" All valves (engine hot), .025-.027" All valves (engine cold).

1954 Models

Valve	Head Diameter	Stem Diameter	Stem Clearance
Intake	1 13/32"	11/32"	.0015-.0035"
Exhaust	1 9/32"	11/32"	.0015-.0035"

1955 Models

Valve	Head Diam.	Stem Diam.	Stem Clearance
Intake	1-21/32"	11/32"	.0015-.0035"
Exhaust	1-17/32"	11/32"	.0015-.0035"

Seat Angle—45° (all valves).

Lift—23/64" (all valves).

Valve Seat Width—1/16-3/32".

Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.

Valve Springs: Single spring used. Replace spring if 10% weaker than pressure listed. *NOTE—dampener installed on lower end of all springs.*

Valve	Spring Pressure	Length
Closed	45-55 lbs	2 1/32"
Open	105-115 lbs	1 43/64"

Valve Guides: Pressed in head from underside.

Guide Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.

►*1954 VALVE LIFTER REPLACEMENT CAUTION:* Different lifters used with Cast Iron and Forged Steel Camshafts. "Step Type" lifters, Part Nos. 536508 (Std.), 536669 (.001" O.S.), 536638 (.005" O.S.) **used with Cast Iron Camshafts only.** "Plain Barrel" lifters, Part No. 531696 (Std.), 531722 (.001" O.S.), 536637 (.005" O.S.) **used with Forged Steel Camshafts only.**

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std. size, .001", .005" oversize.

►*CAUTION—When lifters removed, make sure they are installed in original positions.*

Rocker Arms: *See "Valve System" in Studebaker Special Data.*

►*1955 V8 ENGINE ROCKER ARM RETURN PASSAGE CAUTION:* Beginning with 1955 production, front oil return passages in cylinder block were discontinued to improve coolant circulation around No. 1 & 2 cylinders. A single oil return passage is used for each cylinder bank at the rear of the block. *DO NOT attempt to drill out front oil passages on these engines (would break through into water jacket).*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

1954 Models

Intake Valves—Open 11° BTDC. Close 54° 36' ALDC.
Exhaust Valves—Open 51° 36' BLDC. Close 14° ATDC.

1955 "Early Series" Commander

Intake Valves—Open 19° BTDC. Close 46°36' ALDC.
Exhaust Valve—Open 59° 36' BLDC. Close 6° ATDC.

1955 President & "Late Series" Commander

Intake Valves—Open 11° BTDC. Close 54° 36' ALDC.
Exhaust Valves—Open 51° 36' BLDC. Close 14° ATDC.

Valve Timing Check—Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

►*OIL LEAKAGE AT REAR MAIN BEARING CAP: See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankcase Capacity: 6 quarts (refill).

Normal Oil Pressure: (Early Cars) 40 lbs. at 1400-1600 RPM. (Later Cars) 25-50 lbs. at 40 MPH. See following production change note.

►*OIL PRESSURE RELIEF VALVE SPRING PRODUCTION CHANGE NOTE:* A new valve spring, Studebaker No. 536670 increases the normal oil pressure to 25-50 lbs. at 40 MPH. This change became effective in production at Commander Engine No. V348336 (South Bend), VL-3155 (Los Angeles), VC-7316 (Canada). At President Engine No. P-15929 (South Bend), PL-1576 (Los Angeles), PC-404 (Canada). The new spring can be used as a replacement on all prior models.

Pressure Regulator Valve—Located on right side at front of engine block slightly above crankcase flange.

Oil Pressure Indicator—Not electrical.

Oil Pump: Helical Gear type. Mounted on rear main bearing cap and driven by camshaft gear.

►*OIL FLOAT INSTALLATION CAUTION:* **The correct cotter pin to use when installing the float assembly is 1/8".** If a smaller cotter pin is used float can become disengaged from oil pump, causing damage to engine.

Pump Removal, Overhaul & Installation—*See "Oiling System" in Studebaker Special Data.*

Oil Filter: Partial flow. Replace filter cartridge at 5000-6000 mile intervals. Change more often in dusty areas.

Replacement Filter Element—Studebaker No. 520830 or 196646.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at rear of engine (air outlet).

►*BREATHER TUBE FILTER NOTE: Remove filter element (retained in lower end of tube by cotter pin) for servicing.*

COOLING

Water Capacity: 17-1/4 qts. (18-3/4 qts. with heater).

Pressure Valve: Radiator filler cap. Opens at 7 lbs. (1954), 12-15 lbs. (1955).

Thermostat: **(1954)** Choke type, opens at 152-163°F. **(1955)** Bellows type, opens at 158-163°F.

Water Pump: Packless. Sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*

Pump Removal—Drain cooling system. Loosen generator, push it inward to relieve tension on fan belt, remove fan belt. Remove fan-to-hub screws and remove fan and pulley. Remove fan shroud. Disconnect radiator outlet hose and Climatizer hose (if so equipped). Remove generator adjusting arm from top stud, then remove water pump manifold screws. Remove water pump manifold and four gaskets from engine block.

Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*

Temperature Gauge: Stewart-Warner Electric type.

Dash Unit - (1954) Studebaker No. 532597. **(1955 exc. Speedster)** Studebaker No. 536930. **(Speedster)** Studebaker No. 536832).

Engine Unit - Studebaker No. 532579 (1954), 536837 (1955).

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 9A7. Assembly No. 926 (All 1954 Models & Early 1955 Commander). Model 10A7. Assembly No. 361371 (Late 1955 Commander & 1955 President).

Clutch Disc - Borg & Beck 381662 (1954 & 1955 Early Commander), 382315 (1955 Late Commander & President). *See "Borg & Beck" in Clutch Section.*

Pedal Adjustment: Pedal free travel 1/2-1". To make adjustment, loosen locknut securing clevis to rod connecting release shaft lever to clutch operating shaft lever and remove the clevis pin. Turn clevis

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

to shorten or lengthen rod as necessary for correct pedal free travel.

►*CLUTCH PEDAL REWORK (To Prevent Spring Breakage): See "Clutch Notes" in Studebaker Special Data.*

►*HILL-HOLDER NOTE:* Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever.

Clutch Housing Removal: Remove starter. Remove floor plate and clutch housing top capscrews. Remove clutch operating shaft. Remove transmission (see Synchro-mesh Transmission Removal below). Remove two bolts holding engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a block between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember. Remove support crossmember-to-frame bolts and remove cross member. Remove the two clutch housing bolts retaining exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or capscrews and remove clutch housing.

Clutch Removal: Remove clutch housing (above), remove six screws evenly to release pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS53-T86E (Std.), AS54-T86E with R10 type Overdrive. *See "Warner Synchro-mesh Transmission" in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from transmission case. *NOTE*—On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10 Type (part of AS54-T86E Transmission). Governor controlled, with electric solenoid operation and throttle controlled "kickdown".

See "Warner R10" Overdrive in Transmission Section.

►*OVERDRIVE REVERSE LOCKOUT SWITCH PRODUCTION CHANGE:* Reverse lockout switch discontinued in production. Later type overdrive units are interchangeable in complete assemblies with earlier type.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control, mechanical parking brake, and "Anti-Creep" device which holds brakes applied when car is standing and ignition "on".

NOTE—Early Commander transmission is different than Late Commander and President models. Service procedures are the same.

►*CONVERTER HOUSING SCREEN PRODUCTION CHANGE: Screen is not being installed in production and is not required to be replaced on earlier models in service.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

►*FLUID LEVEL CHECKING NOTE (To obtain accurate level reading): To prevent oil spray and torque converter drain back causing inaccurate dipstick reading, fluid level must be checked as indicated below, immediately after engine is stopped.*

Checking Fluid Level—With car on a level floor, set hand brake firmly. Place selector lever in "L" position and allow engine to warm up to normal operating temperature and then run engine at idle speed. Clean area around inspection hole and top of fluid level gauge. Remove gauge and wipe it dry. *Stop engine and immediately insert and withdraw gauge.* If any additional fluid is required, add it and then repeat the checking procedure. Use only Automatic Transmission Fluid Type "A", bearing an AQ-ATF symbol on the container.

Capacity—9-1/2 quarts, Automatic Transmission Fluid Type "A".

►*OTHER AUTOMATIC TRANSMISSION SERVICE DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember.

Propeller Shaft & Support Bearings: Two shafts used.

1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal: *See "Propeller Shaft Notes" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive. *See "Spicer Hypoid" in Rear Axle Section.*

►*REAR AXLE RATIO PRODUCTION CHANGE NOTE: Axle ratios were changed on some models (as indicated below) at beginning of "Late Series" production.*

1954 Rear Axle Ratios

Standard Axle Ratios

Model	Synchro-mesh	Overdrive	Automatic
All (Exc.Land Cruiser)	4.09-1	①4.27-1	②3.54-1
Land Cruiser	4.09-1	4.09-1	3.54-1

Optional Axle Ratios

Model	Synchro-mesh	Overdriv
All (Exc.Land Cruiser)	4.55-1	4.55-1
	4.27-1	4.09-1
Land Cruiser	4.55-1	4.27-1
	4.27-1	4.55-1

①—4.55-1 on Station Wagon. ②—4.09-1 Optl.

1955 Rear Axle Ratios

Early Series (Std.)	①SM	②OD	③AUTO
Comm. (Exc. Sta. Wgn.)	4.10-1	4.27-1	3.54-1
Comm. Sta. Wag.	4.09-1	4.55-1	3.54-1
President	3.92-1	4.27-1	3.54-1

④—4.56-1 & 4.27-1. ⑤—4.56-1 & 4.10-1.
⑥—None available. ⑦—4.27-1 & 4.55-1.
⑧—4.09-1 & 4.27-1. ⑨—4.55-1 & 4.09-1
⑩—2-Dr. & 4-Dr. Ultra-Vista Models.
⑪—Except 2-Dr. & 4-Dr. Ultra-Vista Models.
⑫—4-Dr. Deluxe Ultra-Vista Models.
⑬—Except 4-Dr. Deluxe Ultra-Vista Models.
⑭—3.73-1 & 3.92-1.

Rear Axle Ratio Identification: Rear axle ratio stamped on plate attached to axle by cover cap screw and also on ring and pinion gears.

Backlash—.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way (*CAUTION*—Do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rear Axle Assembly Removal: Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect hand brake cables, take out backing plate bolts and free hydraulic brake lines from axle housing clips (do not disconnect brake lines from wheel cylinders). Disconnect rear universal joint (wire caps or use clamps to prevent losing bearing rollers). Remove rear spring U-bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde, Monroe or Gabriel. Direct acting hydraulic.

1954 Studebaker Shock Absorber Nos.

U.S. Cars	Front	Rear
Standard	535318	534320
Heavy Duty	536398	536399
Canadian Cars		
Std (Exc. Coupe & Hardtop)	532742	532750
Std. (Coupe & Hardtop)	532743	532750
Heavy Duty	530508	532751

1955 Studebaker Shock Absorber Nos.

U.S. Cars	Front	Rear
Standard (Sedans)	535403	534964
Standard (Cpe. & Hardtop)	534319	534964
Heavy Duty (Houde)	532746	532747
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Standard (Sedan)	535401	534965
Standard (Cpe. & Hardtop)	534329	534965
Heavy Duty (Monroe)	530508	532751

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within the springs. *See "Studebaker" in Front Suspension Section.*

►*FRONT END NOISE CORRECTION ("Chuckling" sound or a sharp "cracking" noise):* May be caused by looseness of lower support arm inner shaft attaching bolt nuts. Correct by installing a plain hardened steel washer, Studebaker No. 1539073 against the inner shaft boss. Install hug nut and tighten to 60-65 ft. lbs. Later production cars have hardened washer installed.

►*SPEEDSTER FRONT SPRING SPACER NOTE:* Two front spring spacers, Studebaker Part No. 526830 are used on the left side only. One spacer is located between lower suspension arm and insulator, and the other is located between frame and upper insulator. These spacers used in production beginning with Car Serial 7166614.

►*CAR LEVELING NOTE. Speedster Front Spring Spacers, Part No. 526830 can be used to level any 1950-55 model passing car.*

Kingpin Inclination - 6° (1954), 5¼° (1955) at 0° camber

Caster—Neg. 1° to Neg. 2-1/2°. Not more than 3/4° variation between wheels.

Camber—0° to Pos. 1°. 1/2° more camber favored on driver's side.

Toe-In—1/16-1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments at left hand tie rod.

Toe-Out on Turns—With outer wheel at 20°, inner wheel should be 22-1/2—23-1/2°.

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller types.
See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.

Power Steering: Saginaw. Integral type. Power unit and control valve assembly built into steering gear.
See "Saginaw (GM) Power Steering" in Steering Section.

►*POWER STEERING PUMP BRACKET STUD BREAKING CORRECTION.* Breakage of these two special screws (either above or below the hex head) may be due to looseness of the screws in the block. Make sure both screws are tightened to the same torque as other cylinder head screws. It is important to keep these bolts tight.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking brake applies rear wheel service brakes.
See "Wagner Lockheed Self-Centering" in Brake Section.

►*1954 PARKING BRAKE LEVER CLIP (IN REAR WHEEL BRAKE ASSEMBLY) BREAKING OFF CORRECTION:* This is due to incorrect assembly of shoe return springs The proper method is to assemble rear shoe return spring to shoe and its spring retainer first, then assemble the front shoe return spring

►*LINING PRODUCTION CHANGE & REPLACEMENT CAUTION See "Wagner Lockheed Self-centering" in Brake Section.*

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeak. This lining is applied to the full length of the shoe and is marked "secondary" and "top", and should be installed as marked.

►*PRIMARY LINING REPLACEMENT CAUTION.* Early models may have either long or short primary lining installed. When relining, the primary lining must be the same length for both front wheels and for both rear wheels.

Drums—Diameter 11"(front), 10"(rear).

Braking Power—62% (front), 38% (rear).

Wheel Cylinder Diameter—1-1/16"(front), 7/8"(rear).

Lining Dimensions	Width	① Length	Thickness
Front Wheels	2-1/4"	12"	② 3/16"
Rear Wheels	2"	10-29/32"	3/16"

①—See "Lining Length Note" above.

②—Front wheel secondary lining is 7/32". See "Front Wheel Secondary Lining Note" above.

Clearance—Lock shoes against drum with adjusting screw, then back off adjusting screw 8 notches, or more notches as required to free drum.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid—Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal—Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. *(NOTE*—Hill-holder equipped cars have one line, Automatic Drive cars have two lines). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to hold hill holder (or Anti-Creep solenoid valve) while master cylinder is off car.

Power Brakes: Hydrovac power unit used with standard master cylinder.
See "Hydrovac Power Unit" in Brake Section.

Checking Fluid—Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit—Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

MISC. MECHANICAL

Windshield Wipers: Auto-Lite, Redmond and Bosch Electric type. *See "Auto-Lite Windshield Wiper 'Single End' Motors" and "Redmond Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electrical, with individual reversible motors in each window. Control switches at each door with a master control switch located on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type with curved seat tracks for seat adjustment (seat raises and lowers with a tilting action).
See "Power Seat Adjusters" in Miscellaneous Section.

►*TORSION LEVEL SUSPENSION CAR SERVICING CAUTION.* Do not jack car up in rear with jack placed under rear load arms or any part of torsion level suspension assembly Rear load arm link may become disengaged from arm

►*AIR CONDITIONED CAR SERVICE CAUTION Before disconnecting any part of air conditioning equipment or lines, see "Air Conditioning Service Cautions in Miscellaneous Section.*

►*ELECTRICAL EQUIPMENT NOTE Both Auto-Lite and Delco-Remy electrical equipment used.*

MODEL IDENTIFICATION

Model	1955 Model Designation	Series
Clipper Deluxe	5522	5540
Clipper Super	5542, 5547	5540
Clipper Custom	5562, 5567	5560
Packard	5582, 5587	5580
Caribbean	5588	5580
Model	**1956 Model Designation**	**Series**
Clipper Deluxe	5622	5640
Clipper Super	5642 5647	5640
Clipper Custom	5662, 5667	5660
Packard (290 HP)	5682, 5687	5680
Packard (310 HP)	5697 5699	5688
Packard Executive	5672A, 5677A	5670

SERIAL NUMBER: Stamped on plate attached to left front hinge pillar post

ENGINE NUMBER: Stamped on front end of engine block between cylinder banks, directly behind water pump

►*DETONATION CORRECTION (First Cars in Low Octane Areas)* If detonation not eliminated by correcting other engine conditions (carbon deposits etc.), early Distributors can be converted to later type with different advance performance. *See Auto-Lite & Delco-Remy Distributors below.*

TUNE-UP

►*ROUGH IDLE, OR POOR PERFORMANCE OR GASOLINE ECONOMY (Cars with Carter 2284S Carburetor) See "Carter WCFB 4-Barrel" in Carburetor Section.*

COMPRESSION PRESSURE: 120 lbs minimum at 150 RPM Variation between cylinders should not exceed 10 lbs

VACUUM READING: 18-21" at idling speed

VALVE TAPPET CLEARANCE: None required in service (hydraulic)

MANIFOLD HEAT CONTROL: Thermostatic spring type mounted between right bank exhaust manifold and exhaust pipe With heater valve in closed position, hook in end of coil should assume a position approximately 90° clockwise from coil anchor pin at normal room temperatures Valve should operate freely

►*NOTE* When valve is closed most exhaust gases are discharged through left exhaust pipe

IGNITION

FIRING ORDER 1-8-4-3-6-5-7-2
Cylinders—RIGHT BANK 2-4-6-8 LEFT BANK 1-3-5-7

SPARK PLUG GAP 033- 037"

Spark Plugs - Champion H-10 (1955), Champion N-18 (1956) 14mm Torque to 26-30 ft lbs

AUTO-LITE

COIL: Auto-Lite CAD-4001 (1955), CAD-4004 (1956).
Ignition Current - 1 25 amps (1955), 2 2 amps (1956) (Hot)
Resistor—Auto-Lite PU-4001

►*COIL RESISTOR NOTE* Resistor is connected in series with primary circuit between battery and coil Resistor is by-passed during cranking by lead from starter solenoid to coil

DISTRIBUTOR: Auto-Lite. 12 Volt.

1956 Car Model	Carburetor
5640	Carter WGD 2393S
5660, 5670	Carter WCFB 2394S
5680	Rochester 4GC 7008610
5688	Rochester 4GC 7009600 & 7009601

THROTTLE LINKAGE ADJUSTMENT (Ultramatic Driv Cars): With engine at normal operating temperature, choke valve fully open and throttle in the slow idle position, set engine idle speed to correct RPM (See "Carburetor" below for idle adjustment and Carburetor Synchronizing) Loosen the two locknuts (4 or 5 turns) that position the transmission throttle control rod cross shaft adjuster on accelerator-to-carburetor rod Make sure that adjuster is free to move back and forth Move transmission throttle shaft outer lever on right side of transmission so that it is at its rearward position With carburetor throttle adjusting screw against its stop, adjust the throttle operating rod turnbuckle so that accelerator pedal rod lever just touches underside of the floorboard (this point is where rod from accelerator pedal extends through the floorboard), **then lengthen turnbuckle one full turn** to provide clearance. Tighten locknut on turnbuckle. Apply a slight forward pressure on transmission throttle rod adjuster and move rear locknut up to the adjuster. Move the front locknut up to the adjuster and tighten securely.

CARTER WGD 2-BARREL
No 2393S

► *MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyl 2-3-5-8, LEFT barrel 1-4-6-7*

Idle Setting–¾ to 1¾ turns open Turn screws out for richer mixture

Idl Sp d (Synchr -mesh & O D)–450-500 RPM

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idl Spe d (Ultramatic Trans.)–450 RPM with selector lever or button in "H" range.

Fl at L vel: With bowl cover gasket removed, bowl cover inverted and needle seated, distance between top of float and bowl cover should be 3/16" Adjust by bending float lever

Accelerating Pump–No seasonal adjustment

Fast Idle Setting: 024" clearance (Gauge T109-189) between throttle valve and bore of carburetor (side opposite idle port) with choke valve tightly closed Adjust by bending choke connector rod at lower angle (Use bending tool T109-213)

Automatic Choke Setting: Two points rich

Throttle Linkage Adjustment (Ultramatic): *See CARBURETOR above*

► *OTHER DATA See "Carter WGD" Carburetors in Carburetion Section.*

Fuel Pump Pressure: 3½-5 lbs. at 500 RPM.

CARTER WCFB 4-BARREL
No. 2232S, 2284S & 2394S

► *CARBURETOR PRODUCTION CHANGE: Carter No. 2232S used with first No. 440689 Cyl. Hd., No. 2284S used with later No. 440854 Cyl. Hd.*

► *CARTER 2284S HIGH VACUUM AT DISTRIBUTOR VACUUM PORT (Causing Rough Idle, Poor Performance or Poor Gasoline Economy): See "Carter WCFB 4-Barrel" in Carburetor Section for test and correction.*

► *ROUGH IDLE CORRECTION (Cars before Engine No. B-1792 with Carter 2394S Carburetor):* Rough engine idle on these cars may be caused by slight opening of secondary throttle valves and can be corrected by increasing wind-up on secondary throttle valve return springs from ½ to 1½ turns. *NOTE* - On cars after Eng. No. B-1792, the return spring has this additional wind-up.

► *ENGINE CUTTING OUT ON LEFT TURN CORRECTION: See "Carter WCFB 4-Barrel" Carburetor in Carburetion Section.*

► *MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl 2-3-5-8, LEFT barrels 1-4-6-7*

Idle Setting - ½-1½ (1955), ¾-1¾ (1956) turns open. Turn screws out for richer mixture.

Idle Speed (1955) - SM & OD. 400-450 RPM, Ultramatic 400 RPM with selector lever or push button in "H" range.

(1956) SM. & OD. 450-500 RPM, Ultramatic 450 RPM with selector lever or push button in "H" range.

Throttle Linkage Adjustment (Ultramatic): *See CARBURETOR above.*

► *OTHER DATA. See "Carter WCFB 4-Barrel" in Carburetion Section.*

Fuel Pump Pressure: 3½-5 lbs. at 500 RPM.

ROCHESTER 4GC 4-BARREL
No. 7007230 & 7008610

► *MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT Barrels Feed Cyl. 2-3-5-8, LEFT Barrels 1-4-6-7.*

Idle Setting – 1 - 1½ turns open. Turn screws out for richer mixture.

Idle Speed - 400 (1955), 450 (1956) RPM with selector lever or push button in "H" range, 400-450 RPM (1955 SM).

Thr ttl Linkag Adjustm nt (Ultramatic): *See CARBURETOR above.*

► *OTHER DATA· See "Rochester 4GC 4-Barrel" in Carburetion Section.*

Fuel Pump Pressure: 3½-5 lbs. at 500 RPM.

ROCHESTER 4GC (CARIBBEAN)
No. 7008230 & 7008231
No. 7009600 (Front), 7009601 (Rear)

► *CARBURETOR ADJUSTMENT CAUTION· Carburetor linkage must be adjusted to synchronize carburetion as directed below.*

► *MANIFOLD FUEL DISTRIBUTION. Carburetor RIGHT barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7*

Idle Setting–1–1-1/2 turns out. Turn screws out for richer mixture.

Idle Speed - 400 (1955), 450 (1956) RPM with selector lever or push button in "H" range

Synchronizing Carburetors: 1) Loosen both jam nuts on throttle rod at front carburetor throttle valve lever and both jam nuts at forward end of transmission throttle rod (where it connects with accelerator pedal rod), several turns.

2) Back out front and rear carburetor idle speed adjusting screws until throttle valves are closed. While holding the front carburetor throttle valves tightly closed, adjust jam nuts on throttle rod at front carburetor throttle lever so that pin fits freely in lever, then tighten jam nuts.

3) Turn in the idle speed screw on **front** carburetor until it makes contact and then turn it in **one additional turn.** Turn the four idle mixture screws (two each carburetor) all the way in and then **back them out one full turn.**

4) After engine is warm, adjust **Front Carburetor** idle speed screw to obtain 400 (1955), 450 (1956) RPM (selector in "D" or push button in "H" range).

NOTE–The rear carburetor idle speed screw is not used and should therefore remain in the "backed out" position.

5) Adjust the idle mixture screws to obtain a smooth idle in the following recommended manner Turn each idle mixture screw in until the lean "drop-off" point (as noticed by a drop in the tachometer and vacuum gauge readings), counting the turns while turning the needle out to its rich "drop-off" point, then returning the screw to a position midway between the two "drop-off" points. Repeat with each idle mixture screw in the following sequence· right rear, right front, left front, left rear. Adjust for the highest possible RPM and vacuum reading. Readjust front carburetor idle speed screw to 400 (1955), 450 (1956) RPM if necessary.

6) Raise the **rear** carburetor fast idle cam so that the idle speed adjusting screw rests on the high step of the cam. Adjust fast idle screw to obtain 2300-2350 engine RPM and then drop cam away from the screw. Repeat this procedure with the **front** carburetor, adjusting the screw to obtain 1850 RPM, drop cam away from the screw. *NOTE–Because of the inaccessibility of th fast idle screws on both carburetors at low idl position, it will b n c ssary to shut th ngine ff and partially op n th throttl to adjust th fast idl screws.*

Thr ttl Linkag Adjustm nt (Ultramatic): *S e CARBURETOR abov .*

► *OTHER DATA S "Roch st r 4GC" Carbur tors in Carbur tion Section.*

Fuel Pump Pressure: 3½-5 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Carter (Fuel Only). Vacuum pump is part of engine oil pump assembly.

Replacement Fuel Pump - Carter No. M-2198S.

Fuel Pump Pressure - 3½-5 lbs. at 500 RPM.

See "Fuel Pumps" in Carbur ti n S cti n.

Gasoline Gauge: King-Seeley electric "CV" (constant voltage) type with voltage regulator.

Dash Unit - King-Seeley No. 46924 (1955) & 49546 (1956) on 40,60,70 Series, and 46884 (1955), 49506 (1956) on 80 & 88 Series.

Tank Unit - King-Seeley No. 44517 (1955), 44519 (1956).

BATTERY

Auto-Lite 3EA-60 or Willard HDW-3KM-60. 12 Volt, 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground - Positive (1955), Negative (1956).

Engine Ground - Cylinder head to dash panel

STARTER

AUTO-LITE

Auto-Lite No. MDD-6301 (1955), MDF-6008 (1956).

Armature - Auto-Lite No. MDC-2037 (1955), MDF-2122 (1956)

Drive - Bendix A-3467 (1955), Solenoid pinion shift and over-running clutch (1956).

Rotation - Counter-clockwise at commutator end.

Brush Spring Tension - 42-53 ozs

	Performanc Data		
Torque	**RPM**	**V lts**	**Amperes**
0ft. lbs.	.3200 min.	10.0	60 max.
6 5 ft. lbs.min.	Lock	4 0	240 max.

Starting Switch: Auto-Lite No SSW-4101 (1955), SAD-4101 (1956). Key starting. *S "Starter Controls" in Electrical Section.*

Ultramatic Neutral Safety & Back-up Light Switch: *S e "Delco-Remy Starter" data b low.*

DELCO-REMY

Delco-Remy No. 1107635 (1955), 1107656 (1956).

Armature - Delco-Remy No. 1926626

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counter-clockwise at commutator end.

Brush Spring Tension - 35 ozs. min.

	Performanc Data		
Torque	RPM	Volts	Amperes
0 ft. lbs.	3240	10.6	91
	Lock	3.5	395

Starting Switch: Delco-Remy 1119760 solenoid switch, mounted on starter and controlled by Ignition & Starter Switch. Turn key full RIGHT to start. *Se "Start r Controls" in Electrical Section.*

Ultramatic Neutral Safety & Back-up Light Switch: Delco-Remy 1998118. Located on lower end of steering column. Connected in starter control circuit so that starter operative in "N" or "P" only.

GENERATOR

AUTO-LITE

Aut -Lit GJC-6001A (Early), GJC-7002F(Later). *12 Volt.*
Armatur - Auto-Lite GJC-2006F (GJC-6001A Gen.), GJC-2030F (GJC-7002F Gen.).
Maximum Charging Rate - *See Voltage Regulator.*

P rformance Data

Amperes	Volts	RPM
20 Ⓒ	15.0	1750 max.
30 Ⓒ	15 0	2050-2250

Ⓒ - Do not operate at high output without ventilating fan for any length of time. To do so may result in burned armature and fields.
Brush Spring T nsi n - 35-53 ozs. (GJC-6001A), 18-36 ozs. (GJC-7002F), with new brushes.
Fi ld Curr nt - 1 2-1 3 amps. at 10.0 volts (70°F.).
M toring Curr nt - 3 4-3.9 amps. at 10.0 volts (70°F.).
Rotati n - Counter-clockwise at commutator end.
B lt Adjustm nt: Loosen generator-to-mounting bracket bolts and adjusting arm screw. Place Fan Belt Adjusting Tool J-4672 over head of front mounting bolt and rotate tool until arm of tool contacts edge of generator end plate. Then using torque wrench, turn tool counter-clockwise until a 20-25 ft. lbs. torque is indicated on wrench scale. While holding wrench at proper torque, tighten adjusting arm screw securely. Remove tool and tighten the generator-to-mounting bracket bolts.

DELCO-REMY

Delco-Remy 1102022 (1955), 1102003 (1956).
Armature - Delco-Remy No 1923535
Maximum Charging Rate - *See Voltage Regulator.*

P rf rmance Data–Cold

Amperes	Volts	RPM
30	14 0	2150

Rotati n - Counter-clockwise at commutator end.
Brush Spring T nsi n - 28 ozs.
Fi ld Current - 1.48-1.62 amps. at 12.0 volts (80°F.).
B lt Adjustm nt: Same as for Auto-Lite above.

REGULATOR

AUTO-LITE

Auto-Lit VRX-6007-A (1955), VRX-6009-A (1956).

Cut ut Relay

Cuts In - 13.0-13 7 volts.
Cuts Out - 8 2-9.3 volts.
C ntact Gap - .015" minimum.
Air Gap - .031-.034".

V ltag Regulator

S tting - 14.2-14.8 volts at 80°F., *unit operating normally whil charging at 10 amps. or with a .25 ohm resistor b twe n r gulator and battery.*
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Ch cking & Adjusting - *See Electrical Section.*

Current Regulator

► *SETTING CAUTION "Temperature Compensated" type, S t t following sp cifications at 70°F.*

Test A	Op rating Amper s	Test B
36 amps.		30 (28-32)

T st A - After 15 minutes operation charging at 10 amps.
T st B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See Electrical Section.*

DELCO-REMY

Delco-Remy 1118953 (1955), 1119123 (1956). *See specifications below for "Normal" settings.*

Cutout Relay

Cuts In - 11.8-13.5 volts (Hot).
Contact Gap - .020".
Air Gap - .020" (with contacts just closed).

Voltage Regulator

Setting - 13.8-14.8 volts (Hot).
Air Gap - .075" with armature pressed down to point where contacts just touching.
Checking & Adjusting - *See "1118825 Series" (1955), "1119000 Series" (1956) Regulators in Electrical Section.*

Current Regulator

Setting - 27-33 amps. (Hot).
Air Gap - .075" with armature pressed down to point where contacts just touching.
Checking & Adjusting - *See "1118825 Series" (1955), "1119000 Series" (1956) Regulators in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Direction Signal: *See Electrical Section.*
Lighting Switch Removal: Remove knob, then remove nut on instrument panel with special wrench. Remove switch.
Stop Light Switch Location: On brake master cylinder outlet tee.
FUSES: All fuses, except as noted are located on a fuse block under instrument panel.
Stop Light - AGW-7½ amps. (SFE-20 amps. fuse with Spring Suspension on Clipper Deluxe 4-Dr. Sedan).
Body Wiring - SFE-20 amps.
Dome Light - SFE-20 amps.
Direction Signal - SFE-9 amps.
Courtesy Light - SFE-20 amps.
Clock - AGA-2 amps.
Overdrive - AGC-15 amps., on relay on dash panel.
Instruments - AGW-7½ amps.
Windshield Washer - SFE-9 amps.
Heater - AGC-15 amps.
Radio - AGW-7½ amps.
Antenna (Electric) - SFE-20 amps.
Torsion Level Motor - AGC-20 (1955), 30 (1956) amps in container near starter
Torsion Level Control - 20 amps. (1955), 7½ amps. (1956)
CIRCUIT BREAKERS: Lighting - 20 ampere circuit breaker on headlight switch protects head, tail, and parking lights.
Power Seat & Windows - 30 amps., located on engine side of dash.
HORNS: Spart n. Dual horns with relay.
H rn R lay: Delco-Remy 1116781.

ENGINE

► *AIR CONDITIONED CAR SERVICE CAUTION: Bef re disc nn cting any part f air conditi ning quipm nt or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*
► *SERIES 5540 CYLINDER HEAD PRODUCTION CHANGE:* Cyl. Head No. 440689 used on first cars, No. 440854 used on later cars. Different Distributor and Carburetor used with each head.
► *IMPROVED OIL CONTROL PRODUCTION CHANGE & CORRECTION ON EARLY CARS:* THREE types of rocker arm shafts have been used in production and latest type should be installed if trouble experienced on cars with previous type shafts *See "Rocker Arms" under VALVE SYSTEM in Packard Special Data.*

1955 ENGINE SPECIFICATIONS: Own. Valve in head.

Series	Bore	Stroke	Displacement
5540	3-13/16"	3-1/2"	320 cu. ins.
5560, 5580, 5588	4"	3-1/2"	352 cu. ins.

Series	Rated HP	Compr. Ratio	Developed HP
5540	46.5	8.5-1	225 at 4600 RPM
5560	51.2	8.5-1	245 at 4600 RPM
5580	51.2	8.5-1	260 at 4600 RPM
5588	51.2	8.5-1	275 at 4800 RPM

1956 ENGINE SPECIFICATIONS: Own. 90° V8.

Model	Bore	Stroke	Displmnt.
5640, 60, 70	4"	3½"	352 cu. ins.
5680, 5688	4 1/8"	3½"	374 cu. ins.

Model	Rated HP	Compr. Ratio	Developed HP
5640	51.2	9.5-1	240 at 4600 RPM
5660, 70	51.2	9.5-1	275 at 4600 RPM
5680	54.45	10.0-1	290 at 4600 RPM
5688	54 45	10 0-1	310 at 4600 RPM

Compression & Vacuum Reading–*See TUNE-UP.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Packard Special Data.*
ENGINE REMOVAL: *See "Engine" in Packard Special Data.*
OIL PAN REMOVAL: *See "Oiling System in Packard Special Data*
CYLINDER HEAD REMOVAL & INSTALLATION: *S "Cylinder Head & Manifolds" in Packard Special Data.*

PISTONS

Aluminum alloy, cam ground, Autothermic flat head, slipper skirt, tin plated.
Weight - 22 293 ozs. (5540), 24 763 ozs. (Other 1955). 24 762 ozs (5540,60,70), 26.067 ozs. (5680,88)
Removal - Pistons and rods removed from above.
Clearance - .000-.0015" at bottom of skirt.
Fitting New Pistons: Using a .0015 x 1/2" feeler gauge placed against side of cylinder wall, insert piston without rings, in an inverted position in cylinder bore. Push piston down until bottom of skirt is slightly below top of cylinder block and piston pin bore is parallel to crankshaft. Pull to withdraw feeler should be 6-11 lbs.
Installing Pistons: Install with "F" cast in piston strut, and notch in piston head, toward front of engine. *Se Rod Installation b low.*
R plac m nt Pist ns: Std size, 010", .020", 030" oversize

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON PIN

Floating type retained by lock ring at each end. Split type bushing used at upper end of rod. Pin is offset 0625" toward thrust side.

►*PISTON PIN LOCK CAUTION:* 5640 60, 70 (4" bore) engines prior to Engine Plant Nos. A-1347 and B-1196 use piston pin locks, Part. No. 440847 (.080" wire size). All 5680 & 5688 engines and 5640, 60, 70 engines beginning at above Engine Plant Nos. use piston pin locks, Part No. 440995 (.063" wire size).

Pin Fit in Piston–(Clearance) .0000"-.0002" Hand push fit with piston heated to 160°F

Pin Fit in Connecting Rod–(Clearance) .0000"-.0004". With pin held in a vise and connecting rod horizontal, rod should fall slowly of its own weight

Replacement Pins: Std size, 003", 006" oversize.

Piston Pin Bushing (In Connecting Rod) Installation: *See "Piston Pins" in Packard Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1&2)	078"	①	.0015-.005"
Oil	.186"	②	.0015-.005"

① - .015" (5540), .018" (5680,88), .019" (Other Series).
② - .015"(5540 & All 1956 Series), 018" (Other Series).

Replacement Rings: Std size, 010", .020", 030" oversize

Installing Rings: Install upper compression ring and oil ring with gap toward camshaft side of engine Install lower compression ring with gap toward opposite side from camshaft All gaps should be midway between pin bosses Grooves on inner diameter of compression rings should be toward top of engine.

CONNECTING RODS

Length–6-25/32", (center-to-center). **Weight–**26.688 ozs.

Crankpin Journal Diameter–2.250".

Lower Bearing–Replaceable precision type.

Clearance–.0005-.0025". **Sideplay–**.003-.011".

Replacement Bearings: Std. size, .001", .002", .020" Undersize.

Installing Rods: Install odd numbered rods in left bank and even numbered rods in right bank, with numbers on rods facing down and away from block and milled oil groove in connecting rod cap upward and toward crankshaft.

CRANKSHAFT

Journal Diameter–2.4990". Five bearings.

Bearings–Precision type. The four front crankshaft bearings are interchangeable.

Clearance - 003-.0023" (1955), .0005-.0025" (1956).

Replacement Bearings: Std. size, .001", .002", .020" undersize.

End Thrust: Taken by No. 5 (rear) main bearing.

Endplay–.0035-.0085".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Packard Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Packard Special Data.*

Crankshaft Removal & Installation (With Engine in Car): *See "Crankshaft & Main Bearings" in Packard Special Data.*

Vibration Damper: *See "Vibration Dampener" in Packard Special Data.*

CAMSHAFT

Bearings–Five, steel-backed babbitt lined precision bearings.

Clearance–.0005-.0045".

End Thrust: Taken by thrust plate behind camshaft sprocket.

Endplay - 0035-.0065" (1955), .004-.006" (1956).

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Packard Special Data.*

Timing Chain: Morse. **Width–**1". **Pitch–**.375". **Length–**64 links.

Engine Front Cover Removal: *See "Engine Front Cover" in Packard Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Packard Special Data.*

Camshaft Setting: Both sprockets marked "O". Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.

Timing Chain & Sprocket Removal: *See "Timing Chain" in Packard Special Data.*

VALVES

►*INTAKE VALVE STEM OIL DEFLECTOR PRODUCTION CHANGE:* Starting with Engine No. P-13644, Intake Valve Stem Oil Deflector, Part No 6476056, entered production The deflector, a rubber cap, is located over valve stem and installed on top section of cast valve guide. This deflector can be installed on all earlier engines for improved oil control

Tappet Clearance: Hydraulic lifters. Adjustment not required unless cylinder head removed or valve lifters replaced. *See "Valve Tappet Adjustment" in Packard Special Data.*

1955 Valves

Valve	Head Diam.	Stem Diam.	Length
Intake	1.937"	.3725"	5.712"
Exhaust	1.687"	.3715"	5.690"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30°	.374"	.001-.002"
Exhaust	45°	.374"	.002-.003"

1956 Valves

Valve	Head Diam.	Stem Diam.	Length
Intake	.2"	.3725"	5.712"
Exhaust	1.687"	.3715"	5.690"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30°	.398"	.001-.002"
Exhaust	45°	.388"	.002-.003"

Valve Seat Width - 3/64" (Intake), 5/64" (Exhaust).

Valve Springs: Single springs used. Install springs with the two closely wound coils against cylinder head.

1955 Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	78-86 lbs.	1-3/4"
Open	158-172 lbs.	1-3/8"

1956 Valve Spring Specifications

Valve	Spring Pressure	Length
Closed	87-97 lbs.	1 3/4"
Open	173-187 lbs.	1 3/8"

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance excessive. Valves are furnished with .003", .010", .020", .030" oversize stems.

Checking Valve Stem Clearance and Reaming Guides for Oversize Valve Stems: *See "Valve System" in Packard Special Data.*

Valve Lifters: Hydraulic type.

Hydraulic Lifter Removal, Overhaul & Testing–*See "Valve System" in Packard Special Data.*

Rocker Arm Assembly: *See "Valve System" in Packard Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

1955 Valve Timing

Intake Valves - Open 14° BTDC. Close 56° ALDC.
Exhaust Valves - Open 52° BTDC. Close 18°ALDC.

1956 Valve Timing

Intake Valves - Open 14° BTDC, Close 62° ALDC.
Exhaust Valves - Open 54° BLDC, Close 18° ATDC.

Valve Timing Check - Remove left bank rocker arm cover. Turn engine until No. 1 cylinder intake valve is open. Let engine stand for several minutes, until hydraulic lifter has leaked down completely. Then hold pressure against the top of the pushrod to keep lifter from refilling, and turn engine until valve closes. Insert tip of a screwdriver between end of valve stem and rocker arm to keep plunger in lifter bottomed, and turn engine until just before mark on timing gear reaches the 15° mark on the timing chain case cover as No. 6 cylinder comes up on compression stroke. Attach a dial indicator to the flange on cylinder head so that it will read any movement of the No. 1 intake valve rocker arm at the pushrod end of the arm. Turn engine very slowly until rocker arm just starts to move. At this point, mark on damper should be just 14° BTDC. *NOTE* - Maximum deflection of timing chain should be ½". If deflection is greater, it will cause a variation in the valve timing.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Packard Special Data.*

Crankcase Capacity: 5 qts. (refill).

Normal Oil Pressure: 45 lbs. at 2800 RPM.

Pressure Regulator Valve –In pump body. Not adjustable.

Pressure Relief Valve Spring–3-19/64" (free length). Compressed to 1-3/8", pressure should be 9–9-1/2 lbs.

Oil Pressure Indicator (Clipper Series)–Red light on instrument panel. Lighted when oil pressure low.

Oil Pressure Switch Engine Unit: King-Seeley No. 47195.

Oil Pressure Gauge (Packard Series): King-Seeley "CV" (Constant Voltage) electric type with Gauge Voltage Regulator.

Dash Unit - King-Seeley No. 46889 (1955), 49512 (1956)

Engine Unit - K-S No. 44000.

See "Oil Pressure Gauges" in Miscellaneous Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump: Gear type. Located on rear main bearing cap and driven through distributor drive and camshaft gears. A vacuum pump is attached to oil pump cover plate and is driven by oil pump idler gear.

Oil Pump R moval, Ov rhaul & Installation—See *"Oiling System" in Packard Special Data.*

Vacuum Pump: Attached to engine oil pump. Serviced only as an assembly. Remove and install in same manner as oil pump. See *"Oiling System" in Packard Special Data.*

Crankcas V ntilati n: Filter element in oil filler cap (air intake). Outlet pipe in valve tappet cover.

COOLING

Wat r Capacity: 26 qts. Additional pint for each heater.

Pr ssur Valv : Radiator filler cap. 12 lbs. type.

Th rm stat: Capsule type. Starts to open 167-173°F (Std.), 177-182°F (High Std.).

Water Pump: Packless type with sealed ball bearing. S *"Wat r Pumps" in Packard Special Data.*

Temperature Gaug : King-Seeley "CV" (Constant Voltage) electric type with Gauge Voltage Regulator.

Dash Unit - King-Seeley No. 46927 (1955 Clipper), 49550 (1956 Clipper). 46892 (Other 1955 Series), 49516 (Other 1956).

Engin Unit - King-Seeley No. 44235.
Se "T mperatur Gauges" in Miscellaneous Section.

CLUTCH

L ng 11CF, Assembly No. 268349 (1955-56 Clipper Seri s).
Se "L ng" Clutch s in Clutch Section.

Clutch Disc - Long No. 284330 (11" Diam. 1955 Clipper Custom), 284339 (10½" 1955 Del. & Super), 284340 (11" 1956).

P dal Adjustm nt: 1-1/4—1-1/2" free travel.

R moval: Remove transmission (see below). Remove flywheel lower housing, and clutch release bearing. Mark flywheel and clutch cover. Remove clutch cover to flywheel bolts evenly to relieve tension.

SYNCHRO-MESH TRANSMISSION

Own. See *"Packard Synchro-mesh" in Transmission Section.*

Transmissi n Controls: See *"Transmission Controls" in Transmission Section.*

R m val: Disconnect speedometer cable, gear shift rods from levers on transmission case, and propeller shaft at rear universal joint. Remove propeller shaft completely by slipping front universal joint flange off the transmission main shaft. *(CAUTION*—Wire or tape the two bearings of the universal joint together to prevent them from falling off). Support rear of engine with a jack. Remove rear engine support mounting and support crossmember. Remove capscrews attaching transmission to flywheel housing. Using two pilots in bolt holes, slip transmission to rear so that clutch release bearing pull back spring may be unhooked. Remove transmission.

OVERDRIVE

Warner R11 Type. Planetary gear type with solenoid operation and accelerator pedal controlled kickdown. Overdrive lockout switch not used.
See "Warner R11" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting overdrive control cable from lever on right side of overdrive case, electric leads at governor and solenoid. Remove governor, then remove solenoid.

ULTRAMATIC DRIVE

Own. "Twin Ultramatic", Torque converter (with hydraulically operated direct speed clutch) and hydraulically operated planetary unit with manual control.
See "Twin Ultramatic Transmission" in Transmission Section.

►*TESTING & TROUBLE SHOOTING: See "Twin Ultramatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level—*(CAUTION—Fluid level must be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute to completely fill the transmission).* Run engine at low idle speed while fluid level is being checked, using the dipstick located in engine compartment. Add fluid through dipstick tube as required to bring level to "Full" mark on dipstick.
NOTE—If fluid level doubtful due to bent or distorted dipstick tube, check actual fluid level in transmission as follows: Place car on level floor and allow engine to run at idle speed for five minutes in "N" (neutral). Place a pan under rear of transmission and remove plug in rear of transmission case. If no oil runs out of opening, add oil until it begins to run out, install plug, then ADD ONE QT. If oil does run out when plug removed at rear of transmission, allow to drain to level of hole, then ADD ONE QT.

Capacity—Approximately 11 qts. Use only Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

►*OTHER TWIN ULTRAMATIC SERVICE DATA: S e "Twin Ultramatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer (Std. & Overdrive Cars), Universal Products (Ultramatic Drive Cars).

►*CAUTION:* Rear universal joint flange nut controls rear axle pinion bearing preload which **must be adjusted** whenever nut is loosened. *See "Packard Hypoid" in Rear Axle Section.*

REAR AXLE

1955

Own. Semi-floating hypoid gear type with Hotchkiss Drive.
See "Packard Hypoid" in Rear Axle Section.

Axle Ratios

Model	Std.	O.D. Cars	Ultramatic
5522	3.9-1	3.9-1	3.07-1
5542, 47	3.9-1	3.9-1	3.23-1
5562, 67	3.9-1	3.9-1	3.23-1
5582, 87, 88			①3.07-1

①—3.23-1 & 3.54-1 optional ratios.
Backlash—.004-.008".

1956

Spicer. Semi-floating, hypoid gear, with Hotchkiss drive. *See "Spicer Hypoid" in Rear Axle Section.*
Axle Ratios - Optional ratios available as follows:
Synchro-mesh - 3.54-1, 4.09-1.
Overdrive - 3.54-1, 4.09-1.
Ultramatic - 2.87-1, 3.07-1, 3.31-1, 3.54-1, 4.09-1.
Backlash - .003-.006"

Carrier Removal: Remove axle shafts (see Axle Shaft Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with a 2 x 4" inserted inside frame crossmember. Drain differential, replace drain plug. Clean off housing, take off carrier mounting nuts, lift carrier assembly out.

Axle Shaft Removal: Remove wheel and brake drum (use screw type puller J-4153 (do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal). Use Tool J-943-B to remove inner seal.

CONTINUED ON NEXT PAGE

Form 34 B

CONTINUED FROM PRECEDING PAGE

Wheel Bearing Adjustment: Endplay controlled by shims between flange end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under, at both wheels if over .050" to secure .004-.007" endplay. Normally adjust by tightening nut to 20 ft. lbs. and back off one hex and lock.

Endplay - .004-.007".

SHOCK ABSORBERS

Delco or Monroe. Direct acting hydraulic type. Serviced by replacement.

FRONT SUSPENSION

Independent. Coil Springs Series 55 & 5640, "Torsion Level Suspension" (Others).

See "Packard" & "Packard Torsion Level Suspension" in Suspensions & Wheel Alignment Section.

Kingpin Inclination– 5° 50'.

Caster–Neg. 1° ± 1/2°.

Camber–0° (Pos. 3/4° to Neg. 1/4° range).

Toe-In–0" (plus 1/16", minus 0").

STEERING

Manual: Gemmer. Worm and three tooth roller.

See "Gemmer Worm & Roller" in Steering Section.

Power Steering: Bendix or Monroe Linkage Types. *NOTE* - Gemmer Worm & 2-Tooth Roller Steering Gear used with both types.

See "Bendix Linkage Type" or "Monroe Linkage Type" Power Steering in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Single Anchor (without eccentric) Hand lever applies rear wheel service brakes rear wheel service brakes.

See "Bendix Hydraulic" in Brake Section.

Drum Diameter - 11" (40,60,70 Series), 12" (80 Series).

Lining Width	**Front**	**Rear**
40, 60, 70 Series	2½"	2"
80 Series	2¼"	2"

Lining Thickness - 3/16" (All Series).

Lining Length	℄**Primary**	℄**Secondary**
40, 60, 70 Series	9 5/16"	12"
80 Series	11 1/2"	13"

℄ - Front & Rear Wheels.

Clearance - Turn brake adjusting screw until wheel can just be turned by hand, then back off shoe until wheel turns free.

Standard Master Cylinder: On bracket on left side of frame near transmission support.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat.

Removal–Remove brake lines from master cylinder. Disconnect pushrod at pedal. Remove gearshift selector linkage bellcrank from mounting bolt stud. Remove mounting bolts and master cylinder.

Power Brakes: Bendix. Combination power cylinder and hydraulic master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid–Check level every 1000 miles Add fluid to bring level to full mark.

Removal of Power Unit–Disconnect hose line and electrical wiring from power unit (raise hydraulic line above level of junction assembly to prevent fluid leakage). Disconnect and remove brake and accelerator pedal. Remove steering column grommet retainers, slide grommet out of way. Remove carpet retainers and fold carpet back. Remove cover plate screws, then remove power brake and cover as an assembly, take out mounting screws and remove power brake from cover

MISC. MECHANICAL

Windshield Wipers: Vacuum type, cable operated. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Harrison. *See "Frigidair & Harrison" Air Conditioning in Miscellaneous Section.*

Power Window Regulators. Electric type with individual motors in each window. *See "Electric Window Regulators" in Miscellaneous Section.*

Power Seat Controls: Individual electric motors for horizontal and vertical seat adjustment. *See "Electric Seat Controls" in Miscellaneous Section.*

Power Top Controls: Hydro-Lectric type. *See "Hydro-Lectric Top Controls" in Miscellaneous Section.*

MODEL IDENTIFICATION

Mod l	Mod l D signati n
Champion (All Models)	56 G

SERIAL NUMBER: Located on left front door pillar post.

Ass mbly Plant	Starting Numbers
South Bend	G 1,357,501
Los Angeles	G 936,701
Hamilton	G 763,701

ENGINE NUMBER: Stamped on pad on upper front left corner of engine block.

Starting Engin Numb r—1180251 (South Bend), L-3201 (Los Angeles).

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM. Variation limit (between cylinders) 10 lbs.

VACUUM READING: 17-18" idle speed.

VALVE TAPPET CLEARANCE: .016" cold. Intake & exhaust.

MANIFOLD HEAT CONTROL: Automatic thermostatic type.

Ch cking Th rm static Coil Spring — With outer end of coil free from anchor, and valve closed (counter-weight up), hooked end of coil should be 90° clockwise from anchor post at 70° F.

IGNITION

FIRING ORDER: 1–5–3–6–2–4.

SPARK PLUG GAP: .030". Limits .028-.033"

Spark Plug — Champion J 7.

COIL: Aut -Lit CAF-4004. *12 Volt.*

Igniti n Curr nt — 4 Amps. (Idling).

►*IGNITION RESISTOR NOTE: Resistor not used.*

DISTRIBUTOR: Aut -Lit IAT-4201. *12 Volt.*

C nd ns r—Auto-Lite IAT-2015L. **Capacity** .21-.25 mfd.

Contact P int Set — Auto-Lite IGW-3028AS.

Br ak r Gap — .020"

Cam Angle - 39°±3°.

Br ak r Arm Spring Tension - 17-20 ozs.

R tati n - Counter-clockwise viewed from above.

►*DISTRIBUTOR SETTING & TIMING NOTE: See "Oil Pump R m val & Installation Change" under OILING SYSTEM b low.*

4	8	7 1/2
8	16	11 1/8
9	18	12

IGNITION TIMING

S tting — 2° BTDC.

Timing Mark — On vibration damper. "IGN" mark in line with pointer (left side of timing cover).

Timing — Disconnect vacuum advance pipe at carburetor. Install plug in carburetor. With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer.

CARBURETOR
CARTER WE

Car Model	Carter Carburetor
56G (to Serial No. G-1,182,938)	2108S
56G (After above Number)	2417S

Idle Setting — ½-1½ turns open. Turn screw out for richer mixture.

Idle Speed — 550 RPM. (With selector lever in "N" or "P" position on "Flightomatic" or "Automatic Transmission" cars).

Float Level — 3/8" measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover inverted.

Accelerating Pump — No seasonal adjustment.

Fast Idle: .046" throttle valve opening with choke valve closed. To check, crack throttle valve, hold choke closed, measure on side opposite idle ports using Gauge T109-158. Adjust by bending connector rod.

Automatic Choke Setting: 1 point lean.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With transmission selector lever in "N" (Neutral) or "P" (Park) position, engine at normal operating temperature and choke valve wide open, proceed as follows:

1) Disconnect rod which connects accelerator bracket on firewall to auxiliary bellcrank on side of engine.

2) Connect a tachometer to engine and set engine idle speed at 550 RPM by adjusting the carburetor idle speed screw. Disconnect the rod which connects the main bellcrank on firewall to auxiliary bellcrank on engine by removing the main bellcrank ball joint stud from main bellcrank lever. Adjust the screw on main bellcrank to provide a 5/16" clearance between bellcrank and pad (use a 5/16' drill as a gauge).

3) Adjust the ball joint on main bellcrank-to-auxiliary bellcrank rod until ball joint freely enters hole in main bellcrank lever. During this adjustment the carburetor idle speed screw must be against its stop and the 5/16" gap at the bellcrank must be maintained.

4) Disconnect and adjust length of the main bellcrank-to-throttle valve outer lever (on transmission) so that ball joint stud freely enters the throttle valve outer lever. During this adjustment the throttle valve outer lever must be against its internal stop (outer lever held to rear of transmission). Remove the ball joint stud from the throttle valve outer lever **and shorten the rod four complete turns** of the ball joint assembly. Reinstall the ball joint stud and tighten nut. Hold accelerator bracket arm approximately 3 7/8" from the firewall and adjust bracket-to-auxiliary bellcrank rod clevis until clevis pin freely enters clevis and bracket arm

AUTOMATIC TRANSMISSION THROTTLE LINKAGE ADJUSTMENT: *See "Stud baker Automatic Transmission" in Transmission Section.*

►*OTHER DATA· See "Carter WE" Carburetors in Carburetion Section.*

Fu l Pump Pr ssur : 3½-5 lbs.

CARB. EQUIPMENT

Fu l Pump: AC No. 4156. Fuel only.

Fu l Pump Pr ssur : 3½-5 lbs.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type.

Dash Unit — Studebaker No. 1541286 (Sedans & Sta. Wgn.), 1539880 (Hard Top "Hawk").

Tank Unit — Studebaker No. 1540262 (Sedans & Hard Top "Hawk"), 1540263 (Station Wagon).

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry Type or Oil Bath type

►*DRY TYPE FILTER CAUTION:* Remove filter element every 1,000 miles and shake thoroughly to remove dirt DO NOT WASH. Replace filter every six months or 10,000 miles

BATTERY

Willard HDW-2SM-50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

►*CAUTION: This is reversed from previous mod ls.*

Engine Ground - Right front of engine

STARTER

Auto-Lite MBG-4103. *12 Volt.* **Armature** MZ-2367.

Drive - Bendix A-3519. Barrel-Anchor Plate type.

Rotation - Counter-clockwise at commutator end.

Brush Spring Tension — 42-53 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5200	10.0	55 max.
5.2 ft. lbs.min.	Lock	4.0	235 max.

Starter Switch; Magnetic Switch mounted on starter and controlled by combination Starter & Ignition Switch. *NOTE* - Automatic drive cars have Neutral Safety and Back-up Light Switch.

Automatic Transmission Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in "N" or "P" position.

Adjustment - *See "Studebaker Automatic" or "Flight-matic" Transmission in Transmission Section.*

GENERATOR

Auto-Lite GJC-7002-F. *12 Volt.* **Armature** GJC-2030F.

Performance Data

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0	15.0	2050-2250
35.0	15.0	2250-2650

Brush Spring Tension - 18-36 ozs.

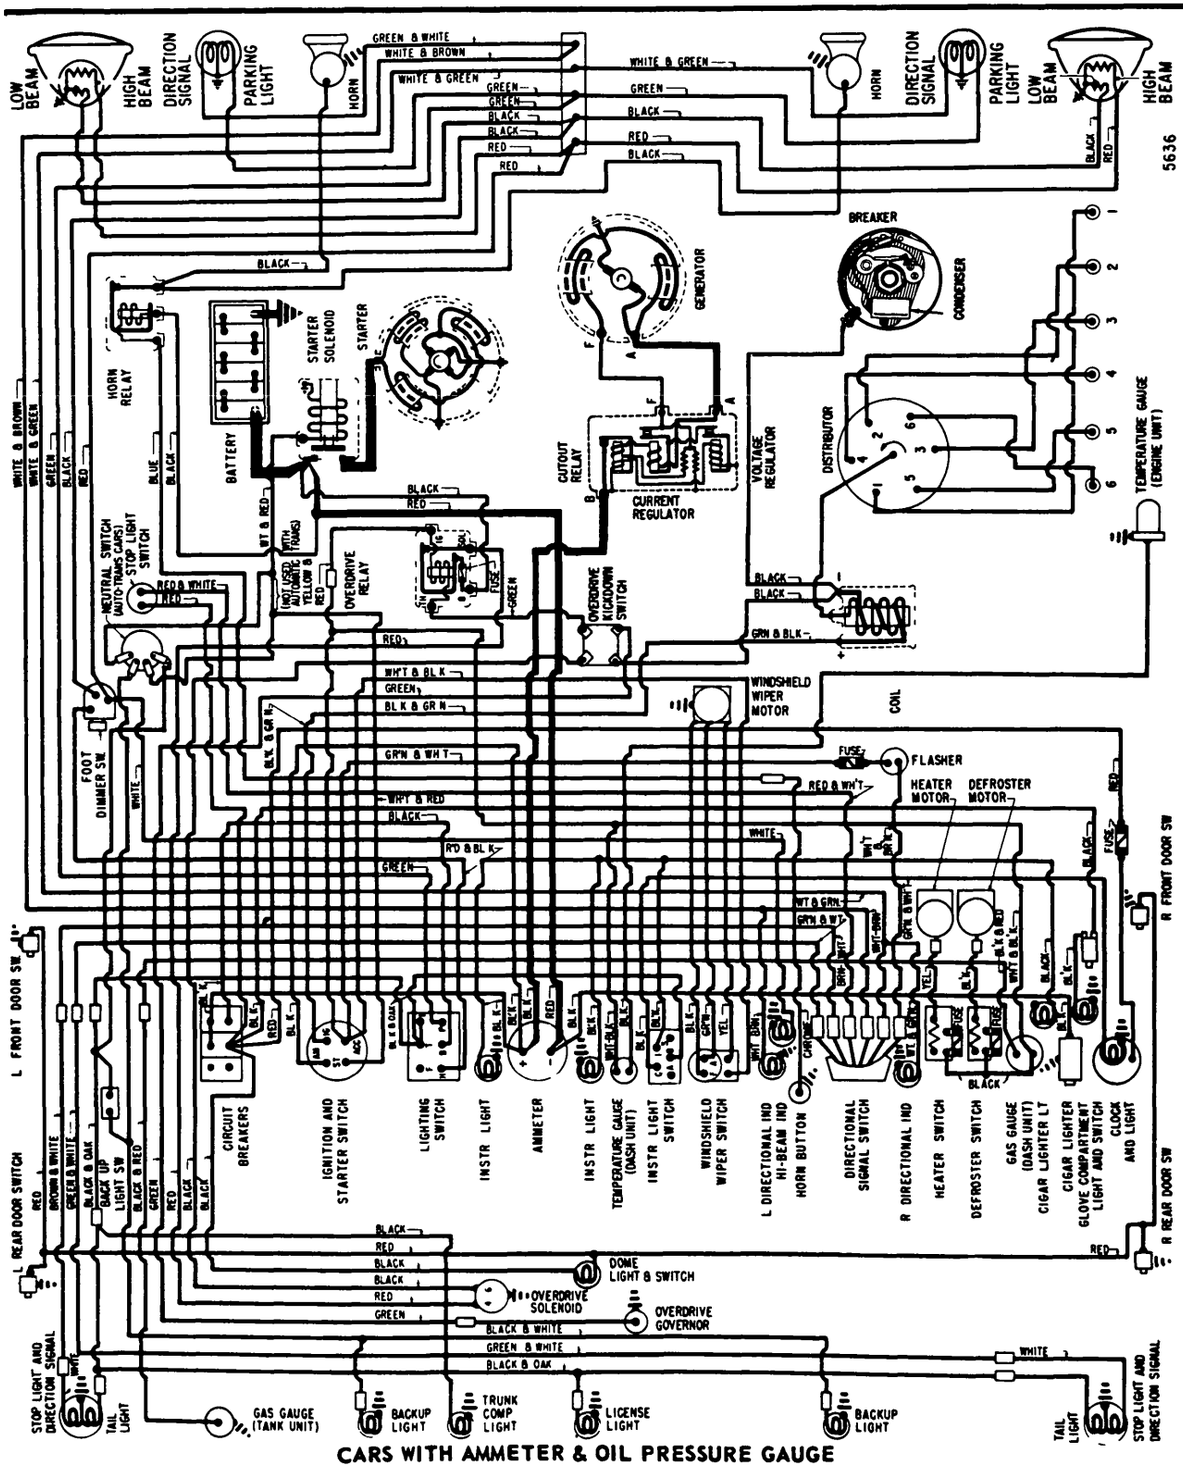
Field Current - 1.2-1.3 amps. at 10.0 volts (70°F.).

Motoring Current - 3.4-3.9 amps. at 10.0 volts (70°F.).

Rotation - Counter-clockwise at commutator end.

Belt Adjustment: 3/8-1/2" deflection midway between generator and fan pulleys.

REGULATOR



Auto-Lite VRX-6008A. *12 Volt.*

Cutout Relay

Cuts In - 12.6-13.6 volts.

Cuts Out - 3-5 amps. discharge current after charge of 7 amps.

C ntact Gap- .015" minimum.
Air Gap - .031-.034".

Voltage R gulator

Setting - 14.2-14.8 volts at 80°F., unit perating normally while charging at 7 amperes or with a .25 ohm resister between regulator and battery.
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See El ctrical Section.*

Current R gulat r

► *SETTING CAUTION: "Temperatur Compensated" typ . Set to following specifications at 70°F.*

Test A	Operating Amp r s	Test B
44 amps. .		35 (33-37) amps.

Test A - After 15 minutes operation charging at 10 amps.
Test B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See El ctrical S ction.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. ***See El ctrical Section.***
Direction Signals: ***See Electrical Secti n.***

Lighting Switch Removal: (Toggl type)—Remove retaining nut. Remove lower panel cover screws and covers. Slide toggle switch back through panel and disconnect wires. **(Knob type)**—Use stiff wire to remove spring from back side of switch knob and pull knob from shaft. Remove bezel nut and shove switch assembly back through panel and remove wires.

Stop Light Switch Location: Inner side of left frame rail just forward of steering gear housing, except on Power Brake equipped cars, where it is screwed into rear end of power unit, located under hood on left front fender apron.

FUSES: Located as follows:
Overdrive - 20 amps. (in relay on dash panel).
Radio - 9 amps. (in lead behind instrument panel).
Direction Signal - 14 amps. (in bracket behind instrument panel).
Electric Clock - 3 amps. (in lead behind instrument panel).
Climatizer & Defroster - 14 amps. (Coupe & Hardtop); 15 amps. (Other Models), (on Climatizer & Defroster switch).

CIRCUIT BREAKERS: Located as follows:
1) — **Head, Parking & Instrument Lights** - 18 amps. (on main lighting switch).
2) - **Body & Stop Lights** - 15 amps. (below headlight switch on instrument panel).
3) - **Windshield Wiper** - 5 amps. (in wiper switch).
4) - **Window Lift** - 20 amps. (on left cowl panel).
5) - **Seat Adjuster** - 20 amps. (on left cowl panel).

HORNS: Dual horns with relay (Exc. Champion Custom models which have one horn).

Delco-R my No.	L w Note	High N te
All Models	1999757	1999758

PISTONS

"T" slotted, cam ground, tin plated aluminum alloy. Three ring type.

Original Bor & Pist ns—See *"Original Bore & Pistons" in Studebak r Sp cial Data.*

Removal—Pistons and rods removed from above.

Fitting N w Pist ns: Clearance—Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to re move feeler with properly fit piston should be 11 to 16 lbs.

R plac ment Pistons: Std. .010", .020", .030" and .040" Oversize.

Installing Pist ns: Install piston in cylinder bore with "T" slot away from camshaft side. *See Rod Instal-lati n.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.

Diameter—.7491-.7495". **Length** 2.625".

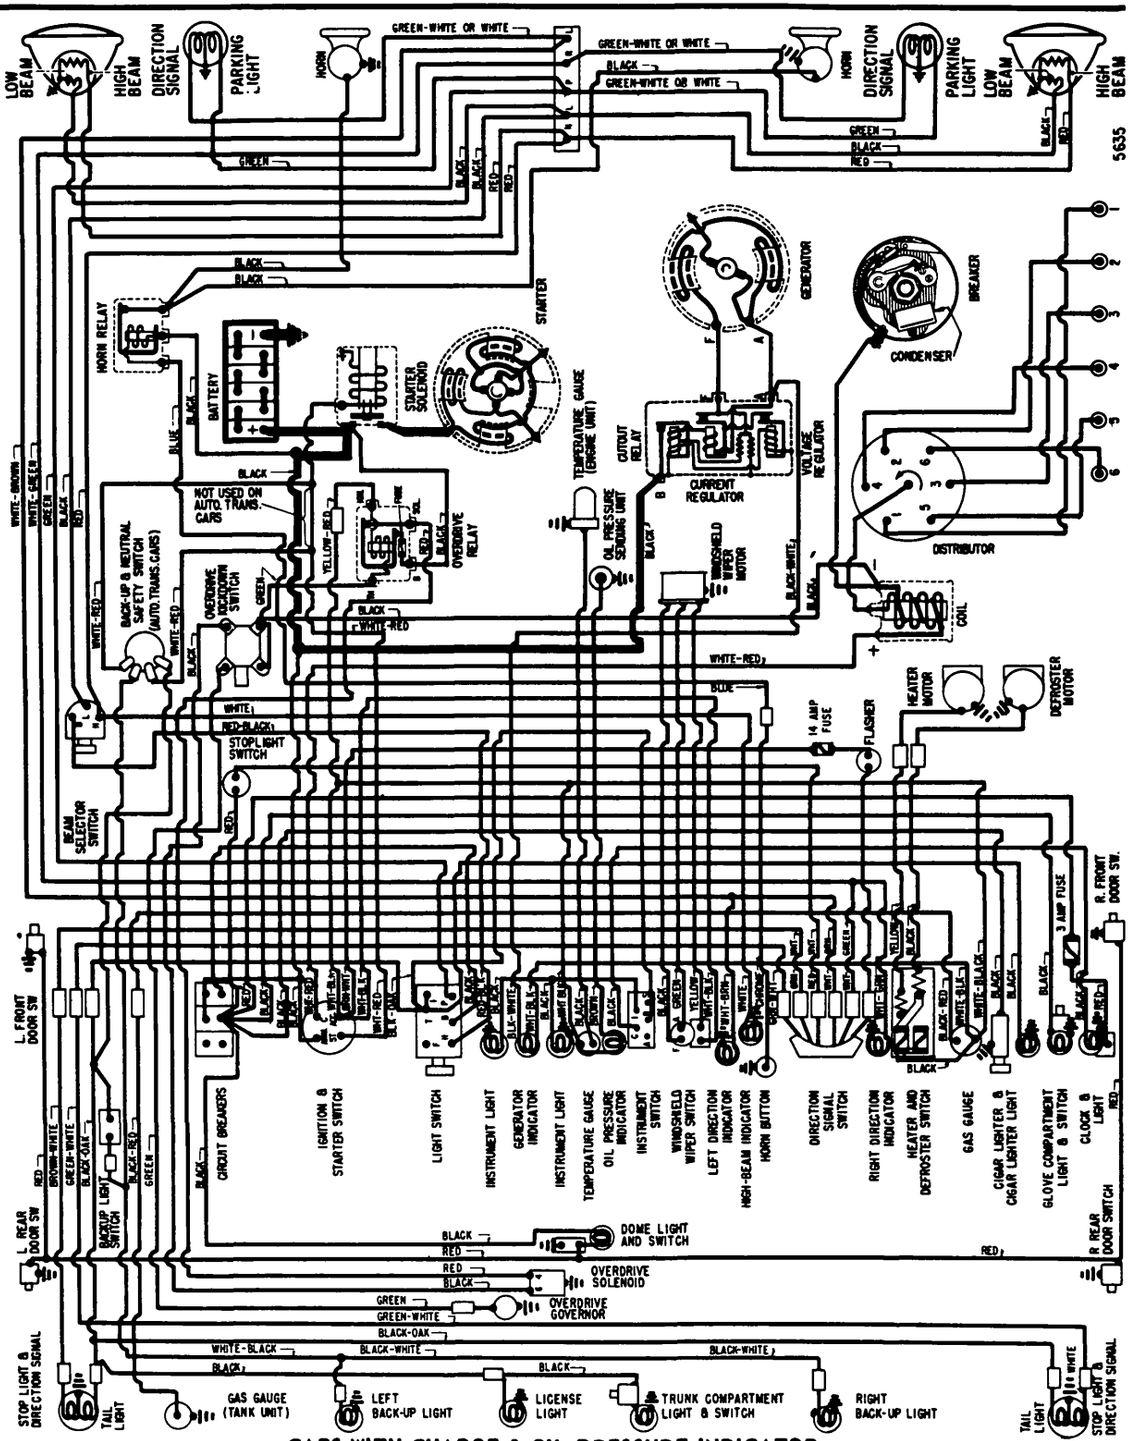
Clearanc in Piston—.0001-.0003" (selective fit). Light thumb push fit at 70°F.

Pist n Pin Removal & Installation—See *"Piston Pins" in Stud bak r Sp cial Data.*

R placement Pins: Std. & .0025", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.002-.005"
Compr. #2	1/8"	.007-.017"	.002-.005"
Oil	5/32"	.007-.017"	.0015-.004"



R plac ment Rings: Std., .020", .030", & .040" Over-size, in sets.

Installing Rings: Top compression ring has step at the inside which must be installed up. Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point.

C NNECTING RODS

L ngth—(Center-to-center) 6 3/8". **W ight**—19.04 ozs.

CONTINUED ON NEXT PAGE

CARS WITH CHARGE & OIL PRESSURE INDICATOR

CONTINUED FROM PRECEDING PAGE

Crankpin J urnal Diam t r—1.81175-1.81275"

B arings—Steel backed, Microbabbitt lined, no shims.

Clearanc —.0005-.002".

Side Play—.005-.009".

R placement Bearings: Standard & .001", .002", .010", .020" Undersize.

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod. Insert tapered end of clamp screw toward heavy boss on rod. With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6).

►*REPLACEMENT ROD NOTE:* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders.

CRANKSHAFT

Journal Diameter—3.0623-3.0628". Four bearings.

►*FRONT MAIN BEARING CAP REMOVAL NOTE:* Turn crankshaft until No. 3 and No. 4 pistons are at top of their travel. Remove bearing cap bolts, then remove cap by twisting end away from camshaft toward rear of engine.

Clearance—.0005-.0025".

R placement Bearings: Std., .001", .010", .020", and .030" Undersize.

End Thrust: Taken by thrust washer assembled betweer front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal.

End Play—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters—(1) 1.7475-1.7480", (2) 1.7162-1.7170", (3) 1.6857-1.6865", (4) 1.6232-1.6240".

Bearings—Steel backed babbitt lined bushings.

Clearance—No.1—.0007-.0022", Nos. 2,3,4—.0010-.0027".

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub). Tighten capscrews alternately a few turns at a time to prevent distortion of plate.

End Play—.003-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub.

Backlash—.001-.003".

R plac m nt G ars—Camshaft gear furnished in two sizes: Standard & High limit. Crankshaft gear furnished standard size only.

Camshaft S tting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear.

Engine Fr nt C v r Oil Seal (Crankshaft Fr nt S al): *S "Engin Front C v r" in Stud bak r Sp cial Data.*

VALVES

Tappet Clearance: .016" cold. Intake & exhaust.

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.0035"
Exhaust	45°	11/32"	.0015-.0035"

Valve Seat Width— 1/16-3/32".

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced.

Valve Springs: Install sprngs so that flanged edge of retainer fits over flat surface of lower coil spring. Tongue on lower side of retainer must fit in groove in spring retainer lock.

Valve Spring Specifications—93-103 lbs. ± 10% when compressed to a length of 1 5/16".

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber. Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine.

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., .001" & .005" Oversize.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC. Closes 49° ALDC.

Exhaust Valves—Open 54° BLDC. Closes 10° ATDC.

Valve Timing Check—Adjust No. 1 Intake valve at .020" cold. Rotate engine until No. 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft. Valve timing will be correct if lifter stops moving as above marking is directly below pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 quarts refill.

Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.

Pressure Regulator Valve: On lower right front corner of engine. For access, remove engine front cover bolt. If spring is weak, replace it (do not stretch spring).

Oil Pressure Indicators: Coupe & Hardtop Models—Direct reading, non-electric type gauge.

Oth r Than C up & Hardt p M d ls—Red indicator light on instrument panel. If light on at highway speeds, after warm-up, low oil level or other difficulty is indicated.

Oil Pr ssur Switch—Studebaker No. 1539898.

Oil Pump: Helical gear type. Mounted on right side of crankcase.

Pump R m val, Ov rhaul & Installati n: *S "Oiling System" in Studebaker Special Data.*

►*OIL PUMP REMOVAL & INSTALLATION CHANGE:* Turn crankshaft away from No. 1 TDC position to give clearance between counterweight and cylinder block. Have crankshaft in same position for replacement of oil pump. With pump and gear entered with shaft in this position, turn engine to No. 1 TDC position. Disengage pump shaft and gear from camshaft, turn pump shaft until keyway in shaft points toward bottom of engine. Draw pump shaft and gear into engagement with camshaft. This will turn the keyway toward the rear of the engine. This will be the correct location for distributor setting and timing.

Oil Filter: Partial Flow. Replace filter element at 5000 mile intervals. Change more often in dusty areas.

Replacement Filter Elem nt: AC No. P-203X (Std.), No. P-209 (Optl.)

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe replaceable.

COOLING

Water Capacity: 11 qts. (with heater 12½ qts.).

Pressure Valve: Radiator filler cap. 13 lb. type.

Thermostat: Choke type. (170° Std.), 155° & 177° (Optl.).

Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Stud bak r Sp cial Data.*

Pump Removal—Remove shroud. *S "Cooling Syst m" in Studebaker Special Data.* Loosen generator and remove belt. Remove fan-to-hub capscrews and remove fan blades and pulley. Disconnect Climatizer hose, and generator adjusting arm. Disconnect outlet hose and remove mounting capscrews.

Radiator & Fan Shroud Rem val: *S "Cooling Syst m" in Studebaker Special Data.*

Temperature Indicators: Coup & Hardt p M d ls—Direct reading, electric type gauge.

Other Than Coupe & Hardt p M d ls—Red-green indicator on instrument panel. Electric type. When indicator shows any green, engine is operating at normal temperature. If it turns red through entire range, engine operating temperature is above normal.

Dash Unit—Studebaker No. 1541287 (Sedans & Sta. Wgn.), 1539879 (Hard Top "Hawk").

Engine Unit—Studebaker No. 1539876 (All Models). *See "Temperature Gauges" in Misc llane us S ction.*

CLUTCH

Borg & Beck 9A7. Assy. No. 361365 (U.S.), No. 361379 (Canada). Single plate, dry disc type.

Clutch Disc. No.—Borg & Beck No. 382276.

Pedal Adjustment: Free Travel ½-1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

►*HILL-HOLDER NOTE:* Check setting whenever clutch

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

pedal adjusted and adjust Hill-holder to release just as clutch engages. Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever.

H using Rem val: Remove oil level gauge and tube. Remove starter mounting screws (only) and tie starter and cables up out of the way. Remove floor plate and clutch housing top capscrews. Remove transmission. *Se "Transmission R moval" under Transmission.* Disconnect pedal rod at operating shaft-to-release sleeve, pull operating shaft out, remove sleeve. Remove two bolts holding rear engine support insulator cage to crossmember. Support engine at rear of oil pan (use block of wood on jack to protect oil pan). Remove crossmember. Remove two clutch housing bolts releasing exhaust pipe support bracket. Loosen clamp bolt and swing bracket out of way. Remove remaining housing bolts and remove housing. *NOTE*–Remove dowel bolts first.

►*INSTALLATION CAUTION:* Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts. Draw dowel bolts in place by tightening the nuts–**do n t driv them into place.**

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warn r M del AS1-T96 (Std.), AS24-T96 with R10 type Ov rdriv .

S "Warn r Synchro-m sh Transmission" in Transmission Section.

Transmissi n C ntrols: *S e "Transmission Controls" in Transmission Section.*

R moval: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from the transmission case. Then move case rearward until main drive pinion clears clutch pressure plate and remove unit from car.

NOTE–On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10. Governor controlled, solenoid operation with throttle controlled "kick-down".

S "Warner R10 Ov rdrive" in Transmission Section.

Ov rdriv Contr l: *See "Warner R10 Overdrive Control" in Transmission Section.*

R m val: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

►*AUTOMATIC TRANSMISSION DISCONTINUANCE NOTE:* Effective Serial No. G-1360743 (Coupe & Conv.) & No. G-1361697 (Others) South Bend produced models, all cars will be equipped with the Flightomatic Transmission as optional equipment. The Studebaker Automatic Transmission is no longer used. *See "Flightomatic Transmission" below.*

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on".

See "Studebaker Automatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check Oil Level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

Capacity–9½ quarts. *Use Automatic Transmission Fluid Type A (in containers with "AQ-ATF" symbol).*

Checking Fluid Level–Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dipstick gauge. Add oil to bring level up to "Full" mark on dipstick (1 pint between "LOW" and "FULL").

►*OTHER AUTOMATIC TRANSMISSION DATA: See "Studebaker Automatic Transmission" in Transmission Sect.*

FLIGHTOMATIC TRANSMISSION

►*NOTE: See "Automatic Transmission Discontinuance Note" under AUTOMATIC TRANSMISSION above.*

Hydraulic torque converter and a hydraulically controlled automatic three-speed planetary type transmission which provides automatic operation in "D" range, and additional "Lo", "R", and "P" ranges which are controlled manually. In "D" position, the car starts in low gear and progresses to intermediate and high as car speed is increased.

See "Flightomatic" Transmission in Transmission Sect.

►*"NO REVERSE" CORRECTION: See "Flightomatic" Transmission in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Flightomatic" Transmission in Transmission Section.*

Lubrication: Check fluid every 1000 miles, drain and refill every 15,000 miles. Use Automatic Transmission Fluid Type "A" (container marked AQ-ATF).

Checking Fluid Level – Place selector lever in "P" position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Clean all dirt and foreign material from dipstick. Apply parking brake and foot brake, and move selector lever slowly from "P" position to "R" position, then back to "D" position. Remove dipstick, wipe clean, and install in transmission and **turn cl ckwis t l ck p siti n.** Remove dipstick and read fluid level. Add fluid to bring level to "FULL" mark on dipstick (1½ pints between "LOW" and "FULL" marks on dipstick).

Capacity – 9 qts. Use Automatic Transmission Fluid Type "A" (container marked AQ-ATF).

►*OTHER FLIGHTOMATIC DATA: See "Flightomatic" Transmission in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft).

Propeller Shaft & Support Bearing: Two shafts used: 1) Front shaft with intermediate universal yoke bolted on rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate univers al.

Propeller Shaft & Support Bearing Removal & Servicing–*See "Propeller Shaft" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive.

See "Spicer Hypoid" in Rear Axle Section.

Axle Ratios

Transmission	Standard	Opti nal
Standard	4.10-1	4.56-1
Overdrive	4.56-1	4.10, 4.88-1
Automatic	3.54-1	4.10-1

NOTE–Rear axle ratio stamped on plate attached to axle by cover capscrew and also on ring and pinion gears.

Backlash–.003-.006". Shim adjustment.

Axle Shaft Removal: Remove wheel, remove wheel hub (use puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (*CAUTION*–Do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with puller HM-931.

Rear Axle Assembly Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs, Remove wheels, hubs and drums. Disconnect hand brake cable, take out backing plate bolts from backing plates. free hydraulic brake line from axle housing clips (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick).

End Play – .001-.006".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Houde, Monroe, or Delco. Direct acting, hydraulic type. Serviced by replacement. *NOTE* - Heavy Duty Shocks are Gabriel.

Houde Shocks (Studebaker Nos.)

	Front	Rear
2 Dr. Sedanet & "Hawk" Ⓒ	537021	537025

Monroe Shocks (Studebaker Nos.)

Station Wagon	1539527	1539545
Others Ⓒ	1539525	1539543

Delco Shocks (Studebaker Nos.)

All (Exc. Sta. Wgn.) Ⓒ	1539987	1539997

Gabriel Shocks (Studebaker Nos.)

Heavy Duty (Non-Adj.)	536398	536399
Heavy Duty (Adj.)	537712	537714

Ⓒ – Before Serial No. G-1,359,504.
Ⓒ – After above No. on 2 Dr. Sedanet & "Hawk".

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within coil springs.
See "Studebaker" in Suspensions & Wheel Alignmt Sect.

►*FRONT SUSPENSION NOISE CORRECTION (Due to Looseness of Bushing at Upper Control Arm Inner Shaft): See "Studebaker" in Suspensions & Wheel Alignment Section.*

Kingpin Inclination–5¼°.
Caster–Neg. 1°–Neg. 2½°. Not more than ¾° variation between wheels.
Camber–0° to Pos. 1°. ½° more camber favored on drivers side.
Toe-In–1/16-1/8".
Toe-Out on Turns–With outer wheel at 20°, Inner wheel should be turned 22½-23½°.

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller Types. *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw. Integral type.
See "Saginaw (G.M.) Power Steering" in Steering Section.

►*POWER STEERING GEAR "CHUCKLE" CORRECTION: See "Saginaw (GM)" Power Steering in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Wagner Lockheed Hydraulic Self-centering (With Bendix type shoes). Parking lever applies rear wheel service brakes.
See "Wagner Lockheed Self-centering" in Brake Section.
Drums–Diameter (Front) 10", (Rear) 9".
Wheel Cylinder Diameter–(Front) 1", (Rear) 13/16".

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary is ¼" thick, (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeal. This lining is applied to the full length of the shoe, and is marked "secondary" and "top" and should be installed as marked.

Braking Power – 62% (front wheels), 38% (rear wheels).

Lining Width & Length

	Front Wheel	Rear Wheel
Primary Shoes	2" x 10 29/32"	2" x 9 27/32"
Secondary Shoes	2" x 10 29/32"	2" x 9 27/32"

Thickness–3/16" (all except front wheel secondary), ¼" front wheel secondary.
Clearance–Lock shoes against drum then turn adjusting screw back eight notches or more as required to free drum.

Hill Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-holder" in Brake Section for data.*

Standard Master Cylinder: On frame left side rail at base of brake pedal.
Checking Fluid–Access hole in front floor pan at left corner of drivers' seat. Fluid should be maintained at level ½" below top of filler opening.
Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. (*NOTE*–On cars equipped with Hill-holder, only one line is connected to master cylinder). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolting bolt to hold Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Power Unit. Used in conjunction with standard master cylinder and located under hood on left front fender apron.
See "Hydrovac Power Unit" in Brake Section.
Removal–Disconnect vacuum and brake lines, stop light wires, remove power unit-to-bracket mounting bolts.

MISC. MECHANICAL

Windshield Wipers: Trico. Vacuum link and crank type (Standard) **Auto-Lite or Redmond.** Electric type (Optional).
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electrical, with reversible motors in each window. Individual switches at each door and master switch on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type with curved seat tracks for seat adjustment.
See "Power Seat Adjusters" in Miscellaneous Section.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Misc. Section.*

MODEL IDENTIFICATION

Model	Model Designation
Commander	56B
President	56H

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers—As follows:

Assembly Plant	Commander	President
South Bend	8429601	7171001
Los Angeles	8849101	7808501
Hamilton	8960001	7900601

ENGINE NUMBER: Stamped on cylinder block to left and in front of oil filler pipe.

Starting Engin Numbers—As follows:

Assembly Plant	Commander	President
South Bend	V-363751	P-22001
Los Angeles	VL-6301	PL-2701
Hamilton	VC-8101	PC-601

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM cranking speed.

VACUUM READING: Steady 18-20" at idling.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling. .025-.027" (cold).

MANIFOLD HEAT CONTROL: Automatic Thermostatic type located in right bank exhaust manifold outlet. Single exhaust with cross-over pipe standard on Commander models. Dual exhaust standard on President models.

►*DUAL EXHAUST NOTE:* When control valve closed, most exhaust gases are discharged through left exhaust pipe.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plug—Champion H-11, 14mm. Torque to 30 ft. lbs. or seat spark plug on new gasket finger tight, then tighten an additional ½ turn.

COIL: Delco-Remy 1115087. *12 Volt.*

Ignition Current—3.8 amps. (idling).

Resistor—Delco-Remy 1927809. Located on firewall.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. Resistor is by-passed during cranking by lead from starter-solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110864. *12 Volt.*

Condenser—Delco-Remy 1869704. **Capacity**—.18-.23 mfd.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.015".

Cam Angle—26°-33° (with .016" gap).

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-5	700
2-4	400	4-8	800
7-9	800	14-18	1600
11-13	1125	22-26	2250

Vacuum Spark Control: Delco-Remy 1116058. Integral type.

Plunger Travel—11/64-3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
8	16	10-11.5

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Setting—4° BTDC with vacuum line to distributor disconnected and opening in carburetor plugged. Engine at normal idle speed.

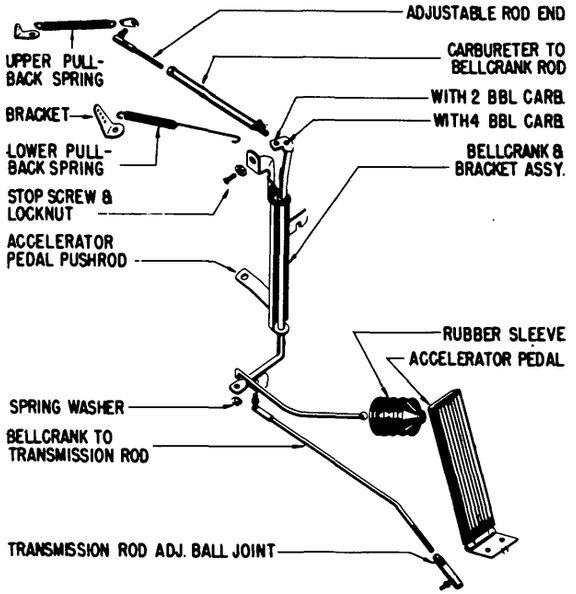
Timing Mark—"IGN" mark on vibration dampener.

Timing—Line up "IGN" mark on vibration dampener with pointer at left side of engine front cover, *after vacuum advance pipe has been disconnected and plugged at carburetor connection.*

►*IGNITION TIMING CAUTION: The manufacturer recommends that no attempt be made to time the engine except with a suitable timing light and that the timing mark on vibration dampener be directly under the pointer. DO NOT SET TIMING BY THE "PING" METHOD.*

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg 2-Barrel Carburetor standard on all models except President Skyhawk & 4-Door Sedan. Carter 4-Barrel Carburetors standard on President Skyhawk & 4-Door Sedan and optional on all other models.*



FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:

1) Adjust engine idle speed to 550 RPM with transmission selector lever in "N" (Neutral) position. Set the stop on the bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge). After stop is adjusted, hold in this position. Make sure that the carburetor-to-bellcrank rod ball joint is in the outer hole of the bellcrank pad (away from centerline of engine), and that the ball joint is on the underneath side of the lever.

►*2-BARREL CARBURETOR NOTE:* It may be found to be impossible to shorten accelerator cross shaft-to-carburetor rod sufficiently to obtain proper bellcrank pad-to-stopscrew adjustment. If condition encountered, cut off ¼" of threaded portion of adjustment rod of cross-shaft-to-carburetor rod.

2) Adjust the carburetor-to-bellcrank rod until the idle speed adjusting screw just begins to leave its stop.

3) With the carburetor on the low step of the idle cam, hold the transmission throttle valve lever against its stop and adjust the bellcrank-to-transmission throttle valve lever rod until the ball joint stud enters the throttle valve lever freely. Shorten the rod by turning the ball joint assembly **three complete turns** (4-Barrel Carburetor); **four complete turns** (2-Barrel Carburetor). Install ball joint stud in throttle lever and install the stud nut.

FLIGHTOMATIC THROTTLE LINKAGE

THROTTLE RETURN CHECK (4-BARREL CARBURETOR) ADJUSTMENT: Loosen throttle return check assembly screw locknut and adjust the return check in the bracket until plunger just breaks contact with tab on throttle lever. Mark position of check assembly relative to bracket, then turn check assembly **1¼ to 2 turns toward lever.** Tighten locknut.

THROTTLE RETURN CHECK (2-BARREL CARBURETOR) ADJUSTMENT: Place idle speed adjusting screw on fourth step of fast idle cam (lowest step being No. 1). Adjust throttle return check screw until it just contacts the pad on throttle shaft lever.

STROMBERG WW

Model	Stromberg Code No.
Comm. (To Eng. No. V-336979)	6-115, 115A
Comm. (After above No.)	6-117, 117A
President	6-117, 117A

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

►*CARBURETOR 6-117A & B CUTTING OUT ON LEFT TURN CORRECTION: See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section.*

Idle Setting—Initial setting, 1-3/4 turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed—550-600 RPM (with selector lever in neut-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ral "N" position on Automatic Drive Cars).

Float Level—3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool T-24733 (Studebaker No. KMO-269-S5).

Accelerating Pump—Center hole—Normal Setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: With choke valve fully closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required.

Automatic Choke Setting: (6-115) Centered with arrow on cover aligned with boss on housing. (6-117) 1 point lean with arrow on cover one notch lean from boss on housing.

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Stromberg WW Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 3½-5 lbs.

Model	CARTER WCFB	Carter No.
Synchro-mesh & Overdrive		2219SA, SB
Flightomatic		2214SA, SB

►*STALLING ON SHARP LEFT TURN CORRECTION: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

►*REPLACEMENT CARBURETOR NOTE:* 2219SB can be used to replace 2214SA, SB when used with Carter Unitized Pkg. 202-81U (Throttle Return Check Assy.).

►*"BACKFIRING" CORRECTION: See Carter WCFB" Carburetors in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl 1-4-6-7, LEFT barrels 2-3-5-8.*

Idle Setting—½-1½ turns open. Turn screws out for richer mixture.

Idle Speed—550-600 RPM (all models)

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Carter WCFB" Carburetors in Carburetion Section.*

Fuel Pump Pressure: 3½-5 lbs.

CARB. EQUIPMENT

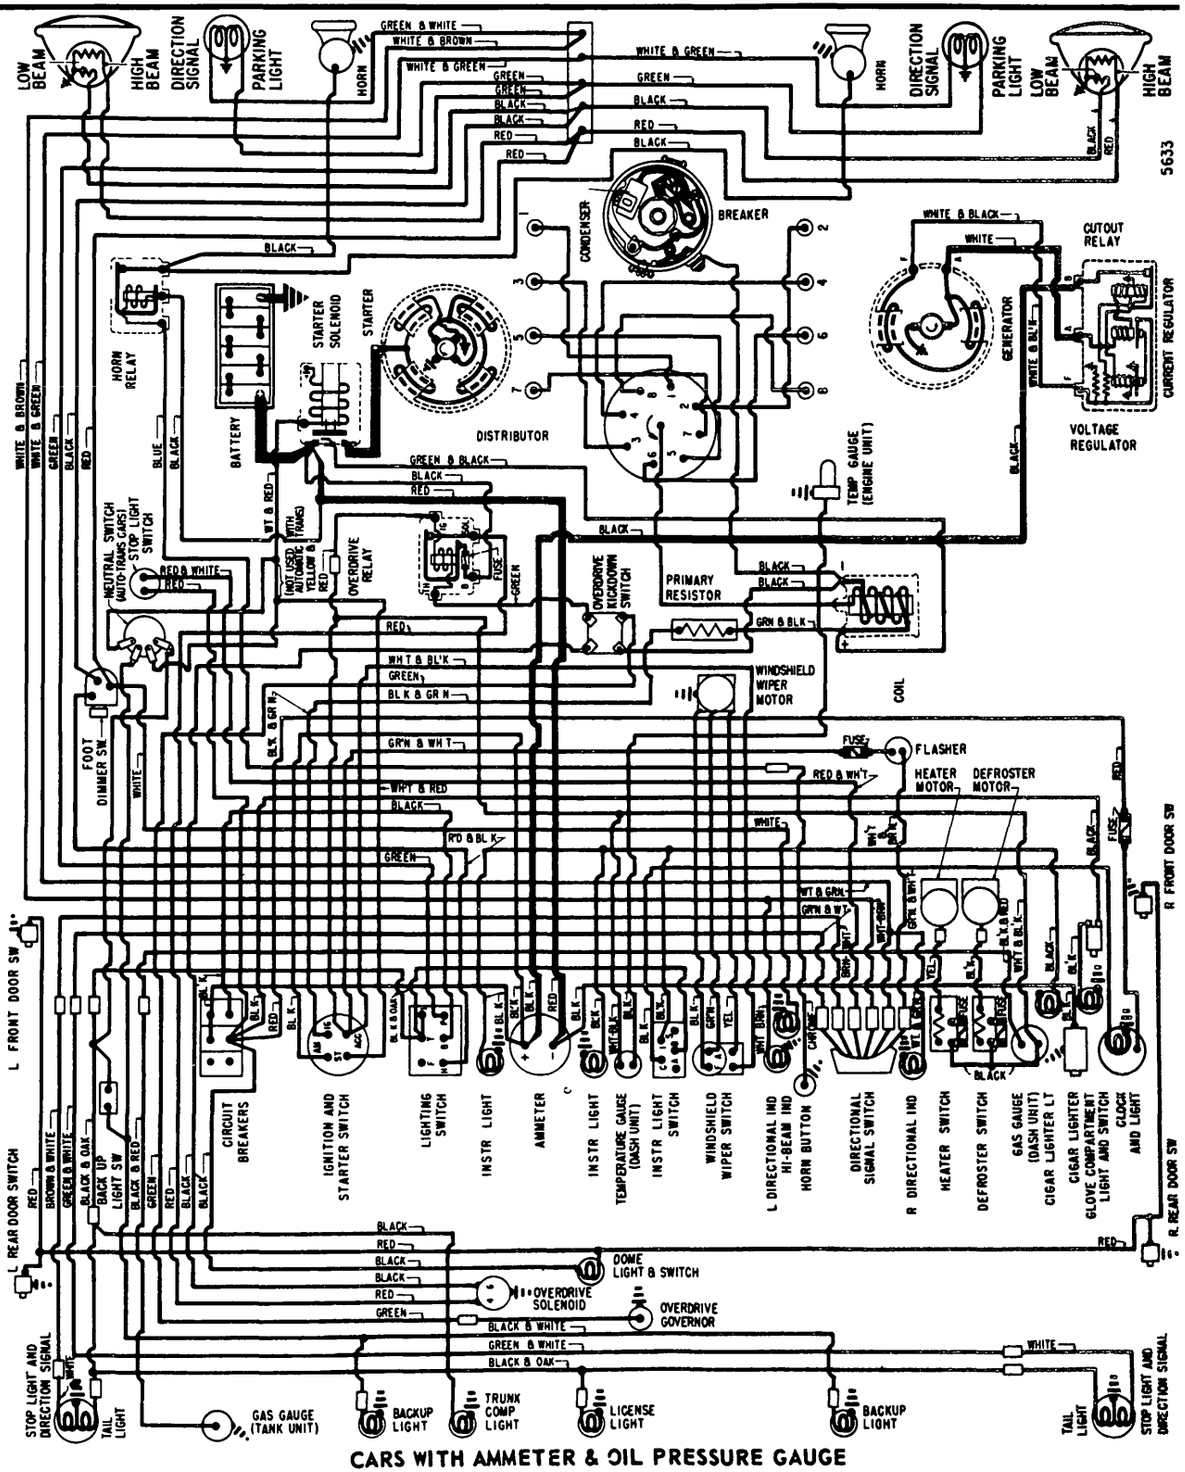
Fuel Pump: Carter No. M2211S. Diaphragm type.

Pressure – 3½-5 lbs.

See "Fuel Pumps" in Carburetion Section.

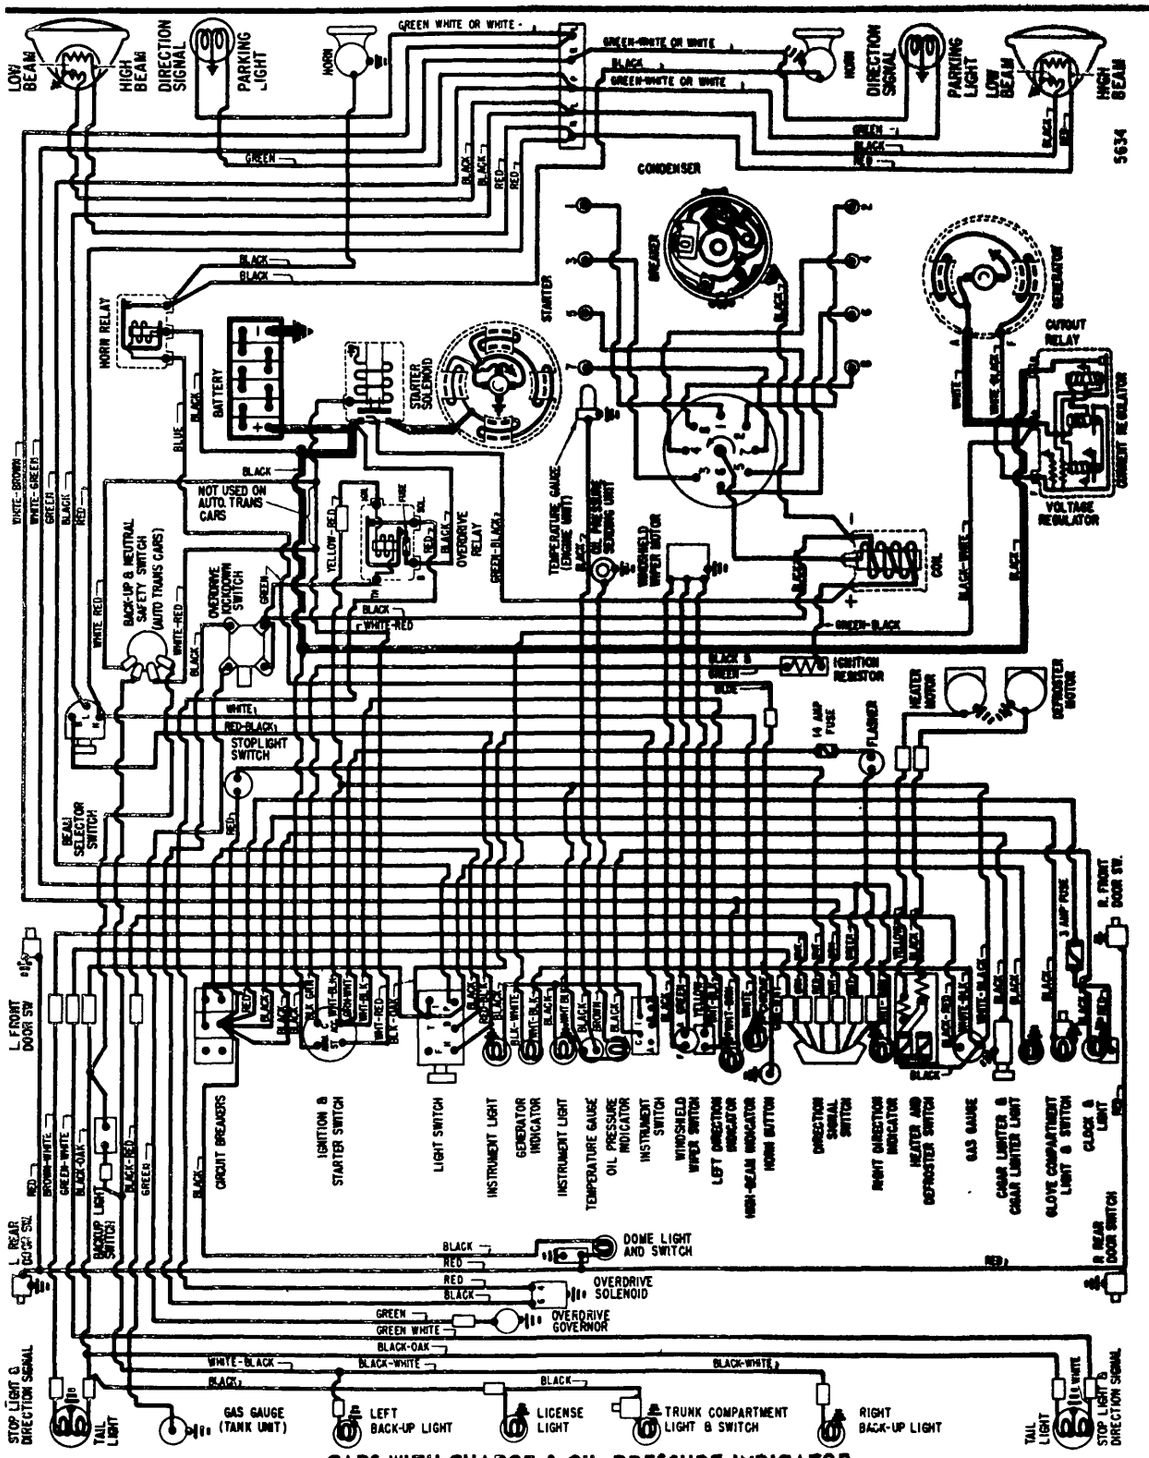
Gasoline Gauge: Electric type.

Dash Unit – Studebaker No. 1541286 (Sedans & Station Wagon), 1539880 (Hard Top "Hawks").



Tank Unit – Studebaker No. 1540262 (Sedans), 1540263 (Station Wagon & Hard Top "Hawks").

See "Fuel Gauges" in Carburetion Section.



Air Cleaner: Dry type or Oil Bath Type.

►*DRY TYPE FILTER CAUTION:* Remove filter element every 1000 miles and shake thoroughly to remove dirt. DO NOT wash element or blow out with compressed

CARS WITH AMMETER & OIL PRESSURE GAUGE

CARS WITH CHARGE & OIL PRESSURE INDICATOR

CONTINUED FROM PRECEDING PAGE

air. Replace filter every six months or 10,000 miles.

BATTERY

Willard HDW-2SM-50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground – Negative.
► *CAUTION: This is reversed from previous models.*
Engine Ground – Right front of engine.

STARTER

Delco-Remy 1107650 (Synchro-mesh & Overdrive), 1107651 (Flightomatic). *12 Volt.* Armature 1933789.
Drive – Bendix "Folo-thru" type.
Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 35 ozs. minimum

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Magnetic type switch, controlled by combination Ignition & Starting Switch. Turn key full right to start engine.
Automatic Transmission Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in "N" or "P" position.
Adjustment: *See "Flightomatic" Transmission in Transmission Section.*

GENERATOR

Delco-Remy 1102003. *12 Volt.* Armature 1923535.
Maximum Charging Rate – *See Voltage Regulator.*

Performance Data - Cold

Amperes	Volts	RPM
30	14.0	2240

Brush Spring Tension - 28 ozs.
Field Current - 1.69-1.79 amps. at 12 volts and 80°F.
Rotation – Counter-clockwise at commutator end.
Belt Adjustment: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs. on scale will lift belt ½".

REGULATOR

Delco-Remy 1119123. *12 Volt. NOTE - Regulator is "1119000 Series". Specifications below are for "Normal" Settings.*

Cutout Relay

Cuts In – 11.8-13.5 volts (hot).
Contact Gap – .020"
Air Gap – .020" with contacts just closed.

Voltage Regulator

Setting – 13.8-14.8 volts (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

Current Regulator

Setting – 27-33 amps. (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Direction Signals: *See Electrical Section.*
Lighting Switch Removal: Toggle Type—Remove switch retaining nut. Push switch sleeve back into panel and disconnect wires from switch.
Push-pull Type—With a pointed tool, lift spring in back side of switch knob and remove knob from shaft. Remove bezel nut and bezel plate. Push switch out of instrument panel and remove wires.
Stop Light Switch Location: On inner side of left frame rail just forward of steering gear housing. On models with power brakes, switch is screwed into hydraulic cylinder of power brake unit.
FUSES: Located as follows:
Overdrive – 20 amps. (in relay on dash panel).
Radio – 9 amps. (in lead behind instrument panel).
Direction Signal – 14 amps. (in bracket behind instrument panel).
Electric Clock – 3 amps. (in lead behind instrument panel).
Climatizer & Defroster – 14 amps. (Coupe & Hardtop); 15 amps. (Other Models), (On Climatizer & Defroster Switch).
CIRCUIT BREAKERS: Located as follows:
1) **Head, Parking & Instrument Lights** – 18 amps. (On main lighting switch).
2) **Body & Stop Lights** – 15 amps. (below headlight switch on instrument panel).
3) **Windshield Wiper** – 5 amps. (in wiper switch).
4) **Window Lift** – 20 amps. (on left cowl panel).
5) **Seat Adjuster** – 20 amps. (on left cowl panel).

HORNS: Dual horns with relay. *12 Volt.*

Delco-Remy No.	Low Note	High Note
All Models	1999757	1999758

Horn Relay: Delco-Remy 1116781. *12 Volt.*

ENGINE

► *AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: "Sweepstakes 259" & "Sweepstakes 289". V8, valve-in-head.

Engine	Bore	Stroke	Displacement
259	3 9/16"	3 1/4"	259.2 cu. ins.
289	3 9/16"	3 5/8"	289 cu. ins.

Engine	Compr. Ratio	Rated HP	Dev. HP
259	7.8-1 ℂ	40.6	ℭ
289	7.8-1 ℂ	40.6	ℭ

ℂ – 8.3-1 Optional.
ℭ – 170 HP at 4500 RPM with 2-Barrel Carburetor. 185 HP at 4500 RPM with 4-Barrel Carburetor.
ℭ – 195 HP at 4500 RPM with 2-Barrel Carburetor. 210 HP at 4500 RPM with 4-Barrel Carburetor.
Compression & Vacuum Reading – *See TUNE-UP.*

OIL PAN REMOVAL: *See "Oil Pan" in Stud bak r Special Data.*

ENGINE REMOVAL: *See "Engin " in Stud bak r Special Data.*

CYLINDER HEAD: *S "Cylinder Head & Manif lds" in Stud bak r Special Data.*

TIGHTENING TORQUES: *S "Tightening Specifications" in Studebaker Special Data.*

PISTONS

Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*

► *PISTON REPLACEMENT CAUTION: "259" & "289" Engine pistons are NOT INTERCHANGEABLE. "Flat Head" piston used on 259" Engine. "Concave Head" Piston used on 289" Engine.*

Fitting New Pistons: Clearance is selective fit. With piston inverted, slotted side away from camshaft, and with bottom of piston about 1" below top of block, insert a .002" x 1" x 12" feeler on camshaft side of piston. Pull to withdraw feeler should be 8-13 lbs.
Replacement Pistons: Std. size & .010", .020", .030", .040" oversize. Pistons furnished with fitted pins.
Installing Pistons: Install piston on rod so that solid side of piston is on same side as oil hole in bearing bore. Install piston in cylinder with the slot toward the left side of engine. *See Rod Installation.*

PISTON PINS

Locked in rod by tapered pin and locknut.
Diameter – .8741-.8745". **Length** – 3 1/16".
Clearance in Piston – .0001-.0003" (selective fit). Light finger push fit at 70° F.
Replacement Pins: Std. size & .0025", .005" oversize.
Removal & Installation: *See "Piston Pins" in Studebaker Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.008-.016"	.002-.005"
Oil	3/16"	.008-.016"	.0015-.005"

Replacement Rings: *See Studebaker Special Data.*
Installing Rings: Install rings with chamfered side of compression rings upward.

CONNECTING RODS

Length (Center-to-Center)—6-5/8". **Weight**—23.71 ozs.
Crankpin Journal Diameter—1.99925-2.00025".
Lower Bearing—Interchangeable. Steel backed, micro-babbitt lined type. No shims.
Clearance – .0005-.002". **Sideplay** – .008-.013".
Replacement Bearings: Std. size, .001", .002", .010", .020" undersize.
Installing Rods: Number on rod and bearing cap must be on same side and rod installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods) and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear (right bank), toward front (left bank).

► *NEW (UNMARKED) ROD NOTE: Hold rod upright with oil hole toward you. Narrow part of offset will be to right on rods for right bank, and to left for rods on l ft bank.*

► *CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

CRANKSHAFT

Journal Diameter—2.4995-2.5000".
Clearance—.0005-.0025".
Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.
End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal.
Endplay—.003-.006".
Crankshaft Rear Main Bearing Oil Seal: *S "Crankshaft & Main Bearings" in Stud bak r Sp cial Data.*
Crankshaft Front Oil Seal: *S "Engin Front Cov r" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters—(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".
Bearings—Precision type, steel backed babbitt lined.
Clearance – .00075-.00225" (No. 1), .001-.00275" (Others).
End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.
Endplay—.003-.006".
Camshaft Removal & Installati n: *See "Camshaft & Bearings" in Studebaker Sp cial Data.*
Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.
Backlash—.001-.003".
Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.
Engine Front Cover Removal: *See "Engine Front Cov r" in Studebaker Special Data.*
Engine Front Cover Oil S al (Crankshaft Front S al): *See "Engine Front Cov r" in Stud bak r Sp cial Data.*

VALVES

► *VALVE NOISE CORRECTION (Wh n Du to Cupp d Valve Stem Ends):* Valve stem caps, Part No. 536426 are available to correct above condition. Caps should be installed in complete sets. It is not necessary to disassemble rocker assembly to install caps. Loosen rocker arm bracket screws and cylinder head capscrews that hold rocker assembly to head, insert caps, retighten capscrews. Readjust valve clearance to original specifications.

► *1955-56 ROCKER ARM OIL RETURN PASSAGE CAUTION:* On these engines there is but one return hole in each bank of cylinders for oil from rocker arm chamber to crankcase. **Thes are at th r ar.** Any attempt to drill front oil passages through into block would result in a passage into engine water jacket.
Tappet Clearance—.023-.025" (Engine hot, running). .025-.027" (Engine cold, standing).

Valv	Head Diam.	St m Diam.	St m Clearance
Intake	1-21/32"	11/32"	.0015-.0035"
Exhaust	1-17/32"	11/32"	.0015-.0035"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Seat Angle–45° (all valves).
Lift–23/64" (all valves).
Valve Seat Width–1/16-3/32".
Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.
Valve Springs: Single spring used. Replace spring if 10% weaker than pressure given in specifications below. *NOTE* - Damper installed on lower (close-coiled) end of all springs.
Valve Spring Specifications–110 lbs., ± 5 lbs., when compressed to 1-43/64".
Valve Guides: Pressed in head from underside.
Guide Removal & Installation–*See "Valve System" in Studebaker Special Data.*
Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.
►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*
Valve Lifter Installation & Fitting–*See "Valve System" in Studebaker Special Data.*
Replacement Lifters–Std. size, .001", .005" oversize.
►*CAUTION–When lifters removed, make sure they are installed in original positions.*
Rocker Arms: *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves–Open 11° BTDC. Close 54° 36' ALDC.
Exhaust Valves–Open 51° 36' BLDC. Close 14° ATDC.
Valve Timing Check–Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*
Crankcase Capacity: 5 qts. (add one quart when filter changed).
Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.
Pressure Regulator Valve – Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator – Coupe & Hardtop Models – Direct reading, non-electric type gauge. Studebaker No. 1539878.
Other Than Coupe & Hardtop Models – Red indicator light on instrument panel controlled by pressure switch, Studebaker No. 1539898, on engine. Light should go on when ignition turned on but should not be lighted with engine running.
Oil Pump: Spur gear type. Mounted on rear main bearing cap and driven by camshaft gear.
Pump Removal, Overhaul & Installation: *See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial Flow. Replace filter element at 5000 mile intervals. Change more often in dusty areas.
Replacement Filter Element – AC No. P-209.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at rear of engine (air outlet).

COOLING

Water Capacity: 17 qts. (18.5 qts. with heater).
Pressure Valve: Radiator filler cap. 13 lb. type.
Thermostat: Choke type. 170° (Std.), 160° & 180° (Optl.).
Water Pump: Packless type. Sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*
Pump Removal – Drain cooling system. Loosen generator, remove belt. Remove fan-to-hub screws and remove fan and pulley. On Coupe and Hardtop models, remove shroud. Remove four capscrews retaining pump cover to water pump manifold. Remove pump from manifold.
Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*
Temperature Indicators: Coupe & Hardtop Models – Direct reading, electric type gauge.
Other Than Coupe & Hardtop Models – Red-green indicator on instrument panel. Electric type. When indicator shows any green, engine is operating at normal temperature. If it turns red through entire range, engine operating temperature is above normal.
Dash Unit – Studebaker No. 1541287 (Sedans & Station Wagon), Studebaker No. 1539879 (Hard Top "Hawks").
Engine Unit – Studebaker No. 1539876 (All Models).
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck. Single plate, dry disc type.

Series	Clutch Model	Assy. No.	Disc No.
Commander	10A7	361371	382315
President	10A6	361386	382389

See "Borg & Beck" in Clutch Section.
Pedal Adjustment: Pedal free travel 1/2-1". To make adjustment, loosen locknut securing clevis to rod connecting release shaft lever to clutch operating shaft lever and remove the clevis pin. Turn clevis to shorten or lengthen rod as necessary for correct pedal free travel. *NOTE–If car is equipped with "Hill-Holder", adjust "Hill-Holder" operating rod as outlined in Brake Section.*
Clutch Housing Removal: Remove starter. Remove floor plate and clutch housing top capscrews. Remove clutch operating shaft. Remove transmission (see Synchro-mesh Transmission Removal below). Remove two bolts holding engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a block between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember. Remove support crossmember-to-frame bolts and remove cross member Remove the two clutch housing bolts retaining exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or capscrews and remove clutch housing
Clutch Removal Remove clutch housing (above), remove six screws evenly to release pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS53-T86E (Std.), AS54-T86E with R10 type Overdrive.
See "Warner Synchro-mesh Transmission" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft bracket, and bearing from transmission case. Move case rearward until the main drive pinion clears clutch pressure plate and remove unit from car.

OVERDRIVE

Warner R10 Type (part of AS54-T86E Transmission). Governor controlled, with electric solenoid operation and throttle controlled "kickdown"
See "Warner R10" Overdrive in Transmission Section.
Overdrive Controls. *See "Overdrive Controls" in Transmission Section.*
Removal Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

FLIGHTOMATIC TRANSMISSION

Hydraulic torque converter and a hydraulically controlled three-speed planetary type transmission which provides automatic operation in "D" range and additional 'Lo", "R', and "P" ranges which are controlled manually. In "D' position, the car starts in low gear and progresses to intermediate and high as car speed is increased.
►*See "Flightomatic" Transmission in Transmission Sect.*
►*"NO REVERSE" CORRECTION See "Flightomatic" Transmission in Transmission Section.*
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic" Transmission in Transmission Section.*
►*TESTING & TROUBLE SHOOTING See "Flightomatic" Transmission in Transmission Section.*
Lubrication: Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type 'A" (marked AQ-ATF on container).
Checking Fluid Level – Place selector lever in 'P' position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Apply parking brake and foot brake, move selector lever slowly from 'P" position to "R' position, then back to 'D' position. Remove dipstick and read fluid level. Add fluid to bring level to 'FULL' mark on dipstick (1½ pints between "LOW' and "FULL' marks on dipstick).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Capacity – 9 qts. Use Automatic Transmission Fluid Type "A" (marked AQ-ATF on container).

►*OTHER FLIGHTOMATIC DATA: See "Flightomatic" Transmission in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Three used, with intermediate universal at propeller shaft support bearing on crossmember.

Propeller Shaft & Support Bearings: Two shafts used.

1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal: *See "Propeller Shaft Notes" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive. *See "Spicer Hypoid" in Rear Axle Section.*

Series	Std.	O.D.	Auto.
Commander	3.54-1	3.92-1	3.31-1
President (Exc. 4-Dr. Classic)	3.54-1	3.92-1	3.31-1
President (4-Dr. Classic)	3.54-1	4.09-1	3.31-1

Rear Axle Ratio Identification: Rear axle ratio stamped on plate attached to axle by cover cap screw and also on ring and pinion gears.

Backlash–.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way *(CAUTION*–Do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

Rear Axle Assembly Removal Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect brake pipes at wheel cylinders, remove backing plate bolts from both backing plates. Remove brake pipe clamps and capscrew which holds brake pipe tee to housing, remove brake pipe from housing. Remove backing plate and shims (suspend from frame). Remove rear universal joint U-bolts and nuts, disconnect rear propeller shaft and move to one side. Remove rear spring U-bolts and disconnect shock absorbers from spring plate. On President models, disconnect stabilizer shaft from spring plates. Remove rear axle assembly.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003" .005" .010" .030" thick). **Endplay** – .001-.006".

SHOCK ABSORBERS

Houde, Monroe, or Delco. Direct acting, hydraulic type. *NOTE* - Heavy Duty Shocks are Gabriel.

Houde Shocks (Studebaker Nos.)

	Front	Rear
Comm. "Hawk" ℂ	537021	537025
Comm. 2 Dr. Sedans	537022	537026

Comm. & Pres. (Non-Adj.)	536398	536399
Comm. & Pres. (Adj.)	537712	537714

ℂ - Before Serial No. 8,430,316

ℭ – Beginning with above number.

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs.

See "Studebaker" in Suspensions & Wheel Alignmt. Sect.

►*FRONT SUSPENSION NOISE CORRECTION (Due to Bushing Looseness at Upper Control Arm Inner Shaft): See "Studebaker" in Suspensions & Wheel Alignmt. Sect.*

Kingpin Inclination–5-1/4° at 0° camber.

Caster–Neg. 1° to Neg. 2-1/2°. Not more than 3/4° variation between wheels.

Camber–0° to Pos. 1°. 1/2° more camber favored on driver's side.

Toe-In–1/16-1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.

RHD Car Note–Make toe-in adjustments at left hand tie rod.

Toe-Out on Turns–With outer wheel at 20°, inner wheel should be 22-1/2–23-1/2°.

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller types.

See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.

Power Steering: Saginaw (G.M.). *See "Saginaw(G.M.) Power Steering" in Steering Section.*

►*POWER STEERING "CHUCKLE" CORRECTION: See "Saginaw(G.M.) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking brake applies rear wheel service brakes.

See "Wagner Lockheed Self-Centering" in Brake Section.

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeak. This lining is applied to the full length of the shoe and is marked "secondary" and "top", and should be installed as marked.

Drums – Diameter 11" (front), 10" (rear).

Braking Power – 62% (front), 38% (rear).

Wheel Cylinder Diameter – 1 1/16" (front), 7/8" (rear).

Lining Dimensions	Width	Length	Thickness
Front Wheels	2¼"	12"	ℂ 3/16"
Rear Wheels	2"	10 29/32"	.3/16"

ℂ – Front wheel secondary lining is 7/32" See "Front Wheel Secondary Lining Note" above.

Clearance–Lock shoes against drum with adjusting screw, then back off adjusting screw 8 notches, or more notches as required to free drum.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder.

(NOTE - One line with Hill-holder). Remove the brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Power Unit. Used with standard master cylinder.

See "Hydrovac Power Unit" in Brake Section.

Checking Fluid–Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit–Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

MISC. MECHANICAL

Windshield Wipers: Auto-Lite, Redmond and Bosch Electric type. *See "Auto-Lite Windshield Wiper 'Single End' Motors" and "Redmond Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electrical, with individual reversible motors in each window. Control switches at each door with a master control switch located on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seats Adjusters. Two-way electric type with curved seat tracks for seat adjustment (seat raises and lowers with a tilting action).

See "Power Seat Adjusters" in Miscellaneous Section.

STUDEBAKER GOLDEN HAWK 1956

MODEL IDENTIFICATION

M d l	M d l ld ntificati n
Golden Hawk (Hardtop)	56J

SERIAL NUMBER: Stamped on plate attached to left front hinge pillar post.

Starting S rial Numb rs–6,030,001 (South Bend), 6,800,001 (Los Angeles).

ENGINE NUMBER: Stamped on front end of engine block between cylinder banks, directly behind water pump.

Starting Engin Numb rs (South Bend & Los Angeles): K-1001 (Overdrive), S-1001 (Ultramatic).

TUNE-UP

►*DETONATION CORRECTION (In Low Octane Areas):* If detonation not caused by carbon deposits, rough combustion chamber, or sharp edges in cylinder head, convert original Distributor IBJ-4001C to later IBJ-4001E performance (see DISTRIBUTOR below). If detonation still present, Ignition Timing may be retarded slightly from standard 5° BTDC setting.

COMPRESSION PRESSURE: 120 lbs. minimum at 150 RPM. Maximum variation between cylinders 10 lbs.

VACUUM READING: 18-21" at idling speed.

VALVE TAPPET CLEARANCE: None (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic spring type mounted between right bank exhaust manifold and exhaust pipe. With heater valve in closed position, hook in end of coil should assume a position approximately 90° clockwise from coil anchor pin at normal room temperatures. Valve should operate freely.

►*NOTE:* With valve in closed position, most exhaust gases are discharged through the left exhaust pipe.

IGNITION

►*ENGINE "MISS" CORRECTION:* May be caused by cross-fire between No. 5 & 7 cylinders. Correct by installing new brackets and cables as follows:

Transmissi n	Cabl Set	Rt. Bracket	Left Bracket
Overdrive	6484554	6489377	6489917
Ultramatic	6484554	6489377	

NOTE - Eight No. 6489378 grommets also used.

►*ENGINE FAILURE TO START CORRECTION (Due to Moistur in Distributor Cap):* Remove tachometer drive unit assembly and drill two 7/64" holes in groove adjacent to outer rim.

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylind rs–RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plugs–Champion N8-67B. 14mm. Torque to 30 ft. lbs. *NOTE* - Champion N8-64B can be used if colder plug desirable.

COIL: Aut -Lit CAD-4004. 12 Volt.

Igniti n Current–2.2 amps. idling HOT.

R sist r–Auto-Lite PU-4001.

►*COIL RESISTOR NOTE:* Resistor is connected in series with primary circuit between battery and coil. Resistor is by-passed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Auto-Lit IBJ-4001C r IBJ-4001E 12 Volt. Single breaker type.

►*DISTRIBUTOR CONVERSION TO CORRECT DETONATION (IBJ-4001C):* Install all parts furnished in Conversion Kit, No. 6486409, as follows: Distributor Stop & Cam Plate, Governor Weight Springs (Weak & Heavy Springs), Vacuum Spring, and small parts. Install new IBJ-4001E nameplate (furnished in kit). Check Automatic & Vacuum Advance which should agree with IBJ-4001E specifications below.

Condenser–Auto-Lite IBB-2015L. **Capacity**– .25-.28 microfarad.

Contact Point Set–Auto-Lite IGW-2028HS.

Breaker Gap–.017".

Cam Angle–31°±3°.

Breaker Arm Spring Tension–17-20 ozs.

Rotation–Counter-clockwise viewed from above.

Automatic Advance–IBJ-4001C

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	300	0	600
1	350	2	700

Start	0	8
1	2	8 5/8
5	10	11 1/4
9	18	14 3/4
10	20	16

IGNITION TIMING

Setting–5° BTDC with engine idling at 550-600 RPM with transmission in neutral. Before checking setting, disconnect vacuum advance pipe at carburetor.

►*DETONATION NOTE* - Timing may be retarded slightly from standard 5° BTDC setting if necessary to correct detonation. *See Detonation Correction.*

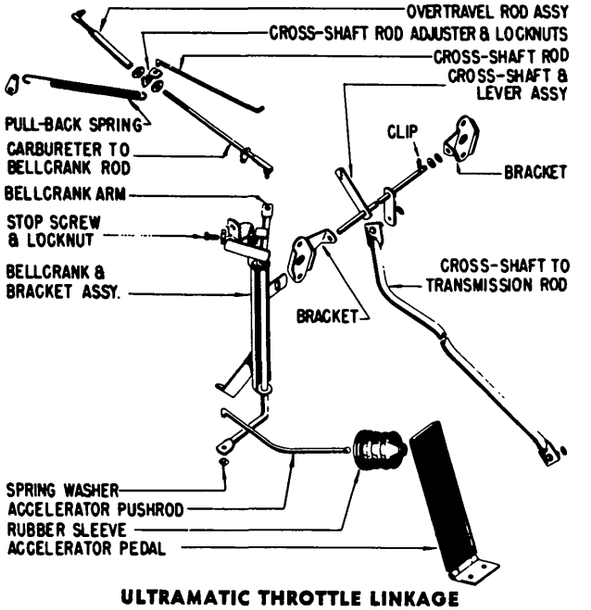
Timing Mark–Timing indicator on chain cover marked "0", "5", "10", "15". Align index mark (groove) on vibration damper with correct mark on indicator.

CARBURETOR

Carter WCFB-2394S. Four-barrel downdraft type

►*ENGINE CUTTING OUT ON LEFT TURN CORRECTION: See "Carter WCFB 4-Barrel" Carburetor in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barr ls f d Cyl. 2-3-5-8, LEFT barr ls 1-4-6-7.*



Idle S tting–¾-1¼ turns open. Turn screws out for richer mixture.

Idl Sp d–550-600 RPM with transmission in neutral.

►*OTHER DATA: See "Cart r WCFB" Carburet r in Carbur tion Section.*

Fuel Pump Pr ssure: 3½-5 lbs.

Throttle Linkage Adjustment (Ultramatic): Replace any excessively worn linkage, check for free action without bind, bring engine to operating temperature. Set engine speed at 400 RPM (selector lever in "D" Drive position) with choke in wide open position. Apply brakes, block open choke valve, disconnect rod at throttle valve outer lever (rear of transmission), hold lever against its stop, straight edge against milled surface of transmission case. Taper end of lever should just contact straight edge. To correct, loosen lever clamp nut, turn shaft to left against stop, reposition lever on shaft to proper position and secure clamp nut. With adjuster to cross-shaft rod in the center in cross-shaft lever *(Supersedes the lower hole specification used previously)*, both locknuts at adjuster released 4 or 5 turns, disconnect carburetor bell crank rod ball joint at bell crank, set stop to provide ¼" gap at bell crank. Hold carburetor idle screw against its stop (¼" gap at bell crank), loosen overtravel end assembly and adjust until ball joint stud on carburetor to bell crank rod freely enters hole in bell crank arm. Lock nut at overtravel end assembly. Hold cross shaft lever forward and tighten rear locknut against adjuster, then secure front nut.

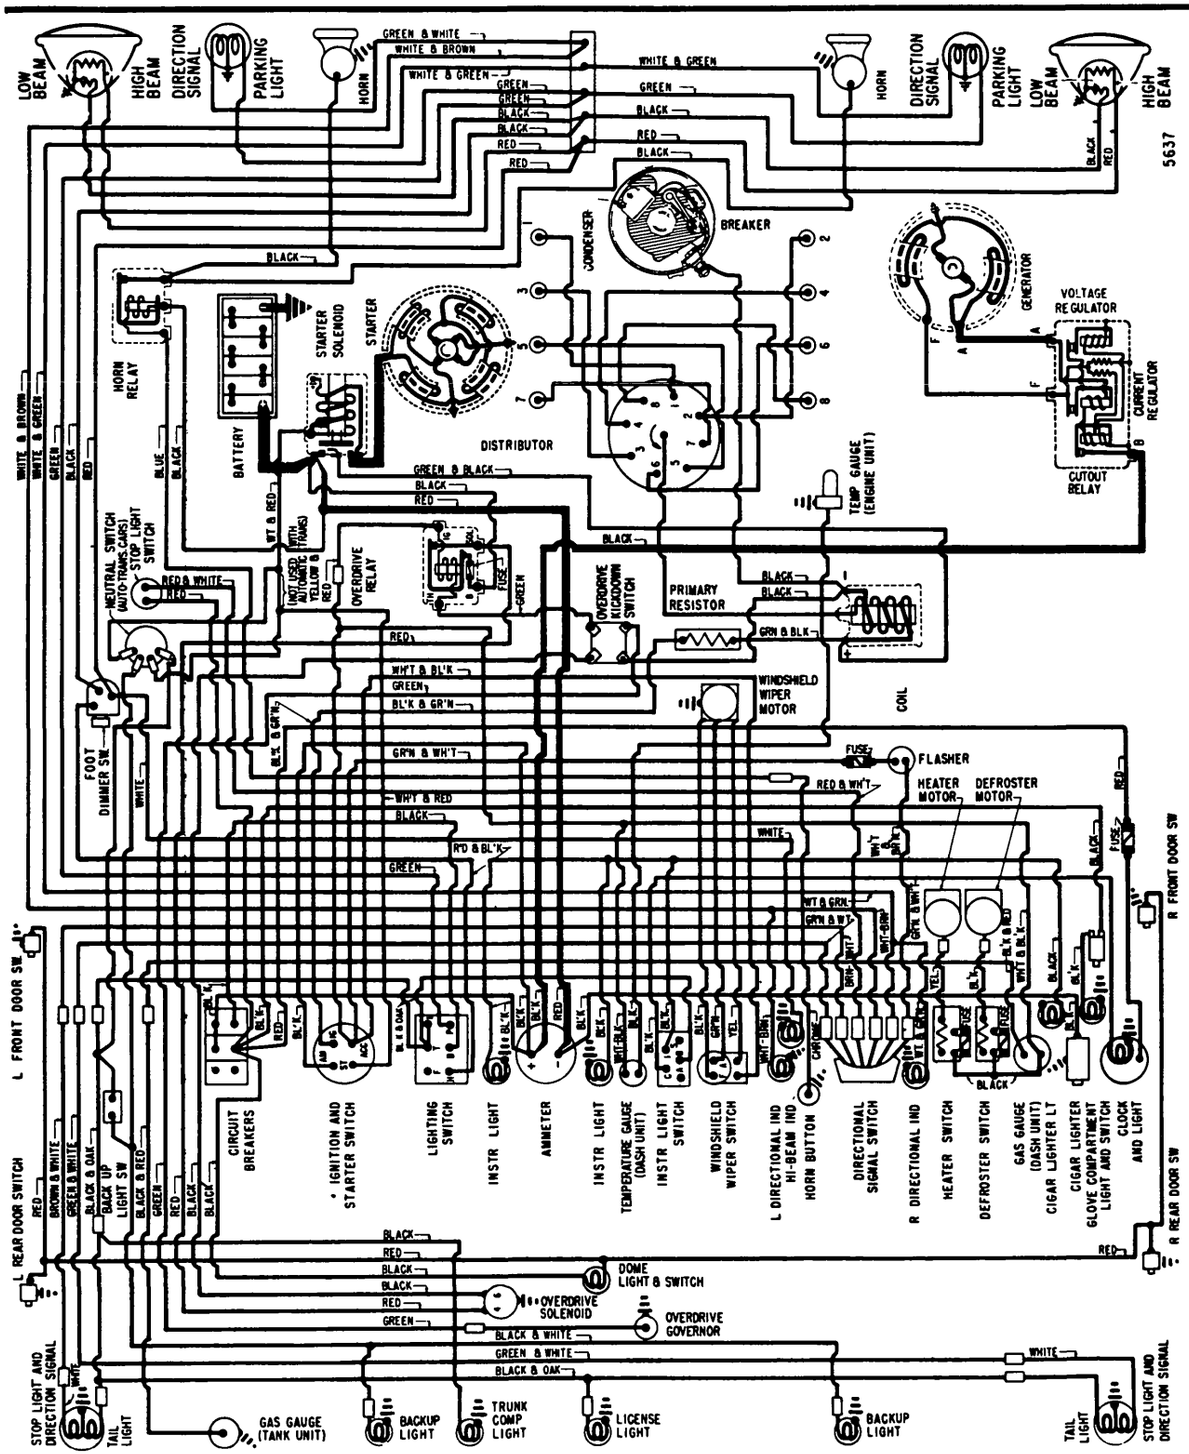
ULTRAMATIC THROTTLE LINKAGE

CARB. EQUIPMENT

Fuel Pump: AC No. 4299. Fuel only.

Fuel Pump Pressure - 3½-5 lbs.

See "Fuel Pumps" in Carburetion Section.



Gas line Gauge: Electric type.

Dash Unit - Studebaker No. 1539880.

Tank Unit - Studebaker No. 1540263.

See "Fu l Gauges" in Carbureti n S ction.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Willard HDW-2SM-60. *12 Volt,* 9 plate, 60 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Cylinder head to dash.

STARTER

Auto-Lite MDF-6008. *12 Volt.* **Armatur** MDF-2122.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 42-53 ozs. with new brushes.

Performanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3200 min.	10.0	60 max.
6.5 ft. lbs. min.	Lock	4.0	240 max.

Starting Switch: Auto-Lite SAD-4101 Solenoid Switch, mounted on starter and controlled by Ignition & Starter Switch. Turn key full RIGHT to start. S *"Start r Controls" in Electrical Secti n.*
Ultramatic Neutral Safety & Back-up Light Switch: Delco-Remy 1998038 (Without power steering), 1998059 (With power steering). Located at base of steering column jacket. Connected in starter control circuit so that starter operative only in "N" or "P" position.
Adjustment - *See "Ultramatic" Transmissi n in Transmission Section.*

GENERATOR

Auto-Lite GJC-7002F. *12 V lt.* **Armature** GJC-2030F.

Performanc Data - C ld

Amperes	Volts	RPM
20 Ⓒ	15.0	1750 max.
30 Ⓒ	15.0	2050-2250

Ⓒ - Do not operate at high output for any length of time without ventilating fan. To do so may result in burned armature and fields.
Brush Spring Tension - 18-36 ozs. with new brushes.
Field Current - 1.2-1.3 amperes at 10.0 volts (70°F.).
Motoring Current - 3.4-3.9 amps. at 10.0 volts (70°F.).
Rotation - Counter-clockwise at commutator end.
Belt Adjustment: Loosen generator-to-mounting bracket bolts and adjusting arm screw. Place Fan Belt Adjusting Tool J-4672 over head of front mounting bolt and rotate tool until arm of tool contacts edge of generator end plate. Then using torque wrench, turn tool counter-clockwise until a 20-25 ft. lbs. torque is indicated on wrench scale. While holding wrench at proper torque, tighten adjusting arm screw securely. Remove tool and tighten the generator-to-mounting bracket bolts.

REGULATOR

Auto-Lite VRX-6008A. *12 Volt.*

Cutout R lay

Cuts In - 12.6-13.6 volts
Cuts Out - 3-5 amps. discharge current after charge of 7 amps.
Contact Gap - .015".
Air Gap - .031-.034".

Voltage R gulat r

Setting - 14.2-14.8 volts at 80°F., unit operating n rmally while charging at 7 amperes or with a .25 ohm resister between regulator and battery.
Air Gap - .048-.052" with contacts just opening

CONTINUED FROM PRECEDING PAGE

Checking & Adjusting - S El ctrical S ction.

Curr nt Regulator

►*SETTING CAUTION: "T mperature Compensated" type. S t t f llowing sp cifications at 70°F.*

Test A	Operating Amperes	Test B
44 amps.		35 (33-37) amps.

Test A - After 15 minutes operation at 10.0 amps.

T st B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).

Air Gap - .048-.052" with contacts just opening.

Ch cking & Adjusting - S e Electrical Section.

MISC. ELECTRICAL

Headlamps: Sealed Beam. See Electrical Section.

Directi n Signals: S Electrical Section.

Lighting Switch R moval: Toggle Type - Remove switch retaining nut. Push switch sleeve back into panel, disconnect wires from switch.

Stop Light Switch Locati n: Located on inner side of left frame rail just forward of steering gear housing (except cars with power brakes). On cars with power brakes, switch is located in end of hydraulic cylinder of power brake unit.

FUSES: Located as follows:

Ov rdrive - 20 amps. (in relay on dash panel).

Radi - 9 amps. (in lead behind instrument panel.)

Direction Signal - 14 amps. (in bracket behind instrument panel).

El ctric Clock - 3 amps. (in lead behind instrument panel).

Climatiz r & Defr st r - 14 amps. (on Climatizer & Defroster switch.)

CIRCUIT BREAKERS: Located as follows:

1) - H ad, Parking & Instrument Lights - 18 amps. (on main lighting switch).

2) - B dy & Stop Lights - 15 amps. (below headlight switch on instrument panel).

3) - Windshield Wip r - 5 amps. (in wiper switch).

4) - Wind w Lift - 20 amps. (on left cowl panel).

5) - Seat Adjuster - 20 amps. (on left cowl panel).

HORNS: Dual horns with relay.

High Pitch - Delco-Remy 1999758.

L w Pitch - Delco-Remy 1999757.

Horn Relay: Delco-Remy 1116781. *12 Volt.*

ENGINE

ENGINE SPECIFICATIONS: 90° V8.

B re	Str k	Displmnt.	Rated HP
4"	3½"	352 cu. ins.	51.2

C mpr. Rati	Developed HP
9.5-1	275 at 4600 RPM

C mpression & Vacuum R ading - *See TUNE-UP.*

OIL PAN REMOVAL: Remove steering bellcrank assembly. Remove left exhaust pipe, starter motor, and flywheel lower housing. Remove oil pan and screws.

►*OTHER ENGINE DATA: See Packard 5660 Engine Data in "1955-56 PACKARD" car model pages.*

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engin Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 qts. (refill).

Normal Oil Pr ssur : 45-50 lbs. at 2800 RPM.

Pressur R gulat r Valv - In pump body. Not adjustable.

Pressure Relief Valve Spring - 3 19/64" (free length). Compressed to 1 3/8", pressure should be 9-9½ lbs.

Oil Pressure Gauge: Studebaker No. 1539878. Not electric.

Oil Pump: Spur gear type. Located on rear main bearing cap and driven through distributor drive and camshaft gears.

Oil Pump Removal, Overhaul & Installation - *See "Oiling System" in Studebaker Special Data.*

Crankcase Ventilation: Filter element in oil filler cap (air intake). Outlet pipe in valve tappet cover.

COOLING

►*FAN BLADE ASSEMBLY PRODUCTION CHANGE (To Correct Cracks & Breakage):* A new fan assembly, Part No. 1542138-P, entered production effective with Car Serial No. 6033140. New assembly uses 15 instead of 14 gauge steel, and has 8 instead of 4 rivets.

Water Capacity: 25 quarts (1½ qts. additional with heater).

Pressure Valve: Radiator filler cap. 13 lb. type.

Thermostat: 170° F. (Std.), 160° & 180° F. (Optional).

Water Pump: Packless type with sealed ball bearing. *See "Water Pumps" in Stude baker Special Data.*

Temperature Gauge: Electric type.

Dash Unit - Studebaker No. 1539879.

Engine Unit - Studebaker No. 1539876.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long 11CF. Single plate, dry disc type.

Assembly No. Studebaker No. 403502. **Disc No.** 473176. *See "Long" Clutches in Clutch Section.*

Pedal Adjustment: 1½" free travel.

Removal: *(NOTE* - Clutch housing and transmission removed as an assembly). Remove transmission and clutch housing (see Synchro-mesh Transmission below). Remove cover retaining screws by alternately backing off screws until spring pressure is released. Remove clutch pressure plate assembly and driven plate. *See "Hill-holder" in Brake Section for adjustment.*

SYNCHRO-MESH TRANSMISSION

Warner. 3-Speed, helical gear type with Overdrive (Std.). *See "Warner Synchro-mesh" Transmission in Transmission Section.*

Transmission Controls: See "Transmission Controls" in Transmission Section.

Removal: *(NOTE* - Clutch housing and transmission with overdrive must be removed as an assembly.).

1) Disconnect clutch adjusting rod from release bearing lever. Remove operating shaft support bracket-to-transmission screws, swing bracket down and slip the bracket and ball stud out of operating shaft. Disconnect shift rods from shift levers. Disconnect propeller shaft from transmission. Disconnect overdrive wiring and control cable.

2) Using jack or suitable lift to support engine, remove engine rear support mounting bolts, remove crossmembers.

3) Remove capscrews which attach bellhousing to flywheel housing and remove housing and transmission as an assembly.

4) Disconnect release lever pull-back spring and remove release bearing from transmission front flange. Remove transmission screws and remove housing.

OVERDRIVE

Warner R10 Type. Governor controlled, with electric solenoid operation and throttle controlled "kick-down". *See "Warner R10" Overdrive in Transmission Section.*

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

ULTRAMATIC TRANSMISSION

"Twin Ultramatic". Torque converter with hydraulically operated direct speed clutch and hydraulically operated planetary unit with manual control. *See "Twin Ultramatic" Transmission in Transmissi n Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Twin Ultramatic" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Twin Ultramatic" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level - Place selector lever in "P" position, start engine and operate for approximately four minutes or until engine and transmission have reached operating temperature. Remove inspection hole cover from floor pan above transmission. Clean area around inspection hole. Apply parking and foot brakes and move selector lever from "P" position to "R" position and back to the "D" position. Remove dipstick, wipe clean, and reinstall in transmission. Remove and read dipstick. Add fluid through dipstick hole to bring level to "F" mark (Fluid required to raise level from "L" to "F" mark is 1½ quarts). *Use only Automatic Transmission Fluid Type "A" (marked AQ-ATF on container).*

Capacity - Approximately 11 quarts.

►*OTHER TWIN ULTRAMATIC SERVICE DATA: S "Twin Ultramatic" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

Propeller Shaft & Support Bearings: Two shafts used.

1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal: *See "Propeller Shaft Notes" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive. *See "Spicer Hypoid" in Rear Axle Section.*

Rear Axle Ratios: 3.92-1 (Overdrive), 3.07-1 (Ultramatic).

Identification - Rear axle gear ratio stamped on plate attached to assembly by cover cap screw and also on ring and pinion gears.

Backlash—.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way *(CAUTION*—Do not lose adjusting shims located

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

Rear Axle Assembly Removal· Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect brake pipes at wheel cylinders, remove backing plate bolts from both backing plates. Remove brake pipe clamps and capscrew which holds brake pipe tee to housing, remove brake pipe from housing. Remove backing plate and shims (suspend from frame). Remove rear universal joint U-bolts and nuts, disconnect rear propeller shaft and move to one side. Remove rear spring U-bolts and disconnect shock absorbers from spring plate. Remove rear axle assembly.

Wheel Bearing Adjustment. Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003", .005", 010", .030" thick). **Endplay** - .001-.006".

SHOCK ABSORBERS

Monroe. Direct acting, hydraulic type. Serviced by replacement. *NOTE* - Heavy duty shocks are Gabriel.

Shock Absorbers (Studebaker Nos.)

	Front	Rear
Monroe (Std.)	1539527	1539543
Gabriel (H D)	536398	536399
Gabriel (H D Adj.)	537712	537714

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs.

See "Studebaker" in Suspensions & Wheel Alignment Section.

►*FRONT SUSPENSION NOISE CORRECTION (Due to Bushing Looseness At Upper Control Arm Inner Shaft). See "Studebaker" in Suspensions & Wheel Alignment Section.*

Kingpin Inclination–5-1/4° at 0° camber
Caster–Neg. 1° to Neg. 2-1/2°. Not more than 3/4° variation between wheels
Camber–0° to Pos 1° 1/2° more camber favored on driver's side.
To -In–1/16-1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.
RHD Car Note–Make toe-in adjustments at left hand tie rod.
Toe-Out on Turns–With outer wheel at 20°, inner wheel should be 22-1/2–23-1/2°

STEERING

Manual· **Ross Cam & Twin Lever or Saginaw Worm & Roller types.**
See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.

Power Steering: Saginaw (G.M.). *See "Saginaw (G.M.)" Power Steering in Steering Section.*

►*POWER STEERING "CHUCKLE" CORRECTION See "Saginaw (G.M.)" Power Steering in Steering Section.*

Steering Linkage *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking brake applies rear wheel service brakes.
See "Wagner Lockheed Self-Centering" in Brake Section.

►*FRONT WHEEL SECONDARY LINING NOTE* Front wheel secondary lining is 7/32" thick (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeak. This lining is applied to the full length of the shoe and is marked "secondary" and "top", and should be installed as marked.
Drums - Diameter 11" (front), 10" (rear).
Braking Power - 62% (front), 38% (rear).
Wheel Cylinder Diameter - **1 1/16" (front), 7/8" (rear).**

Lining Dimensions	Width	Length	Thickness
Front Wheels	2¼"	12"	Ⓒ 3/16"
Rear Wheels	2"	10 29/32"	3/16"

Ⓒ - Front wheel secondary lining is 7/32". See "Front Wheel Secondary Lining Note" above.

Cl aranc –Lock shoes against drum with adjusting screw, then back off adjusting screw 8 notches, or more notches as required to free drum.
Standard Master Cylinder: On frame left side rail at base of brake pedal.
Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.
Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. *(NOTE* - **One line with Hill-holder).** Remove the brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position remove master cylinder. Insert forward mounting bolt to Hill-holder while master cylinder is off car.
Power Brakes: Hydrovac P wer Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brake Section.
Checking Fluid–Same as for Manual Brakes (same master cylinder used).
Removal of Power Unit–Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

MISC. MECHANICAL

Windshield Wipers· Auto-Lite, Redmond and Bosch Electric type. *See "Auto-Lite Windshield Wiper 'Single End' Motors" and "Redmond Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators Electrical, with individual reversible motors in each window. Control switches at each door with a master control switch located on left front door *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters Two-way electric type with curved seat tracks for seat adjustment (seat raises and lowers with a tilting action).
See "Power Seat Adjusters" in Miscellan ous Section.

MODEL IDENTIFICATION

Model	1957 MODELS	Model Symbol
Champion	Cus. & Deluxe	57G(F & W)
Champion	Pelham	57G(D)
Champion	Silver Hawk	57G(C)
Scotsman		57G (F1, D1, W1)

Model	1958 MODELS	Model Symbol
Champion		58G-F4, W4
Scotsman		58G-F1, W1, D1
Silver Hawk		58G-C3
Econ-O-Miler (Taxicab)		58G-Y1

SERIAL NUMBER: Located on left front door pillar post.

Assembly Plant	Starting Numbers
South Bend	G-1379201 (1957), G-1405401 (1958)
Canada	G-769101 (1957), G-772301 (1958)

ENGINE NUMBER: Stamped on pad on upper front left corner of cylinder block.

Assembly Plant	Starting Numbers
South Bend	1202101 (1957), 1228401 (1958)
Canada	C-71401 (1957), C-74701 (1958)

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM. Maximum variation between cylinders 10 lbs.

VACUUM READING: 17-18" at idle speed.

VALVE TAPPET CLEARANCE: .016" cold, all valves.

MANIFOLD HEAT CONTROL: Automatic thermostatic type.

Checking Thermostatic Coil Spring - With outer end of coil free from anchor, and valve closed (counter-weight up), hooked end of coil should be 90° clockwise from anchor post at 70°F.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030". Limits .028-.033".

Spark Plugs - Champion J7. 14 mm. Torque 25-30 ft.lbs.

COIL: Auto-Lit CAF-4004 or CAG-4003A.

Ignition Current - 4 amps. (idling).

►*IGNITION RESISTOR NOTE: Resistor not used.*

DISTRIBUTOR: Aut-Lit IAT-4201.

Condenser - Auto-Lite IAT-2015L. **Capacity** .21-.25 mfd.

Contact Point Set - Auto-Lite IGW-3028AS.

Breaker Gap - .020".

Cam Angle - 38-40°.

Breaker Arm Spring Tension - 17-20 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance					
Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		400	0		800
2		680	4		1360
4		975	8		1950
6		1265	12		2530
7		1400	14		2800

Vacuum Spark Control: Auto-Lite, Integral type.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4
1	2	4 7/8
4	8	7 1/2
8	16	11 1/8
9	18	12

IGNITION TIMING

Setting - 2° BTDC idling at 550 RPM *with vacuum line (to vacuum spark control) disconnected.*

Timing Mark - On vibration damper. "IGN" mark in line with pointer (left side of timing cover).

Timing - Disconnect vacuum advance pipe at carburetor. Install plug in carburetor. With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer.

CARBURETOR

►*CARBURETOR APPLICATION: Carter single barrel downdraft types used as follows:*

Model	Carter Carb. No.
Champion & Silver Hawk	WE 2417S
Scotsman	BBR1 2764S, Ⓒ 2724S
Econ-O-Miler	BBR1 2724S & 2808S

Ⓒ - Optional equipment.

►*COLD STARTING CORRECTION (Scotsman & Econ-O-Miler with BBR1 Manual Choke Carburetors): See CHOKE ADJUSTMENT under BBR1 Carburetors below.*

►*CARBURETOR ICING CORRECTION (Scotsman):* Can be minimized by careful adjustment of engine idle speed. Use tachometer and set idle speed at 525-550 RPM.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With transmission selector lever in "N" (Neutral) or "P" (Park) position, engine at normal operating temperature, choke wide open, proceed as follows:

1) Disconnect rod which connects accelerator bracket on firewall to auxiliary bellcrank on side of engine.

2) Connect a tachometer to engine and set engine idle speed at 550 RPM by adjusting the carburetor idle speed screw. Disconnect the rod which connects the main bellcrank on firewall to auxiliary bellcrank on engine by removing the main bellcrank ball joint stud from main bellcrank lever. Adjust the screw on main bellcrank to provide 5/16" clearance between bellcrank and pad (use a 5/16" drill as a gauge).

3) Adjust the ball joint on main bellcrank-to-auxiliary bellcrank rod until ball joint freely enters hole in main bellcrank lever. During this adjustment the carburetor idle speed screw must be against its stop and the 5/16" gap at the bellcrank must be maintained.

4) Stop engine and remove the 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by the foot brake. Adjust length of the main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs. pressure on gauge. Stop engine, remove gauge, and install the pipe plug in side of transmission. Hold the accelerator bracket arm (on firewall) approximately 3 7/8" from face of firewall and adjust the accelerator-to-auxiliary bellcrank rod clevis until clevis pin freely enters clevis and bracket arm.

CARTER WE No. 2417S

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required. See AIR CLEANER below.*

Idle Setting - ½-1½ turns open. Turn screw out for richer mixture.

Idle Speed - 550 RPM. On Flightomatic cars, selector lever should be in "N" or "P" position.

Float Level - 3/8" measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover inverted.

Accelerating Pump - No seasonal adjustment.

Fast Idle: .046". Throttle valve opening with choke valve closed. To check, crack throttle valve, hold choke closed, measure on side opposite idle ports (Gauge T109-188). Adjust by bending connector rod.

Automatic Choke Setting: 1 point lean.

►*OTHER DATA: See "Carter WE Carburetors" in Carburetion Section.*

CARTER BBR1 2724S, 2764S, 2808S

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required. See AIR CLEANER below.*

Idle Setting - ½-1½ turns open. Turn screw out for richer mixture.

Idle Speed - 550-600 RPM (Synchro-mesh Cars), 550 RPM with selector lever in "P" or "N" position (Flightomatic Cars).

Float Level - 5/64" (2724S & 2764S), 1/8" (2808S) plus or minus 1/64" from top of float (at each side of seam) to top edge of bowl with needle valve seated.

Accelerating Pump - Seasonal setting, Inner Hole (Summer), Outer Hole (Winter).

Fast Idle: No adjustment. Fast idle cam is rotated to fast idle position when choke closed for cold starting.

Choke Adjustment: To aid cold engine starting, choke should be adjusted as follows: Position choke wire conduit so that end of conduit is 1-1 1/8" beyond conduit clamp. This will provide a stop for the choke which will prevent locking choke valve when control is pulled out fully.

►*OTHER DATA: See "Carter BBR1 Carburetors" in Carburetion Section.*

FUEL PUMP PRESSURE: 3½-5½ lbs.

CARB. EQUIPMENT

Fuel Pump: AC. Fuel only. Replacement Pump 4156.

Fuel Pump Pressure - 3½-5½ lbs.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type.

Model	Dash Unit	Tank Unit
1957 Sedans	1542342	1540262
1957 Station Wagons	1542342	1540263

1957 CHAMPION HAWK (SEE V8 DIAGRAM FOR OTHER MODELS)

CONTINUED FROM PRECEDING PAGE

element in solvent or other liquids and DO NOT oil or lubricate.

BATTERY

Willard HDW-2SM-50 (1957), HO-11-50 (1958 Exc. Ec n-O-Miler), HO-11-60 (Econ-O-Mil r). 12 volt, 9 plate, 50 ampere hour capacity (HDW-2SM-50 & HO-11-50), 60 ampere hour capacity (HO-11-60). All at 20 hr. rate.
Battery Ground - Negative.
Engine Ground - Right front of engine.

STARTER

Auto-Lite MBG-4103. Armature MZ-2367.
Drive - Bendix A-3519. Barrel-Anchor Plate type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 42-53 ozs.

Performanc Data.

Torque	RPM	Volts	Amperes
0 ft. lbs.	5200	10.0	55 max.
5.2 ft. lbs. min.	Lock	4.0	235 max.

Starter Switch: Magnetic switch, Studebaker No. 1539452, mounted on starter and controlled by combination Ignition & Starter Switch.
Autometic Transmission Neutral Saf ty Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in "N" or "P" position.

GENERATOR

Auto-Lite GJC-7002-F. Armatur GJC-2030-F.

Performanc Data

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0	15.0	2050-2250
35.0	15.0	2250-2650

Brush Spring Tension - 18-36 ozs.
Field Current - 1.2-1.3 amps. at 10.0 volts (70°F).
Metering Current - 3.4-3.9 amps. at 10.0 volts (70°F).
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 3/8-1/2" deflection midway between generator and fan pulleys with 10 lbs. pull on belt.

REGULATOR

Auto-Lite VRX-6008-A.

Cutout R lay

Cuts In - 12.6-13.6 volts.
Cuts Out - 3.0-5.0 amps. discharge.
Contact Gap - .015" minimum.
Air Gap - .031-.034".

Voltage R gulat r

Setting - 14.2-14.8 volts at 80°F., unit operating normally while charging at 7 amperes or with a .25 ohm resistor between regulator and battery.
Air Gap - .048-.052" with contact just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Auto-Lite Regulators" in Electrical Section.*

Current R gulator

►*SETTING CAUTION: "Temperatur Comp nsat d" typ . Set to following specifications at 70°F.*

Test A	Op rating Amp r s	Test B
44 amps.		35 (33-37) amps.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

T st A - After 15 minutes operation charging at 10 amps.

T st B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).

Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).

Ch cking & Adjusting - *See "Auto-Lite Regulators" in Electrical S ction.*

MISC. ELECTRICAL

H adlamps: Sealed Beam type (Single Headlights). If 4-Headlights (Dual Headlights) installed, *see "4-Headlight Syst m" in El ctrical Section.*

Dir ction Signal: *See El ctrical Section.*

Lighting & Instrum nt Light Switch Removal: Remove switch retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat on board.

St p Light Switch: Located on inner side of left frame rail forward of steering gear housing (except Silver Hawk), in elbow fitting on Power Brake Unit (Silver Hawk).

CIRCUIT BREAKERS: Used as follows:

20 Ampere - Protects head, parking, tail, back-up and instrument lights. Located on headlight switch.

5 Amp r - Protects windshield wipers. Located on windshield wiper switch.

FUSES: Used as follows:

15 Amp r - Protects body and stop lights. Located in fuse block behind instrument panel.

15 Ampere - Protects directional signals. Located in fuse block behind instrument panel.

14 Amper - Protects overdrive circuit.

14 Amp r - Protects heater circuit (Scotsman). Located on heater switch.

14 Amp re - Protects Climatizer & Defroster. Located on switch.

3 Amp r - Protects clock and clock light. Located in lead behind instrument panel.

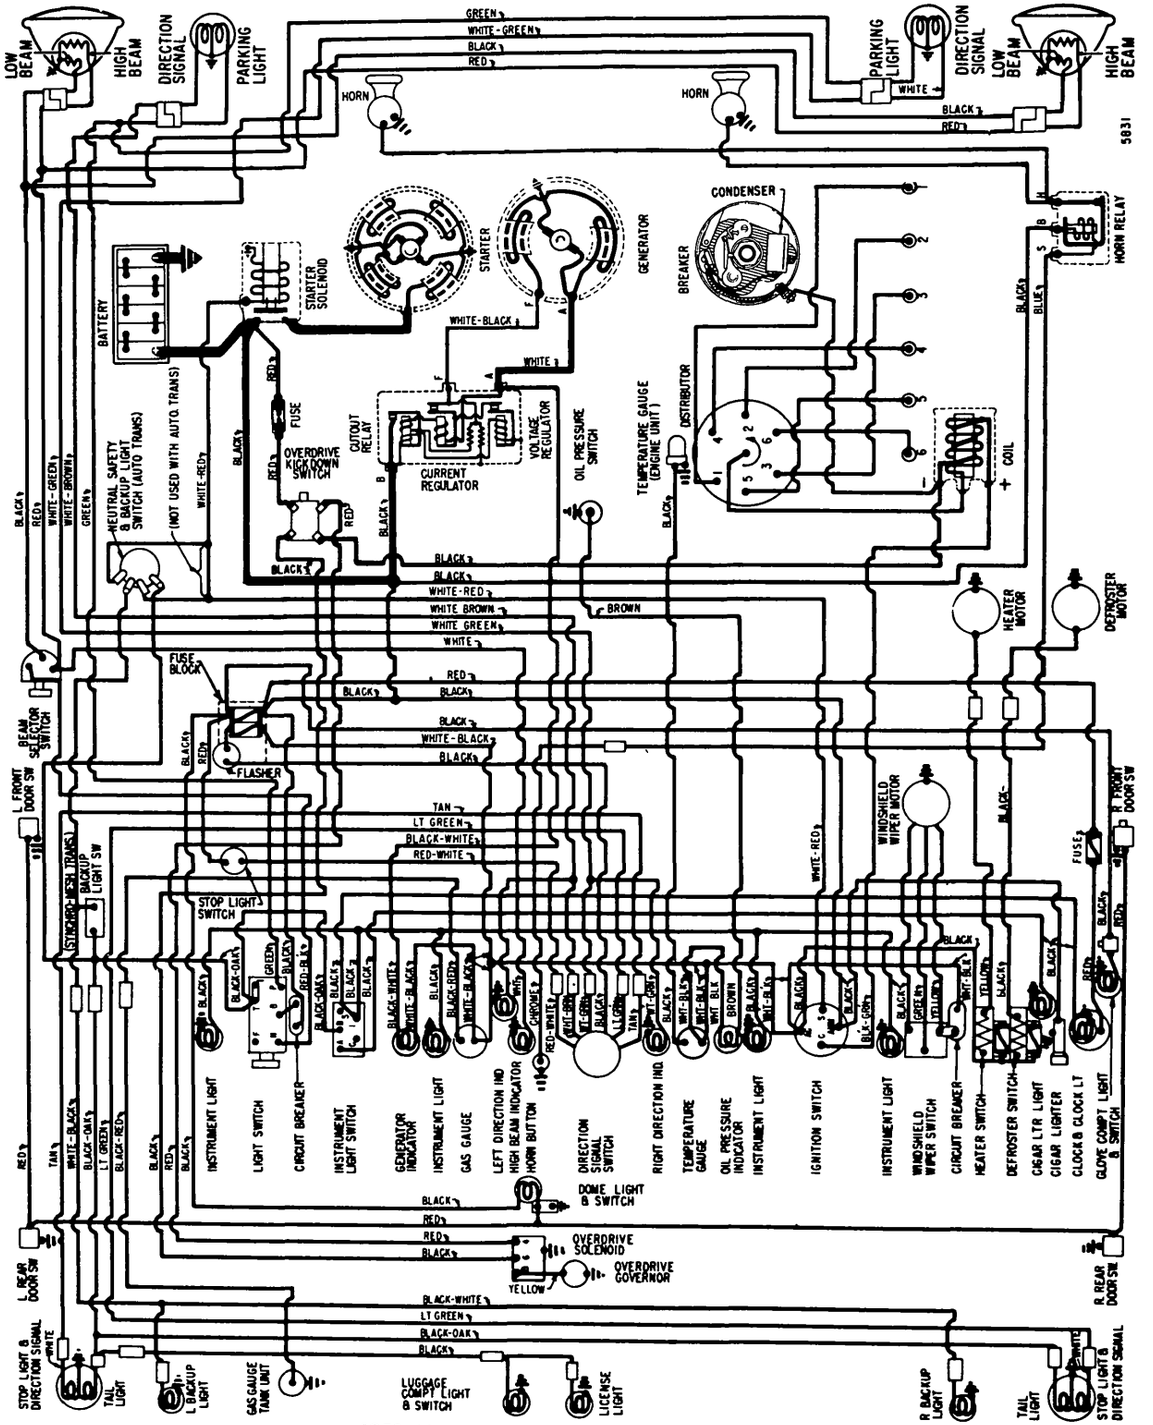
ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extr m car wh n disconnecting any part of air conditioning q uipment or lin s f r access to engine, see "Air C nditi ning Servic Cautions" in Miscellaneous S ction.*

ENGINE SPECIFICATIONS: "Sweepstakes 185". 6 Cyl. "L" head.

B r	Str k	Displacement
3"	4 3/8"	185.6 cu. ins.

C mpr ssi n Ratio	Rated HP	Developed HP
7.8-1 ①	21.6	101 at 4000 RPM



① - 7.1-1 optional compression ratio.

C mpr ssion & Vacuum Reading - *See TUNE-UP.*

►*OIL SEEPAGE AT VALVE COVER PLATE CORRECTION: S "Oiling Syst m" in Studebaker Special Data.*

OIL PAN REMOVAL: Remove oil level gauge. Raise car and support it with stands, drain oil. On long wheelbase models, swing wheels to right to move steering bellcrank out of way. On short wheelbase models, disconnect tie rods and reach rod from steering bellcrank, remove re-

CONTINUED ON NEXT PAGE

1958 ALL SIX CYLINDER MODELS

CONTINUED FROM PRECEDING PAGE

taining pinch bolt and remove bellcrank from shaft. Then remove oil pan capscrews and remove pan.

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

"T" slotted, cam ground, tin plated aluminum alloy. Three ring type.

Original Bore & Pistons—*See "Original Bore & Pistons" in Studebaker Special Data.*

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance—Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 11 to 16 lbs.

Replacement Pistons: Std. .010", .020", .030" and .040" Oversize, Pistons furnished with pins.

Installing Pistons: Install piston in cylinder bore with "T" slot away from camshaft side. *See Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.

Diameter—.7491-.7495". **Length** 2.625".

Clearance in Piston—.0001-.0003" (selective fit). Light thumb push fit at 70°F.

Piston Pin Removal & Installation—*See "Piston Pins" in Studebaker Special Data.*

Replacement Pins: Std. & .0025", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.002-.005"
Compr. #2	1/8"	.007-.017"	.002-.005"
Oil	5/32"	.007-.017"	.0015-.004"

Replacement Rings: Std., .020", .030", & .040" Oversize, in sets.

Installing Rings: Top compression ring has step at the inside which must be installed up. Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point.

CONNECTING RODS

Length—(Center-to-center) 6 3/8". **Weight**—19.04 ozs.

Crankpin Journal Diameter—1.81175-1.81275"

Bearings—Steel backed, Microbabbitt lined, no shims.

Clearance—.0005-.002".

Side Play—.005-.009"

Replacement Bearings: Std., .001", .002", .010", .020" Undersize.

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod. Insert tapered end of clamp screw toward heavy boss on rod. With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6).

►*REPLACEMENT ROD NOTE:* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders.

CRANKSHAFT

Journal Diameter—3.0623-3.0628". Four bearings.

►*FRONT MAIN BEARING CAP REMOVAL NOTE:* Turn crankshaft until No. 3 and No. 4 pistons are at top of their travel. Remove bearing cap bolts, then remove cap by twisting end away from camshaft toward rear of engine.

Bearings - Steel-backed, micro-babbitt lined. No shims.

Clearance - .0003-.0024".

Replacement Bearings: Std., .001", .010", .020", and .030" Undersize.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal.

End Play—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

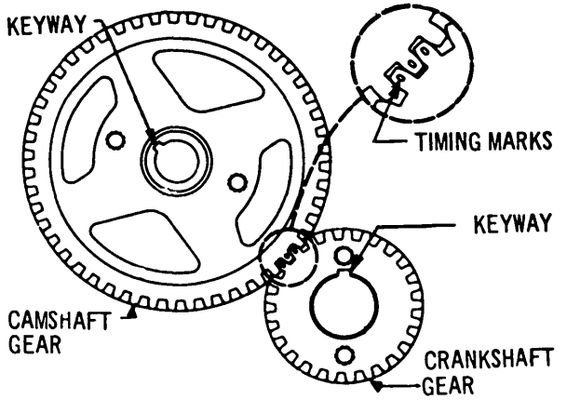
CAMSHAFT

Journal Diameters—(1) 1.7475-1.7480", (2) 1.7162-1.7170", (3) 1.6857-1.6865", (4) 1.6232-1.6240".

Bearings—Steel backed babbitt lined bushings.

Clearance—No. 1—.0007-.0022", Nos. 2, 3, 4—.0010-.0027".

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub). Tighten capscrews alternately a few turns at a time to prevent distortion of plate.



End Play—.003-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub.

Backlash—.001-.003".

Camshaft Setting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear.

6 CYL. VALVE TIMING MARKS

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance: .016" cold. Intake & exhaust.

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.0035"
Exhaust	45°	11/32"	.0015-.0035"

Valve Seat Width—1/16-3/32".

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced.

Valve Springs (1957): Install springs so that flanged edge of retainer fits over flat surface of lower coil spring. Tongue on lower side of retainer must fit in groove in spring retainer lock.

Valve Springs (1958): Springs do not have flat ground on lower coil (see Replacement Caution following).

►*VALVE SPRING & RETAINER REPLACEMENT CAUTION:* 1958 Springs (No. 512074) do not have flat ground on lower coil and are used with Retainer (No. 194505) which does not have matching locking flat. DO NOT use previous type retainer (with locking flat) with new springs. *NOTE* - Previous type springs will be furnished for service and can be used with either type retainer (new type retainer will be furnished when stock of previous type retainer exhausted).

Valve Spring Specifications

	Pressure	Length
Valve Closed	49-54 lbs.	1 21/32"
Valve Open	93-103 lbs.	1 5/16"

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber. Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine.

►*VALVE LIFTER SPRING NOTE:* Valve lifter tension springs are NOT used on 1958 engines.

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., .001" & .005" Oversize.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore):* *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC. Closes 49° ABDC.

Exhaust Valves—Open 54° BLDC. Closes 10° ATDC.

Valve Timing Check—Adjust No. 1 Intake valve at .020" cold. Rotate engine until No. 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft. Valve timing will be correct if lifter stops moving as above marking is directly below pointer.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Studebak r Sp cial Data*

Crankcase Capacity: 5 quarts refill, 1 quart additional with filter change.

Normal Oil Pr ssur : 20-40 lbs at 2000 RPM.

Pr ssur R gulat r Valv · Opens at 40 lbs. Under plug on lower right front corner of engine. For access, remove engine front cover bolt Replace weak spring (do not attempt to stretch spring).

Oil Pr ssur Indicator: (Silver Hawk) Direct reading, non-electric type gauge, Studebaker No. 1539878.

(Oth r Models) Indicator light on instrument panel. If light on at highway speeds, low oil pressure or other difficulty indicated Oil Pressure Switch on Engine Studebaker No 1539898

Oil Pump: Helical gear type. On right side of crankcase.

Pump R moval, Ov rhaul, & Installation - *See "Oiling System" in Studebaker Special Data.*

Oil Filt r: Partial Flow Either replaceable element or disposable type used on 1957 Disposable type usedon 1958 Replace element at 5000 mile intervals or sooner if needed

R plac ment Filt r El ment: Replaceable element Studebaker No. SP 50090 (Filcron) or No 50053 (Waste)

Disp sabl Unit Studebaker No 1542739

Crankcas Ventilati n: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe is replaceable (retained by cotter pin)

COOLING

Wat r Capacity: 11 quarts without heater 12½ qts (Champion Silver Hawk & Econ-O-Miler), 11½ qts. (Scotsman) with heater

Pressure Valv : Radiator filler cap. 13 lb. (12-15) type Studebaker No. 536502

Th rmostat: Choke type in water outlet on cylinder head. Studebaker No 440066 (170°) Std - 1957, No 1542838 (170°) Std - 1958, No 531470 (160°) and No 532017 (180°) Optional

Wat r Pump: Packless, sealed ball bearing type *See "Wat r Pumps" in Stud baker Special Data.*

Pump R moval - Remove shroud *See "Cooling System" in Stud bak r Special Data* Loosen generator and remove belt Remove fan-to-hub capscrews and remove fan blades and pulley Disconnect Climatizer hose, and generator adjusting arm Disconnect outlet hose and remove mounting capscrews

Radiator & Fan Shroud R moval: *See "Cooling System" in Studebaker Sp cial Data*

T mp ratur Gaug : Direct reading, electric type (Exc Scotsman & 1957 Sedans and Station Wagons) On these models, indicator should show some green with engine at normal operating temperature If indicator shows red throughout entire range, engine temperature is above normal

Dash Unit - Studebaker No 1545446 (1958 Champion), No 1542343 (Scotsman & 1957 Sedans & Station Wagons), No 1539879 (Hawks)

Engin Unit - Studebaker No 1545220 (All Models) S *"T mperature Gauges" in Miscellaneous Section*

CLUTCH

B rg & B ck. M d l 9A7 (Std. - Early Cars), **8.5A6** (Std. - Later Cars & All O.D. Cars), **9A7** (Econ-O-Miler Taxicab). *NOTE* - Different size Driven Members (discs) used with these clutches as listed below.

Borg & Beck Clutch Nos.

Model	Cover Assy.	Clutch Disc
All Exc Taxi (Std) ①	361365	①382276
All Exc Taxi (Std) ②	361369	②382768
All exc. Taxi (O.D. Cars)	361369	②382783
Econ-O-Miler Taxicab	361480	③381812

① - 9 1/8" O.D. ② - 8½" O.D. ③ - 9¼" O.D.
① - 1957 & Farly 1958 ② - Later 1958

►*CLUTCH LINKAGE PRODUCTION CHANGE TO CORRECT GEAR CLASHING (Taxicabs)* **Install new Clutch Operating Shaft and Lever Assembly, Part No 1546329 Lever radius is 2" on new parts. Assembly installed in production at Serial No G-1428648**

Pedal Adjustment: Free Travel ½-1' To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage

►*HILL-HOLDER NOTE* Check setting whenever clutch pedal adjusted and adjust Hill holder to release just as clutch engages Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever

Housing Removal Remove oil level gauge and tube Remove starter mounting screws (only) and tie starter and cables up out of the way Remove floor plate and clutch housing top capscrews Remove transmission. *See "Transmission Removal" under Transmission.* Disconnect pedal rod at operating shaft-to-release sleeve, pull operating shaft out remove sleeve Remove two bolts holding rear engine support insulator cage to crossmember Support engine at rear of oil pan (use block of wood on jack to protect oil pan). Remove crossmember. Remove two clutch housing bolts releasing exhaust pipe support bracket Loosen clamp bolt and swing bracket out of way Remove remaining housing bolts and remove housing *NOTE*–Remove dowel bolts first

►*INSTALLATION CAUTION* Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts Draw dowel bolts in place by tightening the nuts–**do not drive them into place**

Clutch Removal· Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member

SYNCHRO-MESH TRANSMISSION

Warner Model T96 (Exc. Taxicab), T90 (Econ-O-Miler Taxicab) 3-Speed Used with R10 Overdrive (Opti). *See "Warner Synchro-mesh" in Transmission Section.*

►*HARD SHIFTING INTC REVERSE (CARS WITH OVERDRIVE TRANSMISSION).* If shifting into reverse difficult with Overdrive Control in "IN" position, correct by installing new Low & Reverse Outer Shift Lever, No 1546796, and new Low & Reverse Outer Shift Lever Shaft Assembly, No 1547057. Adjust transmission control after installing parts. *NOTE* -Shift lever has shaft slot rotated 16° and cam on inner shaft lever has wider face and different contour to prevent possibility of binding. *DO NOT install thes parts on other than 1958 T,6 Transmissions.*

►*GEAR CLASHING CORRECTION (Taxicabs): See CLUTCH above*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect propeller shaft at rear universal joint flange, pull shaft to rear to disengage splined joint at transmission extension, remove shaft. Disconnect shift rods at transmission case shift levers, disconnect speedometer cable at transmission case, remove speedometer pinion. Drain transmission. Support transmission and remove capscrews mounting transmission on clutch housing. Remove clutch operating shaft, bracket, and bearing from transmission case. Move transmission straight back until main drive pinion clears clutch driven member, then lower transmission and remove from beneath car.

NOTE–On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission

OVERDRIVE

Warner R10. Governor controlled, solenoid operation with throttle controlled kick-down. *NOTE* - Relay is not used in overdrive control circuit. See wiring diagram for new control circuit.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

Removal: Remove as unit with transmission. Disconnect control wiring and cable, then proceed as for transmission removal (above).

FLIGHTOMATIC TRANSMISSION

Warner Model AS4-5H (Exc. Econ-O-Miler), AS6-7A (Econ-O-Miler Taxicab). Torque converter and hydraulically controlled three-speed planetary transmission. *NOTE* - Transmission starts in low with selector lever in "D" range

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Flightomatic" Transmission in Transmission Section.*

Lubrication: Check fluid every 1000 miles, drain and refill every 15,000 miles. Use Automatic Transmission Fluid Type "A" (container marked AQ-ATF).

►*INSPECTION HOLE COVER NOTE·* Later cars have rubber covered inspection hole cover installed over floor mat which can be removed for fluid checking without disturbing floor mat.

Checking Fluid Level–Place selector lever in "P" position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Clean all dirt and foreign material from dipstick. Apply parking brake and foot brake, and move selector lever slowly

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

from "P" position to "R" position, then back to "D" position. Remove dipstick, wipe clean, and install in transmission and **turn clockwise to lock position.** Remove dipstick and read fluid level. Add fluid to bring level to "FULL" mark on dipstick (1½ pints between "LOW" and "FULL" marks on dipstick).

Capacity - 9 qts. (Exc. Econ-O-Miler Taxicab), 9½ qts. (Econ-O-Miler). Use only Automatic Transmission Fluid Type A (in container marked AQ-ATF).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER FLIGHTOMATIC DATA: See "Flightomatic Transmission" in Transmission Section.*

UNIVERSALS

►*LATE 1957 & 1958 UNIVERSAL JOINT REPLACEMENT CAUTION:* Universal joints, with and without grease fittings were used in production on some models (some propeller shafts had both types) When replacing a universal joint, install the same type as removed

Spicer. Needle bearing cross type Three used with intermediate universal at propeller shaft support bearing on 1957 Models Two used with one-piece propeller shaft on 1958 Models.

►*UNIVERSAL LUBRICATION NOTE:* **Universals should be disassembled, cleaned, and repacked with special Universal Joint Lubricant at 20,000 mile intervals.**

Propeller Shaft & Support Bearing (1957): Two shafts used

1) Front shaft with intermediate universal yoke bolted on rear end (no slip-joint)

2) Rear shaft with slip-joint on forward end at intermediate universal

Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Special Data.*

Propeller Shaft (1958): One-piece type No center bearing

►*DRIVE LINE VIBRATION CORRECTION (Scotsman Cars with Overdrive Transmission): See Rear Axle (below).*

REAR AXLE

Spicer Model 23-1 (Exc. Econ-O-Miler Taxicab), 44-3 (Econ-O-Miler). Semi-floating, hypoid gear with Hotchkiss Drive.

See "Spicer Hypoid" in Rear Axle Section.

►*"TWIN-TRACTION" DIFFFRENTIAL NOTE:* Optl on all models. Identified by decal next to ignition switch (early cars), by emblem on deck lid (all cars) *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

►*DRIVE LINE VIBRATION CORRECTION (Scotsman Overdrive Transmission Cars before Serial No. G-1408561):* 32-40 MPH "rhythmic beat" vibration in overdrive can be corrected by installing 2° wedge shims between rear spring and axle pad. *See "Rear Axle Notes" in Studebaker Special Data for procedure. NOTE - Later cars (with modified spring pad angle) are marked by yellow paint on one spring pad and do not require this correction.*

Axle Ratios (1957)

Transmission	Standard	Optional
Standard	4.10-1	4.56-1
Overdrive	4.56-1	4.10, 4.88-1
Automatic	3.54-1	4.10-1

Axle Ratios (1958)

Model	Synchro-mesh	Overdrive
All (exc. below)	①4.10-1 (41-10)	②4.56-1 (41-9)
Scotsman Sedans	③3.54-1 (46-13)	③3.54-1 (46-13)
Econ-O-Miler Taxi	④4.09-1 (45-11)	
		Flightomatic Trans.
All Models		3.54-1 (46-13)

Twin-Traction Axle Ratios

Model	Synchro-mesh	Overdrive
All (exc. below)	⑤4.09-1 (45-11)	⑥4.55-1 (50-11)
Scotsman Sedans	⑦3.54-1 (46-13)	⑦3.54-1 (46-13)

Optional Ratios (for above tables) as follows:
① - 3.54-1, ② - 4.10-1, ③ - 4.10-1 & 4.56-1, ④ - 4.27-1, ⑤ - 3.54-1 & 4.55-1, ⑥ - 4.09-1, ⑦ - 4.09-1 & 4.55-1.

►*REAR AXLE RATIO NOTE:* Ratio is stamped on plate attached to axle by cover capscrew and also stamped on ring and pinion gears.

Backlash - .003-.006".

Axle Shaft Removal: Remove wheel, remove wheel hub (use puller J-1644-B) Take out backing plate retaining bolts, remove outer oil seal Pull backing plate out over end of axle shaft and wire plate to frame (*CAUTION*—Do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with puller HM-931

Rear Axle Assembly Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs, Remove wheels, hubs and drums. Disconnect hand brake cable, take out backing plate bolts from backing plates free hydraulic brake line from axle housing clips (do not disconnect brake line from wheel cylinders) Disconnect rear universal (wire caps or use clamp to prevent losing rollers) Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick).

End Play — .001-.006".

►*REAR WHEEL BEARING LUBRICATION CAUTION:* No lubrication plug provided on 1958 Models, but bearings are NOT lubricated for life Remove, clean, and repack bearings at 25,000 mile intervals

SHOCK ABSORBERS

Gabriel or Monroe. Direct acting, hydraulic type. Serviced by replacement. *NOTE* - Gabriel Heavy Duty Adjustable type used on Econ-O-Miler Taxicab. See Adjustment below.

►*1957-58 SHOCK ABSORBER NOISE CORRECTION:* Chuckle or similar noise may be caused by shock absorber rubber bushings and may be corrected by installing new bushings. *See "Shock Absorber Notes" in Studebaker Special Data for bushing installation.*

1957 Monroe Shocks (Stud bak r N.)

	Front	Rear
Station Wagon	1541904	1541913
Others	1541904	1541911

1957 Gabriel Shocks (Stud bak r N.)

	Front	Rear
Heavy Duty (Non-Adj.)	1541958	1541959
Heavy Duty (Adj.)	1541901	1541910

1958 Shock Absorbers (Stud bak r N.)

Model	Front	Rear
All (exc. below) Gabriel	1545055	①1545050
All (exc. below) Monroe	1545047	1545044
Econ-O-Miler Taxi Gabriel	1544410	1544411

① - No. 1545987 on Scotsman Station Wagon.

Adjustment (Econ-O-Miler) - Disconnect one end of shock absorber and collapse it fully to engage internal coupling, then rotate lower shaft until arrow on body lines up with "Soft", "Normal", or "Firm" arrow on dustcover.

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within coil springs. *NOTE* - Sedan models have variable rate front springs. These have coils closer together at one end and must be installed toward top.

See "Studebaker" in Suspensions & Wheel Alignment Section

Kingpin Inclination - 6° at 0° camber.

Caster - Neg. 1° to Neg 2½° Not more than ¾° variation between wheels.

Camber - 0° to Pos. 1°. ½° more camber favored on driver's side.

Toe-In - 1/16"-1/8".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be turned 23½-24½° (1958), 22½-23½°(1957).

STEERING

►*POWER LOSS ON LEFT TURN CORRECTION. See "Saginaw Power Steering (Not In Line)" in Steering Section*

Manual: Ross TL-12(All exc. Econ-O-Miler), **SL-54** (Econ-O-Miler & All Cars with Power Steering). *NOTE* - TL-12 is Cam & Twin Lever type. SL-54 is Cam & Single Lever (with roller stud)

See "Ross Cam & Twin Lever" in Steering Section.

Power Steering (1957): Saginaw (Not In Line) *See "Saginaw Power Steering (Not In Line)" in Steering Section.*

Power Steering (1958): Bendix Linkage Type Used with conventional steering gear *NOTE* - Power steering not available on Scotsman models *See Bendix Linkage Type Power Steering" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" in Steering Section.*

BRAKES

►*BRAKE LINE INTERFERENCE CORRECTION:* Interference may occur between brake line and exhaust pipe at point where brake line held in clip on right side of differential housing. If clip upward so that brake line above level of differential housing, remove housing screw and reverse clip so that brake line is below top of housing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Servic : Wagn r Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking lever applies rear wheel service brakes.
See "Wagner Lockheed S lf-centering Brakes" in Brake S ction.
Drum Diam t r - (Econ-O-Miler) Front 11", Rear 10"; (Others) Front 10", Rear 9".
Master Cylind r B r Diameter - 1" (All Models).
Wh el Cylind r Diam t r - (Econ-O-Miler) 1 1/16" Front, 7/8" Rear. (Others) 1" Front, 13/16" Rear.

Brak Lining: Marshall Eclipse molded lining used on all shoes. *ECON-O-MILER NOTE* - Brake shoes with heavy duty BONDED lining used in production on later cars and furnished for service.

►*1957 PRIMARY BRAKE SHOE LINING LENGTH PRODUCTION CHANGE:* Primary shoe lining length has been changed to· 8 5/32" (Front) and 7 1/4" (Rear) on later cars.

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 1/4" thick (exc. Econ-O-Miler), 7/32" (Econ-O-Miler), (3/16" on all other shoes) and is pre-ground off-center at the factory to eliminate brake squeal. This lining is applied to the full length of the shoe, and is marked "secondary" and "top" and should be installed as marked.

1957 Lining Width & Length

	Fr nt Wheel	Rear Wheel
Primary Shoes ①	2" x 10 29/32"	2" x 9 27/32"
Secondary Shoes	2" x 10 29/32"	2" x 9 27/32"

① Early Cars. For later cars See *"Production Change" above.*

1958 Lining Width & L ngth

(Champi n & Sc tsman)

	Fr nt Wh l	R ar Wh l
Primary Shoes	2" x 8 15/32"	2" x 7 9/16"
Secondary Shoes	2" x 10 53/64"	2" x 9 3/4"

(Econ-O-Miler)

Primary Shoes	2 1/4" x 9 21/64"	2" x 8 15/32"
Secondary Shoes	2 1/4" x 11 57/64"	2" x 10 27/32"

Thickness - 3/16" (exc. front wheel secondary), 1/4" front wheel secondary, (except Econ-O-Miler 7/32").

Clearance - Lock shoes against drums, then turn adjusting screw back eight notches or more as required to free drum.

Braking Power - 62% Front wheels, 38% Rear wheels.

Hill Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-holder" in Brake Section for data*

Standard Master Cylinder: On frame left side rail at base of brake pedal

Checking Fluid—Access hole in front floor pan at left corner of drivers' seat. Fluid should be maintained at level ½" below top of filler opening

Removal—Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder *(NOTE*—On cars equipped with Hill-holder, only one line is connected to master cylinder). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder Insert forward mounting bolt ing bolt to hold Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Power Unit. Used in conjunction with standard master cylinder and located under hood on left front fender apron.
See "Hydrovac Power Unit" in Brake Section.

Removal—Disconnect vacuum and brake lines, stop light wires, remove power unit-to-bracket mounting bolts

MISC. MECHANICAL

Windshield Wiper: (Champion & Silver Hawk) Auto-Lite or Bosch Electric type, (Scotsman & Econ-O-Miler Taxicab) Trico Vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electrical, with reversible motors in each window. Individual switches at each door and master switch on left front door. *See "P wer Window Regulators" in Miscellaneous Section.*

Power S at Adjusters: Two-way electric type with curved seat tracks for seat adjustment.
See "Power Seat Adjusters" in Miscellaneous Section.

MODEL IDENTIFICATION

Model	Model Designation
Comm. Cust. & Deluxe	57B(F & W)
Comm. Parkview	57B(D)
Comm. Provincial	57B(P)
President	57H(F & W)
Pres. Classic	57H(Y)
Pres. Broadmoor	57H(P)
Pres. Silverhawk	57H(C)

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers - As follows:

Assembly Plant	Commander	President
South Bend	8454101	7188901
Canada	8962601	7901501

ENGINE NUMBER: Stamped on cylinder block to left and in front of oil filler pipe.

Starting Engine Numbers — As follows:

Assembly Plant	Commander	President
South Bend	V-390001	P-39601
Canada	VC-10701	PC-1501

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. (approximately) at cranking speed (150 RPM).

VACUUM READING: Steady 18-20" at idling.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling, .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic Thermostatic type located in right bank exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plug - Champion H-11. Torque to 30 ft. lbs. or seat spark plug on new gasket finger tight, then tighten an additional ½ turn.

COIL: Delco-Remy 1115087 or 1115096.

Ignition Current - 3.8 amps. (idling).

Resistor - Delco-Remy 1931614 (1115087 Coil), 1927809 (1115096 Coil). 1.4-1.65 ohms at 75°F.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. Resistor is bypassed during cranking by lead from starter-solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110864.

Condenser — Delco-Remy 1869704. **Capacity** .18-.23 mfd.

Contact Point Set — Delco-Remy 1918148.

Breaker Gap — .013-.018".

Cam Angle - 26-33° with .016" gap.

Breaker Arm Spring Tension — 19-23 ozs.

Rotation — Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-3	700
2-4	400	4-8	800
7-9	800	14-18	1600
11-13	1125	22-26	2250

Vacuum Spark Control: Delco-Remy 1116058. Integral type.

Plunger Travel — 11/64-3/16".

Vacuum Advanc

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
8	16	10.25-11.50

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Setting — 4° BTDC with vacuum line to distributor disconnected and opening in carburetor plugged. Engine at normal idle speed.

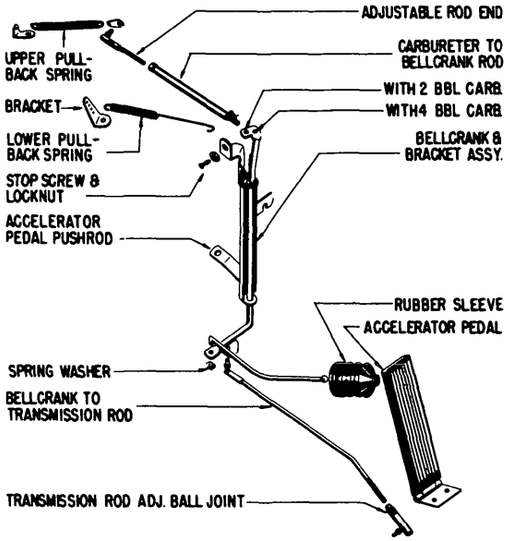
Timing Mark — "IGN" line on vibration dampener aligned with pointer on timing gear cover.

►*IGNITION TIMING CAUTION:* The manufacturer recommends that no attempt be made to time the engine except with a suitable timing light and that timing mark on vibration dampener be directly under pointer. *DO NOT SET TIMING BY THE "PING" METHOD.*

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg 2-barrel and Carter 4-barrel used as follows:*

Model	Optional	Standard
Comm. (All)	Carter	Stromberg
Pres. & Broadmoor	Carter	Stromberg
Pres. (Classic & Silverhawk)		Carter



►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required. See AIR CLEANER below.*

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:

1) Adjust engine idle speed to 550 RPM with transmission selector lever in "N" (Neutral) position. Set the stop on the bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge). After stop is adjusted, hold in this position. Make sure that the carburetor-to-bellcrank rod ball joint is in the outer hole of the bellcrank pad (away from centerline of engine), and that the ball joint is on the underneath side of the lever.

2) Adjust the carburetor-to-bellcrank rod until the idle speed adjusting screw just begins to leave its stop.

3) After stop is adjusted, hold in this position. *(NOTE - Make sure that carburetor-to-bellcrank rod ball joint is in the inner hole of bellcrank pad on cars with 2-barrel carburetors, and in the outer hole on cars with 4-barrel carburetors. In both cases, the ball joint must be located on the underneath side of bellcrank).* Adjust the carburetor-to-bellcrank rod until the idle speed screw on carburetor throttle lever just begins to leave the stop. Stop the engine and remove the 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by the foot brake. Adjust length of the main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs. pressure on gauge (95-100 lbs. pressure on cars with heavy duty transmissions such as used on police cars). Stop the engine, remove gauge, and install the pipe plug in side of transmission.

FLIGHTOMATIC TRANSMISSION THROTTLE LINKAGE

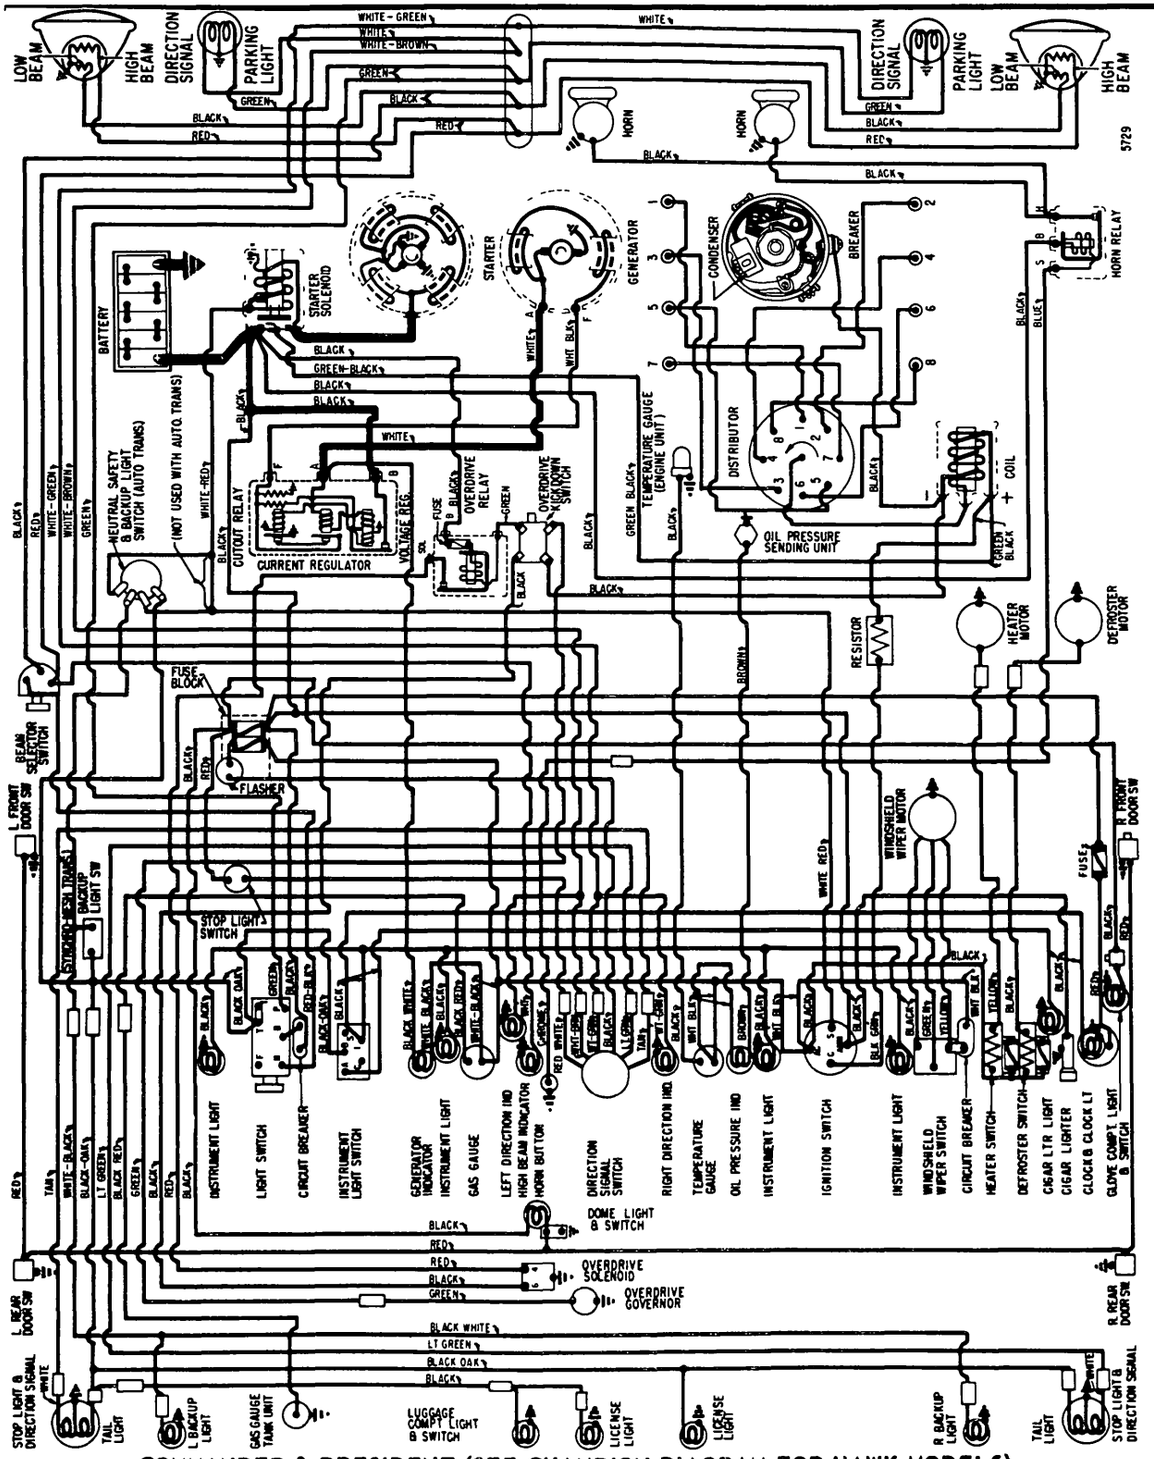
THROTTLE RETURN CHECK (4-BARREL CARBURETOR) ADJUSTMENT: Loosen throttle return check assembly screw locknut and adjust the return check in the bracket until plunger just breaks contact with with tab on throttle lever. Mark position of check assembly relative to bracket, then turn check assembly **1¾ to 2 turns toward lever.** Tighten locknut.

THROTTLE RETURN CHECK (2-BARREL CARBURETOR) ADJUSTMENT: Place idle speed adjusting screw on fourth step of fast idle cam (lowest step being No. 1). Adjust throttle return check screw until it just contacts the pad on throttle shaft lever.

STROMBERG WW

Stromberg Series WW, Code 6-117A. Throttle return Check used on all models with Flightomatic Transmissions.

►*CARBURETOR 6-117A & B CUTTING OUT ON LEFT TURN CORRECTION: See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section.*



►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting — Initial setting, 1¾ turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed — 550-600 RPM (with selector lever in neutral "N" position on Flightomatic).

Float Level — 3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool

CONTINUED FROM PRECEDING PAGE

T-24733 (Studebaker No. KMO-269-S5).

Acc l rating Pump – Center hole – Normal Setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: With choke valve closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required

Automatic Choke Setting: 1 point lean with arrow on cover one notch lean from boss on housing.

Throttle Linkage Adjustment: *See CARBURETOR above.*

► *OTHER DATA: See "Stromberg WW Carburetors" in Carburetion Section*

CARTER WCFB

Carter WCFB 2219SB (Std. & O.D.), 2214SB (Aut. Trans.).

► *MANIFOLD FUEL DISTRIBUTION. Carburetor RIGHT barrels feed Cyl 1-4-6-7, LEFT barrels 2-3-5-8*

Idle Setting - ½-1½ turns open Turn screws out for richer mixture

Idle Speed - 550-600 RPM (all models)

Throttle Linkage Adjustment: *See CARBURETOR above*

► *OTHER DATA: See "Carter WCFB Carburetors" in Carburetion Section*

CARB. EQUIPMENT

Fuel Pump: Carter No M2211S or M2573S Fuel Only

Pressure - 3½-5½ lbs (All models)

See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: Electric type

Dash Unit - Studebaker No 1542342 (Sedans & Sta Wgn), No 1539880 (Hard Top "Hawk")

Tank Unit - Studebaker No 1540262 (Sedans), No 1540263 (Coupes Hard Tops & Sta Wgns)

See "Fuel Gauges" in Carburetion Section

Air Cleaner: DRY TYPE (Plasticized Paper) standard on all Commander Models President & Broadmoor OIL BATH TYPE Sandard on President Classis & Silver Hawk, Optional on all other models

► *DRY TYPE FILTER CAUTION:* Remove filter element every 1000 miles and shake thoroughly to remove dirt DO NOT wash element or blow out with compressd air Replace filter every six months or 10,000 miles

BATTERY

Willard HDW-2SM-50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).

Battery Ground – Negative.

► *CAUTION: This is reversed from previous models.*

Engine Ground – Right front of engine.

STARTER

Delco-Remy 1107650 (Synchro-mesh & Overdrive), 1107651 (Flightomatic). *12 Volt.* **Armature 1933789.**

Drive – Bendix "Folo-thru" type.

Rotation – Counter-clockwise at commutator end.

Brush Spring Tension – 35 ozs. minimum

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Magnetic type switch, controlled by combination Ignition & Starting Switch. Turn key full right to start engine.

Automatic Transmission Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in "N" or "P" position.

Adjustment: *See "Flightomatic" Transmission in Transmission Section.*

GENERATOR

Delco-Remy 1102003. *12 Volt.* **Armature 1923535.**
Maximum Charging Rate – *See Voltage Regulator.*

Performance Data - Cold

Amperes	Volts	RPM
30	14.0	2240

Brush Spring Tension - 28 ozs.
Field Current - 1.69-1.79 amperes at 12 volts and 80°F.
Rotation – Counter-clockwise at commutator end.
B lt Adjustment: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs. on scale will lift belt ½".

REGULATOR

Delco-Remy 1119123. *12 Volt. NOTE - Regulator is "1119000 Series". Specifications below are for "Normal" Settings.*

Cutout Relay

Cuts In – 11.8-13.5 volts (hot).
Contact Gap – .020"
Air Gap – .020" with contacts just closed.

Voltage Regulator

Setting – 13.8-14.8 volts (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

Current Regulator

Setting – 27-33 amps. (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Directional Signal: *See Electrical Section.*
Light Switch Removal: Remove switch retaining nut. Push switch sleeve back into panel and disconnect wires from switch.
St p Light Switch: Located on inner side of left frame rail just forward of steering gear housing. On models with power brakes, switch is screwed into hydraulic cylinder of power brake unit.
FUSES: Body & Stop Lights 15 amps. in block in bracket behind instrument panel.
Direction Signal - 15 amps. in block in bracket behind instrument panel.
Overdriv - 15 amps. in relay on dash panel.
Cl ck - 1 amp. in lead behind instrument panel
CIRCUIT BREAKERS: H ad, Parking, Tail & Instrum nt Lights - 18 amps. on headlight switch.
Windshield Wiper - 5 amps. in wiper switch
Horn Relay: Delco-Remy No. 1116781.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting and part of air conditioning equipment or lines for access to engine, See "Air Conditioning Service Cautions" in Misc. Sect.*

ENGINE SPECIFICATIONS: "Sweepstakes 259" & "Sweepstakes 289". V8, valve-in-head.

Engine	Bore	Stroke	Displacement
259	3-9/16"	3-1/4"	259.2 cu. ins.
289	3-9/16"	3-5/8"	289 cu. ins.

Engine	Compr. Ratio	Rated HP	Dev. HP
259	8.0-1 ①	40.6	②
289	8.0-1 ①	40.6	③

① – 7.5-1 Optional
② – 180 HP at 4500 RPM with 2-Barrel Carburetor, 195 HP at 4500 RPM with 4-Barrel Carburetor.
③ – 210 HP at 4500 RPM with 2-Barrel Carburetor, 225 HP at 4500 RPM with 4-Barrel Carburetor.

Compression & Vacuum Reading – *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

OIL PAN REMOVAL: *See "Oiling System" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

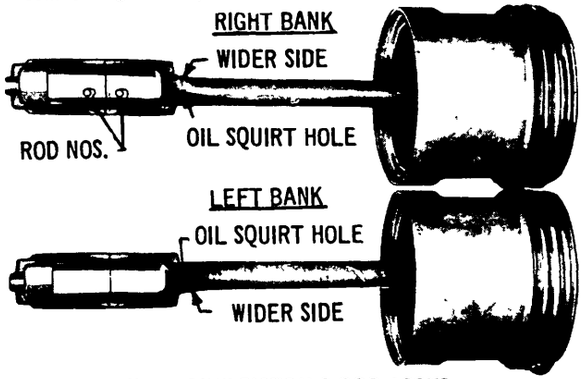
Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*

►*PISTON REPLACEMENT CAUTION: "259" & "289" Engine pistons are NOT INTERCHANGEABLE. "Flat Head" piston used on 259" Engine. "Concave Head" Piston used on 289" Engine.*

Weight - 16.2 ozs.
Removal - Pistons & rods remove from above.
Fitting New Pistons: Clearance - Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 8-13 lbs.
Replacement Pistons: Std. size & .010", .020", .030", .040" oversize. Pistons furnished with fitted pins.
Installing Pistons: Install piston on rod so that solid side of piston is on same side as oil hole in bearing bore. Install piston in cylinder with the slot toward the left side of engine. *See Rod Installation.*

PISTON PINS

Locked in rod by tapered pin and locknut.
Diam t r – .8741-.8745". **L ngth** – 3 1/16".
Cl aranc in Pist n – .0001-.0003" (selective fit). Light finger push fit at 70° F.
R plac m nt Pins: Std. size & .0025", .005" oversize.
R m val & Installati n: *See "Piston Pins" in Studebak r Sp cial Data.*



PISTON RINGS

Ring	Width	End Gap	Sid Cl aranc
Compression	.077-.078"	.008-.016"	.002-.005"
Oil	.1855-.1865"	.088-.016"	.0015-.005"

Replacement Rings: Sets of Std., .020", .030" and .040" Oversize.
See "Piston Rings" in Studebak r Special Data.
Installing Rings: Install compression rings with chamfered side of ring upward. Gaps of inner and outer oil rings must not come at same point.

CONNECTING RODS

Length - 6 5/8" center-to-center. **W ight** - 23.71 ozs.
Crankpin J ournal Diameter - 1.99925-2.00025".
Lower Bearing - Interchangeable. Steel backed, micro-babbitt lined type. No shims.
Clearance - .0005-.002". **Sideplay** - .008-.013".
Replacement Bearings: Std., .001", .002", .010" and .020" Undersize.
Installing Rods: Number on rod and bearing cap must be on same side. Rod is installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods), and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear on right bank, toward front on left bank.

V8 ENGINE PISTON & ROD ASSYS.

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

►*REPLACEMENT ROD IDENTIFICATION NOTE:* Replacement rods are unnumbered. To identify, hold rod upright with oil hole toward you. Wide part of offset will be to right on left bank rods to left on right bank rods.

CRANKSHAFT

Journal Diameter–2.4995-2.5000".
Clearance–.0005-.0025".
Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.
End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

shims between thrust plate and face of main bearing journal. **Endplay**—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

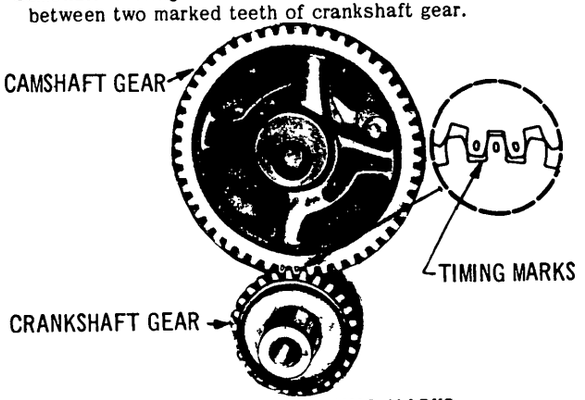
CAMSHAFT

Journal Diameters—(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".

Bearings—Precision type, steel backed babbitt lined.

Clearance — .00075-.00225" (No 1), .001-.00275" (Others).

End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.



Endplay—.003-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.

Backlash—.001-.003".

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

V8 ENGINE VALVE TIMING MARKS

Engine Front Cover Removal: *See "Engine Front Cover" in Studebaker Special Data.*

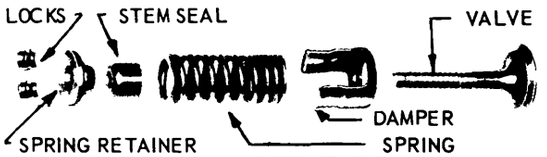
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

►*ROCKER ARM ADJUSTING SCREW PRODUCTION CHANGE* Effective Eng. No V-396500 (259"), P-45703 (289") & PS-2415 (Golden Hawk) rocker arm adjusting screw No 1541806, entered production. Screw has recessed head to prevent pushrod from slipping out of socket if a valve sticks, and to prevent bent pushrods.

Tappet Clearance: 023-025" (Hot) 025-027" (Cold)

Valve	Head Diam.	Stem Diam.	Stem Clearance
Intake	1-21/32"	11/32"	.0015-.0035"
Exhaust	1-17/32"	11/32"	.0015-.0035"



Seat Angle—45° (all valves) **Lift**—23/64" (all valves).

Valve Seat Width—1/16-3/32".

Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.

Valve Springs: Single spring used. Replace spring if 10% weaker than pressure given in specifications below. *NOTE* - Damper installed on lower (close-coiled) end of all springs.

Valve Spring Specifications - 106-112 lbs when compressed to 1 43/64".

V8 ENGINE VALVE ASSY.

Valve Guides Pressed in head from underside.

Guide Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore). See "Valve System" in Studebaker Special Data.*

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std. size, .001", .005" oversize.

►*CAUTION—When lifters removed, make sure they are installed in original positions.*

Rocker Arms *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 11° BTDC. Close 54°36' ALDC.

Exhaust Valves—Open 51°36' BLDC. Close 14° ATDC.

Valve Timing Check—Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 qts. (add one quart when filter changed).

Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.

Pressure Regulator Valve — Located on right side at front of engine block slightly above crankcase flange.

Oil Pressure Indicator: Coupe & Hardtop Models - Direct reading, non-electric type gauge

Sedans & Station Wagons - Indicator light on instrument panel

Oil Pressure Switch - Studebaker No 1539898

Oil Pump: Spur gear type. Mounted on rear main bearing cap and driven by camshaft gear.

Pump Removal, Overhaul & Installation: *See "Oiling System" in Studebaker Special Data.*

Oil Filter: Partial Flow. Either replaceable element or disposable type used. Replace filter or element at 5000 mile intervals or sooner if needed.

Replacement Filter Element: Replaceable Element Studebaker No SP 50090 (Filcron) or No 50053 (Waste)

Disposable Unit Studebaker No 1542739

Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at rear of engine (air outlet).

COOLING

Water Capacity: 17 qts. (18.5 with heater)

Pressure Valve: Radiator filler cap 13 lb. type

Thermostat: Choke type. Studebaker No 1540787 (170°) Std. No 533247 (160°) and No 533257 (180°) Optl.

Water Pump: Packless sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*

Pump Removal: Drain cooling system. Loosen generator, remove belt. Remove fan-to-hub screws and remove fan and pulley. On Coupe and Hardtop models, remove shroud. Remove four capscrews retaining pump cover to water pump manifold. Remove pump.

Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*

Temperature Indicators: Coupe & Hardtop Models - Direct reading electric type gauge

Sedans & Station Wagons - Red-green indicator on instrument panel. Electric type. When indicator shows any green, engine is operating at normal temperature. If it turns red through entire range, engine operating temperature is above normal.

Dash Unit - Studebaker No 1542343 (Sedans & Station Wagons), No 1539879 (Coupes & Hardtops)

Engine Unit - Studebaker No 1539876 (All Models). *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Borg & Beck. Single plate dry disc type.

Series	Clutch Model	Assy No.	Disc No.
Commander	10A7	361454	382650
Pres. "Classic"	10A6	361456	382389
Pres. (Others)	10A6	361386	382389
Golden Hawk	10.5A8	361451	382643
Packard	10.5A8	361451	382643

See "Borg & Beck" in Clutch Section.

Pedal Adjustment: Pedal free travel 1/2-1". To make adjustment, loosen locknut securing clevis to rod connecting release shaft lever to clutch operating shaft lever and remove the clevis pin. Turn clevis to shorten or lengthen rod as necessary for correct pedal free travel. *NOTE—If car is equipped with "Hill-Holder", adjust "Hill-Holder" operating rod as outlined in Brake Section.*

Clutch Housing Removal. Remove starter. Remove floor plate and clutch housing top capscrews. Remove clutch operating shaft. Remove transmission (see Synchro-mesh Transmission Removal below). Remove two bolts holding engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a block between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember. Remove support crossmember-to-frame bolts and remove cross member. Remove the two clutch housing bolts retaining exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or capscrews and remove clutch housing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Clutch R moval. Remove clutch housing (above), remove six screws evenly to release pressure, litt off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model T86 (Commander), T86E (President). T85 with Overdrive (Golden Hawk and Packard). *See "Warner Synchro-mesh Transmission" in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

R moval: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscre vs which hold transmission case to clutch housing. Remove clutch operating shaft bracket, and bearing from transmission case. Move case rearward until the main drive pinion clears clutch pressure plate and remove unit from car.

OVERDRIVE

Warner R10 Type (Part of T85 & T86E Trans.). Governor controlled, with electric solenoid operation and throttle controlled "kickdown"

See "Warner R10" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

R moval: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

FLIGHTOMATIC TRANSMISSION

Hydraulic torque converter and a hydraulically controlled three-speed planetary type transmission which provides automatic operation in "D" range and additional "Lo", "R", and "P" ranges which are controlled manually. In "D" position, the car starts in low gear and progresses to intermediate and high as car speed is increased.

► *"NO REVERSE" CORRECTION: See "Flightomatic" Transmission in Transmission Section.*

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic" Transmission in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Flightomatic" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A" (marked AQ-ATF on container).

Checking Fluid Level – Place selector lever in "P" position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Apply parking brake and foot brake, move selector lever slowly from "P" position to "R" position, then back to "D" position. Remove dipstick and read fluid level. Add fluid to bring level to "FULL" mark on dipstick (1½ pints between "LOW" and "FULL" marks on dipstick)

Capacity - 9 qts Use Automatic Transmission Fluid Type "A" (marked AQ-ATF on container)

Throttle Linkage Adjustment: *S CARBURETOR abov*

► *OTHER FLIGHTOMATIC DATA: See "Flightomatic" Transmissi on in Transmission Section.*

UNIVERSALS

► *LATE 1957 & 1958 STUDEBAKER UNIVERSAL JOINT REPLACEMENT CAUTION:* Universal joints, with and without grease fittings were used in production on some models (some propeller shafts had both types). When replacing a universal joint, install the same type as removed.

Spicer. Needle bearing cross type. Three used, with intermediate universal at propeller shaft support bearing on crossmember.

Propeller Shaft & Support Bearings: Two shafts used.

1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal: *See "Propeller Shaft Notes" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive *See "Spicer-Hypoid" in Rear Axle Section*

► *TWIN-TRACTION DIFFERENTIAL NOTE:* Twin-Traction differential is optional with same gear ratios as conventional differential For Service Information *See "Spicer Power-Lock Differential" in Rear Axle Section*

► *TWIN-TRACTION REAR AXLE IDENTIFICATION NOTE:* Cars with Twin-Traction Differential will have a Red Sticker on front door rear face just above door lock and small tag attached to differential cover screw with the letter "T" stamped on it.

Rear Axle Ratio: Rear axle ratio stamped on plate attached to axle by cover cap screw and also on ring and pinion gears.

Standard Ratios

Series	Std.	O.D.	Auto.
Commander	3 54-1	3 92-1	3 31-1
Pres. (Exc.4-Dr.Classic)	3 54-1	3 92-1	3 31-1
Pres. (4-Dr. Classic)	3 54-1	4 09-1	3 31-1
Golden Hawk	4.27-1		3.31-1
Packard Clipper	4.27-1		3.31-1

Optional Ratios

Series	Std.	O.D.	Auto.
Commander	3.92-1	①	3.07-1
Pres.(Exc.4-Dr.Classic)	3.92-1	②	3.07-1
Pres.(4-Dr.Classic)	3 92-1	③	3.07-1
Golden Hawk		④	
Packard Clipper		⑤	⑥

① - 3.54-1, 4.27-1.
② - 3.54-1, 4 27-1, 3.73-1, 4.09-1.
③ - 3.54-1, 4.27-1, 3.73-1.
④ - 3.54-1, 3.92-1, 3.73-1, 4.09-1, 4 55-1
⑤ - 3.92-1, 4.55-1.
⑥ - 3.07-1, 3 54-1.

Backlash—.003-.006".

Axl Shaft R m val: Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way *(CAUTION*—Do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

Rear Axle Assembly Removal: Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect brake pipes at wheel cylinders, remove backing plate bolts from both backing plates. Remove brake pipe clamps and capscrew which holds brake pipe tee to housing, remove brake pipe from housing. Remove backing plate and shims (suspend from frame). Remove rear universal joint U-bolts and nuts, disconnect rear propeller shaft and move to one side. Remove rear spring U-bolts and disconnect shock absorbers from spring plate. On President models, disconnect stabilizer shaft from spring plates. Remove rear axle assembly.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003" .005" .010" .030" thick). **Endplay** – .001-.006".

SHOCK ABSORBERS

► *1957 STUDEBAKER SHOCK ABSORBER "CHUCKLE" OR SIMILAR NOISE CORRECTION: S Stud bak r Special Data.*

Monroe, Delco or Gabriel. Direct acting, hydraulic type Serviced by replacement *NOTE* - Heavy Duty shocks are Gabriel

Monroe Shocks (Studebak r N .)

	Front	R ar
Clipper	1543702	1543704

	Front	R ar
Coupes & Hardtops	1539986	1539996

Gabriel Shocks (Stud baker No.)

	Front	R ar
Non-Adjustable	1541958	1541959
Adjustable	1541901	1541910

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs.

See "Studebaker" in Suspensions & Wh l Alignm nt Section

► *"VARIABLE RATE" FRONT SPRING INSTALLATION CAUTION:* This type used on sedan models Install with closed coils at the top and the coil ends toward the inside (centerline) of car

Kingpin Inclination - 6° at 0° camber

Caster - Neg 1° to Neg 2½° Not more than ¾° variation between wheels

Camber - 0° to Pos 1° ½° more camber favored on driver's side

Toe-In - 1 16-1/8" **Adjust right hand ti rod nly** for toe-in after left hand tie rod has been adjusted for

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.

RHD Car Not - Make toe-in adjustments at left hand tie rod.

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 22½°-23½°

STEERING

Manual: R ss Mod l SL-54 Cam & Single Lever Roller Stud. Roller stud mounted on tapered roller bearings. *See "Ross Cam & Singl Lever" in Steering Section.*

Pow r Steering: Saginaw (Not l n Line). *See "Saginaw Power Steering (N t In Line)" in Steering Section.*

►*POWER LOSS ON LEFT TURN CORRECTION: See "Saginaw Pow r Steering (Not in Line)" in Steering S ction*

Steering Linkag : *See "Steering Linkage" in Steering S ction.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Singl L ver" in Steering Section.*

Steering G ar R m val: *See "Ross Cam & Single Lever" in Steering S ction.*

BRAKES

Wagn r L ckh d Hydraulic. Self-centering (with Bendix type shoes). Parking brake applies rear wheel service brakes.

See "Wagn r Lockh ed S lf-Centering" in Bra ke Section.

Drum Diam t r - 11" (Front), 10" (Rear).

Wh l Cylind r Diam t r - 1 1/16" (Front), 7/8" (Rear).

Braking P w r - 62% (Front), 38% (Rear).

►*PRIMARY BRAKE SHOE LINING LENGTH PRODUCTION CHANGE:* Primary shoe lining length has been changed to: 8 5/32" (Front), and 7¼" (Rear) on later cars.

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeak. This lining is applied to the full length of the shoe and is marked "secondary" and "top" and should be installed as marked.

Lining Width & Length

	Front Wheels	Rear Wheels
Primary Shoes ©	2¼" x 12"	2" x 10 29/32"
Secondary Shoes	2¼" x 12"	2" x 10 29 32"

© - Early cars only. For later cars, see Production Change Note above.

Thickness - 3/16" (all except front wheel secondary). 7/32" (front wheel secondary).

Clearance—Lock shoes against drum with adjusting screw, then back off adjusting screw 8 notches, or more notches as required to free drum.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid—Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal—Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder.

(NOTE - One line with Hill-holder). Remove the brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to Hill-holder while master cylinder is off car.

P w r Brak s: Hydr vac P w r Unit. Used with standard master cylinder.

S "Hydr vac P w r Unit" in Brak S ction.

►*POWER BRAKE NOISE CORRECTION: See "Hydrovac Power Unit" in Brake Section.*

Checking Fluid—Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit—Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

Hill Holder: Used on Synchro-mesh and Overdrive Transmission cars. *See "Hill-Holder" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers: Auto-Lite or Bosch. Electric type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electrical, with individual reversible motors in each window. Control switches at each door with a master control switch located on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type with curved seat tracks for seat adjustment (seat raises and lowers with a tilting action). *See "Power Seat Adjusters" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	M d l Id ntificati n
Packard Clipper, Town Sedan	57L-Y8
Packard Clipper, Country Sedan	57L-P8
Studebaker Golden Hawk	57H-K7

SERIAL NUMBER: Stamped on plate attached to left front hinge pillar post.
Starting Serial Number – (Packard) 57L-1001, (Studebaker) 6,100,001.

ENGINE NUMBER: Stamped on machined pad at left of oil filler tube mounting on top of cylinder block.
Starting Engine Number – (Packard) LS-101, (Studebaker) PS-1001.

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM.
VACUUM READING: Steady 18-21" at idling speed.
VALVE TAPPET CLEARANCE: .023-.025" (Hot), .025-.027" (Cold).
MANIFOLD HEAT CONTROL: Dual exhaust used. Automatic thermostatic type control valve located in right bank exhaust manifold outlet. When control valve is closed, most exhaust gases are discharged through left exhaust pipe.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders – RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .033-.038".
Spark Plug – Champion H-10. 14 mm. Torque to 25-30 ft. lbs.
►*PACKARD AIR CONDITIONED CAR SPARK PLUG REMOVAL:* On RIGHT bank, remove air cleaner, then remove inner rear bolt retaining compressor base to support bracket. This bolt is directly above No. 1 plug. Remove plug with a deep 3/8" drive - 13/16" socket. Then remove remaining three plugs. On LEFT bank, remove battery, then remove plugs.

COIL: Delco-Remy 1115087 or 1115096.
Ignition Current - 3.8 amps. (idling).
Resistor - Delco-Remy 1931614 (1115087 Coil), 1927809 (1115096 Coil). 1.4-1.65 ohms at 75°F.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch to coil Resistor is by-passed during cranking by lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110864.
Condenser – Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set – Delco-Remy 1918148.
Breaker Gap – .013-.018".
Cam Angle – 28-34°.
Breaker Arm Spring Tension – 19-23 ozs.
Rotation – Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-5	700
2-4	400	4-8	800
7-9	800	14-18	1600
11-13	1125	22-26	2250

Vacuum Spark Contr l: Delco-Remy 1116058. integral type.
Plung r Travel – 11/64-3/16".

Vacuum Advanc

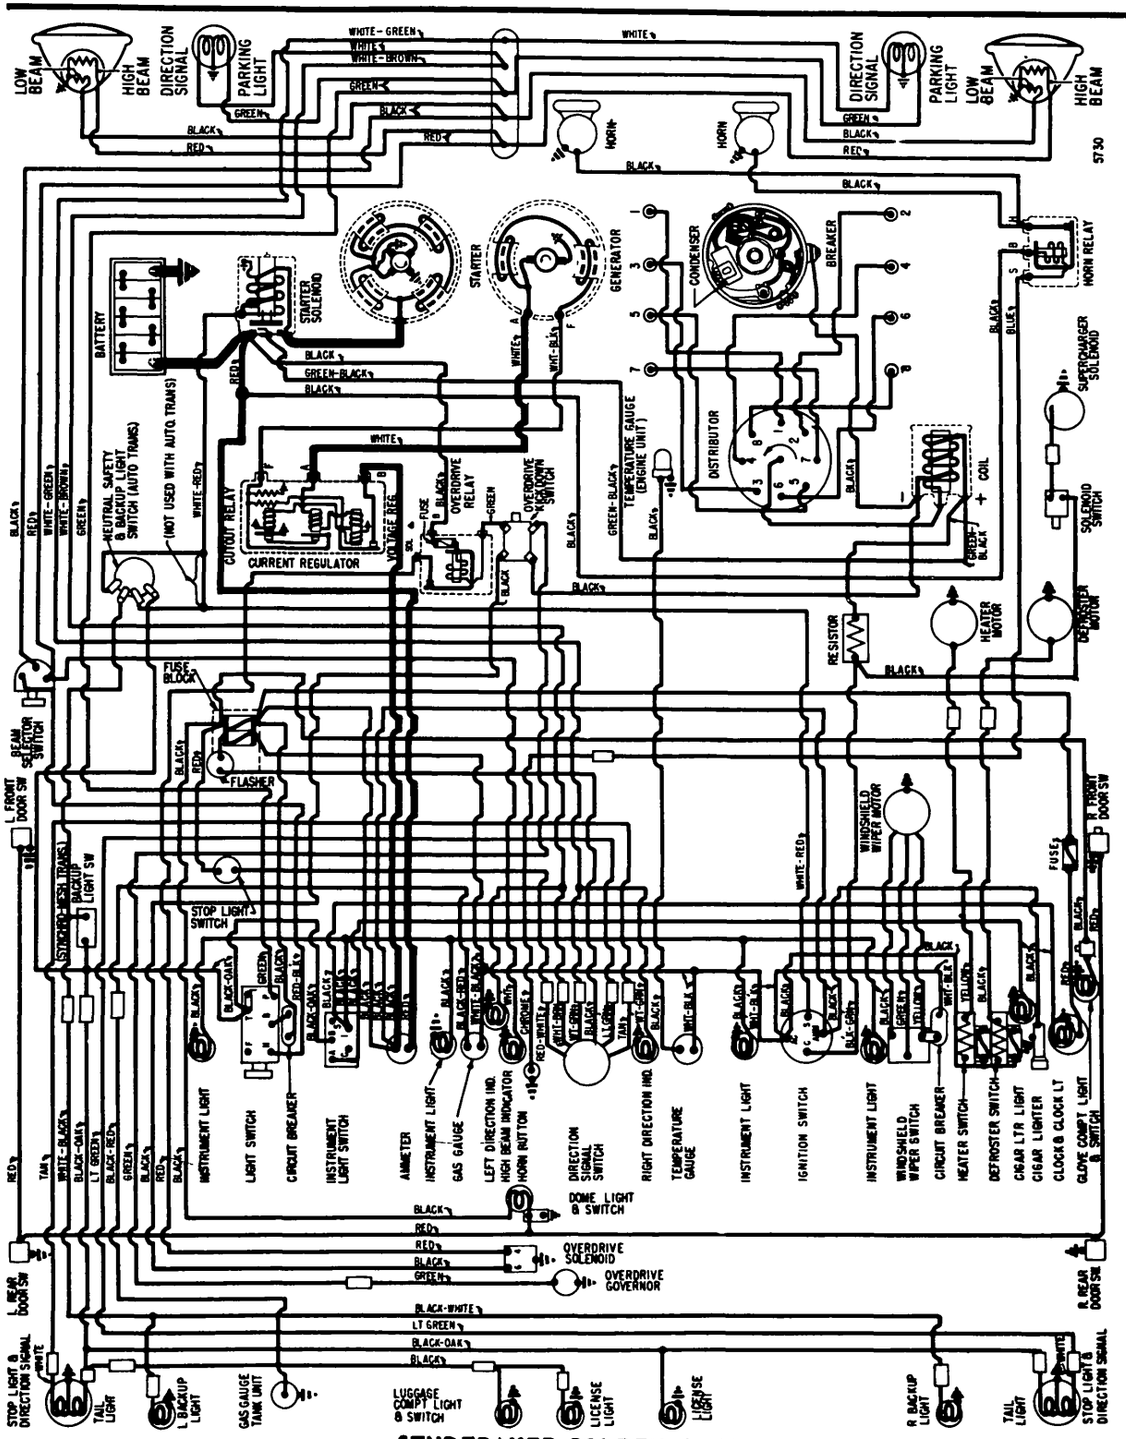
Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
8	16	10.25-11.50

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Setting – 4° BTDC with distributor vacuum line disconnected and carburetor connection plugged. Engine should be idled at 600 RPM. *NOTE –* Reset idling speed to 550 RPM after timing completed.
Timing Mark – "IGN" line on vibration dampener aligned with pointer on timing gear cover.

CARBURETOR



Stromberg WW 6-121, A, B, C (Early), 6-122 (Later).
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.*
►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required. See AIR CLEANER below.*
►*FUEL PUMP NOTE:* Carter M2573-S Pump used but is modified to accommodate a supercharger. Pump is provided with fitting in cover to permit supercharger pressure to act on diaphragm to increase fuel pressure as required. Pump does not have vent hole and uses a different diaphragm spring.
►*EARLY CARBURETOR "IDLE SETTING" & "IDLE SPEED" NOTE:* To reach adjusting screws on early model carburetors, remove two pipe plugs in forward side of air chamber base (IDLE SETTING), left rear of air chamber cover (IDLE SPEED). Use flexible screwdriver through plug openings. Later model carburetor has extensions for adjusting Idle Setting and Idle Speed. Adjusting screw is outside cover.
►*ENGINE STALLING (Left Turn) CORRECTION & CHANGES TO IMPROVE PERFORMANCE & ECONOMY:* Install New Type Air Horn Gasket No. 1543362 and Baffle No. 1543363 (Baffle between float and float needle valve), to correct left turn stalling. To improve Performance and Economy a 1/4" hole placed in choke butterfly, Choke Stove-to-Carburetor pipe shortened 1-1/4" and choke setting changed to Center on Index Mark. Change in tension of Vacuum Power Piston assembly spring improves economy.
►*HOT ENGINE HARD STARTING CORRECTION: See "Stromberg WW Carburetors" in Carburetion Section.*
Idle Setting – Initial setting, 3/4-1 turn open. Final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.
Idle Speed - 575 RPM with transmission in neutral. *NOTE* - This supersedes previous setting of 550 RPM and is to correct hard starting when engine hot.
Float Level – 7/32" from top edge of bowl to top of float with needle valve seated (Guage J-6646).
Accelerating Pump – Center hole – normal setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.
Fast Idl S tting: Set engine idle speed at 550 RPM. Stop engine, Close choke valve, back off fast idle screw until Idle Speed screw just contacts stop, the turn fast idle screw in 7½ turns. This will give a .030-.031" throttle valve opening.
Aut matic Ch k S tting: One point lean with arrow on cover one notch lean from boss on housing (Early Cars), Centered on Index (Later Cars with new type choke).
Throttle Return Check Adjustm nt: Remove carburetor air chamber cover. Loosen return check assembly screw locknut. Adjust assembly in bracket until plunger just breaks contact with tab on throttle lever. Mark position of check assembly with relation to bracket, then turn check assembly 1¾-2 turns toward lever. Tighten locknut, install cover.
Throttle Linkage Adjustment: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:
1) Adjust engine idle speed to 550 RPM with transmission selector lever in "N" (Neutral) position. Set the stop on the bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge. After stop is adjusted, hold in this position. Make sure that carburetor-to-bellcrank rod is in the outer hole of bellcrank pad (away from centerline of engine), and that ball joint is on the upper side of bellcrank lever.
2) Adjust carburetor-to-bellcrank rod until idle speed screw on carburetor throttle lever just begins to leave the stop. Stop the engine and remove the 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by the foot brake. Adjust length of the main bellcrank-to-transmission throttle valve outer lever rod to obtain 95-100 lbs. pressure on gauge. Stop the engine, remove gauge, and install the pipe plug in side of transmission.
►*OTHER DATA: See "Stromb rg WW Carbur tors" in Carburetion Section.*
FUEL PUMP PRESSURE: 6-7 lbs.

SUPERCHARGER

McCulloch VS-57S. Variable ratio type. Mounted on bracket located on top of engine water pump manifold at water outlet opening.
►*SUPERCHARGER AIR CHAMBER BASE AND COVER PRODUCTION CHANGE:* Vent valves removed and Idle Mixture Adjusting Screw Extensions Part No. 1542985 (Right), 1542986 (Left) added starting with Engine No. PS-2197 and Serial No. 6101154. Drain Pipe added in base now serves as drain and vent, and used starting with Engine No. PS-2375 and Serial No. 6101368. To replace Base Assembly No. 1542839 on engines prior to No. PS-2375, add Base Drain Pipe Assembly No. 1543107, Pipe Nipple base End No. 1543108 and Drain Pipe-to-Timing Gear Cover Clip No. 182317.
►*AIR CHAMBER VENT VALVE "FLUTTER" AT IDLE SPEED:* When "Flutter" not caused by insufficient supercharger output or too slow an engine idle, check "REST" position of Vent Valve. Distance from top of valve to base or cover should be 1/4". To adjust, bend Vent Valve Flat Spring.
Kick-down Switch Adjustm nt: Loosen locknuts on each side of switch bracket. With wide open throttle, switch

CONTINUED ON NEXT PAGE

Form 35 A

STUDEBAKER GOLDEN HAWK

CONTINUED FROM PRECEDING PAGE

plunger should be depressed and auxiliary throttle outer lever should rest against threaded sleeve of the kick-down switch.

Belt Tensioning Check: With engine at rest or idling, belt should be in bottom of groove (high blower position). With engine running at approximately 1500 RPM, belt should start to leave bottom of groove and begin to climb up. With engine at 3500 RPM (no l ad), belt should be running near top of pulley (low blow r position). With engine at 3500 RPM, manually operate kick-down switch. Belt should go immediately to bottom of pulley groove (high blower position). Releasing kick-down switch should allow belt to return immediately to top (low blower position).

Lubrication: Capacity – 8 ozs. of "Type A" automatic transmission fluid.

Checking Fluid Level – Check oil level every 1000 miles. Maintain oil level between two punch marks on dipstick. Drain and refill every 15,000 miles.

► *OTHER DATA. See "McCulloch Supercharger" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter No. M2623S. Fuel Only.
Pressure - 5-7 lbs.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge (Studebaker Golden Hawk): Direct reading electric type.
Dash Unit - Studebaker No. 1539880.
Tank Unit - Studebaker No. 1542895.
See "Fuel Gauges" in Carburetion Section.

Gasoline Gauge (Packard): King-Seeley "CV" electric type with Gauge Voltage Regulator.
Dash Unit - K-S No. 49546 (Studebaker No. 6484332).
Tank Unit - Studebaker No. 1543524 (Sedans), 1543616 (Station Wagon).
See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY TYPE (Plasticized paper).

► *DRY TYPE FILTER CAUTION:* Remove filter element every 1000 miles and shake thoroughly to remove dirt. DO NOT wash element or blow out with compressed air. Replace filter every six months or 10,000 miles.

BATTERY

Willard HDW-2SM-50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground – Negative.
Engine Ground - Rear of engine to dash.

STARTER

Delco-Remy 1107650 (Synchro-mesh & Overdriv), 1107651 (Flightomatic). *12 Volt.* **Armature 1933789.**
Drive – Bendix "Folo-thru" type.
Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 35 ozs. minimum

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Magnetic type switch, controlled by combinati n Ignition & Starting Switch. Turn key full right to start engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Aut matic Transmissi n Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in "N" or "P" position.

Adjustment: *See "Flightomatic" Transmission in Transmission Section.*

GENERATOR

Delco-Remy 1102003. *12 Volt.* **Armature 1923535.**
Maximum Charging Rate – *See Voltage Regulator.*

Performance Data - Cold

Amperes	Volts	RPM
30	14.0	2240

Brush Spring Tension - 28 ozs.
Field Current - 1 69-1.79 amps. at 12 volts and 80°F.
Rotation – Counter-clockwise at commutator end.

B it Adjustment: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs. on scale will lift belt ½".

REGULATOR

Delco-Remy 1119123. *12 Volt. NOTE - Regulator is "1119000 Series". Specifications below are for "Normal" Settings.*

Cutout Relay

Cuts In – 11.8-13.5 volts (hot).
Contact Gap – -020"
Air Gap – .020" with contacts just closed.

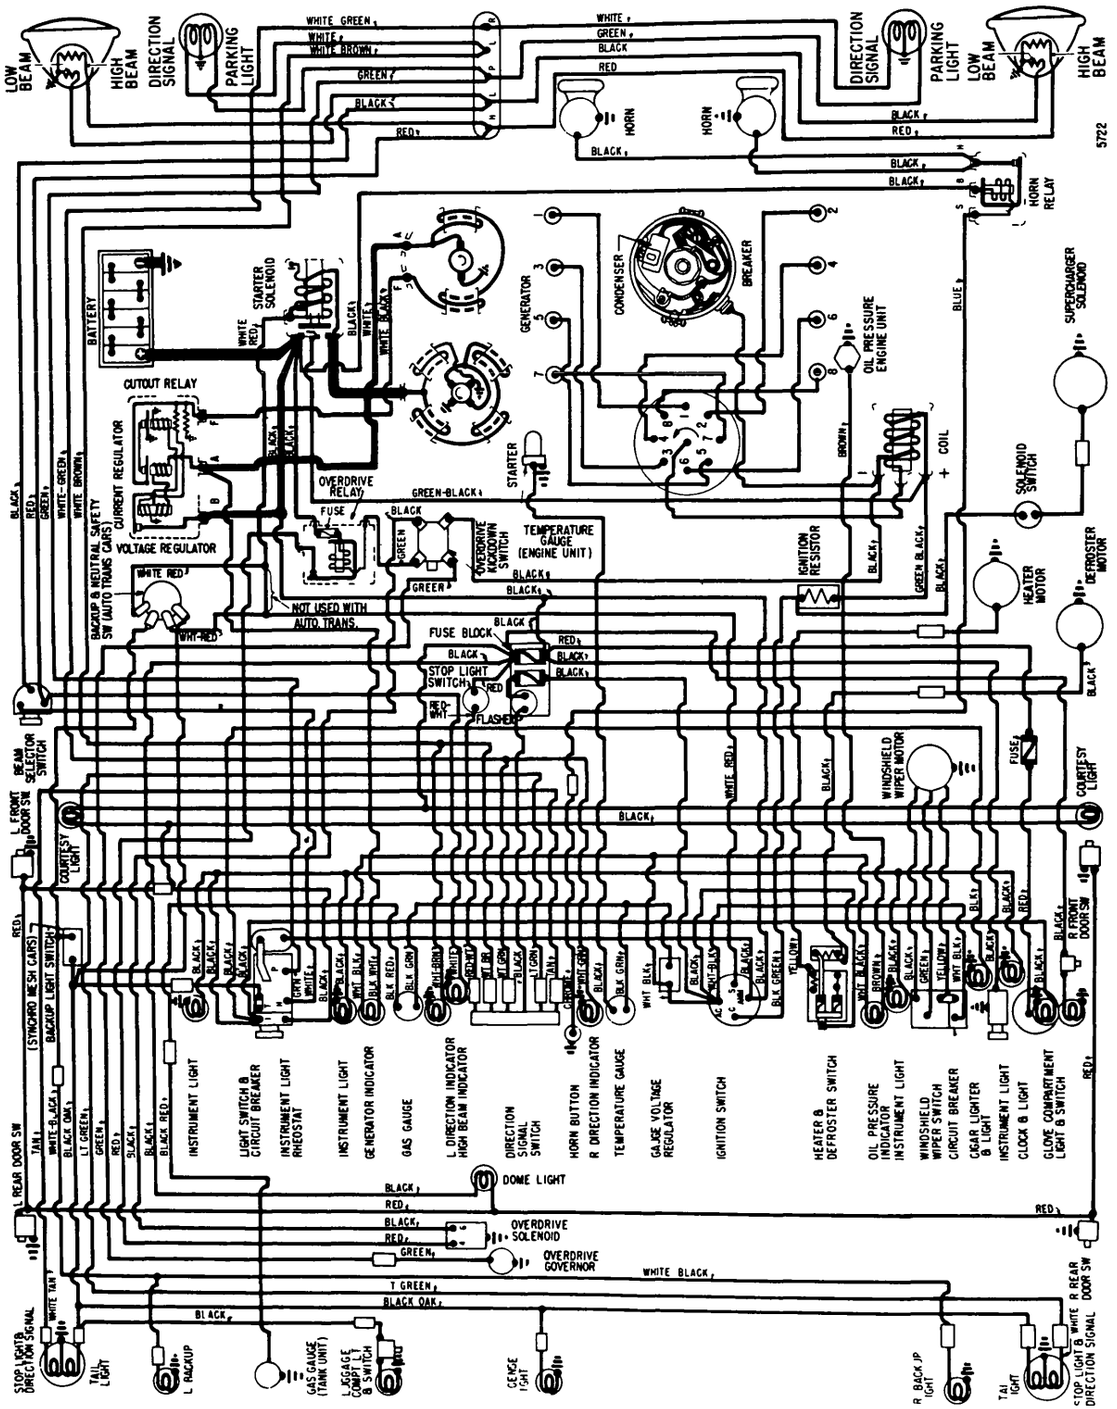
Voltage Regulator

Setting – 13.8-14.8 volts (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

Current Regulator

Setting – 27-33 amps. (hot).
Air Gap – .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting – *See "1119000 Series" Regulator in Electrical Section.*

MISC. ELECTRICAL



Headlamps: Sealed Beam *See Electrical Section*
Directional Signal: *See Electrical Section*

Light Switch Removal: Packard Clipper - Insert small screwdriver into notch at back edge of knob and press inward toward shaft, at same time pull off knob. Insert special wrench Tool No. J-5986 over light switch shaft. Hex of tool will fit into a concealed nut in bezel which holds switch in place. Turn wrench counterclockwise, remove bezel. Move switch back from panel and remove **Studebaker "Golden Hawk"** - Remove switch retaining nut. Push switch sleeve back into panel and disconnect wires from switch.

FUSES: Body & Stop Lights 15 amps in block in bracket behind instrument panel
Direction Signal - 15 amps in block in bracket behind instrument panel
Overdrive - 15 amps in relay on dash panel
Cl ck - 1 amp in lead behind instrument panel

CIRCUIT BREAKERS: H ad, Parking, Tail & Instrum nt Lights - 18 amps on headlight switch

CONTINUED ON NEXT PAGE

PACKARD CLIPPER

CONTINUED FROM PRECEDING PAGE

Windshi ld Wiper - 5 amps. in wiper switch.
Horn R lay: Delco-Remy No. 1116781.

ENGINE

ILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 quarts refill, 1 quart additional with filter change.
Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.
Pressure Regulator Valve: Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator: **Studebaker "Golden Hawk"** - Direct reading, non-electric type gauge.
Packard Clipper - Indicator light on instrument panel.
Oil Pressure Switch - Studebaker No. 1539898.
Oil Pump: Spur gear type. Mounted on rear main bearing cap and driven by camshaft gear.

COOLING

Water Capacity: 17 qts. (18.5 with heater).
Pressure Valve: Radiator filler cap. 13 lb. type.
Thermostat: Choke type. Studebaker No. 1540787 (170°) Std., No. 533247 (160°) and No. 533257 (180°) Optional.
Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*
Pump R m val - Drain cooling system. Loosen generator, remove belt. Remove fan-to-hub screws and remove fan and pulley. On Studebaker "Golden Hawk" remove fan shroud. Remove four capscrews retaining pump cover to water pump manifold. Remove pump from manifold.
Radiator & Fan Shroud Removal: *See "Cooling Syst m" in Studebaker Special Data.*
Temperature Indicators: **Studebaker "Golden Hawk"** - Direct reading, electric type gauge.
Packard Clipper - King-Seeley "CV" electric type with Gauge Voltage Regulator.
Dash Unit - Studebaker "Golden Hawk" - Studebaker No. 1539879. **Packard Clipper** - King-Seeley No. 49550 (Studebaker No. 6484335).
Engine Unit - Studebaker "Golden Hawk" - Studebaker No. 1542895. **Packard Clipper Sedans** - Studebaker No. 1543524, **Packard Clipper Station Wagons** - Studebaker No. 1543616.
See "Temperature Gauges" in Miscellaneous Section.

MECHANICAL

►*FOR ALL CLUTCH, TRANSMISSION, OVERDRIVE, UNIVERSALS, REAR AXLE, SHOCK ABSORBER, SUSPENSION, STEERING, BRAKE & MISC. MECHANICAL DATA, see "1957 Studebaker Commander & President" car model pages (preceding).*

MODEL IDENTIFICATION

STUDEBAKER

Model	Model ID signation
Commander	58B-W4, J4, P4
President	58H-Y6, J6
Silver Hawk	58H-C3
Marshall Police Car	58H-W1, F1, D1

PACKARD

Sedan & Hard Top	58L-Y8, J8
Station Wagon	58L-P8

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers - As follows:

	South Bend	Canada
Commander	8471601	8965101
President	7210001	7902001
Packard	58L-6101	

ENGINE NUMBER: Stamped on machined pad at upper left front of cylinder block.

Starting Engine Numbers - As follows:

	South Bend	Canada
Commander	V-407501	VC-13301
President	P-60 701	PC-2001
Packard	L-101	

TUNE-UP

►*ENGINE CUTTING OUT ON LEFT TURN (Commander & Police Cars with Stromberg WW 6-117B Carburetor):* *See Stromberg WW Carburetor data below.*

►*COLD ENGINE ACCELERATION HESITATION (President & Packard with Carter 4-Barrel Carburetor):* *See Carter WCFB Carburetor data below.*

COMPRESSION PRESSURE: 130-150 lbs. (approximately) at cranking speed (150 RPM).

VACUUM READING: Steady 18-20" at idle.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling, .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic Thermostatic type located in right bank exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plug - Champion H-18Y. Torque to 25-30 ft. lbs.

►*SPARK PLUG REPLACEMENT NOTE:* Some early cars had plug No. H-11. Use H-18Y for replacement and to reduce fouling.

►*SPARK PLUG CABLE CAUTION(PACKARD MODELS):* "Resistance type" cables (identified by letters "TVRS" stamped on cable) used on all models. Cable conductor consists of graphite impregnated nylon cord and following precautions should be observed: DO NOT cut cables or attempt to replace terminals. DO NOT substitute other type of cable (cables have definite electrical resistance for radio noise suppression).

COIL: Delco-Remy 1115096 or 1115087.

Ignition Current - 3.8 amperes idling.

Resistor - Delco-Remy 1927809 (1115096 Coil), 1931614 (1115087 Coil). 1.4-1.65 ohms at 75°F

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by lead from starter solenoid to coil.*

DISTRIBUTOR: Delco-Remy 1110864, 1110899 (Exp.).

Condenser - Delco-Remy 1869704. **Capacity** .18-.23 mfd.

Contact Point Set - Delco-Remy 1918148.

Breaker Gap - .013-.018".

Cam Angle - 26-33° with .016" gap.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance - 1110864

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-3	700
2-4	400	4-8	800
7-9	800	14-18	1600
11-13	1125	22-26	2250

Automatic Advance - 1110899

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.5	350	1-3	700
2-4	400	4-8	800
5-7	650	10-14	1300

Vacuum Spark Control: Delco-Remy 1116058.

Plunger Travel - 11/64-3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
8	16	10.25-11.50

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

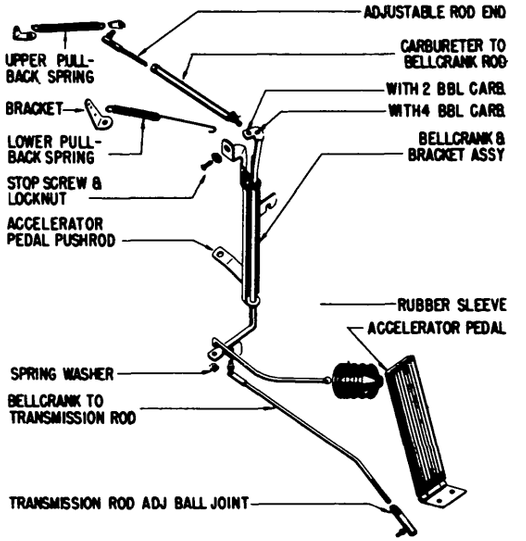
IGNITION TIMING

Setting - 4° BTDC with vacuum line to distributor disconnected and opening in carburetor plugged. Engine at normal idle speed.

Timing Mark - "IGN" line on vibration damper aligned with pointer on timing gear cover.

►*IGNITION TIMING CAUTION:* Manufacturer recommends that no attempt be made to time engine except with a suitable timing light and that timing mark on vibration damper be directly under pointer. *DO NOT SET TIMING BY THE "PING" METHOD.*

CARBURETOR



►*CARBURETOR APPLICATION:* As follows:

Model	Carburetor
Commander	Stromberg WW 6-117B, C
Pres. Silver Hawk & Police	Stromberg WW 6-117B, C
Pres. (Others) S.M. & O.D.	Carter WCFB 2219SB,2574S
Pres. (Others) Auto. Trans.	Carter WCFB 2214SB,2575S
Packard (S.M. & O.D.)	Carter WCFB 2219SB,2574S
Packard (Auto. Trans.)	Carter WCFB 2214SB,2575S

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:

1) Adjust engine idle speed to 575-600 RPM with transmission selector lever in "N" (Neutral) position. Set stop on bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge). After stop is adjusted, hold in this position. Make sure that carburetor-to-bellcrank rod ball joint is in outer hole of bellcrank pad (away from centerline of engine), and that ball joint is on underneath side of lever.

2) Adjust carburetor-to-bellcrank rod until idle speed adjusting screw just begins to leave its stop.

FLIGHTOMATIC TRANSMISSION THROTTLE LINKAGE

3) After stop is adjusted, hold in this position. *NOTE Make sure that carburetor-to-bellcrank rod ball joint is in inner hole of bellcrank pad on cars with 2-barrel carburetors, and in outer hole on cars with 4-barrel carburetors. In both cases, ball joint must be located on underneath side of bellcrank.* Adjust carburetor-to-bellcrank rod until idle speed screw on carburetor throttle lever just begins to leave stop. Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake. Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs. pressure on gauge (95-100 lbs. pressure on cars with heavy duty transmissions such as used on police cars). Stop engine, remove gauge, and install pipe plug in side of transmission.

THROTTLE RETURN CHECK (4-BARREL CARBURETOR) ADJUSTMENT: Loosen throttle return check assembly screw locknut and adjust return check in bracket until plunger just breaks contact with tab on throttle lever. Mark position of check assembly relative to bracket, then turn check assembly 1¼ to 2 turns toward lever. Tighten locknut.

THROTTLE RETURN CHECK (2-BARREL CARBURETOR) ADJUSTMENT: Place idle speed adjusting screw on fourth step of fast idle cam (lowest step being No. 1). Adjust throttle return check screw until it just contacts pad on throttle shaft lever.

STROMBERG WW

Stromberg WW, Code 6-117B (Early), 6-117C (Later). Throttle return check used on Flightomatic Transmission Cars.

►*ENGINE CUTTING OUT ON LEFT TURNS (Stromberg WW 6-117B Carburetor):* Caused by gasoline foam being ejected into air horn through bowl vent due to float

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

dropping on turns and allowing hot gasoline to enter bowl. Correct by installing new Air Horn Gasket and Float Chamber Baffle (same parts as used in supercharged carburetors). This change made in production on later 6-117C carburetors. *See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section for modification data.*

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE Special cleaning procedure required. See AIR CLEANER below.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting - Initial setting, 1¾ turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed - 550 RPM. On Flightomatic cars, selector lever should be in "N".

Float Level - 3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool T-24733 (Studebaker No. KMO-269-S5).

Accelerating Pump - Center hole, normal setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: With choke valve closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required.

Automatic Choke Setting: 1 Point Lean with arrow on cover 1 notch lean from boss on housing.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section.*

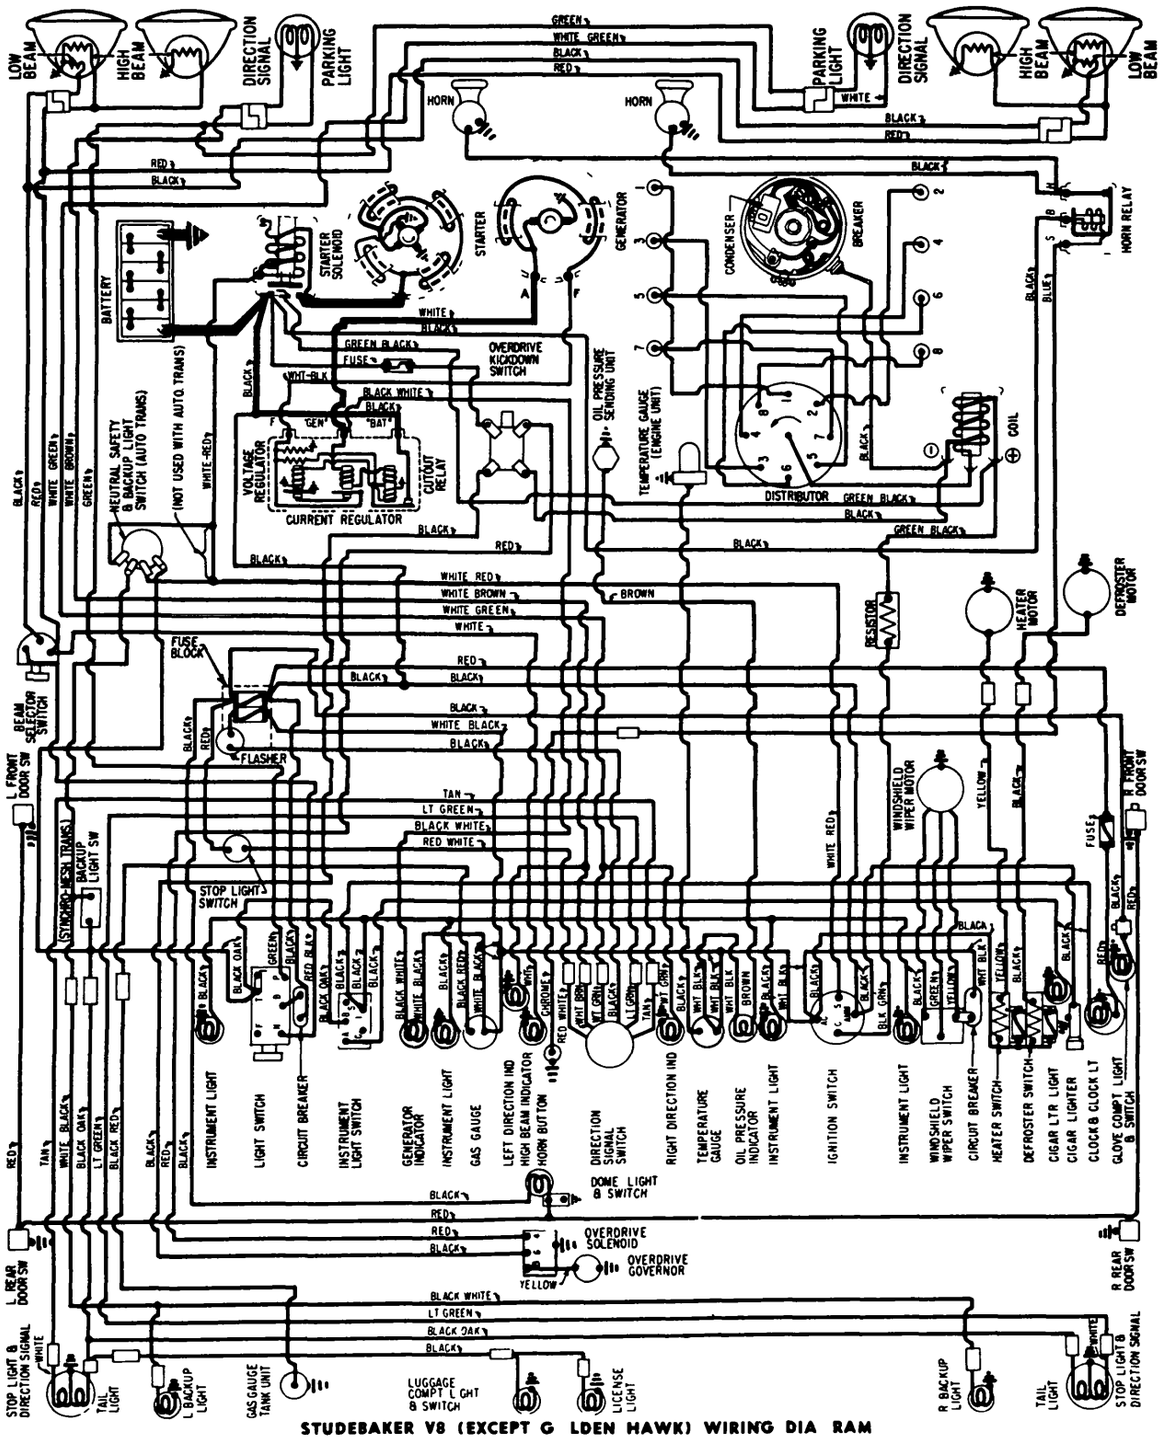
CARTER WCFB

Carter WCFB, No. 2219SB or 2754S (Synchro-mesh & Overdrive), 2214SB or 2575S (Flightomatic Cars).

►*COLD ENGINE ACCELERATION HESITATION* To correct stumbling or hesitation when rapidly accelerating a cold engine, install new Choke Piston, No.160-117 and change automatic choke setting to 2 Points Rich (Std. setting is 1 Point Rich). *See "Carter WCFB 4-Barrel Carburetor" in Carburetion Section for disassembly of automatic choke.*

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE· Special cleaning procedure required. See AIR CLEANER below.*

►*MANIFOLD FUEL DISTRIBUTION· Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed 2-3-5-8.*



Idle Setting - ½-1½ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 550 RPM. On Flightomatic cars, selector lever should be in "N".

Throttle Linkage Adjustment· S *CARBURETOR above.*

►*OTHER DATA S "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

STUDEBAKER V8 (EXCEPT GOLDEN HAWK) WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Fu l Pump: Carter No. 2573S. Fuel only.
Pressure - 3½-5½ lbs.
S e "Fuel Pumps" in Carburetion Section.

Gas line Gauge (Studebaker): Electric type.
Dash Unit - Studebaker No. 1539880 (Silver Hawk), 1545445 (Other Models).
Tank Unit - Studebaker No. 1544825 (Silver Hawk & Station Wagon). 1544826 (Other Models).

Gasoline Gauge (Packard): King-Seeley "CV" Constant Voltage electric type with Gauge Voltage Regulator, King-Seeley No. 45677.
Dash Unit - King-Seeley No. 49546 (Packard No. 6484332).
Tank Unit - Packard No. 1545004 (Sedan & Hardtop), 1545003 (Station Wagon).
S e "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY TYPE (Plasticized paper) Standard. Oil Bath type Optional. Clean dry type filter element every 1000 miles, replace element every six months or 10,000 miles.
►*CLEANING CAUTION (DRY TYPE):* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

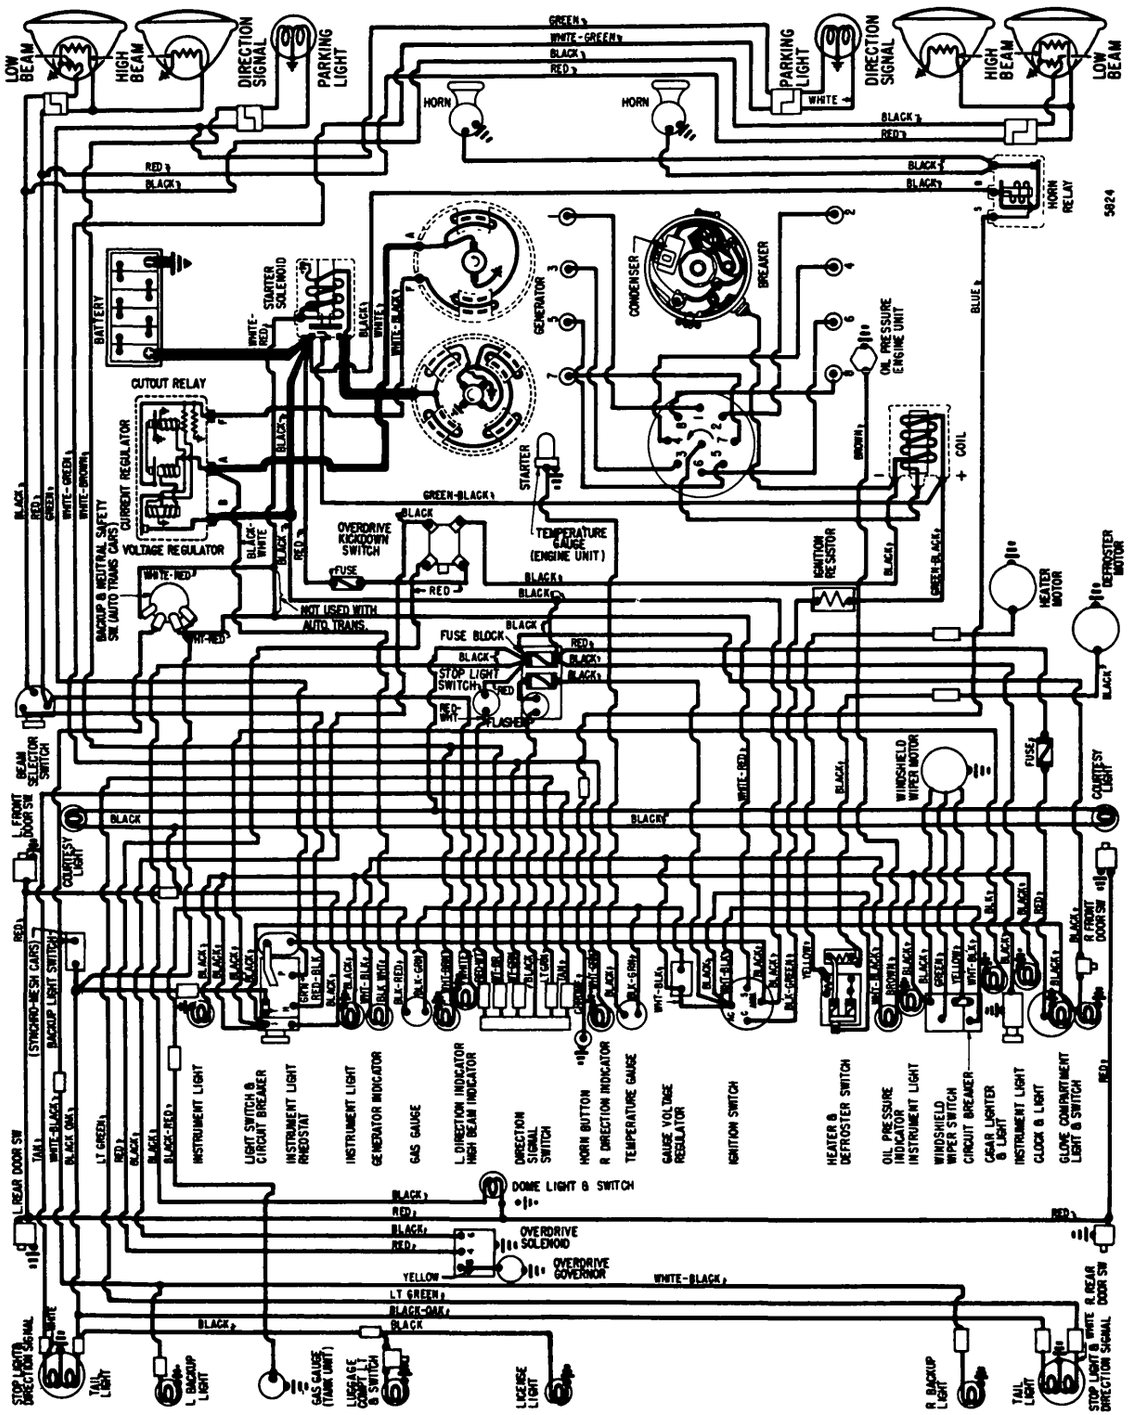
Willard HO-11-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hour rate).
Battery Ground - Negative.
Engine Ground - Strap at right front corner of engine.

STARTER

D lco-Remy 1107650 (Synchro-mesh & Overdrive), 1107651 (Flightomatic). Armature - 1933789.
Drive - Bendix "Folo-thru" No. A3474.
R tation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435



Starting Switch: Magnetic Switch, Studebaker No. 1539716, mounted on dash and controlled by combination Ignition & Starter switch.

Aut matic Transmission Neutral Safety Switch: Studebaker No. 533321 (exc. Saginaw Pwr. Strg.), 534390 (Cars with Saginaw Integral Power Steering). Mounted on steering column. Adjust switch so that starter operative only with selector lever in "N" or "P" position.

GENERATOR

D lco-Remy 1102003 (Std.,), 1102094 (Cars with Air C nditioning & Power Steering). *NOTE* - 1102094 Generator has Power Steering Pump mounted on commutator end of generator.
Armatur - Delco-Remy 1923535 (1102003 Generator).

CONTINUED ON NEXT PAGE

PACKARD (EXCEPT HAWK) WIRIN DIA RAM

CONTINUED FROM PRECEDING PAGE

Performanc Data - C ld

Amperes	Volts	RPM
30	14.0	2240

Brush Spring T nsi n - 28 ozs.
Fi ld Current - 1.69-1.79 amps. at 12 volts and 80°F.
R tati n - Counter-clockwise at commutator end.
B lt Adjustm nt: ½" deflection midway between fan and generator pulleys with 14 lbs. side pull on belt.

REGULATOR

D lco-R my 1119123. *NOTE - Specifications below are "N rmal" s ttings.*

Cut ut Relay

Cuts In - 11.8-13.5 volts (hot).
C ntact Gap - .020".
Air Gap - .020" with contacts just closed.

V ltage Regulator

Setting - 13.8-14.8 volts (hot).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Ch cking & Adjusting - *See "Delco-Remy 12 Volt Regulat rs" in El ctrical S ction.*

Current Regulator

Setting - 27-33 amperes hot (after 15 minutes continuous current regulator operation).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Ch cking & Adjusting - *See "Delco-Remy 12 Volt Regulat rs" in El ctrical S ction.*

MISC. ELECTRICAL

Headlights: Dual Headlights (4-Headlight System) used on all models except Silver Hawk & Police Cars.
S "4-H adlight Syst m" in Electrical Section.
Dir cti n Signal: *S El ctrical Section.*
Lighting & Instrument Switch Removal: Remove retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat in instrument board.
St p Light Switch: Located on inner side of left frame rail forward of steering gear housing (exc. Power Brake Cars), in elbow fitting on Power Brake Unit (with Power Unit).

CIRCUIT BREAKERS: Used as follows:
20 Amp r (Studebakers), 18 Ampere (Packard) - Protects head, parking, tail, back-up and instrument lights. Located on headlight switch.
5 Ampere - Protects windshield wipers. Located on windshield wiper switch.

FUSES: Used as follows:
15 Ampere - Protects body & stop lights. Located in fuse block behind instrument panel.
15 Ampere - Protects directional signals. Located in fuse block behind instrument panel.
15 Ampere (Packard), 14 Ampere (Studebakers) - Protects Climatizer & Defroster. Located on switch.
14 Amper - Protects overdrive circuit.
3 Amper - Protects clock & clock light. Located in lead behind instrument panel.

Horn R lay: Delco-Remy 1116781.
Cl sing V ltag - 5.0-9.5 volts.
Contact Gap - .027". **Air Gap** - .014".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: "Sweepstakes 259" & "Sweepstakes 289". V8, valve-in-head.

Engine	Bore	Stroke	Displacement
259	3 9/16"	3 1/4"	259 cu. ins.
289	3 9/16"	3 5/8"	289 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
259	8.0-1 ①	40.6	180 at 4500 RPM
289	8.0-1 ①	40.6	②

① - 7.5-1 optional
② - 210 at 4500 RPM with 2-barrel carburetor. 225 at 4500 RPM with 4-barrel carburetor.
Compression & Vacuum Reading - *See TUNE-UP.*

OIL PAN REMOVAL: Remove oil level gauge and adapter tube clamp. Disconnect one battery cable. Raise car and support with stands, then drain oil. Remove starter. On Coupe & Hardtop models, swing front wheels to right to move steering bellcrank out of way, and remove oil pan. On Station Wagon and Sedan models, remove steering bellcrank assembly. Remove exhaust crossover pipe, then remove oil pan.

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

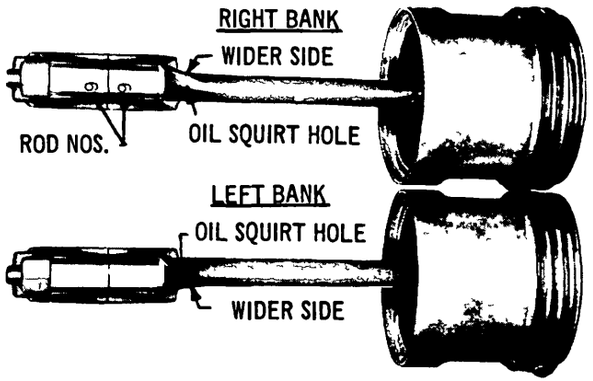
Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*

►*PISTON REPLACEMENT CAUTION: "259" & "289" Engine pistons are NOT INTERCHANGEABLE. "Flat Head" piston used on 259" Engine. "Concave Head" Piston used on 289" Engine.*

Weight - 16.21 ozs. (259 Eng.), 16.22 ozs. (289 Eng.).
Removal - Pistons & rods remove from above.
Fitting New Pistons: Clearance - Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 8-13 lbs.
Replacement Pistons: Std. size & .010", .020", .030", .040" oversize. Pistons furnished with fitted pins.
Installing Pistons: Install piston on rod so that solid side of piston is on same side as oil hole in bearing bore. Install piston in cylinder with the slot toward the left side of engine. *See Rod Installation.*

PIST N PINS

Locked in rod by tapered pin and locknut.
Diam t r – .8741-.8745". **L ngth** – 3 1/16".
Clearance in Piston – .0001-.0003" (selective fit). Light finger push fit at 70° F.
Replac ment Pins: Std. size & .0025", .005" oversize.
Removal & Installati n: *See "Piston Pins" in Studebak r Special Data.*



PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compression	.077-.078"	.008-.016"	.002-.005"
Oil	.1855-.1865"	.008-.016"	.0015-.005"

Replacement Rings: Sets of Std., .020", .030" and .040" Oversize.
Installing Rings: Install compression rings with chamfered side of ring upward. Gaps of inner and outer oil rings must not come at same point.

CONNECTING RODS

Length - 6 5/8" center-to-center. **Weight** - 23.71 ozs.
Crankpin Journal Diameter - 1.99925-2.00025".
Lower Bearing - Interchangeable. Steel backed, micro-babbitt lined type. No shims.
Clearance - .0005-.002". **Sideplay** - .008-.013".
Replacement Bearings: Std., .001", .002", .010" and .020" Undersize.
Installing Rods: Number on rod and bearing cap must be on same side. Rod is installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods), and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear on right bank, toward front on left bank.

V8 ENGINE PISTON & ROD ASSYS.

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

►*REPLACEMENT ROD IDENTIFICATION NOTE:* Replacement rods are unnumbered. To identify, hold rod upright with oil hole toward you. Wide part of offset will be to right on left bank rods, to left on right bank rods.

CRANKSHAFT

Journal Diameter–2.4995-2.5000".
B arings - Steel-backed, micro-babbitt lined. No shims.
Cl aranc –.0005-.0025".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

R plac m nt B arings: Std. size, .001", .010", .020", .030" undersize.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal. **Endplay**—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

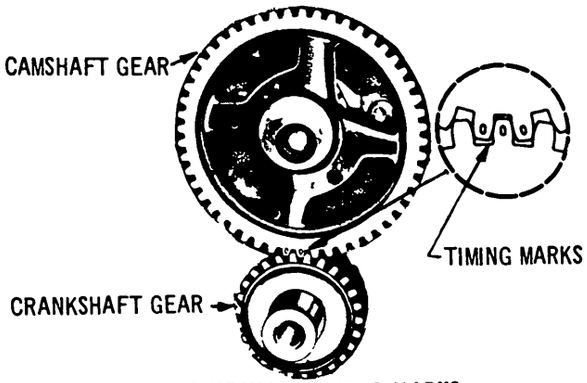
CAMSHAFT

Journal Diameters—(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".

Bearings—Precision type, steel backed babbitt lined.

Clearance — .00075-.00225" (No. 1), .001-.00275" (Others).

End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.



Endplay—.003-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.

Backlash—.001-.003".

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

V8 ENGINE VALVE TIMING MARKS

Engine Front Cover Removal *See "Engine Front Cover" in Studebaker Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal). *See "Engine Front Cover" in Studebaker Special Data.*

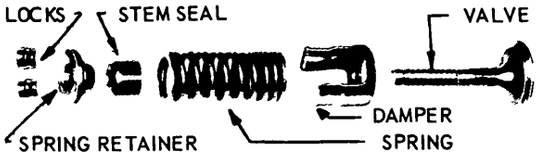
VALVES

Tappet Clearance - .023-.025" (Hot), .025-.027" (Cold).

Valve	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	11/32"	5 5/32"
Exhaust	1 17/32"	11/32"	5 5/32"

Valve	Seat Angle	Lift	Stem Clearance
All	45°	23/64"	.0015-.0035"

Valve Seat Width—1/16-3/32".



Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.

Valv Springs: Single spring used. Replace spring if 10% weaker than pressure given in specifications below.

NOTE - Damper installed on lower (close-coiled) end of all springs.

Valv Spring Specificati ns

	Pressure	Length
Valve Closed	45-55 lbs.	2 1/32"
Valve Open	105-115 lbs.	1 43/64"

V8 ENGINE VALVE ASSY.

Valve Guides: Pressed in head from underside.

Guide Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore). See "Valve System" in Studebaker Special Data.*

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std. size, .001", .005" oversize.

►*CAUTION—When lifters removed, make sure they are installed in original positions.*

Rocker Arms: *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 11° BTDC. Close 54° 36' ALDC.

Exhaust Valves—Open 51° 36' BLDC. Close 14° ATDC.

Valve Timing Check—Set tappet clearance of No. 1 intake valve at 030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 qts. (add one quart when filter changed).

Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.

Pressure Regulator Valve — Located on right side at front of engine block slightly above crankcase flange.

Oil Pressure Indicator: (Packard & Studebaker exc. Silver Hawk) - Indicator light on instrument panel controlled by Oil Pressure Switch, Studebaker No. 1539898. If light on at highway speeds, low oil pressure or other difficulty is indicated.

(Studebaker Silver Hawk) - Direct reading, non-electric type gauge, Studebaker No. 1539878.

Oil Pump: Helical gear type. Mounted on rear main bearing cap in crankcase. *NOTE* - Stationary type oil strainer used which is a unit with the intake pipe.

Pump R m val, Ov rhaul, & Installation: *S "Oiling Syst m" in Stud bak r Special Data.*

Oil Filter: Partial flow, "disposable" type (replace element and housing as a unit). Replace element at 5000-6000 mile intervals or more often under severe conditions.

Replacement Filter El ment - Studebaker No. 1542739.

Crankcase Ventilation: Filter element is located in oil filler cap (air intake). Breather pipe (air outlet) is connected at rear of valve chamber cover plate.

COOLING

Water Capacity: 17 qts. without heater, 18.5 qts. with heater.

Pressure Valve: Radiator filler cap. 13 lb. (12-15) type. Studebaker No. 536502.

Thermostat: Choke type Studebaker No 1540787 (170°) Std No 533247 (160°) and No 533257 (180°) Optl

Water Pump: Packless sealed ball bearing type *See "Water Pumps" in Stud baker Special Data.*

Pump Removal: Drain cooling system Loosen generator remove belt Remove fan-to-hub screws and remove fan and pulley On Coupe and Hardtop models, remove shroud Remove four capscrews retaining pump cover to water pump manifold Remove pump.

Radiator & Fan Shroud Rem val: *See "Cooling Syst m" in Studebaker Special Data*

Temperature Gauge (Studebak r): Direct reading electric type.

Dash Unit - Studebaker No. 1539879 (Silver Hawk), 1545446 (Other Models).

Engine Unit - Studebaker No. 1545220 (All Models).

Temperature Gauge (Packard): King-Seeley "CV" Constant Voltage electric type with Gauge Voltage Regulator, King-Seeley No. 45677.

Dash Unit - King-Seeley No 49950.

Engine Unit - King-Seeley No. 44664.

See "Temperature Gauges" in Misc llan ous S ction.

CLUTCH

Borg & Beck Models 10A7 (10"), 10A6 (10¼") & 10.5A8 (10½"). Single plate types. Used as follows.

Model	Clutch Assy.	Clutch Disc
Comm. (Std.)	10A7 361454	382650
Comm. (HD), Pres (Std)	10A6 361456	382389
Packard	10A6 361456	382389
Packard Hawk	10.5A8 361451	382643
Golden Hawk	10.5A8 361451	382643

See "Borg & Beck" in Clutch S ction.

Pedal Adjustment: Pedal free travel 1/2-1". To make adjustment, loosen locknut securing clevis to rod connecting release shaft lever to clutch operating shaft lever and remove the clevis pin. Turn clevis to shorten or lengthen rod as necessary for correct pedal free travel. *NOTE—If car is equipp d with "Hill-Holder", adjust "Hill-Holder" operating rod as outlined in Brake Section.*

Clutch Housing Removal Remove starter. Remove floor plate and clutch housing top capscrews. Remove clutch operating shaft. Remove transmission (see Synchro-mesh Transmission Removal below). Remove two bolts holding engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a block between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Remove support crossmember-to-frame bolts and remove cross member. Remove the two clutch housing bolts retaining exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or capscrews and remove clutch housing.

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model T85 & T86. Three-speed synchro-mesh type. Used with R10 Overdrive (Optl.).

See "Warner Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect propeller shaft at rear universal joint flange, pull shaft to rear to disengage splined joint at transmission extension, remove shaft. Drain transmission case. Disconnect shift rods at transmission case shift levers, disconnect speedometer cable at transmission case, remove speedometer pinion. Support transmission and remove capscrews mounting transmission on clutch housing. Remove clutch operating shaft, bracket, and bearing from transmission case. Move transmission straight back until main drive gear clears clutch driven member, then lower transmission and remove from beneath car.

OVERDRIVE

Warner R10. Part of transmission assembly. Governor controlled solenoid operation with throttle controlled kick-down. *NOTE* - Relay is not used in overdrive control circuit. See wiring diagram for new control circuit.

Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

Removal: Remove as unit with transmission. Disconnect control wiring and cable, then proceed as for Transmission Removal (above).

FLIGHTOMATIC TRANSMISSION

Warner Model AS2-5J (Early Commander), AS2-5P (Later Commander, All Pr sident), AS6-7A (Packard & Golden Hawk). Torque converter and hydraulically controlled three-speed planetary transmission.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION* See *"Flightomatic" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING* See *"Flightomatic" Transmission in Transmission Section.*

Lubrication Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type A' (marked A-ATF on container).

►*INSPECTION HOLE COVER NOTE* Later cars have rubber covered inspection hole cover installed over floor mat which can be removed for fluid checking without disturbing floor mat

Checking Fluid Level – Place selector lever in 'P' position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Apply parking brake and foot brake, move selector lever slowly from "P" position to "R" position, then back to 'D' position. Remove dipstick and read fluid level. Add fluid to bring level to "FULL" mark on dipstick (1½ pints between "LOW" and "FULL" marks on dipstick. **Capacity - 9 qts (Studebaker V8 & Packard, except police cars which take 9½ qts.). 9½ qts. (Golden & Packard Hawks). Use only Auto. Trans. Fluid Type "A".**

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Flightomatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. TWO used (with new one-piece type propeller shaft).

►*UNIVERSAL JOINT LUBRICATION NOTE:* Universals should be disassembled, cleaned, and repacked with special universal joint lubricant at 20,000 mile intervals.

PROPELLER SHAFT

Propeller Shaft: New one-piece type. No center bearing used.

►*PROPELLER SHAFT NOISE CORRECTION:* May be caused by interference between front end of propeller shaft and body floor pan clearance tunnel (All Cars), or interference between propeller shaft and center arm rest attaching screws (Packard). *See "Propeller Shaft Notes" in Studebaker Special Data for corrective procedure. NOTE - On later cars, these conditions eliminated by production changes (new smaller diameter propeller shaft and relocated arm rest screws).*

REAR AXLE

Spicer Model 44-3 (All Models). Semi-floating, hypoid gear with Hotchkiss Drive.

See "Spicer Hypoid" in Rear Axle Section.

►*"TWIN-TRACTION" DIFFERENTIAL NOTE:* Optl on all models Identified by decal next to ignition switch (early cars), by emblem on deck lid (all cars) *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

Standard & Twin Traction Axle Ratios

Model	Synchro-mesh	Overdrive
Commander	①3.54-1 (46-13)	②3.73-1 (41-11)
President	①3.54-1 (46-13)	③3.92-1 (47-12)
Police Cars	3.54-1 (46-13)	3.92-1 (47-12)
Packard		④4.09-1 (45-11)
Golden & Packard Hawks		⑨4.09-1 (45-11)
Model		**Flightomatic Trans.**
All Models		⑤3.31-1 (43-13)

Optional Ratios (for above table)/① - 3.92-1,② - 3.54-1, 3 92-1, 4 09-1, 4.27-1, ③ - 3.54-1, 3 73-1, 4.09-1, 4.27-1, ④ - 3.54-1, 3.73-1, 3 92-1, 4.27-1, ⑤ - 3.54-1.

►*REAR AXLE RATIO NOTE* Ratio is stamped on plate attached to axle by cover capscrew and is also stamped on ring and pinion gears

Backlash - 003- 006"

Axle Shaft Removal Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way *(CAUTION–Do* not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

Rear Axle Assembly Removal: Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect brake pipes at wheel cylinders, remove backing plate bolts from both backing plates. Remove brake pipe clamps and capscrew which holds brake pipe tee to housing, remove brake pipe from housing. Remove backing plate and shims (suspend from frame). Remove rear universal joint U-bolts and nuts, disconnect rear propeller shaft and move to one side. Remove rear spring U-bolts and disconnect shock absorbers from spring plate. On President models, disconnect stabilizer shaft from spring plates. Remove rear axle assembly.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003" .005" .010" .030" thick). **Endplay – .001-.006".**

►*REAR WHEEL BEARING LUBRICATION CAUTION:* No lubrication plug provided but bearings are NOT lubricated for life. Remove, clean, and repack bearings at 25,000 mile intervals.

SHOCK ABSORBERS

Gabriel or Monroe. Direct acting, hydraulic type. Serviced by replacement. *NOTE* - Gabriel Heavy Duty Adjustable type are special equipment on all models.

►*1957-58 SHOCK ABSORBER NOISE CORRECTION:* Chuckle or similar noise may be caused by shock absorber rubber bushings and can be corrected by installing new bushings. *See "Shock Absorber Notes" in Studebaker Special Data for bushing installation.*

Shock Absorbers (Studebaker Nos.)

Model	Front	Rear
All (exc. below) Gabriel	1545056	1545050
All (exc. below) Monroe	1545058	1545044
Station Wgns - Gabriel	1545055	1545051
Hawk - Gabriel	1545055	1545050
Hawk - Monroe	1545047	1545044
All Models - Gabriel Adj.	1544410	1544411

Adjustment (Gabriel Adj. Type) - Disconnect one end of shock absorber and collapse it fully to engage internal coupling, then rotate lower shaft until arrow on body lines up with "Soft", "Normal", or "Firm" arrow on dustcover.

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs

See "Studebaker" in Suspensions & Wheel Alignment Section

►*"VARIABLE RATE" FRONT SPRING INSTALLATION CAUTION* This type used on sedan models Install

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

with closed coils at the top and the coil ends toward the inside (centerline) of car.

Kingpin Inclination - 6° at 0° camber.

Caster - Neg. 1° to Neg. 2½°. Not more than ¾° variation between wheels.

Camber - 0° to Pos. 1°. ½° more camber favored on driver's side.

Toe-In - 1 16-1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.

RHD Car Note - Make toe-in adjustments at left hand tie rod.

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be 23½-24½°.

STEERING

Manual: Ross Model SL-54. Cam & Single Lever Roller Stud. Roller stud is mounted on taper roller bearings. *See "Ross Cam & Lever" in Steering Section.*

Power Steering (Studebaker): Bendix Linkage type. Used with conventional steering gear. *See "Bendix Linkage Type Power Steering" in Steering Section.*

Power Steering (Packard): Saginaw (Not in Line). Recirculating ball nut and worm type steering gear with integral power unit. Replaces regular steering gear.

See "Saginaw (Not in Line) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

BRAKES

►*BRAKE LINE INTERFERENCE CORRECTION:* Interference may occur between brake line and exhaust pipe at point where brake line held in clip on right side of differential housing. If clip upward so that brake line above level of differential housing, remove housing screw and reverse clip so that brake line is below top of housing.

Service: Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking lever applies rear wheel service brakes. *See "Wagner Lockheed Self-centering Brakes" in Brake Section.*

Drum Diameter - 11" (Front), 10" (Rear).

Master Cylinder Bore Diameter - 1" (All Models).

Wheel Cylinder Diameter - 1 1/16" (Front), 7/8" (Rear).

Brake Lining: Marshall Eclipse molded lining used on all shoes. *NOTE* - Brake shoes with Heavy Duty BONDED lining available for service. Recommended for Taxicab, Police Car, and other severe service.

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeak. This lining is applied to full length of shoe, and is marked "secondary" and "top", and should be installed as marked.

Lining Width & Length

	Front Wheel	Rear Wheel
Primary Shoes	2 1/4" x 9 21/64"	2" x 8 15/32"
Secondary Shoes	2 1/4" x 11 57/64"	2" x 10 27/32"

Thickness - 3/16" (all exc. front wheel secondary), 7/32" (front wheel secondary).

Clearance - Lock shoes against drums, then turn adjusting screw back eight notches or more as required to free drum.

Braking Power - 62% Front wheels, 38% Rear wheels.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. (*NOTE* - One line with Hill-holder). Remove the brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Power Unit. Used with standard master cylinder. *See "Hydrovac Power Unit" in Brake Section.*

Checking Fluid–Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit–Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

Hill Holder: Used on Synchro-mesh and Overdrive Transmission cars. *See "Hill-Holder" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers: Auto-Lite or Bosch. Electric type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electrical with individual reversible motors in each window. Control switches at each door with a master control switch located on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type with curved seat tracks for seat adjustment (seat raises and lowers with a tilting action). *See "Power Seat Adjusters" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
Studebaker Golden Hawk	58H-K7
Packard Hawk	58L-K9

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers - Studebaker 6104501, Packard 58LS-1001.

ENGINE NUMBER: Stamped on machined pad at upper left front of cylinder block.

Starting Engine Numbers - Studebaker PS-5501, Packard LS-5201.

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. (approximately) at cranking speed (150 RPM).

VACUUM READING: Steady 18-20" at idle.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling, .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic Thermostatic type located in right bank exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plug - Champion H-18Y. Torque to 25-30 ft. lbs.

►*SPARK PLUG REPLACEMENT NOTE:* Some early cars had plug No. H-11. Use H-18Y for replacement and to reduce fouling.

►*SPARK PLUG CABLE CAUTION (PACKARD):* "Resistance type" cables (identified by letters "TVRS" stamped on cable) used on all models. Cable conductor consists of graphite impregnated nylon cord and following precautions should be observed: DO NOT cut cables or attempt to replace terminals. DO NOT substitute other type of cable (cables have definite electrical resistance for radio noise suppression).

COIL: Delco-Remy 1115087 or 1115096.

Ignition Current - 3.8 amperes (idling).

Resistor - Delco-Remy 1931614 (1115087 Coil), 1927809 (1115096 Coil). 1.40-1.65 ohms at 75°F.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. Resistor is by-passed during cranking by lead from starter-solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110864 or 1110899 (Exp.)

►*TACHOMETER DRIVE UNIT NOTE:* Tachometer Drive Unit is installed on distributor housing (driven by breaker shaft) with distributor rotor and cap installed on top of tachometer drive unit. Lift off tachometer drive unit for access to breaker plate.

Condenser - Delco-Remy 1869704. **Capacity** - .18-.23 mfd.

Contact Point Set - Delco-Remy 1918148.

Breaker Gap - .013-.018".

Cam Angle - 26-33° with .016" gap.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance - 1110864

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-3	700
2-4	400	4-8	800
7-9	800	14-18	1600
11-13	1125	22-26	2250

Automatic Advance - 1110899

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.5	350	1-3	700
2-4	400	4-8	800
5-7	650	10-14	1300

Vacuum Spark Control: Delco-Remy 1116058.

Plunger Travel - 11/64-3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
8	16	10.25-11.50

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Setting - 4° BTDC with distributor vacuum line disconnected (plug carburetor connection) and engine idling at 600 RPM. *NOTE* - Reset idling speed to 550 RPM after timing completed.

Timing Mark - "IGN" line on vibration damper aligned with pointer on timing gear cover.

CARBURETOR

Stromberg WW 6-122A (Supercharged). *NOTE* - This carburetor has all modifications (including venting to improve hard hot starting) as recommended to be made on 1957 Code 6-121 carburetors.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:

1) Adjust engine idle speed to 575-600 RPM with transmission selector lever in "N" (Neutral) position. Set stop on bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge). After stop is adjusted, hold in this position. Make sure that carburetor-to-bellcrank rod is in outer hole of bellcrank pad (away from centerline of engine), and that ball joint is on upper side of bellcrank lever.

2) Adjust carburetor-to-bellcrank rod until idle speed screw on carburetor throttle lever just begins to leave stop. Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake. Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 95-100 lbs. pressure on gauge Stop engine, remove gauge and install pipe plug.

THROTTLE RETURN CHECK: Remove carburetor air chamber cover. Loosen return check assembly screw locknut. Adjust assembly in bracket until plunger just breaks contact with tab on throttle lever. Mark position of check assembly with relation to bracket, then turn check assembly 1¾-2 turns toward lever. Tighten locknut, install cover.

STROMBERG WW

Stromberg Series WW, Code 6-122A. Throttle return check used on all models with Flightomatic Transmission.

►*CUTTING OUT ON ACCELERATION & ROUGH IDLE CORRECTION:* **Install new dual electric fuel pump kit, Part No. 1547161. Instructions contained in kit.**

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting - Initial setting, ¾-1 turn open. Final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed - 550-575 RPM. On Flightomatic Cars, selector lever should be in "N" position.

Float Level - 7/32" from top edge of bowl to top of float with needle valve seated (Gauge J-6646).

Accelerating Pump - Center hole - normal setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: Set engine idle speed correctly. Stop engine, close choke valve. Back off fast idle screw until idle speed screw just contacts stop, then turn fast idle screw in 7½ turns. This will give a .030-.031" throttle valve opening.

Automatic Choke Setting: Centered on Index.

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Stromberg WW Carburetors" in in Carburetion Section.*

SUPERCHARGER

McCulloch VS-57S. Variable ratio type. Mounted on bracket located on top of engine water pump manifold at water outlet opening.

Kickdown Switch Adjustment: Loosen locknuts on each side of switch bracket. With wide open throttle, switch plunger should be depressed and auxiliary throttle outer lever should rest against threaded sleeve of kickdown switch.

Belt Tensioning Check: With engine at rest or idling, belt should be in bottom of groove (high blower position). With engine running at approximately 1500 RPM, belt should start to leave bottom of groove and begin to climb up. With engine at 3500 RPM (no load), belt should be running near top of pulley (low blower position). With engine at 3500 RPM, manually operate kickdown switch. Belt should go immediately to bottom of pulley groove (high blower position). Releasing kickdown switch should allow belt to return immediately to top (low blower position).

Pressure Check: Remove pipe plug on rear of carburetor cover, install low-reading pressure gauge at this point. With engine operating at 3500 RPM in high blower position (kick-down switch closed), pressure should be 5 lbs.

Lubrication: Capacity - 8 ozs. of "Type A" automatic transmission fluid.

Checking Fluid Level: Check oil level every 1000 miles. Maintain oil level between two punch marks on dipstick. Drain and refill every 15,000 miles.

►*OTHER DATA: See "McCulloch Supercharger" in Carburetion Section.*

FUEL PUMP PRESSURE: 5½-7 lbs.

CARB. EQUIPMENT

Fuel Pump: Carter M2623S. Fuel only. *NOTE* - Pump does not have vent hole and pump cover is connected to supercharger by pressure line so that supercharger pressure increases fuel pressure as required.

Fuel Pressure - 5½-7 lbs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type.

Dash Unit - Studebaker No. 1539880.

Tank Unit - Studebaker No. 1544825.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY TYPE (Plasticized Paper). Clean every 1000 miles, replace element every six months or 10,000 miles.

►*CLEANING CAUTION (DRY TYPE):* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Willard HO-11-50. 12 Volt, 9 plate, 50 ampere hour capacity (20 hour rate).

Battery Ground - Negative.

Engine Ground - Strap at right front corner of engine.

STARTER

Delco-Remy 1107650 (Synchro-mesh & Overdrive), 1107651 (Flightomatic). Armature - 1933789 (All).

Drive - Bendix "Folo-thru" No. A3474.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Magnetic Switch, Studebaker No. 1539716, mounted on dash and controlled by combination Ignition & Starter Switch.

Automatic Transmission Neutral Safety Switch: Studebaker No. 533321 (exc. Saginaw Pwr. Strg.), 534390 (Cars with Saginaw Integral Power Steering). Mounted on steering column. Adjust switch so that starter operative only with selector lever in "N" or "P" position.

GENERATOR

Delco-Remy 1102003 (Std.), 1102094 (Cars with Air Conditioning & Power Steering). *NOTE* - 1102094 Generator has Power Steering Pump mounted on commutator end of generator.

Armature - Delco-Remy 1923535 (1102003 Generator).

Performance Data - Cold

Amperes	Volts	RPM
30	14 0	2240

Brush Spring Tension - 28 ozs

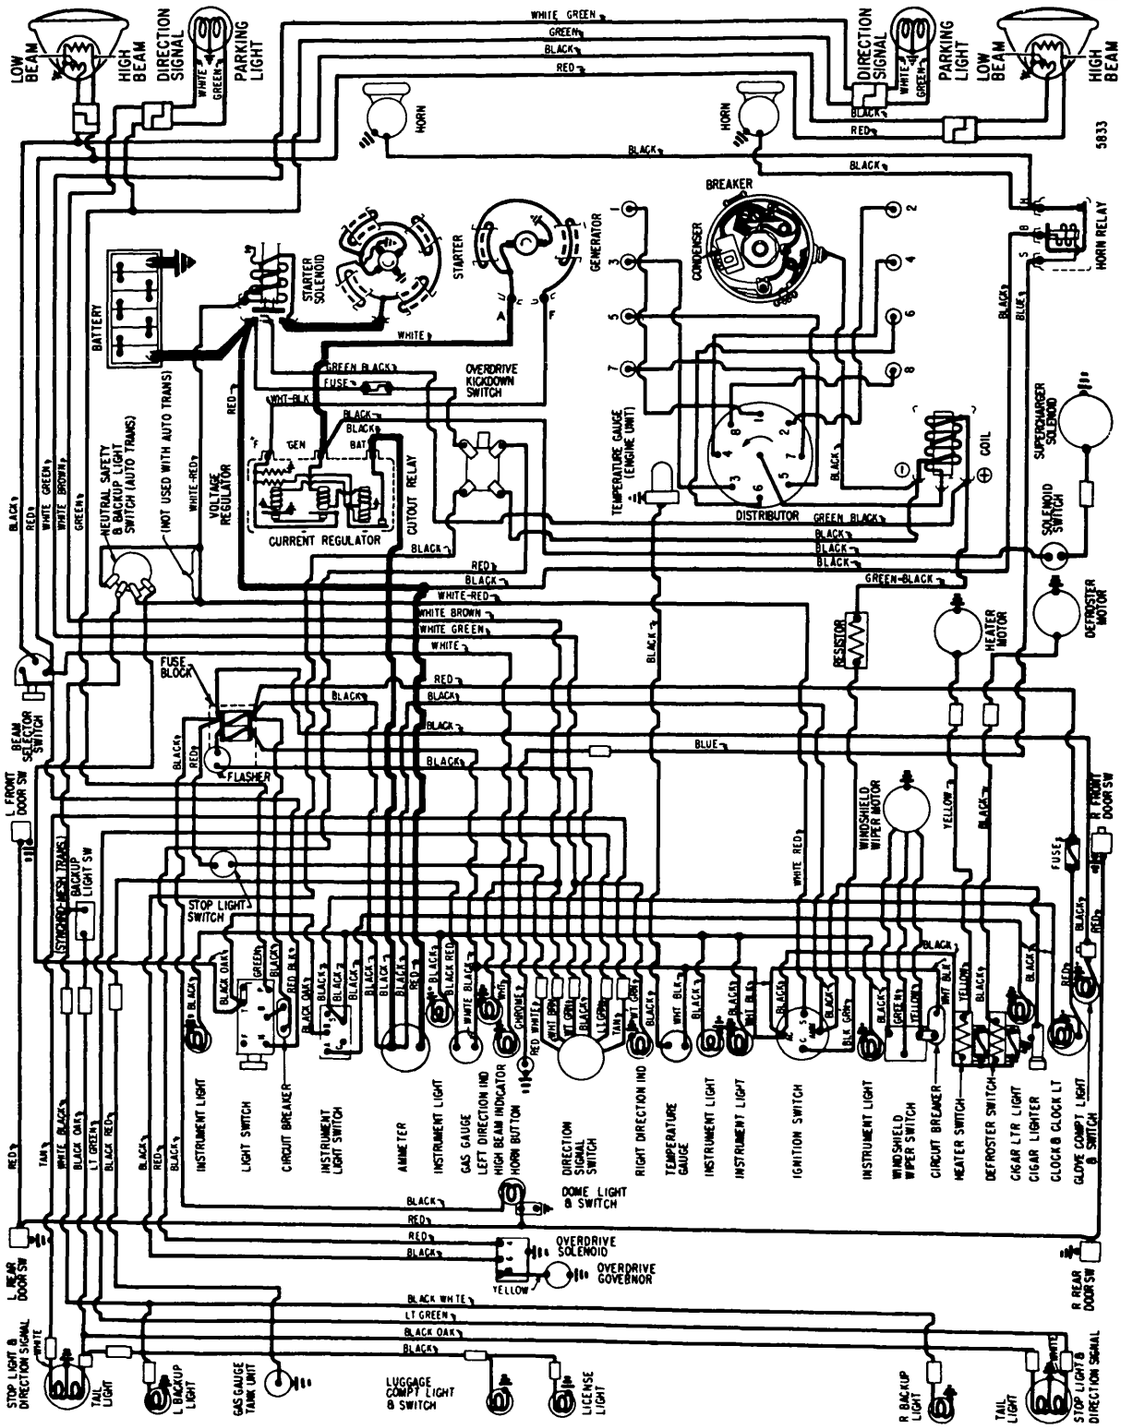
Field Current - 1 69-1 79 amps at 12 volts and 80°F

Rotation – Counter-clockwise at commutator end.

Belt Adjustment: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs. on scale will lift belt ½".

REGULATOR

Delco-Remy 1119123. *12 Volt. NOTE - Regulator is "1119000 Series". Specifications below are for "Normal" Settings.*



Cut ut Relay

Cuts In – 11.8-13.5 volts (hot).

Contact Gap – -020"

Air Gap – .020" with contacts just closed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

V ltage R gulat r

Setting - 13.8-14.8 volts (hot).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Ch cking & Adjusting - *See "Delco-Remy 12-Volt Regulators" in El ctrical S ction.*

Curr nt Regulator

Setting - 27-33 amperes hot (after 15 minutes continuous current regulator operation).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Ch cking & Adjusting - *See "Delco-Remy 12-Volt R gulators" in El ctrical Section.*

MISC. ELECTRICAL

H adlights: Sealed Beam. Single headlight in each front fender.
Direction Signals: *See El ctrical Section.*
Lighting & Instrument Switch Removal: Remove retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat in instrument board.
Stop Light Switch: Located on inner side of left frame on inner side of left frame rail forward of steering gear housing (exc. Power Brake Cars), in elbow fitting on Power Brake Unit (with Power Brakes).
CIRCUIT BREAKERS: Used as follows:
20 Amper - Protects head, parking, tail, license, back-up, and instrument lights. Located on headlight switch.
5 Amp r - Protects windshield wiper. Located on switch.
FUSES: Used as follows:
15 Amp r - Protects body & stop lights. Located in fuse block behind instrument panel.
15 Amp re - Protects directional signals. Located in fuse block behind instrument panel.
14 Ampere - Protects overdrive circuit.
14 Ampere - Protects Climatizer & Defroster. Located on switch.
3 Amper - Protects clock. Located in lead behind instrument panel.

H rn R lay: Delco-Remy 1116781.
Cl sing V ltag - 5.0-9.5 volts.
Contact Gap - .027". **Air Gap** - .014".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: "Sweepstakes 289". V8, valve-in-head, supercharged.

Bore	Stroke	Displacement
3 9/16"	3 5/8"	289 cu. ins.

Compr. Ratio	Rated HP	Developed HP
7.5-1 ①	40.6	② 275 at 4800 RPM

① - 7.0-1 Optional. ② - Supercharged.

Compression & Vacuum Reading – *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

OIL PAN REMOVAL: Remove oil level gauge and adapter tube clamp. Disconnect battery cable. Raise car and support on stands. Drain oil. Remove starter. Swing front wheels to right to move steering bellcrank out of the way. Remove oil pan.
Oil Pan Installation - *See "Oiling System" in Studebaker Special Data for front filler block installation.*

CYLINDER HEAD: *See "Cylinder Heaa & Manifolds" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

►*OTHER ENGINE DATA: See "1958 STUDEBAKER V8 & PACKARD" car model pages (preceding).*

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 quarts refill, 1 quart additional with filter change.
Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.
Pressure Regulator Valve: Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator: Direct reading, non-electric type gauge, Studebaker No. 1539878.
Oil Pump: Helical gear type. Mounted on rear main bearing cap in crankcase. *NOTE* - Stationary type oil strainer used which is integral with intake pipe.
Pump Removal, Overhaul, & Installation - *See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial flow. New disposable type. Replace entire unit at 5000 mile intervals or sooner if needed.
Replacement Filter - Studebaker No. 1542739.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at rear of engine (air outlet).

COOLING

►*FAN NOISE CORRECTION & IMPROVED COOLING (Packard Hawk before Serial No. 58LS-1465): See "Cooling System Notes" in Studebaker Special Data for recommended corrections. NOTE - Cars after abov serial number have this modification made in production.*

Water Capacity: 17 qts. (18.5 with heater).
Pressure Valve: Radiator filler cap. 13 lb. type.
Thermostat: Choke type. Studebaker No. 1540787 (170°) Std., No. 533247 (160°) and No. 533257 (180°) Optional.
NOTE - Thermostat located in side of supercharger mounting bracket (water outlet manifold).
Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Studebaker Special Data.
Pump Removal - Drain cooling system. Loosen generator, remove belt. Remove fan-to-hub screws and remove fan and pulley. On Studebaker "Golden Hawk" remove fan shroud. Remove four capscrews retaining pump cover to water pump manifold. Remove pump from manifold.
Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*
Temperature Gauge: Direct reading, electric type.
Dash Unit - Studebaker No. 1539879.
Engine Unit - Studebaker No. 1545220 used with Adapter, No. 1543523.
See "Temperature Gauges" in Miscellaneous Section.

MECHANICAL

►*FOR ALL CLUTCH, TRANSMISSION, OVERDRIVE, UNIVERSALS, REAR AXLE, SHOCK ABSORBER, SUSPENSION, STEERING, BRAKES & MISC. MECHANICAL DATA, see "1958 Studebaker V8 & Packard" car model pages (preceding).*

►*ELECTRICAL EQUIPMENT PRODUCTION CHANGE & CAUTION D lco-Remy equipm nt us d on cars b ginning Serial No 59S-23905 Specifications for this equipment differ from those for Auto-Lite equipment and different make units MUST NOT be intermixed on same car*

MODEL IDENTIFICATION

IGNITION TIMING

Setting - 2° BTDC

Timing Mark - On vibration damper "IGN" mark in line with pointer of left side of timing cover

Timing - Disconnect vacuum advance pipe at carburetor Install plug in carburetor With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer

CARBURETOR

►*CARBURETOR APPLICATION Carter AS, single barrel used*

►*LACK OF CONTROL PRESSURE & IMPROPER TRANSMISSION OPERATION CORRECTION* May be caused by right hand carburetor-to-bellcrank rod installed on a left hand drive car To check for proper rod, use spring scale t check pull required to start rod to move to overtravel position. Pull for left hand rod should be 8-10 lbs , for right hand rod 4-6 lbs.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With transmission selector lever in "N" (Neutral) or "P" (Park) position, engine at normal operating temperature, choke wide open, proceed as follows

1) Adjust carburetor-to-bellcrank rod so length between centerline of ball stud and centerline of cotter pin hole is 11 1/16" *Do not change this length during following adjustments*

2) Connect a tachometer to engine and set engine idle speed at 550 RPM Disconnect rod which connects main bellcrank on firewall to auxiliary bellcrank on engine by removing main bellcrank ball joint stud from main bellcrank lever Adjust screw on main bellcrank to provide 5/16" clearance between bellcrank and pad (use a 5/16" drill as a gauge)

3) Adjust ball joint on main bellcrank-to-auxiliary bellcrank lever *Carburetor idle speed screw must be against its stop and 5/16 ' gap at bellcrank maintained*

4) Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs pressure on gauge Stop engine remove gauge and install pipe plug

5) Hold accelerator bracket arm (on firewall) approximately 3 5/8-3 3/4" from face of firewall and adjust accelerator-to-auxiliary bellcrank rod clevis until clevis pin freely enters clevis and bracket arm

CARTER AS NO. 2876S

►*CARTER NO. 2876S CARBURETOR PRODUCTION CHANGES & RECOMMENDED CHANGES FOR IMPROVED PERFORMANCE, STALLING & HARD HOT STARTING CORRECTIONS: See "Carter AS Carburetors" in Carburetion Section.*

Idl S tting - ¼-1¾ turns open. Turn screw out for richer mixture.

Idle Speed - 550 RPM with selector lever in "N" or "P" on Flightomatic cars.

Fl at L v l - ¼" (Gauge T109-282) from top of each float (at free end) to top of casting. To adjust, bend float lip.

Acc l rating Pump - Pump arm on lifter link should be parallel to top of casting. To adjust, bend pump arm.

Fast Idl : .045" (Gauge T109-158) between lower edge of valve and bore with fast idle link on high step of cam. To adjust, bend choke connector rod.

Aut matic Ch k S tting: Centered at index.

Thr ttl Linkag Adjustm nt: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AS Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fu l Pump: AC. Fuel only. Replacement Pump 4703.

Fu l Pump Pr ssur - 3½-5½ lbs.

See "Fuel Pumps" in Carburetion Section.

Gas lin Gauge: Electric type.

Dash Unit - Studebaker No. 1548689 (Exc. Silver Hawk), No. 1539880 (Silver Hawk).

Tank Unit - Studebaker No. 1544825 (All).

See "Fuel Gauges" in Carburetion Section.

Air Cl an r: DRY FILTER ELEMENT TYPE Std., Oil Bath type optional. Clean element every 1,000 miles, replace dry type every 10,000 miles.

►*DRY TYPE CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil, lubricate, or blow out with compressed air.*

BATTERY

Willard HO-11-50. 12 Volt, 9 plate, 50 ampere hour capacity (20 hr. rate).

Battery Ground - Negative.

Engin Gr und - Right front engine support bracket to frame.

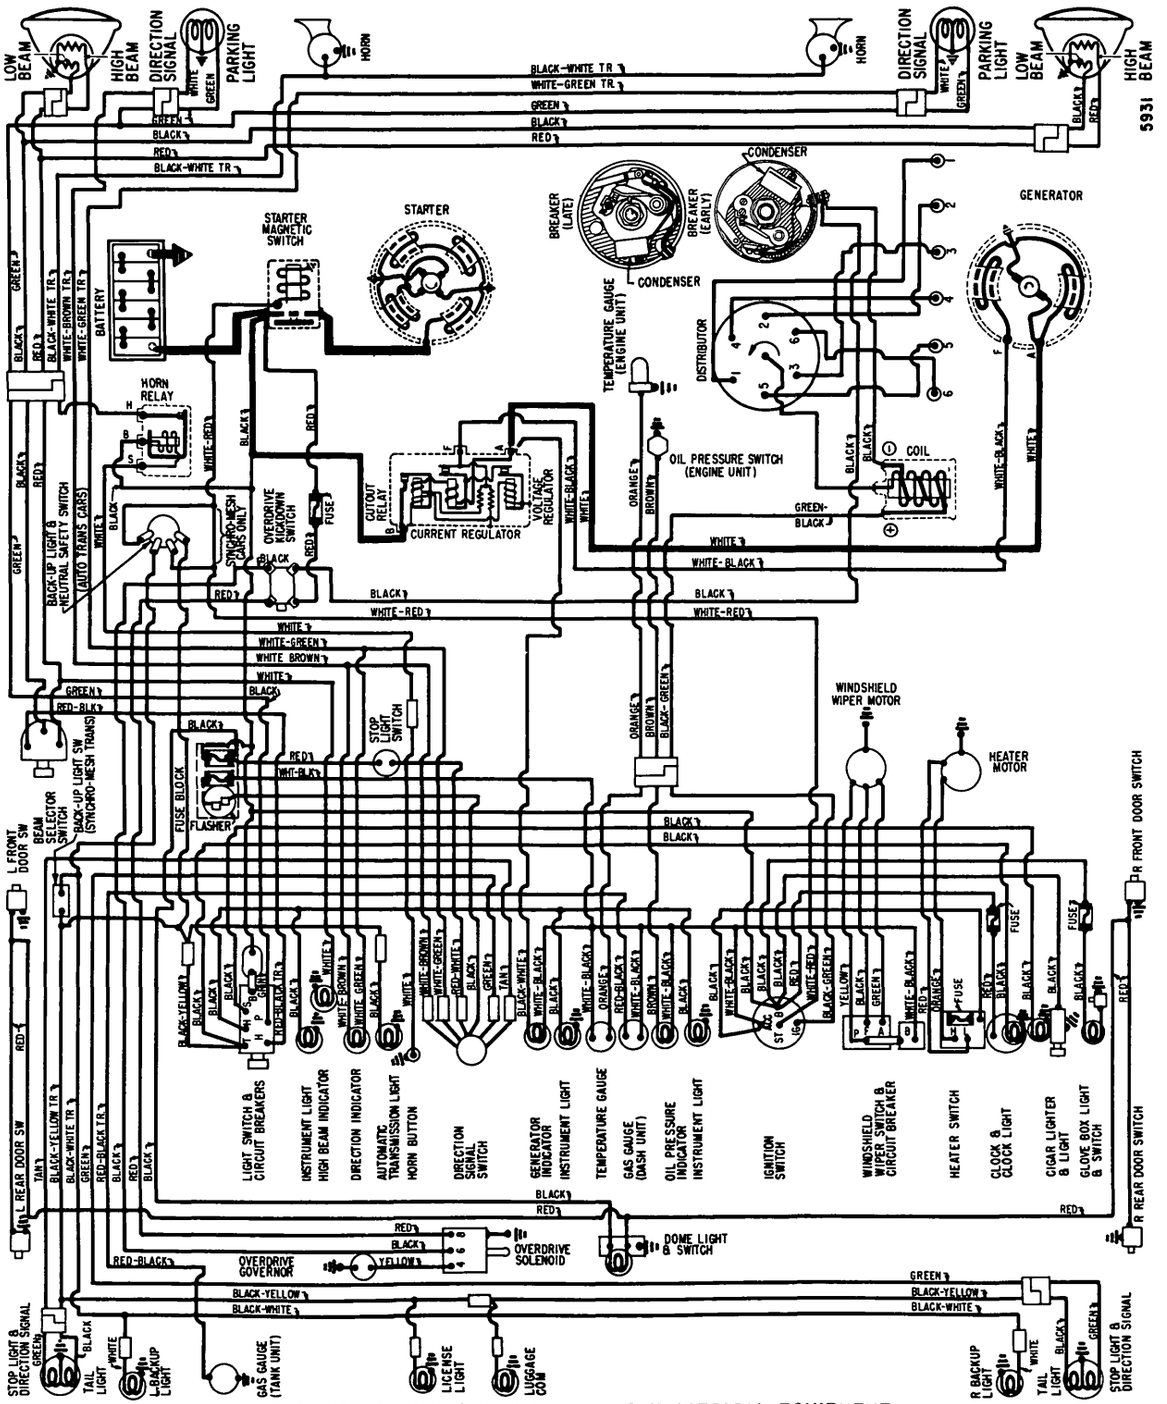
AUTO-LITE STARTER

Aut -Lit MBG-4103. Armature MZ-2367.

Drive - Bendix A-3519. Barrel-Anchor type.

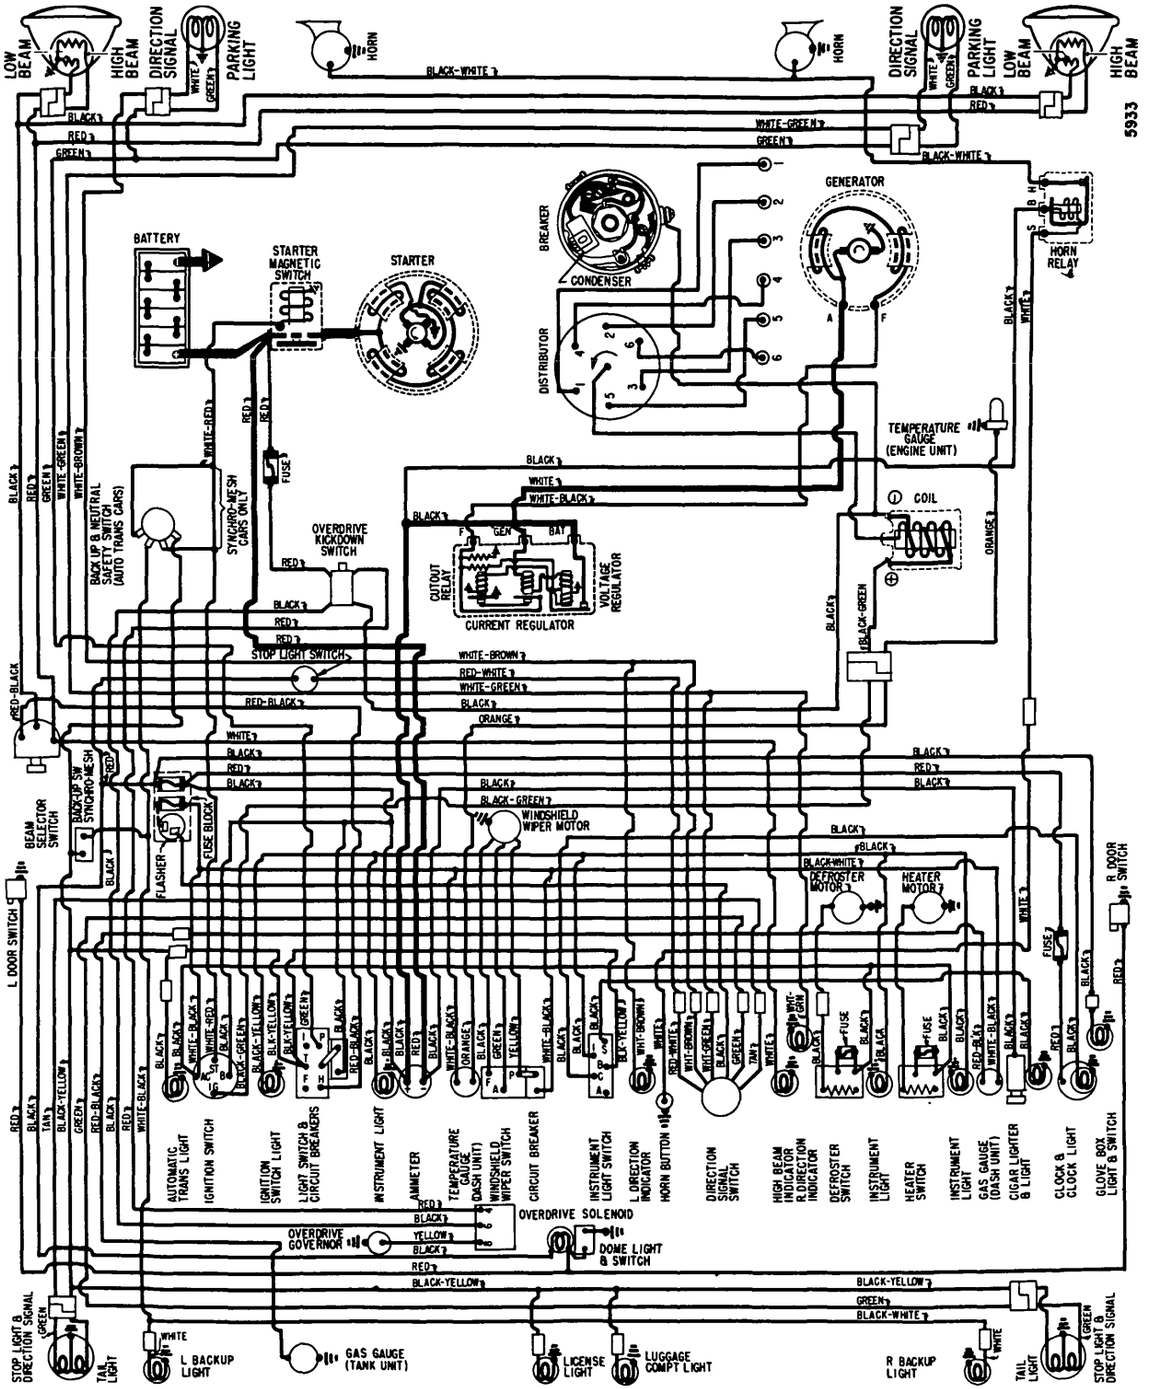
R tati n - Counterclockwise at commutator end.

Bru h Spring Tension - 42-53 ozs.



P rf rmance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5200	10.0	55 max.
5.2 ft. lbs. min.	Lock	4.0	235 max.



Start r Switch: Magnetic switch, Studebaker No. 1539716 mounted on starter and controlled by combination Ignition & Starter Switch.

Aut matic Transmission N utral Safety Switch: Studebaker No. 533321. Combination Neutral Safety and Back-up Light switch mounted on lower end of steer-

ing column. Adjust switch so that starter operative only with selector lever in "N" or "P" position.

Adjustment - See *"Studebaker Flightomatic" in Transmission Section.*

GENERATOR

Auto-Lite GJC-7002-F. Armature GJC-2030-F.

Performance Data

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0	15.0	2050-2250
35.0	15.0	2250-2650

Brush Spring Tension - 18-36 ozs.
Field Current - 1.2-1.3 amps. at 10.0 volts (70°F).
Motoring Current - 3.4-3.9 amps. at 10.0 volts (70°F).
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 3/8-1/2" deflection midway between generator and fan pulleys with 10 lbs. pull on belt.

REGULATOR

Auto-Lite VRX-6008-A.

Cutout R lay

Cuts In - 12.6-13.6 volts.
Cuts Out - 3.0-5.0 amps. discharge.
Contact Gap - .015" minimum.
Air Gap - .031-.034".

Voltage Regulat r

Setting - 14.2-14.8 volts at 80°F., unit operating normally while charging at 7 amperes or with a .25 ohm resistor between regulator and battery.
Air Gap - .048-.052" with contact just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Auto-Lite Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" typ . Set to following specifications at 70°F.*

Test A	Operating Amper s	Test B
44 amps.		35 (33-37) amps.

Test A - After 15 minutes operation charging at 10 amps.
Test B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Auto-Lite R gulators" in Electrical Section.*

DELCO-REMY STARTER

Delco-Remy 1107748 (Std.), 1107650 (Taxi with H avy Duty Clutch).
Armature - Delco-Remy 1933789 (1107650).
Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum (1107650).

Performance Data - 1107650

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Start r Switch: Same as Auto-Lite Starter (above).

CONTINUED ON NEXT PAGE

GENERATOR

D lc -Remy No. 1102003. Armatur No. 1923535.
Performance Data - Cold

Amperes	Volts	RPM
30	14 0	2240

Brush Spring Tension - 28 ozs
Field Curr nt - 1 69-1 79 amps at 12 volts and 80°F
R tati n - Counterclockwise at commutator end
B lt Adjustm nt: Same as Auto-Lite Generator (above)

REGULATOR

D lc -R my 1119123. *NOTE - Specifications below are ar normal s ttings*

Cut ut Relay
Cuts In - 11 8-13 5 volts (Hot)
C ntact Gap - 020"
Air Gap - 020" with contacts just closed

V ltag Regulator
S tting - 13 8-14 8 volts (Hot)
Air Gap - 075" with armature pressed down to point where contacts just touch
Ch cking & Adjusting - *See "Delco-Remy 1119000 Seri s R gulators" in El ctrical Section*

Curr nt Regulator
S tting - 27-33 amperes (Hot)
Air Gap - 075" with armature pressed down to point where contacts just touch
Ch cking & Adjusting - *See "Delco-Remy 1119000 S ri s R gulators" in El ctrical Section*

MISC. ELECTRICAL

H adlamps: Sealed Beam type (Single Headlights)

Dir ction Signal: *See El ctrical Section.*

Lighting & Instrum nt Light Switch Removal: Remove switch retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat on board.

St p Light Switch: Located on inner side of left frame rail forward of st ering gear housing (except Silver Hawk), in elbow fitting on Power Brake Unit (Srlver Hawk).

CIRCUIT BREAKERS: Used as follows
20 Amp r - Protects head, parking, tail, back-up, and instrument lights Located on headlight switch
5 Amp r - Protects windshield wiper Located in wiper switch

FUSES: Used as follows
15 Amper - Protects body and stop lights Located in block behind instrument panel
15 Amp r s - Protects directional signal Located in fuse block behind instrument panel
14 Amp r s - Protects overdrive circuit Located in kick-down switch-to-solenoid cable
14 Amp r s - Protects Climatizer & Defroster Located on switch
7 Amp r s - Protects radio Located in lead behind instrument panel
3 Amp r s - Protects clock Located in lead behind instrument panel

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION Us extr m caution wh n disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions' in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own 6 Cyl "L" head

Bore	Stroke	Displacement
3"	4"	170 cu ins
Compression Ratio	**Rated HP**	**Developed HP**
8 3-1©	21 6	90 at 4000 RPM

© - 7 0-1 Optional

Compression & Vacuum Reading - *See TUNE-UP*

►*OIL LEAKAGE OR SEEPAGE AT VALVE COVER PLATE CORRECTION (First Cars)* Leakage at lower edge of valve cover plate (when not due to defective gasket or improperly tightened cover bolts) can be corrected by removing cover and installing aluminum plugs, No 1549330 (furnished 12 in pkg), in each of the 12 valve lifter oil holes in the cylinder block Use small punch to drive plugs in tight and flush with the cylinder block *NOTE - These plugs installed in production beginning Engine No S-82962*

►*ENGINE VIBRATION CORRECTION (Cars with Flightomatic Trans)* Excessive engine vibration, particularly at lower speeds, can be corrected by installing new Front Engine Mounts of 40 durometer material These mounts are Part No 1548274 (marked "40")

►*ENGINE REAR SUPPORT INSULATOR CHANGE FOR SMOOTHER ENGINE OPERATION (Y1 Taxicab Models)* New Engine Rear Support Insulator, Part No 1548995 (40 durometer hardness), used in production beginning Serial No 59S-38215 Supersedes Part No 1547196 (60 durometer hardness)

OIL PAN REMOVAL: Remove oil level gauge. Raise car and support it with stands, drain oil. On long wheelbase models, swing wheels to right to move steering bellcrank out of way. On short wheelbase models, disconnect tie rods and reach rod from steering bellcrank, remove retaining pinch bolt and remove bellcrank from shaft. Then remove oil pan capscrews and remove pan.

OIL PAN INSTALLATION· *See "Oil Pan" in Studebaker Special Data*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data*

PISTONS

"T" slotted, cam ground, tin plated aluminum alloy

Original Bore & Pistons—*See "Original Bore & Pistons" in Studebaker Special Data*

Removal—Pistons and rods removed from above

Fitting New Pistons: Clearance—Selective feeler fit Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore Pull required to remove feeler with properly fit piston should be 11 to 16 lbs

R plac ment Pist ns: Std. .010", .020", 030" and 040" Oversize, Pistons furnished with pins.

Installing Pist ns: Install piston in cylinder bore with "T" slot away from camshaft side *Se R d Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.
Diameter—.7491-.7495". **Length** 2.625"
Clearance in Piston—.0001- 0003" (selective fit)
Light thumb push fit at 70°F
Piston Pin Removal & Installation—*See "Piston Pins" in Studebaker Special Data*
Replacement Pins: Std. & 0025", .005" Oversize

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1 ...	3/32"	.007-.017"	. .002-.005"
Compr #2	1/8"	007- 017"	002- 005"
Oil	5/32"	.007-.015"	0015- 004"

Replacement Rings: Std , .020", .030", & .040" Oversize, in sets

Installing Rings: Top compression ring has step at the inside which must be installed up Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point

CONNECTING RODS

Length—(Center-to-center) 6 3/8". **Weight**—19.04 ozs.
Crankpin Journal Diameter—1 81175-1 81275"
Bearings—Steel backed, Microbabbitt lined, no shims
Clearance— 0005-.002"
Side Play—.005-.009"

Replacement Bearings: Std., .001", .002", .010", .020" Undersize.

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod Insert tapered end of clamp screw toward heavy boss on rod With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6)

►*REPLACEMENT ROD NOTE.* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders

CRANKSHAFT

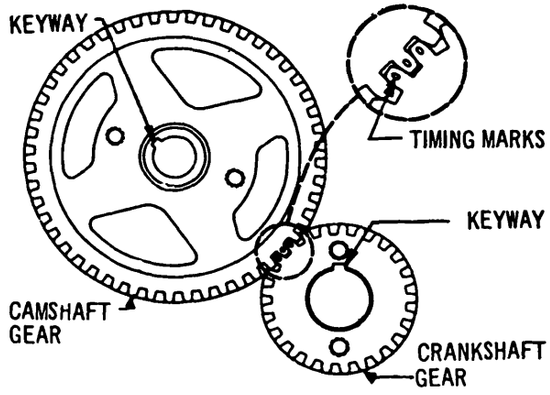
Journal Diameter—3 0623-3.0628" Four bearings

►*FRONT MAIN BEARING CAP REMOVAL NOTE:* Turn crankshaft until No. 3 and No. 4 pistons are at top of their travel. Remove bearing cap bolts, then remove cap by twisting end away from camshaft toward rear of engine.

Bearings - Steel-backed, micro-babbitt lined No shims
Clearance - 0005- 002"

Replacement Bearings Standard & 001" 010" 020", 030" Undersize

End Thrust· Taken by thrust washer assembled between front main bearing and crankshaft gear controlled by shims between thrust washer and main bearing journal These shims furnished 003" 005" 007" thick
Endplay - 003- 006"



CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankshaft R ar Main B aring Oil Seal: S *"Crankshaft & Main B arings" in Stud bak r Special Data*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data*

CAMSHAFT

Journal Diameters—(1) 1.7475-1.7480", (2) 1.7162-1.7170", (3) 1.6857-1.6865", (4) 1.6232-1.6240".
Bearings—Steel backed babbitt lined bushings
Clearance—No.1—.0007-.0022", Nos. 2,3,4—.0010-.0027".
End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft between gear hub and front bearing journal controls endplay) Adjust endplay by replacing thrust plate or spacer When installing thrust plate, tighten capscrews evenly and alternately to avoid distorting the plate
End Play—.003-.006"
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data*
Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub
Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Special Data*
Backlash—.001-.003"
Camshaft Setting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear

6 CYL. VALVE TIMING MARKS

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance: 018" Intake and Exhaust, COLD
►*CAUTI ON Disregard 016" specification stamped on valve cover on some engines*

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exha ist	1 9/32'	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	0015- 0035"
Exhaust	45°	11/32"	0015- 0035"

Valv Seat Width— 1/16-3/32'

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced
Valve Springs: Single spring used on all valves
►*VALVE SPRING LOCK INSTALLATION CAUTION* When installing lock in recess of lower spring retainer, groove in lock must engage tongue in retainer

Valve Spring Specifications

	Pressure	Length
Valve Closed	49-54 lbs.	1 21/32"
Valve Open	93-103 lbs.	1 5/16"

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber. Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar
Valve Lifters: Mushroom type Remove from below with camshaft out of engine
Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*
Replacement Lifters—Std., .001" & .005" Oversize
►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 15° BTDC Closes 49° ALDC
Exhaust Valves—Open 54° BLDC. Closes 10° ATDC
Valve Timing Check—Adjust No. 1 Intake valve at .020" cold Rotate engine until No 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft Valve timing will be correct if lifter stops moving as above marking is directly below pointer

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*
Crankcase Capacity: 5 quarts refill, 1 quart additional with filter change.
Normal Oil Pressure: 20-40 lbs. at 2000 RPM.
Pressure Regulator Valve: Opens at 40 lbs. Under plug on lower right front corner of engine. For access, remove engine front cover bolt. Replace weak spring (do not attempt to stretch spring).
Oil Pressure Indicator: (Silver Hawk) Direct reading, non-electric type gauge, Studebaker No. 1539878.
(Other Models) Indicator light on instrument panel. If light on at highway speeds, low oil pressure or other difficulty indicated. Oil Pressure Switch on Engine Studebaker No. 1539898.
Oil Pump: Helical gear type. On right side of crankcase.
Pump Removal, Overhaul, & Installation - *See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial flow, "disposable" type (replace element and housing as a unit). Replace element at 5000-6000 mile intervals or more often under severe conditions.
Replac m nt Filt r El m nt - Studebaker No. 1542739.
Crankcase V ntilati n: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe is replaceable (retained by cotter pin).
Filt r El m nt S rvicing - Remove filter in breather pipe by removing cotter pin and pulling filter out with a hooked wire Clean filters by washing in kerosene or solvent, drain thoroughly and re-oil by coating with engine oil

COOLING

Water Capacity: 11 qts without heater Add 1 qt (Exc Silver Hawk), 1½ qts (Silver Hawk) with heater
Pressure Valve: Radiator filler cap. 13 lb. (12-15) type. Studebaker No. 536502.
Thermostat: Choke type in water outlet on cylinder head. Studebaker No. 1542838 (170°) Std., No. 531470 (160°) and No. 532017 (180°) Optional.
Water Pump: Packless, sealed ball bearing type
See "Water Pumps" in Stud bak r Sp cial Data.
Pump Removal - Remove shroud. *See "Cooling System" in Studebaker Special Data* Loosen generator and remove belt. Remove fan-to-hub capscrews and remove fan blades and pulley Disconnect Climatizer hose, and generator adjusting arm Disconnect outlet hose and remove mounting capscrews.
Radiator & Fan Shroud Removal: S e *"Cooling System" in Studebaker Special Data*
Temperature Gauge: Direct reading, electric type
Dash Unit - Studebaker No 1548690 (Exc Silver Hawk), 1539879 (Silver Hawk)
Engine Unit - Studebaker No 1549452 (marked "362-AR" on one face of hex head) *NOTE* - This unit supersedes previous type, No 1545220, and should be used for replacement
See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Borg & Beck Model 8.5A6 (Exc. Y1), 9A7 (Y1 Taxicab). Single plate, dry disc type
See "Borg & Beck" in Clutch Section
Pedal Adjustment: Free travel ½-1" To adjust, loosen locknut on rod connecting clutch release shaft lever to clutch operating shaft lever Turn opposite nut in or out to shorten or lengthen rod as required, tighten locknut securely against swivel
►*HILL-HOLDER NOTE.* Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever
Housing Removal: Remove oil level gauge and tube Remove starter mounting screws (only) and tie starter and cables up out of the way Disconnect clutch pedal free travel adjusting rod at operating shaft inner lever On cars with Hill Holder, disconnect operating rod from operating shaft outer lever Remove operating shaft sleeve pin (in sleeve at frame end of shaft), remove support bracket capscrews (on bottom of transmission case), lower support bracket and slip operating shaft sleeve off shaft, remove operating shaft assembly Remove transmission (see below) Remove two bolts or nuts holding rear support insulator to the crossmember Support engine weight with a jack placed under the rear of the oil pan (use block on jack to prevent damage to pan) Remove support crossmember-to-frame bolts and remove crossmember Remove clutch housing bolts

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

or capscrews (*CAUTION* - Remove dowel bolts first), remove clutch housing

►*INSTALLATION CAUTION* Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts Draw dowel bolts in place by tightening the nuts—d n t driv them into place

Clutch Rem val Remove clutch housing (above),remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member

SYNCHRO-MESH TRANSMISSION

Warner Mod l T96 (Exc Taxicab), T90B (Y1 Taxicab) Three-speed synchro-mesh

See Warner Transmissions in Transmission Section

►*TAXICAB TRANSMISSION IDENTIFICATION NOTE* This T90B transmission is installed in case marked "T86" Types used can be identified by letters stamped on metal tag attached to one cover capscrew as follows "EE - Used with 9A7 (9½") Clutch 'L' - Used with 10 5A8 (10½") Clutch

Transmission C ntr l: S *"Transmission Controls" in Transmission S ction.*

R m val: Disconnect propeller shaft at rear universal joint flange, pull shaft to rear to disengage splined joint at transmission extension, remove shaft. Disconnect shift rods at transmission case shift levers, disconnect speedometer cable at transmission case, remove speedometer pinion. Drain transmission. Support transmission and remove capscrews mounting transmission on clutch housing. Remove clutch operating shaft, bracket, and bearing from transmission case. Move transmission straight back until main drive pinion clears clutch driven member, then lower transmission and remove from beneath car.

OVERDRIVE

Warn r R10. Governor controlled, solenoid operation with throttle controlled kick-down. *NOTE* - Relay is not used in overdrive control circuit. See wiring diagram for new control circuit.

See "Warner R10 Overdrive" in Transmission Section.

Ov rdriv Contr l: Se *"Warner R10 Overdrive Control" in Transmission S ction.*

R m val: Remove as unit with transmission. Disconnect control wiring and cable, then proceed as for transmission removal (above).

FLIGHTOMATIC TRANSMISSION

Warner M del AS4-5H (Exc. Taxicab), AS2-7E (Y1 Taxicab) Torque converter and hydraulically controlled 3-speed planetary gear transmission

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION:* S e *"Flight matic" Transmission in Transmissi n S cti n.*

►*TESTING & TROUBLE SHOOTING: See "Flightomatic" Transmissi n in Transmission Section.*

Lubricati n: Check fluid every 1000 miles, drain and refill every 15,000 miles. Use Automatic Transmission Fluid Type A - Suffix A

►*INSPECTION HOLE COVER NOTE* Later cars have rubber covered inspection hole cover installed over floor mat which can be removed for fluid checking without disturbing floor mat.

Ch cking Fluid L v l – Place selector lever in "P" position. Start engine and operate it for approximately four minutes or until engine and transmission have reached operating temperature. Remove floor mat from right side and remove oil inspection hole cover. Clean all dirt and foreign material from dipstick. Apply parking brake and foot brake, and move selector lever slowly from "P" position to "R" position, then back to "D" position. Remove dipstick, wipe clean, and install in transmission and **turn clockwise to lock position.** Remove dipstick and read fluid level. Add fluid to bring level to "FULL" mark on dipstick (1½ pints between "LOW" and "FULL" marks on dipstick).

Capacity - 9 qts (Exc Taxicab), 9½ qts (Y1 Taxicab)

Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER FLIGHTOMATIC DATA: See "Flightomatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. TWO used (with new one-piece type propeller shaft).

►*UNIVERSAL LUBRICATION NOTE* · Universals should be disassembled, cleaned, and repacked with special Universal Joint Lubricant at 20,000 mile intervals.

PROPELLER SHAFT

►*DRIVE LINE ANGLES CHECKING & ADJUSTMENT See 'Propeller Shaft Notes" in Studebaker Special Data CAUTION - Incorrect angles may cause drive line or chassis vibration*

►*UNIVERSAL JOINT "PHASE ANGLE" & PROPELLER SHAFT REPLACEMENT CAUTION* Shaft assemblies with different universal joint phase angles used on some models *See "Propeller Shaft Notes" in Studebaker Special Data for complete data on each model*

►*PROPELLER SHAFT PRODUCTION CHANGE & RECOMMENDED CORRECTION FOR "RHYTHMIC BEAT" NOISE IN DRIVE LINE See "Propeller Shaft Notes" in Studebaker Special Data for new Propeller Shaft Assemblies and special installation procedure*

REAR AXLE

Spicer Model 23-1 (Exc. Taxicab), Model 44-3 (Y1 Taxicab). Semi-floating, hypoid gear, with Hotchkiss Drive *See "Spicer Hypoid" in Rear Axle Section*

►*"TWIN-TRACTION" DIFFERENTIAL NOTE* Optional Can be identified by letter "T" or figure "45" stamped on tag attached to axle housing by one cover screw (*NOTE* - Separate tag used to indicate axle ratio) *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

►*PINION BEARING OIL SEAL LEAK CORRECTION See "Spicer Hypoid" in Rear Axle Section*

Axle Ratio Identification - Stamped on tag attached to axle housing by one cover screw (*NOTE* - Separate tag used to indicate "Twin-Traction" Differential)

►*AXLE RATIO PRODUCTION CHANGE* Later cars have new axle ratio of 3 73-1 (Synchro-mesh & Flightomatic Transmission)

ℂ - See Axle Ratio Production Change Note above

Backlash - 003- 006"

Axle Shaft Removal: Remove wheel, remove wheel hub using Puller J-1644-S Take out backing plate retaining bolts, remove outer washer, retainer, reinforcing plate, and felt washer (discard this washer) Free hand brake cable from equalizer and frame guides, disconnect hydraulic brake line at wheel cylinder Pull backing plate out over end of axle shaft and tie it up out of the way Remove endplay adjusting shims (*CAUTION* - Save these shims for reinstallation) Use Puller J-7935 with Hammer J-2619 to remove axle shaft

Rear Axle Assembly Removal: Remove hub caps, loosen wheel nuts and remove axle shaft nut Raise rear of car and support on stands under frame just ahead of rear springs Remove wheels, hubs, and drums Disconnect brake line at each rear wheel cylinder, remove brake pipe clamps and free brake line from rear axle housing Take out backing plate bolts pull backing plate out over end of axle shaft and tie up out of the way Remove adjusting shims located beneath backing plate (*CAUTION* - Save these shims for reinstallation) Disconnect propeller shaft by removing rear universal joint U-bolts and nuts (wire caps together) Remove rear spring U-bolts from axle housing, disconnect rear shock absorbers Remove rear axle assembly from beneath car

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", 005", 010", 030" thick).

End Play – .001-.006".

►*REAR WHEEL BEARING LUBRICATION CAUTION:* No lubrication plug provided but bearings are NOT lubricated for life. Remove, clean, and repack bearings at 25,000 mile intervals.

SHOCK ABSORBERS

Gabriel (U.S. Cars), Monroe (Canadian Cars). Direct acting, Hydraulic, Non-adjustable (Exc Taxicab), Adjustable (Y1 Taxicab & Optl Heavy Duty on other cars)

Ⓒ - First 557 cars only Ⓒ - Adjustable type

FRONT SUSPENSION

Independent. Coil spring type with shock absorbers located within springs

►*VARIABLE RATE COIL SPRING NOTE* All springs except Heavy Duty type are Variable Rate with closer coils at upper end.

S e "Studebaker" in Suspensions & Wheel Alignment S ction

Kingpin Inclination - 6° at 0° camber

Caster - Neg 1½° to Neg 3°. Maximum variation between wheels ¾° *NOTE - Above specifications supersede previous data.*

Camber - 0° to Pos. 1°. ½° more camber favored on driver's side

Toe-In - 1/16"-1/8".

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be turned 23½-24½°.

STEERING

Manual: Ross TA-12 & TL-12 Cam & Twin Lever or SL-54 Cam & Single Lever Roller Stud. Used as follows

Car Model	Ross Strg. Gear Model
Sedans & Station Wagons (LHD)	TA-12
Sedans & Station Wagons (RHD)	SL-54
Silver Hawk & Taxicab (LHD)	SL-54
Silver Hawk (RHD)	TL-12

See "Ross Steering Gears" in Steering Section

P wer Steering: Bendix Linkage Type Used with standard steering gear

See "Bendix Linkage Type Power Steering" in Steering Section.

St ering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & H rn Butt n R m val: *See "R ss Cam & Twin Lev r" in Steering Section.*

Steering G ar R moval: *S e "R ss Cam & Twin L v r" in Steering Section.*

BRAKES

Service: Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes) Parking lever applies rear wheel service brakes

See "Wagner Lockheed Self-centering Brakes" in Brake Section

►*BRAKE THUMP CORRECTION (All Models)* A thumping or bumping noise on brake application which increases as car is slowed down can be corrected as follows Remove wheel and brake drum assembly, remove all tool marks in brake drum by cross-sanding the drum with emery cloth If all tool marks cannot be removed by this method, use a light lathe cut

Drum Diameter	Frt. Whls.	Rear Whls.
All (Exc Taxicab)	10"	9"
Y1 Taxicab	11"	10"

Master Cyl. Bore Diameter - 1 000" (All)

Wheel Cylinder Diameter	Frt. Whls.	Rear Whls.
All (Exc Taxicab)	1 000"	812"
Y1 Taxicab	1 062"	875"

Braking Power - 62% Front, 38% Rear

Brake Lining: Marshall-Eclipse lining used on all models Lining is riveted (Exc Taxicab), Bonded (Y1 Taxicab with heavy duty lining)

►*FRONT WHEEL SECONDARY LINING NOTE (Exc Y1 Taxicab)* Lining on this shoe is 1/4" thick (3/16" on all other shoes) and is pre-ground off-center to eliminate brake squeal This lining marked "Secondary" and "Top" and should be installed as marked

►*BRAKE LINING THICKNESS CAUTION (Y1 Taxicab)* **Front** wheel lining thickness is 9/32", **Rear** wheel lining thickness 3/16" DO NOT interchange these linings

Lining Width & Length (All Models except Taxicab)

Shoe	Front Wheel	Rear Wheel
Primary	2" x 8 15/32"	2" x 7 9/16"
Secondary	2" x 10 53/64"	2" x 9 3/4"
	(Y1 Taxicab)	
All Shoes	2 1/4" x 11 1/2"	2" x 10 7/16"

Thickness - 3/16" except as noted above *See Brak Lining Notes and Cautions above*

Clearance - Lock wheels by turning shoes out against drum, then back off adjusting screw 8 notches or more as required to free the drum

Hill Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-holder" in Brake Section for data*

Standard Master Cylinder On frame left side rail at base of brake pedal

Checking Fluid—Access hole in front floor pan at left corner of drivers' seat Fluid should be maintained at level ½" below top of filler opening

Removal—Remove from beneath car Disconnect clutch pedal pullback spring from master cylinder support strap Remove brake pedal pullback spring by unhooking it first from frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod Disconnect fluid line or lines at rear of master cylinder *(NOTE*—On cars equipped with Hill-holder, only one line is connected to master cylinder). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder Insert forward mounting bolt ing bolt to hold Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Power Unit. Used in conjunction with standard master cylinder and located under hood on left front fender apron.

See Hydrovac P wer Unit" in Brak Section.

Removal—Disconnect vacuum and brake lines, stop light wires, remove power unit-to-bracket mounting bolts

MISC. MECHANICAL

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section*

Windshield Wiper: (Deluxe Models) Vacuum Link & Crank Arm type (Others) Auto-Lite or Bosch Electric Two-speed type

See "Windshield Wipers" in Miscellan ous S ction.

IGNITION TIMING

Setting - 4° BTDC at 550 RPM Vacuum line to distributor disconnected and opening in carburetor plugged

Timing Mark - "IGN" line on vibration damper aligned with pointer on timing gear cover

CARBURETOR

►*CARBURETOR APPLICATION* *Stromberg WW 2-Barrel Standard on all models, Carter WCFB 4-Barrel Optional on all models except Taxi*

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows

1) Adjust engine idle speed to 550 RPM with transmission selector lever in "N" (Neutral) position Set stop on bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge) After stop is adjusted, hold in this position

2) *NOTE - Make sure that carburetor-to-bellcrank rod ball joint is in inner hole of bellcrank pad on cars with 2-barrel carburetor, and in outer hole on cars with 4-barrel carburetor In both cases, ball joint must be on underneath side of bellcrank lever*

3) Adjust carburetor-bellcrank rod until idle speed screw on carburetor throttle lever just begins to leave its stop

4) Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs pressure on gauge (95-100 lbs on Taxi) Stop engine, remove gauge and install plug

THROTTLE RETURN CHECK ADJUSTMENT: Loosen throttle return check assembly screw locknut and adjust return check in bracket until plunger just breaks contact with tab on throttle lever Mark position of check assembly relative to bracket, then turn check assembly 1¾ to 2 turns toward lever. Tighten locknut

STROMBERG WW

Stromberg Series WW, Code 6-123. Throttle return check used on all models with Flightomatic Transmission

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyls 1-4-6-7, LEFT barrel 2-3-5-8*

Idle Setting – Initial setting 1¼ turns open final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture

Idle Speed - 550-600 RPM, with selector lever in "N" on Flightomatic cars

Float Level - 3/16" from top edge of main body to top of float To check, remove bowl cover and place float level gauge of Tool J-7477 across top edge of main body Float should just touch gauge To adjust, bend float lip

Accelerating Pump - Center hole, normal setting For less fuel install rod in inner hole, for more fuel install rod in outer hole

Fast Idle Setting: With choke valve closed and highest part of high idle cam contacting fast idle screw, adjust fast idle screw so 030" wire (Tool J-7477) can be inserted freely between throttle valve and throttle body on idle port side

Automatic Choke Setting: Centered on index

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA: See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section*

CARTER WCFB

Carter WCFB No. 2829S (Std. & O.D. Trans.), No. 2830S (Flightomatic).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls 1–4–6–7, LEFT barrels feed 2–3–5–8*

►*STUMBLE OR HESITATION ON COLD START CORRECTION:* Install new choke piston *See "Carter WCFB 4–Barrel Carburetors" in Carburetion Section*

Idle Setting – Initial setting 1 turn open Turn screws out for richer mixture

Idle Speed – 550–600 RPM with selector lever in "N" on Flightomatic cars

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA: See "Carter WCFB 4–Barrel Carburetors" in Carburetion Section*

CARB. EQUIPMENT

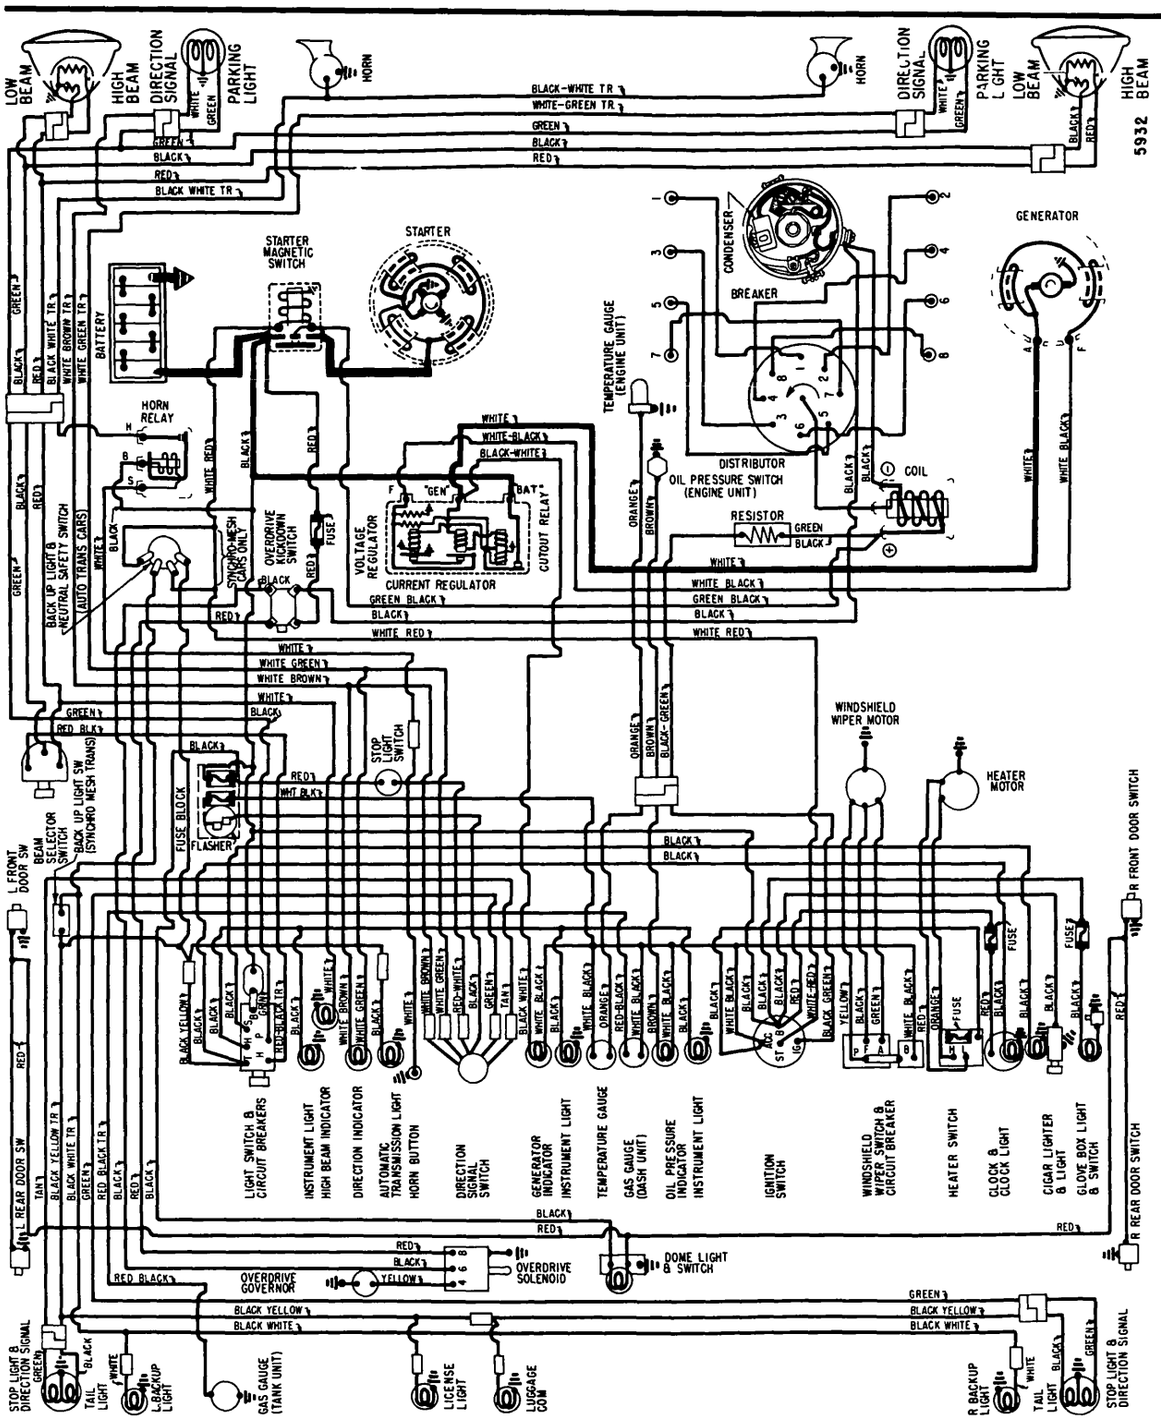
Fuel Pump: Carter No 2573S Fuel only

Pressure - 3½-5½ lbs

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type

Dash Unit – Studebaker No 1539880 (Hawk) No 1548689 (others)



Tank Unit – Studebaker No 1544825

See "Fuel Gauges" in Carburetion Section

Air Cleaner: DRY TYPE (Plasticized paper) Standard. Oil Bath type Optional Clean dry type filter element every 1000 miles, replace element every six months or 10,000 miles

►*CLEANING CAUTION (DRY TYPE)* Clean filter element by tapping and shaking to remove dirt particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Willard HO-11-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hour rate).
Battery Ground - Negative.
Engine Ground - Strap at right front corner of engine.

STARTER

Delco-Remy 1107650 (Synchr -mesh & Ov rdriv), 1107651 (Flightomatic). Armature - 1933789.
Drive - Bendix "Folo-thru" No. A3474.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

► *STARTER MOTOR CABLE-ACCELERATOR LINKAGE INTERFERENCE CORRECTION & PRODUCTION CHANGE:* Install new longer starter motor cable, Part No. 1539935, and route cable through body hold-down bracket. Cable installed on cars after Serial No. 59V—26047.

Starting Switch: Magnetic Switch, Studebaker No. 1539716, mounted on dash and controlled by combination Ignition & Starter switch.

Automatic Transmission Neutral Saf ty Switch: Studebaker No. 533321 (exc. Saginaw Pwr. Strg.), 534390 (Cars with Saginaw Integral Power Steering). Mounted on steering column. Adjust switch so that starter operative only with selector lever in "N" or "P" position.
Adjustment - *See "Studebaker Flightomatic" in Transmission Section.*

GENERATOR

Delco-Remy No. 1102003. Armatur N . 1923535.

Performance Data - C ld

Amperes	Volts	RPM
30	14.0	2240

Brush Spring Tension - 28 ozs.
Field Current - 1.69-1.79 amps. at 12 volts and 80°F.
Rotation - Counter-clockwise at commutator end.
Belt Adjustment: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs. on scale will lift belt ½".

REGULATOR

Delco-Remy 1119123. *NOTE - Specifications below are "Normal" settings.*

Cutout Relay

Cuts In - 11.8-13.5 volts (hot).
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage Regulat r

Setting - 13.8-14.8 volts (hot).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 12 Volt Regulators" in Electrical Section.*

Current R gulator

Setting - 27-33 amperes hot (after 15 minutes continuous current regulator operation).
Air Gap - .075" with armature pressed down to point where contacts just touch
Ch cking & Adjusting - *See 'Delco-Remy 12 Volt Regulat rs" in Electrical Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

Headlights: Two headlights, one in each fender.

Direction Signal: See *Electrical Section.*

Lighting & Instrument Switch Removal: Remove retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat in instrument board.

Stop Light Switch: Located on inner side of left frame rail forward of steering gear housing (exc. Power Brake Cars), in elbow fitting on Power Brake Unit (with Power Unit).

CIRCUIT BREAKERS: 20 Ampere – Headlights, High beam indicator, Parking, Tail, License, and All Instrument lights. On headlight switch.
5 Amp r – Windshield wiper. On wiper switch.

FUSES: 15 Amp r – Direction signals, Stop lights, and Interior lights. In fuse block behind instrument panel.
14 Amp r – Overdrive. In kickdown switch-to-starter solenoid cable.
14 Amp r – Heater. On heater switch.
1 Amp r – Clock. In lead behind instrument panel.

H rn R lay: Studebaker No. 1547377.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme car when disconnecting any part of air conditioning equipment or lines for access to engine, See "Air Conditioning S rvice Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8, valve-in-head.

B r	Str k	Displacement
3 9/16"	3 1/4"	259.2 cu. in.
C mpr. Rati ℂ	**Rat d HP**	**Developed HP**
8.8-1 (2-Bbl. Carb.)	40.6	180 at 4500 RPM
8.8-1 (4-Bbl. Carb.)	40.6	195 at 4500 RPM

ℂ - 7.0-1 & 7.5-1 Optional.

C mpr ssion & Vacuum R ading - See *TUNE-UP.*

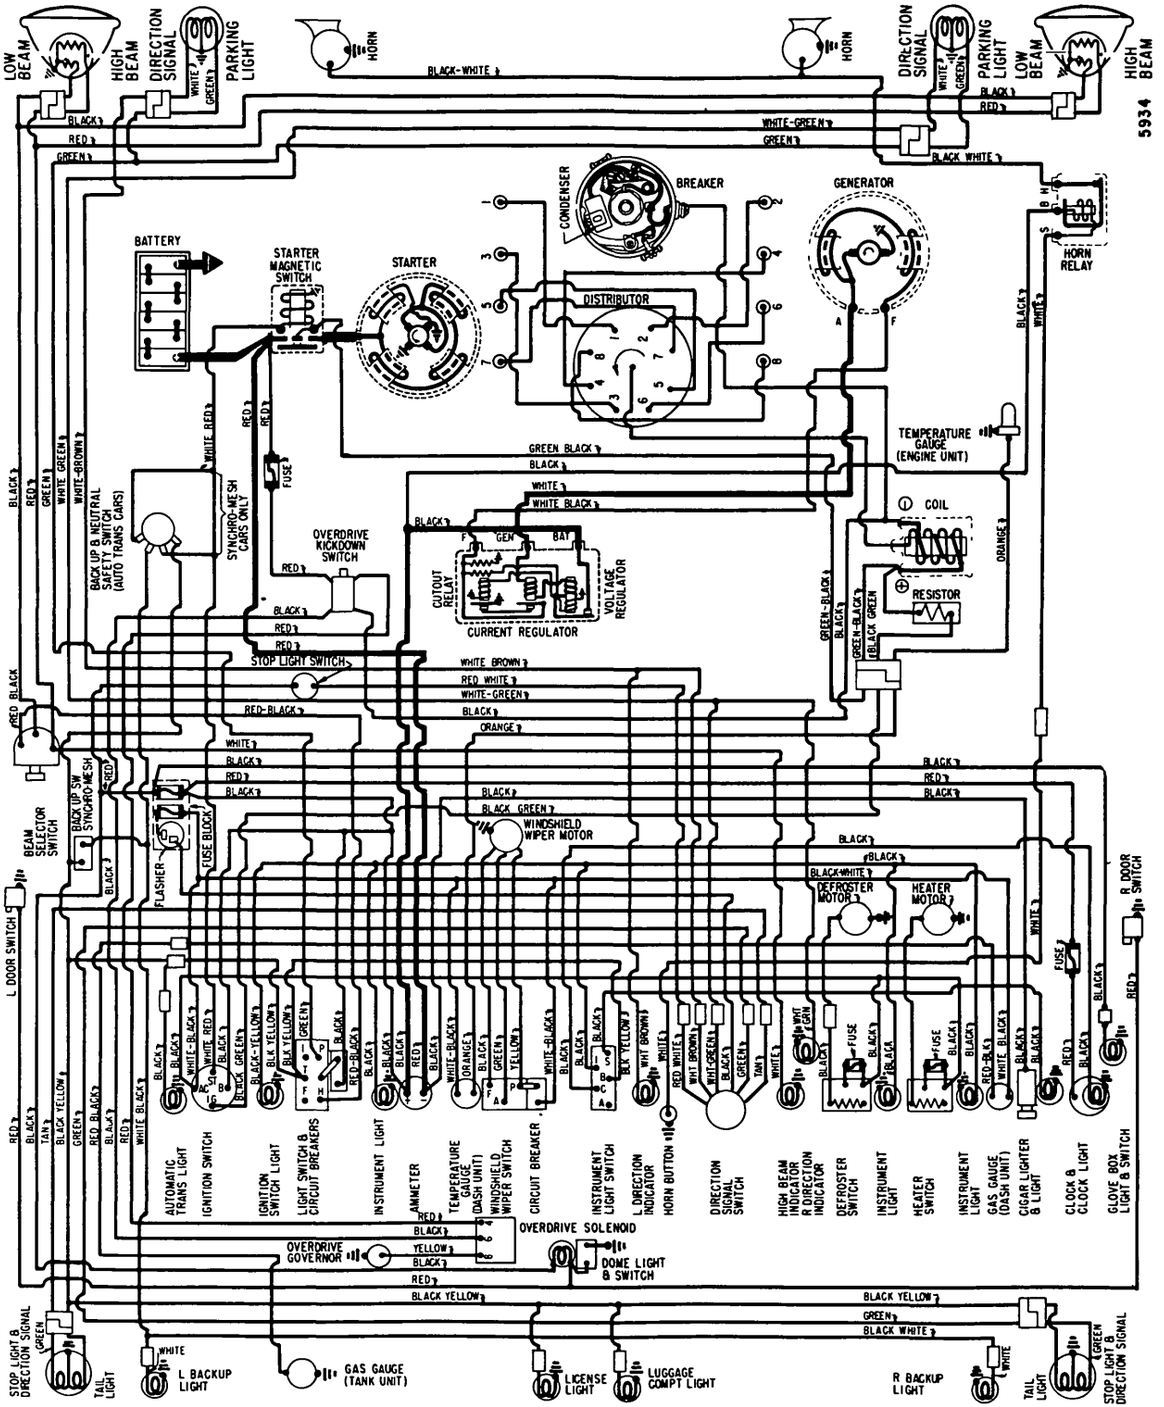
OIL PAN REMOVAL: Remove dipstick and adapter tube (remove head bolt to remove tube clamp). Disconnect battery. Drain crankcase. Remove starter. On Hawk, swing wheels to right to move steering bellcrank out of way. On Other Models, remove steering bellcrank assembly and exhaust crossover pipe. Remove oil pan screws and pan.

OIL PAN INSTALLATION: *See "Oil Pan" in Studebaker Special Data for special procedure.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *S e "Cylinder Head & Manifolds" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*



PISTONS

Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*

W ight – 16.21 ozs.

R m val - Pistons & rods remove from above.

CONTINUED ON NEXT PAGE

STUDEBAKER SILVER HAWK V8

CONTINUED FROM PRECEDING PAGE

Fitting New Pistons: Clearance - Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 7–12 lbs.

Replacement Pistons: Std. size & .010", .020", .030", .040" oversize. Pistons furnished with fitted pins.

Installing Pistons: Install piston on rod so that solid side of piston is on same side as oil hole in bearing bore. Install piston in cylinder with the slot toward the left side of engine. *See Rod Installation.*

PISTON PINS

Locked in rod by tapered pin and locknut.

Diameter – .8741-.8745". **Length** – 3 1/16".

Clearance in Piston – .0001-.0003" (selective fit). Light finger push fit at 70° F.

Replacement Pins: Std. size & .0025", .005" oversize.

Removal & Installation: *See "Piston Pins" in Studebaker Special Data.*

PISTON RINGS

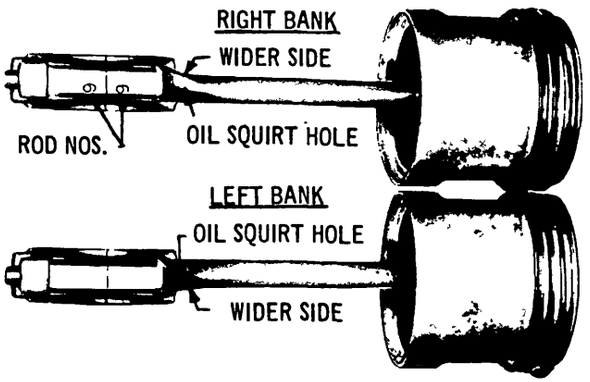
Ring	Width	End Gap	Side Clearance
Compression	.077-.078"	.008-.016"	.002-.005"
Oil	.1855-.1865"	.008-.016"	.0015-.005"

Replacement Rings: Sets of Std., .020", .030" and .040" Oversize.

Installing Rings: Install compression rings with chamfered side of ring upward. Gaps of inner and outer oil rings must not come at same point.

CONNECTING RODS

Length - 6 5/8" center-to-center. **Weight** - 23.71 ozs.



Crankpin Journal Diameter - 1.99925-2.00025".

Lower Bearing - Interchangeable. Steel backed, micro-babbitt lined type. No shims.

Clearance - .0005-.002". **Sideplay** - .008-.013".

Replacement Bearings: Std., .001", .002", .010" and .020" Undersize.

Installing Rods: Number on rod and bearing cap must be on same side. Rod is installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods), and oil squirt hole on all rods toward right of engine.

V8 ENGINE PISTON & ROD ASSYS.

Rods are offset with widest half of bearing toward rear on right bank, toward front on left bank.

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

►*REPLACEMENT ROD IDENTIFICATION NOTE:* Replacement rods are unnumbered. To identify, hold rod upright with oil hole toward you. Wide part of offset will be to right on left bank rods, to left on right bank rods.

CRANKSHAFT

Journal Diameter–2.4995-2.5000".

Bearings - Steel-backed, micro-babbitt lined. No shims.

Clearance–.0005-.0025".

Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal. **Endplay**–.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

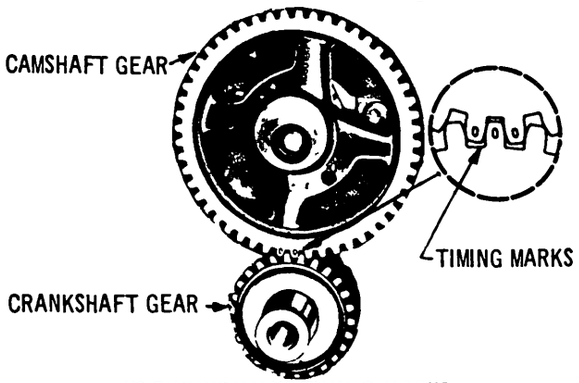
Journal Diameters–(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".

Bearings–Precision type, steel backed babbitt lined.

Clearance – .00075-.00225" (No. 1), .001-.00275" (Others).

End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.

Endplay–.003-.006".



Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.

Timing Gear Removal & Installation–*See "Timing Gears" in Studebaker Special Data.*

Backlash–.001-.003".

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

V8 ENGINE VALVE TIMING MARKS

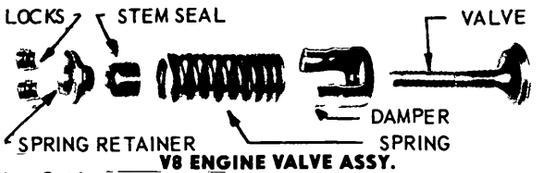
Engine Front Cover Removal: *See "Engine Front Cover" in Studebaker Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance - .023-.025" (Hot), .025-.027" (Cold).

Valve	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	11/32"	5 5/32"
Exhaust	1 17/32"	11/32"	5 5/32"



Valve	Seat Angl	Lift	Stem Clearance
All	45°	.23/64"	.0015-.0035"

Valve Seat Width–1/16-3/32".

Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.

Valve Springs: Single spring used. Replace spring if 10% weaker than pressure given in specifications below. *NOTE* - Damper installed on lower (close-coiled) end of all springs. **Valve Spring Specifications**

	Pressure	Length
Valve Closed	45-55 lbs.	2 1/32"
Valve Open	105-115 lbs.	1 43/64"

V8 ENGINE VALVE ASSY.

Valve Guides: Pressed in head from underside.

Guide Removal & Installation–*See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

Valve Lifter Installation & Fitting–*See "Valve System" in Studebaker Special Data.*

Replacement Lifters–Std. size, .001", .005" oversize.

►*CAUTION–When lifters removed, make sure they are installed in original positions.*

Rocker Arms: *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves–Open 11° BTDC. Close 54°36' ALDC.

Exhaust Valves–Open 51°36' BLDC. Close 14° ATDC.

Valve Timing Check–Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" and "OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 qts. (add one quart when filter changed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Normal Oil Pressure – 20–40 lbs. at 40 MPH.
Pressure Regulator Valve – Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator (Exc. Hawk): Indicator light on instrument panel controlled by Oil Pressure Switch, Studebaker No. 1539898. If light on at highway speeds, low oil pressure or other difficulty is indicated.
Oil Pressure Indicator (Hawk): Direct reading, non-electric type gauge, Studebaker No. 1539878.
Oil Pump: Helical gear type. Mounted on rear main bearing cap in crankcase. *NOTE* - Stationary type oil strainer used which is a unit with the intake pipe.
Pump Removal, Overhaul, & Installation: *See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial flow, "disposable" type (replace element and housing as a unit). Replace element at 5000-6000 mile intervals or more often under severe conditions.
Replacement Filter Element - Studebaker No. 1542739.
Crankcase Ventilation: Filter element is located in oil filler cap (air intake). Breather pipe (air outlet) is connected at rear of valve chamber cover plate.

COOLING

Water Capacity: 17 qts. without heater, 18.5 qts. with heater (Hawk), 18 qts. with heater (Others).
Pressure Valve: Radiator filler cap. 13 lb. (12–15) type. Studebaker No. 536502.
Thermostat: Choke type. Studebaker No. 1540787 (170°) Std., No. 533247 (160°) and No. 533257 (180°) Opt.
Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Studebaker Special Data.
Pump Removal – Drain cooling system. Loosen generator, remove belt. Remove fan-to-hub screws and remove fan and pulley. On Hawk, remove shroud. Remove capscrews retaining pump cover to water manifold and remove pump.
Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*
Temperature Gauge: Direct reading, electric type.
Dash Unit – Studebaker No. 1539879 (Hawk), No. 1548690 (Others).
Engine Unit – Studebaker No. 1545220 (All Models).
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 10A7 (Std.), 10.5A6 (Taxi). Single plate, dry disc type.
Clutch Assy. – Borg & Beck No. 361454 (10A7).
Clutch Disc – Borg & Beck No. 382650 (10A7).
See "Borg & Beck" in Clutch Section.
Pedal Adjustment: Free travel ½–1". To adjust, loosen locknut on rod connecting clutch release shaft lever to clutch operating shaft lever. Turn opposite nut in or out to shorten or lengthen rod as required. Tighten locknut securely against swivel. *NOTE – If car is equipped with "Hill-Holder", adjust "Hill-Holder" operating rod as outlined in Brake Section.*
Clutch Housing Removal: Disconnect battery ground cable and remove starter. Remove clutch operating shaft by disconnecting clutch pedal free travel adjusting rod at operating shaft inner lever. On cars with Hill-Holder, disconnect operating rod from operating shaft outer lever. Remove operating shaft sleeve pin (in sleeve at frame end of shaft) and support bracket capscrews. Lower support bracket and slip operating shaft sleeve off pedal shaft and remove assembly. Remove transmission (see below). Remove two bolts or nuts holding rear support insulator to crossmember. Support engine weight with a jack under rear of oil pan (use wood block to prevent damage to pan). Remove support crossmember-to-frame bolts and remove crossmember. Remove clutch housing cover plate. Remove housing mounting bolts or capscrews and remove clutch housing.
Clutch Removal: Remove clutch housing (above), remove screws evenly to relieve pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model T86 (Exc. Taxi), T89-C (Taxi). Three-speed synchro-mesh type.
See "Warner Synchro-Mesh" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Disconnect propeller shaft at rear universal joint flange, pull shaft to rear to disengage splined joint at transmission extension, remove shaft. Drain transmission case. Disconnect shift rods at transmission case shift levers, disconnect speedometer cable at transmission case, remove speedometer pinion. Remove clutch operating shaft, bracket, and bearing from transmission case. Support transmission and remove capscrews mounting transmission on clutch housing. Move transmission straight back until main drive gear clears clutch driven member, then lower transmission and remove from beneath car.

OVERDRIVE

Warner R10. Part of transmission assembly. Governor controlled solenoid operation with throttle controlled kick-down. *NOTE* - Relay is not used in overdrive control circuit. See wiring diagram for new control circuit.
Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*
Removal: Remove as unit with transmission. Disconnect control wiring and cable, then proceed as for Transmission Removal (above).

FLIGHTOMATIC TRANSMISSION

Warner Model AS6-5P (Exc. Taxi), AS10-7A (Taxi). Torque converter and hydraulically controlled three-speed planetary transmission.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic Transmission" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Flightomatic Transmission" in Transmission Section.*
Lubrication: Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A"; or Type "A", Suffix "A".
Checking Fluid Level – Operate engine with selector lever in "P" for 4 minutes or until engine and transmission reach operating temperature. Apply brakes, move selector lever from "P" to "R" and then to "D" slowly. Check fluid level on dipstick (under inspection hole cover on right side of front floor). Add fluid as necessary to bring to "F" mark on dipstick (1½ pints between "L" and "F" marks).
Capacity – 18 pints (exc. Taxi), 19 pints (Taxi).
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Flightomatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Two used (with one-piece propeller shaft).
►*UNIVERSAL JOINT LUBRICATION NOTE:* Universals should be disassembled, cleaned, and repacked with special universal joint lubricant at 20,000 mile intervals.

PROPELLER SHAFT

One-piece type, with a universal joint at each end.
►*DRIVE LINE ANGLES CHECKING & ADJUSTMENT: See "Propeller Shaft Notes" in Studebaker Special Data. CAUTION – Incorrect angles may cause driveline or chassis vibration.*
►*UNIVERSAL JOINT "PHASE ANGLE" & PROPELLER SHAFT REPLACEMENT CAUTION:* Shaft assemblies with different universal joint phase angles used on some models. *See "Propeller Shaft Notes" in Studebaker Special Data for complete data on each model.*

REAR AXLE

Spicer Model 44–3 (Taxi & Station Wagons), 23–1 (Others). Semi-floating, hypoid gear, with Hotchkiss Drive.
See "Spicer Hypoid" in Rear Axle Section.
►*"TWIN-TRACTION" DIFFERENTIAL NOTE:* Optional on all models. Identified by "45" or "T" stamped on a plate attached to cover capscrew. *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

Conventional & Twin-Traction Axle Ratios

Std. Axle Ratios

Model	S.M. Trans.	Overdriv
W,F,J,D,Y1	3.31-1	3.54-1
C	3.54-1	3.73-1
		Flightomatic
All Models		3.31-1

Optional Axle Ratios

Model	S.M. Trans.	Overdriv
W,F,J,D,Y1	3.54-1, 3.73-1	3.31-1, 3.73-1
C	3.31-1, 3.73-1	3.31-1, 3.54-1
		Flightomatic
All Models		3.54-1

►*REAR AXLE RATIO NOTE:* Ratio is stamped on plate attached to axle by cover capscrew and is also stamped on ring and pinion gears.

Backlash -.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub using Puller J–1644–S. Remove brake backing plate retaining bolts and remove outer washer, retainer, reinforcing plate and felt washer (discard this washer). Free hand brake cable from equalizer and frame guides and disconnect hydraulic brake line at wheel cylinder. Pull backing plate out over end of axle shaft and tie it up out of way. Remove endplay adjusting shims *(CAUTION – Save for reinstallation).* Use Puller J–7935 with Hammer J–2619 to remove axle shaft.

Rear Axle Assembly Removal: Remove hub caps, loosen wheel nuts and remove axle shaft nut. Raise rear of car and support on stands under frame just ahead of rear springs. Remove wheels, hubs, and drums. Disconnect brake line at each rear wheel cylinder, remove brake pipe clamps and free brake line from rear axle housing. Take out backing plate bolts, pull backing plate out over end of axle shaft and tie up out of way. Remove adjusting shims located beneath backing plate. *(CAUTION – Save for reinstallation).* Disconnect propeller shaft by removing rear universal joint U-bolts and nuts (wire caps together). Remove rear spring U-bolts from axle housing, disconnect rear shock absorbers. Remove rear axle assembly from beneath car.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Wh l Bearing Adjustm nt: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003". .005". .010". .030" thick). **Endplay** – .001-.006".

►*REAR WHEEL BEARING LUBRICATION CAUTION:* No lubrication plug provided but bearings are NOT lubricated for life. Remove, clean, and repack bearings at 25,000 mile intervals.

SHOCK ABSORBERS

Gabriel (U.S. Cars), Monroe (Canadian Cars). Direct acting, hydraulic, non-adjustable (Exc. Taxi), Adjustable (Taxi & Optl. Heavy Duty on other cars).

Gabriel Shock Absorbers (Studebaker Nos.)

Car Model	Front	Rear
Sedans & Hardtop	1545057	1545053
Station Wagons	1545057	1545053
Hawk (Early) Ⓒ	1545055	1545050
Hawk (Later)	1545057	1545052
Taxi ②	1548550	1548549
All (Heavy Duty)②	1544410	1544411

Monroe Shock Absorbers (Canada)

All (Exc. Hawk)	1547458	1545046
Hawk	1547458	1545045

Ⓒ — First 660 cars only. ② — Adjustable type.

Adjustment (Gabriel Adj. Type) - Disconnect one end of shock absorber and collapse it fully to engage internal coupling, then rotate lower shaft until arrow on body lines up with "Soft", "Normal", or "Firm" arrow on dustcover.

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs.
See "Studebaker" in Suspensions & Wheel Alignment Section.

►*VARIABLE RATE COIL SPRING NOTE:* All springs except Heavy Duty type are Variable Rate with closer coils at upper end.

►*FRONT SPRING NOISE CORRECTION (LARK):* May be caused by too much paint on upper coils. To correct, apply engine oil to these coils.

Kingpin Inclination - 6° at 0° camber.

Caster - Neg. 1½° to Neg. 3°. Maximum variation between wheels ¾°. *NOTE - Above specifications supersede previous data.*

Camber - 0° to Pos. 1°. ½° more camber favored on driver's side.

Toe-In - 1 16-1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.

RHD Car Note - Make toe-in adjustments at left hand tie rod.

Toe-Out on Turns - With outer wheel at 20°, inner wheel should be turned 23½-24½°.

STEERING

Manual: Ross Model SL–54. Cam & Single Lever Roller Stud. Roller stud is mounted on taper roller bearings. *See "Ross Cam & Lever" in Steering Section.*

Power Steering: Bendix Linkage Type. *NOTE – Saginaw (Not In Line) type used on Hawk models prior to Serial No. 59V–34592.*
See "Bendix Linkage Type" or "Saginaw (Not In Line)" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

BRAKES

Service: Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking lever applies rear wheel service brakes.
See "Wagner Lockheed Self-Centering Brakes" in Brake Section.

►*BRAKE THUMPING CORRECTION (ALL MODELS):* Thumping or bumping noise on brake application which increases when car slows down, can be corrected by sanding all tool marks from brake drum with emery cloth or cutting lightly with a lathe.

Drum Diameter – 11" Front, 10" Rear. All Models.
Master Cylinder Bore Diameter – 1". All Models.
Wheel Cylinder Diameter – 1 1/16" Front, 7/8" Rear.
Braking Power – 62% Front, 38% Rear.

Brake Lining: Marshall-Eclipse lining used on all models. Lining is riveted (Exc. Taxi), bonded (Taxi with Heavy Duty lining).

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (Exc. Taxi), 9/32" (Taxi- all shoes). 3/16" thick on all other shoes. Lining is pre-ground off-center at the factory to eliminate brake squeal. Lining applied to full length of shoe, and is marked "secondary" and "top" and should be installed as marked.

Lining Width & L ngth (Exc pt Taxi)

	Fr nt Wh el	R ar Wh l
Primary Shoes	2 1/4" x 9 21/64"	2" x 8 15/32"
Secondary Shoes	2 1/4" x 11 57/64"	2" x 10 27/32"

(Taxi)

	Front Wh l	R ar Wh l
All Shoes	2 1/4" x 11 1/2"	2" x 10 7/16"

Thickness – 3/16" except as noted above under "Secondary Lining Note".

Clearance – Lock shoes against drums, then turn adjusting screw back eight notches or more as required to free drum.

Standard Master Cylinder: *On frame left side rail at* base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. *(NOTE* - One line with Hill-holder). Remove the brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to Hill-holder while master cylinder is off car.

Power Brakes: Hydrovac Pow r Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brak S ction.

Checking Fluid–Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit–Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

Hill Holder: Used on Synchro-mesh and Overdrive Transmission cars. *See "Hill-Hold r" in Brak S cti n.*

MISC. MECHANICAL

Windshield Wipers: (Deluxe Models) Vacuum Link & Crank Arm type. (Others) Auto-Lite or Bosch Electric Two-Speed type. *See "Windshield Wip rs" in Miscellaneous Section.*

Air Conditioning: *See "Studebak r Air Conditioning" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
Deluxe 4-Door Sedan	60S-W4
Regal 4-Door Sedan	60S-W6
Deluxe 2-Door Sedan	60S-F4
Regal 2-Door Hardtop	60S-J6
Regal 2-Door Convertible	60S-L6
Deluxe 2-Door Station Wagon	60S-D4
Deluxe 4-Door Station Wagon	60S-P4
Regal 4-Door Station Wagon	60S-P6
Taxicab 4-Door Sedan	60S-Y1

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.

Assembly Plant	Starting Numbers
South Bend	60S-1001
Canada	60SC-1001

ENGINE NUMBER: Stamped on pad at upper left front of cylinder block.

Assembly Plant	Starting Numbers
South Bend	S-106001
Canada	SC-15501

TUNE-UP

►*DETONATION AT LIGHT THROTTLE CORRECTION: See DISTRIBUTOR below for correction.*

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM. Maximum variation between cylinders 10 lbs

VACUUM READING: 17-18" at idle speed.

VALVE TAPPET CLEARANCE: 018" cold, all valves.

MANIFOLD HEAT CONTROL: Automatic thermostatic type.

Checking Thermostatic Coil Spring - With outer end of coil free from anchor, and valve closed (counterweight up), hooked end of coil should be 90° clockwise from anchor pin at 70°F.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .028-.033".

Spark Plugs - Champion J7. 14 mm. Torque to 30 ft. ft. lbs.

COIL: Autolite No. 200562.

Ignition Current - 4.0 amps idling.

►*IGNITION RESISTOR NOTE: Resistor not used.*

DISTRIBUTOR: Autolite IAT-4403.

►*DETONATION AT LIGHT THROTTLE CORRECTION:* Install Spark Modifier Kit, Studebaker Part No 1552852 (spring & washers) and see *Modified Vacuum Advance Table below for new Advance Curve data*

Condenser - Autolite No. 2-32. **Capacity** .21-.25 mfd

Contact Point Set - Autolite No. 1-47

Breaker Gap - .020"

Cam Angle - 38-40°.

Breaker Arm Spring Tension - 17-20 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

Vacuum Spark Control: Autolite integral type

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4
1	2	5 1/4
3	6	7 1/2
6	12	10 7/8
7	14	12

Modified Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8
4¼	8½	11
8	16	13

IGNITION TIMING

Setting - 2° BTDC.

Timing Mark - On vibration damper. "IGN" mark in line with pointer on left side of timing cover.

Timing - Disconnect vacuum advance pipe at carburetor. Install plug in carburetor. With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer.

CARBURETOR

►*CARBURETOR APPLICATION: Carter AS, single barrel used.*

►*EXCESSIVE ACCELERATOR PEDAL OPERATING EFFORT CORRECTION:* To correct hard accelerator pedal operation grind off sufficient rubber at bottom of pedal (5/32" down from hinge and 7/16" in from centerline of hinge) so pedal will lie flat on floor pan.

►*THROTTLE LINKAGE BINDING OR STICKING CORRECTION:* May be caused by interference between accelerator pushrod and boot at opening in floor pan, in wide open or kickdown position. To correct, remove accelerator pedal and slot mounting holes approximately 1/8" toward pedal hinge. Install pedal as far rearward as possible. Lubricate pushrod with Lubriplate and make sure throttle linkage correctly adjusted.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With transmission selector lever in "N" (Neutral) or "P" (Park) position, engine at normal operating temperature, choke wide open, proceed as follows:

1) Adjust carburetor-to-bellcrank rod so length between centerline of ball stud and centerline of cotter pin hole is 11 1/16". *Do not change this length during following adjustments.*

2) Connect a tachometer to engine and set engine idle speed at 550 RPM. Disconnect accelerator-to-auxiliary bellcrank rod clevis. Disconnect rod which connects main bellcrank on firewall to auxiliary bellcrank on engine by removing main bellcrank ball joint stud from main bellcrank lever. Adjust screw on main bellcrank to provide 5/16" clearance between bellcrank and pad (use a 5/16" drill as a gauge).

3) Adjust ball joint on main bellcrank-to-auxiliary bellcrank lever so ball joint stud freely enters hole in lever. *Carburetor idle speed screw must be against its stop and 5/16" gap at bellcrank maintained*

4) Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake. Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs. pressure on gauge. Stop engine, remove gauge and install pipe plug

5) Hold accelerator bracket arm (on firewall) approximately 3 5/8 - 3 3/4" from face of firewall and adjust accelerator-to-auxiliary bellcrank rod clevis until clevis pin freely enters clevis and bracket arm.

CARTER AS NO. 2934S, SA

►*PRODUCTION CHANGE NOTE: Carburetor 2934SA used in production beginning Serial No. 60S-40716 and has corrections listed below. To convert early 2934S carburetor to 2934SA, see "Carter AS Carburetors" in Carburetion Section.*

►*2934S STUMBLE ON ACCELERATION AND ENGINE STOPPING AFTER COLD START CORRECTION:* Install new Choke Improvement Kit and new Accelerating Improvement Kit. *See "Carter AS Carburetors" in Carburetion Section*

►*2934S FLAT SPOT DURING LIGHT TO MEDIUM THROTTLE OPENING CORRECTION:* New pump piston spring and other adjustments necessary. *See "Carter AS Carburetors" in Carburetion Section.*

Idle Setting - Initial setting ¼-1¾ turns open from a lightly seated position. Turn screw out for richer mixture.

Idle Speed - 550 RPM (Synchro-mesh), 575-590 RPM (Flightomatic in "N").

Float Level - ¼" (Gauge T109-282) from top of each float at free end to top of casting. To adjust, bend float arm lever.

Accelerating Pump - Pump arm on lifter link should be parallel to top of casting. To adjust, bend pump arm

Fast Idle: .065" clearance between throttle valve and side of body measured opposite idle ports, with fast idle link on high step of cam. To adjust, bend choke connector rod

Automatic Choke Setting: 1 notch rich (2934S), Centered at index (2934SA)

Throttle Linkage Adjustment: See *CARBURETOR above*

►*OTHER DATA: See "Carter AS Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Fuel only Replacement Pump 4703.

Fuel Pump Pressure - 3½-5½ lbs

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type.

Dash Unit - Studebaker No. 1548689

Tank Unit - Studebaker No 1544825

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY FILTER ELEMENT TYPE Std., Oil Bath type optional. Clean element every 1,000 miles, replace dry type every 10,000 miles.

►*DRY TYPE CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil, lubricate, or blow out with compressed air*

BATTERY

Willard HO-11-50. 12 Volt, 9 plate, 50 ampere hour capacity (20 hr rate)

Battery Ground - Negative

Engine Ground - Right front engine support bracket to frame

STARTER

Autolite MBG-4113 (Before Serial No. 60S-27643). MDU-7005 (Beginning Serial No. 60S-27643).

Armature - Autolite No 16-54 (MBG Starter).

Drive - Bendix type.

►*STARTER DRIVE REPLACEMENT NOTE:* Use only improved "Folo-Thru" type, Studebaker No, 1551230, for service replacement on MBG starters.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Shunt Fi ld Draw (MDU-7005) - 4.4-5.1 amps. at 10 volts.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 42-53 ozs. (MBG-4113), 31-47 ozs. (MDU-7005).

Performance Data - MBG-4113

Torque	RPM	Volts	Amperes
0 ft. lbs.	5200	10.0	55 max.
5.2 ft. lbs.	Lock	4.0	235 max.

Performance Data - MDU-7005

Torque	RPM	Volts	Amperes
0 ft. lbs.	5300	10.0	50 max.
6.2 ft. lbs.	Lock	4.0	280 max.

Starter Switch: Magnetic switch, Studebaker No 1539716 mounted on starter and controlled by combination Ignition & Starter Switch.

Automatic Transmission Neutral Safety Switch: Studebaker No. 533321. Combination Neutral Safety and Back-up Light switch mounted on lower end of steering column. Adjust switch so that starter operative only with selector lever in "N" or "P" position.

Adjustment - *See "Studebaker Flightomatic" in Transmission Section.*

GENERATOR

Autolite. Used as follows:

Model	Autolite No.
Std. (Up to Serial No. 60S-28727)	GJC-7002F
Std. (Beginning Serial No. 60S-28727)	GJP-7102C
Taxi	GGA-6001SN

►*GENERATOR GJP-7102C CAUTION: This generator is "B" circuit type and must be used with Regulator VBO-6201A.*

►*OPTIONAL GENERATOR NOTE: For optional Delco-Remy generators No. 1102127 and No. 1106981, see Studebaker V8 Pages.*

Armature - Autolite No. 10-53 (GJC Gen.), No. 10-24 (GGA Gen.).

Brush Spring Tension - 18-36 ozs. (GJC & GJP), 34-41 ozs. (GGA).

Field Current - 1.2-1.3 amps. (GJC), 1.6-1.7 amps. (GJP), 1.1-1.3 amps. (GGA), at 10.0 volts (70°F).

Motoring Current - 3.4-3.9 amps. (GJC), 3.1-3.5 amps. (GJP), 2.3-2.6 amps. (GGA), at 10.0 volts (70°F).

Rotation - Counterclockwise at commutator end.

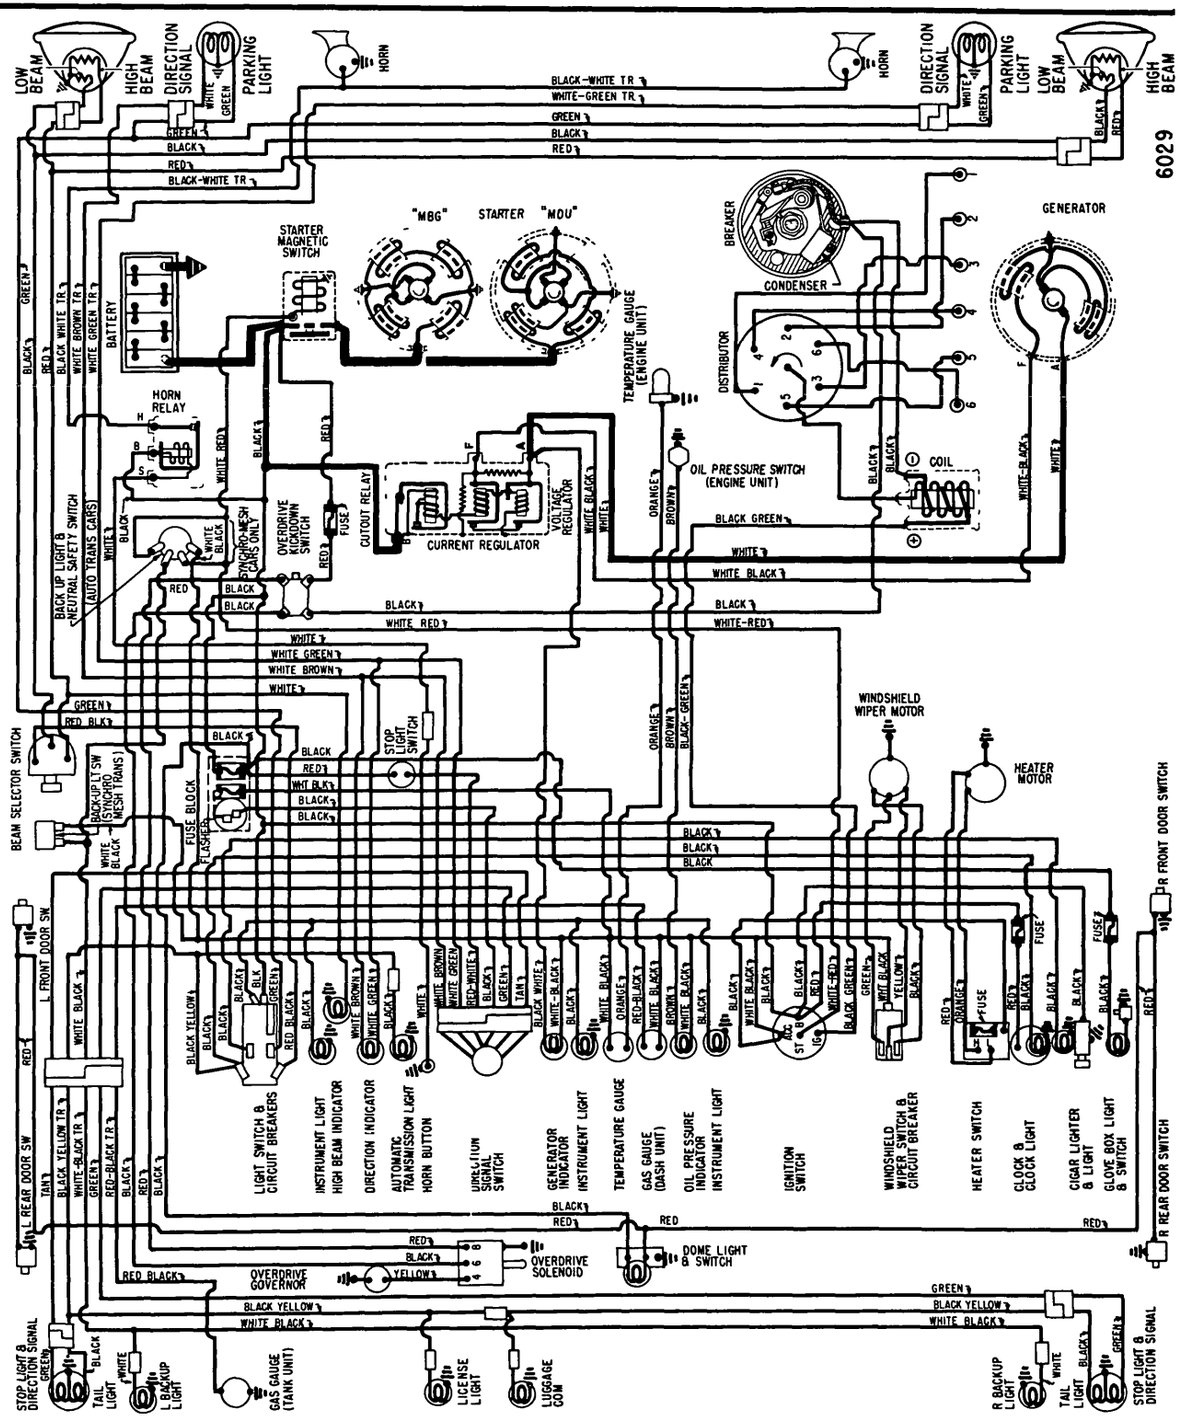
Performance Data - GJC-7002F

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0	15.0	2050-2250
35.0	15.0	2250-2650

Performance Data - GJP-7102C

Amperes	Volts	RPM
16 min.	15.0	1750
30	15.0	2300 max.
35	15.0	2600-max.

Performance Data - GGA-6001SN



Amperes	Volts	RPM
4.0	14.6	950
40.0	14.6	1600
40.0	15.0	1600

Belt Adjustment: 3/8-1/2" deflection midway between generator and fan pulleys.

REGULATOR

Aut lit N . VBO-4202B-1 (GJC Gen.), N . VBO-6201A (GJP G n.), N . VBO-4202A (GGA G n.). *NOTE - Reg-*

CONTINUED ON NEXT PAGE

(SEE 1959 DIAGRAM FOR FIRST TYPE "A" CIRCUIT GENERATOR & REGULATOR)

CONTINUED FROM PRECEDING PAGE

ulator VBO-6201A is "B" circuit typ and must b us d with G n rator GJP-7102C.

►*OPTIONAL REGULATOR NOTE: For D lco-R my r gulators us d with optional Delco-Remy generators, s Stud bak r V8 Pag s.*

Cut ut Relay

Cuts In - 12.5-13.5 volts.

Cuts Out - 3-5 amps. discharge current after a charge of 7 amps.

C ntact Gap - .015" minimum.

Air Gap - .025-.027",

V ltag Regulator

Setting - 14.2-14.8 volts at 80°F, unit operating normally while charging at 7 amperes or with a .25 ohm resistor between regulator and battery.

Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).

Ch cking & Adjusting (VBO-4202B-1 & 4202A) - *See "Aut lit 12-Volt R gulators" in Electrical Section.*

Ch cking & Adjusting (VBO-6201A) - *See "Autolite B Circuit R gulat rs" in El ctrical Section.*

Curr nt Regulator

►*SETTING CAUTION: "T mperature Compensated" type. S t to following specifications at 70°F.*

R gulator	Test A - Operating Amperes -	Test B
VBO-4202B-1	44	35 (33-37)
VBO-6201A	44	35 (33-37)
VBO-4202A	49	40 (38-42)

T st A - After 15 minutes operation charging at 7 amps.

T st B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).

Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).

Checking & Adjusting (VBO-4202B-1 & 4202A) - *See "Aut lit 12-Volt R gulators" in Electrical Section.*

Ch cking & Adjusting (VBO-6201A) - *See "Autolite B Circuit R gulators" in El ctrical Section.*

MISC. ELECTRICAL

Headlights: Sealed beam type, one in each fender.

Dir cti n Signals: *See El ctrical Section.*

►*DIRECTION SIGNAL CANCELS TOO SOON ON LEFT TURN CORRECTION:* May be caused by bent switch plate. To correct, raise front of car and remove steering wheel. Insert screwdriver under switch plate midway between ends of plate and press down on right end of plate near cancelling lever.

Lighting & Instrum nt Light Switch Removal: Remove switch retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat on board.

Sp ed met r & Instrum nt Removal: Units can be removed separately without disturbing other parts.

St p Light Switch: Located on inner side of left frame rail forward of steering gear housing (Std. Brakes), mounted in elbow fitting on power brake unit (Power Brakes).

CIRCUIT BREAKERS: 20 Ampere - Headlights, High beam indicator, Parking, Tail, License, and All Instrument lights. On headlight switch.

5 Amp r - Windshield wiper. On wiper switch.

FUSES: 15 Amp r - Body and Stop lights. In fuse block behind instrument panel.

15 Amp r - Direction signal. In fuse block behind instrument panel.

15 Amp r - Heater and defroster. On heater switch.

14 Ampere - Overdrive. In kickdown switch-to-starter solenoid cable.

1 Ampere - Clock. In lead behind instrument panel.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme caution when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 6 Cyl. "L" head.

Bore	Stroke	Displacement
3"	4"	170 cu. ins.
Compression Ratio	**Rated HP**	**Developed HP**
8.3-1℃	21.6	90 at 4000 RPM

℃ - 7.0-1 Optional.

Compression & Vacuum Reading - *See TUNE-UP.*

OIL PAN REMOVAL: Remove oil level gauge. Raise car and support it with stands, drain oil. On long wheelbase models, swing wheels to right to move steering bellcrank out of way. On short wheelbase models, disconnect tie rods and reach rod from steering bellcrank, remove retaining pinch bolt and remove bellcrank from shaft. Then remove oil pan capscrews and remove pan.

OIL PAN INSTALLATION: *See "Oil Pan" in Studebaker Special Data.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

"T" slotted, cam ground, tin plated aluminum alloy.

Original Bore & Pistons—*See "Original Bore & Pistons" in Studebaker Special Data.*

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance—Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 11 to 16 lbs.

Replacement Pistons: Std. .010", .020", .030" and .040" Oversize, Pistons furnished with pins.

Installing Pistons: Install piston in cylinder bore with "T" slot away from camshaft side. *See Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.

Diameter—.7491-.7495". **Length** 2.625".

Clearance in Piston—.0001-.0003" (selective fit). Light thumb push fit at 70°F.

Piston Pin Removal & Installation—*See "Piston Pins" in Studebaker Special Data.*

Replacement Pins: Std. & .0025", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Sid Clearanc
Compr. #1	3/32"	.007-.017"	.002-.005"
Compr. #2	1/8"	.007-.017"	.002-.005"
Oil	5/32"	.007-.017"	.0015-.004"

R placement Rings: Std., .020", .030", & .040" Oversize, in sets.

Installing Rings: Top compression ring has step at the inside which must be installed up. Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point.

CONNECTING RODS

Length—(Center-to-center) 6 3/8". **Weight**—19.04 ozs.

Crankpin Journal Diameter—1.81175-1.81275"

Bearings—Steel backed, Microbabbitt lined, no shims.

Clearance—.0005-.002".

Side Play—.005-.009"

Replacement Bearings: Std., .001", .002", .010", .020" Undersize.

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod. Insert tapered end of clamp screw toward heavy boss on rod. With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6).

►*REPLACEMENT ROD NOTE:* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders.

CRANKSHAFT

►*REAR MAIN BEARING OIL LEAK CORRECTION:* If proper installation of new rear oil seal and oil pan gaskets does not stop the leak, make sure that drain core hole in rear main bearing cap connects with groove in cap. Drill and file hole to correct.

Journal Diameter—3.0623-3.0628". Four bearings.

►*FRONT MAIN BEARING CAP REMOVAL NOTE:* Turn crankshaft until No. 3 and No. 4 pistons are at top of their travel. Remove bearing cap bolts, then remove cap by twisting end away from camshaft toward rear of engine.

Bearings - Steel-backed, micro-babbitt lined. No shims.

Clearance - .0005-.002".

Replacement Bearings: Standard & .001", .010", .020", .030" Undersize.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear, controlled by shims between thrust washer and main bearing journal. These shims furnished .003", .005", .007" thick.

Endplay - .003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters—(1) 1.7475-1.7480", (2) 1.7162-1.7170", (3) 1.6857-1.6865", (4) 1.6232-1.6240".

Bearings—Steel backed babbitt lined bushings.

Clearance—No. 1—.0007-.0022", Nos. 2, 3, 4—.0010-.0027".

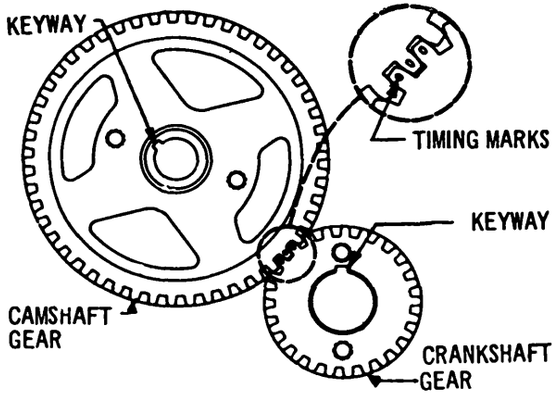
End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

assembled on shaft between gear hub and front bearing journal controls endplay) Adjust endplay by replacing thrust plate or spacer When installing thrust plate, tighten capscrews evenly and alternately to avoid distorting the plate

End Play—.003-.006"



Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data*

Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub

Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Special Data*

Backlash—.001-.003"

Camshaft Setting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear

6 CYL. VALVE TIMING MARKS

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance: 018" Intake and Exhaust, COLD

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	0015- 0035"
Exhaust	45°	11/32"	0015- 0035"

Valve Seat Width— 1/16-3/32'

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced

Valve Springs: Single spring used on all valves

►*VALVE SPRING LOCK INSTALLATION CAUTION* When installing lock in recess of lower spring retainer, groove in lock must engage tongue in retainer

Valve Spring Specifications

	Pressure	Length
Valve Closed	49-54 lbs.	1 21/32"
Valve Open	93-103 lbs.	1 5/16"

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber. Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar

Valve Lifters: Mushroom type Remove from below with camshaft out of engine

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., .001" & .005" Oversize

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC Closes 49° ALDC

Exhaust Valves—Open 54° BLDC. Closes 10° ATDC

Valve Timing Check—Adjust No. 1 Intake valve at .020" cold Rotate engine until No 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft Valve timing will be correct if lifter stops moving as above marking is directly below pointer

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Studebaker Special Data.*

Crankcase Capacity: 5 quarts refill, 1 quart additional with filter change.

Normal Oil Pressure: 20-40 lbs. at 2000 RPM.

Pressure Regulator Valve: Opens at 40 lbs. Under plug on lower right front corner of engine. For access, remove engine front cover bolt. Replace weak spring (do not attempt to stretch spring).

Oil Pressure Indicator: Indicator light on instrument panel controlled by oil pressure switch, Studebaker No. 1539898, on left side of engine.

Oil Pump: Helical gear type. On right side of crankcase. **Pump Removal, Overhaul, & Installation** - *See "Oiling System" in Studebaker Special Data.*

Oil Filter: Partial flow, "disposable" type (replace element and housing as a unit). Replace element at 5000-6000 mile intervals or more often under severe conditions.

►*OIL FILTER INSTALLATION CAUTION.* **Lubricate gasket with engine oil and tighten filter by hand ½-turn after gasket seats on base.** ***Do not cross-thread or overtighten.***

Replacement Filter Element - Studebaker No. 1542739.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe is replaceable (retained by cotter pin).

Filter Element Servicing - Remove filter in breather pipe by removing cotter pin and pulling filter out with a hooked wire Clean filters by washing in kerosene or solvent, drain thoroughly and re-oil by coating with engine oil

COOLING

Water Capacity: 11 qts. refill. Add 1 qt. for heater.

Pressure Valve: 14 lb. radiator filler cap, Studebaker No. 1551190. *Supersedes 13-15 lb. cap, No. 1548915.*

Thermostat: Choke type in water outlet on cylinder head. Studebaker No. 1542838 (170°) Std., No 531470 (160°) and No. 532017 (180°) Optional

Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Studebaker Special Data.*

Temperature Gauge: Direct reading, electric type.

Dash Unit - Studebaker No. 1548690.

Engine Unit - Studebaker No. 1549452 (marked "362-AR" on one face of hex head).

See "Temperature Gauges" in Miscellaneous Section.

MECHANICAL

►*SEE STUDEBAKER V8 PAGES FOLLOWING FOR ALL CLUTCH, SYNCHRO-MESH TRANSMISSION, OVERDRIVE, FLIGHTOMATIC, UNIVERSALS, PROPELLER SHAFT, REAR AXLE, SHOCK ABSORBERS, FRONT SUSPENSION, STEERING, BRAKES & MISC. MECHANICAL DATA.*

© - Fleet Sales Only.

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.

Assembly Plant	Starting Numbers
South Bend	60V-1001
Canada	60VC-1001

ENGINE NUMBER: Stamped on machined pad at upper left front of cylinder block.

Assembly Plant	Starting Numbers 259" Eng.	289" Eng.
South Bend	V-454701	P-70501
Canada	VC-16701	PC-2201

TUNE-UP

►*DETONATION AT LIGHT THROTTLE CORRECTION: See DISTRIBUTOR below for correction.*

COMPRESSION PRESSURE: 140-160 lbs. at 150 RPM. Maximum variation between cylinders 10 lbs.

VACUUM READING: 18-20" at idle speed.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling, .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Located in right bank exhaust manifold outlet.

Checking Thermostatic Coil Spring - With outer end of coil free from anchor, and valve closed (counterweight forward), hooked end of coil should be 90° clockwise from anchor pin at 70°F.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plugs - Champion H-18Y (Up to Serial No. 60V-30000), H-14Y (Beginning Serial No. 60V-30000). *Use only H-14Y for service replacement.* 14mm. Torque to 25-30 ft. lbs.

COIL: Delco-Remy 1115122.

Ignition Current - 3.8 amps. idling.

Resistor - Resistance (pink) wire (1.52 ohms) from coil to ignition switch. Bypassed during cranking by lead from starter solenoid to coil.

DISTRIBUTOR: Delco-Remy 1110969 (Exc. Hawk), 1110864 (Hawk). *NOTE - Distributor 1110969 is "Window" type with external adjustments. See "Delco-Remy (Window) Distributors" in Electrical Section.*

►*DETONATION AT LIGHT THROTTLE CORRECTION:* Install Spark Modifier Assembly, Studebaker Part No. 1553389 (Exc. Hawk), No. 1553390 (Hawk) and *refer to Modified Vacuum Advance Table below for new Advance Curve data.*

Condenser - Delco-Remy 1869704 (1110864 Distr.),

Condenser Capacity - .18-.23 mfd.

Contact Point Set - Delco-Remy 1918148 (1110864 Distr.),

Breaker Gap (1110864) - .013-.018".

Breaker Gap (1110969) - Gap (.016") will be correct when cam angle correctly set (see below).

Cam Angle (1110864) - 26-33° with .016" breaker gap.

Cam Angle (1110969) - 28-32°. Set at 30°. Will give .016" breaker gap.

Breaker Arm Spring Tension - 19-23 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0.5-2.5	350	1-5	700
2-4	400	4-8	800
7-9	800	14-18	1600

Vacuum Spark Control: Delco-Remy 1116058 (1110864 Distr.), 1116169 (1110969 Distr.).

Plunger Travel - 11/64-3/16" (1116058),

Vacuum Advance - 1110864 Distr.

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4-6
8	16	10.25-11.5

Modified Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8
4¼	8½	11
8	16	13

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Setting - 4° BTDC. Set timing at 600 RPM with vacuum line disconnected and carburetor opening taped closed. *After timing correctly set, reduce engine speed to 550 RPM.*

Timing Mark - "IGN" line on vibration damper aligned with pointer on timing gear cover.

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg WW 2-Barrel Standard on all models; Carter WCFB 4-Barrel Optional on all models except Taxi.*

►*EXCESSIVE ACCELERATOR PEDAL OPERATING EFFORT CORRECTION:* To correct hard accelerator pedal operation, grind off sufficient rubber at bottom of pedal (5/32" down from hinge and 7/16" in from centerline of hinge) so pedal will lie flat on floor pan.

►*THROTTLE LINKAGE BINDING OR STICKING CORRECTION:* **1)** May be caused by interference where accelerator pedal pushrod attaches to accelerator bellcrank lower lever. If this attachment cannot be made with the proper wave washer and flat washer without binding, replace pushrod. If pushrod does not fit freely into a 9/32" diameter hole, replace rod.

2) May be caused by interference between accelerator pushrod and boot at opening in floor pan, in wide open or kickdown position. To correct, remove accelerator pedal and slot mounting holes approximately 1/8" toward pedal hinge. Install pedal as far rearward as possible. Lubricate pushrod with Lubriplate and make sure throttle linkage correctly adjusted.

FLIGHTOMATIC THROTTLE LINKAGE ADJUSTMENT: With engine at normal operating temperature, choke valve wide open and throttle return check operating correctly, proceed as follows:

1) Adjust engine idle speed to 550 RPM with transmission selector lever in "N" (Neutral) position. Set stop on bellcrank (at rear of engine) to provide a 17/64" gap between bellcrank pads (use a 17/64" drill as a gauge). After stop is adjusted, hold in this position.

2) *NOTE - Make sure that carburetor-to-bellcrank rod ball joint is in inner hole of bellcrank pad on cars with 2-barrel carburetor, and in outer hole on cars with 4-barrel carburetor. In both cases, ball joint must be on underneath side of bellcrank lever.*

3) Adjust carburetor-bellcrank rod until idle speed screw on carburetor throttle lever just begins to leave its stop.

4) Stop engine and remove 1/8" pipe plug located near throttle lever on side of transmission and install a pressure gauge. Place selector lever in "D" (Drive) position and run engine at 1000 RPM with rear wheels held stationary by foot brake. Adjust length of main bellcrank-to-transmission throttle valve outer lever rod to obtain 80-85 lbs. pressure on gauge (95-100 lbs. on Taxi). Stop engine, remove gauge and install plug.

THROTTLE RETURN CHECK ADJUSTMENT: Loosen throttle return check assembly screw locknut and adjust return check in bracket until plunger just breaks contact with tab on throttle lever. Mark position of check assembly relative to bracket, then turn check assembly **1¼ to 2 turns toward lever.** Tighten locknut.

STROMBERG WW

Stromberg Series WW, Code 6-123 or 6-123A. Throttle return check used with Flightomatic Transmission.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - Initial setting 1¼ turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed - 550-600 RPM, with selector lever in "N" on Flightomatic cars.

Float Level - 3/16" from top edge of main body to top of float. To check, remove bowl cover and place float level gauge of Tool J-7477 across top edge of main body. Float should just touch gauge. To adjust, bend float lip.

Accelerating Pump - Center hole, normal setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: With engine running at normal operating temperature, back out fast idle screw a few turns and set engine idle speed to 550 RPM with idle speed screw. Turn fast idle screw in until setscrew just touches low step of fast idle cam, then turn fast idle screw back (counterclockwise) ½-turn.

Automatic Choke Setting: Centered on index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg WW (Studebaker) Carburetors" in Carburetion Section.*

CARTER WCFB

Carter WCFB 2829S (Std. & O.D. Trans.), 2830S (Flightomatic).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7. LEFT barrels feed 2-3-5-8.*

Idle Setting - Initial setting ½-1½ turns open. Turn screws out for richer mixture.

Idle Speed - 550-600 RPM, with selector lever in "N" on Flightomatic cars.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Fuel Pump: Carter No. 2573S. Fuel only.
Pressure - 3½-5½ lbs.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Electric type.
Dash Unit – Studebaker No. 1539880 (Hawk), No. 1548689 (others).
Tank Unit – Studebaker No. 1544825.
See "Fuel Gauges" in Carburetion Section

Air Cleaner: DRY TYPE (Plasticized paper) Standard. Oil Bath type Optional. Clean dry type filter element every 1000 miles, replace element every six months or 10,000 miles.

►*CLEANING CAUTION (DRY TYPE)*·Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Willard HO-11-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hour rate).
Battery Ground - Negative.
Engine Ground - Strap at right front corner of engine.

STARTER

Delco-Remy 1107650 (Synchro-mesh & Overdrive), 1107651 (Flightomatic). Armature - 1933789.
Drive - Bendix "Folo-thru" No. A3474.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

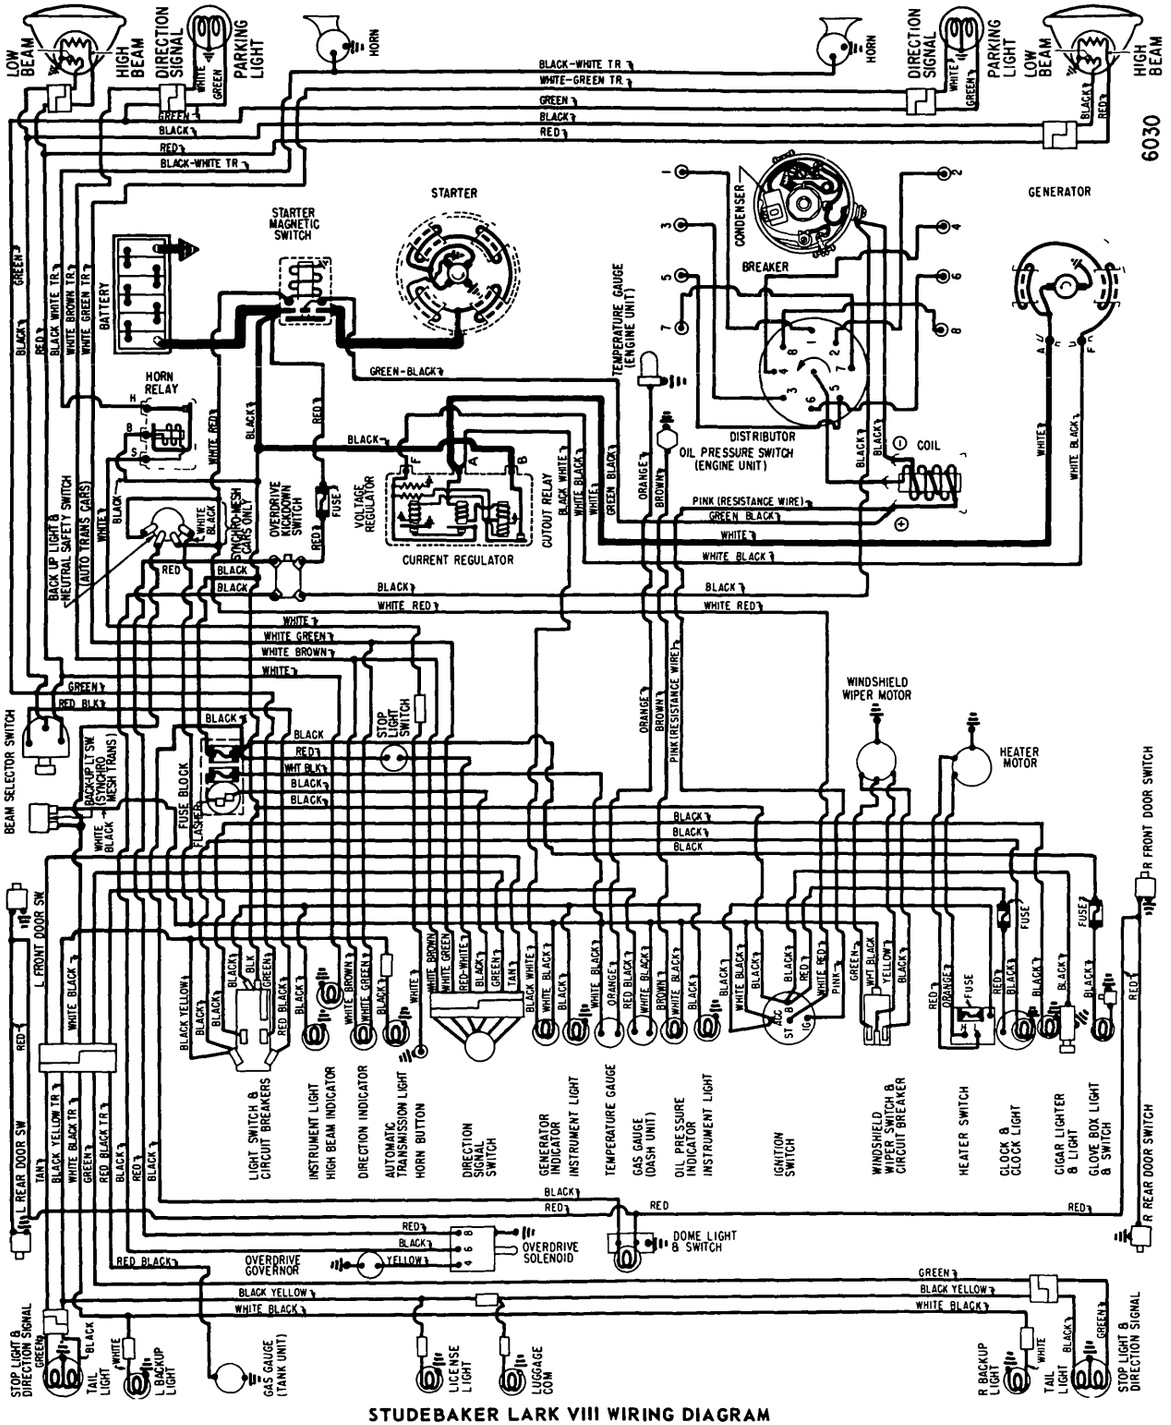
Starting Switch: Magnetic Switch, Studebaker No. 1539716, mounted on dash and controlled by combination Ignition & Starter Switch

Automatic Transmission Neutral Safety Switch: Studebaker No. 533321, mounted on steering column.
Adjustment - *See "Studebaker Flightomatic Transmission" in Transmission Section*

GENERATOR

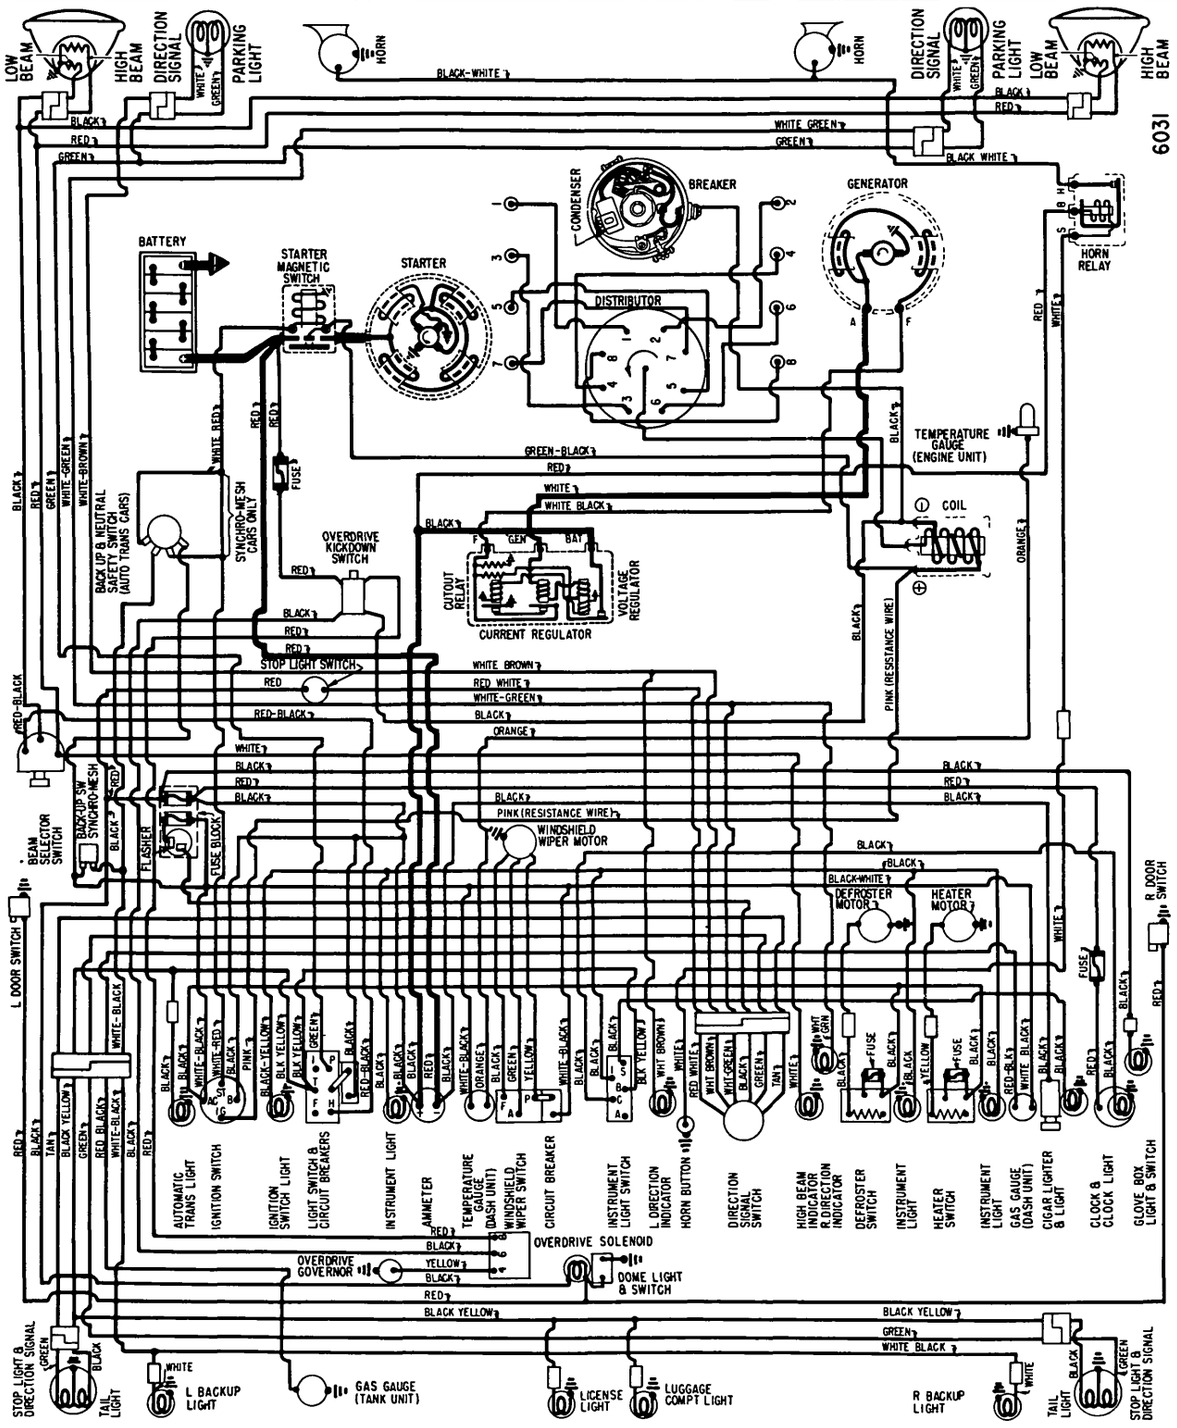
Delco-Remy. Used as follows

Model	Generator No.
Standard	1102003
Optional Heavy Duty	① 1102127
Optional Low Cut-In	② 1106981



① - When used on 6 Cyl. cars, this generator is made low cut-in type by use of a special drive pulley
② - Also used on 6 Cyl. cars

Performance Data - Cold



Generator	Amperes	Volts	RPM
1102003	30.0	14.0	2240
1102127	45.0	14 0	2600

Brush Spring Tension - 28 ozs (1102003 & 1102127)
Field Current - 1 69-1 79 amps. (1102003), 2 66-2.86 amps (1102127) at 12 0 volts
R tati n - Counterclockwise at commutator end
B lt Adjustm nt: Hook a spring scale to belt midway between generator and fan pulleys, then adjust belt tension so that pull of 14 lbs on scale will lift belt ½"

STUDEBAKER LARK VIII WIRING DIAGRAM

STUDEBAKER V8 HAWK WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

REGULATOR

Delco-Remy No. 1119123 (1102003 Gen.).
NOTE - Specifications below are "Normal" settings.

Cutout Relay

Cuts In - 11.8-13.5 volts (hot).
Contact Gap - .020".
Air Gap - .020" with contacts just closed

Voltage Regulator

Setting - 13.8-14 8 volts (hot).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" in Electrical Section.*

Current Regulator

Setting - 27-33 amperes hot (after 15 minutes continuous current regulator operation).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: Sealed beam type, one in each fender.
Direction Signals: *See Electrical Section.*
►*DIRECTION SIGNAL CANCELS TOO SOON ON LEFT TURN CORRECTION*· May be caused by bent switch plate. To correct, raise front of car and remove steering wheel. Insert screwdriver under switch plate midway between ends of plate and press down on right end of plate near cancelling lever.
Lighting & Instrument Light Switch Removal: Remove switch retaining nut, push switch back through instrument board, disconnect wires. *NOTE* - When installing switch, align flat on switch sleeve with corresponding flat on board.
Speedometer & Instrument Removal: Units can be removed separately without disturbing other parts.
Stop Light Switch: Located on inner side of left frame rail forward of steering gear housing (Std. Brakes), mounted in elbow fitting on power brake unit (Power Brakes).
CIRCUIT BREAKERS: 20 Ampere - Headlights, High beam indicator, Parking, Tail, License, and All Instrument lights On headlight switch
5 Ampere - Windshield wiper. On wiper switch.
FUSES: 15 Ampere - Body and Stop lights. In fuse block behind instrument panel.
15 Ampere - Direction signal. In fuse block behind instrument panel.
15 Ampere - Heater and defroster. On heater switch.
14 Ampere - Overdrive. In kickdown switch-to-starter solenoid cable.
1 Ampere - Clock. In lead behind instrument panel.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, See "Air Conditioning Service Cautions" in Miscellaneous Section.*
ENGINE SPECIFICATIONS: Own. V8, valve-in-head. Two engines used. 289" Engine used in Hawk Sports

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Coupe and available on Police Cars, 259" Engine used in all other models.

Engine	Bore	Stroke	Displacement
259"	3 9/16"	3 1/4"	259.2 cu. ins.
289"	3 9/16"	3 5/8"	289 cu. ins.

Engine	Compr. Ratio①	Rated HP	Developed HP
259"	8.8-1②	40.6	180 at 4500 RPM
259"	8.8-1③	40.6	195 at 4500 RPM
289"	8.8-1②	40.6	210 at 4500 RPM
289"	8.8-1③	40.6	225 at 4500 RPM

① - 7.5-1 Optional. ② - 2-Bbl. Carb. ③ - 4-Bbl. Carb.

Compression & Vacuum Reading - See *TUNE-UP.*

OIL PAN REMOVAL: Remove dipstick and adapter tube (remove head bolt to remove tube clamp). Disconnect battery. Drain crankcase Remove starter. On Hawk, swing wheels to right to move steering bellcrank out of way. On Other Models, remove steering bellcrank assembly and exhaust crossover pipe. Remove oil pan screws and pan.

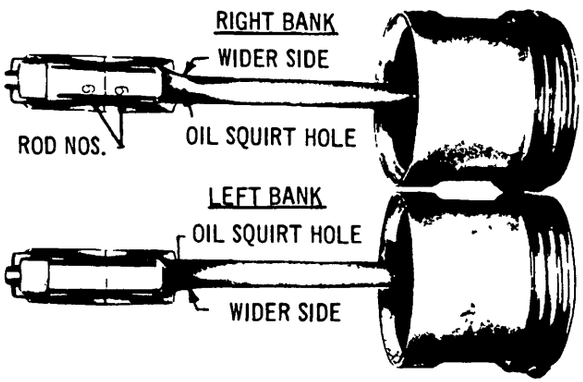
OIL PAN INSTALLATION: *See "Oil Pan" in Studebaker Special Data for special procedure.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Studebaker Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data*

PISTONS



Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data*

►*PISTON INTERCHANGEABILITY CAUTION:* Pistons for 289" engine have a dished head. 259" pistons have flat head. DO NOT interchange between engines.

Weight – 16.21 ozs.

Removal - Pistons & rods remove from above.

Fitting New Pistons: Clearance - Selective feeler fit. Use feeler 1" wide, 002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore Pull required to remove feeler with properly fit piston should be 7–12 lbs.

V8 ENGINE PISTON & ROD ASSEMBLY

Replacement Pistons: Std. size & .010", .020", .030", .040" oversize. Pistons furnished with fitted pins.

Installing Pistons: Install piston on rod so that solid side of piston is on same side as oil hole in bearing bore. Install piston in cylinder with the slot toward the left side of engine. *See Rod Installation.*

PISTON PINS

Locked in rod by tapered pin and locknut.

Diameter – .8741-.8745". **Length** – 3 1/16".

Clearance in Piston – .0001-.0003" (selective fit). Light finger push fit at 70° F.

Replacement Pins: Std. size & .0025", .005" oversize.

Removal & Installation: *See "Piston Pins" in Studebaker Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compression	.077-.078"	.008-.016"	.002-.005"
Oil	1855-.1865"	...008-.016"	.....0015-.005"

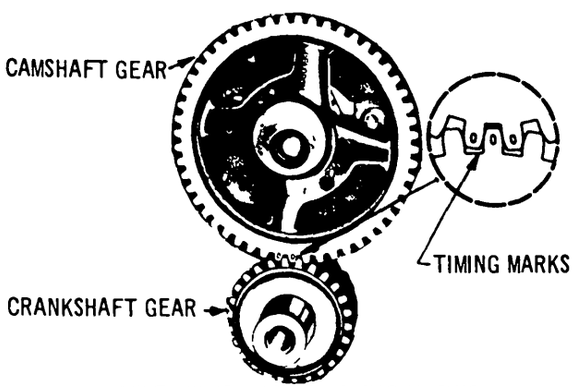
Replacement Rings: Sets of Std., .020", 030" and .040" Oversize.

Installing Rings: Install compression rings with chamfered side of ring upward. Gaps of inner and outer oil rings must not come at same point.

CONNECTING RODS

Length - 6 5/8" center-to-center. **Weight** - 23 71 ozs.

Crankpin Journal Diameter - 1.99925-2 00025".



Lower Bearing - Interchangeable. Steel backed, micro-babbitt lined type. No shims.

Clearance - 0005- 002". **Sideplay** - .008- 013".

Replacement Bearings: Std., 001", 002", .010" and 020" Undersize.

Installing Rods: Number on rod and bearing cap must be on same side. Rod is installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods), and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear on right bank, toward front on left bank.

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

V8 ENGINE VALVE TIMING MARKS

►*REPLACEMENT ROD IDENTIFICATION NOTE:* Replacement rods are unnumbered. To identify, hold rod upright with oil hole toward you. Wide part of offset will be to right on left bank rods, to left on right bank rods.

CRANKSHAFT

►*REAR MAIN BEARING OIL LEAK CORRECTION:* If proper installation of new rear oil seal and oil pan gaskets does not stop the leak, make sure that drain core hole in rear main bearing cap connects with groove in cap. Drill and file hole to correct.

Journal Diameter–2.4995-2.5000".

Bearings - Steel-backed, micro-babbitt lined. No shims.

Clearance–.0005-.0025".

Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal. **Endplay**–.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters–(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".

Bearings–Precision type, steel backed babbitt lined.

Clearance – .00075-.00225" (No. 1), .001-.00275" (Others).

End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.

Endplay–.003-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.

Timing Gear Removal & Installation–*See "Timing Gears" in Studebaker Special Data.*

Backlash–.001-.003".

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

Engine Front Cover Removal: *See "Engine Front Cover" in Studebaker Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

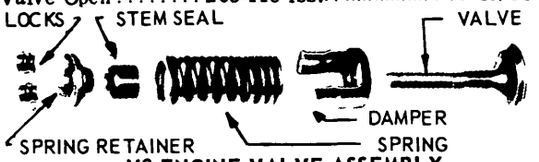
Tappet Clearance - .023-.025" (Hot), .025-.027" (Cold).

Valve	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	11/32"	5 5/32"
Exhaust	1 17/32"	11/32"	5 5/32"

Valve	Seat Angle	Lift	Stem Clearance
All	45°	23/64"	.0015-.0035"

Valve Seat Width–1/16-3/32".

Valve Stem Oil Seal: "Umbrella" type, rubber seals installed on all exhaust and intake valve stems (with cupped side down toward top of valve guide) within valve spring below spring retainer.



Valve Springs: Single spring used. Replace spring if 10% weaker than pressure given in specifications below *NOTE* - Damper installed on lower (close-coiled) end of all springs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Spring Specifications

	Pressure	Length
Valve Closed	45-55 lbs.	2 1/32"
Valve Open	105-115 lbs.	1 43/64"

V8 ENGINE VALVE ASSEMBLY

Valve Guides: Pressed in head from underside.
Guide Removal & Installation–See *"Valve System" in Studebaker Special Data.*
Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.
►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore):* See *"Valve System" in Studebaker Special Data.*
Valve Lifter Installation & Fitting–See *"Valve System" in Studebaker Special Data.*
Replacement Lifters–Std. size, .001", .005" oversize.
►*CAUTION–When lifters removed, make sure they are installed in riginal positions.*
Rocker Arms: See *"Valve System" in Studebaker Special Data.*
►*ROCKER ARM COVER & GASKET PRODUCTION CHANGE:* Beginning Serial No. 60V-13001, new rocker arm cover and gasket were used in production. New cover has only two retaining stud holes and gasket is wider Install new gasket, Part No. 1550521, in cover with gasket retaining notches toward center of engine.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves–Open 11° BTDC. Close 54° 36' ALDC.
Exhaust Valves–Open 51° 36' BLDC. Close 14° ATDC.
Valve Timing Check–Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Studebaker Special Data.*
Crankcas Capacity: 5 qts. (add one quart when filter changed).
Normal Oil Pressure – 20–40 lbs. at 40 MPH.
Pressure Regulator Valve – Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator (Lark): Indicator light on instrument panel controlled by oil pressure switch, Studebaker No 1539898
Oil Pressure Indicator (Hawk): Direct reading, non-electric type gauge, Studebaker No. 1539878.
Oil Pump: Helical gear type. Mounted on rear main bearing cap in crankcase. *NOTE* - Stationary type oil strainer used which is a unit with the intake pipe.
Pump Removal, Overhaul, & Installation: *See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial flow, "disposable" type (replace element and housing as a unit). Replace element at 5000-6000 mile intervals or more often under sever conditions.
►*OIL FILTER INSTALLATION CAUTION:* Lubricate gasket with engine oil and tighten filter **by hand ½-turn after gasket seats on base.** *Do not cross-thread or overtighten.*
Replacement Filter Element - Studebaker No. 1542739.
Crankcase Ventilation: Filter element is located in oil filler cap (air intake). Breather pipe (air outlet) is connected at rear of valve chamber cover plate.

COOLING

Water Capacity: 17 qts. without heater. 18 qts. with heater (Lark), 18½ qts. with heater (Hawk).
Pressure Valve: 14 lb. radiator filler cap, Studebaker No. 1551190. *Supersedes 13-15 lb. cap, No. 1548915.*
Thermostat: Choke type. Studebaker No. 1540787 (170°) Std., No. 533247 (160°) and No. 533257 (180°) Optl.
Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Studebaker Special Data.

Radiator & Fan Shroud Removal - *See "Cooling System" in Studebaker Special Data.*
Temperature Gauge: Direct reading, electric type.
Dash Unit - Studebaker No. 1548690 (Lark), No. 1539879 (Hawk).
Engine Unit - Studebaker No. 1545220 (All).
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck. Used as follows:

Car Model	Clutch Model
6 Cyl. Lark Std.	8A7
6 Cyl. Lark H.D.	9A7
6 Cyl. Taxi Early Ⓣ	9A7
6 Cyl. Taxi Later Ⓣ	10.5A6
V8 Lark	10A7
V8 Taxi	10.5A6
V8 Hawk	10A6

Ⓣ - See Production Change Note below.
See "Borg & Beck" in Clutch Section.
►*6 CYL. TAXI CLUTCH PRODUCTION CHANGE & EXCESSIVE RELEASE EFFORT CORRECTION:* Different type clutches used. *See "Borg & Beck" in Clutch Section.*
Pedal Adjustment: Free travel ½-1". To adjust, loosen locknut on rod connecting clutch release shaft lever to clutch operating shaft lever. Turn opposite nut in or out to shorten or lengthen rod as required. Tighten locknut.
►*HILL HOLDER NOTE:* Check setting whenever clutch pedal adjusted and adjust operating rod so Hill Holder releases at same time clutch is engaged
Clutch Housing Removal: Disconnect battery. On 6 Cyl. remove dipstick and tube and starter mounting capscrews (do not disconnect cables) and tie starter out of way. On V8, remove starter. On all models, remove clutch operating shaft. Remove transmission (see below). Disconnect engine rear support from crossmember. Raise engine at oil pan and remove crossmember. On V8, remove clutch housing cover plate. Remove clutch housing. *NOTE* - On 6 Cyl., remove dowel bolts first.
►*6 CYL. TAXI CLUTCH REMOVAL NOTE:* If engine rear support insulator is attached to clutch housing by two accessible capscrews, clutch can be removed without removing crossmember and clutch housing as follows: Disconnect insulator from clutch housing and crossmember. Raise engine and slide insulator forward and remove it. Push clutch housing to rear and rotate until starter area is adjacent to crossmember. Remove pressure plate from flywheel. Remove driven plate. To remove pressure plate assembly, move it toward starter area in clutch housing and slip out between clutch housing and engine rear plate.
Clutch Removal: Remove clutch housing (see above), remove screws evenly to relieve pressure, remove clutch.

SYNCHRO-MESH TRANSMISSION

Warner. Used as follows:

Car Model	Transmission Mod l
6 Cyl. Except Taxi	T-96
6 Cyl. Taxi	T-90
V8 Except Taxi	T-86
V8 Taxi	T-89

See "Warner Synchro-mesh" in Transmission Section.
►*REAR BEARING SMALL SNAP RING BREAKING OR COMING OUT CORRECTION (6 Cyl.):* Install improved snap ring, Part No. 1550544. *See "Warner Synchro-mesh" in Transmission Section.*
►*SECOND-TO-HIGH GEAR CLASH CORRECTION (V8):* May be due to improperly adjusted shift linkage or mainshaft-drive pinion interference. *See "Warner Synchr - mesh" in Transmission Section.*
►*TRANSMISSION OIL LEAK CORRECTION.* If oil leakage occurs between rear oil seal and transmission rear housing or between transmission case and rear housing, use a non-hardening sealer such as Permatex No. 2 between rear seal and transmission housing and on transmission main case capscrews.
►*LUBRICANT LEVEL CHECKING & FILLING CAUTION:* On transmissions with drain and filler plugs in **both** transmission main case and extension housing, lubricant must be checked, added, and drained from each unit separately to assure proper lubrication for all parts.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
►*GEAR SHIFT CONTROL PRODUCTION CHANGE & PARTS REPLACEMENT CAUTION:* Later cars have new transmission remote control assembly which has a nylon bearing between shift lever support and upper bearing bracket. First 2300 cars with new assembly have no external identification. Later cars identified by letter "D" on underside of shift lever boss on shift lever support. Parts for early and later assemblies are **not** interchangeable.
Removal: Disconnect propeller shaft at rear universal joint flange, pull shaft to rear to disengage splined joint at transmission extension, remove shaft. Drain transmission case. Disconnect shift rods at transmission case shift levers, disconnect speedometer cable at transmission case, remove speedometer pinion. Remove clutch operating shaft, bracket, and bearing from transmission case. Support transmission and remove capscrews mounting transmission on clutch housing. Move transmission straight back until main drive gear clears clutch driven member, then lower transmission and remove from beneath car.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OVERDRIVE

Warner R10. Governor controlled solenoid operation with throttle controlled kickdown. *NOTE* - Relay is not used in overdrive control circuit. See wiring diagram for control circuit.

Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

R moval: Same as for synchro-mesh transmission (above) after disconnecting control cable and wiring.

FLIGHTOMATIC TRANSMISSION

Warner. Torque converter and hydraulically controlled three-speed planetary transmission. Used as follows:

Car Model	Transmission Model
6 Cyl. Except Taxi	AS6-5H
6 Cyl Taxi	AS2-7E
V8 Except Taxi	AS6-5P
V8 Taxi	AS10-7A

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Flightomatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Flightomatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A"; or Type "A", Suffix "A".

Checking Fluid Level – Operate engine with selector lever in "P" for 4 minutes or until engine and transmission reach operating temperature. Apply brakes, move selector lever from "P" to "R" and then to "D" slowly. Check fluid level on dipstick (under inspection hole cover on right side of front floor). Add fluid as necessary to bring to "F" mark on dipstick (1½ pints between "L" and "F" marks).

Capacity – 18 pints (exc. Taxi), 19 pints (Taxi).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Flightomatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Two used (with one-piece propeller shaft).

►*UNIVERSAL JOINT LUBRICATION NOTE:* Universals should be disassembled, cleaned, and repacked with special universal joint lubricant at 20,000 mile intervals.

PROPELLER SHAFT

One-piece type, with a universal joint at each end.

►*DRIVE LINE ANGLES CHECKING & ADJUSTMENT: See "Propeller Shaft Notes" in Studebaker Special Data. CAUTION – Incorrect angles may cause drive line or chassis vibration.*

►*UNIVERSAL JOINT "PHASE ANGLE" & PROPELLER SHAFT REPLACEMENT CAUTION:* Shaft assemblies with different universal joint phase angles used on some models. *See "Prop ll r Shaft Notes" in Stud - bak r Special Data for compl t data n ach mod l.*

REAR AXLE

Spic r. Semi-floating, hypoid gear with Hotchkiss Drive. Used as follows:

Car Model	Rear Axle Model
6 Cyl. Except Taxi	23-1 or 27
6 Cyl. Taxi.	44-3
V8 Except Taxi & Station Wagon	23-1 or 27
V8 Taxi & Station Wagon	44-3

See "Spicer Hypoid" in Rear Axle Section.

►*REAR AXLE PINION SEAL OIL LEAK CORRECTION:* If oil leaks between rear axle pinion seal and axle housing, apply non-hardening sealer such as Permatex No. 2 between seal and housing.

►*"TWIN-TRACTION" DIFFERENTIAL NOTE:* Optional on all models. Identified by "45" or "T" stamped on a tag under a cover capscrew. *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

►*AXLE RATIO IDENTIFICATION NOTE:* Gear ratio stamped on a tag attached by a cover capscrew.

Axle Ratios

Model	Synchro-mesh	Overdrive	Flightomatic
6 Cyl. W,F,J	① 3.73-1	② 4.10-1	③ 3.73-1
6 Cyl. D, P	② 4.10-1	④ 4.27-1	③ 3.73-1
6 Cyl. L	② 4.10-1	⑤ 4.56-1	③ 3.73-1
6 Cyl. Y	⑤ 4.09-1		⑥ 3.73-1
V8 Except Y	⑦ 3.31-1	⑦ 3 54-1	⑧ 3.07- 1
V8 Y	⑨ 3.31-1		⑥ 3.31-1

① - Optional: 3.54-1; 4.10-1; 4.27-1; 4.56-1.
② - Optional: 3.73-1; 4.27-1, 4.56-1.
③ - Optional: 3.54-1, 4.10-1.
④ - Optional: 4.10-1; 4.56-1.
⑤ - Optional: 4.27-1.
⑥ - Optional: 3.54-1.
⑦ - Optional: 3.07-1, 3.73-1.
⑧ - Optional: 3.31-1; 3.54-1.
⑨ - Optional: 3.54-1, 3.73-1.

Backlash -.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub using Puller J–1644–S. Remove brake backing plate retaining bolts and remove outer washer, retainer, reinforcing plate and felt washer (discard this washer). Free hand brake cable from equalizer and frame guides and disconnect hydraulic brake line at wheel cylinder. Pull backing plate out over end of axle shaft and tie it up out of way. Remove endplay adjusting shims *(CAUTION – Save for reinsfallation).* Use Puller J–7935 with Hammer J–2619 to remove axle shaft.

Rear Axle Assembly Removal: Remove hub caps, loosen wheel nuts and remove axle shaft nut. Raise rear of car and support on stands under frame just ahead of rear springs. Remove wheels, hubs, and drums. Disconnect brake line at each rear wheel cylinder, remove brake pipe clamps and free brake line from rear axle housing. Take out backing plate bolts, pull backing plate out over end of axle shaft and tie up out of way. Remove adjusting shims located beneath backing plate. *(CAUTION – Save for reinstallation).* Disconnect propeller shaft by removing rear universal joint U-bolts and nuts (wire caps together). Remove rear spring U-bolts from axle housing, disconnect rear shock absorbers. Remove rear axle assembly from beneath car.

Wh l Bearing Adjustm nt: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003". .005". .010". .030" thick). **Endplay –** .001-.006".

►*REAR WHEEL BEARING LUBRICATION CAUTION:* No lubrication plug provided but bearings are NOT lubricated for life. Remove, clean, and repack bearings at 25,000 mile intervals.

SHOCK ABSORBERS

Gabriel (U.S. Cars), Monr (Canadian Cars). Direct acting, hydraulic, non-adjustable (Exc. Taxi), Adjustable (Taxi & Optl. Heavy Duty on other cars).

Gabriel Shock Absorb rs (Stud bak r N s.)

Car Model	Front	Rear
Sedans & Hardtop	1545057	1545053
Station Wagons	1545057	1545053
Hawk (Early) ①	1545055	1545050
Hawk (Later)	1545057	1545052
Taxi ②	1548550	1548549
All (Heavy Duty)②	1544410	1544411

Monroe Shock Abs rbers (Canada)

All (Exc. Hawk)	1547458	1545046
Hawk	1547458	1545045

① – First 660 cars only. ② – Adjustable type.

Adjustment (Gabriel Adj. Typ) - Disconnect one end of shock absorber and collapse it fully to engage internal coupling, then rotate lower shaft until arrow on body lines up with "Soft", "Normal", or "Firm" arrow on dustcover.

FRONT SUSPENSION

Independent. Coil spring suspension with shock absorbers mounted within coil springs.
See "Studebaker" in Suspensions & Wh l Alignm nt Section.

►*FRONT SPRING NOISE CORRECTION:* If caused by coil-to-coil contact of upper four coils of spring, install rubber insulators, No. 526249, at top and bottom of each spring.

►*VARIABLE RATE COIL SPRING NOTE:* All springs except Heavy Duty type are Variable Rate with closer coils at upper end.

Kingpin Inclination - 6° at 0° camber.

Caster - Neg. 1½° to Neg 3° Not more than ¾° variation between wheels. *Supersed s pr vious sp cifications of Neg. 1° to Neg. 2½°.*

Camber - 0° to Pos. 1° ½° more camber favored on driver's side.

Toe-In - 1 16-1/8" **Adjust right hand ti rod nly** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel.

RHD Car Note - Make toe-in adjustments at left hand tie rod.

T e-Out on Turns - With outer wheel at 20°, inner wheel should be turned 23½-24½°.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Manual: Ross TA-12 & TL-12 Cam & Twin Lever or SL-54 Cam & Single Lever Roller Stud. Used as follows:

Car Model	Ross Strng. Gear Model
6 Cyl. Exc. Convert. & Taxi (LHD)	TA-12
6 Cyl. Convert. & Taxi (LHD)	SL-54
6 Cyl. (RHD)	SL-54
V8 (All)	SL-54

See "Ross Steering Gears" in Steering Section.

Power Steering: Bendix Linkage Type. *See "Bendix Linkage Type Power Steering" in Steering Section.*

►*HISSING NOISE IN STRAIGHT AHEAD DRIVING CORRECTION & CONTROL VALVE PRODUCTION CHANGE: See "Bendix Linkage Type Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Lever" Steering Gear in Steering Section.*

BRAKES

Service: Wagner Lockheed Hydraulic. Self-centering (with Bendix type shoes). Parking lever applies rear wheel service brakes.

See "Wagner Lockheed Self-Centering Brakes" in Brake Section.

►*BRAKE USAGE NOTE: 6 Cyl. Taxi models use same size brakes as V8 cars. Specifications below for V8 cars apply also to 6 Cyl. Taxi.*

Drum Diameter - 10" front, 9" rear (6 Cyl.); 11" front, 10" rear (V8).

►*BRAKE DRUM NOTE:* Air cooled rib type drums used on all Taxi and Hawk models.

Master Cylinder Bore Diameter - 1" All Models.

Wheel Cylinder Diameter - 1" front, 13/16" rear (6 Cyl.); 1 1/16" front, 7/8" rear (V8).

Braking Power - 62% front, 38% rear. All Models.

Brake Lining: Marshall-Eclipse lining used on all models. Lining is bonded to shoe (Taxi), riveted to shoe (Others).

►*FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 7/32" thick (All Shoes on Taxi), and 3/16" thick on all other shoes. Lining is pre-ground off-center at the factory to eliminate brake squeal Lining applied to full length of shoe, and is marked "secondary" and "top" and should be installed as marked.

Lining Width & Length (Except Taxi)

Shoe	Front Wheel	Rear Wheel
6 Cyl. Primary	2"x8 15/32"	.2" x 7 9/16"
6 Cyl.Secondary	2" x 10 53/64"	2" x 9 3/4"
V8 Primary	2 1/4" x 9 21/64"	2" x 8 15/32"
V8 Secondary	2 1/4" x 11 57/64"	2" x 10 27/32"
(Taxi)		
All Shoes	2 1/4" x 11 1/2"	2" x 10 7/16"

Thickness – 3/16" except as noted above under "Secondary Lining Note".

Clearance – Lock shoes against drums, then turn adjusting screw back eight notches or more as required to free drum.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained 1/2" below top of filler opening.

Removal: Disconnect clutch pedal retracting spring from master cylinder support strap, unhook spring from frame bracket and then from spring clip on pedal rod. Disconnect fluid lines from master cylinder. Remove brake pedal clevis pin and disconnect pedal rod at brake pedal. Remove attaching bolts, swing support strap down, and remove master cylinder. *NOTE* - Reinsert forward mounting bolt to support Hill Holder.

Power Brakes: Hydrovac Power Unit. Used with standard master cylinder.

See "Hydrovac Power Unit" in Brake Section.

Checking Fluid–Same as for Manual Brakes (same master cylinder used).

Removal of Power Unit–Disconnect manifold vacuum supply hose at the power unit and disconnect stop light switch wires. Disconnect hydraulic lines from power unit (lines leading to master cylinder and to wheel cylinders). Remove power unit-to-bracket mounting bolts and remove unit from car.

Hill Holder: Used on Synchro-mesh and Overdrive Transmission cars *See "Hill-Holder" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers: Autolite or Bosch Electric Two-Speed type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Studebaker Air Conditioning" in Miscellaneous Section.*

Power Top: Autolite, electric-hydraulic type.
See "Power Top Controls" in Miscellaneous Section.

TIGHTENING SPECIFICATIONS
ALL MODELS

TIGHTENING TORQUES: When tightening capscrews or bolt nuts retaining the parts listed below, use a torque indicating wrench and tighten to tensions listed.

4 CYL. ENGINES

	Ft. Lbs.
Cylinder Head Stud Nuts or Screws	60-70
Main Bearing Cap Bolts	65-75
Con. Rod Cap Bolt Nut 3/8"	35-40
Con. Rod Cap Bolt Nut 7/16"	50-55
Con. Rod Cap Bolt Nut 11/32"	33-38
Crankshaft Counterweight Bolt	60-70
Flywheel to Crankshaft Bolts	36-40
Camshaft Thrust Plate Bolts	20-26
Camshaft Gear to Camshaft Bolt	30-40
Intake & Exhaust Manifold Bolts	31-35
Rocker Arm Bracket to Head Nuts	30-36
Spark Plugs	25-30

6 CYL. ENGINES (EXC. 6226)

	Ft. Lbs.
Cylinder Head Stud Nut or Screw	60-70
Main Bearing Cap Bolts	65-75
Con Rod Cap Bolt Nut 3/8"	35-40
Con Rod Cap Bolt Nut 7/16"	50-55
Con Rod Cap Bolt Nut 11/32"	33-38
Crankshaft Counterweight Bolt	60-70
Flywheel to Crankshaft Bolt	36-40
Camshaft Thrust Plate Bolt	14-20
Camshaft Gear To Camshaft Bolt	30-40
Int. & Exh. Manifold Bolts	31-35
Rocker Arm Bracket To Head Nuts	30-36
Spark Plugs	25-30

6 CYL. 6226 ENGINE

	Ft. Lbs.
Cyl. Head Bolts	35-45
Con Rod Cap Bolts	40-45
Main Bearing Cap Bolts	85-95
Camshaft Thrust Plate Bolts	12-15
Camshaft Sprocket Nut	35-40
Timing Chain Cover Screws	12-15
Flywheel Mounting Bolts	35-40
Int & Exh. Manifolds	30-35
Vibration Dampener Bolt	100-130
Oil Pan Screws	12-15
Valve Chamber Cover	7-10
Water Pump	12-15

ENGINE
UNIVERSAL JEEP

ENGINE REMOVAL: To remove engine from chassis as required for such engine items as crankshaft and camshaft overhaul, perform the following operations in sequence.

1)—Drain cooling system, and remoye battery. Disconnect and remove upper and lower radiator hoses, stay rod, radiator hold down bolts, and lift radiator out.

2)—Remove air cleaner. Disconnect cable at starter terminal and remove starter. Disconnect generator leads and ignition coil leads, and remove heat indicator bulb at cylinder head, and oil gauge pressure line. Disconnect engine ground strap, and remove two bolts in engine mounting on each side.

3)—Disconnect throttle control and choke control rods at carburetor, governor dash control at governor. Remove horn. Disconnect fuel and windshield wiper lines at fuel pump. Disconnect exhaust pipe at manifold.

4)—Disconnect rear end of engine stay cable at frame cross-member, and remove bell housing **leaving one bolt at each side to support engine weight.**

5)—Attach chain hoist to engine and take up just enough to support engine without binding remaining bell housing bolts, and remove, these bolts. Swing engine forward to withdraw clutch shaft from bushing in flywheel, lift engine from chassis.

►*INSTALLATION CAUTION*—Place small amount of grease in clutch shaft bushing in flywheel before installing engine.

STA. WGN., SEDAN DEL., TRUCKS

ENGINE REMOVAL: NOTE—It is recommended that engine be removed from chassis for overhauling.

1)—Disconnect battery, drain cooling system, and remove the bolts and nuts attaching hood to hinge and remove hood. Remove radiator brace rods, and both upper and lower radiator hoses (heater hoses if so equipped). Remove radiator attaching screws and remove radiator.

2)—Disconnect fuel line and flexible windshield wiper hose at fuel pump. Remove carburetor air cleaner, and disconnect the carburetor choke and throttle controls.

3)—Remove starter motor wires and starting motor. Disconnect generator wires at generator, and coil wires at coil. If car is equipped with overdrive, tag overdrive control wires and remove them. Disconnect heat indicator and oil gauge wires.

4)—Disconnect exhaust pipe at manifold, and remove the nuts and bolts from front engine supports. Remove flywheel-to-bell housing attaching bolts.

5)—Attach a suitable lifting sling on engine, and raise engine high enough to release weight from front engine supports, then pull engine forward until clutch clears the bell housing. Lift engine from chassis.

FORWARD CONTROL FC-150 & FC-170

ENGINE REMOVAL: *NOTE* - Remove engine, transmission and transfer case as a unit as follows:

1) Drain cooling system, remove driver seats, engine hood and panel (FC-170), panels (FC-150). Disconnect battery.

2) Remove air cleaner assembly (FC-150) and bracket (FC-170), choke and throttle controls, and on FC-150 remove fuel line at pump.

3) Remove carburetor, radiator and heater hoses then remove surge tank

4) On FC-150, remove wires from coil, starter, generator and remove oil filter and bracket.

5) On FC-170, remove distributor, oil filler tube, coil, oil filter and bracket, temperature and starter to solenoid wires, generator access panel, generator, bracket and pulley.

6) On FC-150, disconnect accelerator control wire at engine bell crank and disconnect oil sender unit.

7) On FC-170, disconnect radiator brace at engine and loosen at radiator and move out of way. Remove radiator hose at water pump, then remove fan belt and blade assembly from fan shaft. Disconnect vacuum outlet hose and fuel line from pump and plug line. Remove fuel line (pump to carburetor).

8) On FC-170, disconnect exhaust pipe at manifold, remote control rod at transfer case, oil pressure unit wire and engine ground strap. Disconnect two remote control rods at transmission and move out of way.

9) On FC-150, disconnect exhaust pipe at manifold, raise front of vehicle on jacks and remove front and rear exhaust pipes.

10) On FC-170, disconnect clutch control cross shaft and remove hand brake, release spring, cable brackets at bell housing and frame crossmember and cable adjusting rod at lever.

11) On FC-150, disconnect brake and clutch cables and springs, remote control cable rod at transfer case and remove front propeller shaft.

12) On FC-170, disconnect rear propeller shaft at transfer case and secure out of way. Disconnect speedometer cable and front propeller shaft at transfer case and remove engine bolts.

13) On FC-150, disconnect battery cable at bell housing, remove fan belt, loosen and raise generator then remove two front motor mount bolts and engine ground strap at frame. Disconnect spark plug wires and clamp and remove valve cover and speedometer cable. Remove propeller shaft. Disconnect shift control rods at transmission levers and secure out of way.

14) Attach lifting brackets to engine at head bolt locations so engine will be well balanced, then use crane or "A" frame and chain hoist to support engine. Disconnect rear engine support (frame crossmember) at rails. Lift front of engine and remove two rubber front mounts.

15) Raise vehicle as necessary to lower and remove engine from below. *NOTE* - On FC-170 models it may be necessary to raise front of vehicle to loosen front spring clips on front axle so axle may be moved forward to length of brake hose. Reverse procedure to reinstall.

CYLINDER HEAD
ALL MODELS

►*6 CYL. HEAD TIGHTENING SEQUENCE CHANGE:* New sequence is indicated in diagram and supersedes previous instructions.

►*CYLINDER HEAD BOLT TIGHTENING CAUTION:* On F4-134 engine, one cylinder head nut is under carburetor so that carburetor must be removed to torque this nut. On L6-226 engine, one cylinder head bolt is close to distributor adapter so that adapter must be removed to torque this bolt.

CYLINDER HEAD INSTALLATION: Tighten stud nuts and capscrews in sequence shown in diagram to correct torque (see above). *NOTE* – On 6 Cyl. engine, bolts

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

No. 24 & 26 are of smaller diameter than the others. Use guide pins in these holes when installing head to assure accurate alignment with block and to prevent gasket failure.

Tightening Torque - See *Tightening (Torque Wrench) Specifications*

ORIGINAL BORE & PISTONS

ALL MODELS (EXC. 6226 ENGINE)

BORE & PISTON SIZES: Engines originally equipped at factory with special oversize pistons may be identified by code letter stamped on engine following the engine number:

"B"—Pistons are .002" Oversize.

"AB"—Pistons .002" Oversize. Main and connecting rod bearings are Undersize (see Original Bearing Sizes following).

"C"—Piston Pins .002" Undersize.

4 CYLINDER MODELS

STANDARD BORE & PISTON SIZE VARIATION: bores and pistons are graded in four .0005" steps as shown in table below and are marked as follows:

Piston—Letter stamped on piston head.

Cylinder Bore—Letter stamped on top of block between valve ports and bore at center.

4 Cylinder Bore & Piston Sizes

Letter	Cylinder Bore Size	Piston Size
A	3.1255-3.1250"	3.1235-3.1230"
B	3.1260-3.1255"	3.1240-3.1235"
C	3.1265-3.1260"	3.1245-3.1240"
D	3.1270-3.1265"	3.1250-3.1245"

6 CYL. MODELS (EXC. 6226 ENG.)

STANDARD BORE & PISTON SIZE VARIATION: Cylinder bore and pistons are graded in six .0004" steps and are marked as follows:

Piston—Letter stamped on piston head.

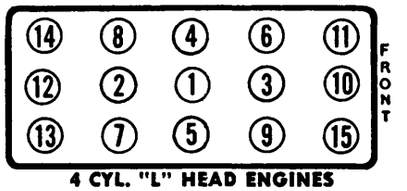
Cylinder Bore—Similar letter stamped on top of block between valve ports and bore.

ORIGINAL BEARING SIZES

ALL MODELS (EXC. 6226 ENGINE)

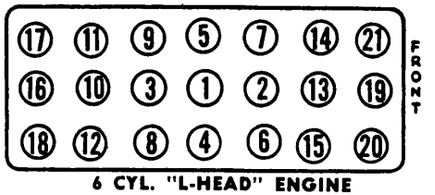
MAIN & CONNECTING ROD BEARING SIZES: Engines originally equipped with special undersize mains and connecting rod bearings can be identified by code letter stamped on engine following the engine number:

"A"—Main & Con. Rod Bearings .010" Undersize.



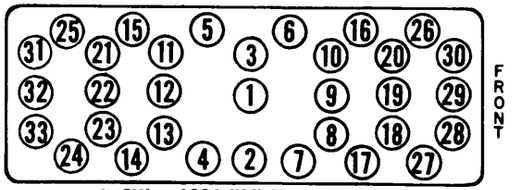
"AB"—Main & Con. Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore & Pistons).

"D"—Main Bearings .010" Undersize.



"E"—Connecting Rod Bearings .010" Undersize.

CRANKSHAFT & MAIN BEARINGS

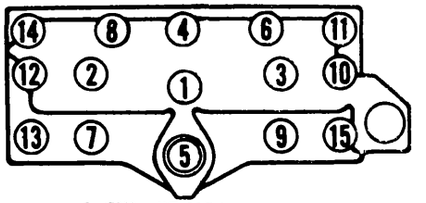


►*MAIN BEARING CAP LOCATING DOWEL CAUTION* Raise main bearing cap up evenly to eliminate possibility of bending dowels Bent dowels will cause misalignment of bearing cap and result in rapid bearing wear and need for early bearing replacement Install new dowels when old dowels are bent

4 CYL. "L" HEAD ENGINES

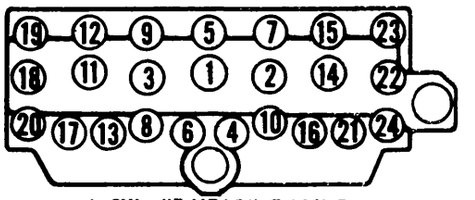
6 CYL. "L-HEAD" ENGINE

6 CYL. 6226 "L" HEAD ENGINE



ALL MODELS (EXC. 6226 ENGINE)

►*MAIN BEARING CAP IDENTIFICATION CAUTION* Cylinder block center crankshaft bearing web and bearing caps marked with daub of paint to indicate that caps are to be used with that block only *DO NOT USE CAPS WITH ANY OTHER COLOR THAN SHOWN ONWEB*



CRANKSHAFT SERVICING: Bearing Replacement – Engine must be removed from car for bearing replacement (bearings "doweled" in case and crankshaft must be taken out to remove and install bearings). Make certain that oil holes in bearings line up with oil holes in crankcase, and that bearings fit snugly on dowel pins in crankcase and bearing caps.

Rear Bearing Oil Seal (Neoprene Type—*NOTE Upper and lower halves of seal can be replaced without removing crankshaft from engine.* Seal is neoprene with a steel back Upper half of seal can be removed by using a suitable piece of strap steel (hack saw blade with teeth ground off) Rotate upper half of seal around shaft with steel strap until opposite end protrudes far enough to grasp end and remove To install, coat both parts of seal with grease and install upper half by rotating it around crankshaft until it is in position with ends even at the engine block Coat both ends of lower seal with Permatex before installing to insure good seal with upper half

Rear Bearing Cap Seal—Bearing cap sealed by cylindrical rubber packing strips inserted in holes between cap and case. When installing bearing cap, coat upper face lightly with sealing compound, insert new packing strips after cap is in place. Packing strips should protrude ¼" to provide proper compression when oil pan installed. CAUTION—Do not cut off this protruding portion of the packing.

4 CYL. "F-HEAD" ENGINE

6 CYL. "F-HEAD" ENGINE

6226 ENGINE

►*REAR BEARING OIL SEAL ASSEMBLY PRODUCTION CHANGE & INSTALLATION CAUTION* New Rear Bearing Oil Seal Assembly (to eliminate oil seal leakage) used starting with Engine Serial Nos SW-6-L-13542, TW-6-L-T-74176 and TW-6-L-F-13756 New Filler Block No 733560 has aligning pins and pre-installed seall New Guard Assembly No 733547 has pre-installed seals and holes for filler block pins Oil Pan Side Gaskets No. 733542 have 125" hole for aligning pins Kit No 917608 contains above items plus Gasket 910220 Replace all old type Seal Assemblies (for oil leak correction) with new Kit No 917608 Use replacement seals No 731046 only, to correct oil leakage with new type seal assemblies

►*FRONT FILLER BLOCK (LOWER) OIL SEAL PRODUCTION CHANGE:* Effective in 1956 production new type seal used to prevent leakage between filler blocks and oil pan. To install new seal on earlier models, coat inner surfaces of filler block with gasket cement. Install seals in grooves evenly centered so that each end extends an equal distance of 1/16" above faces of filler block ends. Be sure they are well seated in grooves and allow cement to dry. Do not trim off ends. If necessary to use cork seals, follow procedure outlined below, **but first soak cork seals in water for a minimum of three hours to make them sufficiently pliabl f r satisfactory use.**

1954-57 6226 MODELS

FRONT & REAR FILLER BLOCKS: Lower filler blocks (front and rear) are bolted on lower face of crankcase to close oil pan opening (filler blocks must be removed to replace pan gasket) Rear filler blocks (additional **upper filler block guard** in crankcase) are grooved for cork oil seals which bear on polished surface of crankshaft directly behind oil slinger. Filler blocks can be removed and replaced without disturbing crankshaft as follows

Front Filler Block (Lower) Servicing: Remove by taking out mounting capscrews and timing gear cover

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

capscrews which enter the filler block. When installing filler block, first install oil pan side gaskets (No. 200266), install filler block (use Perma-tex), install new end gasket (No. 200267) on block.

Rear Filler Block (Lower) Servicing: Same as for the lower front block (above) except for crankshaft oil seal (square cork gasket or graphite impregnated seal). Remove and discard old gasket or seal. Install new seal (no. 204654) in same manner as described below for Rear Filler Block (Upper) Guard. Install lower filler block **after** upper filler block guard has been installed.

Rear Filler Block (Upper) Guard Servicing: Guard is seated in groove in crankcase and can be "rotated" out without disturbing crankshaft after lower filler block removed. Remove and discard old gasket or seal, clean out seal groove. Install new graphite impregnated seal (no. 204654), flatten seal slightly and use mandrel or rod to seat seal in groove by rolling from ends toward the center (ends must extend slightly above flat surface of guard). **Do not use shellac or sealing compound in groove.**

►*CAUTION*—Oil seal in both Upper Filler Block Guard and Rear Filler Block must be centered with crankshaft. If necessary, seal can be built up using 1/32" thick gasket material, 3/16" wide, as shims shellacked to groove in block or guard behind seal.

1958-60 6226 MODELS

FRONT & REAR FILLER BLOCKS: Lower filler blocks (front & rear) are bolted on lower face of crankcase to close oil pan opening (filler blocks must be removed to replace pan gasket). Rear filler blocks (additional upper filler block guard in crankcase) are grooved for cork oil seals which bear on polished surface of crankshaft directly behind oil slinger. Filler blocks can be removed and replaced without disturbing crankshaft as follows:

Front Filler Block (Lower) Servicing: Remove by taking out mounting screws and timing gear cover screws which enter the filler block. When installing filler block, first install oil pan side gaskets (No. 733542), install filler block (use Permatex) and install new end gasket on block.

Rear Filler Block (Lower) Servicing: Same as for the lower front block (above) except for crankshaft oil seal (square cork gasket or graphite impregnated seal). Remove and discard old gasket or seal. Install new seal (No. 731046) in same manner as described below for Rear Filler Block (Upper) Guard. Install lower filler block **after** upper filler block guard has been installed.

Rear Filler Block (Upper) Guard Servicing: Guard is seated in groove in crankcase and can be rotated out without disturbing crankshaft after lower filler block removed. Remove and discard old gasket or seal, clean out seal groove. Install new graphite impregnated seal, No. 731046, flatten seal slightly and use mandrel or rod to seat seal in groove by rolling from ends toward center (ends must extend slightly above flat surface of guard). Do not use shellac or sealing compound in groove.

►*CAUTION:* Oil seal in both Upper Filler Block Guard and Rear Filler Block must be centered with crankshaft. If necessary, seal can be built up using 1/32" thick gasket material, 3/16" wide, as shims shellacked to groove in block or guard behind seal.

OIL PAN TO FILLER BLOCK GASKET INSTALLATION. Install Neoprene Rubber gasket in each filler block (use Gasket Cement in grooves) With each end extending an equal amount (1/16") above faces of filler block ends. Allow cement to dry.

ENGINE FRONT COVER

ALL MODELS (EXC. 6226 ENGINE)

FRONT COVER OIL SEAL: Cover has double metal baffle and spring-loaded leather seal which contacts polished surface of crankshaft pulley hub. When installing seal, make certain that seal lip is inward or toward rear of engine.

6 CYL. 6226 ENGINE

FRONT COVER OIL SEAL: Drive out old seal using Oil Seal Driver KF-44. Place cover with opening flange on flat surface. Coat outer edge of new seal with sealing compound, place seal in opening with seal lip toward rear and drive seal in place.

CAMSHAFT & BEARINGS

4 CYL. ENGINES

CAMSHAFT SERVICING: Removal - Drain radiator and cylinder block, remove radiator and grille, cylinder head, manifold, valves, and valve springs. Remove oil pump, oil pan, crankshaft pulley (use puller), fan drive belts and fan assembly. Remove timing gear cover, camshaft gear and thrust plate and spacer. Block-up all valve lifters (can be tied up with string to manifold studs). Remove camshaft through front of engine.

Camshaft Front Bearing - Consists of steel backed babbitt lined bushing, staked in place to prevent rotation or endwise movement, with oil hole in bushing lined up with oil hole in crankcase.

Camshaft Thrust Plate - Thrust plate assembled behind camshaft gear with a spacer to control endplay. Add shim behind spacer to increase clearance, dress down spacer to reduce clearance. Beveled edge of spacer must be to rear.

6 CYL. 6226 ENGINE

CAMSHAFT SERVICING: Removal - Drain cooling system, remove radiator, vibration dampener, timing chain cover, timing gear and chain. Remove fuel pump, cylinder head, oil pan and oil pump. Remove valve cover, valves and spring. Hold lifters up (use spring type clothes pins) while carefully removing camshaft.

VALVE SYSTEM

VALVE TAPPET ADJUSTMENT

6226 ENGINE

TAPPET CLEARANCE ADJUSTMENT PROCEDURE: Car manufacturer recommends valves be adjusted in order listed (see table below). Remove right front wheel and access cover in fender splash shield for access to valve compartment. Remove spark plugs so that engine can be turned over by moving fan or fan belt. By setting valves in fully raised position (left hand column), **valves in right hand column will be on "low" side of cam in position for tappet adjustment.**

Fully Raise Valve	Then ADJUST Valve:
Nos. 1 and 3	Nos. 10 and 12
Nos. 8 and 9	Nos. 4 and 5
Nos. 2 and 6	Nos. 7 and 11
Nos. 10 and 12	Nos. 1 and 3
Nos. 4 and 5	Nos. 8 and 9
Nos. 7 and 11	Nos. 2 and 6

ROCKER ARMS

4 & 6 CYL. "F" HEAD ENGINES

ROCKER ARM ASSEMBLY REMOVAL: Lock rocker arms, shaft, brackets and springs together as a unit by removing cover studs in front and rear rocker arm shaft brackets and installing 5/16"-24 thread set screws in the front and rear brackets in same manner set screws are installed in center brackets. Remove nuts on bracket studs and lift entire assembly off studs as a unit.

Installation: Check push rods, straighten or replace any that are bent. Place push rods in holes in head and block, being sure that they are properly seated in intake valve tappets. Place rocker arm assembly on its studs, seat intake valve adjusting screws in tops of push rods before installing nuts on bracket studs. Torque nuts to 30-36 ft. lbs. Remove extra set screws from front and rear rocker arm shaft brackets, install cover studs in front and rear brackets with short end of stud down.

OILING SYSTEM

ENGINE LUBRICATION

4 CYL. ENGINES

►*"L" HEAD & "F" HEAD ENGINE NOTE:* These engines have similar oiling systems with exception of cylinder head valve mechanism oiling (Pushrods, Rocker Arms, Valve Tips) used on "F" head engines only.

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, timing gears, and rocker arm assembly ("F" Head engines only). All other parts are lubricated by oil spray.

OPERATION: Rotor type oil pump mounted externally on left side of crankcase draws oil through floating type oil screen mounted on lower face of crankcase in oil pan (passage from oil intake pipe to pump is through drilled passages in crankcase). Pump delivers oil through passage in pump body directly to main oil gallery which extends along left side of crankcase. Oil is distributed through this oil gallery as follows:

Crankshaft Bearings - Each main bearing supplied with oil from main oil gallery through angle passage in crankcase web extending down from oil gallery to main bearing bore.

Camshaft Bearings - Front & Rear camshaft bearings supplied with oil through short oil passage intersecting corresponding main bearing oil passage. Intermediate camshaft bearings are supplied with oil directly from

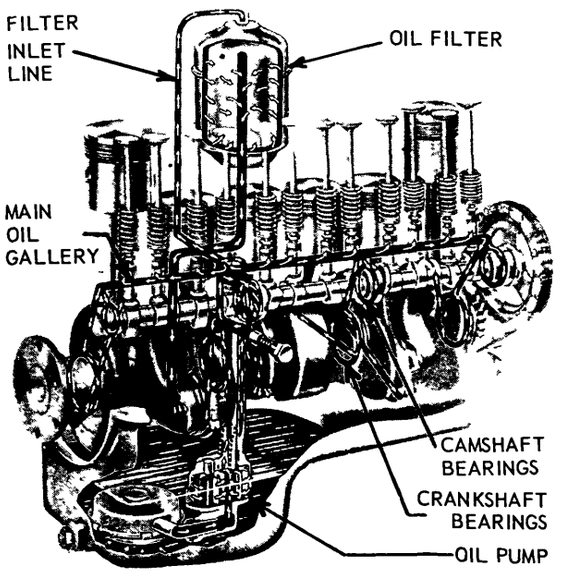
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

main oil gallery by passages extending down from the oil gallery to the camshaft bearing bores.

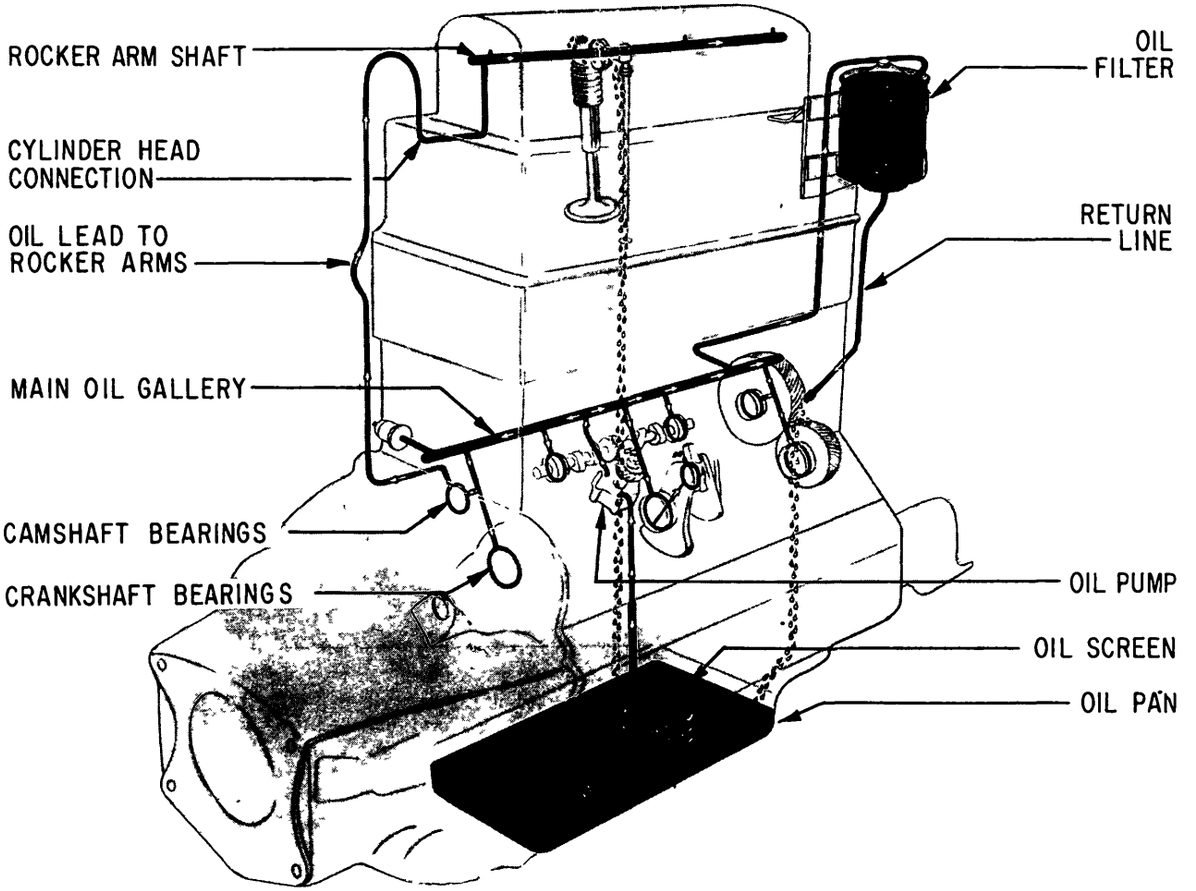
C nnecting R d B arings - Crankshaft is drilled and each rod bearing is lubricated through passage extending from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder wall from spurt hole in connecting rod when this hole lines up with oil hole in crankpin.



Valv Lift rs - Lubricated from oil reservoir trough cast in crankcase which is filled by oil spray from connecting rod bearings. Lifter guides are drilled to permit oil flow from trough to lifter bore (lifters have oil groove at center for uniform lubrication of lifter bore).

Timing G ars - Lubricated by oil jet from nozzle threaded in front face of engine block which directs oil on camshaft gear at point where gears mesh. Oil is supplied to nozzle through drilled passage from front main bearing oil passage.



►*TIMING GEAR OIL JET PRODUCTION CHANGE & REPLACEMENT CAUTION:* Beginning with 1960 Engines, Nos. 3J-166871 & 4J-250095, Timing Gear Oil Jet Part No. 924335 (with .040" aperature) was used to prevent oil pressure fluctuations at No. 1 connecting rod bearing. When replacing scored or burned No. 1 rod bearings, check timing gear oil jet and install new type with .040" aperature.

Pushr ds, R cker Arms & Intake Valves ("F" Head Engin) - External oil pipe connects fitting at rear of cylinder block with fitting on top of cylinder head at rear end behind rocker cover. Oil supplied through this line is metered by rear camshaft bearing. Passages in head conduct oil to rear rocker shaft support bracket mounting pad and drilled hole in support bracket and rocker shaft permit oil to flow into hollow rocker shaft. Shaft and rocker arms are drilled for lubrication of rocker arms, pushrod sockets, and valve tips. Excess oil drains back into crankcase through pushrod holes.

OIL FILTER: Partial flow type mounted on bracket on engine. Filter inlet pipe is connected at fitting on left side of crankcase and draws oil directly from main oil gallery. Outlet pipe returns oil to crankcase.

WILLYS 6 CYL. 6226 ENGINE OILING SYSTEM

WILLYS 4 CYL. "F" HEAD ENGINE OILING SYSTEM

6 CYL. 6226 ENGINE

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, and valve lifters. All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted on lower face of crankcase in oil pan draws oil through floating oil screen and intake pipe mounted on pump cover and delivers oil directly to main oil gallery which extends along right side of crankcase to left of lifter bores (oil flows up around shaft in pump body to outlet hole which registers with oil passage in block when pump installed). *See Caution below.* Pressure regulator valve is located under plug on right side of crankcase at end of pump outlet cross-passage and returns excess oil directly to oil pan. Oil is distributed through the main oil gallery as detailed below.

►*OIL PUMP BUSHING CAUTION:* Pump bushing (installed in block) must be tight and installed flush with bottom of cylinder block. Loose or improperly installed bushing may restrict main oil gallery.

Crankshaft Bearings - Main bearings supplied with oil from main oil gallery through angle passage in crankcase web extending down from oil gallery to main bearing bore. *NOTE* - No. 3 crankshaft bearing is lubricated directly from pump outlet cross-passage (above).

Camshaft Bearings - Each camshaft bearing supplied with oil directly from main oil gallery by passage in crankcase web extending down from oil gallery to camshaft bearing bore.

Conn cting R d B arings - Crankshaft is drilled and each rod bearing is lubricated through passage extending from adjacent main bearing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pistons & Pins - Lubricated by oil spray thrown on cylinder wall from spurt hole in connecting rod when this hole lines up with oil hole in crankpin

Valve Lifters - Lubricated directly from main oil gallery through cross-passage drilled through each lifter boss *NOTE* - Oil holes extend completely through lifter bosses and first two groups (Cyl Nos 1 through 4) are shielded by sheet metal oil shields held in place by spring clips on underside of shield No shield is used on rear group (Cyl Nos 5 & 6)

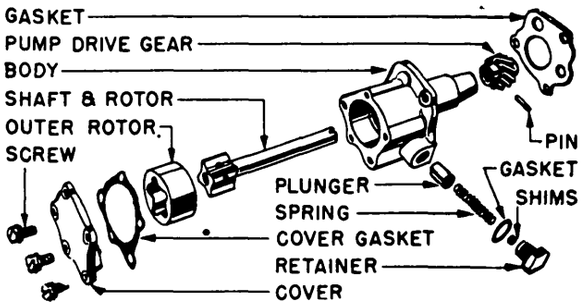
Timing Chain & Sprockets - Lubricated by continuous flow of oil from engine oiling pressure system

OIL FILTER: Partial flow type mounted on bracket on left side of engine Filter inlet pipe is connected to fitting on left side of block and draws oil directly from main oil gallery Outlet pipe returns oil directly to oil pan

OIL PUMP
ALL MODELS (EXC. 6226 ENGINE)

OIL PUMP REMOVAL & OVERHAUL: (Removal)—Rotate engine until distributor rotor points to No 1 firing position and timing mark on flywheel or vibration dampener is directly under pointer On 4 Cyl Models do not remove distributor (pump must be installed so gears mesh without moving rotor for correct engine timing) On 6 Cyl Models, remove distributor (CAUTION—Engine must not be rotated with oil pump removed) Remove pump mounting bolts and pull pump out as far as possible Place a short jack between front suspension support and front lower edge of block and push engine to right until pump is free (Note—It may be necessary to loosen engine support bolts for more movement) Check pump shaft for wear before disassembling pump by mounting it in a vise with a dial indicator bearing against shoulder on gear, at right angles to relief valve housing Move gear toward, then away from indicator and note total reading If this play exceeds 010", replace complete pump

Disassembly: Remove cover screws, cover and gasket and shake outer rotor from housing Remove relief valve retainer, gasket, shims, spring, and plunger If rotor is to be replaced, file off one end of gear retaining pin, pull gear off shaft and remove shaft and inner rotor from housing Clean all parts in solvent and check for wear, pits and scoring



Inspection: Measure clearance between outer rotor and pump body Replace body if clearance exceeds 012" Check cover to make certain that inner surface is not rough or scored and that inner face is flat within 001" Rotors must be within 001" thickness of each other with gear installed on pump shaft clearance between gear and pump body should be 003- 010"

Checking Rotor Clearance Position inner rotor with one lobe engaged between lobes of outer rotor then measure clearance of opposite inner rotor lobe and lobe of outer rotor This clearance should be 010" To check end clearance install the cover without gasket and tighten screws If shaft can be turned by hand end clearance is excessive Install new cover and repeat test If rotors still not tight replace rotors

Reassembly: Install relief valve, spring, gasket and retainer If shims were removed, install them between spring and retainer If new rotors installed, slide gear on shaft after installing shaft and rotor in housing Position gear so there is not over 010" clearance between gear and pump housing and drill a 5/32" hole through pump shaft for retaining pin Install pin and peen ends Install cover and gasket and tighten screws

Installation (4 Cyl. Models): Check to see that timing marks on flywheel or vibration dampener are directly under pointer and distributor rotor is pointed toward No 1 firing position Insert pump in block with pump gear positioned so that it will engage camshaft gear and the distributor shaft drive key without moving distributor rotor Installation can be made only in one position without moving distributor rotor as slot in drive gear and key on distributor shaft is machined off-center

Installation (6 Cyl. Models): Make certain that No 1 piston is on top dead center and that timing mark on flywheel or vibration dampener is directly under pointer Install new gasket between pump and block and be sure that gasket matches pump intake and discharge ports Start pump into mounting hole but do not engage gears Insert a long screw driver through distributor hole and engage slot in pump drive gear Rotate pump gear so that when meshed with camshaft gear, slot will be practically vertical with off-set to rear, as it enters camshaft gear As pump is pushed in and gears are fully meshed, slot will be about 45° from vertical position (NOTE—If gear is meshed one tooth away from the correct position, slot will be 36° off, which is readily noticeable) Install distributor and check ignition timing

OIL PUMP (ALL ENGINES EXC. 6226)

6226 ENGINE

OIL PUMP SERVICING Pump can be removed from engine (with oil pan off) by taking off retaining nut on stud on #3 main bearing cap and pulling pump straight down to disengage drive gear and distributor drive coupling Service pump as follows:

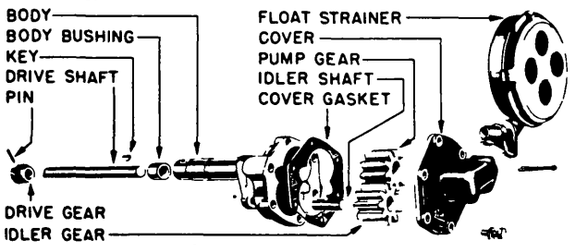
Disassembly—Take out cotter pin and remove screen float assembly Remove cover and gasket. Drive out pin holding upper drive gear on shaft (pin peened in place), drive out shaft from gear. remove idler gear (remove idler shaft if required) Take off lower drive gear (press fit and keyed to shaft)

Oil Pump Clearances—Check as follows.

1)—Pump Body Bushing if over 005" clearance between pump body and ends of lower drive gear teeth, replace bushing and ream to 500- 501"

2)—Pump Shaft: shaft diameter .4990-.4985".

3)—Lower Drive Gear: end of gear should be .001-.006" beyond gasket seat on pump body.



4)—Upper Drive Gear: .002- 004" clearance between underside of gear and upper end of pump body. Controlled by pressing lower drive gear on shaft until this clearance obtained.

NOTE—Cover plate should be replaced if worn from contact with gears, or if cracked.

Oil Pump Bushing (in Cylinder Block)—Replace if worn or loose (can restrict oil gallery if loose). Replace by using drift inserted in distributor drive shaft bore from top of block. Install new bushing from below (must be flush with bottom of block).

Reassembly—Press upper drive gear on shaft with pin hole at right angles to tongue on shaft. Insert new pin and peen ends flush with gear. Install shaft and gear in pump body. Press lower drive gear on shaft (with key in place) until .002-.004" clearance obtained between upper drive gear and upper end of pump body. Press idler gear shaft in body, install idler gear. Install cover using new gasket and pin oil screen float assembly on cover. Check shaft and gears—must rotate freely when turned by hand.

Oil Pump Installation—Set #1 piston at top dead center. Insert distributor main drive shaft from top of block. Install pump with pump drive shaft tongue engaging slot in lower end of distributor main drive shaft and in such a position that when installed, slot in upper end of distributor main drive shaft will be approx. parallel to side of block (slot pointing fore-and-aft), install lock washer, tighten mounting nut. Remove distributor shaft for cyl. head installation.

6226 ENGINE OIL PUMP

COOLING SYSTEM

WATER PUMP

1954-60 4 CYL. ENGINE

DESCRIPTION: Packless type with special double row ball bearing shaft (shaft serves as inner race, bearing is sealed type and packed with lubricant at assembly) Shaft and bearing cannot be dismantled and serviced as an assembly No lubrication required in service Various type seals used (See Notes below)

4 Cylinder Seal Note - Seal is one of two types, either "U" shaped with spring within seal or bellows type with spring assembled on outer circumference of seal

OVERHAUL: Disassembly - Use special W 116 puller and pull impeller off shaft, lift out bakelite seal washer Remove bearing lock ring from slot in bearing hub on

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

pump housing support pump housing in arbor press, press shaft and bearing assembly out of pump housing toward forward end To remove fan pulley from shaft, use any regular puller (special W-115 puller furnished for this purpose) to pull pulley off shaft Do not attempt to remove bearing from shaft (shaft and bearing serviced as assembly)

Servicing - If rear face of pump housing is not smooth and flat, resurface with special Tool C-551 or install new pump body

Pump Reass mbly: Install shaft and bearing assembly in pump housing (long end of shaft to rear) so that outer end of bearing is flush with front end of housing Install seal assembly in impeller (dip seal parts in brake fluid before installing), press impeller on shaft until end of shaft is flush with face of impeller hub Press fan pulley c- orward end of shaft until end of shaft is flush with fa of pulley Check location of locking ring groove i earing with respect to slot in housing, align groove ar lot, install bearing locking wire

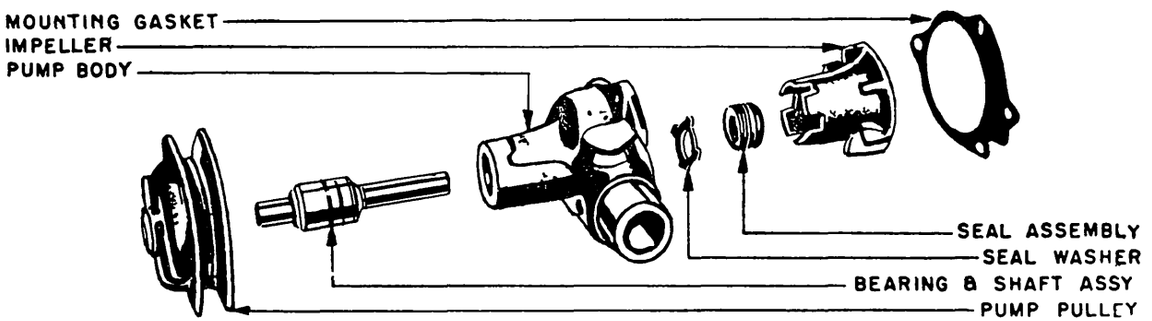
1954-55 6 CYL. "F" HEAD ENGINE

DESCRIPTION: Similar to 4 cylinder type except for seal assembly

6 Cylinder Seal N te - Seal assembly consists of sleeve seated in recess in pump body with a rubber seal ("U" Section with spring within "U") and seal washer between seal and impeller A slinger is used on shaft just behind bearing

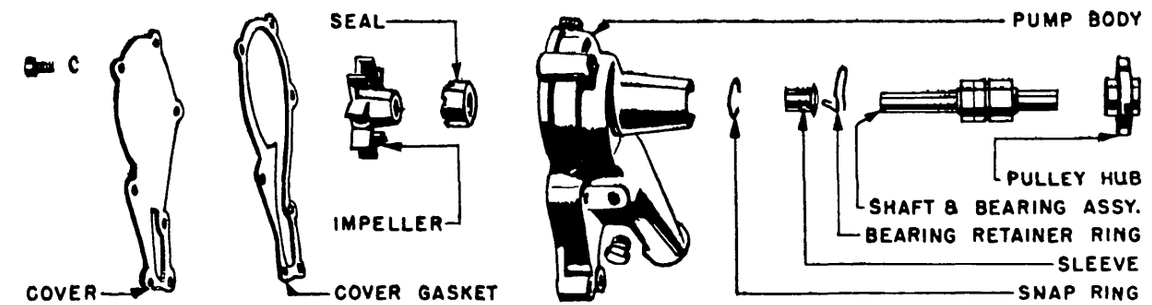
OVERHAUL: Disass mbly - Take out bearing snap ring from hole or slot in pump body (pulley may have to be removed for access to snap ring) Pull impeller off shaft Take out seal washer Press shaft and bearing assembly out through forward end of pump

R assembly - Carefully seat new seal assembly in pump body Press shaft assembly into pump until front face of bearing aligned with front end of pump See that seal washer is in place and press impeller on rear end of shaft until flush with end of shaft Install bearing snap ring in pump body (align groove in bearing with slot in pump body) Press pulley on front end of shaft if removed



1954-60 6 CYL. "L" HEAD ENGINE

DESCRIPTION: Packless type with double row ball bearing Pump shaft and bearing assembly are integral and cannot be disassembled Seal assembly is self contained pressed into pump body



OVERHAUL: Disassembly - Remove fan and pulley from pulley hub Remove pump cover and gasket With Puller KF-29 and adapter, KF-113, remove impeller from shaft Remove bearing retainer ring from slot in housing and press shaft assembly out front of housing Press or drive seal assembly from pump body

Reassembly: Press seal assembly carefully into pump housing Apply oil or graphite to face of carbon seal washer Press pump shaft and bearing assembly into pump housing just far enough to insert retaining ring, insert ring Press impeller on until flush with shaft end Check impeller position to be sure it clears cover

Pulley Hub Installation - Press hub on shaft so fan mounting face is 5 7/32" from rear face of rear cover plate Install cover gasket and cover

4 CYLINDER ENGINE WATER PUMP

6 CYLINDER ENGINE WATER PUMP

FRONT AXLE UNIVERSALS

ALL 4-WHEEL DRIVE MODELS

BENDIX CONSTANT-VELOCITY

NOTE: This 'constant velocity' universal joint used only on front axle shafts (at each front wheel).

SERVICING: With axle shaft assembly removed from housing, service universal as follows:

Disassembly: Drive out retainer pin locking center ball pin in outer axle shaft (pin located within shaft end yoke—use pin punch). Strike outer end of axle shaft on block of wood to cause center ball pin to move into recess in shaft and free center ball. Pull halves of joint apart as far as possible and bend shafts at sharp angle. Rotate center ball until grooved side lines up with one of the ball raceways, move adjacent ball past center ball and remove from joint. Remaining balls (including center ball) will then drop out.

Inspection & Servicing: Inspect raceways for wear, replace complete axle shaft and universal assembly if badly worn. Inspect center ball pin for wear, inspect all balls, replace balls if rough, grooved or with flat spots CAUTION—If one or more balls being replaced, measure old ball with micrometer and replace with ball of exact same size unless larger balls needed to take up play. See Ball Service note following Reassembly (below).

Reassembly: If original balls not being re-used, see Ball Servicing Note below for selection of correct size balls. Clamp inner axle shaft in vise with universal yoke upward, place center ball in socket in end of shaft with groove and pin turned to one side. Drop center ball pin in recess in end of outer (wheel end) axle shaft, position this shaft on center ball, insert balls in three raceways. Bend shafts at sharp angle, turn center ball until groove lines up with fourth raceway, insert ball. Straighten shafts, turn center ball to align hole with center ball pin, install retainer pin, prick punch ends of pin to hold it in place securely. CAUTION—always use new retainer pin.

Ball Servicing Note: Standard balls are .875" in diameter. If universal worn so that play evident, and raceways are in good condition, one or two larger balls (preferably 001", not more than 002" larger) may be used to take up play. Measure old ball with micrometer (std. diameter .875"). Balls are furnished in 001" steps from .003" undersize to .003" oversize. If all balls not same size, install larger balls diametrically opposite each other CAUTION—all balls used must be within 001" of same size and total variation should not exceed 002".

►*INSTALLATION NOTE: For axle shaft endplay adjustment (to center universal joint), see "FRONT AXLE" below.*

RZEPPA CONSTANT-VELOCITY

NOTE: This 'Constant Velocity' universal used only on front axle shafts (at each front wheel).

SERVICING: Axle shaft assembly removed from housing, service universal as follows

Disassembly: Remove three screws retaining inner axle shaft in universal inner race, pull shaft out (retainer can be removed from shaft by taking out retainer ring on shaft). Lift out axle centering pin.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Manipulate inner race and cage until all six balls have been taken out. Rotate inner race and cage assembly until pilot cup is exposed, lift pilot cup out. Turn cage until two of the bosses on outer race drop into elongated holes in cage, lift cage and inner race out. Remove inner race by rotating it until one boss drops into one of the elongated holes in the cage, shift race to one side and lift it out.

Inspection & Servicing: Inspect all parts for wear. Replace balls if rough, chipped, or with flat spots.

Reassembly: Reverse disassembly directions given above. Do not force parts into place which may cause damage.

►*INSTALLATION NOTE: For axle shaft endplay adjustment (to center universal joint), see "FRONT AXLE" below.*

FRONT AXLE

ALL 4-WHEEL DRIVE MODELS

Steering Knuckle Bearings: Steering knuckle pivots on tapered roller bearings. To adjust bearings, remove hub and brake drum assembly, wheel bearings, axle shaft, spindle, steering tie rod and steering knuckle.

Disassembly - Remove eight screws which hold oil seal retainer in place. Remove four screws that hold lower pivot pin bearing cap. Remove four screws that hold upper bearing cap in place and remove bearing cap. Remove steering knuckle from axle.

Cleaning & Inspection - Wash all parts in solvent and replace all damaged or worn parts. Inspect bearing and races for scores, cracks or chips. Remove damaged cups with Special Driver, Tool W-138.

Reassembly - Reverse disassembly procedure with sufficent shims under top cap to obtain correct preload on bearings. Shims are available in .003", .005", .010" and .030" thicknesses. Install one each of the above shims at the top only. *NOTE - A shim pack of .058" thickness is added to the bottom face of kingpin boss on steering knuckles in production which must be maintained. Make all adjustments at top only.* Install bearing caps, lockwashers, and screws and tighten securely. Hook spring scale in hole in knuckle arm (tie rod socket hole) and take scale reading when knuckle has just started its sweep. Load should be 6-9 lbs. without oil seal installed. Remove or add shims (at top) as required to obtain this preload.

Oil Seal Replacement - Remove old seal by removing eight screws which hold it in place. *NOTE* - Earlier production vehicles have seal consisting of two halves. Later production vehicles have seal assemblies consisting of a split oil seal and backing ring assembly, an oil seal felt, and two seal retainer plate halves. Check spherical surface of axle for scores or scratches and remove damaged surfaces with emery cloth. *NOTE* - Before installing seal felt, make a diagonal cut across top side of felt so it may be slipped over axle. Install oil seal assembly in sequence given above making sure that backing ring (of oil seal and backing ring assembly) is toward wheel. *CAUTION* - After driving in wet freezing weather swing wheels from right to left to remove moisture adhering to oil seal and spherical surface of axle housing, to prevent freezing. When storing vehicle for long periods of time, coat surfaces with light grease to prevent rusting.

Wheel Bearing Adjustment: Jack up front wheel, remove hub cap, axle shaft nut and washer, driving flange capscrews, and flange (use puller on flange). Bend lip of adjusting nut lockwasher back to free nut, remove locknut. Tighten adjusting nut until wheel binds (turn wheel while tightening nut), back off nut 1/6 turn or until wheel rotates freely. Replace lockwasher and locknut, tighten locknut securely and bend ear of lockwasher up against nut to prevent loosening in service. Check adjustment of bearings by grasping front and rear of tire and shaking wheels from side to side. A barely perceptible shake should be felt in the bearings. Install flange shims and flange. On cars prior to Serial No. 37549 (CJ-3A), No. 44074 (4-WD), and No. 14284 (4-463), with Bendix Universals, check axle shaft endplay (below) before completing assembly. *NOTE* —On cars with Rzeppa Universals, disregard endplay note below and install shim pack of .060" under flange. No shims used in later cars, see "4-Wheel Drive Front Axle Change" below.

Axle Shaft Endplay Check (With Bendix Universal Joints)—Tighten the flange nut (do not install lockwasher), swing wheel to maximum left or right position with punchmark on end of axle shaft straight up or down. Back off flange nut until clearance between nut and flange is .050" (measure with feeler gauge). Tap end of shaft with a soft hammer (shaft will move in an amount equal to the endplay). Recheck clearance between nut and flange with a feeler gauge. Subtract this measured clearance from the original .050" clearance. If resulting figure is less than .015", add shims to shim pack under flange, if figure is more than 035", remove shims from shim pack under flange. With correct thickness of shim pack under flange, install axle shaft lockwasher, nut, and cotter pin.

4-Wheel Drive Front Axle Change—A change in endplay control of front axle shafts beginning with Serial No. 37549 (CJ-3A), No. 44074 (4-WD), and 14284 (4-463), eliminated the shim pack for endplay adjustment formerly located behind drive flange and added a flanged bushing on outer side of Universal Joint and thrust washer on inner side, centering Universal Joint directly under center line of spindle pivot points and allowing axle shaft to float in driving flange. This same change was made in the Rzeppa type, plus a snap ring added at outer end of shaft, giving the endplay control between the flanged bushing and the snap ring. In both types, replace the flanged bushing when endplay is excessive.

SUSPENSION NOTES

FRONT WHEEL SHIMMY CORRECTION (CJ-5 & FC-150 FOUR-WHEEL DRIVE MODELS): Check all items listed below.

1) Remove both steering knuckles and inspect the upper and lower kingpin bearings (cups for brinnelling, pitting, or fretting) and replace if they show slightest imperfection.

2) Adjust kingpin bearing preload (add or remove shims), with axle shafts removed to 12-16 pounds load (maximum preferred). *NOTE - Hook scal in hol in arm for* tie rod socket Read scale after knuckle has been started

3) Replace original Steering Knuckle Oil Seals with Kit Part No. 915-664 if seals show wear.

4) Steering bell crank and/or double tie rod socket should be replaced when slightest rocking action or looseness observed when turning wheels under normal load.

5) Adjust drag link to maximum safe tightening at both ends and adjust steering gear.

6) See "Vehicle Leans to Left", "Shimmy due to Loose Steering Arm", and "Tie Bar Installation" below.

VEHICLE LEANS TO LEFT (FC-150): Install Axle Shim Part No. 915858 with Spring Clip Front No. 808460 and Clip No. 808461, placing shim between spring and spring saddle on right front side of vehicle. Locate shim in saddle and torque to 50-55 ft. lbs.

SHIMMY DUE TO LOOSE STEERING ARM: Permanently correct condition by replacing two bolts in steering arm with two additional dowel studs and taper face nuts Ream holes in steering arm to 60° taper for proper seating of taper face nuts.

TIE BAR INSTALLATION (FC-150): Installing Tie Bar will stabilize frame and reduce possibility of shimmy developing. Secure 29½" length of 2" x ½" hot or cold rolled #11 steel channel and proceed as follows:

1) Remove radiator guard screen and place Tie Bar up against front spring hanger brackets.

2) Set front wheels in straight ahead position, hold Tie Bar level and provide 3/8" clearance between Tie Bar and steering connecting rod

3) Arc weld Tie Bar to hanger brackets at outside and inside rear edges of both brackets

ALL 4-WHEEL DRIVE MODELS

4-WHEEL DRIVE CHATTER CORRECTION: When front end chatters on extreme turns on 4-wheel drive vehicles it is due to excessive turning angle (controlled by stop screws mounted on axle housing). Check turning angle, see table below, and correct by breaking weld securing stop screw and changing adjustment and rewelding screw to housing.

Vehicle	Turning Angl
L6-226 4WD & 4X4	29°
F4-134 4WD & 4X4	29°
CJ-3B, CJ-5, CJ-6	27½°
FC-150-57" tread	29°
FC-150-48" tread	27°
FC-170	29°

►*NOTE:* When turning angle too small, excessively large radius is required to make turns.

TRANSMISSION NOTES

HARD SHIFTING, SHIFTING INTO TWO GEARS & SLIPPING OUT OF GEAR CORRECTION (TWO-WHEEL DRIVE MODELS): Proceed as follows for each model:

L6-226 (4x2) & DJ-3A Mod ls - 1) Disconnect transmission shift rods from remote control levers and check

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

for binding of remote control shaft on steering column and correct as necessary.

2) Check operation of remote control levers and clutches and reconnect shift levers.

3) Disconnect rods from levers at transmission, insert ¼" pin through remote control levers and bracket on steering gear housing Place transmission in neutral, adjust rods so clevis pin will enter clevis and lever freely.

4) If lever sticks in first gear or is hard to shift from first to second gear, shorten low and reverse shift rod one turn at a time (3 turns usually required) until improvement is obtained.

FC-150 Models - 1) Disconnect control rods from shift lever at cab and check free operation of shift lever.
2) Adjust shift rods with transmission in neutral.
3) Check clutch pedal adjustment.

All Models (with Two Wheel Drive) - When minimum clearance (.001-.007") between end of interlock sleeve and transmission shift levers (with longest sleeve Part No. 641310), cannot be obtained, remove original interlock pin from shift lever poppet spring and replace it with a Transfer Case Intermediate Gear Needle Bearing Roller Part No. 809294 which has been ground down to a length of .780". Assemble transmission so shift action can be checked. If pin is too long causing a bind, reduce length of pin from .780" until smooth ball and detent engagement is obtained.

FC-150 TRANSFER CASE OPERATING LEVER VIBRATION: To correct vibration noise caused by operating lever vibrating against, or transmitting vibration to body panel, proceed as follows:

1) Install sound deadening material between the two transfer case lever shaft brackets and body panel. Use Dust Cover material Part No. A-622 or a piece of rubber 3" square, 1/16" thick.

2) File body opening to obtain clearance for transfer lever when in "2WD High"

3) Install Grommet Part No. 670543 on lever at body opening as dust seal and possible vibration dampener.

SPRING SHACKLES

JEEP & TRUCK MODELS

SPRING SHACKLES: Springs are fitted with "U" type shackle (front end of front springs, rear end of rear springs on Jeep; front end of front springs only on Trucks). Opposite end of all springs fitted with bronze bushing and conventional pivot bolt (rear shackle of rear springs on Trucks has same type bushing and bolt).) CAUTION—When removing springs, remove pivot bolt first, then remove bushings from "U" shackle. Install springs as follows:

Pivot Bolt Installation—Install bolts with head and grease fitting toward outside, tighten bolt nut with a torque indicating wrench to 27-30 ft.lbs.

"U" Shackle Installation—Install grease seal retainer and grease seal on each leg of "U" shackle, insert shackle through inner face of frame hanger and spring eye (threaded bushings installed with hexagonal head toward outside), hold shackle tightly against frame and start upper bushing on shackle (see Bushing Caution below) taking care that bushing is not cross-threaded on shackle or in spring eye. Turn bushing on shackle approximately halfway, then start lower bushing similarly, turn both bushings in alternately and evenly until heads of bushings are snug against frame bracket and bushing in spring eye is 1/32" away from spring (measured from inside hexagonal head to spring). Lubricate bushing with high-pressure lubricant, check shackles for binding by flexing spring. If shackle is tight, remove and re-install bushing.

BUSHING CAUTION—Left-hand threaded "U" shackles are used at left front spring and right rear spring (Jeep), at left front spring only (Trucks) with the left-hand threaded end down (toward spring eye) and special left-hand threaded bushings must be used with these shackles. Shackles may be identified by small boss forged on lower shank and bushings identified by groove around head. Right-hand shackles and bushings are unmarked.

SILENT BLOC BUSHING TYPE SPRING SHACKLE: Silent-bloc bushing type shackle replaces U-type. Service Kit Part No. 916646 (2 silent bloc bushings and new type shackle) will replace one shackle only. When replacing threaded shackle, ream out frame bracket to .875" and press silent bloc bushing into bracket and spring eye. *NOTE* - Lockwasher included for spacer at the spring.

CONTINUED FROM PRECEDING PAGE

STARTER

Auto-Lite No. MCH-6207 (CJ-3B & CJ-5).
Armature—Auto-Lite No. MCH-2088 (MCH-6207).
Drive (MCH Starter)—Bendix "Folo-thru" type.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. with new brushes.

Performance Data—MCH-6207

	RPM	Volts	Amperes
0 ft. lbs.	4300	5.0	65
6.0 ft. lbs.	Lock	2.0	335

Starting Switch—(CJ-3B) Auto-Lite SW-4015 (Early), SW-4015A (Later).

GENERATOR

Auto-Lite No. GDZ-6001D (CJ-3A & Early CJ-3B). GGW-4801D (Late CJ-3B & CJ-5). Two brush type with voltage & Current regulation.
Armature—GGY-2006F (for GDZ-6001D). **GGW-2006F** (for GGW-4801D).
Maximum Charging Rate—(GDZ-6001D) 35 amperes. (GGW-4801D) 45 amperes, both at 8.0 volts cold with discharged battery (controlled by regulator).
Charging Rate Adjustment—None (see Regulator).

Performance Data—GDZ-6001D

Amperes	Volts	Cold — R.P.M. — Hot
0	6.4	870-970 — 950-1050
17.0	8.0	1350-1500 — 1550-1700
35.0	8.0	1800-2000 — 2150-2350

Performance Data—GGW-4801D

Amperes	Volts	Cold — R.P.M. — Hot
0	6.4	870-970 — 950-1050
40.0	8.0	1800-2000 — 2150-2350
45.0	8.0	1925-2125 — 2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. with new brushes.
Field Current—(GDZ) 1.3-1.5 amps. (GGW) 1.4-1.5 amps., both at 5.0 volts.
Motoring Current—(GDZ) 3.9-4.4 amps. (GGW) 4.1-4.6 amps., both at 5.0 volts.
Belt Adjustment: ½-⅝" deflection with thumb pressure midway between generator and pump pulley.

REGULATOR

Auto-Lite VRP-6003A (used with GDZ-6001D generator). VBE-6105A (used with GGW-4801D generator). Voltage & Current type. On right side of engine compartment.
See El ctrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seal broken.

Cutout Relay

Cuts In—6.3-6.8 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (measured at hinge end of core).

Voltage Regulator

S tting—7.2-7.5 volts at 70°F. after 15 minutes operation charging at 10 amperes (VRP), one-half maximum rate (VBE).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator—(VRP)

Setting—34-36 amperes (marked '35' on cover).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator—(VBE)

►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A—Operating Amperes	Test B
VBE-6105A	52	45 (43-47)

Test A—After 15 minutes operation charging at ½ maximum rate.
Test B—After fifteen minute additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toe board.
See Electrical Equipment Section for complete data.
Beam Indicator—On left side of instrument panel. Lighted when upper beam in use.

Switches

Lighting—Willys No. 801274. Instrument light controlled by rotating switch knob.
Beam Selector—Willys No. 801903.

MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER: 30 ampere type. Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits. No adjustment.
FUSES: Overdrive—20 amperes. On control relay.
HORNS: Auto-Lite No. HA-4037.

ENGINE

ENGINE SPECIFICATIONS: 4 Cyl. "L" Head, and 4 Cyl. "F" Head engines of own make.
►*NOTE—4 Cyl. "L-Head" Engine used on CJ-3A Jeep, 4 Cyl. "F-Head" Engine used on CJ-3B Jeep.*
Bore—3⅛". Stroke—4⅜".
Displacement—134.2 cu. ins. **Rated H.P.**—15.63.

Model	Compr. Ratio	Developed HP
CJ-3B	6.9-1①	72 at 4000 RPM
CJ-5	6.9-1①	... 75 at 4000 RPM

①—7.4-1 & 7.8-1 optional ratios.
Compression Ratio ("F" Head Engine)—Cast iron head. Heads painted to indicate ratio: 6.9-1 (Blue); 7.4-1 (Black), 7.8-1 (Yellow).
CYLINDER HEAD & TIGHTENING TORQUES: *See Willys Special Data.*
ENGINE REMOVAL: *See Willys Special Data.*
PISTONS: Lo-Ex Aluminum alloy (Lynite, Bohn, Permite, or Arrowhead), "T" slot, cam ground, tin plated type with heat insulation groove above top piston ring. **Length—3¾".**
►*PISTON OVERSIZE NOTE—Letter "B" or "AB" following engine number indicates that cylinders and pistons are .010" OVERSIZE.*
►*CAUTION—"L" Head & "F" Head pistons are different, do not interchange.*
Removal—Pistons and rods removed from above.
Clearance—Top Land—.017-.019". **Skirt**—.003.
Replacement Pistons: Finished pistons furnished .010". .020". .030". .040" Oversize.
CAUTION—Piston must not be lapped in. This will destroy tin plated surface.
Fitting New Pistons: Use .003" feeler stock, ½" wide, inserted between piston and cylinder wall on opposite side from "T" slot. Pull required to withdraw feeler must be within 5-10 lbs. at 70°F.
Installing Pistons: "T" slot toward valve (left side) of engine (opposite side from oil spray hole in connecting rod lower end).
PISTON RINGS: Two compression, one oil control ring per piston, all above pin (piston has narrow heat insulation groove above top ring groove). Oil ring groove drilled with oil drainage holes.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.002-.004"
Compr. (#2)	3/32"	.007-.015"	.0015-.0035"
Oil Contr.	3/16"	.007-.015"	.001-.0015"

Installing Rings: Install compression rings with mark "TOP" (on side) toward top. Rings have taper face and must be installed correctly. Top ring inner bevel edge must be up.
Replacement Rings: For Rebored Cylinders—Furnished Std. and .010", .020", .030", .040" Oversize. **Servicing Ring Sets**—Furnished in following sizes for oversize range noted: Standard (0 to .010" O.S.), .020" O.S. (.011" to .024"), .030" O S. (.025" to .034"), .040" O.S. (.035" to .049").
PISTON PIN: Diameter .8117-.8119". Length 2 25/32". Pin is locked in connecting rod by clampscrew.

NOTE—On new pistons, pin hole is .8120-.8122" in diameter and is diamond-bored and tin-plated.
Pin Fit in Piston—.0001-.0005" clearance or light thumb push fit with piston and pin at 70°F.
Replacement Pins: No oversizes are available.
CONNECTING ROD: Length 9 3/16" center-to-center. **Weight**—33.4 ozs.
►*JOURNAL DIAMETER UNDERSIZE NOTE—The letter 'A' following the engine number indicates that main and connecting rod journals are .010" UNDERSIZE.*
Crankpin Journal Diameter—1.9385-1.9375".
Lower Bearing—Steel-backed, babbitt-lined, replaceable type. CAUTION—Oil spray hole in upper half of bearing must line up with oil spray hole in rod.
Clearance—.0001-.0025". **Sideplay**—.004-.010".
Bearing Adjustment: None (no shims). Replace bearings. Do not file connecting rods or bearing caps.
NOTE—Replace bearings when clearance exceeds .005" or sideplay exceeds .013".
Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.
Installing Rods: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), toward rear (#2, 4). Oil spray hole in lower end of rod toward right of engine (away from camshaft) on all rods.
CRANKSHAFT: Three bearing type with removable counter-weights.
►*JOURNAL DIAMETER UNDERSIZE NOTE—The l tter 'A' following the engine number indicates that main and connecting rod journals are .010" UNDERSIZE.*
Journal Diameters—2.3341-2.3331" (all main journals).
Bearings—Steel backed, babbitt-lined, replaceable type. Bearing shells are dowelled in bearing caps and crankcase.
Clearance—.0014-.0029".
NOTE—Replace bearings when clearance exceeds .006" or when endplay exceeds .018".
Rear Bearing Oil Seals—*See Crankshaft & Main Bearings in Willys Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*REAR MAIN OIL SEAL PRODUCTION CHANGE—Neoprene type seal replaces rope type. See Willys Special Data.*

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See Crankshaft Servicing instructions in Willys Special Data.*

NOTE—Engine must be removed from chassis for bearing replacement and crankshaft servicing.

Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.

End Thrust: Taken by flanged faces of #1 (front) bearing. Adjustable by adding or removing shims between crankshaft sprocket thrust washer and sprocket.

Endplay—.004-.006".

►*FLYWHEEL RING GEAR REPLACEMENT CAUTION:* Different flywheels used as follows: **97 teeth** (CJ-3A with Old Type Std. Bendix Drive); 124 teeth (CJ-3A through Serial Number 30973 with overrunning clutch type drive); **129 teeth** (All Models after CJ-3A, Serial No. 30973 with Bendix "Folo-thru" type drive. *CAUTION—Replacement ring gear must have the same number teeth as the original.*

CAMSHAFT: Four bearing, helical gear drive.

Journal Diameters—#1 2.1855-2.1860", #2 2.1215-2.1225", #3 2.590-2.600", #4 1.6225-1.6230".

Bearings—Removable steel-backed, babbitt-lined bushing (front), machined in crankcase (all others).

Clearance—.001-.0025". Service limit .006" (front), .008" (all others).

Camshaft Removal—*See Willys Special Data.*

End Thrust: Taken by thrust plate behind camshaft gear. Endplay controlled by spacer between camshaft gear and shoulder on shaft. Endplay can be increased by installing shim between spacer and shaft, or decreased by dressing off spacer. NOTE - Inner beveled edge of spacer must be toward crankcase.

Endplay—.003-.0055".

Timing Gears: Crankshaft gear, steel. Camshaft gear, fibre with steel hub.

Gear Backlash—.000-.002".

Camshaft Setting: Mesh marked tooth of camshaft gear with marked space (between teeth) on crankshaft gear.

VALVES: ("L" Head Engine)

Valve	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	5 51/64"
Exhaust	1 15/32"	.3725"	5 51/64"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°	23/64"	.0015-.00325"
Exhaust	45°	23/64"	.0025-.0045"

Valves ("F" Head Engine)

Valve	Head Diam.	Stem Diam.	Length
Intake	2"	.3733-.3738"	4.937"
Exhaust	1 15/32"	.371-.372"	5.909"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°	.260"	.0007-.0022"
Exhaust	45°	.351"	.002-.00375"

►*EXHAUST VALVES ("F" HEAD ENGINE) NOTE—Thompson "Roto-Valve" or Eaton "Free Valve" rotators used.*

Valv Guides ("L" Head Engines): Removable type. Remove guides from above with puller, install new guides with driver or press guides down in place to following dimensions:

Intake Guide—Top of guide 1 5/16" below top face of block. The shorter, smaller-diameter section end of guide should be up.

Exhaust Guide—Top of guide 1" below top face of block. Taper end (counter-bored end) of guide should be up.

Valve Guides ("F" Head Engine): Removable type. Drive guides out with Tool W-240. To install, use W-240 with correct adapters to install guides:

Intake Guide—Drive guide in with taper end toward valve seat until inner end flush with port wall at guide hole.

Exhaust Guide—Drive guide down in block with taper end up toward valve seat until upper end 1" below top face of cylinder block.

Valve Springs: *CAUTION—Intake valve springs on "F" Head Engines are different than other valve springs. See Spring Data below.*

Valve Springs ("L" Head Engine)

Free Length—2½" (Intake and Exhaust).

Intake & Exhaust	Spring Pressure	Length
Valve Closed	53 lbs.	2 7/64"
Valve Open	120 lbs.	1¾"

Valve Springs ("F" Head Engine)

Free Length—1 31/32" (Intake), 2½" (Exhaust).

Intake	Spring Pressure	Length
Valve Closed	73 lbs.	1 21/32"
Valve Open	160 lbs.	1 3/8"
Exhaust	**Spring Pressure**	**Length**
Valve Closed	53 lbs.	2 7/64"
Valve Open	120 lbs.	1 3/4"

Valve Lifters: Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" oversize.

Lifter Diameter—.6240-.6245".

Lifter Clearance—.0005-.002".

NOTE—Camshaft must be removed for lifter removal and replacement.

VALVE TIMING

Tappet Clearance: ("L" Head Engine)—.016", all valves hot or cold. ("F" Head Engine)—.018" (Intake), .016" (Exhaust—With "Thompson Roto-Valve"), .012" (Exhaust—With "Eaton Free Valve"). Adjust "F" Head Engine valves with engine cold.

NOTE—Adjusting screws are self-locking type.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

Valve Timing Check—Adjust No. 1 cylinder Intake valve lash to .020" ("L" Head Engine), .026" ("F" Head Engine) with tappet resting on low side of cam lobe. Rotate crankshaft until No. 1 cylinder is coming toward top of cylinder on exhaust stroke, then continue to rotate crankshaft until No. 1 intake tappet is JUST TIGHT against valve stem indicating that valve is about to open. Check position of ignition timing mark on crankshaft pulley (5° BTDC) and estimate crankshaft position (5° mark should be approximately ¼" before reference point on timing gear cover). Reset tappet clearance to correct running clearance as given above.

LUBRICATION

►*ENGINE OILING SYSTEM: See "Engine Lubrication" und r OILING SYSTEM in Willys Sp cial Data.*

Crankcas Capacity - 4 qts.

Normal Oil Pr ssure - 35 lbs. at 35 MPH.

Oil Pressur Regulator—Under plug on side of pump housing. Opens at 40 lbs. Adjustable by adding or removing shims located above spring in plug.

Oil Pump: Rotor type pump mounted on left side of crankcase.

Oil Pump Overhaul—*See Willys Special Data.*

Oil Filter: Purolator. On cylinder head bracket at right front corner of cylinder head with oil outlet connected to timing gear cover.

►*CAUTION*—Filter should be drained at each crankcase oil change (2000 mile intervals) and filter element replaced every 8000 miles (normal service).

Oil Pressure Gauge: (CJ-3A)—Auto-Lite No. 121250-A; (Early CJ-3B)—Auto-Lite No 11987-A; (Late CJ-3B & CJ-5)—Auto-Lite No. 121250-A. Bourdon tube type, not electric

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap.

Capacity—11 qts. (12 qts. with Heater).

Pressure Valve—Radiator filler cap. Opens at 7 lbs.

Water Pump: Centrifugal, packless, ball bearing type. *See Water Pump in Willys Special Data.*

Removal—Loosen and remove drive belt, disconnect hose. Remove pump mounting screws, lift out pump

Belt Adjustment—See Generator Belt Adjustment.

Thermostat: Harrison. In water outlet elbow in cylinder head. Starts to open at 151°F (148°F min.).

Temperature Gauge (Exc. CJ-5): Auto-Lite No. 12149-A (CJ-3A); No 11986-A (Early CJ-3B); No. 12149-A (Late CJ-3B). Bourdon tube type. Not electric

Temperature Gauge (CJ-5): King-Seeley "CV" (Constant Voltage) electric type

Dash Unit—K-S No 46832 (with 100 MPH Speedometer). No. 46833 (with 80 MPH Speedometer)

Engine Unit—K-S No. 44230.

CLUTCH

Auburn 8501-23 & 8501-39 or Rockford Model 8½RM. Used with Borg & Beck driven member. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven asbestos. I.D. 5⅛". O.D. 8½".

Thickness .135" (.132-.138").

Pedal Adjustment: Set pedal free travel to 1" (to provide 1/16" clearance between release bearing and clutch release levers). Adjust length of clutch control cable at clevis. Screw cable end in or out of clevis. Tighten locknut

Removal: Remove transmission (Transmission & Case Assembly), see below. Remove flywheel bell housing. Mark clutch pressure plate and flywheel to insure installation in same position. Remove clutch cover screws evenly to remove spring pressure, then remove clutch assembly and driven member.

TRANSMISSION

Warner Model AS1-T90C (Floor Mounted Gearshift). Three speed type. Constant-mesh, synchro-mesh, helical gears (second & high), sliding spur gear (low & reverse).

See Transmission Section for complete data.

Transfer Case: Spicer or Warner. Two-speed auxiliary transmission and front-wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front-wheel drive engagement (left hand lever).

See Transmission Section for complete data.

C NTINUED ON NEXT PAGE

C NTINUED FR M PRECEDIN PAGE

Removal: Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints (NOTE—If equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, transmission shift rods at transmission case levers, and clutch release cable at cross-shaft bell-crank. Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross-member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers (NOTE—if Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member (CAUTION—with cross-member removed, engine and transmission weight will rest on support jacks). Remove bolts holding transmission on bell housing force transmission to right until ball stud end can be disengaged from end of clutch control cross-shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

UNIVERSALS

Front & Rear Drive Propeller Shaft Joints: Spicer needle roller bearing type.

Front Axle Shaft Joint: Bendix or Rzeppa Constant Velocity type. One joint used at outer end of each shaft (within steering knuckle housing).

See "Universal Joints" in Willys Special Data.

Power Take-off Propeller Shaft Joints: Detroit Ball-and-Trunnion type. Two used (one at each end of shaft—no splined joint used).

FRONT AXLE

Spicer (Salisbury) Model 25—Full-floating, hypoid gear type. Differential assembly (ring and pinion gear assembly) is identical with Spicer Model 23-2 and is serviced in same manner.

See Spicer (Salisbury) Full Floating Rear Axle in Rear Axle Section for complete data.

Ratio—5.38-1.

Backlash—.005-.007". Shim adjustment.

Removal: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross-member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear end of springs and lower the springs, remove axle assembly from beneath car.

Axle Shaft & Universal Joint Assy. Removal: Remove wheel, hub cap, axle shaft nut and washer. Take out drive flange capscrews and remove flange with a puller *(CAUTION*—do not lose shim pack under drive flange). Bend lip on bearing adjusting nut lockwasher out, remove locknut, lockwasher, adjusting nut, and bearing locking washer. Remove wheel hub and bearing assembly *(CAUTION*—use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal joint assembly out of housing.

►*INSTALLATION CAUTION*—Adjust front wheel bearings and bleed brakes after installation completed.

Wheel Bearing Adjustment: Tighten inner adjusting nut until wheel binds (turn wheel while adjusting), then back nut off 1/6 turn, install lockwasher and locknut and make certain nut locked by turning lockwasher ear up. Check axle shaft endplay.

Axle Shaft Endplay Checking & Adjustment—Tighten the axle shaft nut against the flange (do not install lockwasher), swing wheel to maximum left or right position with punchmark on end of axle shaft straight up or down. Back off flange nut until clearance between nut and flange is .050" (measure with feeler gauge). Tap end of shaft with a soft hammer (shaft will move in an amount equal to the endplay). Recheck clearance between nut and flange with a feeler gauge. **Subtract this measured clearance from the original .050" clearance.** If resulting figure is less than .015", add shims to shim pack under flange, if figure is more than .035", remove shims from shim pack under flange. With correct thickness of shim pack under flange, install axle shaft lockwasher, nut, and cotter pin.

Steering Knuckle Bearing Disassembly & Adjustment: *See "Front Axle" in Willys Special Data.*

REAR AXLE

Spicer Model 23-1, 41-2, or 44-2. Semi-floating, hypoid gear type with Hotchkiss drive.

See "Spicer Rear Axle" in Rear Axle Section.

Ratio—5.38-1.

Backlash—.004-.008". Shim adjustment.

Removal: Support rear end of truck securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables and propeller shaft at rear universal. Place support jacks under axle housing to relieve springs of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs to floor. Remove axle assembly.

Axle Shaft Removal: Remove wheel and hub assembly (use wheel puller), remove nuts on bolts holding backing plate and brake assembly, remove dust shield, oil seal, and backing plate. Remove axle shaft and wheel bearing. CAUTION—Do not lose shims.

Wheel Bearing Adjustment—Endplay .003-.005". Adjust by adding or removing shims between backing plate and flange on axle housing.

NOTE—Shims installed on **left hand** end of axle housing only in production. Shims can be installed on right hand end of axle housing, if necessary, for correct endplay.

SHOCK ABSORBERS

Monroe. Direct acting, hydraulic type. Not adjustable or refillable. Serviced by replacement.

FRONT SUSPENSION

Front Axle: Spicer (Salisbury) Model 25. Special full-floating driving unit. *See Front Axle data (above).*

Front Suspension: Special front-wheel drive unit with semi-elliptic springs. Steering knuckle mounted on taper roller bearings carried on two stub shafts.

Endplay—.001-.003".

Kingpin Inclination—7½° crosswise.

Caster—3°. No adjustment. If caster incorrect, check front end, correct by installing new parts.

Camber—1½°. No adjustment. Correct by installing new parts. Do not attempt to correct camber by cold bending or heating of parts.

Toe-In—3/64-3/32" (1/32" each wheel). To adjust, first set each front wheel straight ahead (see Note below), then set toe-in by shortening **each** tie rod approximately ½ turn. This procedure necessary to maintain correct position of steering idler arm.

NOTE—To set front wheels straight ahead, first set tie rod end of steering bell crank (idler lever on frame front cross-member) exactly at right angles to front axle. Check front wheels by using a straight edge or sighting along rear and front wheels. Adjust each tie rod (loosen end clamp bolts and turn rod) until front wheels are exactly straight ahead. Then make toe-in adjustment as directed above. Tie rod lengths between ball end centers should be 20⅞" (left), 25⅝" (right).

Toe-out on Turns—With inner wheel turned 20°, outer wheel should be turned exactly 18°30'.

STEERING GEAR

Steering Gear: Ross Model T-12. Cam-and-Twin Lever

See Steering Gear Section for complete data.

BRAKES

Service Brakes (CJ-3B & CJ-5 Jeeps): Bendix-Lockheed hydraulic, self-centering type. Hand lever applies independent brake on drive shaft at rear of transfer case.

See "Bendix-Lockheed" in Brake Section.

Drum Diameter—9".

Whl. Cyl. Diameter—1" (Front), ¾" (Rear).

Lining—Molded asbestos. Width 1¾", Thickness .206-.216", Length per shoe 10 7/32" (primary or forward shoe), 6 39/64" (secondary or rear shoe).

Clearance—.008" toe, .005" heel, for each shoe.

NOTE—On self-centering type brakes, centralize shoes by hard brake application before making adjustment.

Braking Power—65% Front, 35% Rear.

Hand Brake: Mechanical type. Two-shoe internal expanding type with drum mounted on drive shaft at rear of transfer case (See Hand Brake Adjustment following).

Drum Diameter—8".

Lining—Width 1¾", Thickness .206-.216", Length per shoe 8⅛".

HAND BRAKE ADJUSTMENT

Hand Brake (Adjustment for W ar)—Make certain that hand brake cable and linkage operate freely. Lubricate if sticking or binding is evident. Place brake handle on instrument panel in "off" position. Rotate brake drum until one pair of adjusting holes (three pairs located on back face of drum) is opposite the adjusting screws (notched wheels) within the brake. Insert a screwdriver or adjusting tool through each hole and turn each adjusting screw equally until the brake shoes are snug against the drum (NOTE—with tool against edge of hole as a fulcrum, move outer end of tool out away from center of driveshaft to expand shoes). **Back off each adjusting screw 7 notches** to provide correct shoe clearance.

MISC. MECHANICAL

Windshield Wipers: Vacuum type, individual wiper motors.

See Miscellaneous Section for complete data.

SERIAL NUMBER: Located as follows:

All Stati n Wag ns—On plate mounted on riser to left of drivers seat.

All 475-4WD Trucks—On plate mounted on dash under hood near steering tube.

M d l 6226-4WD Truck—On plate mounted on dash near right hood hinge.

ENGINE NUMBER: Located as follows:

4 Cyl. "F" h ad. Stamped in top of water pump boss.

6 Cyl. 6-226 "L" h ad. Right top of cylinder block near front.

6 Cyl. 685 "F" H ad. Stamped on right side of cylinder block at upper front.

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following:

"A" .010" main & connecting rod journals undersize.

"B" .010" cylinder bore and pistons oversize.

"AB" Both above conditions exist.

TUNE-UP

COMPRESSION PRESSURE: Taken with wide open throttle. Should be equal to within 10 lbs. with 100 lbs. minimum.

Engin	Comp. Press.
475	125 lbs. at 185 RPM
6226	120 lbs. at 70 RPM
685	155 lbs. at 185 RPM

VACUUM READING: 17-21" at idling speed.

VALVE TAPPET CLEARANCE: Taken with engine cold.

Engin	Intak	Exhaust
475	.018"	.016"
685	.018"	.016"
6226	.014"	.014"

MANIFOLD HEAT CONTROL: (474 & 685) water thermostat controlled. (6226) none used.

IGNITION

FIRING ORDER: (4 cyl.) 1-3-4-2. (6 cyl.) 1-5-3-6-2-4. See diagram.

SPARK PLUG GAP: .030".

Spark Plug—Champion J8, 14mm.

COIL: Auto-Lite CR-6009.

Ignition Current—2.5 amperes idling, 5 amperes at 6.3 volts stopped.

DISTRIBUTOR: Autolite. Used as follows:

Model	1954	1955
475	A-L No. IAT-4008B	A-L No. IAT-4204A

IGNITION TIMING

Setting—5° BTDC (Exc. 6226 Eng.). 4° BTDC (6226 Eng.).

Timing Mark (475)—Timing gear cover. Notch on rim of fan pulley to align with correct mark on timing gear cover. Two lines on cover marked 5° (5° BTDC) and T(TDC).

6226 & 685—Vibration dampener. Align correct graduation with pointer on timing gear cover. Damper marked "0" at TDC with 1° graduations before and after this point.

CARBURETOR

Model	Carter Carburetor No.
475 (1954-55)	YF-951S
685 (1954-55)	YF-2071S
6226 (Early 1954)	WGD-2052S, SA
6226 (Late 1954 & 1955)	WCD-2204S

CARTER YF

►*1955 MODEL "FLAT SPOT" ON ACCELERATION CORRECTION: See "Carter YF" in Carburetor Section.*

Idle Setting—¾-1¾ turns open (951S), 1-2 turns open (2071S). Turn screw out for richer mixture.

Idle Speed—600 RPM.

Float Level—(951S) 5/16"; (2071S) 9/32" from top of float at free end to gasket seat on cover with assembly inverted and float resting freely on intake needle.

CAUTION—Do not compress spring in intake needle.

Fast Idle: With choke held in wide open position, lip on fast idle arm should contact boss on body casting. Adjust by bending at offset of fast idle link.

Automatic Choke Setting: None, Manual Choke.

►*OTHER DATA: See "Carter YF" in Carburetor Section.*

Fuel Pump Pressure: 3½-5½ lbs. at 1800 RPM.

CARTER WGD

Idle Setting—1/2-1-1/2 turns open. Turn out for richer mixture.

Idle Speed—550 RPM.

Float Level—9/32" between top of float and bowl cover with gasket removed and cover inverted.

Acc l rating Pump—No seasonal adjustment.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fast Idle: .018-.023" throttle valve opening gauge T109-29) with choke valve closed and thermostatic coil housing, gasket and baffle plate removed.
Automatic Choke Setting: Set two points rich.
►*OTHER DATA: See "Carter WGD" in Carburetor Section.*
Fuel Pump Pressure: 3½-5½ lbs. at 1800 RPM.

CARTER WCD

Idle Setting—1-2 turns open Turn screws out for richer mixture
Idle Speed—500 RPM.
Float Level—3/16" between top of float and machined surface of casting (Gauge T109-28)
Accelerating Pump—No seasonal adjustment
Fast Idle Setting: Two settings required
Cam Clearance—Loosen choke valve lever clamp-screw on choke valve, insert .040" feeler gauge (T109-193) between lip of fast idle cam and boss on flange casting, hold choke valve tightly closed, remove all slack from linkage by pressing choke valve lever toward closed position, tighten choke valve lever clamp-screw
Screw Setting—Hold choke valve tightly closed, tighten fast idle adjusting screw against high step of fast idle cam until throttle valve opening or clearance between edge of valve and carburetor bore on side opposite ports is 016" (T109-29) Be sure fast idle adjusting screw is on high step of cam while making this adjustment
Automatic Choke Setting: Centered (At Index)
►*OTHER DATA: See "Carter WCD" carburetors in Carburetor Section*
Fuel Pump Pressure: 3½-5½ lbs at 1800 RPM

CARB. EQUIPMENT

Fuel Pump: AC No. 9562 (475), fuel & vacuum. **Carter No. M893S** (685), fuel only. **Carter No. M794S** (685), fuel & vacuum. **Carter No. M957S** (6226), fuel & vacuum.
Pressure—3½-5½ lbs. at 1800 RPM.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: King-Seeley "CV" (Constant Voltage) electric type with voltage regulator.
Dash Unit—K-S No. 45727 (all models).
Tank Unit—K-S No. 44506 (Exc. Trucks).
Tank Unit—K-S No. 44508 (Trucks).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Auto-Lite or Willard. 6 volt, 15 plate, 100 ampere (20 hr. rate).
Battery Ground—Negative (—) ground. (4 cyl. Eng.) right side of engine. (6 cyl. Eng.) left side of engine.
Engine Ground—Strap from engine to frame at right front engine mounting.

STARTER

Auto-Lite Numbers	Starter	Armature
475	MCH-6207	MCH-2088
6226	MCH-6210	MCH-2088
685 . .	MCH-6203	MCH-2088

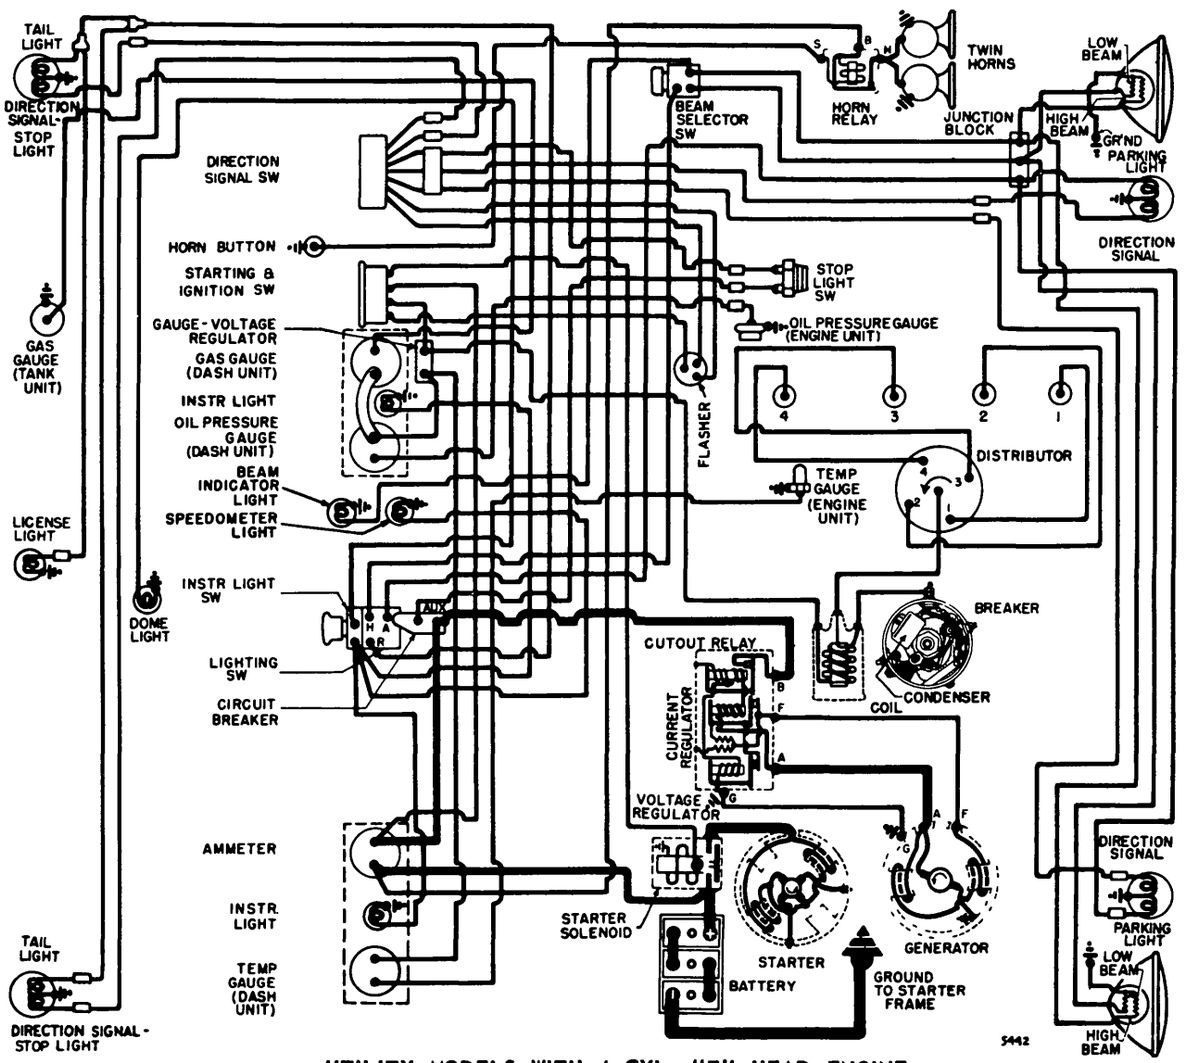
Drive—Bendix A3281 "Follow-thru" type.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0	4300	5.0	65
6.0	Lock	2.0	335

Starting Switch: Auto-Lite SSW-4012. Key starting (magnetic switch controlled by turning ignition switch past "ON" position.

GENERATOR



Auto-Lite GGW-4801D (475 & 685-B Eng.). **GGW-4801EN** (6226 Eng.).
Armature—Auto-Lite GGW-2006F (All Cars).

Performance Data

Amperes	Volts	Cold —RPM—	Hot
0	6.4	870-970	950-1050
40.0	8.0	1800-2000	2150-2350
45.0	8.0	1925-2125	2350-2550

Brush Spring Tension—35-53 ozs.
Field Current—1.4-1.5 Amperes at 5.0 volts.
Rotation—Counter-clockwise at commutator end.

UTILITY MODELS WITH 4 CYL. "F" HEAD ENGINE
(SEE PASS. CAR DIAGRAM FOR 6 CYL. 6226 "L" HEAD ENGINE)

CONTINUED FROM PRECEDING PAGE

Belt Adjustm nt: 1/2-5/8" deflection with thumb pressure midway between generator and pump pulleys.

REGULATOR

Aut -Lit VBE-6105A. Voltage & Current type with "Temperature Compensated" Current Regulator.

Cut ut Relay

Cuts In–6.3-6.8 Volts (set to 6.4-6.6 volts).
Cuts Out–4.1-4.8 Volts (4.6 amps. discharge).
Contact Gap–.015" minimum.
Air Gap–.031-.034" with contacts open (check at hinge end of core).

V ltag Regulator

Setting–7.2-7.5 volts at 70° F *after 15 minutes operation charging at 1/2 maximum rate.*
Air Gap–.048-.052" with contacts just touching.
Ch cking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" typ . Set to following sp cifications at 70° F.*

	Test A	–Operating Amperes–	Test B
VBE-6105A	52		45 (43-47)

T st A–After 15 minutes operation with current at 1/2 maximum rate.
T st B–After 15 minutes additional operation with current regulator operating (load applied to hold to 6.7-6.9 volts).
Air Gap–.048-.052" with contacts just touching.
Ch cking & Adjusting–*S Electrical Equip. Section.*

MISC. ELECTRICAL

H ad Lamps: Sealed Beam. *See Electrical Equip. Section.*
Dir cti nal Signals: *S Electrical Equip. Section.*
Lighting Switch R m val: Loosen set screw on side of control knob and remove knob. Remove retaining nut and push switch through panel.
Stop Light Switch L cati n: At front end of brake master cylinder.
CIRCUIT BREAKER: 30 ampere. Thermal type on light switch.
FUSES: Dir cti n Signal–14 amp., in flasher lead.
Radi –9 amp., in lead in radio.
Ov rdrive–20 amp., at overdrive relay.
Heater–14 amp. in lead to heater.
HORNS: Auto-Lite HAB-4603 (Low Pitch), HAB-4604 (High Pitch).

ENGINE

►*THREE DIFFERENT ENGINES USED AS FOLLOWS:*

6 CYL. "L" HEAD (6226 ENG.)

B re–3-5/16", **Str k** –4-3/8".
Displac m nt–226.2 cu. ins. **Rated HP**–26.3.
D v l p d H rsepow r–115 at 3650 RPM.
Compressi n Rati –7.3-1.

►*OTHER ENGINE DATA: S "1956-57 WILLYS JEEP, UTILITY, & FORWARD CONTROL" car model pages (following)*

4 CYL. "F" HEAD (475 ENG.)

B r –3 1/8". **Strok** –4 3/8".
Displac ment–134.3 cu. ins. **Rat d HP**–15.63.
D v l ped H rs p w r–75 at 4000 RPM.
C mpressi n Ratio–6.9-1 (Std.). 7.4-1 (Optional).

►*OTHER ENGINE DATA: Se "1956-57 WILLYS JEEP, UTILITY, & FORWARD CONTROL" car model pag s (following).*

6 CYL. "F" HEAD (685 ENG.)

Bore	Stroke	Displmnt.
3 1/8"	3½" ..	161 Cu. Ins.

Compr. Ratio	Rated HP	Developed HP
7.6-1	23 44	90 at 4200 RPM

Compression & Vacuum Reading–*See TUNE-UP*

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following.
"A" .010" Undersize main and connecting rod journals.
"B" .010" Oversize cylinder bore and pistons.
"AB" both above conditions exist.

CYLINDER HEAD & GASKETS: *See "Cylinder Head & Manifolds" in Willys Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Willys Special Data*

PISTONS

Aluminum alloy, cam ground, T slot, Tin or Brass plated.

►*PISTON OVERSIZE NOTE:* Letter "B" or "AB" following engine number indicates that cylinder bore and pistons are .010" Oversize.

Weight–10.9 ozs.
Removal–Pistons and rods removed from above.
Fitting New Pistons: Place .003 x 1/2" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove ribbon feeler should be 5 to 10 lbs.
Replacement Pistons: Std. and .010", .020", .030" and .040" Oversize.
Installing Pistons: "T" slot toward valve (left side) of engine (opposite side from oil spray hole in connecting rod lower end).

PISTON PINS

Locked in rod with clamp screw.
Diameter–.7496-.7498".
Clearance in Piston–.0000-.0004" max. Push fit at 70° F.
Replacement Pins: Not furnished separately.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (Top)	3/32"	.007-.023"	.002-.004"
Compr. (2nd)	3/32"	.007-.023"	.0015-.0035"
Oil	3/16"	.007-.023"	.001-.0025"

Replacement Rings: Ring sets furnished in following sizes for oversize noted. Standard (0-.010" O.S.), .020" O.S. (.011-.024"), .030" O.S. (.025-.034"), .040" O.S. (.035-.049").
Installing Rings: Compression ring marked "Top" (on side of ring) and bevel on inner edge must be up.

CONNECTING RODS

Length–6.345" (Center to Center).
Crankpin Journal Diameter–1.875".

►*JOURNAL DIAMETER UNDERSIZE NOTE:* The letter "A" or "AB" following engine number indicates that main and connecting rod journals are .010" Undersize.
B arings–Steel Backed Babbitt.
Cl aranc –.0001-.0025". **Side Play**–.004-.010".
Replac m nt Bearings. Std., .001", .002", .010", .011", .012", .020" and .030" Undersize.
Installing R ds: Rods not offset. Install with spray hole in lower end toward right side (away from camshaft) on all rods.

CRANKSHAFT

Journal Diameter–2.25" all bearings.
►*JOURNAL DIAMETER UNDERSIZE NOTE:* The letter "A" or "AB" following the engine number indicates that the main and connecting rod journals are .010" Undersize.
Bearings–Steel Backed Babbitt.
Clearance–.0009-.003".
Replacement Bearings: Std., .001", .002", .010", .011", .012", .020" and .030" Undersize.
End Thrust: Taken by No. 1 (front main bearing), and thrust washer in back of crankshaft gear. Adjusted by removing or adding shims behind thrust washer. Shims furnished .002" thick.
NOTE–Crankshaft gear must be removed with gear puller for end play adjustment
End Play–.004-.006".
Crankshaft Rear Main Bearing Oil Seal: *See "Front & Rear Filler Blocks" under "Crankshaft & Main Bearings" in Willys Special Data*

CAMSHAFT

Journal Diameters–(1) 1.8770-1.8765", (2) 1.8445-1.8435", (3) 1.8130-1.8120", (4) 1.6260-1.6255".
►*CAUTION: 675-B and 685-B camshafts not interchangeable.*
Bearings–#1 steel backed babbitt. #2, 3, & 4 cast iron.
Clearance–.001-.0025".
End Thrust: Taken by thrust plate behind camshaft gear with spacer assembled behind plate. If end thrust not within these limits, replace timing gear and thrust plate. Dressing face of thrust plate may be required to reduce thickness for correct clearance.
End Play–.004-.007".
Timing Gears: Crankshaft gear Cast Iron, Camshaft gear fibre
Gear Backlash–.000- 002"
Camshaft Setting: Mesh marked tooth of camshaft gear with marked space (between teeth) on crankshaft gear.
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Willys Special Data*

VALVES

Tappet Clearance: Intake 018", Exhaust 016" Cold

Valve	Head Diam.	Stem Diam.	Length
Intake	1 3/4'	3733- 3738"	4 17/32"
Exhaust	1 9/32"	3395- 3405	4 5/8'

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	260"	0007- 0022'
Exhaust	45°	360"	0025- 0045'

►*EXHAUST VALVE NOTE* Thompson type rotators used on exhaust valves
Valve Seat Width: 3/64" (All valves)
Valve Springs: Intake & Exhaust springs not interchangeable See table below

Valve Spring Specifications

Valv	Intak	Exhaust
Closed	73 lbs at 1 66'	50 lbs at 1 5/8
Open	153 lbs at 1 40'	105 lbs at 1 21 64

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fr L ngth–1.968" (Intake), 1.890" (Exhaust).
Valv Guid s: Removable type. Drive guides out with Tool W-240. To install, use Tool W-240 with correct adaptors and drive guides into head and cylinder block until top of guide is 7/8" from top of valve seat (taper end toward seat).
R cker Arm Assembly Removal: *See "Valve System" in Willys Special Data.*
Valve Lifters: Mushroom type, in reamed holes in block. Service by installing oversize lifters.
Lifter Removal–Camshaft must be removed first. *See "Camshaft & Bearings" in Willys Special Data.*
Lifter Diameter–.6240-.6245". **Length**–2".
Clearance in Block–.0005-.002".

VALVE TIMING

See "Camshaft Setting" under Camshaft.
Intake Valves–Open 9° BTDC. Close 50° ALDC.
Exhaust Valves–Open 47° BLDC. Close 12° ATDC.
NOTE–Set Intake valve tappet for timing .026" Cold.
Valve Timing Check–Set Intake tappet clearance as given above with tappet resting on low side of cam lobe. Rotate crankshaft until No. 1 piston is coming toward top of cylinder on Exhaust stroke, then continue to rotate crankshaft until the 9° BTDC mark on dampener is aligned with pointer on timing gear case. With crankshaft in this position No. 1 Intake tappet should be JUST TIGHT against valve stem if timing is correct. Reset tappet clearance to .018". *See "Camshaft Setting" under Camshaft.*

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Willys Special Data.*
Crankcase Capacity: 4 quarts.
N rmal Oil Pressure: 35 lbs. at 30 MPH (2000 RPM).
Pressure Regulator–Under plug on side of pump housing. Adjust to 35 lbs. pressure by adding or removing shims located above spring in plug.
Oil Pressure Indicator: King-Seeley "CV" (Constant Voltage) electric type with voltage regulator.
Dash Unit–K-S No. 45729.
Engine Unit–K-S No. 44030.
See "Oil Pressure Gauges" in Miscellaneous Section.
Oil Pump: Rotor type. On left side of crankcase.
Pump Overhaul–*See "Oil Pump" in Willys Special Data.*
Oil Filter: Fram or Purolator. Located on cylinder head bracket at right front corner of cylinder head with oil outlet connected to timing gear cover.

COOLING

Water Capacity: 12 quarts. Add 1 quart for heater.
Pressure Valve: Radiator filler cap. Opens at 7 lbs.
Thermostat: Harrison. In water outlet elbow in cylinder head. Opens at 163-168°.
Water Pump: Centrifugal, packless, ball bearing type.
See "Water Pumps" in Willys Special Data.
T mp ratur Gaug : King-Seeley "CV" (Constant Voltage) electric type with voltage regulator.
Dash Unit–K-S No. 45734.
Engin Unit–K-S No. 44220.
S "T mperature Gaug s" in Misc llaneous Section.

CLUTCH

R ckford 8½ RM, Auburn 8501-39, Borg & Beck 10A7, Single Plate type. Use as follows:
475 & 685 Engines–Rockford 8½ RM or Auburn 8501-39.
6226 Engine–Borg & Beck 10A7. Assembly No. 982. *See Clutch Section for complete data.*
Clutch Disc–As follows: *(NOTE–Borg & Beck Clutch Disc used with Rockford Clutch).*

Engine	Borg & Beck No.	Auburn No.
475	381580	100020
685	382113 & 382231	100043
6226	381806	

Pedal Adjustment: 1¼" free travel (475 & 685 Engines). 1" free travel (6226 Engine). Loosen two locknuts on pedal adjusting link and adjust as necessary.
Removal: Remove transmission (and transfer case on 4-wheel drive models). See Transmission Removal (below). Remove flywheel bellhousing. Mark clutch and flywheel for installation in the same position. Remove clutch cover screws evenly to remove spring pressure, then remove clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

4 WHL. DRIVE

Warner AS1-T90J (6226 Eng.), **AS1-T90C** (475 Eng.). Three speed type. Constant mesh, synchro-mesh, helical gears (second & high), sliding spur gear (low & reverse).
See "Warner Transmissions" in Transmission Section.
Transfer Case: Spicer or Warner. Two speed auxiliary transmission and front wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front wheel drive engagement (left hand lever).
See Transmission Section for complete data.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: (4 Whl. Drive) Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints *(NOTE–If* equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, and clutch release cable at cross shaft bell crank (Jeep), Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers *(NOTE–If* Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member *(CAUTION* -With cross-member removed, engine and transmission weight will rest on support jacks). Remove bolts holding transmission on bell housing, force transmission to right until ball stud end can be disengaged from end of clutch control cross shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

2-WHL. DRIVE

Warner AS50-T96 with Ov rdriv (685 Engine). Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type.
Transmission Control: Remote control type with gear-shift lever on steering column. *See "Transmission Controls" in Transmission S ction.*
Removal: (2 Whl. Drive) Remove floor boards, take off bell housing inspection cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine support bolts from cross-member under transmission case, raise rear end of engine so transmission clears cross-member *(CAUTION* –Use care that fan blades do not damage radiator). Remove transmission bell housing bolts, pull transmission straight back to clear clutch shaft, remove from car.

OVERDRIVE

Warner R10. Part of transmission assembly. *NOTE–Lockout Switch not used on 1955 models.*
See "Warner R10 Overdriv " in Transmission S ction.
Overdrive Controls: *See "Warner R10 & R11 Ov rdriv Controls" in Transmission Section.*
Removal: Same as for standard transmission after control wiring and cables removed.

UNIVERSALS

2-WHL. DRIVE

Spicer (Cross) or Detroit (Ball & Trunni n). One at each end of propeller shaft.

4 WHL. DRIVE

Drive Shaft Joints–Spicer (Cross) One used at front and rear of both front and rear propeller shafts.
Front Axle Shaft Joint–Rzeppa Constant Velocity type. One joint used at outer end of each shaft (within steering knuckle housing).
See "Universal Joints" in Willys Special Data.
Power Take-off Shaft Joints–Detroit Ball-and-Trunnion type. Two used (one at each end of shaft-no splined joint used).

FRONT AXLE

4 WHL. DRIVE

Spicer (Salisbury) Model 25. Full floating, Hypoid gear type. Differential assembly (ring and pinion gear assembly) is serviced in same manner as Spicer Rear Axles.
See "Spicer (Salisbury)" in Rear Axl S cti n.
Ratio–5.38-1 (Exc. 6226-4X4SW, 4WD). 4.88-1 (6226-4X4SW, 4WD).
Backlash–.004-.007". Shim Adjustment.
Rem val: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

steering linkage (at idler lever on frame front cross member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear end of springs and lower springs, remove axle assembly from beneath car.

Axl Shaft & Univ rsal J int Assy. Removal: Remove wheel, hub cap, axle shaft nut and washer. Take out drive flange cap screws and remove flange with puller, (*CAUTION*–do not lose shim pack under drive flange). Bend lip of bearing adjusting nut lockwasher out, remove locknut, lockwasher, adjusting nut, and bearing locking washer. Remove wheel hub and bearing assembly.((*CAUTION*–use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal joint assembly out of housing.

►*INSTALLATION CAUTION:* Adjust front wheel bearings and bleed brakes after installation completed.

Wheel Bearing Adjustm nt: Tighten inner adjusting nut until wheel binds (turn wheel while adjusting), then back nut off 1/6 turn, install lockwasher, locknut, and make certain nut locked by turning lockwasher ear up.

St ering Knuckl B aring Disassembly & Adjustment: *See "Front Axl " in Willys Special Data.*

REAR AXLE

Spic r M d l 44-2 (Exc. 475-4WD & 6226-4WD). Model 53 (475-4WD & 6226-4WD). Semi-floating hypoid gear type with Hotchkiss drive.

►*TIMKEN SPIRAL BEVEL REAR AXLE NOTE: These used int rmittantly in production on 4-WD Trucks. See "Spic r Hypoid S mi-Floating" or "Timken Semi-Floating" in Rear Axle S ction.*

Axl Ratios

Mod l	Std. Trans.	O.D. Trans.
2-Wheel Drive	4.88-1	©4.88-1
4 Cyl. 4-Wheel Drive	5.38-1	
6 Cyl. 4-Wheel Drive	4.88-1©	

©–5.38-1 Optional.

Backlash–.004-.007". Shim adjusted.

Axl Shaft Removal (Semi-floating Axle): Remove axle shaft nut, then use puller to remove wheel hub. Remove bolts retaining dust shield, grease and bearing retainers, and brake assembly. *CAUTION* - Do not disturb backing plate. Remove shield and retainer then pull axle shaft, being careful not to lose adjusting shims.

R ar Axl Ass mbly R m val: Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs. Remove axle assembly from beneath car.

Wheel Bearing Adjustment: End Play .003-.007". Adjust by adding or removing shims between backing plate and axle housing flange at each wheel. See "Axle Shaft Removal" above.

SHOCK ABSORBERS

Monroe or Gabriel. Direct acting type.

FRONT SUSPENSION

2 WHL. DRIVE

Planadyne Type. Independent, linked parallelogram type with transverse spring (spring acts as lower control arm).

See "Willys Front Suspension" in Front Suspension Section.

Kingpin Inclination–5° crosswise.

Caster–1° No adjustment.

Camber–1°.

Toe-in–1/16-1/8". *See "Willys Planadyne" in Front Suspension Section for Toe-in Adjustments.*

4 WHL. DRIVE

Special front-wheel drive unit with semi-elliptic springs. Steering knuckle mounted on taper roller bearings carried on two stub shafts.

End Play–.001-.003".

Kingpin Inclination–7-1/2°.

Caster–3°. No adjustment. If caster incorrect, check front end, correct by installing new parts.

Camber–1-1/2°. No adjustment. Correct by installing new parts. Do not attempt to correct camber by cold bending or heating of parts.

Toe-in–3/64-3/32". (1/32" each wheel) To adjust first set each front wheel straight ahead (see note below), then set toe-in by shortening each tie rod approximately 1/2 turn. This procedure necessary to maintain correct position of steering idler arm.

NOTE–To set front wheels straight ahead, first set tie rod end of steering bell crank (idler lever on frame cross member) exactly at right angles to front axle. Check front wheels by using a straight edge or sighting along rear and front wheels. Adjust each tie rod (loosen end clamp bolts and turn rod) until front wheels are exactly straight ahead. Then make toe-in adjustment as directed above. Tie rod lengths between ball end centers should be 20-7/8" (left), 25-5/8" (right).

Toe-Out on Turns–With inner wheel turned 20°, outer wheel should be turned exactly 19°.

STEERING

Ross T-12, No. 13108. Cam & *Twin* Lever type.
See "Ross Cam & Twin Lever" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" in Steering Section.*

BRAKES

Bendix-Lockheed (Self-Centering). Without anchor pin adjustment. Hand lever applies rear service brakes (Exc. Jeep). Independent brake on drive shaft at rear of transfer case (Jeep).

See "Bendix-Lockheed (Self-Centering)" in Brake Section.

Drums–Diameter 10" (2-Whl. Drive); 11" (4-Whl. Drove).

Wheel Cylinder Diameter–(Front) 1 1/8". (Rear) 1".

Model	Lining Length Primary	Secondary
2 Whl. Drive	10 11/16"	8 5/8"
4 Whl. Drive	12 1/4"	10"

Thickness–.212" (2 Whl. Drive); .187" (4 Whl. Drive).

Width–1¾" (2-Whl. Drive); 2" (4-Whl. Drive).

Braking Power–Front 65%, Rear 35% (2-Whl. Drive); Front 57%, Rear 43% (4-Whl. Drive).

Clearance–.005-.008" all models.

MISC. MECHANICAL

Windshield Wipers: Vacuum type. Single motor operates wiper arms by cable control.
See "Windshield Wipers" in Miscellaneous Section.

MODEL IDENTIFICATION

Model	Series Symbol
F4-134 4x2 & 4x4 Jeep Utility	54
L6-226 4x2 & 4x4 Jeep Utility	54

MANIFOLD HEAT CONTROL: Used as follows—
4 Cyl. "L" Head. Thermostatic coil on manifold.
4 Cyl. "F" Head. Water jacketed intake manifold.
6-226 "L" Head. Exhaust heat from No. 3 & No. 4 cylinders enters heat chamber under intake manifold

IGNITION

FIRING ORDER: 1-3-4-2 (4 cyl.), 1-5-3-6-2-4 (6 Cyl.).

SPARK PLUG GAP: .030".
Spark Plug - Auto-Lite A7 or Champion J8. 14 mm. Torque to 28-30 ft. lbs.

COIL: Auto-Lite CR-6009 (Early), CAL-4001A (Later).
Ignition Current - 2.5 amperes idling, 5 amperes at 6.3 volts stopped.

DISTRIBUTOR:	Auto-Lite No.
4 Cyl. "L" Jeep	IAY-4012
4 Cyl. "F" Univ. Jeep	IAD-4041
4 Cy. "F" Others	IAT-4204A
6-226 "L" All	IAT-4206

Condenser—Auto-Lite (IAY Distr.) IAT-3076LA, (IAD Distr.) IGW-3139, (IAT Distr.) IAT-2015L.
Capacity—(IAT-3076LA) .25-.28 mfd. (IGW-3139) .23-.26 mfd. (IAT-2015L) .21-.25 mfd.
Contact Point Set—Auto-Lite (IAY Distr.) IGW-3028DS, (IAD Distr.) IGP-3028FS, (IAT Distr.) IGW-3028AS.
Breaker Gap—.020".
Cam Angle - 39-45° (4 Cyl.), 36-42° (6 Cyl.).
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance
(IAY-4012, IAD-4041, IAT-4204A)

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	300	0	600

5	10	15

IGNITION TIMING

Setting - 5° BTDC (All 4 Cyl.), 4° BTDC (1956 6 Cyl.), 5° BTDC (1957 6 Cyl.).
Timing Mark - **(All 4 Cyl. Eng.).** Notch on rim of fan pulley to align with 5° mark on timing gear cover Cover has two marks 5° and T (Top dead Center)
(6 Cyl. Eng.). Align correct graduation with pointer on timing gear cover Damper marked "O" at TDC with 1° graduations before and after this point.

CARBURETOR

►*AIR CLEANER TO CARBURETOR HOSE PRODUCTION CHANGE & CAUTION (FC-150):* To prevent hose from collapsing under high temperature conditions, install Reinforcing Spring Part No. 914965 in hose. FC-150 vehicles produced after Serial No. 65548-11274 have this spring installed.

►*FLAT SPOT OR STUMBLE CORRECTION (V hicl s with Carter YF 938S, SA; 951S Carbur tors):* See *"Carter YF Carburetors" in Carbur ti n Secti n.*

Model	Cart r Carb. N .
4 Cyl. "L" Jeep Dispatcher	YF 2392S
4 Cyl. "F" Univ. Jeep	YF 938SA
4 Cyl. "F" 4X2, 4X4, 4WD	YF 951S
4 Cyl. "F" Fwd. Control	YF 938SA
6 Cyl. (Early 1956)	WCD 2204S
6 Cyl. (Later 1956-57)	YF 2467S

CARTER YF
Idle Setting - ¾-1¾ turns open (938SA, 951S). ½-2 turns open (2392S), 1-2½ turns open (2467S). Turn screw out for richer mixture.
Idle Speed - 600 RPM (4 Cyl.), 550 RPM (6 Cyl.)
Float Level - 9/32" (Gauge T109-126) from top of float at free end to gasket seat on cover with assembly inverted and float resting freely on intake needle.
Fast Idle: With choke held in wide open position, lip on fast idle arm should contact boss on body casting.
►*OTHER DATA: See "Carter YF Carburetor" in Carburetion Section.*

CARTER WCD
Idle Setting—1-2 turns open. Turn screws out for richer mixture.
Idle Speed—500 RPM.
Float Level—3/16" (Gauge T109-28) from top of each float to gasket seat on cover with assembly inverted.
Fast Idle Setting Hold choke valve tightly closed, tighten fast idle adjusting screw against high step of fast idle cam until throttle valve opening or clearance between edge of valve and carburetor bore on side opposite ports is .016" (T109-29)
Automatic Choke Setting: Centered (At Index).
►*OTHER DATA: See "Carter WCD" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter M2195S Fuel Only (1956 DJ-3A, 1957 All 4 Cyl.). AC No. 4032 (1956 Jeep & Utility). Carter No. M957S (All 6 Cyl.) Fuel & Vacuum.
Pressure - (4 Cyl.) 2½-3¾ lbs. at 1800 RPM, (6 Cyl.) 3½-5½ lbs. at 1800 RPM.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: King-Seeley "CV" (Constant Voltage) type with Voltage Regulator contained within Gauge (FC-170) separate Regulator (Others)

Model	Dash Unit	Tank Unit
Jeep	49452	44556
Truck	45727	44508
Station Wagon	45727	44506

See "Fuel Gauges" in Carburetion Section.

CRANKCASE VENTILATOR

Sealed Positive Ventilation (4 Cyl.). Clean air is drawn into oil filler tube and rocker arm cover through a hose to the air cleaner All connections and gasket on filler tube must be air tight. The crankcase is ventilated

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

by a sealed system from air cleaner tube to intake manifold A valve is attached to valve spring cover in the line to air cleaner This valve must be free of carbon and operate freely at all times to obtain smooth idle Remove and clean valve every 5000 miles or more often if engine must run at idle speed excessively or is used for stationary power

BATTERY

Auto-Lit 1H-100 or Willard 1-M-100. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Batt ry Ground - Negative
Engine Ground - Left front engine support (6-226) right front engine support (Others)

STARTER

Auto-Lite. Used as follows

Model	Starter	Armature
4 Cyl (All)	MCH-6203 or 6207	MCH-2088
6 Cyl	MCH-6210	MCH 2088

Driv - Bendix "Folo-Thru" type. No. A3281.
R tation - Counterclockwise at commutator end
Brush Spring T nsion - 42-53 ozs

Performance Data

Torque	RPM	Volts	Amperes
0	4300	5 0	65
6 0	Lock	2 0	335

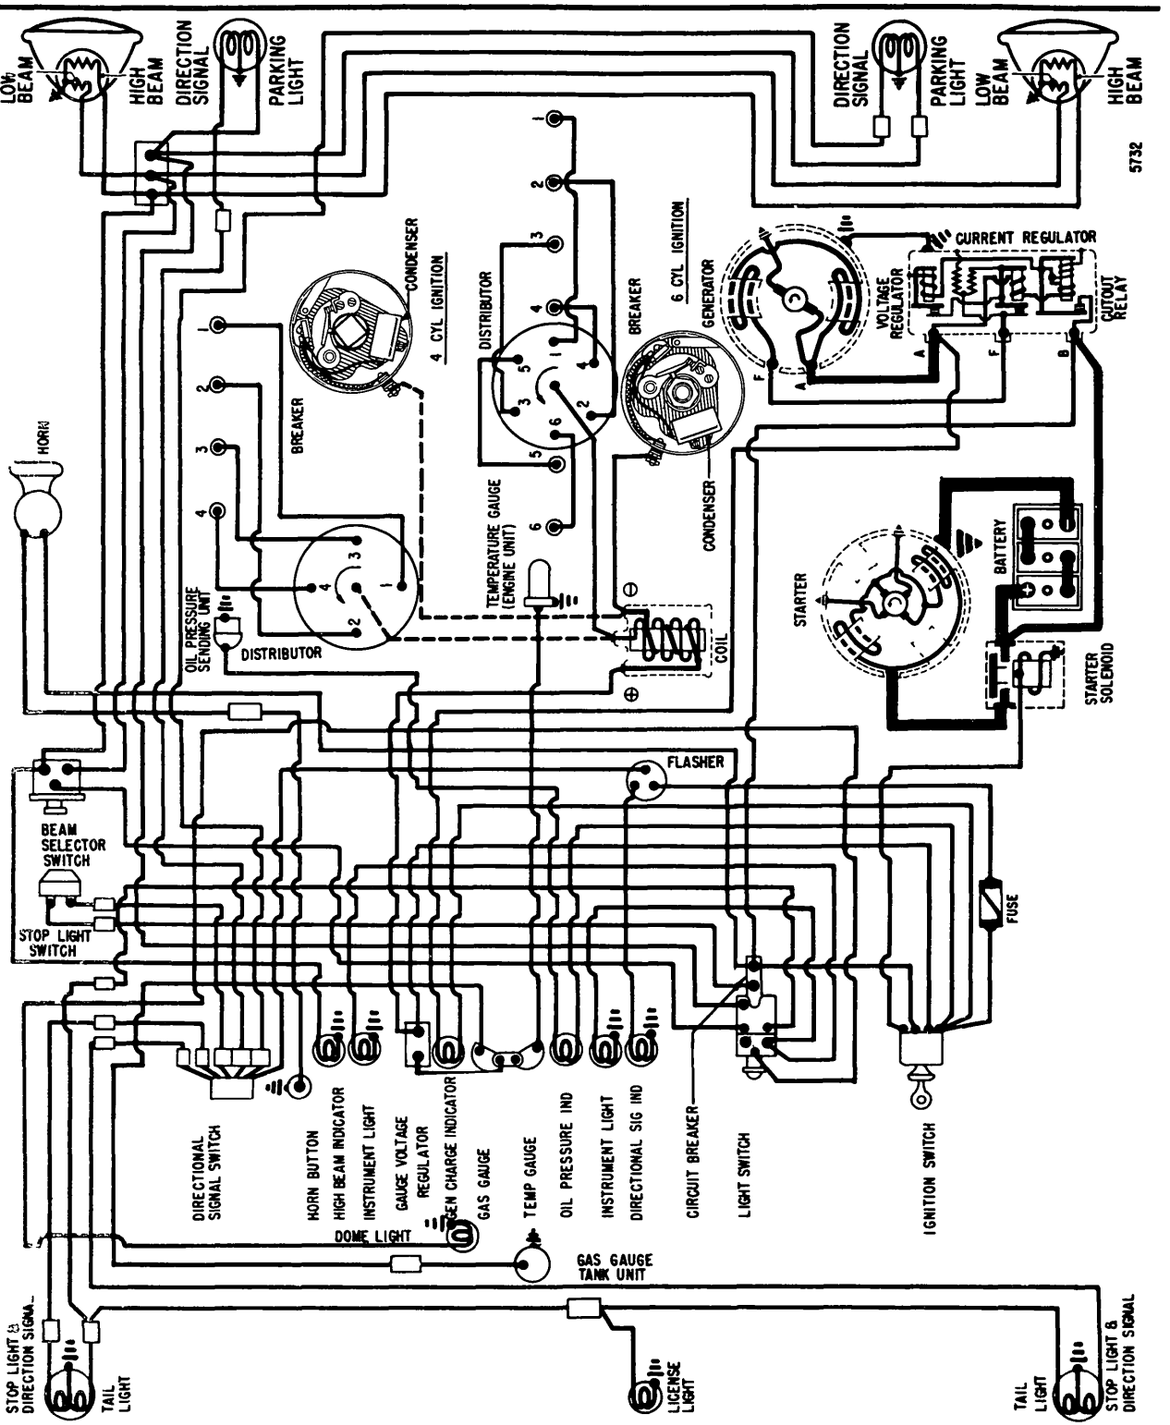
Starting Switch· Auto-Lite SST-4012 (MCH-6203), Key starting (Magnetic switch controlled by turning key past "Ignition On" position) Auto-Lite SW-4015A (MCH-6207) Foot operated

GENERATOR

Aut -Lite GGW-4801D (4 Cyl.), GGW-4801EN (6 Cyl.).
Armatur - Auto-Lite GGW-2006F (All Cars)

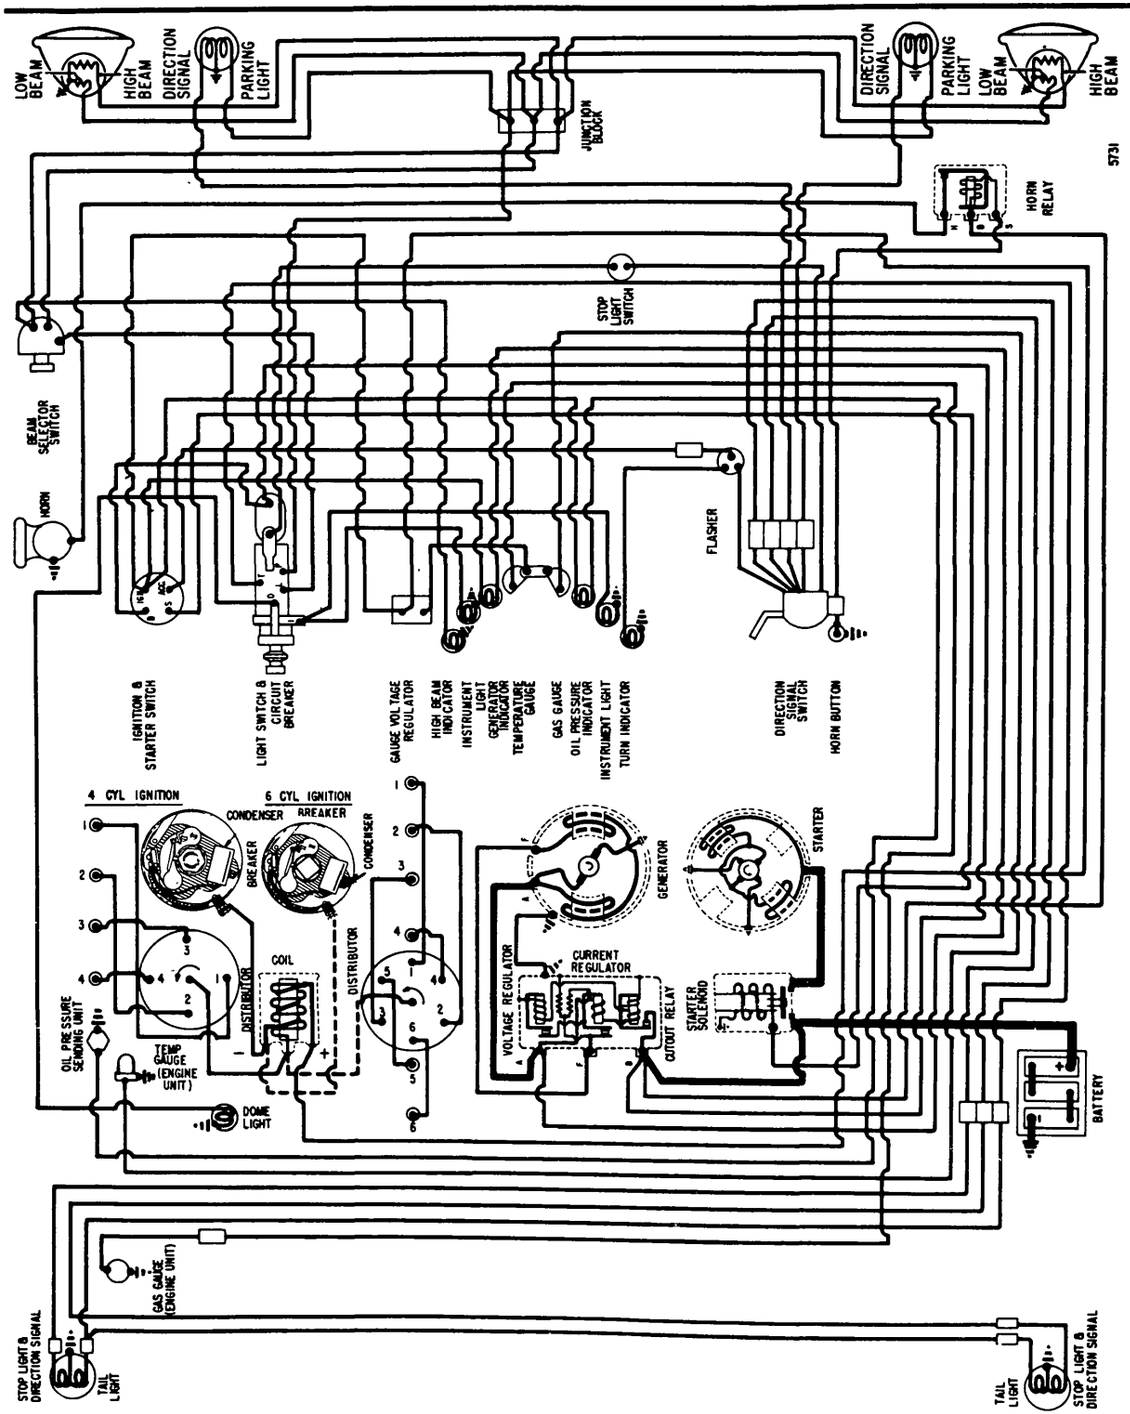
Performance Data

Amperes	Volts	Cold	RPM	Hot
0	6.4	870-970		950-1050
40.0	8.0	1800-2000		2150-2350
45.0	8.0	1925-2125		2350-2550



Brush Spring T nsi n—35-53 ozs.
Fi ld Curr nt - 1.6-1.7 amperes at 5.0 volts.
M toring Curr nt - 5.0-5.5 amperes at 5.0 volts.
Rotati n—Counter-clockwise at commutator end.
Belt Adjustm nt: ½-5/8" deflection with thumb pressure midway between generator and pump pulleys

REGULATOR



Aut -Lit VBE-6105A. Voltage & Current type with "Temperature Compensated" Current Regulator

Cut ut Relay
Cuts In—6.3-6.8 Volts (set to 6.4-6 6 volts).
Cuts Out—4.1-4.8 Volts (4.6 amps.discharge).
C ntact Gap— 015" minimum
Air Gap— 031-.034" with contacts open (check at hinge end of core). **Voltag Regulator**
Setting - 7.2-7.5 volts at 70°F after 15 minutes operation charging at 10 amperes.
Air Gap - 048-052" with contacts just touching.
Ch cking & Adjusting - *Se "Auto-Lit 6-Volt Regulators" in El ctrical S ction.*

Model	Bore	Str k	Displac m nt
F4-134 (All)	3.125"	4.375"	134.2 cu. ins.

Model	Compr. Ratio	Rat d HP	D v l ped HP
F4-134 4x2	7.4-1①	15.63	75 at 4000 RPM
F4-134 Others	6.9-1②	15.63	72 at 4000 RPM

① - 7.8-1 Optl. ② - 7.4-1 Optl.

Compression & Vacuum Reading–*See "TUNE-UP" above.*

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following:
"A" .010" main & connecting rod journals Undersize.
"B" .010" cylinder bore and pistons Oversize.
"AB" both above conditions exist.

CYLINDER HEAD & GASKET INSTALLATION: *See Willys Special Data.*

TIGHTENING TORQUES: *See Willys Special Data.*

PISTONS

Aluminum alloy, cam ground, T slot, Tin or Brass plated.

►*PISTON OVERSIZE NOTE:* Letter "B" or "AB" following engine number indicates that cylinder bore and pistons are .010" Oversize.
W ight–13.5 ozs.
R m val–Pistons & Rods removed from above.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fitting New Pist ns: Place 003" x 3/4" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove ribbon feeler should be 5 to 10 lbs.

R plac m nt Pistons: Std. and .010", .020", .030" and .040" Oversize.

Installing Pistons: "T" slot toward valve (left side) of engine (opposite side from oil spray hole in connecting rod lower end).

PISTON PINS

Locked in rod with clamp screw.

Diam t r- .8118-.8120". **L ngth-**2-25/32".

Clearanc in Pist n-.0002-.0004". Thumb push fit at 70° F.

Replac ment Pins: No oversizes available.

PIST N RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	002- 004"
Compr #2	3/32"	.007-.017"	.0015- 0035"
Oil	3/16"	.007-.017"	001- 0025'

Replacem nt Rings: (F r rebored cylinders)—Furnished .010", .020", .030" and .040" Oversize.

Servic Type Rings—(For Cylinders not Rebored)—Furnished Std. (.000-.009"), .010" (.010-.019"), .020" (.020-.029"), .030" (.030-.039"), .040" (.040-.049") Oversize.

Installing Rings· Install compression rings with mark "Top" (on side) toward top. Rings have tapered face and must be installed correctly. Top ring inner bevel edge must be up.

CONNECTING RODS

L ngth (Center t Center) - 9.1845-9.1905. **Weight** - 32 ozs.

Crankpin J urnal Diamet r - 1.9375".

►*JOURNAL DIAMETER UNDERSIZE NOTE.* The letter "A" or "AB" following the engine number indicates that main and connecting rod journals are .010" Undersize.

B arings—Steel backed babbitt.

Clearanc - 0001- 0025"

Sid Play - 004- 010"

Replac m nt Bearings: Std., 010", .020" & 030" Undersize

Installing R ds: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), and toward rear (#2, 4). Oil spray hole in lower rod bearing toward right of engine (away from camshaft) on all rods.

CRANKSHAFT

J urnal Diam ter—2.3341-2.3331". All main bearings.

►*JOURNAL DIAMETER UNDERSIZE NOTE:* The letter "A" or "AB" following engine number indicates that main and connecting rod journals are .010" Undersize.

B arings—Steel backed babbitt.

Clearance—.0003-.0029".

Replacem nt B arings: Std , 010", 020" & 030" Undersize

Crankshaft S rvicing: *See "Crankshaft & Main B arings" in Willys Sp cial Data.*

End Thrust: Taken at #1 main bearing. Shims between crankshaft thrust washer and shoulder on the crank. Endplay—.004-.006".

Crankshaft Rear Main Bearing Oil S al: *See "Crankshaft & Main B arings" in Willys Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 2.1860-2.1855", **(2)** 2.1225-2.1215", **(3)** 2.0600-2 0590", **(4)** 1 6230-1 6225".

Bearings—#1 steel backed babbitt. #2, 3 & 4 cast iron.

Clearance—.001-.0025".

End Thrust: Taken by thrust plate behind camshaft gear Endplay controlled by spacer between camshaft gear and shoulder on shaft Endplay can be increased by installing shim between spacer and shaft, or decreased by dressing off spacer *NOTE* - Inner beveled edge of spacer must be toward crankcase

End Play—.004-.007".

Camshaft Servicing: *See "Camshaft & Bearings" in Willys Special Data.*

Timing Gears: Crankshaft gear, steel. Camshaft gear, fibre with steel hub.

Camshaft Setting: Mesh marked tooth of camshaft with marked space (between teeth).

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Willys Special Data.*

VALVES

Tappet Clearance: Intake .018", Exhaust .016" Cold.

Valve	Head Diameter	Stem Diameter	Length
Intake	2"	.3733-.3738"	4.781"
Exhaust	1-15/32"	.371-.372"	5 909"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.260"	.0007-.0022"
Exhaust	45°	.351"	.0025-.0045"

►*EXHAUST VALVE NOTE* Thompson Valve Rotators used.

Valve Seat Width—3/64".

Valve Springs: Install with closed coil upward toward block (Exhaust), down towards head (Intake).

Free Length—1 31/32' (Intake), 2½ (Exhaust)

Valve Spring Specifications

Valve	Intake	Exhaust
Closed	73 lbs at 1 21/32"	53 lbs at 2 7/64"
Open	153 lbs at 1 13/32"	120 lbs at 1¾"

Valve Guides. Use Tool W-177 to remove and install guides. Drive Exhaust guide down into valve compartment to remove. Drive new Exhaust guide to 1" below surface of cylinder block and new Intake guide flush with bottom of valve guide bore in cylinder head.

Rocker Arm Assembly Removal *See "Valve System" in Willys Special Data.*

Valve Lifters Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

Diameter—.6240-.6245". **Clearance**—.0005-.002".

►*NOTE.* Camshaft must be removed for lifter removal.

VALVE TIMING

See "Camshaft Setting" under "CAMSHAFT" above.

Intak Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

Valv Timing Check—Set Intake valve clearance at .026". Rotate engine clockwise until No. 1 cylinder is ready for intake stroke. Intake opens 9° BTDC. Note the distance between TDC and the 5° mark and estimate 9° from this distance. With the crankshaft in this position timing is correct if lifter is just tight against valve stem.

ENGINE

4 CYL. "L" HEAD

Model	Bore	Stroke	Displacement
L4-134	3.125"	4.375"	134.2 cu. ins.
Model	**Compr. Ratio**	**Rated HP**	**Developed HP**
L4-134	6.48-1	15.63	60 at 4000 RPM

►*OTHER ENGINE DATA See "4 Cyl. "F" Head" above and note the following differences*

►*ENGINE NUMBER NOTE Letters stamped after engine number denote the following*

"A" - .010" undersize main & connecting rod bearings.
"B" - .010" oversize cylinder bore.
"AB" - Both above conditions exist.
"C" - .002" undersize piston pin.
"D" - .010" undersize main bearing journals only.
"E" - .010" undersize connecting rod bearing journals only.

VALVES: Tappet Clearance - .016" Cold (Intake & Exhaust).

Valve	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	5 51/64"
Exhaust	1 15/32"	.3715"	5 51/64"
Valve	**Seat Angle**	**Lift**	**Stem Clearanc**
Intake	45°	.351"	.0007-.0022"
Exhaust	45°	.351"	.0025-.0045"

Valve Seat Width - 3/64".

Valve Springs: Free Length - 2½".

Valve Spring Specifications

Valve	Intake	Exhaust
Closed	53 lbs. at 2 7/64"	53 lbs. at 2 7/64"
Open	120 lbs. at 1 3/4"	120 lbs. at 1 3/4"

Valve Guides: Use W-177 to remove and install guides. Drive guides into valve compartment to remove. Drive new exhaust guide to 1" below surface of cylinder block and new intake guide 1 5/16" below surface of cylinder block.

Valve Timing Check: Set No. 1 cylinder intake valve tappet clearance to .020" for check. After check made, reset No. 1 cylinder intake valve tappet clearance to a running clearance of .016".

ENGINE

6 CYL. "L" HEAD

Model	Bore	Stroke	Displacement
L6-226	3.3125"	4.375"	226.2 cu. ins.

③ - 7.3-1 Optl.

Compression & Vacuum Reading—See *TUNE-UP above.*

►*ENGINE NUMBER NOTE* Letters following engine number denote the following

"A" .010" Undersize main and connecting rod journals.
"B" .010" Oversize cylinder bore and pistons.
"AB" Both above conditions exist.

CYLINDER HEAD & GASKET INSTALLATION· *See "Cylind r Head & Manif lds" in Willys Sp cial Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

TIGHTENING TORQUES: *See "Tight ning Sp cifi- cati ns" in Willys Special Data*

►*FILLER BLOCK-OIL PAN OIL SEAL PRODUCTION CHANGE (To Prevent Oil Leakage Between Filler Block & Oil Pan).* Neoprene oil seal, Part No. 910220, was placed in early production and is available for installation on earlier models. Replaces earlier type cork seal. To install new seal, coat inner surfaces of filler block grooves with gasket cement. Install gaskets in grooves evenly centered so each end extends 1/16" above faces of filler block ends. Do not trim off ends. Install filler blocks, dust gaskets with graphite and install oil pan.

PISTONS

Aluminum alloy, steel band, T-slot Cam Ground. Tin Plated.

►*PISTON OVERSIZE NOTE* Letter "B" or "AB" following engine number indicates that cylinder bore and pistons are .010" Oversize.

Weight–15.312 ozs. Less rings and pin.

Removal–Pistons and rods removed from above.

Fitting New Pistons: Place 0015" x 1/2" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove feeler should be 5 to 10 lbs.

Piston Replacement–Std., .010", .020", .025 .030", 040", 050", and .060" Oversize

Installing Pistons. Slot in skirt toward left or away from camshaft.

PISTON PINS

Floating type with lock ring at each end.

Diameter - .8591-.8593". **Length** - 2.779".

Clearance in Piston - .0002" Selective fit. Push fit at 160°F.

Clearance in Rod - .0002-.0006". Press fit.

Replacement Pins: Std. .003" and .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (Upper)	.0930-.0935"	.008-.016"	.002-.004"
Compr. (Lower)	.0930- 0935"	.008-.016"	.003-.007"
Oil (Top ring)	.1545-.1550"	.008-.016"	.006-.010"
Oil (Bottom ring	.1545-.1550"	.008-.016"	.0025-.004"

Replacement Rings: Ring sets and single rings furnished in following sizes for oversize ranges indicated Std. (Std.-.009"), .020" (.010-.029"), .030" (.030-.039"), .040" (.040-.049"), .060" (.050-.069").

Installing Rings. Side marked "Top" (compression rings) upward. Chrome plated ring must be installed in top (#1) ring groove.

CONNECTING RODS

Length–6.998"- 7.002" (Center to center).

Crankpin Journal Diameter–2.0619 - 2.0627".

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AB" following engine number indicates that the main and connecting rod journals are .010" Undersize.

Bearings–Steel Backed Babbitt.

Cl arance - .0018" maximum. **Sid play** - .006- 011"

Replacem nt B arings Std. and .001", .002", .010" and .012" Undersize.

Installing Rods· Mark rods and bearing caps. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. *NOTE*–Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 forward), (#2, 4, 6 toward rear).

CRANKSHAFT

Journal Diameter–2.3744-2.3752".

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AB" following the engine number indicates that the main and connecting rod journals are .010" Undersize.

Bearings–Steel Backed Babbitt.

Clearance - .0007-.0020"

Replacement Bearings Std. and .001", .002", 010" and .012" Undersize.

End Thrust Taken by #4 rear main bearing which is flanged type.

End Play– 002-.006".

Rear Bearing Oil Seal Installation *See "Crankshaft and Main Bearings" in Willys Special Data.*

CAMSHAFT

Journal Diameters–(1) 1.8725-1.8735". (2) 1.8095-1.8105". (3) 1.7472-1.7485". (4) 1.2475-1.2485".

Bearings–Steel Backed Babbitt.

Clearance–.001-.003".

End Thrust Taken by thrust plate on front of engine (between front bearing journal and hub of sprocket)

End Play–.003-.007".

Camshaft Servicing: *See "Camshaft & Bearings" in Willys Special Data*

Timing Chain Non-adjustable type. Width 1". Pitch .500". Length 23" or 46 links.

►*TIMING CHAIN CAUTION Morse and Link Belt chains used. Chains and sprocket interchangeable only in COMPLETE SETS*

Camshaft Setting. Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Willys Special Data*

VALVES

Tappet Clearance: Intake and Exhaust .014" Cold.

►*TAPPET CLEARANCE ADJUSTMENT PROCEDURE: See "Valve System" in Willys Special Data*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 520"	3402-.3410"	5.187"
Exhaust	1 328"	.3382- 3390"	5.205 '
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30°	284"	001- 003"
Exhaust	45°	284"	0032- 0050"

Valve Seat Width 5/64-3/32" (intake), 3/32-7/64" (exhaust).

NOTE–Rotators used on Exhaust valves.

Valve Guides Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides to inside diameter of 3432-3422".

Replacem nt Guid s–Std., .0005" (marked "A"), .0055" (marked "L") to insure .0005-.003" press fit.

Guid Installation–Place guide (tapered end of guide toward top) in position in bore and drive in to correct position of 1-7/32" below top face of cylinder block.

Valv Springs: Intake & Exhaust valve, spring interchangeable

Free Length–1-31/32".

Valve Spring Sp cifications

Valve	Lbs. Pr ss.	L ngt
Closed	51	1.672'
Open	118	1.312

Valve Lifters: Mushroom type with self locking adjusting screws.

Diameter–.6855-.6860".

Clearance–Selective fit. Lifter should rotate in bore with slight drag. Service by installing oversize lifter.

Replacement Lifters–Furnished in Std. and the following oversizes marked as indicated "B" is .001", "D" is .002", and "K" is .005" O.S.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE:* **Specifications are with tappet clearance as follows Intake 018", Exhaust 020"**

Intake Valves - Open 2° BTDC Close 42° ALDC

Exhaust Valves - Open 42° BLDC Close 8° ATDC

Valve Timing Check–With .020" tappet clearance, #1 exhaust valve should close with piston 10° or .045" after top dead center with ten-degree mark, after top dead center "0" mark on dampener aligned with pointer at front of engine. Reset tappet to .014" clearance COLD.

OILING SYSTEM

►*ENGINE OILING SYSTEM· See "Engine Lubrication" under OILING SYSTEM in Willys Special Data*

Crankcase Capacity: (4 Cyl) 4 qts , (6 Cyl) 5 qts (refill)

Normal Oil Pressure: 35 lbs at 2000 RPM (4 Cyl), 1700 RPM (6 Cyl)

Pressure Regulator - In pump housing (4 Cyl), right side of cylinder block below valve chamber to rear of engine (6 Cyl)

Oil Pressure Indicator (Jeeps & Dispatch r): Red telltale light in instrument cluster operated by oil pressure switch, King-Seeley No. 47150 Light comes on when ignition switch turned on and goes out when oil pressure reaches 6 lbs.

Oil Pressure Indicator (Others): King-Seeley "CV" (Constant Voltage) electric type with gauge voltage regulator

Dash Unit - King-Seeley No 45729

Engine Unit - King-Seeley No 44030

See "Oil Pressure Gauges" in Misc llan ous S ction.

Oil Pump: Rotor type on left side of engine (4 Cyl), gear type attached to rear intermediate main bearing (6 Cyl)

Pump Overhaul - *See "Oiling Syst m" in Willys Special Data*

Oil Filter: Located on bracket attached to cylinder head (4 Cyl) On bracket on left side of cylinder head (6 Cyl)

Crankcas V ntilati n: (4 Cyl) See Crankcase Ventilator above (Others) Filter in oil filler cap and outlet tube from crankcase ventilator baffle on valve side cover

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Wat r Capacity: (FC-150) 10 qts (FC-170) 11 qts (Other 4 Cyl) 11 qts (Other 6 Cyl) 12 qts Add 1 qt for heater

Pr ssure Valv : (FC-150 170) 9 lbs (Other 4 & 6 Cyl) 7 lbs Radiator filler cap

Th rm stat: Harrison In water outlet elbow in cylinder head Opens at 163-168°F

Wat r Pump· Centrifugal packless ball bearing type S *"Wat r Pumps" in Willys Special Data*

►*FC-150 FAN PULLEY NOTE:* Install fan pulleys on both water pump and fan shaft assemblies with offset to front of engine to eliminate interference with generator pulley Adjust fan belt to ¼-½" deflection with light thumb pressure by pulling shaft housing to right side of frame

T mp ratur Gaug : King-Seeley "CV" (Constant Voltage) type FC-170 has Voltage Regulation contained within Gauge Other models have separate Voltage Regulator

King-Se l y No.	Dash Unit	Engine Unit
DJ-3A, CJ-5, 6, 3B	49454	44230
Other 4 Cyl	45734	44230
6 Cyl (Exc FC-170)	45734	44214

S *Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Auburn 8501-39, R ckford 8½ RM, Borg & Beck 9A7 & 10A7. Single plate types Used as follows

4 Cyl. (All) - Auburn 8501-39 or Rockford 8½ RM 8½"

6 Cyl. Utility (4x2) - Borg & Beck 9A7 Assy No 951

6 Cyl. Utility (4x4) & Trucks (4WD) - Borg & Beck 10A7 Assy No 360982

S e Clutch S cti n f r complete data

Clutch Disc - (4 Cyl) B & B No 382298 (6 Cyl 4x2) B & B No 381929, (6 Cyl 4x4 & 4WD) B & B No 381806

Pedal Adjustment: 4 Cyl. (Exc. Trks. & Sta Wgns). 1½" pedal freeplay To adjust freeplay loosen yoke locknut on cable between throwout lever and cross shaft lever and turn cable

4 Cyl. (Trks. & Sta. Wgns. exc. FC-150) - 1½" pedal freeplay To adjust loosen locknut on adjusting rod (between clutch control lever and clutch control tube lever) and turn adjusting nut to increase or decrease rod length

6-226 Mod ls (Exc. 4x2 and FC-170) - 1" pedal freeplay To adjust, loosen locknuts on pedal adjusting rod turn nuts forward to increase or backward to decrease freeplay

6-226 (4x2) - 5/8-3/4" pedal freeplay Adjustment same as other 6-226 models

FC-150 & FC-170 -½" pedal freeplay To adjust loosen locknut on cable between clutch pedal and cross shaft lever and adjust length of cable

►*FC-150 CLUTCH PEDAL MODIFICATION* Late model FC 150 clutch pedals have approximately ¼" stock at extreme upper end which contacts pedal stop On pedals with ½" stock at this point grind off ¼" of stock to give pedal longer stroke to insure adequate clutch plate separation Reset cable length to obtain correct pedal freeplay *NOTE* - To remove lever loosen left headlight and move forward Separate heater blower wire if necessary Remove lever assembly from bracket and cable from lever

SYNCHRO-MESH TRANSMISSION

4 WHEEL DRIVE

Warner. Three speed type Constant mesh synchro-mesh helical gears (second and high) sliding spur gear (low and reverse) Used as follows

Model	Warner No.
Jeep	T90C
F4-134	T90C
6-226	T90J
FC-150 (3-speed)	T90A
FC-170 (3-speed)	T90J

NOTE - 4-speed Optional on FC-150 & FC-170

See "Warner Transmission" in Transmission Section

►*VIBRATION CORRECTION (4x4 Utility Models "Coasting Down Hill" with closed throttle)* May be due to endplay in transfer case output shaft. To correct, remove shims from between rear bearing cap and transfer case housing, so that when bearing cap is pulled up tight against case, endplay in shaft and bearings is just eliminated Shims are in sets consisting of four 003", two 010', and two 031" *CAUTION* - Output shaft must roll freely by hand **after** bearing capscrews are tightened securely.

►*TRANSFER CASE SHIFT LINKAGE CAUTION (FC-150)* Attach linkage lever to outer hole (two in shift rod nearest transmission) to eliminate hard transfer case shifting For correct linkage adjustment *See "Transfer Case" in Transmission Section*

►*TRANSFER CASE OPERATING LEVER VIBRATION ON ACCELERATION OR DECELERATION CORRECTION* When light hand pressure (either forward or backward) minimizes vibration insulate transfer case lever shaft brackets from body panel *See 'Transmission Notes" in Willys Special Data*

►*TRANSFER CASE OUTFUT SHAFT OIL LEAKAGE CORRECTION* Install additional seal Part No 811687 on both ends of output shaft in addition to standard seal seal guard and seal retainer New seal goes between seal retainer and seal guard

►*FOUR SPEED TRANSMISSION LUBRICATION CAUTION* Since there is no passage between 4-speed transmission and transfer case it is necessary to check fluid level at both transmission and transfer case fill points Fluid capacity is 4-Speed Transmission - 6¾ pints Transfer Case 3½ pints

Transfer Case· Spicer Model 18. Two speed auxiliary transmission and front wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front wheel drive engagement (left hand lever).

See Transmission Section for complete data.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

R moval· (4 Whl. Drive) Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints *(NOTE*–If equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, and clutch release cable at cross shaft bell crank (Jeep), Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers *(NOTE*–If Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member *(CAUTION* -With cross-member removed, engine and transmission weight will rest on support jacks). Remove bolts holding transmission on bell housing, force transmission to right until ball stud end can be disengaged from end of clutch control cross shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

2 WHEEL DRIVE

Warner. Three speed type Constant mesh synchro-mesh, helical gear (second & high) sliding spur gear (low & reverse) Used as follows

Model	Warner Type
Jeep Dispatcher	T90
F4-134	T96
6-226	T86

See "Warner Transmissions" in Transmission Section

►*HARD SHIFTING, SHIFTING INTO TWO GEARS OR JUMPING OUT OF GEAR CORRECTIONS* For trouble shooting above difficulties on 2-wheel drive models *See "Transmission Notes" in Willys Special Data*

Transmission Control· Remote control type with gear-shift lever on steering column. *See "Transmission Controls" in Transmission Section.*

Removal: (2 Whl. Drive) Remove floor boards, take off bell housing inspection cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine support bolts from cross-member under transmission case, raise rear end of engine so transmission clears cross-member *(CAUTION* –Use care that fan blades do not damage radiator). Remove transmission bell housing bolts, pull transmission straight back to clear clutch shaft, remove from car.

OVERDRIVE

Warner R10. *See "Warner R10" in Transmission Section.*

Overdrive Control· *See "Warner R10 & R11 Overdriv Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (2 Wheel Drive above) after disconnecting control cable and wiring.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

2 WHEEL DRIVE

Spicer. Cross type. One at each end of propeller shaft.

4 WHEEL DRIVE

Drive Shaft Joints - Spicer. Cross type. One used at front and rear of both front and rear propeller shafts.
Front Axle Shaft Joints - Rzeppa. Constant velocity type. One joint used at outer end of each shaft (within steering knuckle housing).
See "Universal Joints" in Willys Special Data.
Power Take-off Shaft Joints - Detroit Ball-and-Trunion type. Two used (one at each end of shaft - no splined joint used).

FRONT AXLE

4 WHEEL DRIVE

Spicer Model 44(FC-170), Model 25(All Others). Full floating, Hypoid gear type. Differential assembly (ring and pinion gear assembly) is serviced in same manner as Spicer Rear Axles.
See "Spicer" in Rear Axle Section.
Ratio - (F-134, FC-150) 5.38-1; 6-226 (4x4) 4.27-1, (4WD & FC-170) 4.88-1. *NOTE* - FC-170 Optional Ratios - 4.27-1, 5.38-1

Removal: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear end of springs and lower springs, remove axle assembly from beneath car.

Axle Shaft & Universal Joint Assy. Removal: Remove wheel, hub cap, axle shaft nut and washer. Take out drive flange cap screws and remove flange with puller, (*CAUTION*–do not lose shim pack under drive flange). Bend lip of bearing adjusting nut lockwasher out, remove locknut, lockwasher, adjusting nut, and bearing locking washer. Remove wheel hub and bearing assembly.((*CAUTION*–use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal joint assembly out.

Wheel Bearing Adjustment: Tighten inner adjusting nut until wheel binds (turn wheel while adjusting), then back nut off 1/6 turn, install lockwasher, locknut, and make certain nut locked by turning lockwasher ear up.
Axle Shaft End Play–No adjustment. Shims (.060") between driving flange and wheel hub establish correct endplay.

St ering Knuckle Bearing Disassembly & Adjustment: *See "Front Axle" in Willys Special Data.*

REAR AXLE

Spicer. Hypoid Semi-floating with Hotchkiss drive.

►*NOTE:* 6 Cyl. 4WD may have Timken Spiral Bevel as alternate equipment.

Mod l	Spic r No.
DJ-3A	25
F4-134 & 6-226 (4x4), FC-170	53
All Other Models	44

S "Spic r Hypoid Semi-floating" in Rear Axl Section.

►*"POWER-LOK" DIFFERENTIAL:* Optl equipment. Can be installed on vehicles not so equipped (Axle shafts must be replaced if they do not have involute splines). *See "Spicer Power-Lock Differential" in Rear Axle Section.*

►*POWER-LOK DIFFERENTIAL CAUTION: DO NOT use the engine to spin a rear wheel with one wheel raised off the ground. Always remove rear wheels when balancing them.*

►*AXLE SHAFT GREASE RETAINER PRODUCTION CHANGE:* Use only new axle shaft grease retainer Part No. 914802 to correct grease leaks.

►*RING GEAR BOLT LOCKING STRAP NOTE:* Replace drive gear screws and install locking straps when overhauling early production ring gear assemblies. Late type have locking straps.

Axle Ratios

Model	Std.	Optl.
F-134 (4x4,4WD)	5 38-1	.
F-134 (4x2)	4 89-1	5.38-1
DJ-3A	4 56-1	
FC-150, CJ-5, 6, 3B	.5.38-1	
6-226 (4x4, 4x2) Ⓒ	4 27-1	4 89-1 or 5 38-1
6-226 (4WD), FC-170	4.88-1	4,27-1 or 5 38-1

Ⓒ - With Overdrive 4,89-1 (Std), 5 38-1 (Optl.).

Axle Shaft Removal (Semi-floating Axle): Remove axle shaft nut, then use puller to remove wheel hub. Remove bolts retaining dust shield, grease and bearing retainers, and brake assembly. *CAUTION* - Do not disturb backing plate. Remove shield and retainer then pull axle shaft, being careful not to lose adjusting shims.

Rear Axle Assembly Removal: Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs. Remove axle assembly from beneath car.

Wheel Bearing Adjustment: End Play .003-.007". Adjust by adding or removing shims between backing plate and axle housing flange at each wheel. See "Axle Shaft Removal" above.

SHOCK ABSORBERS

Monroe or Gabriel. Direct acting type.

FRONT SUSPENSION

2 WHEEL DRIVE

Conventional I-Beam with Reverse-Elliot ends and semi-elliptical springs.
Kingpin Inclination - 7°30'.
Caster - 3°. **Camber** - 1° (Dispatcher), 1°30' (Others).
Toe-In - .047-.094".
Toe-Out on Turns - Outer wheel 20°, inner wheel 22°.

4 WHEEL DRIVE

Special front wheel drive unit with semi-elliptical springs. Steering knuckle mounted on taper roller bearings carried on two stub shafts.
Kingpin Inclinati n - 7½°.
Cast r - 3° **Camber** - 1½° **T -In** - 047- 094".
T -Out n Turns -Outer wheel 20°, Inner wheel should be 20° (Exc. Jeep), Jeep 22°.

►*OTHER DATA: S e "Front Axl " in Willys Special Data.*

STEERING

Ross. Cam and Twin Lever type.
See "Ross Cam & Twin Lev r" in St ring S ction.
Steering Linkage: *See "Ste ring Linkage" in Steering Section.*
Steering Wheel & Horn Button R m val: *S "R ss Cam & Twin Lever" in Steering S ction.*
Steering Gear Removal: *See "Ross Cam & Twin L v r" in Steering Section.*

BRAKES

Bendix-Lockheed (Self-Cent ring). Hand brake applies rear service brakes(Exc. Univ. Jeep) Independent brake on drive shaft at rear of transfer case (Univ. Jeep). *NOTE* - Drive shaft brake optional on FC-150.
See "Bendix-Lockheed (Self-C nt ring)" in Brak S ction.

►*FC-150 HAND BRAKE BRACKET BREAKAGE CORRECTION:* Reweld bracket to Rail Reinforcement Assembly, then weld an additional reinforcement bracket between top of mounting bracket and Rail Reinforcement Assembly.

Drums - 9" (CJ-3B 5 6; DJ-3A), 11" (Others)

Wheel Cyl. Diameter -	Fr nt	R ar
CJ-3B,5,6,	1"	3/4"
DJ-3A	1 1/8"	13/16"
Others	1 1/8"	1"

Lining Length & Width

Model	Primary	Sec ndary
CJ-3B 5,6	10 7/32" x 1 3/4"	6 39/64" x 1 3/4"
DJ-3A	9 7/8" x 2"	7.11/16" x 1 3/4"
Others	12 1/4" x 2"	10 1/32" x 2"

Thickness - .206- 216" (CJ-3B,5,6); .214" (DJ-3A); 212" (Others).
Braking Power - Front 65%, Rear 35% (CJ-3B,5,6,DJ-3A); Front 57%, Rear 43% (Others).
Clearance - Tur n eccentric until shoe contacts drum, then back off until wheel turns freely.

Power Brake: Hydrovac Power Unit. Used with standard master cylinder.
See "Hydrovac Power Unit" in Brak S ction.

Parking Brake (Independent Typ): Be certain hand brake cable and linkage operate freely. Lubricate if sticking or binding is evident. Place brake handle on instrument panel to "OFF" position. Rotate brake drum until one pair of adjusting holes (three pairs located on back face of drum) is opposite the adjusting screws (notched wheels) within the brake. Insert a screwdriver or adjusting tool through hole and turn each adjusting screw equally until the brake shoes are snug against drum (*NOTE* - With tool against edge of hole as a fulcrum, move outer end of tool out away from center of driveshaft to expand shoes). **Back ff ach adjusting screw 7 notches** to provide correct shoe clearance.

MISC. MECHANICAL

Windshield Wipers: Vacuum type.
(Univ. J p) - Individual motors operate wiper arms.
(Oth r Mod ls) - Single motor operates wiper arms by cable control.
S "Windshield Wipers" in Misc llane us S ction.

►*ELECTRICAL EQUIPMENT NOTE 12-Volt system used on all models except EARLY Forward Control FC-150 & FC-170 Data on both 6-volt and 12-volt equipment are listed below*

ENGINE NUMBER: Located as follows:
4 Cyl. Engin s - Stamped on top of water pump boss at front of engine.
6 Cyl. Engine - Stamped on boss on left front corner of engine block above generator.
NOTE - Letters following engine number designate special cylinder bore and bearing oversizes or undersizes

TUNE-UP

COMPRESSION PRESSURE:	Pressure & Speed
4 Cyl "L" Head	90-110 lbs at 185 RPM
4 Cyl "F" Head	115-145 lbs at 185 RPM
6-226 "L" Head	120-130 lbs at 185 RPM

NOTE - Pressure in all cylinders should be uniform within 10 lbs

VACUUM READING: 18-21" steady at idling speed

TAPPET CLEARANCE:	Intake	Exhaust
4 Cyl "L" Head	016"	016"
4 Cyl "F" Head	018"	016"
6-226 "L" Head	014"	014"

NOTE - Set tappet clearance with engine COLD and not running

►*VALVE TAPPET ADJUSTMENT (FORWARD CONTROL MODELS)* Access panel provided in right front wheel housing for valve tappet adjustment Install jack stand under right frame rail remove right front wheel, remove wheel housing access panel (both sections of split panel), remove fuel pump and valve covers Tappet clearance can then be adjusted

MANIFOLD HEAT CONTROL: Used as follows—
4 Cyl. "L" Head. Thermostatic coil on manifold.
4 Cyl. "F" Head. Water jacketed intake manifold.
6-226 "L" Head. Exhaust heat from No. 3 & No. 4 cylinders enters heat chamber under intake manifold

IGNITION

FIRING ORDER: 1-3-4-2 (4 cyl.), 1-5-3-6-2-4 (6 Cyl.).

SPARK PLUG GAP: 030".
Spark Plug - Auto-Lite A7 or Champion J8. 14 mm. Torque to 28-30 ft. lbs.

COIL: Auto-Lite. *NOTE* Different coils used for 6-volt and 12-volt systems as follows

Model	6-Volt	Auto-Lite Coil No.
FC-150, FC-170		CR-6009
	12-Volt	
Sta Wgn & Trk (4 Cyl)		CAG-4002A
Sta Wgn & Trk (6 Cyl)		CAJ-4002A
Jeeps		CAF-4003

Ignition Current - (6 Volt) 2 5 amps idling, 5 amps at 6 3 volts stopped **(12 Volt)** 2 5 amps at 12 5 volts stopped

DISTRIBUTOR: Auto-Lite. *NOTE* - Same distributors used on both 6-volt and 12-volt systems as follows

IGNITION TIMING

Setting - 5° BTDC (All Models)
Timing Mark (All 4 Cyl Engines) - Notch on rim of crankshaft pulley and pointer on timing gear cover marked by two lines "T" (Top dead center) and "5" (5°BTDC) Align notch with "5" mark
(6 Cyl. Eng.). Align correct graduation with pointer on timing gear cover Damper marked "O" at TDC with 1° graduations before and after this point

CARBURETOR

►*FORWARD CONTROL FC-150 ACCELERATOR CONTROL ASSEMBLY (To prevent control wire breakage) See "Fuel System Notes" in Willys Special Data for correct assembly of control system*

►*FLAT SPOT OR STUMBLE CORRECTION (Vehicl s with Carter YF 938S, SA; 951S Carburetors): S e "Carter YF Carburetors" in Carburetion Section.*

Carburetor Application

Model	Carter Carb. N .
4 Cyl. "L" Jeep Dispatcher	YF 2392S
4 Cyl. "F" Univ Jeep	YF 938SA
4 Cyl. "F" 4X2, 4X4, 4WD	YF 951S
4 Cyl. "F" Fwd. Control	YF 938SA
6 Cyl. 6-226 "L" All	YF 2467 S

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idl Setting - ¾-1¾ turns open (938SA, 951S). ½-2 turns open (2392S), 1-2½ turns open (2467S). Turn screw out for richer mixture.

Idle Speed - 600 RPM (4 Cyl), 550 RPM (6 Cyl)

Float Level - (2392S, 2467S) 9/32" - Gauge T109-126, (938SA, 951S) 5/16" - Gauge T109-107. From top of float at free end to gasket seat on cover with assembly inverted and float resting freely on intake needle.

Fast Idle: With choke held in wide open position, lip on fast idle arm should contact boss on body casting.

► *OTHER DATA· See "Carter YF Carburetor" in Carburetion Section*

FUEL PUMP PRESSURE: (4 Cyl.) 2½-3¾ lbs. at 1800 RPM. (6 Cyl.) 3½-5½ lbs. at 1800 RPM.

CARB. EQUIPMENT

Fu l Pump: (4 Cyl) Carter M2195S, Fuel only (6 Cyl) Carter M957S, Fuel & Vacuum

Pressure - (4 Cyl) 2½-3¾ lbs at 1800 RPM, (6 Cyl) 3½-5½ lbs at 1800 RPM

See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: Stewart-Warner Electric type

See "Fuel Gauges" in Carburetion Section

CRANKCASE VENTILATOR

Sealed Positive Ventilation (4 Cyl.). Clean air is drawn into oil filler tube and rocker arm cover through a hose to the air cleaner All connections and gasket on filler tube must be air tight The crankcase is ventilated by a sealed system from air cleaner tube to intake manifold A valve is attached to valve spring cover in the line to air cleaner This valve must be free of carbon and operate freely at all times to obtain smooth idle Remove and clean valve every 5000 miles or more often if engine must run at idle speed excessively or is used for stationary power

6-VOLT ELECTRICAL SYSTEM

BATTERY

Auto-Lite or Willard Type 1-M-100. 6 volt 15 plate, 100 ampere hour capacity (20 hr rate)

Battery Ground - Negative

Engine Ground - Left front engine support (6-226), right front engine support (Others)

STARTER

Auto-Lite MCH-6203 (4 Cyl.), MCH-6210 (6 Cyl.)

Armature Auto-Lite MCH-2088 (All)

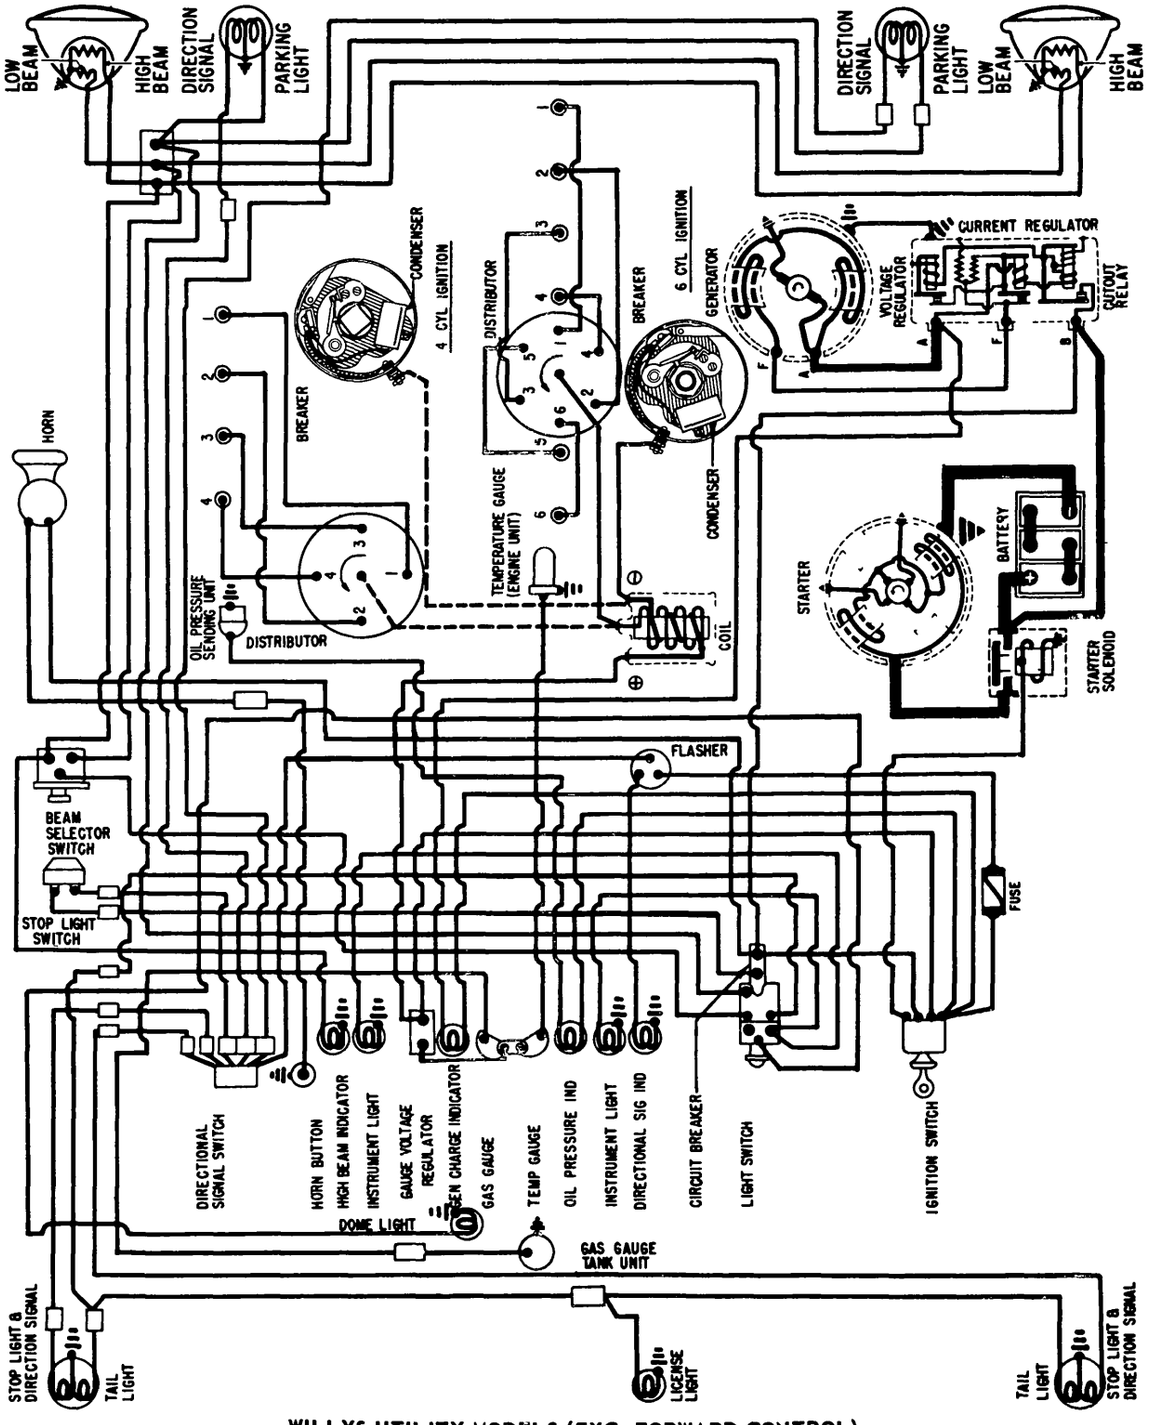
Drive - Bendix "Folo-Thru" type

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 42-53 ozs

Performance Data

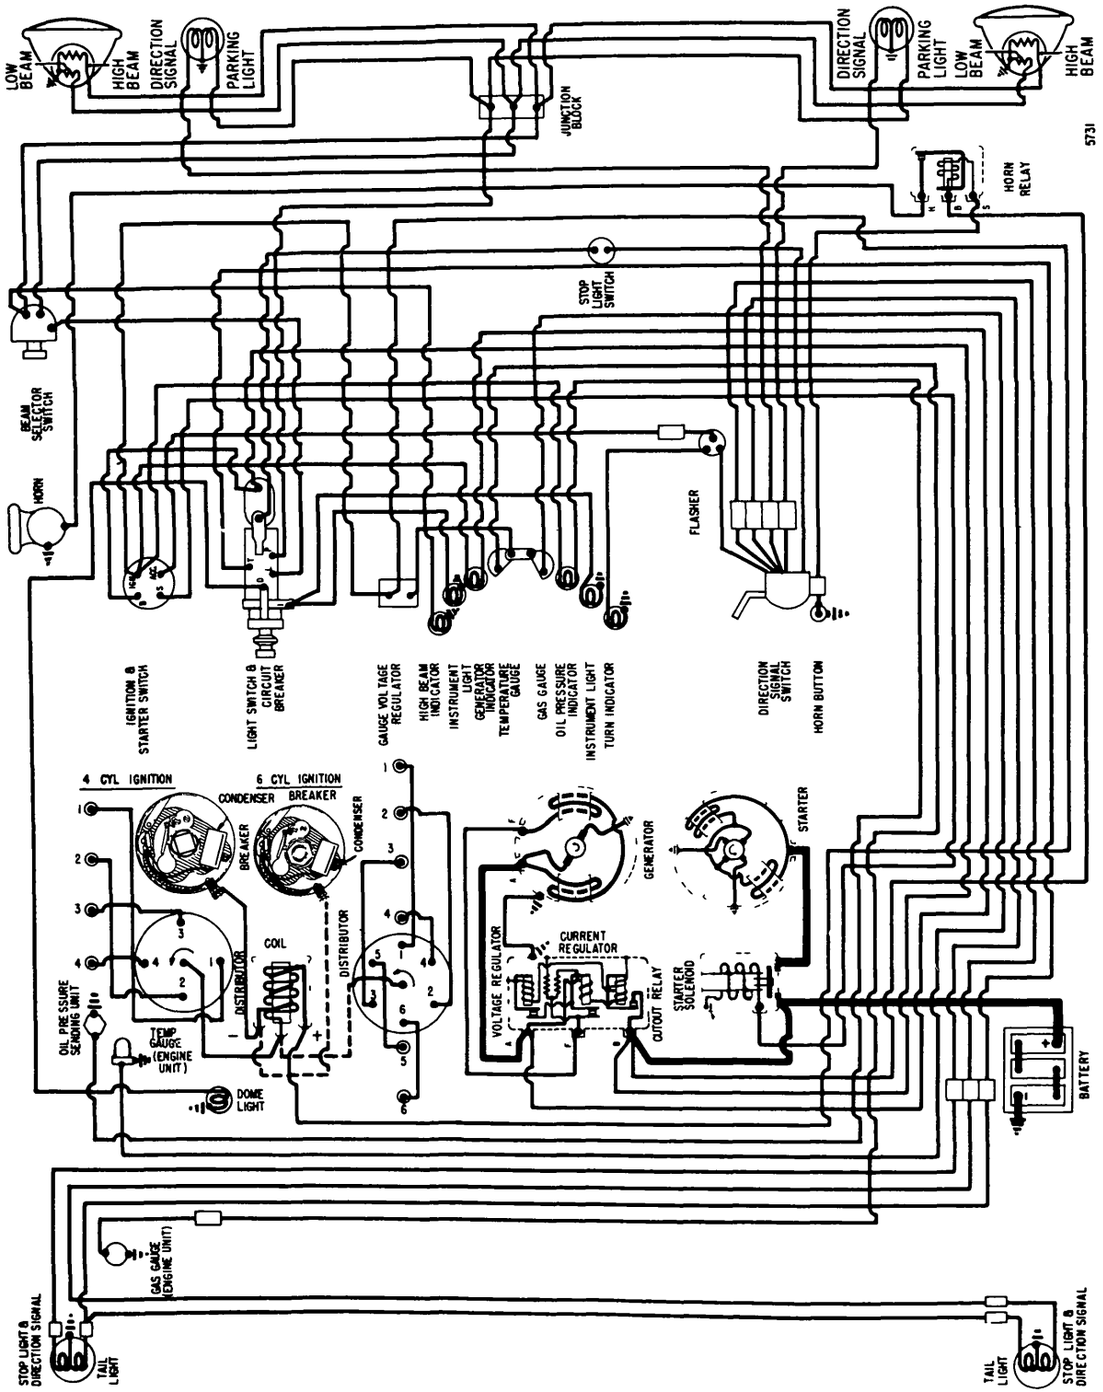
Torque	RPM	Volts	Amperes
0	4300	5 0	65
6 0	Lock	2 0	335



Starting Switch: Auto-Lite SST-4012 (MCH-6203), Key starting (Magnetic switch controlled by turning key past "Ignition On" position)

GENERATOR

Aut -Lit GGW-4801D (4 Cyl.), GGW-4801EN (6 Cyl.).



Armatur - Auto-Lite GGW-2006F (All Cars)

CONTINUED ON NEXT PAGE

WILLYS UTILITY MODELS (EXC. FORWARD CONTROL)

Form 37 A

WILLYS FORWARD CONTROL MODELS FC-150 & FC-170

CONTINUED FROM PRECEDING PAGE

Performance Data

Amperes	Volts	Cold	RPM	Hot
0	6.4	870-970		950-1050
40.0	8.0	1800-2000		2150-2350
45.0	8.0	1925-2125		2350-2550

Brush Spring Tension—35-53 ozs
Field Current - 1 6-1 7 amperes at 5 0 volts
Motoring Current - 5 0-5 5 amperes, 5 0 volts at 70°F
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: ½-5/8" deflection with thumb pressure midway between generator and pump pulleys

REGULATOR

Auto-Lite VBE-6105A. Voltage & Current type with "Temperature Compensated" Current Regulator

Cutout Relay

Cuts In—6.3-6.8 Volts
Cuts Out—4 1-4 8 Volts
Contact Gap— 015" minimum
Air Gap— 031- 034" with contacts open (check at hinge end of core)

Voltage Regulator

Setting—7.2-7.5 volts at 70°F *after 15 minutes operation charging at 10 amperes*
Air Gap - 048- 052" with contacts just opening (check at brass armature stop pin)
Checking & Adjusting - *See "Auto-Lite 6-Volt Regulators" in Electrical Section*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type Set to following specifications at 70°F.*

	Test A—Operating Amperes—	Test B
VBE-6105A	52	45 (43-47)

Test A - After 15 minutes operation charging at 10 amperes
Test B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6 7-6 9 volts)
Air Gap - 048- 052" with contacts just opening (check at brass armature stop pin)
Checking & Adjusting - *See "Auto-Lite 6-Volt Regulators" in Electrical Section*

12-VOLT ELECTRICAL SYSTEM

BATTERY

Auto-Lite 11-HS-50. 12 Volt, 9 Plate, 50 ampere hour capacity (20 hour rate)
Battery Ground - Negative
Engine Ground - Left front engine support (6-226), right front engine support (Others)

STARTER

Auto-Lite MDM-6005 (4 Cyl.), MDM-6006 (6 Cyl.).
Armature - Auto-Lite MDL-2048 (All)
Drive - Bendix "Folo-Thru" type
Rotation - Counterclockwise at commutator end
Brush Spring Tension - 31-47 ozs

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	4400	10 0	50
5 0 ft lbs	Lock	4 0	210

CONTINUED ON NEXT PAGE

Form 37 B

CONTINUED FROM PRECEDING PAGE

Starting Switch: Auto-Lite SAE 4005 (MDM 6005) Key starting (Magnetic switch controlled by turning key past "Ignition On" position)

GENERATOR

Auto-Lite GJC-7002J (4 Cyl.), GJC-7002K (6 Cyl.)

Armature - Auto-Lite GJC-2030F (All Models).

Performance Data

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0 -	15.0	2050-2250

Brush Spring Tension - 18-36 ozs.

Field Current - 1.2-1.3 amps. at 10.0 volts (70°F).

Rotation - Counterclockwise at commutator end.

Belt Adjustment: 1/2-5/8" deflection with thumb pressure midway between generator and water pump pulleys.

REGULATOR

Auto-Lite VRX-6009B. 12 Volt Voltage and current type with "Temperature Compensated" Current Regulator

Cutout Relay

Cuts In - 12.6-13.6 volts.

Cuts Out - 3.0 - 5.0 amps. discharge after a charge of **Contact Gap** - .015" minimum. **Air Gap** - .031-.034".

Voltage Regulator

Setting - 14.5 volts at 80°F, unit operating while charging at 10 amperes or with a .25 ohm resistor between regulator and battery.

Air Gap - .048-.052" with contacts just opening.

Checking & Adjusting - *See "Auto-Lite 12-Volt Regulators" in Electrical Section*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Test A	Operating Amperes	Test B
37 amps. max.		28-32 amps.

Test A - After 15 minutes operation charging at 10 amps.

Test B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).

Air Gap - 048-052" with contacts just opening

Checking & Adjusting - *See "Auto-Lite 12-Volt Regulators" in Electrical Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam *See Electrical Section*

Directional Signal: *See Electrical Section*

Lighting Switch Removal: Loosen set screw on side of control knob and remove knob Remove retaining nut and push switch through panel

Stop Light Switch Location: On brake master cylinder

CIRCUIT BREAKER: 30 ampere Thermal type on light switch

FUSES: Directional Indicator - SFE-14 ampere in flasher lead

Radio - SFE-9A ampere in lead to radio

Heater - SFE-10 (FC-150,170), SFE-14 (Others)

Overdrive - SFE-20 at overdrive relay

ENGINE

►*THREE DIFFERENT ENGINES USED: See "Model Identification" for application*

4 CYL. "F" HEAD

Model	Bore	Stroke	Displacement
F4-134 (All)	3.125"	4.375"	134.2 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
F4-134 4x2	7.4-1①	15.63	75 at 4000 RPM
F4-134 Others	6.9-1②	15.63	72 at 4000 RPM

① - 7.8-1 Optl. ② - 7.4-1 Optl.

Compression & Vacuum Reading—*See "TUNE-UP" above.*

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following.

"A" .010" main & connecting rod journals Undersize.

"B" .010" cylinder bore and pistons Oversize.

"AB" both above conditions exist.

ENGINE REMOVAL (FC-150 FORWARD CONTROL): *See "Engine" in Willys Special Data*

CYLINDER HEAD & GASKET INSTALLATION: *See Willys Special Data.*

TIGHTENING TORQUES: *See Willys Special Data.*

PISTONS

Aluminum alloy, cam ground, T slot, Tin or Brass plated Piston has heat insulating groove above top piston ring groove

►*PISTON OVERSIZE NOTE:* Letter "B" or "AB" following engine number indicates that cylinder bore and pistons are .010" Oversize.

Weight—13.5 ozs.

Removal—Pistons & Rods removed from above.

Fitting New Pistons: Place 003" x 3/4" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove ribbon feeler should be 5 to 10 lbs.

Replacement Pistons: Std. and .010", .020", .030" and .040" Oversize.

Installing Pistons: "T" slot toward valve (left side) of engine (opposite side from oil spray hole in connecting rod lower end).

PISTON PINS

Locked in rod with clamp screw.

Diameter - .8118-.8120". **Length**—2-25/32".

Clearance in Piston—.0002-.0004". Thumb push fit at 70° F.

Replacement Pins: No oversizes available.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr #1	3/32"	007-.017"	002- 004"
Compr #2	3/32'	.007-.017"	.0015- 0035'
Oil	3/16'	007- 017"	001- 0025

Replacement Rings (For rebored cylinders)—Furnished .010", .020", .030" and .040" Oversize.

Service Type Rings—(For Cylinders not Rebored)—Furnished Std. (.000-.009"), .010" (.010-.019"), .020' (.020-.029"), 030" (.030-.039"), .040" (.040-.049") Oversize.

Installing Rings Install compression rings with mark "Top" (on side) toward top. Rings have tapered face and must be installed correctly. Top ring inner bevel edge must be up.

CONNECTING RODS

Length (Center to Center) - 9.1845-9.1905 **Weight** - 32 ozs.

Crankpin Journal Diameter - 1.9375"

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AB" following the engine number indicates that main and connecting rod journals are .010" Undersize.

Bearings—Steel backed babbitt.

Clearance - 0002- 0025"

Sideplay - 005- 009"

Replacement Bearings: Std and 010", 020" 030" Undersize

Installing Rods: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), and toward rear (#2, 4). Oil spray hole in lower rod bearing toward right of engine (away from camshaft) on all rods.

CRANKSHAFT

Journal Diameter—2.3341-2.3331". All main bearings.

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AB" following engine number indicates that main and connecting rod journals are .010" Undersize.

Bearings—Steel backed babbitt.

Clearance - 0014 0029"

Replacement Bearings: Std and 010", 020", 030" Undersize

Crankshaft Servicing: *See "Crankshaft & Main Bearings" in Willys Special Data*

End Thrust: Taken by thrust washer between crankshaft gear and front bearing Endplay controlled by shims between thrust washer and shoulder on crankshaft *NOTE* - Thrust washer must be installed with inner beveled edge toward front bearing

Endplay—.004-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Willys Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 2.1860-2.1855", **(2)** 2.1225-2.1215", **(3)** 2.0600-2.0590", **(4)** 1.6230-1.6225".

Bearings - No 1 steel-backed, babbitt (replaceable bushings), Nos 2, 3 4 cast iron (precision bored in block)

Clearance - 001- 0025"

End Thrust: Taken by thrust plate behind camshaft gear Endplay controlled by spacer between camshaft gear and shoulder on shaft Endplay can be increased by installing shim between spacer and shaft or decreased by dressing off spacer *NOTE* Inner beveled edge of spacer must be toward crankcase

End Play—.004-.007".

Camshaft Servicing: *See "Camshaft & Bearings" in Willys Special Data.*

Timing Gears: Crankshaft gear, steel. Camshaft gear, fibre with steel hub.

Gear Clearance - 000 002"

Camshaft Setting. Mesh marked tooth of camshaft gear with marked space (between teeth) of crankshaft gear

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Willys Special Data.*

VALVES

Tappet Clearance Intake .018", Exhaust .016" Cold.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv	H ad Diamet r	St m Diam t r	L ngth
Intake	2"	.3733-.3738"	4.781"
Exhaust	1-15/32"	.371-.372"	5 909'

Valv	Seat Angl	Lift	Stem Clearance
Intake	45°	.260"	.0007-.0022"
Exhaust	45°	.351"	.0025-.0045"

►*EXHAUST VALVE NOTE* Thompson Valve Rotators used.

Valve S at Width–3/64".

Valv Seat Ins rts - Used for all exhaust valves

Valve St m S als (Intake Valves) - Rubber seal ring installed on upper end of valve stem directly below valve locks When installing valves install spring and retainer compress spring install seal in groove before installing locks

Valve Springs Install with closed coil upward toward block (Exhaust), down towards head (Intake).

Fr L ngth–1 31/32 (Intake), 2½' (Exhaust)

Valv Spring Specifications

Valve	Intake	Exhaust
Closed	73 lbs at 1 21 32"	53 lbs at 2 7/64"
Open	160 lbs at 1 3/8"	120 lbs at 1 3/4"

Valve Guides Use Tool W-177 to remove and install guides. Drive Exhaust guide down into valve compartment to remove. Drive new Exhaust guide to 1" below surface of cylinder block and new Intake guide flush with bottom of valve guide bore in cylinder head.

R cker Arm Ass mbly Removal *See "Valve System" in Willys Special Data.*

Valv Lift rs Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

Diam t r–.6240-.6245". **Clearance**–.0005-.002".

►*NOTE.* Camshaft must be removed for lifter removal.

VALVE TIMING

S e "Camshaft Setting" under "CAMSHAFT" above.

Intak Valv s–Open 9° BTDC. Close 50° ALDC.

Exhaust Valves–Open 47° BLDC. Close 12° ATDC.

Valve Timing Ch ck–Set Intake valve clearance at .026". Rotate engine clockwise until No. 1 cylinder is ready for intake stroke. Intake opens 9° BTDC. Note the distance between TDC and the 5° mark and estimate 9° from this distance. With the crankshaft in this position timing is correct if lifter is just tight against valve stem.

ENGINE

4 CYL. "L" HEAD

Mod l	Bor	Stroke	Displacement
L4-134	3.125"	4.375"	134.2 cu. ins.
Mod l	**C mpr. Rati**	**Rated HP**	**Developed HP**
L4-134	6.48-1	15.63	60 at 4000 RPM

►*ENGINE NUMBER NOTE Letters stamped after engine number denote the following*

"A" - .010" undersize main & connecting rod bearings.
"B" - .010" oversize cylinder bore.
"AD" - Both above conditions exist.
"C" - 002" undersize piston pin
"D" - 010" undersize main bearing journals only
"E" - 010" undersize connecting rod bearing journals only

►*OTHER ENGINE DATA S "4 Cyl. "F" H ad" abov and note the foll wing differences*

VALVES: Tapp t Cl aranc - .016" Cold (Intake & Exhaust).

Valve	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	5 51/64"
Exhaust	1 15/32"	.3715"	5 51/64"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°	351"	0015- 00325"
Exhaust	45°	351"	0025- 00375"

Valve Seat Width - 3/64"

Valve Springs: Install all springs with closed coil end up toward cylinder block **Free Length** - 2½"

Spring Specifications (All Valves)

Valve	Pressure & Length
Closed	53 lbs at 2 7/64"
Open	120 lbs at 1 3/4"

Valve Guides: Use W-177 to remove and install guides. Drive guides into valve compartment to remove. Drive new exhaust guide to 1" below surface of cylinder block and new intake guide 1 5/16" below surface of cylinder block.

VALVE TIMING: *Same as on 4 Cyl "F" Head Engine*

Valve Timing Check - Set tappet clearance of No 1 cylinder intake valve at 020" Rotate engine until No 1 cylinder is entering intake stroke (9° BTDC) Note distance between TDC and 5° mark on timing gear cover, estimate position of 9° point With crankshaft in this position, timing is correct if lifter is just tight against valve stem Reset tappet clearance to 016"

ENGINE

6 CYL. "L" HEAD

Model	Bore	Stroke	Displacement
L6-226	3.3125"	4.375"	226.2 cu. ins.
Model	**Compr. Ratio**	**Rated HP**	**Developed HP**
L6-226	6.86-1③	26.33	105 at 3600 RPM

③ - 7.3-1 Optl.

Compression & Vacuum Reading–*See TUNE-UP above.*

►*BEARING PRODUCTION CHANGE & REPLACEMENT CAUTION (Beginning Engine Number TW-6L-226-47787 and SW-6L-226-12252)* New improved Connecting Rod and Main Bearings used in production to provide increased bearing life When replacing ALL bearings in earlier engines, install late type bearings *CAUTION - If only partial replacement made, use SAME type bearings as originally installed Early and late type bearings MUST NOT BE INTER-MIXED*

►*ENGINE REAR BEARING OIL LEAK CORRECTION (Engines before No SW-6-L-13542, TW-6-L-T-74176, and TW-6-L-F-13756)* If these engines do not have improved Rear Bearing Filler Block (with alignment pins which engage holes in guard assembly), install all parts of new Rear Oil Seal Service Kit, Part No 917608 *See "Crankshaft & Main Bearings" in Willys Special Data for installation data*

►*ENGINE NUMBER NOTE* Letters following engine number denote the following

"A" 010" Undersize main and connecting rod journals
"N" 020" Oversize bore and pistons
"AN" Indicates both "A" and "N" conditions

ENGINE REMOVAL (FC-170 FORWARD CONTROL): *S e "Engine" in Willys Special Data*

CYLINDER HEAD & GASKET INSTALLATION: *See "Cylinder Head & Manifolds" in Willys Special Data*

TIGHTENING TORQUES: *See "Tightening Sp cifications" in Willys Special Data*

PISTONS

Aluminum alloy, T slot, Cam ground Tin-plated

►*PISTON OVERSIZE NOTE* Letters "N" or "AN" following engine number indicates that cylinder bore and pistons are 020" Oversize

Weight - 15 187-15 437 ozs (less rings and pin)

Removal - Pistons and rods removed from above

Fitting New Pistons: Place 0015" x 1/2" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove feeler should be 5 to 10 lbs.

Piston Replacement–Std., .010", .020", .025 .030", 040", 050", and .060" Oversize

Installing Pistons. Slot in skirt toward left or away from camshaft.

PISTON PINS

Floating type with lock ring at each end.

Diameter - .8591-.8593". **Length** - 2.779".

Clearance in Piston - .0002". Selective fit. Push fit at 160°F.

Clearance in Rod - .0002-.0006". Press fit.

Replacement Pins. Std., .003" and .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr. (Upper)	.0930-.0935"	.008-.016"	.002-.004"
Compr. (Lower)	.0930-.0935"	.008-.016"	.003-.007"
Oil (Top ring)	.1545-.1550"	.008-.016"	.006-.010"
Oil (Bottom ring	.1545-.1550"	.008-.016"	.0025-.004"

Replacement Rings: Ring sets and single rings furnished in following sizes for oversize ranges indicated Std. (Std.-.009"), .020" (.010-.029"), .030" (.030-.039"), .040" (.040-.049"), .060" (.050-.069").

Installing Rings Side marked "Top" (compression rings) upward. Chrome plated ring must be installed in top (#1) ring groove.

CONNECTING RODS

Length–6.998"- 7.002" (Center to center)

Crankpin Journal Diameter–2.0619- 2.0627".

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AN" following engine number indicates that the main and connecting rod journals are .010" Undersize.

Bearings–Steel Backed Babbitt.

Clearance - 0018" maximum. **Sideplay** - .006-.011".

Replacement Bearings Std. and .001", .002", .010" and .012" Undersize.

Installing Rods. Mark rods and bearing caps. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. *NOTE*–Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 forward), (#2, 4, 6 toward rear).

CRANKSHAFT

Journal Diam ter–2.3744-2.3752".

►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AN" following the engine number indicates

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

that the main and connecting rod journals are .010" Undersize.

Bearings—Steel Backed Babbitt.

Clearance - .0007-.0020".

Replacement Bearings· Std. and .001", .002", .010" and .012" Undersize.

End Thrust: Taken by #4 rear main bearing which is flanged type.

End Play— 002-.006".

R at Bearing Oil Seal Installation· *See "Crankshaft and Main Bearings" in Willys Special Data.*

►*REAR BEARING OIL SEAL PRODUCTION CHANGE (B ginning Engine No SW-6-L-13542, TW-6-L-T-74176, and TW-6-L-F-13756)* New Rear Bearing Filler Block with alignment pins, and Rear Bearing Guard Assembly (with mating holes) *See "Crankshaft & Main Bearings" in Willys Special Data for installation of this assembly on earlier engines*

CAMSHAFT

Journal Diameters—(1) 1.8725-1.8735". (2) 1.8095-1.8105". (3) 1.7472-1.7485". (4) 1.2475-1.2485".

B arings—Steel Backed Babbitt.

Cl arance—.001-.003".

End Thrust· Taken by thrust plate on front of engine (between front bearing journal and hub of sprocket)

End Play—.003-.007".

Camshaft Servicing: See *"Camshaft & Bearings" in Willys Special Data*

Timing Chain: Non-adjustable type. Width 1". Pitch .500". Length 23" or 46 links.

►*TIMING CHAIN CAUTION. Morse and Link Belt chains used. Chains and sprocket interchangeable only in COMPLETE SETS*

Camshaft Setting: Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *Se "Engine Front Cover" in Willys Special Data*

VALVES

Tappet Clearance: Intake and Exhaust .014" Cold.

►*VALVE TAPPET ADJUSTMENT (FORWARD CONTROL MODELS)* Access panel provided in right front wheel housing for valve tappet adjustment Install jack stand under right frame rail, remove right front wheel, remove wheel housing access panel (both sections of split panel), remove fuel pump and valve covers Tappet clearance can then be adjusted

►*TAPPET CLEARANCE ADJUSTMENT PROCEDURE: S e "Valve System" in Willys Special Data*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.520"	.3402-.3410"	5.187"
Exhaust	1.328"	.3382-.3390"	5 205 '

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	284"	001 003"
Exhaust	45°	284"	0032- 0050"

Valve Seat Ins rts - Used for all exhaust valves on later engines

Valv S at Width: 5/64-3/32" (intake), 3/32-7/64" (exhaust).

NOTE—Rotators used on Exhaust valves.

Valve Guides: Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides to inside diameter of .3432-3422".

Replacement Guides—Std., .0005" (marked "A"), .0055" (marked "L") to insure .0005-.003" press fit.

Guide Installation—Place guide (tapered end of guide toward top) in position in bore and drive in to correct position of 1-7/32" below top face of cylinder block.

Valve Springs: Intake & Exhaust valve, spring interchangeable

Free Length—1-31/32".

Valve Spring Specifications

Valve	Lbs. Press.	Length
Closed	51	1.672'
Open	118	1.312

Valve Lifters: Mushroom type with self locking adjusting screws.

Diameter—.6855-.6860".

Clearance—Selective fit. Lifter should rotate in bore with slight drag. Service by installing oversize lifter.

Replacement Lifters—Furnished in Std. and the following oversizes marked as indicated: "B" is .001", "D" is .002", and "K" is .005" O.S.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE:* **Specifications are with tappet clearance as follows: Intake 018", Exhaust 020"**

Intake Valves - Open 2° BTDC Close 42° ALDC

Exhaust Valves - Open 42° BLDC Close 8° ATDC

Checking Valve Timing - Set tappet clearance of No 1 exhaust valve to 020" Turn crankshaft until No 1 intake valve just starts to open, turn crankshaft further until No 1 exhaust valve just closes This point should be 8° ATDC plus or minus 2° Reset tappet clearance to 014"

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Willys Special Data.*

Crankcase Capacity - 4 qts (4 Cyl), 5 qts (6 Cyl) refill

Normal Oil Pressure: 35 lbs at 2000 RPM (4 Cyl), 1700 RPM (6 Cyl)

Pressure Regulator - In pump housing (4 Cyl), right side of cylinder block below valve chamber to rear of engine (6 Cyl)

Oil Pressure Indicator: Red telltale light in Instrument Cluster operated by Oil Pressure Switch Light comes on when Ignition Switch turned on and goes out when oil pressure reaches 6 lbs

Oil Pump: Rotor type on left side of engine (4 Cyl), gear type attached to rear intermediate main bearing in crankcase (6 Cyl)

►*OIL PUMP PRODUCTION CHANGE & RECOMMENDED CORRECTION (6 Cyl. "L" Head Engine)*: Beginning Engine No SW-6-L-13509 TW-6-L-T-74081, & TW-6-L-F-13736, tab lockwasher was installed under each oil pump cover screw to prevent loosening of the cover Whenever oil pan removed on earlier engines, install these lockwashers, Part No 916879, on pump cover screws if not previously installed *NOTE* - Pump cover bolts was over-all length of 3/4" (Part No 911097) must be used with these lockwashers Torque cover bolts to 7-10 ft lbs

Oil Pump Overhaul - *See "Oiling Syst m" in Willys Special Data*

Oil Filter: Partial flow type ("Disposable" type used on some cars) *NOTE* - When replacing disposable type filter, tighten filter by hand until gasket contacts mounting flange, then tighten one-half turn additional

Crankcase Ventilation: (4 Cyl) See Crankcase Ventilator above (Others) Filter in oil filler cap and outlet tube from crankcase ventilator baffle on valve side cover

COOLING

►*COOLING SYSTEM FILLING CAUTION (FC-150 & FC-170)* These models have separate "surge tank" and cooling system should be checked and filled as follows Fill surge tank to the top replace cap, run engine at medium speed for one minute remove cap and recheck coolant level, add more coolant as necessary to bring level to top of tank *NOTE* - If system filled with engine cold recheck coolant level after engine run for one minute **aft r th rmostat pens.**

►*RADIATOR BYPASS VALVE CAUTION (FC-170)* This valve located on water pump can be closed for cold weather operation for more efficient heater operation but VALVE MUST BE OPEN IN WARM WEATHER FOR PROPER COOLING

►*FAN BOLT PRODUCTION CHANGE & RECOMMENDED CORRECTION (FC 170)* Elastic stop nuts, Part No 54066, used on later engines to prevent fan loosening in service If loose fan blade attaching bolts noted on earlier engines replace original nuts and lockwashers with these elastic stop nuts

►*FC-150 FAN PULLEY NOTE*· Install fan pulleys on both water pump and fan shaft assemblies with offset to front of engine to eliminate interference with generator pulley Adjust fan belt to ¼-½" deflection with light thumb pressure by pulling shaft housing to right side of frame

Water Capacity: (FC-150) 10 qts (FC-170) 11 qts , (Other 4 Cyl) 11 qts , (Other 6 Cyl) 12 qts without heater Add 1 qt for heater (except FC-170 - ½ qt)

Pressure Valve: Radiator filler cap, 7 lbs (FC-150, FC-170), 13 lbs (6 Cyl) 7 lbs (4 Cyl)

Thermostat: Harrison In water outlet elbow in cylinder head Opens at 163-168°F

Water Pump: Centrifugal packless ball bearing type. *See "Water Pumps" in Willys Sp cial Data.*

Temperature Gauge: Stewart-Warner Electric type *See "Temperature Gauges" in Misc llane us S ction*

CLUTCH

Auburn, Rockford 8½ RM, Borg & B ck 10A7. Single plate types

See Clutch Section for complet data

►*CLUTCH PRODUCTION CHANGE NOTE (6 Cyl)* Improved Clutch Pressure Plate, Willys No 917257 (Auburn), No 917262 (Borg & Beck), used on Models 6-226 4x4, & 4WD beginning Engine No TW-6-L-T-75827 and on FC-170 beginning Engine No TW-6-L-F-13801

►*CLUTCH VIBRATION CORRECTION:* Replace clutch disc *See "Willys" in Clutch S cti n*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pedal Adjustm nt: 4 Cyl. (Exc. Trks. & Sta Wgns.). 1½" pedal freeplay To adjust freeplay loosen yoke locknut on cable between throwout lever and cross shaft lever and turn cable

4 Cyl. (Trks. & Sta. Wgns. exc. FC-150) - 1½" pedal freeplay To adjust loosen locknut on adjusting rod (between clutch control lever and clutch control tube lever) and turn adjusting nut to increase or decrease rod length

6-226 Mod ls (Exc. 4x2 and FC-170) - 1" pedal freeplay To adjust, loosen locknuts on pedal adjusting rod turn nuts forward to increase or backward to decrease freeplay

6-226 (4x2) - 5/8-3/4" pedal freeplay Adjustment same as other 6-226 models

FC-150 & FC-170 -½" pedal freeplay To adjust loosen locknut on cable between clutch pedal and cross shaft lever and adjust length of cable

R m val (4 Cyl.): Remove transmission (see Transmission Removal below) Remove engine from chassis (labor will be saved if engine removed without bell housing) Take out clutch cover mounting screws (turn all screws out evenly to relieve spring pressure), remove cover assembly and clutch disc from flywheel

R m val (6 Cyl.): *NOTE* - This engine has split bell housing and it is not necessary to remove engine or transmission for clutch removal Disconnect both front and rear propeller shafts, pull transmission and transfer case to rear sufficiently so that drive gear shaft clears clutch *(CAUTION - Support transmission securely)*, remove bell housing bottom pan Mark clutch cover and flywheel, take out clutch cover mounting screws (turn out all screws evenly to relieve spring pressure), remove cover assembly and clutch disc through bottom of bell housing

SYNCHRO-MESH TRANSMISSION

4 WHEEL DRIVE

Warner. Three speed type Constant mesh synchro-mesh helical gears (second and high) sliding spur gear (low and reverse) Used as follows

	Warner No.
Jeep	T90C
F4-134	T90C
6-226	T90J
FC-150 (3-speed)	T90A
FC-170 (3-speed)	T90J

NOTE - 4-speed Optional on FC-150 & FC-170 S *"Warner Transmission" in Transmission Section*

► *TRANSFER CASE OPERATING LEVER VIBRATION ON ACCELERATION OR DECELERATION CORRECTION (FC-150)* If light hand pressure (in either direction) minimizes vibration, insulate transfer case lev r shaft brackets from body panel *See "Transmissi n N t s" in Willys Special Data*

► *FOUR SPEED TRANSMISSION LUBRICATION CAUTION* Since there is no passage between 4-speed transmission and transfer case it is necessary to check fluid level at both transmission and transfer case fill points Fluid capacity is 4-Speed Transmission - 6¾ pints Transfer Case - 3½ pints

Transfer Cas · Spicer Mod l 18. Two speed auxiliary transmission and front wheel drive unit mounted on rear of transmission case
See Transmission Section for complete data

► *TRANSFER CASE SHIFT LINKAGE ADJUSTMENT (FC-150)* Attach linkage lever to outer hole (two in shift rod nearest transmission) to eliminate hard transfer case shifting Adjust shift rod assembly as follows Set transfer case hand shift lever in neutral loosen adjusting nuts at transfer case end of remote control rod move shift lever at transfer case to neutral position, tighten adjusting nuts being careful not to disturb shift lever position at either end of remote control rod

Removal (4 Whl Drive): Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints *(NOTE*–If equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, and clutch release cable at cross shaft bell crank (Jeep), Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers *(NOTE*–If Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member *(CAUTION* -With cross-member removed, engine and transmission weight will rest on support jacks). Remove bolts holding transmission on bell housing, force transmission to right until ball stud end can be disengaged from end of clutch control cross shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

2 WHEEL DRIVE

Warner. Three speed type Constant mesh synchro-mesh helical gear (second & high) sliding spur gear (low & reverse) Used as follows

Model	Warner Type
Jeep Dispatcher	T90
F4-134	T96
6-226	T86

See "Warner Transmissions" in Transmission Section

► *HARD SHIFTING, SHIFTING INTO TWO GEARS OR JUMPING OUT OF GEAR CORRECTIONS* For trouble shooting above difficulties on 2-wheel drive models *See "Transmission Notes" in Willys Special Data*

Transmission Control· Remote control type with gearshift lever on steering column. *See "Transmission Controls" in Transmission Section.*

Removal (2 Whl Drive): Disconnect shift control rods at transmission case levers On Overdrive cars, disconnect and tag wires at solenoid and governor, disconnect overdrive control cable and conduit Disconnect propeller shaft at front universal joint Disconnect speedometer cable at transmission *(CAUTION - Plug cable opening in case with a cork to prevent lubricant loss)* On Overdrive cars, remove rubber mounted support at rear end of overdrive case *(CAUTION Do not los spacers)*, and remove governor Install jack under bell housing and lift engine just enough to remove weight from crossmember, remove crossmember and rubber insulators Support engine with jack Unscrew four screws attaching transmission to bell housing approximately ¾", pull transmission back to bolt heads *(CAUTION - Screws must have sufficient thread engagement to support transmission weight)* Use a long screwdriver inserted between transmission and bell housing to pry clutch release fork from clutch release bearing carrier leaving fork in bell housing Remove transmission mounting screws, pull transmission straight back until drive gear shaft clears bell housing, lower transmission and remove from beneath

OVERDRIVE

Warner R10. *See "Warner R10" in Transmissi n Section.*

Overdrive Control: *See "Warner R10 & R11 Overdriv Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (2 Wheel Drive above) after disconnecting control cable and wiring.

UNIVERSALS

2 WHEEL DRIVE

Spicer. Cross type. One at each end of propeller shaft.

4 WHEEL DRIVE

Drive Shaft Joints - Spicer. Cross type. One used at front and rear of both front and rear propeller shafts.

Front Axle Shaft Joint - Spicer. Cross type with needle bearings Similar to joints used in front and rear propeller shafts *NOTE* - Bendix & Rzeppa constant velocity type optional *See "Universal Joints" in Willys Special Data*

Power Take-off Shaft Joints - Detroit. Ball-and-Trunnion type One used at each end of shaft (no splined joint required)

FRONT AXLE

4-WHEEL DRIVE

Spicer Model 44(FC-170), Model 25(All Others). Full floating Hypoid gear type Differential assembly (ring and pinion gear assembly) is serviced in same manner as Spicer Rear Axles
See "Spicer" in Rear Axle Section

► *"POWER-LOCK" DIFFERENTIAL (FC-170) Optl on this model only (not available for Model 25 Axleus d on other models) See "Power Lock Differential (Plat Clutch Type)" in Rear Axle Section*

► *"POWER-LOCK" DIFFERENTIAL IDENTIFICATION & LUBRICATION CAUTION See same note under R ar Axle below*

Axle Ratios	
CJ-3B, CJ-5, CJ-6 Jeep	5 38-1
F4-134 (4x4 & 4WD)	5 38-1
6-226 (4x4)	4 27-1 (4 89-1, 5 38-1 Optl)
6-226 (4WD)	4 88-1 (4 27-1, 5 38-1 Optl)
FC-150	5 38-1
FC-170	4 88-1 (4 27-1, 5 38-1 Optl)

Removal: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs re-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

lieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear end of springs and lower springs, remove axle assembly from beneath car.

Axle Shaft & Universal Joint Assy. Removal: Remove wheel, hub cap, axle shaft nut and washer. Take out drive flange cap screws and remove flange with puller, Bend lip of bearing adjusting nut lockwasher out, remove locknut, lockwasher, adjusting nut, and bearing locking washer. Remove wheel hub and bearing assembly.(*(CAUTION*–use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal joint assembly out of housing.

►*INSTALLATION CAUTION:* Adjust front wheel bearings and bleed brakes after installation completed.

St ring Knuckle Bearing Disassembly & Adjustment: *See "Front Axle" in Willys Special Data.*

Wheel Bearing Adjustment: Tighten inner adjusting nut until there is a slight drag on the bearings as the hub is turned, then back nut off 1/6 turn, install locking washer and nut, tighten locknut securely and bend lockwasher over the locknut

REAR AXLE

Spicer. Hypoid gear, semi floating type with Hotchkiss Drive. Various models used as follows

M del	Spicer Axle No.
DJ-3A Jeep Dispatcher	23
DJ-3B, CJ-5, CJ-6 Jeeps	44
F4-134 & 6-226 Sta Wgns & Del	44
FC-150	44
F4-134 & 6-226 Trucks	53
FC-170	53

See "Spicer Hypoid Semi-Floating" in Rear Axle S ction

►*"POWER-LOCK" DIFFERENTIAL* Optional on all models (Rear Axle), some models only (Front Axle). *See "Power Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

►*POWER-LOCK DIFFERENTIAL IDENTIFICATION & LUBRICATION CAUTION:* Axles with Power-Lock differential can be identified by brass tag stamped "T" attached to housing by one carrier housing cover bolt Use only Special Power-Lock Differential Oil furnished in pint cans, Willys No 94557

Axle Ratios

DJ-3A Jeep Dispatcher	4 56-1
CJ-3B, CJ-5, CJ-6 Jeep	5 38-1
F4-134 (4x2)	4 89-1 (5 38-1 Optl)
F4-134 (4x4 & 4WD)	5 38-1
6-226 (4x2 & 4x4)	4 27-1 (4 89-1, 5 38-1 Optl)
With Overdrive	4 89-1 (5 38-1 Optl)
6-226 (4WD)	4 88-1 (4 27-1, 5 38-1 Optl)
FC-150	5 38-1
FC-170	4 88-1 (4 27-1, 5 38-1 Optl)

Axl Shaft R moval (S mi-fl ating Axl): Remove axle shaft nut, then use puller to remove wheel hub. Remove bolts retaining dust shield, grease and bearing retainers, and brake assembly *CAUTION* - Do not disturb backing plate Remove shield and retainer then pull axle shaft, being careful not to lose adjusting shims

Rear Axle Assembly Removal: Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs. Remove axle assembly.

Wheel Bearing Adjustment: End Play .003-.007". Adjust by adding or removing shims between backing plate and axle housing flange at each wheel.

SHOCK ABSORBERS

Monroe or Gabriel. Direct acting type.

FRONT SUSPENSION

2-WHEEL DRIVE

Conventional I-Beam with Reverse-Elliot ends and semi-elliptical springs

Kingpin Inclination - 7°30' **Caster** - 3° **Camber** - 1°

Toe-In - 3/64-3/32" Adjust both tie rods alike (approximately 1/2 turn from point where front wheels are "straight ahead")

Toe-Out on Turns -Outer wheel 20° Inner wheel should be 21°45'

4-WHEEL DRIVE

►*LEANING-TO-LEFT CORRECTION (FC-150 FORWARD CONTROL) Can be corrected by installing shim under right front spring saddle See "Suspension Notes" in Willys Special Data*

►*FRONT WHEEL SHIMMY CORRECTION (CJ-5 & FC-150)· See "Suspension Notes" in Willys Special Data*

Front Axle: Special driving unit with semi-elliptical springs Steering knuckle mounted on taper roller bearings carried on two stub shafts **End Play** - 001- 003"

Kingpin Inclination - 7½° **Caster** - 3° **Camber** - 1½°

Toe-In - 3/64-3/32" Adjust both tie rods alike (approximately 1/2 turn from point where front wheels are "straight ahead")

Toe-Out on Turns - Outer wheel 20° Inner wheel should be 22° (Jeeps), 20° (All other models)

►*OTHER DATA See "Front Axle" (above)*

STEERING

Ross. Cam and Twin Lever type

See "Ross Cam & Twin Lever" in Steering Section

St ring Linkag : *S e "St ring Linkage" in Ste ring S ction*

St ring Wh l & Horn Butt n R m val: *S "Ross Carr & Twin Lev r" in Steering Section*

Steering Gear Removal: *See "Ross Cam & Twin L v r" in Steering Section*

BRAKES

Bendix-Lockheed (Self-Cent ring). Hand brake applies rear service brakes(Exc Univ Jeep) Independent brake on drive shaft at rear of transfer case (Univ Jeep) *See "Bendix-Lockheed (Self-C nt ring)" in Brak S ction*

Drums - 9" (CJ-3B 5,6, DJ-3A), 11" (Others).

Wheel Cyl. Diameter -	Fr nt	R ar
CJ-3B 5,6,	1"	3/4"
DJ-3A	1 1/8"	13/16"
Others	1 1/8"	1"

Lining Length & Width

Model	Primary	Sec ndary
CJ-3B 5 6	10 7/32" x 1 3/4"	6 39/64" x 1 3/4"
DJ 3A	9 7/8" x 2"	7 11/16" x 1 3/4"
Others	12 1/4" x 2"	10 1/32" x 2"

Thickness - 206- 216" (CJ 3B 5 6); 214" (DJ-3A); 212" (Others)

Braking Power - Front 65% Rear 35% (CJ-3B 5,6,DJ-3A), Front 57% Rear 43% (Others)

Clearance - Turn eccentric until shoe contacts drum then back off until wheel turns freely

Power Brake: Hydrovac Power Unit Used with standard master cylinder

See "Hydrovac Power Unit" in Brak S ction

Parking Brake (Independent Typ): Two shoe, internal expanding type on shaft at rear of transmission

Lining - One piece per shoe (two shoes) Width 1¾", Length 8 1/8", Thickness 211"

Adjustment - Lubricate linkage and make certain the linkage operates freely Place brake handle on instrument panel to "OFF" position Rotate brake drum until one pair of adjusting holes (three pairs located on back face of drum) is opposite the adjusting screws (notched wheels) within the brake Insert a screwdriver or adjusting tool through hole and turn each adjusting screw equally until the brake shoes are snug against drum *(NOTE* - With tool against edge of hole as a fulcrum, move outer end of tool out away from center of driveshaft to expand shoes) **Back ff ach adjusting screw 7 notches** to provide correct shoe clearance

MISC. MECHANICAL

Windshield Wipers: Vacuum type

(Univ. Jeep) - Individual motors operate wiper arms.

(Other Models) - Single motor operates wiper arms by cable control

See "Windshield Wipers" in Misc llan ous S cti n

►*ELECTRICAL EQUIPMENT NOTE: Both Auto-Lit and Delco-Remy equipment used and may be intermixed on same vehicle, but g n rat r and regulat r of sam mak must b us d t g ther. 12-VOLT system is standard. 6-VOLT syst m with either type equipment is optional on all mod ls. Data for all types of equipment is listed below.*

MODEL IDENTIFICATION

M d l	Series Symbol
F4-134 4x2 & 4x4 Jeep Utility	54
L6-226 4x2 & 4x4 Jeep Utility	54
F4-134 4 x 2 Jeep Utility "Maverick"	58
L6-226 4 x 2 Jeep Utility "El Gaucho"	58
F4-134 & L6-226 4WD Truck	55
DJ-3A & DJ-6A Jeep Dispatcher	56
CJ-3B, CJ-5, CJ-6 Universal Jeep	57
FC-150 Forward Control	65
FC-170 Forward Control	61

SERIAL NUMBER: Stamped on metal plate attached in various locations:

CJ-3B & DJ-3A to **right** side of dash under hood.
CJ-5, CJ-6 & DJ-6A to **left** side of dash under hood.
FC-150 & FC-170 to cab floor above wheel housing at right door.
All 4WD Trucks on floor riser under **left** side of driver's seat.
All Utility Wag ns on floor riser to **left** and directly behind **back** of driver's seat.

NOTE - Numb r (xampl below) includes identification data.

④ - 5 (CJ-5), 3 (DJ-3A).

ENGINE NUMBER: Located as follows:

4 Cyl. Engin s - Stamped on top of water pump boss at front of engine.

6 Cyl. Engin s - Stamped on boss on left front corner of engine block above generator.

NOTE - Letters following engine number designate special cylinder bore and bearing oversizes or undersizes. *See "Engine Specifications".*

TUNE-UP

►*STUMBLE ON HARD ACCELERATION IN COLD WEATHER CORRECTION:* Can be caused by poor exhaust heat chamber efficiency. To correct, remove manifolds and enlarge the two holes in exhaust manifold heat chamber to 5/8". Install manifolds. Attach a sheet metal plate to engine under water pump attaching bolts so blasts of cold air will be deflected around manifolds.

►*HEAT CONTROL VALVE PRODUCTION CHANGE (L6-226 ENG.):* Beginning Serial Nos. SW-6-L-226-14346, TW-6-K-226-95379, and FW-6-L-16220 a new exhaust manifold heat control valve was installed on engines to improve warm-up characteristics. To install on earlier models use kit, Part No. 921550.

COMPRESSION PRESSURE	Pressure & Speed
4 Cyl. "L" Head	105 lbs. at 185 RPM
4 Cyl. "F" Head	120-130 lbs. at 185 RPM
6 Cyl. "L" Head	155 lbs. at 185 RPM

NOTE - All cylinders must be equal within 10 lbs.

VACUUM READING: Steady 18-21" at idle speed.

TAPPET CLEARANCE:	Intake	Exhaust
4 Cyl. "L" Head	.016"	.016"
4 Cyl. "F" Head	.018"	.016"
6 Cyl.	.014"	.014"

NOTE - Set clearance with engine COLD not running.

►*TAPPET ADJUSTMENT (FORWARD CONTROL MODELS):* Access panel provided in right front wheel housing.

MANIFOLD HEAT CONTROL: Used as follows:

4 Cyl. "L" Head - Thermostatic coil on manifold.
4 Cyl. "F" Head - Water jacketed intake manifold.
6 Cyl. – Exhaust heat control valve with spring tension of 180° wind-up on manifold.

►*HEAT CONTROL VALVE STICKING ON L6-226 ENGINES:* Should heat control valve stick with shaft and bushings properly lubricated and spring tension at 180° wind-up, check distance between inside edges of valve bushings and exhaust manifold for proper distance of 2.902"–2.910". If necessary, force bushings outward until proper distance obtained.

IGNITION

►*DISTRIBUTOR WIRING SHORT CAUTION:* Some Model DJ-3A Dispatchers are equipped with fresh air heaters from which the temperature control Bowden wire passes over cylinder head near the distributor. If wire is not properly insulated there is danger of shorting distributor wiring. Wire may be insulated with 3/16" I.D. x 10" long loom, or with friction tape.

►*PLASTIC COVERED HARNESS NOTE:* Plastic covered harness requires use of rubber insulated wire clips. When servicing this type harness use rubber insulated clips Part No. 664721.

FIRING ORDER: 1-3-4-2 (4 Cyl.), 1-5-3-6-2-4 (6 Cyl.).
SPARK PLUG GAP: .030".

Spark Plugs - Auto-Lite A7 or Champion J8. 14mm. Torque to 28-30 ft. lbs.

COIL: Aut -Lit . N . CAL-4001A (6-V lt), CAG-4002A (12-V lt).

Ignition Current - 6-Volt - 2.5 amps. idling, 5 amps. at 6.3 volts stopped. **12-Volt** - 2.8-2.9 amps. at 12.5 volts idling or stopped.

DISTRIBUTOR: Autolite. *NOTE* - Same distributor used in both 6-volt and 12-volt systems.

Engine	Autolite Distr. No.
4 Cyl. Jeeps	IAY-4012 or 4401
4 Cyl. Others	IAT-4204A or 4405
6 Cyl.	IAT-4206B or 4404A

Condenser - Autolite IAT-3076-LA (IAY Distr.), IBB-2042-SS1 (IAT Distr.). **Capacity** - .25-.28 mfd. (IAY Distr.), .21-.25 mfd. (IAT Distr.).

Contact Point Set - Auto-Lite IGW-3028-DS (IAY Distr.), IGW-3028-AS (IAT Distr.).

Breaker Gap - .020". Limits .018-.022"..

Cam Angle - 37-43° (4 Cyl.), 36-42° (6 Cyl.).

Breaker Arm Spring Tension - 17-20 ozs.

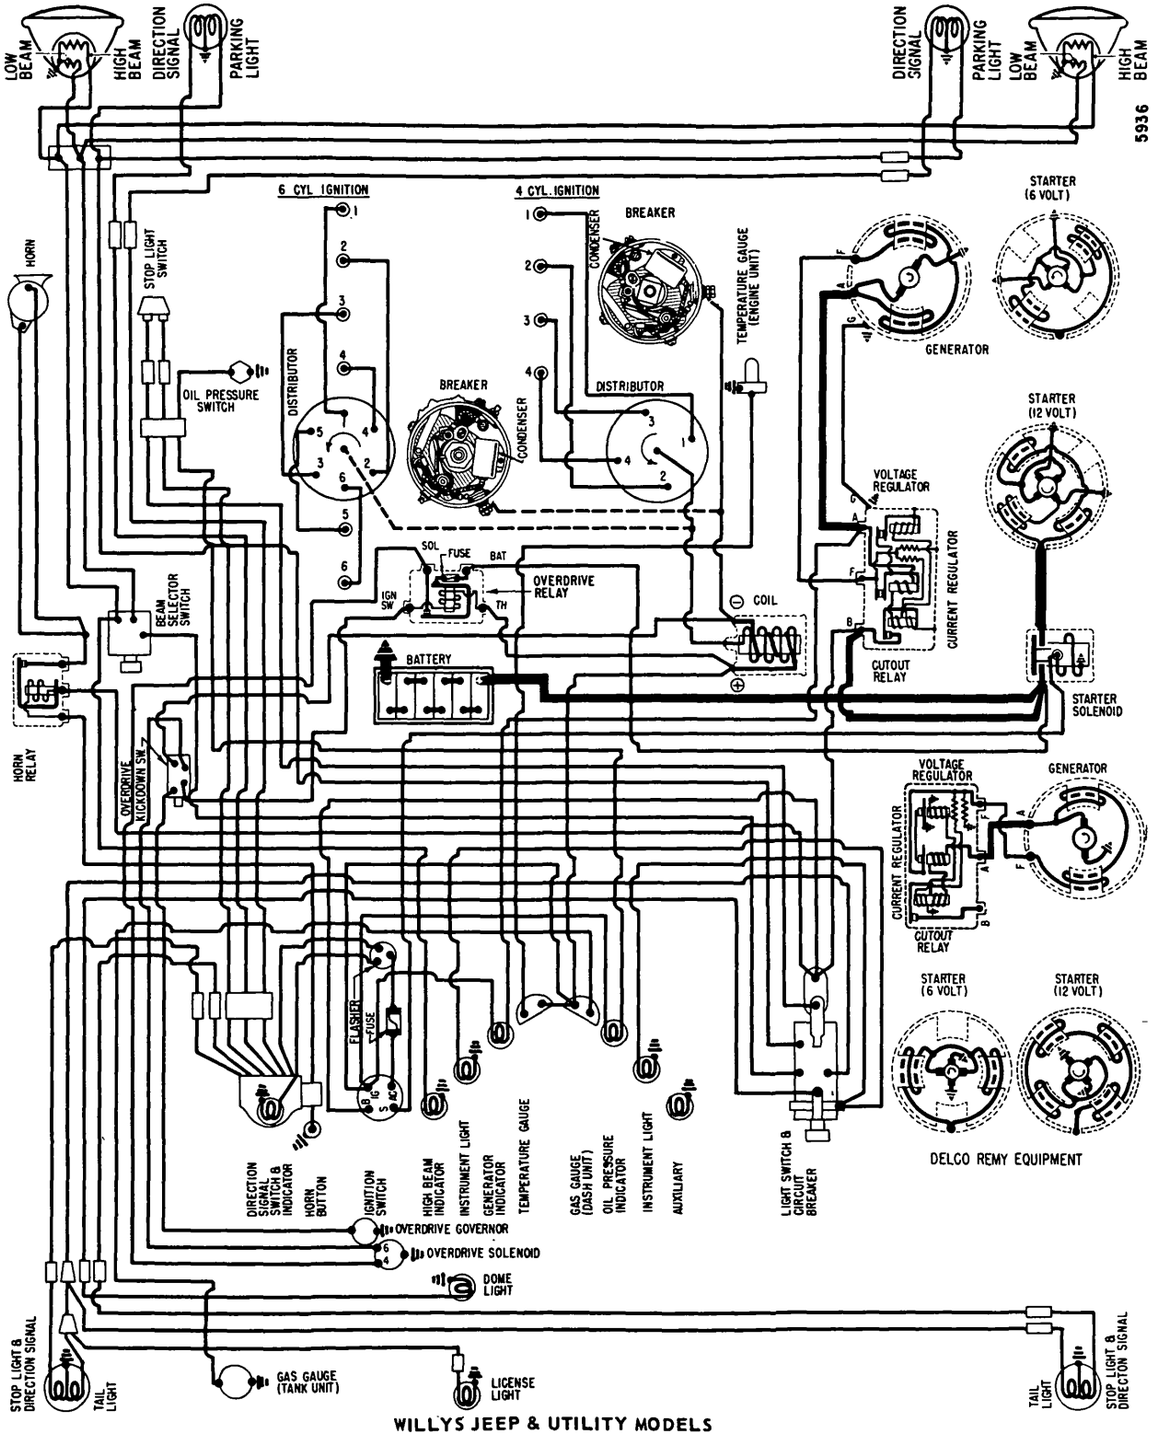
IGNITION TIMING

Setting - 5° BTDC (All Models).

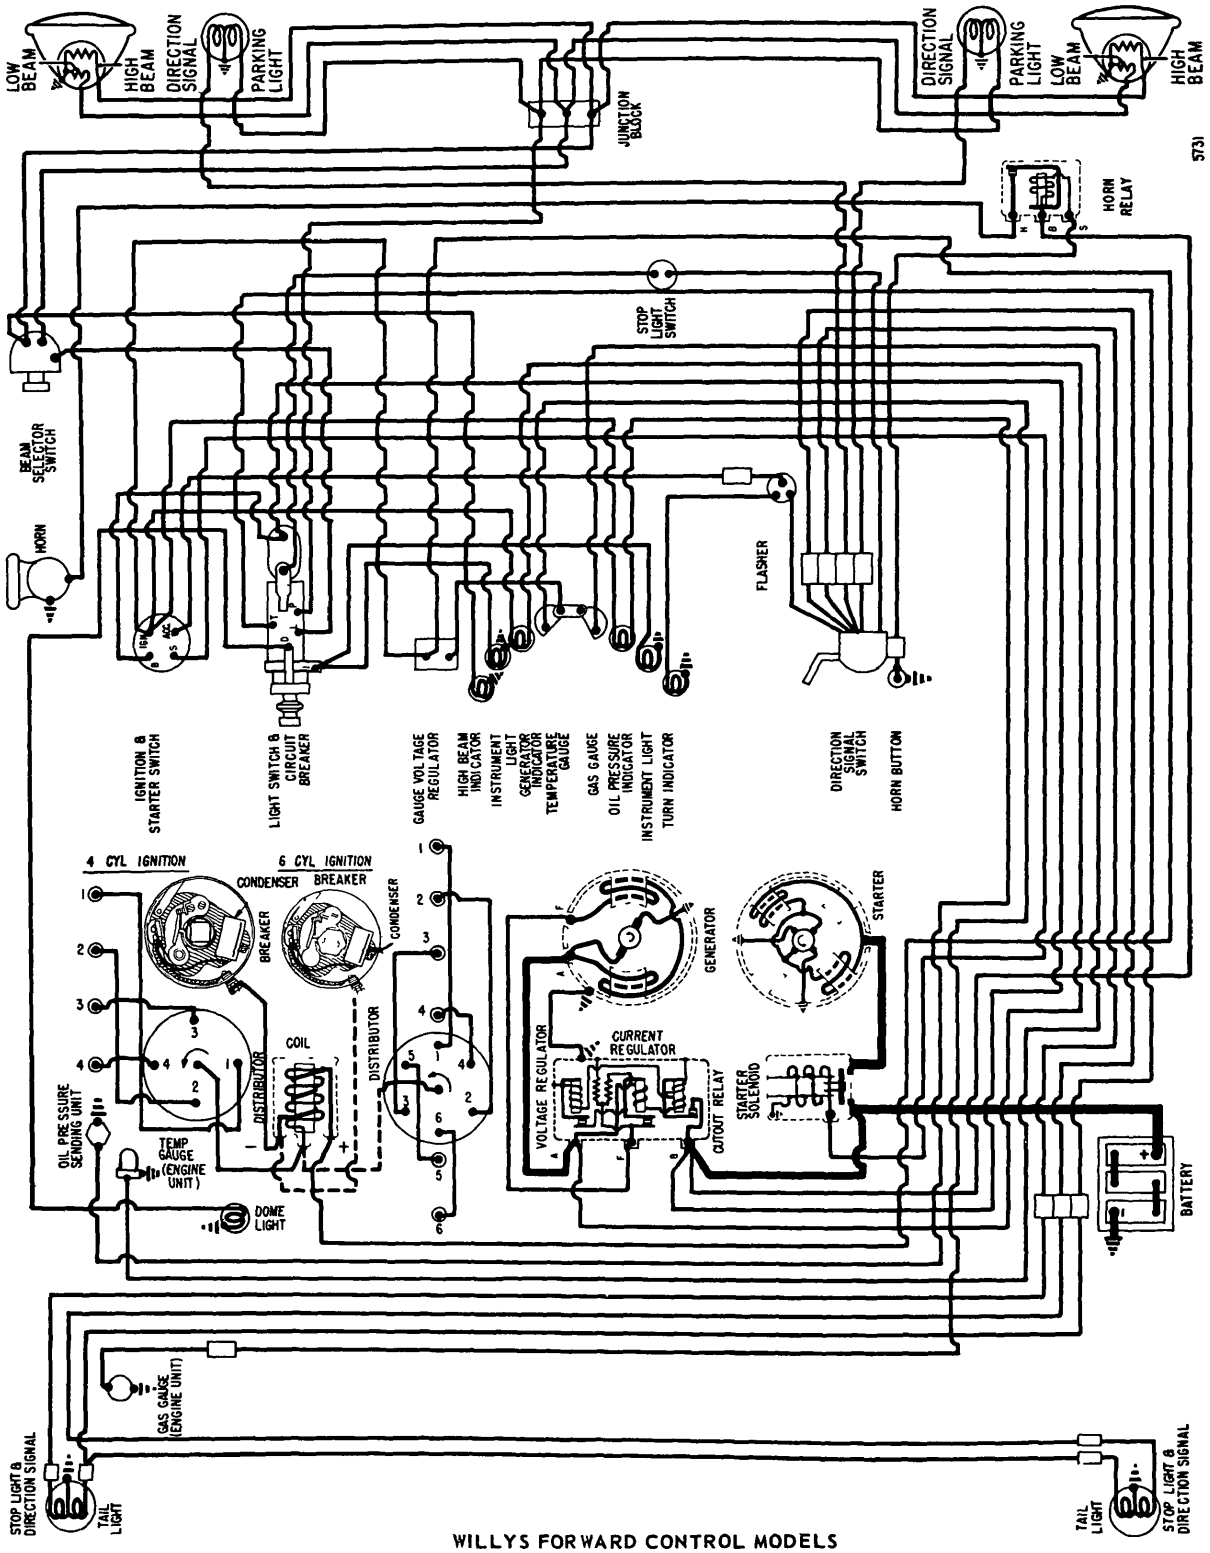
Timing Mark (4 Cyl. "F" Head) - Notch on rim of fan pulley to align with 5° mark on pointer on timing gear cover. Two marks on pointer - 5° and T (TDC).

Timing Mark (4 Cyl. "L" Head) - 5° mark on flywheel is in center of timing hole in flywheel housing. Flywheel marked T.C. (TDC) and 5° (5° BTDC).

Timing Mark (6 Cyl.) - Align correct graduation with pointer on timing gear cover. Damper marked "O" at TDC with 1° graduations before and after this point.



CARBURETOR



Model	Carter Carb. No.
4 Cyl. "L" Head Jeep Dispatcher	YF 2392S
4 Cyl. "F" Head Universal Jeep	YF 938SA,SC,SD
4 Cyl. "F" Head 4x2, 4x4, 4WD	YF 951S,SA
4 Cyl. "F" Head Foward Control	YF 938SA,SC,SD
6 Cyl.	YF 2467S

►*FLAT SPOT OR SURGE CORRECTION (Jeep & Forward Control FC-150 Models with 938SA Carburetor):* If condition not corrected by thorough Engine Tune-Up (including carburetor adjustment), see "Carter YF Carburetor" in Carburetion Section for recommended modification. NOTE - Later 938SC carburetors have these changes made in production.

►*ENGINE SURGE CORRECTION (Utility & Truck Models with Carter 951S Carburetor):* This surge will be noted at 35-40 MPH when cruising or when accelerating after

CONTINUED ON NEXT PAGE

WILLYS FORWARD CONTROL MODELS

CONTINUED FROM PRECEDING PAGE

coasting If condition not corrected by thorough Engine Tune-Up (including carburetor adjustment), see *"Carter YF Carburetor" in Carburetion Section for recommended modification. NOTE - Later 951SA carburetors have these changes made in production.*

►*CARBURETOR PRODUCTION CHANGE (YF 951S and YF 938SC superseded by YF 951SA and YF 938SD):* Carter YF 938SD and YF 951SA have all modifications recommended for "Flat Spot & Stumble Correction" below.

►*FLAT SPOT OR STUMBLE CORRECTION (All vehicle with Carter YF 938S, SA, SC; 951S Carburetors):* Before modifying Carburetor, thoroughly tune up engine, check carburetor metering rod and float level settings, adjust engine idling speed, and make certain that cooling system thermostat operating correctly. If flat spot or stumble persists, modify carburetor. *See "Carter YF Carburetors" in Carburetion Section.*

Idle Setting - ¾-1¼ turns open (938SA,SC,SD, 951S,SA). ½-2 turns open (2392S). 1-2½ turns open (2467S). Turn screws out for richer mixture.

Idle Speed - 600 RPM (4 Cyl.), 550 RPM (6 Cyl.).

Float Level - (2392S, 2467S) 9/32" - Gauge T109-126, (938SA,SC,SD, 951S,SA) 5/16" - Gauge T109-107. From top of float at free end to gasket seat on cover with assembly inverted and float resting freely on intake needle.

Fast Idle: With choke held in wide open position, lip on fast idle arm should contact boss on body casting.

►*OTHER DATA: See "Carter YF Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC & Carter used as follows:

Model	AC No.	Carter N .
Jeep Univ. ①	4032	M2195S
Jeep Dispatcher ②	9716	M2195S
Fwd. Control (FC-150) ①	4080	M2195S
Utility (4-Cyl.) ①	4080	M2195S
Fwd. Control (FC-170) ①	4318	M957S
Utility (6-Cyl.) ①	4318	M957S

① - Fuel & Vacuum. ② - Fuel only.

Pressure - 2½-3¾ lbs. (AC), 3½-5½ lbs. (Carter), all at 1800 RPM.
See "Fuel Pumps" in Carburetion Section.

►*FUEL FILTER NOTE:* Filter Spool located inside fuel tank on all models exc. Univ. Jeep & Jeep Dispatcher.

Gasoline Gauge: Stewart-Warner Electric Constant Voltage type with gauge voltage regulator on back of instrument panel or fuel gauge.
See "Fuel Gauges" in Carburetion Section.

AIR CLEANER: Oil bath type. Service at regular intervals.

►*AIR CLEANER NOTE:* Improved oil bath air cleaner Part No. 923388 used on Univ. Jeep and FC-170 Fwd. Control beginning with Serial Numbers - 57348-63433, 57548-113195, 57748-18223, 65548-23109. This cleaner is provided with a water deflector.

►*AIR CLEANER WING NUT CAUTION (L6-226 ENGINES):* Wing nut attaching cover to air cleaner on L6-226 Engines should be tightened to only 5 to 7 in. lbs. torque (finger tight). Excessive tightening of nut may

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

crack weld at base of stud causing it to fall into carburetor, jamming throttle valve.

CRANKCASE VENTILATOR

Sealed Positive Ventilation (4 Cyl.). Clean air is drawn into oil filler tube and rocker arm cover through a hose to the air cleaner. All connections and gasket on filler tube must be air tight. The crankcase is ventilated by a sealed system from air cleaner tube to intake manifold. A valve is attached to valve spring cover in the line to air cleaner. This valve must be free of carbon and operate freely at all times to obtain smooth idle. Remove and clean valve every 5000 miles or more often if engine must run at idle speed excessively or is used for stationary power.

6-VOLT ELECTRICAL SYSTEM
AUTO LITE
BATTERY

Autolite 1M-100. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Left front of engine support (6-226), right front engine support (Others).

STARTER

Autolite MCH-6203 (4 Cyl.), MCH-6210 (6 Cyl.).
Armature - Autolite MCH-2088,
Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 42-53 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4300	5 0	65
6.0 ft lbs.	Lock	2.0	335

Starting Switch: Autolite SST-4012 (MCH-6203) Key starting (Magnetic switch controlled by turning key past "Ignition On" position).

GENERATOR

Autolite GGW-4801D, 7404A (4 Cyl.), GGW-4801EN, 7404B (6 Cyl.).
Armature - Autolite GGW-2006F (GGW-4801D, EN)

Performance Data - GGW-4801D, EN

Amperes	Volts	Cold RPM	Hot
0	6.4	870-970	950-1050
40.0	8.0	1800-2000	2150-2350
45.0	8.0	1925-2125	2350-2550

Brush Spring Tension (GGW-4801D, EN) - 35-53 ozs.
Field Current (GGW-4801D, EN) - 1.6-1.7 amperes at 5.0 volts.
Motoring Current (GGW-4801D, EN) - 5.0-5 5 amperes at 5.0 volts.
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 1/2-5/8" deflection midway between generator and fan pulleys with normal thumb pressure.

REGULATOR

Autolite VBE-6105A (Early), VBO-4601C (Late)

Cutout Relay

Cuts In - 6.3-6.8 volts (All).
Cuts Out - 4.1-4.8 volts (VBE-6105A), 4-6 amps. discharge current after a charge of 10 amps. (VBO-4601C).
C ntact Gap - .015" minimum.
Air Gap - .025-.027" (VBO-4601C), .030-.034" (VBE-6105A), with contacts open (check at hinge end of core).

V ltag R gulat r

Setting - 7.2-7.5 volts at 70°F (VBE-6105A), 7.2 volts at 80°F (VBO-4601C), after 15 minutes operation charging at 10 amperes.
Air Gap - .048-.052" with contacts just opening (Check at brass armature stop pin).
Checking & Adjusting - *See "Autolite 6-Volt Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F (VBE-6105A), 80°F (VBO-4601C).*

Operating Amperes

Model	Test A	Test B
VBE-6105A	52 amperes max.	45 (43-47)
VBO-4601C	54 amperes max.	45 (43-47)

Test A - After 15 minutes operation with current at 10 amperes
Test B - After 15 additional minutes operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts).
Air Gap - .048-.052" with contacts just opening (Check at brass armature stop pin).
Checking & Adjusting - *See "Autolite 6-Volt Regulators" in Electrical Section.*

6-VOLT ELECTRICAL SYSTEM
DELCO-REMY
STARTER

Delco-Remy 1108077 (4 Cyl.), 1108078 (6 Cyl.).
Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 24 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15.0 ft. lbs.	Lock	3.0	600

GENERATOR

Delco-Remy 1102832 (4 Cyl.), 1102831 (6 Cyl.).
Replacement Generator Without Pulley - 1102811 (All).

Performance Data

Amperes	Volts	RPM
45	8.0	2350

Brush Spring Tension - 28 ozs.
Field Current - 1.87-2.0 amps. at 6.0 volts.
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 1/2-5/8" deflection midway between generator and fan pulleys with normal thumb pressure.

REGULATOR

Delco-Remy 1972063.

Cutout Relay

Cuts In - 5.9-6.7 volts.
Contact Gap - .020". **Air Gap** - .020".

Voltage Regulator

Setting - 6.9-7.4 volts.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 6-Volt Regulators" in El ctrical Section.*

Curr nt Regulator

Setting - 42-47 amperes.
Air Gap - .075" with armature pressed down to point where contacts just touch

Ch cking & Adjusting - *See "Delco-Remy 6-Volt Regulators" in Electrical Section.*

12-VOLT ELECTRICAL SYSTEM
AUTO LITE
BATTERY

Autolite 11-HS. 12 volt, 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Left front of engine support (6 Cyl.) right front engine support (4 Cyl.).

STARTER

Autolite MDM-6005, MDU-7004 (4 Cyl.), MDM-6006, MDU-7003 (6 Cyl.).
Armature - Autolite MDL-2048 (MDM-6005, 6).
Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 31-47 ozs.

Performance Data (MDM-6005,6)

Torque	RPM	Volts	Amperes
0 ft. lbs.	4400	10.0	50
5.0 ft. lbs.	Lock	4.0	210

Performance Data (MDU-7003,4)

Torque	RPM	Volts	Amperes
0 ft. lbs.	5300	10.0	50
6.2 ft. lbs.	Lock	4.0	280

Starting Switch: Autolite SAE-4005 (MDM-6005) Key starting (Magnetic switch controlled by turning key past "Ignition On" position).

GENERATOR

Autolite GJC-7002J; GJP-7202A (4 Cyl.). GJC-7002K; GJP-7202B (6 Cyl.).
Replacement Generator Without Pull y - GJC-7002S (All GJC generators).
Armature - Autolite GJC-2030F (GJC generators).

Performance Data - GJC-7002J, K, S

Amperes	Volts	RPM
0.0	12.8	1225-1325
15.0	15.0	1700-2000
30.0	15.0	2050-2250

Performance Data - GJP-7202A,B

Amperes	Volts	RPM
16	15 0	1750
30	15 0	2300
35	15.0	2600

Brush Spring Tension - 18-36 ozs.
Field Current - 1.2-1.3 amps (GJC-7002J,K,S), 1.6-1 7 amps. (GJP-7202A,B), at 10.0 Volts (70°F).
Motoring Current - 3.4-3.9 amps. (GJC-7002J,K,S), 3 1-3.5 amps. (GJP-7202A,B), at 10.0 volts (70°F).
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 1/2-5/8" deflection midway between generator and water pump pulleys with normal thumb pressure.

REGULATOR

Autolite VRX-6009B (Early), VBO-4201E (Lat).

Cut ut R lay

Cuts In - 12.6-13.6 volts (VRX), 12.5-13.5 volts (VBO).
Cuts Out - 3-5 amps. discharge after charge of 7 amps.
Contact Gap - .015" min. **Air Gap** - .031-.034" (VRX), .025-.027" (VBO).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Voltage Regulator

Setting - 14.5 volts at 80°F, unit operating while charging at 7 amperes or with a .25 ohm resistor between regulator and battery.
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Autolite 12-Volt Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION:* "Temperature Compensated" type. Set to following specifications at 70°F.

Operating Amperes

Model	Test A	Test B
VRX-6009B	37 amps. max.	30 (28-32) amps.
VBO-4201E	44 amps. max.	35 (33-37) amps.

Test A - After 15 minutes operation charging at 10 amps.
Test B - After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Autolite 12-Volt Regulators" in Electrical Section.*

12-VOLT ELECTRICAL SYSTEM

DELCO-REMY STARTER

Delco-Remy 1107746 (4 Cyl.), 1107747 (6 Cyl.).
Rotation - Counterclockwise at commutator end.
Drive - Bendix "Folo-Thru" type.
Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

GENERATOR

Delco-Remy 1102172 (4 Cyl.),1102171 (6 Cyl.).
Replacement Generator Without Pulley - 1102096 (All).

Performance Data

Amperes	Volts	RPM
30	14.0	2240

Brush Spring Tension - 28 ozs.
Field Current - 1.69-1.79 amps. at 12 volts (80°F).
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 1/2-5/8" deflection midway between generator and fan pulleys with normal thumb pressure.

REGULATOR

Delco-Remy 1972029.

Cut out Relay

Cuts In - 11.8-13.5 volts.
Contact Gap - .020". **Air Gap** - .020".

Voltage Regulator

Setting - 13.8-14.8 volts.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" in Electrical Section.*

Current Regulator

Setting - 27-33 amperes.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" in Electrical Section.*

MISC. ELECTRICAL

Directional Signals: *See Electrical Section.*
Lighting Switch Removal: Loosen set screw on side of control knob and remove knob. Remove retaining nut and remove switch through panel.
Stop Light Switch Location: On brake master cylinder.
CIRCUIT BREAKER: 25 Ampere - Protects lighting circuits. Integral with headlight switch.
FUSES: Located in lead except overdrive fuse, which is at overdrive relay. See table below.

Fuse Specifications

Item	6 Volt	12 Volt
Overdrive	SFE 20	SFE 14
Dir. Signal	SFE 14	SFE 9
Heater (Exc. Fwd. Contr.)	SFE 14	SFE 9
Heater (Fwd. Contr.)	SFE 10	AGC 10
Radio	SFE 9	①

① - AGA-5 (Fwd. Contr.), AGC-7½ (Utility).

ENGINE

►*THREE DIFFERENT ENGINES USED: See "Model Identification" for application.*

4 CYL. "F" HEAD

Model	Bore	Stroke	Displacement
F4-134 (All)	3.125"	4.375"	134.2 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
F4-134 4x2	7.4-1①	15.63	75 at 4000 RPM
F4-134Others	6.9-1②	15.63	72 at 4000 RPM

① - 7.8-1 Optl. ② - 7.4-1 Optl.

Compression & Vacuum Reading—*See "TUNE-UP" above.*

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following:
"A" .010" main & connecting rod journals Undersize.
"B" .010" cylinder bore and pistons Oversize.
"AB" both above conditions exist.

►*TIMING GEAR OIL JET PRODUCTION CHANGE & CAUTION:* Smaller jet (.040") Part No. 924335 entered production with engine Nos. 3J-16687 and 4J-250095. When necessary to replace No. 1 Con Rod bearing, replace the .070" jet with the new .040" jet at the same time.

ENGINE REMOVAL (Utility & Forward Control Models): *See "Engine" in Willys Special Data.*
CYLINDER HEAD & GASKET INSTALLATION: *See Willys Special Data.*
TIGHTENING TORQUES: *See Willys Special Data.*

PISTONS

Aluminum alloy, cam ground, T slot, Tin or Brass plated Piston has heat insulating groove above top piston ring groove.

►*PISTON OVERSIZE NOTE:* Letter "B" or "AB" following engine number indicates that cylinder bore and pistons are .010" Oversize.
Weight—13.5 ozs.
Removal—Pistons & Rods removed from above.
Fitting New Pistons: Place .003" x 3/4" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove ribbon feeler should be 5 to 10 lbs.
Replacement Pistons: Std. and .010", .020", .030" and .040" Oversize.
Installing Pistons: "T" slot toward valve (left side) of engine (opposite side from oil spray hole in connecting rod lower end).

PISTON PINS

Locked in rod with clamp screw.
Diameter—.8118-.8120". **Length**—2-25/32".
Clearance in Piston—.0002-.0004". Thumb push fit at 70° F.
Replacement Pins: No oversizes available.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.013"	.002-.004"
Compr. #2	3/32"	.007-.013"	.0015-.0035"
Oil	3/16"	.007-.013"	.001-.0025"

Replacement Rings: (For rebored cylinders)—Furnished .010", .020", .030" and .040" Oversize.
Service Type Rings—(For Cylinders not Rebored)—Furnished Std. (.000-.009"), .010" (.010-.019"), .020" (.020-.029"), .030" (.030-.039"), .040" (.040-.049") Oversize.
Installing Rings: Install compression rings with mark "Top" (on side) toward top. Rings have tapered face and must be installed correctly. Top ring inner bevel edge must be up.

CONNECTING RODS

Length (Center to Center) - 9.1845-9.1905".
Weight - 32 ozs.
Crankpin Journal Diameter - 1.9375".

►*JOURNAL DIAMETER UNDERSIZE NOTE:* The letter "A" or "AB" following the engine number indicates that main and connecting rod journals are .010" Undersize.
Bearings—Steel backed babbitt.
Clearance - .001-.0019".
Sideplay - .004"-.010".
Replacement Bearings: Std. and .001", .002", .010", .020", .030" Undersize.
Installing Rods: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (Nos. 1 & 3), toward rear of engine (Nos. 2 & 4). Oil spray hole in lower end of rod must be toward right of engine (away from camshaft) on all rods.

CRANKSHAFT

Journal Diameter - 2.333-2.334". All main bearings.

►*JOURNAL DIAMETER UNDERSIZE NOTE:* The letter "A" or "AB" following engine number indicates that main and connecting rod journals are .010" Undersize.
Bearings—Steel backed babbitt.
Clearance - .0003-.0029".
Replacement Bearings: Std. and .001", .002", .010", .020", .030" Undersize.
Crankshaft Servicing: *See "Crankshaft & Main Bearings" in Willys Special Data*
End Thrust: Taken by thrust washer between crankshaft gear and front bearing. Endplay controlled by shims between thrust washer and shoulder on crankshaft.
NOTE - Thrust washer must be installed with inner beveled edge toward front bearing
Endplay—.004-.006".
Crankshaft Rear Main Bearing Oil Seal: Knurls added to rear seal surface on crankshaft. *See "Crankshaft & Main Bearings" in Willys Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Engin Fr nt C v r Oil S al (Crankshaft Fr nt S al): S *"Engine Front Cover" in Willys Special Data.*

CAMSHAFT

Journal Diameters - (1) 2.1860-2.1855", (2) 2.1225-2.1215", (3) 2.0600-2.0590", (4) 1.6230-1.6225".

Bearings - No. 1 steel-backed, babbitt (replaceable bushings), Nos. 2, 3, 4 cast iron (precision bored in block).

Clearance - .001-.0025".

End Thrust: Taken by thrust plate behind camshaft gear Endplay controlled by spacer between camshaft gear and shoulder on shaft Endplay can be increased by installing shim between spacer and shaft, or decreased by dressing off spacer NOTE - Inner beveled edge of spacer must be toward crankcase

End Play—.004-.007".

Camshaft Servicing: *See "Camshaft & Bearings" in Willys Special Data.*

Timing Gears: Crankshaft gear, steel. Camshaft gear, fibre with steel hub.

Gear Clearance - 000- 002"

Camshaft Setting: Mesh marked tooth of camshaft gear with marked space (between teeth) of crankshaft gear

VALVES

Tappet Clearance: Intake 018", Exhaust 016" Cold

Valve	Head Diameter	Stem Diameter	Length
Intake	2"	.3733-.3738"	4.781"
Exhaust	1-15/32"	.371- 372"	5.909"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	260"	.0007-.0022"
Exhaust	45°	.351"	0025- 0045"

►*EXHAUST VALVE NOTE:* Thompson Valve Rotators used.

Valve Seat Width—3/64".

Valve Seat Inserts - Used for all exhaust valves

Valve Stem Seals (Intake Valves) - Rubber seal ring installed on upper end of valve stem directly below valve locks When installing valves, install spring and retainer, compress spring, install seal in groove before installing locks

Valve Springs. Install with closed coil upward toward block (Exhaust), down towards head (Intake).

Free Length—1 31/32" (Intake), 2½" (Exhaust).

Valve Spring Specifications

Valve	Intake	Exhaust
Closed	73 lbs at 1 21/32"	53 lbs at 2 7/64"
Open	160 lbs at 1 3/8"	120 lbs at 1 3/4"

Valve Guides: Use Tool W-177 to remove and install guides. Drive Exhaust guide down into valve compartment to remove. Drive new Exhaust guide to 1" below surface of cylinder block and new Intake guide flush with bottom of valve guide bore in cylinder head.

Rocker Arm Assembly Removal: *See "Valve System" in Willys Special Data.*

Valve Lifters: Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

Diameter—.6240-.6245". **Clearance**—.0005-.002".

VALVE TIMING

See "Camshaft Setting" und r "CAMSHAFT" abov .

Intak Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

Valve Timing Check—Set Intake valve clearance at .026". Rotate engine clockwise until No. 1 cylinder is ready for intake stroke. Intake opens 9° BTDC. Note the distance between TDC and the 5° mark and estimate 9° from this distance. With the crankshaft in this position timing is correct if lifter is just tight against valve stem.

ENGINE

4 CYL. "L" HEAD

Model	Bore	Stroke	Displacement
L4-134	3.125"	4.375"	134.2 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
L4-134	6.48-1	15.63	60 at 4000 RPM

►*ENGINE NUMBER NOTE: Letters stamped after engine number denote the following:*

"A" - .010" undersize main & connecting rod bearings.
"B" - .010" oversize cylinder bore.
"AB" - Both above conditions exist.
"C" - .002" undersize piston pin.
"D" - .010" undersize main bearing journals only.
"E" - .010" undersize connecting rod bearing journals only.

►*TIMING GEAR OIL JET PRODUCTION CHANGE & CAUTION:* Smaller jet (.040") Part No. 924335 entered production with engine Nos. 3J-16687 and 4J-250095. When necessary to replace No. 1 Con Rod bearing, replace the .070" jet with the new .040" jet at the same time.

►*OTHER ENGINE DATA: See "4 Cyl. "F" Head" above and note the following differences:*

VALVES: Tappet Clearance - .016" Cold (Intake & Exhaust).

Valve	Head Diam.	Stem. Diam	Length
Intake	1 17/32"	.373"	5 51/64"
Exhaust	1 15/32"	.371-.372"	5 51/64"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.351"	.0007-.0022"
Exhaust	45°	.351"	.0025-.0045"

Valve Seat Width - 3/64"

Valve Springs: Install all springs with closed coil end up toward cylinder block **Free Length** - 2½"

Spring Specifications (All Valves)

Valve	Pressure & Length
Closed	53 lbs. at 2 7/64"
Open	120 lbs at 1 3/4"

Valve Guides: Use W-177 to remove and install guides. Drive guides into valve compartment to remove. Drive new exhaust guide to 1" below surface of cylinder block and new intake guide 1 5/16" below surface of cylinder block.

VALVE TIMING: *Same as on 4 Cyl. "F" Head Engine.* **Valve Timing Check** - Set tappet clearance of No. 1 cylinder intake valve at 020" Rotate engine until No 1 cylinder is entering intake stroke (9° BTDC). Note distance between TDC and 5° mark on timing gear cover, estimate position of 9° point. With crankshaft in this position, timing is correct if lifter is just tight against valve stem Reset tappet clearance to 016".

L6-226	6.86-1③	26.33	105 at 3600 RPM

③ - 7.3-1 Optl.

Compression & Vacuum Reading—S e *TUNE-UP above.*

►*ENGINE NUMBER NOTE:* Letters following engine number denote the following:

"A" 010" Undersize main and connecting rod journals.
"N" 020" Oversize bore and pistons
"AN" Indicates both "A" and "N" conditions

►*ENGINE SERIAL NUMBER PLATE REPLACEMENT CAUTION:* When installing a new cylinder block, old engine serial number plate must be transferred and installed on new block to prevent oil leakage at drilled holes provided in new block.

►*EXHAUST PIPE SUPPORT BRACKET PRODUCTION CHANGE:* New bracket used on later vehicles to reduce exhaust pipe flange breakage.

ENGINE REMOVAL (Utility & Forward Contr l M d ls): *See "Engine" in Willys Special Data.*

CYLINDER HEAD & GASKET INSTALLATION: *See "Cylinder Head & Manifolds" in Willys Sp cial Data.*

TIGHTENING TORQUES: *Se "Tight ning Specifications" in Willys Special Data.*

PISTONS

Aluminum alloy, T-slot, cam ground, tin or brass plated.

►*PISTON OVERSIZE NOTE:* Letters "N" or "AN" following engine number indicates that cylinder bore and pistons are 020" Oversize

Weight - 15 187-15 437 ozs (less rings and pin)

Removal - Pistons and rods removed from above

Fitting New Pistons: Place 0015" x 1/2" ribbon feeler between thrust side of piston and cylinder wall. Pull required to remove feeler should be 5 to 10 lbs.

Piston Replacement—Std., .010", .020", .025 , .030", .040", .050", and .060" Oversize.

Installing Pistons: Slot in skirt toward left or away from camshaft.

PISTON PINS

Floating type with lock ring at each end.

Diameter - .8591-.8593". **L ngth** - 2.779".

Clearance in Piston - .0002". Selective fit. Light thumb push fit.

Clearance in Rod - .0002-.0006". Hand press fit at room temperature.

Piston Pin Fitting - *See "Piston Pin Not s" in Willys Special Data.*

Replacement Pins: Std., .003" and .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (Upper)	.0930-.0935"	.008-.016"	.002-.004"
Compr. (Lower)	.0930-.0935"	.008-.016"	.003-.007"
Oil (Top ring)	.1545-.1550"	.008-.016"	.006-.010"
Oil (Bottom ring	.1545-.1550"	.008-.016"	.0025-.004"

Replacement Rings: Ring sets and single rings furnished in following sizes for oversize ranges indicated: Std. (Std.-.009"), .020" (.010-.029"), .030" (.030-.039"), .040" (.040-.049"), .060" (.050-.069").

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installing Rings Side marked "Top" (compression rings) upward. Chrome plated ring must be installed in top (#1) ring groove.

CONNECTING RODS

Length–6.998"- 7.002" (Center to center)
Crankpin Journal Diameter–2.0619- 2.0627".
►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AN" following engine number indicates that the main and connecting rod journals are .010" Undersize.
Bearings–Steel Backed Babbitt.
Clearance - 0007- 0025" maximum **Sideplay** - 006- 011"
Replacement Bearings Std. and .001", .002", .010" and 012", 020" Undersize
Installing Rods Mark rods and bearing caps. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. *NOTE*–Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 forward), (#2, 4, 6 toward rear).

CRANKSHAFT

Journal Diameter - 2 374-2 375"
►*JOURNAL DIAMETER UNDERSIZE NOTE* The letter "A" or "AN" following the engine number indicates that the main and connecting rod journals are .010" Undersize.
Bearings–Steel Backed Babbitt.
Clearance - 0008- 0028"
Replacement Bearings Std. and .001", .002", 010" and 012", 020" Undersize
End Thrust Taken by #4 rear main bearing which is flanged type.
Endplay - 003- 006"
Rear Bearing Oil Seal Installation *See "Crankshaft and Main Bearings" in Willys Special Data*

CAMSHAFT

Journal Diameters–(1) 1.8725-1.8735". (2) 1.8095-1.8105". (3) 1.7472-1.7485". (4) 1.2475-1.2485".
Bearings–Steel Backed Babbitt.
Clearance – 001-.003".
End Thrust Taken by thrust plate on front of engine (between front bearing journal and hub of sprocket)
End Play–.003-.007".
Camshaft Servicing: *See "Camshaft & Bearings" in Willys Special Data*
Timing Chain: Non-adjustable type Width 1" (Early), 875" (Late) Pitch 500"
Length 23" or 46 links.
►*TIMING CHAIN CAUTION Morse and Link Belt chains used. Chains and sprocket interchangeable only in COMPLETE SETS*
Camshaft Setting Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Willys Special Data*

VALVES

Tappet Clearance : Intake and Exhaust .014" Cold.
►*VALVE TAPPET ADJUSTMENT (FORWARD CONTROL MODELS)* Access panel provided in right front wheel housing for valve tappet adjustment Install jack stand under right frame rail remove right front wheel remove wheel housing access panel (both sections of split panel), remove fuel pump and valve covers Tappet clearance can then be adjusted
►*TAPPET CLEARANCE ADJUSTMENT PROCEDURE: See "Valve System" in Willys Special Data*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.520"	.3402-.3410"	5.187"
Exhaust	1.328"	.3382- 3390"	5 205

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	284"	001- 003"
Exhaust	45°	284"	0032- 0050"

Valve Seat Inserts - Used for all exhaust valves
Valve Seat Width- 5/64-3/32" (intake), 3/32-7/64" (exhaust).
NOTE–Rotators used on Exhaust valves.
Valve Guides Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides to inside diameter of .3432-3422".
Replacement Guides–Std., .0005" (marked "A"), .0055" (marked "L") to insure .0005-.003" press fit.
Guide Installation–Place guide (tapered end of guide toward top) in position in bore and drive in to correct position of 1-7/32" below top face of cylinder block.
Valve Springs: Intake & Exhaust valve spring interchangeable
Free Length–1-31/32".

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	51	1 672"
Open	107	1 312"

Valve Lifters Mushroom type with self locking adjusting screws.
Diameter–.6855-.6860".
Clearance–Selective fit. Lifter should rotate in bore with slight drag. Service by installing oversize lifter.
Replacement Lifters–Furnished in Std. and the following oversizes marked as indicated "B" is .001", "D" is .002", and "K" is .005" O.S.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE:* Specifications are with tappet clearance as follows Intake 018", Exhaust 020"
Intake Valves - Open 2° BTDC Close 42° ALDC
Exhaust Valves - Open 42° BLDC Close 8° ATDC
Checking Valve Timing - Check timing marks on vibration damper to be sure they are correct when No 1 Piston is at TDC Adjust No 1 intake and exhaust valve clearance to 0175" Remove spark plugs and turn engine until No 1 intake has zero clearance then continue to turn engine until No 1 intake just starts to open Timing indicator should show 2°±2° BTDC Continue to turn engine Exhaust valve should be closed when indicator shows 8°±2° ATDC

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" and OILING SYSTEM in Willys Special Data*
Crankcase Capacity - 4 qts (4 Cyl) 5 qts (6 Cyl) refill
Normal Oil Pressure : 35 lbs at 2000 RPM (4 Cyl), 1700 RPM (6 Cyl)
Pressure Regulator - In pump housing (4 Cyl), right side of cylinder block below valve chamber to rear of engine (6 Cyl)
Oil Pressure Indicator: Red telltale light in Instrument Cluster operated by Oil Pressure Switch Light comes on when Ignition Switch turned on and goes out when oil pressure reaches 6 lbs
Oil Pump: Rotor type on left side of engine (4 Cyl), gear type attached to rear intermediate main bearing in crankcase (6 Cyl)
Oil Pump Overhaul - *See "Oiling System" in Willys Special Data*
Oil Filter: Partial flow type ("Disposable" type used on some cars) *NOTE* - When replacing disposable type filter tighten filter by hand until gasket contacts mounting flange then tighten one-half turn additional
Crankcase Ventilation: (4 Cyl) See Crankcase Ventilator above (Others) Filter in oil filler cap and outlet tube from crankcase ventilator baffle on valve side cover

COOLING

►*COOLING SYSTEM FILLING CAUTION (FC 150 & FC 170)* These models have separate "surge tank" and cooling system should be checked and filled as follows Fill surge tank to the top replace cap run engine at medium speed for one minute remove cap and recheck coolant level add more coolant as necessary to bring level to top of tank *NOTE* If system filled with engine cold recheck coolant level after engine run for one minute **after thermostat opens**
►*RADIATOR BYPASS VALVE CAUTION (FC 170)* This valve located on water pump can be closed for cold weather operation for more efficient heater operation but VALVE MUST BE OPEN IN WARM WEATHER FOR PROPER COOLING
►*FC-150 FAN PULLEY NOTE* Install fan pulleys on both water pump and fan shaft assemblies with offset to front of engine to eliminate interference with generator pulley Adjust fan belt to ¼-½" deflection with light thumb pressure by pulling shaft housing to right side of frame
Water Capacity. (FC-150) 10 qts (FC 170) 11 qts (Other 4 Cyl) 11 qts (Other 6 Cyl) 12 qts without heater Add 1 qt for heater (except FC-170 ½ qt)
Pressure Valve: 7 lb. (Jeep & Jeep Dispatcher), 7 lb. (Jeep Utility Exc 6 Cyl 4 x 4) 13 lb. (Jeep Utility 4 x 4) 9 lb. Forward Control (Exc FC-170 with Air Intake Modification Kit) 13 lb (Forward Control with Air Intake Modification Kit)
Thermostat: Harrison In water outlet elbow in cylinder head Opens at 163-168°F
Water Pump: Centrifugal packless ball bearing type *See "Water Pumps" in Willys Special Data*
Temperature Gauge: Stewart-Warner Electric Constant Voltage type with gauge voltage regulator on back of instrument panel or fuel gauge
See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Auburn, Rockford 8½RM, Borg & Beck 10A7. Single plate types
See Clutch Section for complete data

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CLUTCH CONTROL LINKAGE PRODUCTION CHANGE (L6-226 Utility):* New linkage used starting with Serial Nos 58167-10698, 54167-15682, 54267-11617, 54168-53268, 54268-13779, 55268-58604 Kit Part No 924263 (L6-226 4 x 2), Kit No 92464 (L6-226 4 x 4 & 4 WD) may be installed on earlier models to reduce linkage breakage *NOTE - Installation instructions contained in Kit*

Pedal Adjustment: 4 Cyl. (Exc. Trks. & Sta. Wgns). 1" pedal freeplay To adjust freeplay, loosen the yoke locknut on cable between throwout lever and cross shaft lever and turn cable

4 Cyl. (Trks. & Sta. Wgns. Exc. FC-150) - 1" pedal freeplay To adjust, loosen locknut on adjusting rod (between intermediate shaft lever and clutch fork) and turn adjusting nut to increase or decrease rod length

6-226 Models (Exc. FC-170) - 1" pedal freeplay To adjust, loosen locknuts on pedal adjusting rod, turn nuts forward to increase or backward to decrease freeplay

FC-150 & FC-170 - ½" pedal freeplay To adjust loosen locknut on cable between clutch pedal and cross shaft lever and adjust length of cable

R moval (4 Cyl.): Remove transmission (see Trans mission Removal below) Remove engine from chassis (labor will be saved if engine removed without bell housing) Take out clutch cover mounting screws (turn all screws out evenly to relieve spring pressure) remove cover assembly and clutch disc from flywheel

R moval (6 Cyl.): *NOTE* - This engine has split bell housing and it is not necessary to remove engine or transmission for clutch removal Disconnect both front and rear propeller shafts, pull transmission and transfer case to rear sufficiently so that drive gear shaft clears clutch *(CAUTION - Support transmission securely),* remove bell housing bottom pan Mark clutch cover and flywheel, take out clutch cover mounting screws (turn out all screws evenly to relieve spring pressure) remove cover assembly and clutch disc through bottom of bell housing

SYNCHRO-MESH TRANSMISSION

4 WHEEL DRIVE

Model	Warner No.
Jeep (3 Spd)	T90C
Jeep (4 Spd)	T98A
F4-134	T90C
6-226	T90J
FC-150,170 (3 Spd)	T90A
FC-150,170 (4 Spd) ①	T98A

① - Mandatory with Optional FC-150 6100 GVW and FC-170 9000 GVW

See "Warner Transmission" in Transmission Section

►*TRANSFER CASE OPERATING LEVER VIBRATION ON ACCELERATION OR DECELERATION CORRECTION (FC-150)* If light hand pressure (in either direction) minimizes vibration, insulate transfer case lever shaft brackets from body panel *See "Transmission Notes" in Willys Special Data*

►*FOUR SPEED TRANSMISSION LUBRICATION CAUTION* Since there is no passage between 4-speed transmission and transfer case it is necessary to check fluid level at both transmission and transfer case fill points Fluid capacity is 4-Speed Transmission - 6¾ pints Transfer Case - 3½ pints

Transfer Case: Spicer Model 18. Two speed auxiliary transmission and front wheel drive unit mounted on rear of transmission case

See Transmission Section for complete data

►*TRANSFER CASE SHIFT LINKAGE ADJUSTMENT (FC-150)* Attach linkage lever to outer hole (two in shift rod nearest transmission) to eliminate hard transfer case shifting Adjust shift rod assembly as follows Set transfer case hand shift lever in neutral loosen adjusting nuts at transfer case end of remote control rod move shift lever at transfer case to neutral position tighten adjusting nuts being careful not to disturb shift lever position at either end of remote control rod

Removal (4 Whl. Drive): Drain transmission and transfer case, then replace plugs Remove transmission access cover from floor pan Remove shift lever, housing assembly, and gasket Remove setscrew from transfer case shift lever pivot pin Remove pivot pin, shift levers, and springs If vehicle is equipped with power take-off, remove the shift lever plate screws and lift out lever Disconnect front and rear propeller shaft from transfer case Disconnect speedometer cable at case and front and rear hand brake cables at lever Place jacks under transmission and engine, protecting engine oil pan with block of wood Remove transfer case snubbing rubber bolt nut and bolts holding frame center crossmember to frame side rail, then remove crossmember Remove bolts holding transmission to flywheel bell housing and force transmission to right to disengage clutch control lever tube ball joint Lower jacks under engine and transmission, slide transmission and transfer case assemblies toward rear of vehicle until clutch shaft clears bell housing Then lower jack under transmission and remove transmission and transfer case as an assembly

2 WHEEL DRIVE

Warner Three speed type Constant mesh, synchro-mesh, helical gear (second & high), sliding spur gear (low & reverse) Used as follows

Model	Warner Type
Jeep Dispatcher	T96
F4-134	T96
6-226	T86

Transmission Control: Remote control type with gear-shift lever on steering column. *See "Transmission Controls" in Transmission Section.*

Removal (2 Whl. Drive): Disconnect remote control shift rods from control levers and two wires from solenoid Tag wires and terminals for reassembly Disconnect two wires from overdrive rail switch if vehicle is so equipped Disconnect propeller shaft front universal joint at transmission Disconnect speedometer cable, overdrive control cable, and conduit Remove rubber mounted saddle support at rear end of overdrive and take out overdrive governor assembly Place jack under flywheel bell housing and raise sufficiently to be tight under housing Remove frame crossmember with rubber insulators attached Place jack under engine to support it when transmission is removed Protect oil pan with block of wood Thread out screws attaching transmission to bell housing as far as possible and support weight of transmission Pull transmission back to bolt heads which will provide approximately ¾" opening between two housings Insert long screwdriver through opening in side of bell housing and pry clutch release fork from engagement with clutch release bearing carrier Remove transmission attaching screws, pull transmission back until clutch shaft clears bell housing, then remove assembly

OVERDRIVE

Warner R10. *See "Warner R10" in Transmission Section.*

Overdrive Control: *See "Warner R10 & R11 Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (2 Wheel Drive above) after disconnecting control cable and wiring.

UNIVERSALS

2 WHEEL DRIVE

Spicer. Cross type One at each end of propeller shaft.

4 WHEEL DRIVE

Drive Shaft Joints - Spicer. Cross type. One used at front and rear of both front and rear propeller shafts.

Front Axle Shaft Joint - Spicer. Cross type with needle bearings Similar to joints used in front and rear propeller shafts *NOTE* - Bendix & Rzeppa constant velocity type optional *See "Universal Joints" in Willys Special Data*

Power Take-off Shaft Joints - Dana. Ball-and-Trunnion type One used at each end of shaft (no splined joint required)

FRONT AXLE

4-WHEEL DRIVE

Spicer Model 44F (FC-150, 170), Model 25 (All Others). Full floating Hypoid gear type Differential assembly (ring and pinion gear assembly) is serviced in same manner as Spicer Rear Axles

See "Spicer" in Rear Axle Section

►*"POWER-LOCK" DIFFERENTIAL. Optional. See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

►*"POWER-LOCK" DIFFERENTIAL IDENTIFICATION & LUBRICATION CAUTION See same note under Rear Axle below*

Axle Ratios

Model	Ratio
CJ-3B,5,6	5 38-1 (8-43)
F4-134 4 x 4, 4WD	5 38-1 (8-43)
L6-226 4 x 4	① 4 27-1 (11-47)
L6-226 4WD	② 4 88-1 (8-39)
FC-150	③ 5 38-1 (8-43)
FC-170 Std	④ 4 89-1 (9-44)
FC-170 H D Modification	③ 4 89-1 (9-44)

① - 4 88-1 (8-39) or 5 38-1 (8-43) Optl
② - 5 38-1 (8-43) or 4 27-1 (11-47) Optl
③ - 5 89-1 (9-53) Optl
④ - 4 27-1 (11-47) or 5 38-1 (8-43) Optl

Removal: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

"U" bolts, remove bolts at rear end of springs and lower springs, remove axle assembly from beneath car.

Axle Shaft & Universal J int Assy. Removal. Remove wheel, hub cap, axle shaft nut and washer. Take out drive flange cap screws and remove flange with puller, Bend lip of bearing adjusting nut lockwasher out, remove locknut, lockwasher, adjusting nut, and bearing locking washer. Remove wheel hub and bearing assembly.(*(CAUTION*–use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal joint assembly out of housing.

►*INSTALLATION CAUTION.* Adjust front wheel bearings and bleed brakes after installation completed.

St ring Knuckle B aring Disassembly & Adjustment: *See "Front Axle" in Willys Special Data*

Wh l B aring Adjustment: Tighten inner adjusting nut until there is a slight drag on the bearings as the hub is turned, then back nut off 1/6 turn, install locking washer and nut, tighten locknut securely and bend lockwasher over the locknut

REAR AXLE

Spic r. Hypoid gear, semi-floating type (Exc 70) with Hotchkiss Drive Various models used as follows

Model	Spicer Axle No.
CJ3B, 5,6	44-2
DJ-3A,6A	23
F4-134 4 x 2 & 4 x 4	44
F4-134 4WD Std	①53-2
FC-150	44-1
FC-170 Std	53
FC-170 H D Modification	②70

① - 53 Optional ② - Full Floating

See 'Spicer Hypoid' in Rear Axle Section

M del	Axl Ratios	Ratio
CJ-3B,5,6		5 38-1(8-43)
DJ-3A,6A		4 56-1(9-41)
F4-134 4 x 4, 4WD		5 38-1(8-43)
F4-134 4 x 2		①4 89-1(9-44)
L6-226 4 x 2, 4 x 4		②4 27-1(11-47)
L6-226 4WD		③4 88-1(8-39)
FC-150		④5 38-1(8-43)
FC-170 Std		③4 88-1(8-39)
FC-170 H D Modification		⑤4 88-1(8-39)

① - 5 38-1 (8-43) Optl
② - 4 89-1 (9-44) or 5 38-1 (8-43) Optl
③ - 5 38-1 (8-43) or 4 27-1 (11-47) Optl
④ - 5 89-1 (9-53) Optl
⑤ - 5 87-1 (8-47) Optl

►*"POWER-LOCK" DIFFERENTIAL* Optional on all models except DJ3A,6A (Rear Axle), *see "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

►*"POWER-LOCK" DIFFERENTIAL IDENTIFICATION & LUBRICATION CAUTION* Axles with Power-Lock differential can be identified by brass tag stamped "T" or reading "USE LIMITED SLIP DIFF LUBE ONLY" attached to one of gear cover screws

Axl Shaft R m val (S mi-fl ating Axl): Remove axle shaft nut, then use puller to remove wheel hub Remove bolts retaining dust shield, grease and bearing retainers and brake assembly *CAUTION* - Do not disturb backing plate Remove shield and retainer then pull axle shaft, being careful not to lose adjusting shims

Full-Floating Axles - To remove the axle shaft it is not necessary to jack up the rear wheel Remove the 8 axle flange nuts and 16 lockwashers holding the axle shaft flange Pull axle from housing

Rear Axle Assembly Removal: Raise rear end of vehicle with hoist and support frame ahead of rear springs Remove wheels and disconnect propeller shaft at rear universal joint companion flange Disconnect brake hydraulic hoses, remove spring to axle "U"-bolt clips and slide assembly from underneath the vehicle

Wheel Bearing Adjustment (Semi-floating Axles): Endplay 003- 007" Adjust by adding or removing shims between backing plate and axle housing flange at each wheel

Full-Floating - Tighten inner adjusting nut until there is a slight drag on the bearings as the hub is turned, then back nut off 1/6 turn, install locking nut and washer, tighten locknut securely and bend lockwasher over the locknut

SHOCK ABSORBERS

Monroe or Gabriel. Direct acting type

FRONT SUSPENSION

2-WHEEL DRIVE

Conventional I-Beam with Reverse-Elliot ends and semi-elliptical springs

Kingpin Inclination - 7°30' **Caster** - 3° **Camber** - 1°

Toe-In - 3/64-3/32" Adjust both tie rods alike (approximately 1/2 turn from point where front wheels are "straight ahead")

Toe-Out on Turns - Outer wheel 20°, inner wheel should be 22° (Dispatcher), 21°45' (Utility)

4-WHEEL DRIVE

►*FRONT WHEEL SHIMMY CORRECTION (CJ-5 & FC-150) See 'Suspension Notes" in Willys Special Data*

Front Axle: Special driving unit with semi-elliptical springs Steering knuckle mounted on taper roller bearings carried on two stub shafts **End Play** - 001- 003" **Kingpin Inclination** - 7°30' **Caster** - 3°. **Camber** - 1°30' **Toe-In** - 3/64-3/32" Adjust both tie-rods alike (approx-approximately 1/2 turn from point where front wheels are "straight ahead")

Toe-Out on Turns - Outer wheel 20°, inner wheel should be 20°

►*OTHER DATA See "Front Axle (above)*

STEERING

Ross. Cam and Twin Lever type

See "Ross Cam & Twin Lever" in Steering Section

►*STEERING GEAR ASSEMBLY PRODUCTION CHANGES·* Two different steering gear assemblies and remote control assemblies used in production The type used is determined by the distance between bottom edge of steering hub and top of remote control shift shaft upper bracket On Dispatcher Models, the distance should be less than 2" on one type and greater than 2" on the other On 4 x 2 Utility models the distance should be 1 1/2-1 5/8" on one type and 1 7/8"-2" on the other The parts of the two types in each case are n t interchangeable

St ring Linkag · *S e "St ering Linkage" in Ste ring S ction*

St ring Wh l & Horn Butt n R m val: *S "R ss Cam & Twin L v r" in St ring S ction*

Steering Gear Removal: *See "Ross Cam & Twin Lev r" in Steering Section*

BRAKES

Bendix (Lockheed) Self-Centering. Hand brake lever applies rear service brakes (Jeep Utility and some Forward Control Models), applies transmission mounted brake (Jeep Models and some Forward Control Models)

See "Bendix-Lockheed (Self-Centering)" in Brake S ction

Drums - 9" front and rear (CJ-3B,5,6, DJ-3A,6A), 12" front, 13" rear (FC-170 with Dual Wheels), 11" front and rear (Others)

Wheel Cyl. Diameter	Front	Rear
CJ-3B,5,6	1"	3/4"
DJ-3A, 6A	1 1/8"	13/16"
Utility & Truck	1 1/8"	1"
FC 150	1 1/8"	7/8"
FC 170	1 1/8"	1"
FC 170 (Dual Wheels)	1 1/8"	1 1/4"

Lining Length & Width
(Exc. FC-170 with Dual Rear Wheels)

Model	Primary	Secondary
CJ-3B,5,6	10 7/32" x 1 3/4"	6 39/64" x 1 3/4"
DJ-3A, 6A	9 7/8" x 2"	7 11/16" x 1 3/4"
Others	12 1/4" x 2"	10 1/32" x 2"

Lining Width & Length
(FC-170 With Dual Rear Wheels)

	Front	Rear
Primary Shoe	11 5" x 2"	12 67" x 2 5"
Secondary Shoe	13 0" x 2"	13 94" x 2 5"

Thickness - 211" (CJ-3B,5,6), 214" (DJ-3A,6A), 238" (FC-170 with dual wheels), 212" (Others)

Braking Power - Front 65%, rear 35% (CJ-3B,5,6, DJ-3A,6A), 50% Front and Rear (FC-170 with Dual Wheels), Front 57%, Rear 43% (Others)

Clearance - Turn eccentric until shoe contacts drum then back off until wheel turns freely

Power Brake: Hydrovac Power Unit Used with standard master cylinder

See "Hydrovac Power Unit" in Brake Section

Parking Brake (Independent Type): Two shoe internal expanding type on shaft at rear of transmission

Lining - One piece per shoe (two shoes) Width $1\frac{3}{4}$", Length 8 1/8" Thickness 211"

Adjustment - Lubricate linkage and make certain the linkage operates freely Place brake handle on instrument panel to "OFF" position Rotate brake drum until one pair of adjusting holes (three pairs located on back face of drum) is opposite the adjusting screws (notched wheels) within the brake Insert a screwdriver or adjusting tool through hole and turn each adjusting screw equally until the brake shoes are snug against drum *(NOTE* With tool against edge of hole as a fulcrum move outer end of tool out away from center of driveshaft to expand shoes) **Back off each adjusting screw 7 notches** to provide correct shoe clearance

MISC. MECHANICAL

Windshi ld Wipers: Vacuum type

(Univ J p) - Individual motors operate wiper arms.

(Oth r Mod ls) - Single motor operates wiper arms by cable control

See "Windshi ld Wipers" in Misc llan ous S ction

MODEL IDENTIFICATION

Model	Model Designation
4-Door Sedan, "L" Head Engine	A-10L
4-Door Sedan, "Valve-in-Head" Engine	A-10
4-Door Station Wagon, Either Engine	A-10W

►*ENGINE REFERENCE NOTE: In the following data, reference to engines will be: A-10L for "L" Head, A-10 for "Valve-in-Head".*

SERIAL NUMBER: Stamped on plate attached to dash panel under hood. Number (example below) includes identification data as follows:

① ② ③
A-10L 456 34534

①- Model & Engine Designation. *See table above.*
②- Production Order Number.
③- Vehicle Unit Number.

ENGINE NUMBER: Stamped on left side of cylinder block and on serial number plate on dash.

TUNE-UP

VALVE TAPPET CLEARANCE: A-10L - .014" Intake & Exhaust hot and idling. **A-10** - .017" Intake, .023" Exhaust, hot and idling.

MANIFOLD HEAT CONTROL: Thermostatic coil spring type with counterweight (A-10L); Water jacketed intake manifold (water circulated from cylinder head through manifold to water pump) used on A-10 engine.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .028-.030" (A-10L), .032-.033" (A-10).

Spark Plug (A-10L) - Champion UD-16. 18 mm. Torque to 40 ft. lbs.

Spark Plug (A-10) - Champion N-8. 14 mm. Torque to 30 ft. lbs.

COIL: Autolite No. 200574.

Ignition Current - 2.0 amps. idling, 2.6 amps. stopped.

Resistor - None used.

DISTRIBUTOR: Autolite IGC-6002-1AC (A-10L), IAT-4021 (A-10 Early), IAT-4406 (A-10 Later). *NOTE* - IGC Distributor has Centrifugal Advance only.

Condenser - Autolite.

Condenser Capacity - .25-.28 mfd. (IGC Distr.), .21-.25 mfd. (IAT Distr.).

Contact Point Set - Autolite.

Breaker Gap - .018-.022". Set at .020".

Cam Angle - 36-42°.

Breaker Arm Spring Tension - 17-20 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance - IGC-6002-1AC

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	275	0	550
1	430	2	860
5	1060	10	2120
8	1525	16	3050
9	1685	18	3370

Automatic Advance - IAT-4021, 4406

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	250	0	500
1	310	2	620
8	730	16	1460
15	1160	30	2320
16.5	1250	33	2500

Vacuum Spark Control: Autolite integral type used on IAT Distributor only. None used on IGC Distributor.

Vacuum Advance - IAT-4021, 4406

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	10
1	2	11
3	6	13
4	8	14
5	10	15

IGNITION TIMING

Setting - 4° BTDC (A-10L), 3½° BTDC (A-10) at 350 RPM.

Timing Mark - Marks on vibration damper and pointer on engine front cover. Align correct mark with pointer. *NOTE* - Facing the car, rear or left mark is TDC.

CARBURETOR

►*CARBURETOR APPLICATION: Zenith single barrel used on A-10L, Carter AS single barrel used on A-10.*

THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS. CARS): None required. Transmission shift points controlled by Vacuum & Solenoid unit on transmission case.

ZENITH

Zenith Model 228BV10C. Single barrel downdraft type with automatic choke. *NOTE* - Automatic choke has an electric heating coil.

►*HARD STARTING CORRECTION:* May be due to improperly adjusted automatic choke. If thermostat eye does not stay within ± 2 points from zero setting at 65-70°F, set choke 19 points rich from observed zero position of thermostat eye.

Idle Setting - Initial setting ¾-1½ turns out. Turn screw out for richer mixture.

Idle Speed - Initial setting 1½ turns in from point where throttle stopscrew contacts stop on throttle body. Idle speed should be 375 RPM (Auto. Trans. in N).

Float Level - 1½"±1/32" from machined surface of air horn casting to top of float. To adjust, bend float lever.

Accelerating Pump - Install hairpin cotter pin in proper groove in pump guide rod as follows: Bottom groove for full stroke (Winter), middle groove for ¾ stroke (Normal), upper groove for ½ stroke (Summer).

Fast Idle: No adjustment. Fast idle will be correct when slow idle correctly set.

Automatic Choke Setting: 15 points rich.

►*OTHER DATA: See "Zenith Carburetors" in Carburetion Section.*

CARTER

Carter AS No. 2858S. Single barrel downdraft type with automatic choke.

Idle Setting - Initial setting 1/2-1 3/4 turns open. Turn screw out for richer mixture.

Idle Speed - 400 RPM (Auto. Trans. in "N").

Float Level - ¼" (Gauge T109-282) from top of each float at free end to top of casting. To adjust, bend float lip. After adjustment made, clearance between overlapping tangs on float levers should be .010-.015". To adjust, bend long tang on left float.

Accelerating Pump - Pump arm on lifter link should be parallel to top of casting. To adjust, bend pump arm.

Fast Idle: .030" (Gauge T109-29) between lower edge of valve and bore with fast idle link on high step of cam. To adjust, bend choke connector rod.

Automatic Choke Setting: One notch rich.

►*OTHER DATA: See "Carter AS Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter No. M873S. Fuel & Vacuum.

Fuel Pump Pressure - 3-5 lbs. at 500 RPM.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Stewart-Warner electric type.

Dash Unit - Stewart-Warner No. 441193.

Tank Unit - Stewart-Warner No. 390-X.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry filter element type. Clean element every 5000 miles (2000 miles under severe dust conditions). *NOTE* - Oil bath type optional on A-10L.

►*CLEANING CAUTION:* Clean element by tapping lightly or blowing out with a low pressure stream of air directed from the inside surface of element. DO NOT oil, wash or lubricate element.

BATTERY

Willard H-11-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr. rate). *NOTE* - 80 ampere battery optional.

Battery Ground - Negative, to cylinder block.

STARTER

Autolite No. MDL-6025 (Synchro-mesh), MDL-6023 (Aut. Trans.).

Drive - Bendix "Folo-Thru" type.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 31-47 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3200	10.0	60
6.0 ft. lbs.	Lock	4.0	225

Starting Switch: Magnetic Switch, Checker No. 93993, controlled by Ignition & Starter Switch, Checker No. 93738. Neutral Safety Switch No. 02909 (Driv-er-matic), No. 02943 (Dual-Range), mounted at lower end of steering column.

GENERATOR

Autolite. Used as follows:

Model	Generator No.
A-10L Manual Steering	GHM-6016S
A-10L Manual Steering, A-10	GGA-6001SN
A-10L Power Steering	GHM-6017A
A-10L Power Steering	GGA-6002S
A-10, A-10L (Early)	GJC-7008A
A-10, A-10L (Later)	GJP-7103A

►*GJP GENERATOR NOTE: "B" Circuit typ. See "Autolite B Circuit Regulators" in Electrical Section.*

Performance Data - GHM (Cold - 70°F)

Amperes	Volts	RPM
5.0	14.0	875
25.0	15.0	1350
30.0	15.0	1500

Performance Data - GJC (Cold - 70°F)

Amperes	Volts	RPM
0.0	12.8	1225-1325
15.0	15.0	1700-2000
30.0	15.0	2050-2250
35.0	15.0	2250-2650

Performance Data - GGA (Cold - 70°F)

Amperes	Volts	RPM
4.0	14.6	950
40.0	14.6	1600
40.0	15.0	1600

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data - GJP (Cold - 70 F)

Amperes	Volts	RPM
16.0 Min.	15.0	1750
35.0	15.0	2600 Max.

Brush Spring Tension - 35-53 ozs. (GHM), 18-36 ozs. (GJC & GJP), 34-41 ozs. (GGA).
Field Current - 1.1-1.3 amps. (GHM & GGA), 1.2-1.3 amps. (GJC), 1.6-1.7 amps. (GJP) at 10.0 volts and 70°F.
Motoring Current - 3.0-3.5 amps. (GHM), 3.4-3.9 amps. (GJC), 3.1-3.5 amps. (GJP), 2.3-2.6 amps. (GGA) at 10.0 volts and 70°F.
Rotation - Counterclockwise at commutator end.

REGULATOR

Autolite. Used as follows:

Regulator	Generator
VBO-4201D	GHM (30 Amp.)
VBO-4202B	GJC (35 Amp.)
VBO-4202A	GGA (40 Amp.)
VBO-6201A	GJP (35 Amp.)

►*VBO REGULATOR NOTE: "B" Circuit type.*

Cutout Relay

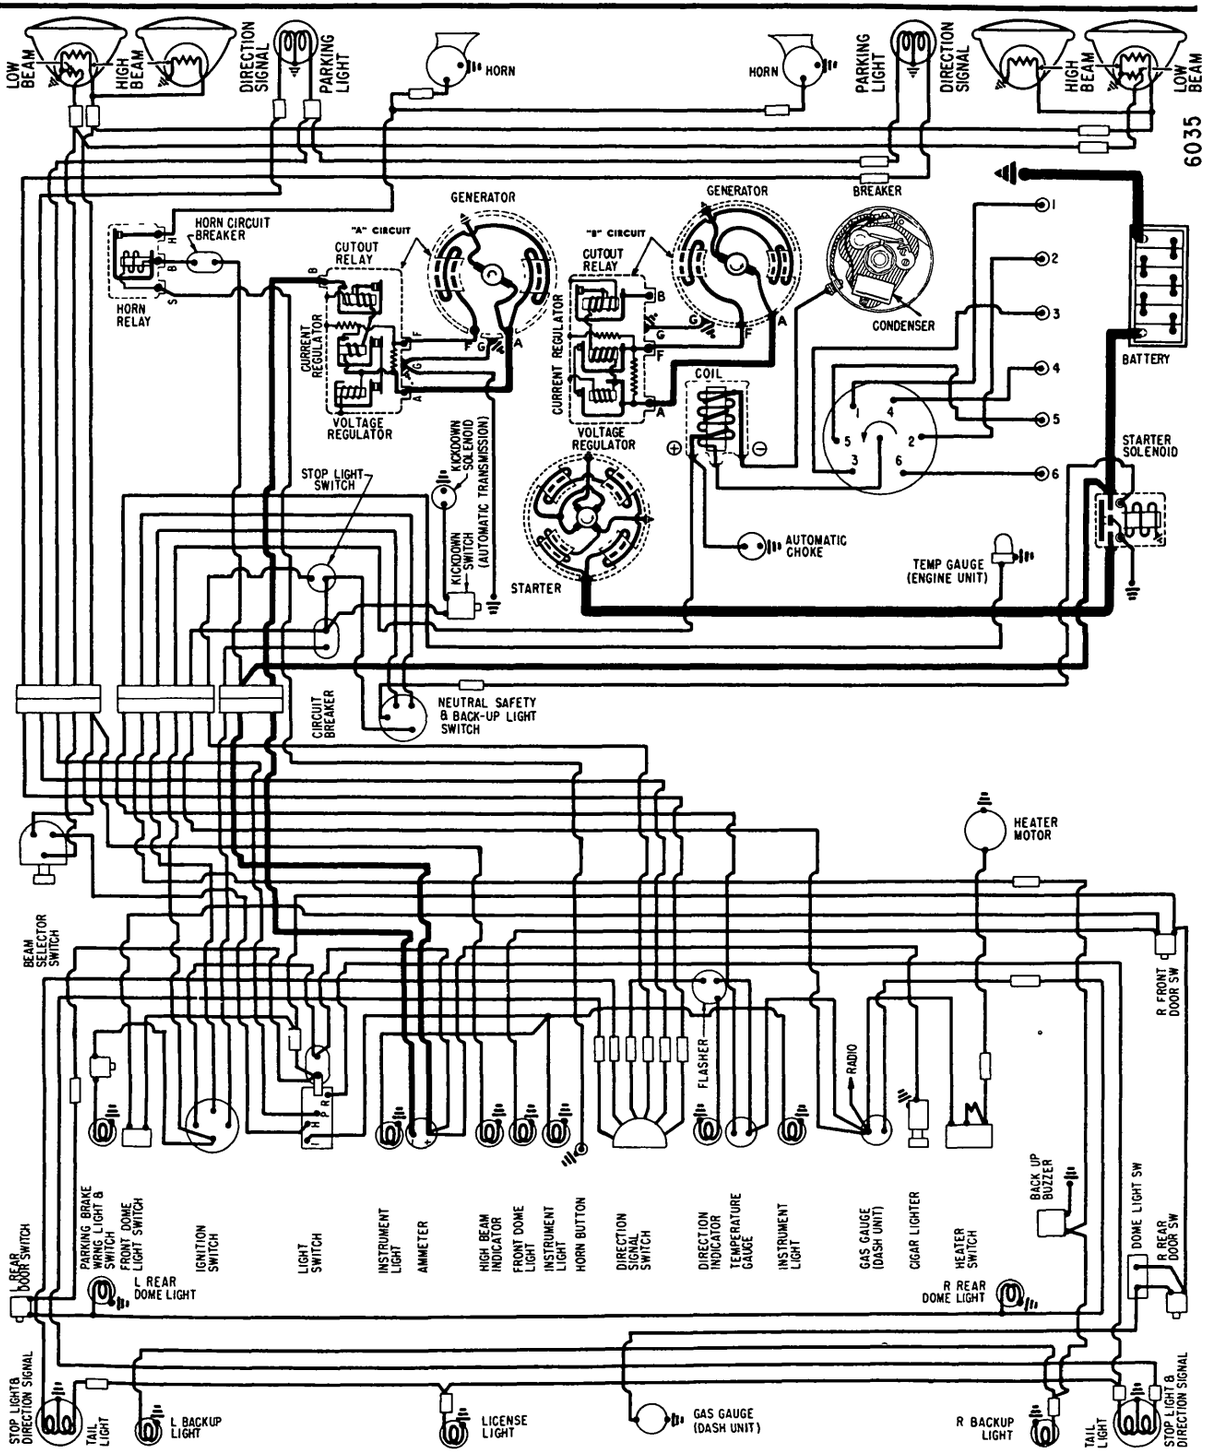
Cuts In - 12.5-13.5 volts.
Cuts Out - 3-5 amps. discharge current after charging at 7 amps.
Contact Gap - .015" minimum.
Air Gap - .025-.027".

Voltage Regulator

Setting - 14.3-14.8 volts charging at 7 amperes and 80°F or with a .25 ohm resistor in series between regulator and battery.
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
See "Autolite 12-Volt A Circuit Regulators" or "Autolite 12-Volt B Circuit Regulators" in Electrical Section.

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*



Regulator	Test A - Operating Amperes	Test B
VBO-4201D	37	30 (28-32)
VBO-4202B, 6201A	44	35 (33-37)
VBO-4202A	49	40 (38-42)

Test A - After 15 minutes operation charging at 7 amps.
Test B - After additional 15 minutes operation with current regulator operating and load applied to hold voltage down to 13.6-13.8 volts.
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
See "Autolite 12-Volt A Circuit Regulators" or "Autolite 12-Volt B Circuit Regulators" in Electrical Section.

MISC. ELECTRICAL

Headlights: 4-Headlight System. *See "4-Headlight Systems" in Electrical Section.*
Direction Signals: *See Electrical Section.*
CIRCUIT BREAKERS: 15 Ampere - Entire lighting system. In headlight switch.
15 Ampere - Back-up lights and heater.
15 Ampere - Horns. Located above horn relay on left wheelhouse panel.
FUSES: 15 Ampere - Overdrive.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Continental Motors Model F6226. 6 Cylinder with either "L" Head or Overhead Valve system.

Bore	Stroke	Displacement	Rated HP
3 5/16"	4 3/8"	226 cu. ins.	26.33

Engine	Compr. Ratio	Developed HP
"L" Head (A-10L)	7.3-1	95 at 3100 RPM
Overhead Valve (A-10)	8.0-1	125 at 4000 RPM

CYLINDER HEAD & MANIFOLD: Tighten cylinder head bolts from center outward to 45 ft. lbs. Tighten intake and exhaust manifold bolts to 25-30 ft. lbs.

FLYWHEEL: Tighten flywheel-to-crankshaft bolts to 35-40 ft. lbs.

OIL PAN: Tighten oil pan bolts to 15-20 ft. lbs.

PISTONS

Aluminum alloy, flat head, cam ground with T-slot. A-10L engine has five rings per piston with 5th ring on piston skirt below piston pin. A-10 engine has standard four ring piston.

Weight - 16.448 ozs. (A-10L), 15.312 ozs. (A-10).

Clearance - .0010-.0020" at bottom of skirt. Pull required to withdraw .002" feeler gauge inserted between piston and cylinder wall should be 5-10 lbs.

Replacement Pistons: A-10L - Furnished in 14 sizes in .0005" steps from 3.31095" to 3.31745" for engines "A" through "N".

A-10 - Furnished Std. size only finished or semi-finished with or without rings and pin.

PISTON PIN

Floating type with retaining ring at each end.

Diameter - 55/64". **Length** - 2 13/16".

Clearance in Piston - .0001-.0003" (A-10L), .0002" (A-10). Light push fit.

Clearance in Rod - .0003-.0005".

Replacement Pins: Furnished Std., & .003", .005" Oversize.

PISTON RINGS

A-10L - Nos. 1, 2, 3, 5 are compression rings. No. 4 is oil ring.

A-10 - Nos. 1 & 2 are compression rings, Nos. 3 & 4 are oil rings.

A-10L Engine

Ring	Width	End Gap
Compr. (1)	3/32"	.010-.020"
Compr. (2 & 3)	1/8"	.010-.020"
Oil (4)	1/4"	.010-.018"
Compr. (5)	5/32"	.010-.020"

A-10 Engine

Ring	Width	End Gap
Compr. (1 & 2)	3/32"	.010-.020"
Oil (3 & 4)	5/32"	.010-.018"

Replacement Rings: A-10L - Std. & .020", .040", .060" Oversize. **A-10** - Furnished Std. size only.

CONNECTING ROD

Length (Center-to-Center) - 7".

Weight - 32.24 ozs.

Crankpin Journal Diameter - 2 1/16".

Lower Bearing - Babbitt lined steel back type.

Clearance - .0027". **Sideplay** - .006-.010".

►*BEARING INTERCHANGEABILITY NOTE:* Bearings No. 1, 3, 5 are not interchangeable with bearings No. 2, 4, 6.

Connecting Rod Bearing Cap Bolt Torque - 35-40 ft. lbs.

Replacement Bearings: Furnished Std. & .020" Undersize.

CRANKSHAFT

Journal Diameter - 2 3/8".

Bearings - Babbitt lined steel back type.

Clearance - .0034".

Replacement Bearings: Furnished Std. & .020" Undersize.

►*BEARING INTERCHANGEABILITY NOTE:* Bearings No. 2 & 3 are interchangeable.

Main Bearing Cap Bolt Torque - 85-95 ft. lbs.

End Thrust (A-10L): Taken by thrust washers, shims, and thrust plate assembled behind crankshaft timing gear. Shims furnished in .002" & .008" thicknesses.

Endplay - .004-.006".

End Thrust (A-10): Taken by flanged rear main bearing.

Endplay - .002-.006".

Crankshaft Rear Oil Seal Replacement: Remove filler block and oil guard and clean thoroughly. Crush new jute seal in a vise until narrow enough to fit grooves in filler block and oil guard. Press seal in until firmly seated and expanded to seize sides of block and guard. Cut ends of seal so they protrude 1/32" above surface of castings. Insert guard into cylinder block. Hold neoprene filler block-to-oil pan seal in place with a small spot of non-hardening cement at center of seal and insert into groove in filler block. Install front filler block seal in same manner. Tighten filler block retaining bolts to 15-20 ft. lbs.

CAMSHAFT

Bearings - Steel back babbitt lined bushings.

Clearance - .001-.003" except No.3 bearing. No. 3 bearing .001-.0027".

End Thrust: Controlled by thrust plate located behind camshaft sprocket.

Timing Chain: Width 7/8". Pitch 1/2". Length 46 links.

Engine Front Cover Bolt Torque - 15-20 ft. lbs.

Vibration Damper Bolt Torque - 15-20 ft. lbs.

VALVES

Tappet Clearance: A-10L - .014" Intake & Exhaust, hot and idling.

A-10 - .017" Intake, .023" Exhaust, hot and idling.

Valve Specifications - A-10L Engine

Valve	Head Diam	Stem Diam.	Length
Intake	1 33/64"	11/32"	5 3/16"
Exhaust	1 21/64"	11/32"	5 11/64"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.284"	.0012-.0030"
Exhaust	45° ①	.284"	.0032-.0050"

① - Valve Face Angle 44°.

Valve Specifications - A-10 Engine

Valve	Head Diam.	Stem Diam.	Length
Intake	1 25/32"	11/32"	4.941"
Exhaust	1 27/64"	11/32"	5.396"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.4088"	.0012-.0030"
Exhaust	45° ①	.4088"	.0032-.0052"

① - Valve Face Angle 44°.

Exhaust Valve Seat Inserts - Used on A-10 engine. Replacement inserts furnished .010" Oversize for shrink fit.

Valve Stem Oil Seal - "O" ring seal used on stems of intake valves on A-10 engine.

Valve Rotators - Used on exhaust valves on A-10 engine.

Valve Guides - Pressed in block or head.

Valve Springs: Single spring used on all valves.

Spring Specifications - A-10L Engine

Valve	Pressure	Length
Closed	47-53 lbs.	1 21/32"
Open	103-110 lbs.	1 3/8"

Spring Specifications - A-10 Engine

Valve	Pressure	Length
Closed	72.5-79.5 lbs.	1.817"
Open	174.3-175.7 lbs.	1.405"

Spring Free Length (A-10L) - 1 31/32".

Valve Lifters: Mechanical barrel type used on all engines.

Rocker Arm Assembly (A-10): Rear end bracket is drilled for oil supply line to rocker shaft assembly. Front end bracket is drilled for locating plug to retain rocker shaft in position. These brackets are not interchangeable with other support brackets.

VALVE TIMING

Valve Timing Specifications - A-10L Engine

Intake Valves - Open 2° BTDC. Close 42° ALDC.

Exhaust Valves - Open 42° BLDC. Close 8° ATDC.

Valve Timing Specifications - A-10 Engine

Intake Valves - Open 17° BTDC. Close 54° ALDC.

Exhaust Valves - Open 62° BLDC. Close 9° ATDC.

OILING SYSTEM

Crankcase Capacity: 5 qts. refill.

Normal Oil Pressure: 20 lbs. at 375 RPM.

Oil Pressure Relief Valve (A-10) - In pump body, not adjustable.

Oil Pressure Indicator: Direct reading, non-electric type gauge.

Dash Unit - Checker No. 93941.

Oil Pump: Gear type. Mounted on center main bearing cap (A-10L), on right side of cylinder block (A-10).

Oil Pump Attaching Bolt Torque - 25-30 ft. lbs. (A-10L), 15-20 ft. lbs. (A-10).

Oil Filter: Partial flow type optional.

Crankcase Ventilation: Filter element in oil filler cap and breather tube in engine right side cover. Clean filter in filler cap by washing in solvent and oiling with light engine oil.

COOLING

Water Capacity: 12 qts. Add 1 qt. for heater.

Pressure Valve: 4 lb. radiator filler cap.

Thermostat: Choke type located in water outlet elbow. **A-10L** - 170° type, Part No. 93025, starts to open at 167-172°F. **A-10** - 180° type, Part No. 93026, starts to open at 177-182°F.

Water Pump: Packless sealed ball bearing type. No lubrication required.

Pump Removal & Disassembly - Remove fan hub and remove pump from engine. Remove pump cover and gasket and pull impeller from shaft. Remove seal and shedder, shaft and bearing retaining rings and press shaft through front of body.

Water Pump Attaching Bolt Torque - 25-30 ft. lbs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Temperature Gaug : Stewart-Warner direct reading electric type.
Dash Unit - Checker No. 93944.
Engin Unit - Checker No. 93946. Located between No.5 and No. 6 spark plugs.
See "T mp rature Gauges" in Miscellaneous Section.

CLUTCH

B rg & B ck 10A7. Single plate, dry disc type.
Cover No. - Borg & Beck No. 361538.
Disc N . - Borg & Beck No. 382903.
S "B rg & Beck" in Clutch Section.
P dal Freeplay Adjustm nt: With engine running at idle speed and car supported with front wheels off floor, lengthen clutch throwout adjusting rod until throwout bearing contacts clutch pressure plate release levers and turns clutch. Now shorten adjusting rod until bearing is slightly free of contact and stops turning. Tighten adjusting rod locknut and lower car. This procedure will provide correct ½-1" pedal freeplay. *NOTE - In fully rel s d position, clutch pedal must touch floor board, pedal pad plat must be parallel to floor board (bend to c rrect), and throwout bearing must provide 7/16" forward trav l of clutch release levers.*

SYNCHRO-MESH TRANSMISSION

Warn r Mod l T-90. 3-speed constant mesh, all helical gear type.
S "Warn r Synchro-m sh Transmission" in Transmissi n S ction.

AUTOMATIC TRANSMISSION

Driv- r-matic and **Dual-Range** three-speed automatic transmission with torque converter. Dual-Range type has two manually selected Drive positions.
►*TESTING & TROUBLE SHOOTING: See "Superba Automatic Transmissi n" in Transmission Section.*
Lubricati n: Check fluid level every 1000 miles, drain and refill every 15,000 miles.
Ch cking Fluid - With engine and transmission at normal operating temperature, engine idling and hand brake applied, move selector lever through all ranges to assure fluid distribution. Maintain fluid at "F" mark on dipstick. *Use only Automatic Transmission Fluid Type "A", Suffix "A".*
►*OTHER DATA: See "Superba Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Three cross type universal joints used (two-piece propeller shaft).

REAR AXLE

Spicer Model 44. Semi-floating, hypoid gear with Hotchkiss Drive. *NOTE -* "Power-Lock" differential optional. *See "Spicer Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*
►*AXLE RATIO IDENTIFICATION NOTE:* Ratio stamped on a tag attached to a differential cover capscrew.
Axle Ratios: As follows:

Transmission	Standard Ratio	Optional Ratio
Synchro-mesh	3.73-1 (41-11)	4.09-1, 4.55-1
Overdrive	4.09-1 (45-11)	3.73-1
Automatic	3.31-1 (43-13)	3.54-1

SHOCK ABSORBERS

Gabriel. Direct acting hydraulic type. Serviced by replacement.

Replacement Shock Absorbers - Checker Nos.

Model	Front	Rear
Standard	93959	94409
Heavy Duty	95092	95091

FRONT SUSPENSION

Independent ball joint type with shock absorbers mounted within coil springs.
See "Superba Front Suspension" in Suspension & Wheel Alignment Section.

Steering Axis Inclinati n - 7° at 1° camber. Not adjustable.
Caster - Pos. 2° (Superba), Pos. 1° (Checker Cab).
Camber - Pos. ½° to Pos. 1½° (Superba), 0° to Pos. 1° (Checker Cab).
Toe-In - 1/16" to 1/8". *NOTE -* On cars with power steering, engine must be running when toe-in checked.
Toe-Out on Turns - With inner wheel at 20°, outer wheel should be at 17°30'.

STEERING

Manual: Gemmer. Worm & Roller type.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: Bendix Linkage type.
See "Bendix Linkage Type Power Steering" in Steering Section.

BRAKES

Service: Wagner Lockheed Self-Centering. Self-centering with Bendix type shoes. Parking lever applies rear wheel service brakes.
See "Wagner Lockheed Self-Centering Brakes" in Brak Section.
Drum Diameter - 11" front & rear.
Wheel Cylinder Diameter - 1" front, 7/8" rear.
Lining - Molded asbestos bonded to shoe.

Lining Width & Length

Wheel	Primary Shoe	Secondary Sho
Front	9 5/16" x 2 1/4"	12" x 2 1/4"
Rear	9 5/16" x 2 1/4"	12" x 2 1/4"

Lining Thickness - 7/32" front wheel, 3/16" rear wheel.
Clearance - With wheel locked against drum back off adjusting star wheel until no drag is felt.
Master Cylinder - Located on engine side of firewall.
Power Brakes: "Treadle-Vac" type. Mounted on firewall.
See "Bendix Power Brake Unit (Hydraulic Reacti n Type)" in Brake Section.

MISC. MECHANICAL

Windshield Wiper: Vacuum Link & Crank Arm type.
See "Windshield Wipers" in Miscellaneous Section.

AMERICAN MOTORS

►*1958-60 AMBASSADOR TRANSMISSION CHANGE FOR IMPROVED SHIFTING:* To decrease shifting effort from Low to 2nd. Gear, longer shift lever (Second & High Gear Shift Lever Part No. 3155833) can be installed to replace original low and reverse lever. *NOTE* - This longer lever used in production on later cars.

►*1961 & EARLIER 6 CYL. ENGINE MAIN BEARING CAPSCREW INSTALLATION CAUTION:* On Series 6110 and earlier Rambler American and Series 10 engine (cast iron block), the main bearing capscrews used at both intermediate bearing caps are longer than those used at front and rear main bearing caps. Make sure screws are used in their proper location.

CHRYSLER CORP.

►*1960-61 TORQUEFLITE 8 GOVERNOR "BUZZ" CORRECTION: See "Torqu Flite 8 Transmission" on Page 433.*

►*1959 & LATER HARD COLD WEATHER STARTING CORRECTION:* On cars with carburetor unloader piston integral with carburetor air horn, remove gum formation from piston by squirting carburetor cleaner, lacquer thinner or alcohol through piston link opening in air horn while operating choke valve back and forth to flush out unit.

►*1959-61 350", 361", 383" & 413" V8 ENGINE ROCKER ARM SHAFT INSTALLATION CAUTION:* To insure correct installation (regardless of arrow identification marks on ends of shafts), install shafts as follows: Install rocker arm shafts so that 3/16" diameter rocker arm lubrication holes point downward into rocker arm and so that the 15° angle of these holes points toward valve end of rocker arms. *NOTE - 15° angle of lubrication hol s is determined from centerline of shaft and bracket attaching bolts.*

►*1960-61 (ALL MODELS) TEMPERATURE & FUEL GAUGE NOTE: See "T mperature & Fuel Gauges" on Pag 270.*

►*1958-61 POWER STEERING GEAR LEAKAGE CORRECTIO N: See "C nstant Control Power Steering" on Pag 384.*

►*1957 & LATER REAR SPRING "U" BOLT NUT TIGHTENING TORQUE SPECIFICATION CHANGE:* To prevent damage to rear axle housing, "U" bolt nut tightening torque has been reduced to 50 ft. lbs.

►*1959-61 BRAKE SHOE DRAG CORRECTION (CARS WITH 11" THREE PLATFORM BRAKES): See "Three Platform Total Contact Brakes" on Page 309.*

►*1960-61 ALTERNATOR VOLTAGE REGULATOR FUSE WIRE REPLACEMENT: See "Chrysler Corp. Alternator & R gulator" on Pag 275.*

►*1960-61 POWER BRAKE LOSS OF POWER ASSIST ON INITIAL STOP CORRECTION:* This condition may occur during cold weather and can be corrected by installing a new type check valve in vacuum line. Use Part No. 2074934 (Lancer & Valiant); 1944089 (All Others).

►*1960-61 6 CYL. ENGINE POOR PERFORMANCE & FUEL ECONOMY CORRECTION: See 1961 Dodg & Plymouth 6 Cyl. Car M del pag s.*

►*1960-61 DODGE & PLYMOUTH 6 CYL. ENGINE IGNITION TIMING CHANGE (FOR IMPROVED PERFORMANCE):* On cars with automatic transmission, set timing at 5° BTDC. This setting supersedes previous setting of 2½°.

►*1960 PLYMOUTH 318" ENGINE HARD STARTING CORRECTION & CARBURETOR AIR CLEANER INSTALLATION NOTE:* To prevent air cleaner from interfering with choke lever, position air cleaner so "looped" end of clamp is located on right side approximately 2" rearward of centerline of air cleaner.

►*1960 TORQUEFLITE 6 "NO DRIVE" CORRECTION NOTE: See "TorqueFlite Six Transmission" on Page 428.*

►*1960 6 CYL. ENGINE OIL LEAKAGE (AT DISTRIBUTOR) CORRECTION:* On early distributors with either a cork gasket or a large rubber "O" ring, position a new smaller "O" ring, Part No. 2095630 on distributor housing against retainer flange, then install a new larger rubber "O" ring, Part No. 2095740. Install distributor. *NOTE - Later distributors have the small "O" ring installed in machined groove in distributor shank.*

►*1960 VALIANT TORQUEFLITE SIX TRANSMISSION FLUID LEVEL CHECKING NOTE: See "TorqueFlite Six Transmission" in 1960 Annual Data, Page 449, or later Manual edition for correct procedure.*

►*1960 VALIANT REAR AXLE PINION BEARING PRELOAD SPECIFICATION CHANGE (USED BEARINGS): See "Lancer & Valiant Hypoid" on Page 328.*

►*1960 DODGE & PLYMOUTH SYNCHRO-MESH TRANSMISSION HARD SHIFT OR GEAR DAMAGE CORRECTION: Adjust shift linkage in same manner as for 1961 models. See Transmission Section.*

FORD MOTOR CO.

►*1960 COMET STEERING POOR RECOVERING-TO-STRAIGHT AHEAD POSITION:* Loosen idler arm retaining nut and retighten to 45-60 ft. lbs. *CAUTION - Do not exceed 60 ft. lbs.*

►*1960 COMET FRONT SUSPENSION BALL JOINT ATTACHING BOLT TIGHTENING CHANGE:* Tighten upper and lower ball joint attaching bolts to 12-15 ft. lbs. *NOTE* - This supersedes previous specification of 12-17 ft. lbs. (Upper Ball Joint); 28-45 ft. lbs. (Lower Ball Joint).

►*1960-EARLY 1961 COMET FRONT SUSPENSION BALL JOINT SEAL REPLACEMENT NOTE: For installation of later type seals, see "Comet & Falcon Front Suspension" on Page 363.*

►*1960 COMET .& FALCON BRAKE SQUEAK CORRECTION: See "Ford Bendix Hydraulic" on Page 315.*

►*1960 COMET & FALCON VALVE TAPPET CLEARANCE ADJUSTMENT CHANGE:* .016" all valves. Use step-type feeler gauge (.015" GO, .017" NO GO). If tappet clearance set with engine cold, reset clearance after operating engine for 30 minutes at 1200 RPM to stabilize temperature.

►*1960 FALCON SYNCHRO-MESH TRANSMISSION INTERMEDIATE & HIGH GEAR CLASH CORRECTION:* Install later type synchronizer blocker ring, Part No. CODR-7107-B.

►*1960 FORD PASS. CAR (EXC. THUNDERBIRD) FRONT END ALIGNMENT SPECIFICATION CHANGE:* Adjust Caster to Pos. 3/4° - 1 1/4°. Camber to Pos. 1/2° - 1°. Toe-In to 1/8-1/4". This supersedes all previous 1960 specifications.

►*1958-60 LINCOLN 430" & MERCURY 383" ENGINE VALVE STEM SEAL APPLICATION:* When replacing valve stem seals, the correct seals must be used with each type valve spring as follows: **Intake Valves** - Use 13/16" long seal with Maroon or Grey spring (with damper); and with Blue spring (without damper). **Exhaust Valves** - Use 17/32" long seal with Maroon or Grey spring (with damper). Use 13/16" long seal with Blue spring (without damper).

►*1958-60 LINCOLN 430" ENGINE INTAKE MANIFOLD TIGHTENING SEQUENCE CHANGE:* Use same tightening sequence and procedure as for 1961 models. *See 1961 Lincoln Special Data.*

►*1958-60 LINCOLN 430" & MERCURY 383" & 430" ENGINE MAIN BEARING BOLT REPLACEMENT NOTE:* It is recommended that when main bearing bolts are removed, new bolts, Part No. COSZ-6065-A (13/16" across flats) should be installed to prevent bolt heads brinnelling into main bearing caps, causing a loss of torque on bolt.

►*1959-EARLY 1961 TWO-SPEED AUTOMATIC TRANSMISSION FRONT PUMP CHECK VALVE SPRING REPLACEMENT NOTE:* It is recommended that Front Pump Check Valve Spring, Part No. B9A-77455-A be used to replace spring, Part No. B9A-7A205-A which has a smaller diameter at the end that contacts the check valve. The larger size spring prevents excessive tilting of check valve in its bore.

►*1959-60 MERCURY REAR AXLE "START-UP" NOISE CORRECTION:* This noise is similar to a "groan" and is evident when car is under load and is started into motion in low or reverse. To correct, add a four ounce bottle of lubricant, Part No. C1AA-19B546 to existing axle lubricant.

►*1961 & EARLIER MERCURY MANUAL TRANSMISSION CLUSTER GEAR REPLACEMENT CAUTION:* When replacing cluster gear, make sure that either cluster gear or cluster gear thrust washer has oil grooves in thrust face. Later type service replacement cluster gears are built without oil grooves and it is necessary to use thrust washer, Part No. C1AR-7119-A with this gear It is permissible to have oil grooves in both parts, but no assembly should be made unless one surface has oil grooves.

GENERAL MOTORS

►*1961 BUICK SPECIAL ENGINE-TO-DASH GROUND STRAP CAUTION:* This ground strap is connected between rear end of right hand cylinder head and the dash. Make very sure this strap is properly connected at all times and is not damaged, as it provides the only ground circuit between voltage regulator and generator frame. If strap is disconnected, the increased voltage will cause failure of generator, lamp bulbs and excessive pitting of distributor contact points.

CONTINUED ON NEXT PAGE

IMPORTANT FACTORY PRODUCTION & RECOMMENDED CHANGES

FOR PREVIOUS MODELS & 1961 MODELS

GENERAL MOTORS (C ntinu d)

►*1961 BUICK (EXCEPT SPECIAL) STEERING GEAR REMOVAL & INSTALLATION CAUTION:* On some cars, a .030" spacer is used between steering gear and frame at each of the bolt locations. It is very important that these spacers be reinstalled if steering gear is removed.

►*1961 BUICK (EXCEPT SPECIAL) GENERATOR BELT ADJUSTMENT NOTE:* If proper adjustment is not possible on early production cars, replace generator belt with Part No. 1163447.

►*1957-60 BUICK ENGINE CLEANING CAUTION (DURING FREEZING TEMPERATURE):* To prevent water entering (and freezing) the fuel pump through two small vent holes in top of fuel pump casting, tapered plastic plugs or equivalent should be used to plug these holes before cleaning engine. *Be sure to remove plugs after cleaning.*

►*1961 & EARLIER CADILLAC ROCKER ARM SHAFT INSTALLATION NOTE:* For proper installation, install shaft so that oil grooves on shaft face downward, and the chamfered oil holes point toward center of engine.

►*1960 (LATE) CADILLAC HYDRA-MATIC 2-3 SHIFT VALVE BINDING CORRECTION:* On later 1960 transmissions with spacer installed in 2-3 shift valve bore, install 2-3 shift valve spring, Part No. 8620807 (with redesigned end coils) to prevent end of spring hanging up on step in valve bore.

►*1958-60 CADILLAC AIR SUSPENSION CAR CONVERSION:* When air suspension cars converted for use with coil springs, shock absorbers must also be changed (air suspension shock absorbers cannot be used with coil springs). Use Conversion Kits, Part No. 3631824 (1958), No. 3631825 (1959-60).

►*1959-61 CHEVROLET PASS. CARS (6 CYL. ENG.) INCONSISTENT CHOKE OPENING DURING ENGINE WARM-UP CORRECTION:* On all Rochester "BC" carburetors, install new choke piston, Part No. 7020438. The later type piston can be identified by a distance of 9/32" measured from lever attaching hole in piston to shoulder of piston. Early type pistons have a 7/32" measurement at this point.

►*1955-61 CHEVROLET 6 CYL. ENGINE TIMING MARK (ON FLYWHEEL) NOTE:* Some replacement flywheels for automatic transmission cars do not have a steel timing ball embedded in flywheel. If there is no timing ball, look for a .190" diameter circle stamped to indicate TDC.

►*1959 290 HP & 1960 315 HP CORVETTE FUEL INJECTION FUEL ENRICHMENT THERMOSTATIC COIL SETTING CHANGE:* Adjust thermostat cover to 3½ notches lean from index mark on housing. This supersedes previous setting of 1½ notches rich.

►*1959-60 CHEVROLET PASS. CARS & 1960 CORVAIR REVISED BRAKE ADJUSTMENT SPECIFICATION CHANGE: Use 1961 brake adjustment specifications for th s mod ls. See "Ch vrolet-Bendix Hydraulic Brakes" n Pag 312.*

►*1960-61 CHEVROLET (EXC. CORVAIR) ENGINE IGNITION TIMING SERVICE SETTING RANGE LIMIT NOTE:* Ignition timing should be within following specifications when "tailoring" for particular operating conditions: **235" Eng.** (0° to 8° BTDC); **283" Eng. with 2-Bbl. Carb.** (4° to 8° BTDC); **283" & 348" Engs. with 4-Bbl. Carbs.** (4° to 10° BTDC).

►*1960 CHEVROLET TRUCK "TWINPLEX" BRAKE BLEEDING PROCEDURE NOTE: For correct brake bleeding procedure, see 1961 "Chevrolet Truck Twinplex Brakes" on Page 314.*

►*1960 CORVAIR AUTOMATIC TRANSMISSION ENDPLAY CHANGE: Endplay specification is same as for 1961 models. See "Corvair Transaxle" on Page 423.*

►*1961 CORVAIR ENGINE IGNITION TIMING SERVICE SETTING RANGE LIMIT NOTE:* Ignition timing should be within following specifications when "tailoring" for particular operating conditions: **Turbo-Air Eng. with Std. Trans.** (4° to 10° BTDC); **Turbo-Air Eng. with Auto. Trans.** (13° to 18° BTDC); **Super Turbo-Air Eng. with Std. & Auto. Trans.** (13° to 18° BTDC).

►*1958-59 OLDSMOBILE COIL SPRING CONVERSION KIT (FOR NEW-MATIC SUSPENSION CARS):* Kits consisting of four coil springs, front lower control arms and other necessary parts to convert air suspension cars to conventional suspension are available for field installation.

►*1958 OLDSMOBILE AIR CONDITIONING COMPRESSOR REPLACEMENT CAUTION:* When replacing a 1958 air conditioning compressor with a 1961 service replacement compressor, it is also necessary to install a new Coil Housing, Part No. 5914557 to prevent refrigerant leakage.

►*1961 PONTIAC TEMPEST TIMING CHAIN BUMPER & BRACKET PRODUCTION CHANGE & SERVICE REPLACEMENT NOTE (4 CYL. ENG.):* To avoid timing chain failure on these engines, install new type chain bumper bracket, Part No. 543285 and bumper spring damper, Part No. 543287. *CAUTION - These new parts should be installed whenever timing chain cover is removed from engine. Cars built after Engine No. 116591 have the parts installed in production.*

►*1961 PONTIAC TEMPEST (LATER CARS) UPPER CONTROL ARM RETAINING BOLT REMOVAL & INSTALLATION NOTE:* There are no access holes to front suspension upper control arm retaining bolts on later cars and it will be necessary to cut 1¼" holes in inner fender panel opposite the bolts in order to remove and install. Install plug, Part No. 540402 in each hole after control arm has been reinstalled.

►*1961 PONTIAC HYDRA-MATIC (4-BARREL CARB. MODELS) THROTTLE LINKAGE ADJUSTMENT NOTE:* Throttle control rod assembly connecting carburetor throttle valve lever to idler lever at rear of engine may be too short after adjustment, for proper security. Lengthen rod by using hex connector assembly from throttle rod, Part No. 537182 in place of connector used in production.

STUDEBAKER-PACKARD

►*1959-60 STUDEBAKER DETONATION AT LIGHT THROTTLE CORRECTION:* On 6 cyl. models, install Spark Modifier Kit, Part No. 1552852. On all 1959 V8 models and 1960 Hawk models, install complete Modifier Assembly, Part No. 1553390. On 1960 Lark models, install complete Modifier Assembly, Part No. 1553389. Vacuum advance curves for modifier kit or assemblies will be the same as for 1961 models. See 1961 Car Model pages.

►*1961 STUDEBAKER 6 CYL. NOISY MANIFOLD HEAT VALVE, POOR PERFORMANCE & LOW TOP SPEED CORRECTION:* Remove and disassemble manifold and check for loose valve-to-shaft lock screw, or for valve being off shaft. If lock screw is missing, replace with a 12-28 x ½" filister head screw. If necessary, replace heater valve parts as necessary so that all parts operate properly.

►*1960 STUDEBAKER LARK 6 CYL. DISTRIBUTOR REPLACEMENT CAUTION:* DO NOT install 1961 Distributor, Autolite No. IAT-4403-B on 1960 cars. A severe loss of power will result if this distributor used.

►*1959-60 STUDEBAKER FRONT SPRING NOISE CORRECTION:* Coil-to-coil contact of front spring can be eliminated by installing Insulator, Part No. 526249 as follows: Raise front end of car so spring coils are separated, then cut through one of the insulators so it forms one long section of rubber. Place insulator on top center coil so inner flange of insulator is down, then thread insulator upward as far as possible (weight of car will hold insulator in place). If necessary, install second insulator adjacent to first to completely eliminate noise.

►*1958-60 STUDEBAKER SYNCHRO-MESH TRANSMISSION (EXC. V8 TAXI & OVERDRIVE) REAR BEARING RETAINER SNAP RING SERVICE REPLACEMENT CAUTION:* To prevent snap rings from coming out of grooves, a new tubular retainer is used. S "Warn r 3-Speed Transmissions" on Pag 403.

►*1960 STUDEBAKER 6 CYLINDER ENGINE POOR MILEAGE OR PERFORMANCE CORRECTION:* This condition may be caused by felt pad on underside of air cleaner top cover sagging between retaining fingers and restricting the flow of air. Install new top cover if necessary.

WILLYS MOTORS

►*1960 WILLYS ELECTRICAL EQUIPMENT PRODUCTION CHANGE: New Aut lit lectrical quipm nt used in later production. S Willys car mod l pag s for specifications on this equipment.*

►*1961 & EARLIER WILLYS L6-226 ENGINE REAR OIL SEAL LEAKAGE CORRECTION:* A new Crankshaft Rear Oil Seal Kit, Part No. 925958 is available to correct rear oil seal leakage.

ALUMINUM ENGINE SERVICE CAUTIONS

SERVICE PRECAUTIONS: *NOTE* - Extreme caution must be observed when working on aluminum engines to prevent damage by scratching, nicking, or scoring. Note the following:

1) Do not drop or slide machined surfaces on bench or floor.

2) Do not use gasket cement (Except as indicated under Cylinder Head Installation).

3) Lubricate all bolts or screws entering an aluminum part. See "Bolt Thread Lubrication Note" below.

4) Tighten bolts and nuts to the specified torque. DO NOT overtighten. Torque valves are for clean lubricated threads.

►*BOLT THREAD LUBRICATION NOTE:* Use engine oil or special thread lubricant on all threads entering an aluminum part.

DAMAGED OR WORN THREAD REPAIR (ALUMINUM BLOCK): "Heli-Coils" are available locally for repairing damaged or worn threads in aluminum. The repair consists of drilling out worn or damaged threads, tapping hole with special "Heli-Coil" tap, and installing a "Heli-Coil" insert in tapped hole. This brings hole back to original thread size. See following table for inserts and tools required.

"Heli-Coil" Thread Inserts

Thread Size	Insert Part No.	Drill Size	Special Tap Part No.	Inserting Tool No.
1/4"-20	1185-4	266"	4 CPB	528-4N
5/16"-18	1185-5	332"	5 CPB	528-5N
3/8-16	1185-6	397"	6 CPB	528-6N
7/16"-14	1185-7	453"	7 CPB	528-7N
1/2"-13	1185-8	516"	8 CPB	528-8N
Spark Plug				
14 MM Short	512		137-11	542
14 MM Long	513		137-11	542

ENGINE

6 CYL. ENGINE

ENGINE REMOVAL: 1) Remove hood assembly, drain cooling system and engine oil. Remove air cleaner, starter and radiator core. Disconnect exhaust pipe at manifold and remove flywheel housing screws and flywheel mud pan.

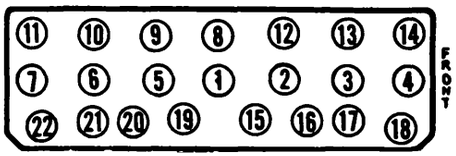
2) On Auto. Trans. Cars, disconnect thrust rod assembly from bracket on lower left side of block and drain torque converter and transmission and remove flywheel drive plate-to-converter assembly screws.

3) Remove front engine support upper nuts. Disconnect all wiring, lines, and hoses from engine and power steering assembly. Remove Air Conditioning compressor and bracket assembly. *NOTE* - DO NOT DISCHARGE system.

4) Attach lifting hook, lift engine upward and forward to clear clutch shaft pilot bushing.

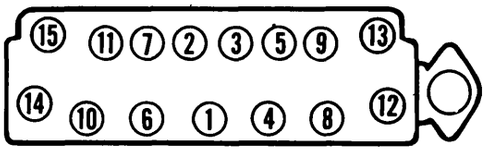
V8 ENGINE

ENGINE REMOVAL: 1) Remove battery and hood assembly. Drain oil and cooling system. On Auto. Trans. Cars, drain transmission and disconnect cooler lines at radiator and straps on engine oil pan. On Air Conditioned Cars, remove air compressor and mounting bracket from engine and move compressor and hoses to one side.



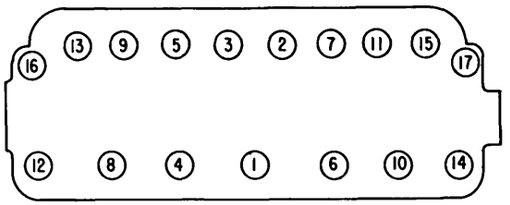
2) Remove water pump upper and lower hoses and hoses at fuel pump, heater control valve and cylinder head. Remove radiator core and loosen exhaust pipes at mufflers and exhaust manifolds at cylinder heads and push them out toward wheel house panels.

3) Disconnect all wiring and hose connections from engine, coil primary, heat sending unit, oil sending unit, vacuum safety switch, generator, etc.

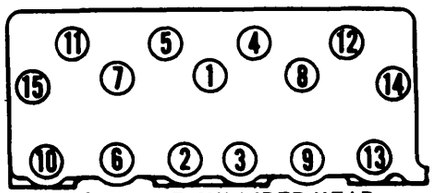


4) Remove starter. Loosen flywheel housing and remove flywheel mud pan.

5) On Auto. Trans. Cars, drain torque converter and loosen flywheel drive plate from converter.



6) Attach lifting fixture to engine, loosen rear engine support cushions at r ar crossmember. Support transmission and torque tube and remove rear crossmember. Loosen front engine support cushions, raise engine upward and forward through hood opening.



6 CYL. "L-HEAD" CYLINDER HEAD

6 CYL. (CAST IRON) CYLINDER HEAD

6 CYL. (ALUMINUM) CYLINDER HEAD

V8 ENGINE CYLINDER HEAD

CYLINDER HEAD & MANIFOLD

6 CYL. ENGINE

CYLINDER HEAD INSTALLATION: Use torque indicating wrench to tighten cylinder head studs in sequence shown in cylinder head diagram. Torque specifications are for engine at operating temperature.

Cylinder Head Gasket - Always use new gasket. Coat gasket with non-hardening gasket paste to insure tight seal between cylinder head and block.

V8 ENGINE

CYLINDER HEAD INSTALLATION: Cylinder block has two sleeve locating dowels to assist in lining up cylinder head and gasket during installation. Coat gasket with non-hardening gasket paste, install gasket with marks "AM" and "TOP" upward. Install cylinder head, pushrods, and rocker arm assembly (*CAUTION* - Special drilled capscrew must be installed in rear rocker arm support bracket to provide lubrication for rocker arms). Tighten head bolts in sequence shown in diagram to correct torque. See Tightening Specifications.

PISTON PINS

ALL ENGINES

PISTON PIN: Pin is press fit in connecting rod and no clamp bolt or locking rings are used to retain the pin. Piston pin must be removed and installed as detailed below to prevent distortion or damage to piston.

Removal - Remove pins with special Piston Pin Remover J-6360 and an arbor press. Place piston in remover support so pin will enter support when pressed out with piloted driver.

Installation - Place piston pin pilot in support, insert piston and connecting rod. This aligns piston and connecting rod piston pin bores. Press piston pin into connecting rod and piston assembly until lower pilot bottoms in support which will properly center rod on pin.

► *CAUTION:* Pin must be tight press fit in connecting rod.

CRANKSHAFT & MAIN BEARINGS

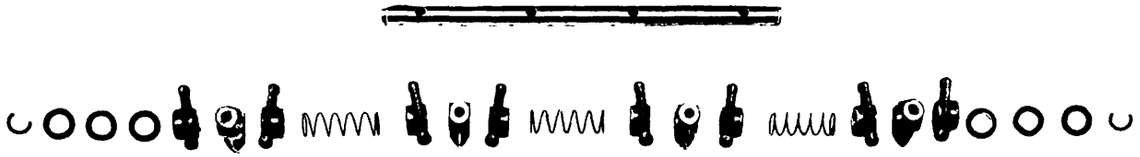
6 CYL. ENGINE

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Packing in groove in block and cap behind oil slinger on crankshaft. Cap sealed with rubber plugs in groove on each side where cap fitted in recess in block. Use Tool J-1610 to install packing in groove in block and cap. Place packing in groove (with bearing shell removed), place small diameter of tool over packing, hit end of tool with lead hammer to seat packing, cut ends of packing flush with bearing cap seat, remove tool. Repeat operation for groove in block. Install rubber seal plugs on each side of bearing cap (where angle seal used, make certain that seal also seated in horizontal groove in block).

V8 ENGINE

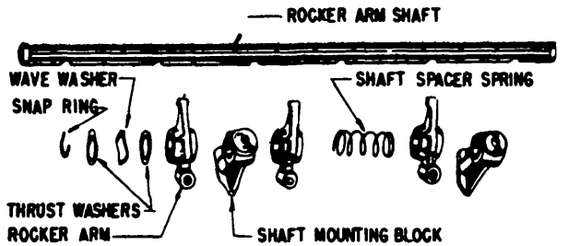
CRANKSHAFT REAR MAIN BEARING OIL SEAL: Install hemp packing in block and in bearing cap using Tool J-3048-A to seat packing in groove. Trim excess packing off flush with face of cap. Rubber seals are installed in side grooves of bearing cap.

ENGINE FRONT COVER



V8 ENGINE

ENGINE FRONT COVER: Removal - Remove water pump, fuel pump assembly and vibration damper. Remove cover-to-cylinder block screws and remove cover. **Installation** - Locate dowels in cylinder block and leave cover screws loose until vibration damper is partially installed. This prevents damage to oil seal and aligns cover properly. Then tighten cover screws and install fuel and water pumps.



CAMSHAFT & BEARINGS

V8 ENGINE

CAMSHAFT REMOVAL: Remove rocker arm covers, spark plug wires, rocker arm assemblies, intake manifold and carburetor. Remove upper oil breather and lifter assembly cover. Remove spring and lower oil baffle and pushrods. Keep pushrods in order for reinstallation in original positions. Remove hydraulic lifters, keeping them in order for reinstallation. Remove fuel pump, vibration damper, and engine front cover. Remove water pump and cylinder head water distributing manifold. Crank engine to bring timing marks adjacent and in line across shaft centers and remove fuel pump eccentric, crankshaft and camshaft sprockets and timing chain assembly. Remove camshaft thrust retainer plate and withdraw camshaft.

V8 ENGINE ROCKER ARM ASSEMBLY

6 CYL. ROCKER ARM ASSEMBLY

6 CYL. "L" ENGINE

CAMSHAFT LOBE LIFT: With cylinder head removed and all valve lash adjusted to zero, rotate engine until cam lobe to be checked has the basic circle (opposite nose of cam) under valve tappet. Install a dial indicator so arm rests on head of valve, and adjust dial indicator to zero. Rotate engine to point where maximum upward movement of valve occurs. This reading should be .340"±.006" for all cam lobes (intake and exhaust).

"OHV" 6 V8 ENGINES

CAMSHAFT LOBE LIFT: Remove rocker arm covers and install dial indicator with contact arm directly over pushrod end of rocker arm to register upward movement of pushrod. Zero dial indicator with all valve lash removed on 6 cyl. engine or with hydraulic lifter collapsed on V8 engine. Rotate engine to point where maximum upward pushrod movement occurs and note dial reading. Reading should be as shown in table (plus or minus .006").

Cam Lobe Lift	
6 Cyl. & V8 Ser. 20 (Intake)	℄.262"
6 Cyl. & V8 Ser. 20 (Exhaust)	℄.263"
V8 Ser. 80 (All Valves)	.254"

℄ - .250"±.006" Aluminum Eng.(Int. & Exh.).

VALVE SYSTEM

ROCKER ARMS

6 CYL. ENGINE

ROCKER ARM ASSEMBLY: Rocker arm shaft is one piece type and entire rocker arm assembly can be removed after taking out mounting bolts in shaft brackets.

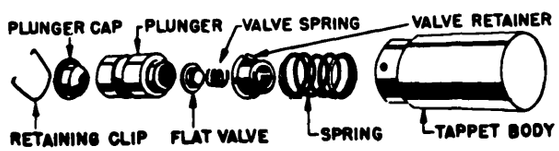
Disassembly & Inspection: Remove snap ring on end of shaft, slide thrust washers, wave washer, rocker arms.

Reassembly & Installation: Install all parts in same relative positions. *CAUTION* - Rocker arms are "Right" and "Left" and must not be exchanged. On Aluminum engines the support blocks must be installed with the word "Front" facing forward. Install assembly with rocker arm lubricating holes in shaft down or toward cylinder head. Oil is supplied through front rocker arm shaft support block.

V8 ENGINE

ROCKER ARM ASSEMBLY: Complete assembly mounted on cylinder head by four long cylinder head retaining capscrews (*CAUTION* - Rear bolt is special hollow type for rocker arm lubrication). Assembly can be removed by taking out the retaining screws.

Disassembly & Inspection: Remove snap ring on end of shaft and slide all parts off shaft. Keep all parts in order so they can be reassembled in same relative positions. Clean and inspect all parts for wear. Inspect rocker arm radius at valve stem end for wear and replace worn rocker arms. Make certain that plugs are tight in ends of shaft.



Reassembly & Installation: Install all parts in same relative positions. *CAUTION - Rock r arms ar "Right" and "Left" and will not c ntact valve st m properly if interchanged. However, rock r arm ass mbli s are interchangeable from bank to bank.* When installing assembly, make certain that special hollow bolt is installed in rear support bracket (necessary for correct rocker arm lubrication).

HYDRAULIC LIFTERS

V8 ENGINE

HYDRAULIC VALVE LIFTERS: R m val - Remove rocker arm covers, spark plug wires, rocker arm assemblies, intake manifold and carburetor. Remove upper oil breather and lifter assembly cover. Remove spring and lower baffle and pushrods. Keep pushrods in order for installation in original positions. Remove hydraulic lifters, keeping them in order for reinstallation.

Disassembly: Press down on valve pushrod socket and use a pair of needle nose pliers to remove the lock ring. Remove pushrod socket, plunger, and plunger spring. Remove check valve assembly from plunger being careful not to lose the small flat valve and coil spring. *(CAUTION–Disass mble one lifter at a time to avoid mixing plungers and bodi s. Thes parts are selectively fitted and must not be int rchanged).* Use clean solvent and thoroughly wash all parts. Remove all varnish and gum deposits.

V8 HYDRAULIC VALVE LIFTER

CONTINUED ON NEXT PAGE

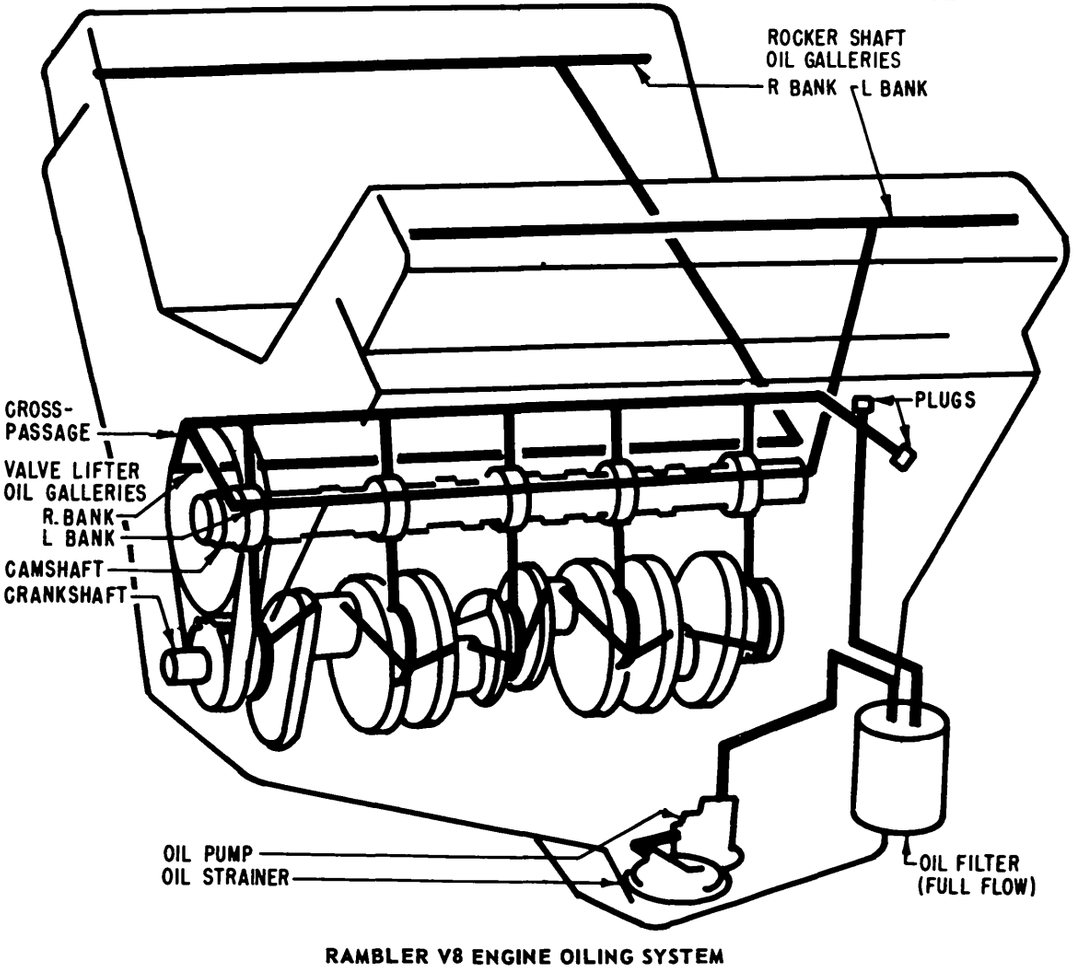
CONTINUED FROM PRECEDING PAGE

Inspection: Inspect the plunger and wall of body for scratches (if plunger or body is scratched, replace complete unit). Try the plunger for fit in body. If check valve removed from plunger, inspect flat disc valve, spring and seat.

Reassembly: Reverse disassembly procedure. See illustration for correct sequence.

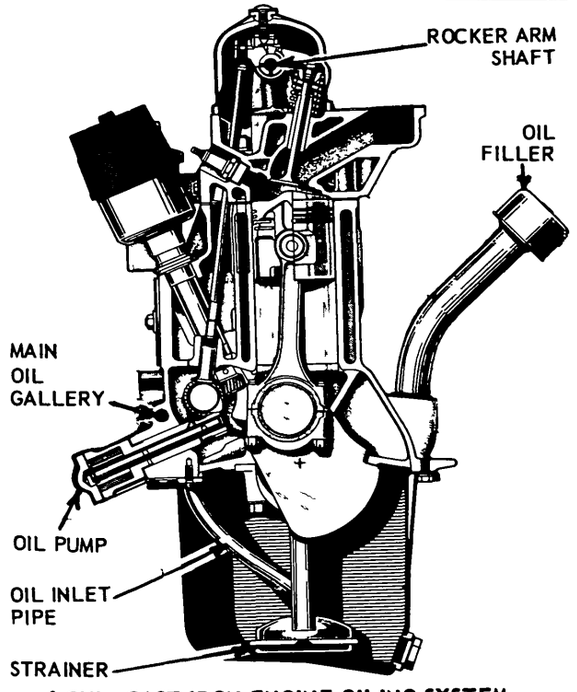
Testing: Fill body with kerosene and install plunger return spring, plunger assembly, and pushrod socket (do not install snap ring). Place lifter between jaws of Checking Tool J-5790 and check leakdown by depressing tool. A decided resistance should be felt. If lifter leaks down rapidly, or collapses immediately, it should be rechecked and/or replaced with a complete new lifter assembly. Normal lifter should require 10-45 seconds to leak down when filled with kerosene (.125" travel with 50 lb. load).

Installation: Lifters should be pre-lubricated and installed in engine WITHOUT being filled with oil. They will normally charge themselves in 3 to 8 minutes of engine operation.



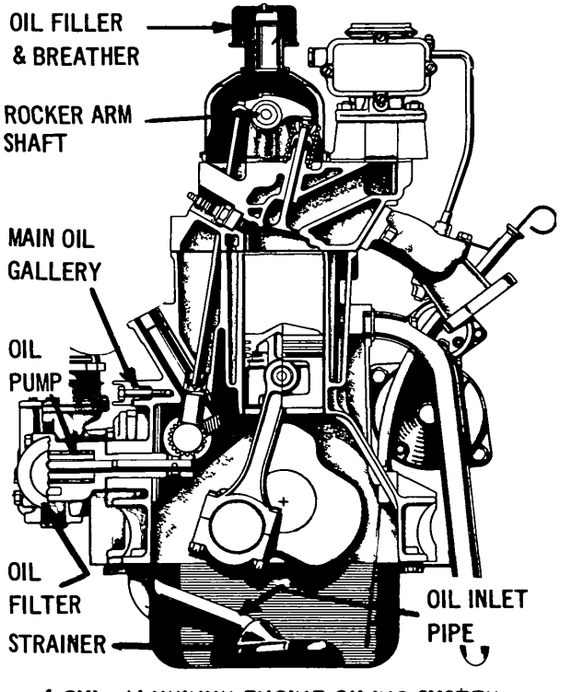
OILING SYSTEM

ENGINE LUBRICATION



6 CYL. ENGINES (CAST IRON)

▸*OVERHEAD VALVE & "L" HEAD (AMERICAN) ENGINE NOTE:* Oiling systems for both engines are similar except for cylinder head rocker arm and valve lubrication used on Overhead Valve Engines only.



CONTINUED ON NEXT PAGE

RAMBLER V8 ENGINE OILING SYSTEM

6 CYL. CAST IRON ENGINE OILING SYSTEM

6 CYL. ALUMINUM ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, and valve mechanism on cylinder head (Overhead Valve Engines only). All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted externally on right side of crankcase. Pump draws oil through fixed strainer and intake pipe in oil pan (intake passage in crankcase registers with intake port in mounting face of pump body) and delivers oil through passage around pump body hub to main oil gallery which extends along right side of crankcase. Oil pressure regulator valve (under plug on right side of crankcase) regulates pressure by bypassing oil from main oil gallery back into oil pan. Oil is distributed through main oil gallery as follows:

Crankshaft & Camshaft Bearings - Oil passages in crankcase webs supply oil from main oil gallery to each camshaft and crankshaft bearing (passage intersects lower part of camshaft bearing bore and extends past this point to main bearing bore).

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from oil hole in each side of connecting rod when these holes register with oil hole in connecting rod journal (these squirt holes are located 24° and 29° from rod center line).

Timing Chain & Sprockets - Lubricated by oil metered by front camshaft bearing.

Valve Lifters, Cam Lobes, Distributor & Oil Pump Drive Gears - Lubricated by spray and oil mist thrown off by connecting rod and crankshaft bearings.

Rocker Arms, Pushrods & Valve Stems (Overhead Valve Engine) - Oil tube connected to main oil gallery (at front of engine) and to fitting on side of cylinder head (at forward end directly above No. 1 spark plug) supplies oil to passage in cylinder head and through front rocker arm shaft support block to hollow rocker shaft. Rocker shafts have drilled oil holes at each rocker arm. Rocker arms are drilled (upper hole in arm allows oil to run down flat machined surface to each end of arm for pushrod and valve stem lubrication).

OIL FILTER: Partial flow type mounted on bracket on engine. Intake pipe is connected to main oil gallery and return pipe is connected to fitting on crankcase.

6 CYL. ENGINES (ALUMINUM)

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, valve lifters, and valve mechanism on cylinder head. All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted externally on right side of crankcase. Pump draws oil through fixed strainer and intake pipe in oil pan (intake passage in crankcase registers with intake port in mounting face of pump body) and delivers oil through passage in pump body to main oil gallery which extends along right side of crankcase. Oil pressure regulator valve in pump cover regulates pressure by bypassing oil back into oil intake passage. Oil is distributed through main oil gallery as follows:

Crankshaft & Camshaft Bearings - Oil passages in crankcase webs supply oil from main oil gallery to each camshaft and crankshaft bearing (passage intersects upper part of camshaft bearing bore and extends past this point to main bearing bore).

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from oil hole in each side of connecting rod when these holes register with oil hole in connecting rod journal (these squirt holes are located 24° and 29° from rod center line).

Timing Chain & Sprockets - Lubricated by oil metered by front camshaft bearing.

Cam Lobes, Distributor & Oil Pump Drive Gears - Lubricated by spray and oil mist thrown off by connecting rod and crankshaft bearings .

Rocker Arms, Pushrods, & Valve Stems - An oil gallery (vertical) located in right front corner of cylinder block distributes oil from main longitudinal oil gallery, through the hollow locator pin into the cylinder head where a pair of drilled passages connect into the front valve rocker arm support block and into the hollow rocker arm shaft. Each rocker arm is drilled to direct oil to flat machined surface of top, then to each pushrod, valve stem and spring. Holes on top of cylinder head drain oil back into oil pan.

Valve Lifters - Ports in main oil gallery supply lubrication to valve lifters.

OILFILTER: Externally mounted, full flow type located on adapter on oil pump body.

V8 ENGINES

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, hydraulic valve lifters, and rocker arm and valve mechanism on cylinder head. All other parts are lubricated by oil spray.

OPERATION: Gear type oil pump mounted on rear main bearing cap in crankcase draws oil through fixed strainer and intake pipe assembly mounted on pump cover. Oil pressure regulator is located in pump body with oil pipe through which oil is bypassed back into oil pan. Pump delivers oil through passage in bearing cap and block to full flow type oil filter mounted externally on left side of engine block. From the filter, oil flows through transverse and vertical passages in block to main oil gallery extending full length of block directly above camshaft. Main gallery feeds two lifter galleries (on either side of main gallery and extending full length of block) through grooved channel in rear face of camshaft thrust plate which serves as a cover for the galleries on front face of engine block. Oil is distributed through these galleries as follows:

Crankshaft & Camshaft Bearings - Oil passage in each crankcase web connects main oil gallery with camshaft bearing and corresponding main bearing.

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder wall from grooved passage in bearing cap of rod for opposite bank of cylinders (groove in rod must be upward or toward center of engine for this cross-lubrication).

Timing Chain & Sprockets - Lubricated through drilled passage in camshaft front bearing journal. This oil is metered by camshaft bearing.

Valve Lifters - Lifter oil galleries intersect lifter bores for direct oil supply to the hydraulic lifters.

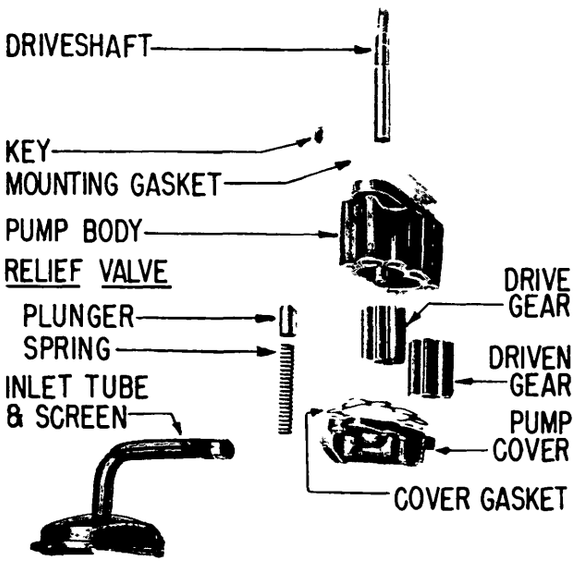
Rocker Arms, Pushrods & Valv Stems - Oil passage in block at rear end of each lifter oil gallery connects with rear cylinder head and rocker shaft bracket bolt hole in block. Special drilled bolts used in these holes which permit oil to flow upward, through and around undercut bolt stem, and through bracket to hollow rocker arm shaft. Shaft is drilled at each rocker arm. Rocker arms have drilled oil hole on upper side which permits oil to flow over top of arm for pushrod and valve stem lubrication. Drain holes in lower corners of cylinder head provide a return passage to oil pan.

OIL FILTER: Full flow type mounted on pad on left side of engine block. Bypass valve located in filter adapt r mounted on filter pad (bypass valve allows oil to flow directly to outlet passage).

►*OPTIONAL FILTER NOTE:* On engines where filter was optional equipment, a cover with a grooved channel connecting the inlet and outlet ports on the filter pad was installed on engine block when a filter was not used.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



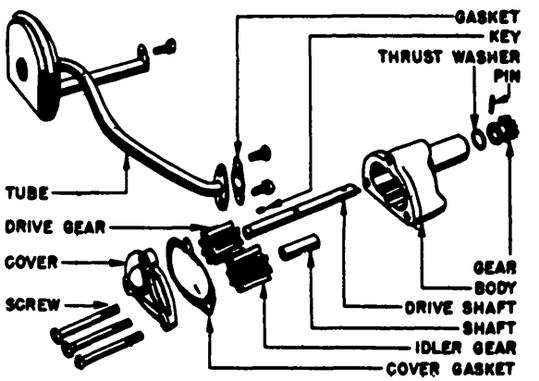
OIL PUMP

V8 ENGINE

OIL PUMP: Removal - Remove oil pan and screws retaining oil pump to rear main bearing cap, remove oil pump. *NOTE* - Oil pump is driven by distributor drive shaft so removal of oil pump does not affect ignition timing.

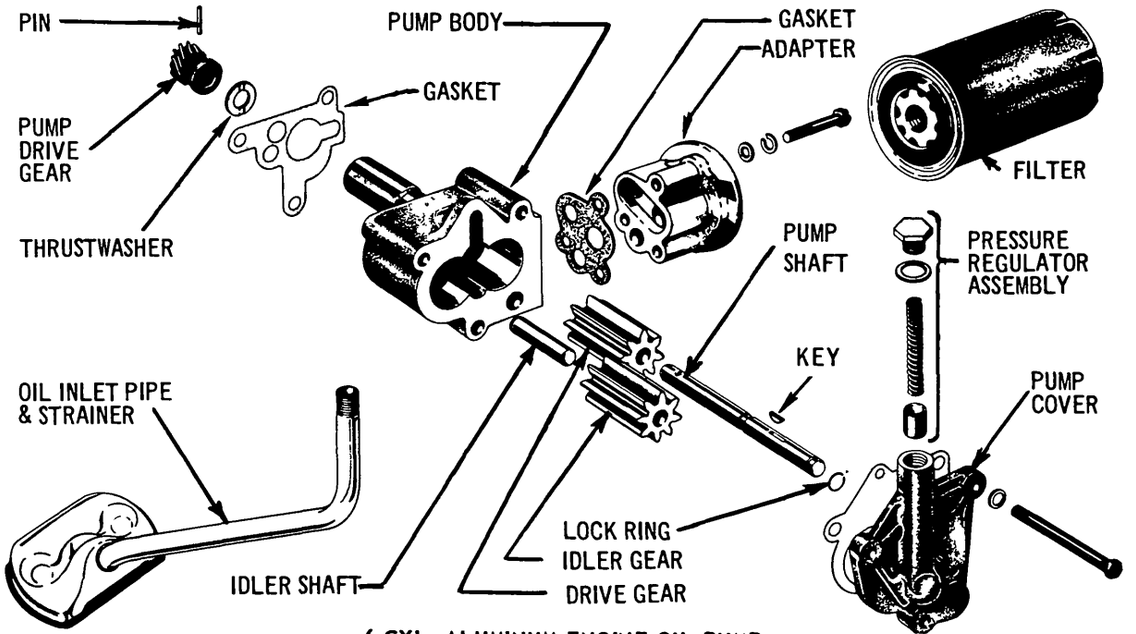
Disass mbly - Remove inlet tube and screen assembly from pump cover. Remove cover retaining screws, cover, pump gears, relief valve spring and plunger.

Insp ction - Check gear to cover clearance by placing straight edge across pump body with gears in operational cavity. Clearance should not exceed .004". A clearance of .008" maximum should exist between gears and walls of gear cavity opposite point of gear mesh.



V8 ENGINE OIL PUMP

Reass mbly & Installation - Reverse disassembly procedure. Install cover with pump ut of engine, and check pump for free operation before installing on engine.



6 CYL. ENGINE

OIL PUMP: Removal - Pump mounted externally on right side of engine. Remove pump by taking out three capscrews in pump cover.

Overhaul: Remove pump cover and gasket. Lift out pump drive gear, idler gear, and idler gear shaft. Remove key from keyway in shaft. Remove shaft and driving gear assembly through upper end of pump body (*NOTE* - Driving gear is held on shaft by a pin). Remove thrustwasher from shaft. Reassemble pump by reversing this disassembly procedure.

6 CYL. CAST IRON ENGINE OIL PUMP

6 CYL. ALUMINUM ENGINE OIL PUMP

►*AMERICAN CUSTOM SERIES NOTE:* This model has 6 Cyl. Overhead Valve Engine and Delco-Remy electrical equipment. *S "Rambl r Am rican Cust m & Rambler Six" (following) for all data on this model.*

MODEL IDENTIFICATION

Model	Series
Rambler American (Deluxe & Super)	6101

NOTE - "L" Head engine used in these models.

SERIAL NUMBER: Stamped on plate attached to right hand wheelhouse panel.
Starting Serial Number - B-221001 (Dom.), BK-10701 (Exp.).

Car Code Number: Stamped on bottom of body and number plate located on left front door hinge pillar post. Indicates date of manufacture, not used for licensing.

Engine Code Number: Stamped on machined pad on upper left front corner of cylinder block below cylinder head. Indicates date of manufacture, not used for licensing.

►*ENGINE NUMBER LETTERS (Adjacent to Engine Code Number):* First letter is size of bore, second letter is size of main bearings, and third letter is size of connecting rod bearings. Engines not so marked are standard in all respects. "A" - Standard. "B" - .010" Undersize.. "C" - .010" Oversize.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. min. at cranking speed with throttle wide open. Maximum variation between cylinders 10 lbs.

VACUUM READING: 18-20" at idling speed.

VALVE TAPPET CLEARANCE: .016" Intake, .018" Exhaust, Cold.

MANIFOLD HEAT CONTROL: None used.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .033-.037"
Spark Plugs - Autolite AL-7, AL-82, ARL-82 or Champion H-10, H18Y. 14mm. Torque to 30 ft. lbs.

COIL: Autolite CAG-20613.
Ignition Current - 3.0 amps. stopped.
Resistor - None used.

DISTRIBUTOR: Autolite IAT-4402-1. Pivoted breaker plate type with centrifugal and vacuum advance.
Condenser - Autolite 2-32. **Capacity** .18-.23 mfd.
Contact Point Set - Autolite No. 1-47.
Breaker Gap - .018-.022". *NOTE* - Set gap with engine stopped and use feeler gauge or dial indicator.
Cam Angle - 36-42°. *CAUTION -Use breaker gap setting only, see above.*
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance.

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	420	0	840
1	540	2	1080
2.5	700	5	1400
6	1700	12	3400
7	2000	14	4000

Vacuum Spark Control: Autolite integral type.

Vacuum Advanc

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	5
1	2	5 7/8
2	4	6 3/4
4	8	9
5.5	11	11

IGNITION TIMING

Setting - 3° BTDC (Reg. Fuel), 6° BTDC (Prem. Fuel).
Timing Mark - Vibration damper has five notches (TDC, 3°, 5°, 8°, 10° BTDC). Align correct notch with pointer on timing chain cover.

CARBURETOR

►*CARBURETOR APPLICATION: Carter YF single barrel carburetor used.*

THROTTLE LINKAGE ADJUSTMENT (FLASH-O-MATIC CARS): None required. Transmission shift points controlled by Vacuum & Solenoid unit on transmission case.

CARTER YF

Carter YF 2014S. Single barrel, downdraft type.
Idle Setting - ½-1½ turns open. Turn screw out for richer mixture.
Idle Speed - 550 RPM (Synchro-mesh), 475 RPM (Flash-O-Matic in "N"), 500 RPM (Air Cond. "ON").
Float Level - ½" (Gauge T109-83) from top of float at free end to top surface of bowl cover (air horn and float assembly inverted and gasket removed). To adjust, bend float lip.
Accelerating Pump - No seasonal adjustment.
Fast Idle: .054" throttle valve opening (Gauge T109-193) with choke valve tightly closed. Adjust by bending fast idle connector link at lower angle.
Automatic Choke Setting: One notch lean.
►*OTHER DATA: See "Carter YF Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter MODF-3184S. Fuel & Vacuum, diaphragm type.
Pressure - 4-5½ lbs. maximum, measured 16" above pump outlet with engine running at 1800 RPM.

Gasoline Gauge: King-Seeley Electric Constant-Voltage ("CV") type with gauge Voltage Regulator, King-Seeley No. 57603.
Dash Unit - King-Seeley No. 57592.
Tank Unit - King-Seeley.

Air Cleaner: Oil Bath and Dry Filter Element types used. Dry filter element type should be removed every 1,000 miles for cleaning and replaced every 6 months or 10,000 miles whichever occurs first.

►*PAPER ELEMENT AIR CLEANER CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. DO NOT wash element in solvent or other liquids and DO NOT oil, lubricate or blow out with compressed air.

BATTERY

Autolite. Used as follows:

Model	Bat. No.	Plates	①Hr. Capacity
Standard	11-MS-40	7	40 Amps.
Air Cond	11-HS-60	11	60 Amps.
Fleet-Hvy.Dty.	11-HS-70		70 Amps.

① - At 20 hour rate.

Batt ry Gr und - Negative to cylinder head.
Engin Gr und - Transmission case to rear engine crossmember.

STARTER

Autolite MEC-6002. Armatur - Autolit N. 16-77.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 42-53 ozs.
Shunt Field Current Draw - 4.4-5.1 amps. at 10 volts.

Performanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5300	10.0	48
6.5 ft. lbs.	Lock	4.0	285

Starter Switch: Autolite Solenoid No. 15-65 mounted on starter and controlled by Ignition & Starter Switch Rambler No. 3158414 and Neutral Safety & Back-up Switch (Auto. Trans.) No. 3202684. Starter operative only in "N" or "P".
Neutral Safety Switch Adjustment - *See "Rambler Automatic Transmission" in Transmission S ction.*

ALTERNATOR & REGULATOR

Leece-Neville. Alternator N. A0012036 with R gulat r No. R-0013533.
Rotation - Clockwise at drive end.
Field Current - 2.5-3.0 Amps. at 12 Volts.
Rated Output - 60 Amps. at 14 Volts at 4400 RPM, (1800 Eng. RPM).
►*OTHER DATA: See "Leece-N vill Alternator & Regulator" in Electrical Section.*

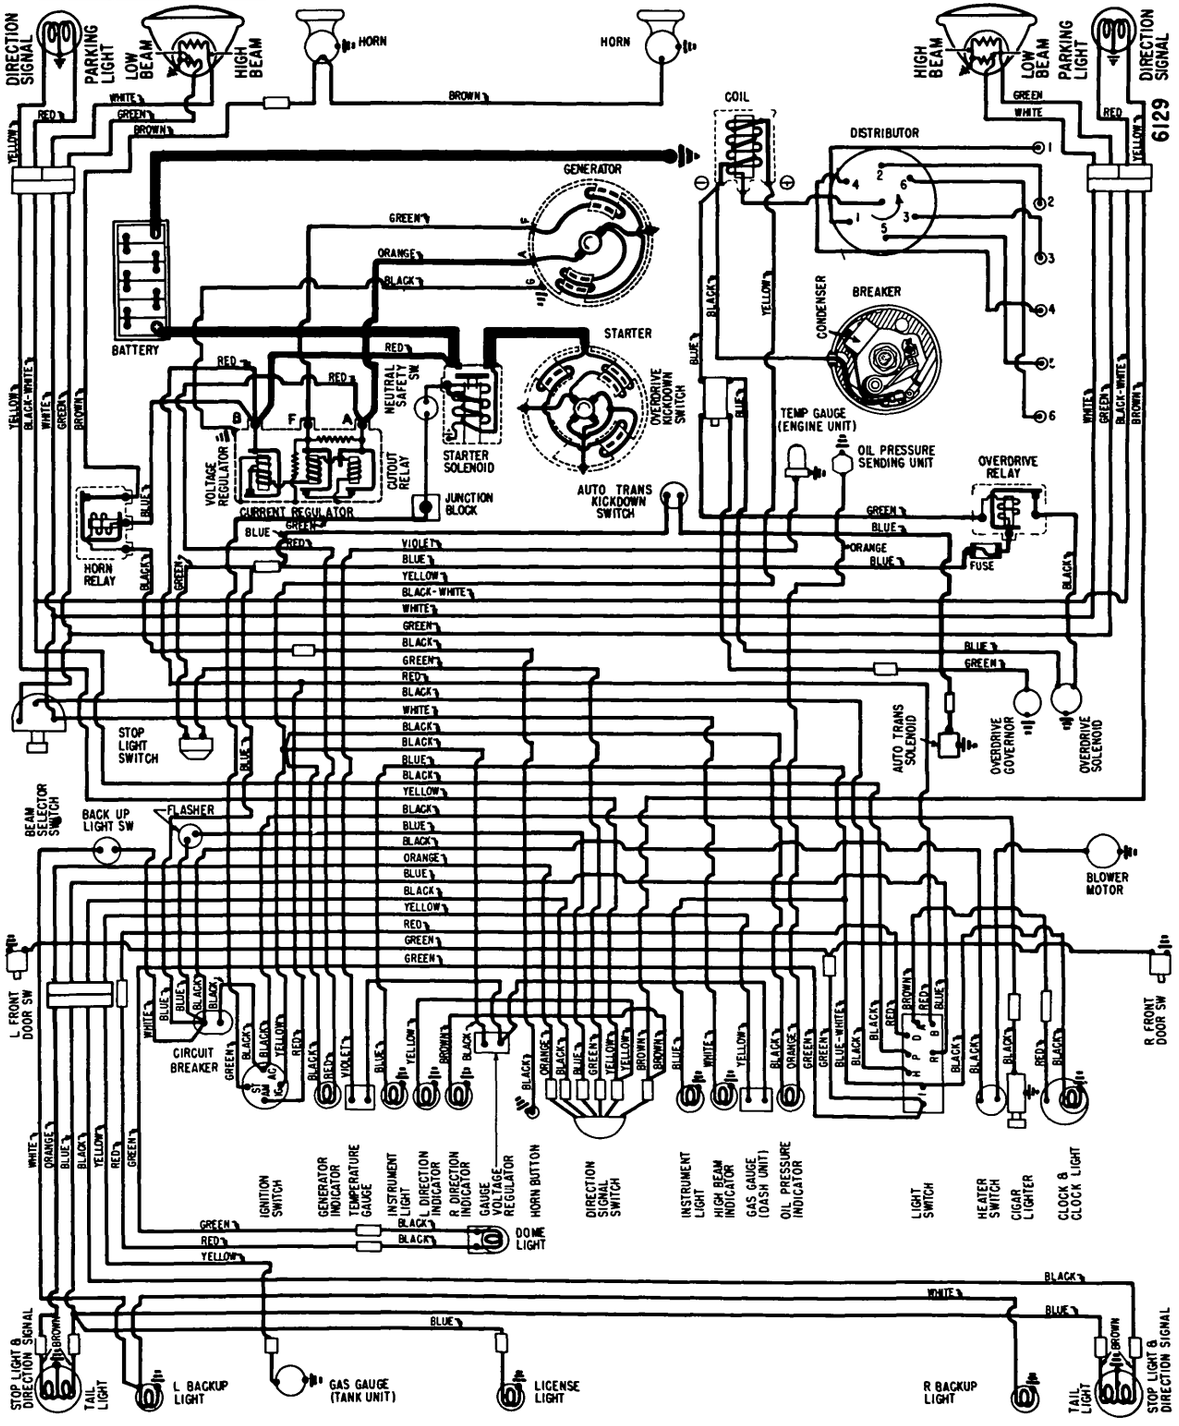
GENERATOR

Autolite GJO-7101A. Armatur - Aut lite No. 10-72.
►*CHARGING CIRCUIT CAUTION: "B" typ circuit used with generator field ground d in generat r. F r wiring diagrams and testing cautions, s "Autolite B Circuit Regulators" in Electrical S cti n.*

Performance Data - Cold (70°F)

Amperes	Volts	RPM
13.0	15.0	1750
25.0	15.0	2300

Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 18-36 ozs.
Field Current - 1.6-1.7 amperes at 10.0 volts.
Motoring Current - 2.9-3.3 amps. at 10.0 volts.



Belt Adjustment: 110-120 lbs. (new belt), 70-80 lbs. (used belt) strand tension using a belt tension gauge. Move generator in its mounting bracket to adjust. *NOTE* - When using gauge on notched belt, finger of gauge should be in notch.

GENERATOR REGULATOR

Autolite VBO-6201C (Early), 6221C-1 (Lat) I ss Air Cond.; VBO-6201B-2 (Early), 6221B-1 (Late), with Air Cond.
►*CHARGING CIRCUIT CAUTION: "B" typ circuit us d with generator field ground d in generator. For wiring diagrams and testing cauti ns, see "Aut lit B Circuit Regulators" in Electrical S cti n.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for compl te CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Cutout Relay

Cuts In - 12.5-13.5 volts.
Cuts Out - 3-5 amps. discharge current after a charge of 7 amps.
Contact Gap - .015".
Air Gap - .025-.027".

Voltage Regulator

Setting - 14.2-14.8 volts at 80°F charging at 7 amperes, or with .25 ohm resistor in series with regulator and battery.
Air Gap - .048-.052" (check at brass armature stop pin).
Checking & Adjusting - *See "Autolite B Circuit Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Regulator	Test A Operating Amperes	Test B
VBO-6201C, 6221C-1	.32 max.	25 (23-27)
VBO-6201B-2, 6221B-1	.37 max.	30 (28-32)

Test A - After 15 minutes operation charging at 7 amps.
Test B - After additional 15 minutes operation with current regulator operating and load applied to hold voltage down to 13.6-13.8 volts.
Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting - *See "Autolite B Circuit Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Two headlights, one in each fender. Sealed beam.

Light Switch Removal: Disconnect battery, place switch in full "Off" position and press button (on top of switch) to release switch shaft and knob assembly, then remove (French) nut. Remove switch and disconnect wires.

Stop Light Switch: Located at front end of master cylinder. Use thread sealer when installing new switch.

CIRCUIT BREAKERS: 18 Amperes. Headlights & High Beam Indicator. In light switch.
12 Ampere. Parking, Tail, License Plate, Instrument, Dome and Clock lamps. In light switch.
30 Ampere. Stop, Direction, Back-up lamps. On ceiling of cowl beneath dash panel.

FUSES: AGA-5. In radio lead.
AGC-15. Overdrive. Clipped to "B" terminal of relay.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own, 6 cyl. "L" head.

Bore	Stroke	Displacement
3 1/8"	4 1/4"	195.6 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.0-1	23.4	90 at 3800 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

OIL PAN REMOVAL: Remove steering linkage cross tie rod before removing pan.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE REMOVAL: *See "ENGINE" in Rambler Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Rambler Special Data.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Rambler Special Data.*

PISTONS

Aluminum alloy, solid skirt, tin plated type with flat top.

Original Bore & Piston Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification, above.*

Clearance - .0006"-.0012" at bottom of skirt.

Removal - Pistons and rods removed from above.

Fitting New Pistons: Piston to bore clearance .0006-.0017" (Skirt Top), .0006-.0012" (Skirt Bottom). Piston properly fitted should support its own weight with piston and bore dry.

Replacement Pistons: Std., .002", .005", .010", and .020" Oversize. Furnished with fitted pins.

Installing Pistons: Notch in perimeter must be to front of engine.

PISTON PIN

Press fit in connecting rod. No locking device.

Diameter - .8595-.8598". **Length** - 2.75".

Clearance in Piston - Palm press fit in piston at room temperature.

Pin Removal & Installation - *See "Piston Pins" in Rambler Special Data.*

Replacement Pins: Furnished Std. and .001", .003", .005" Oversize.

PISTON RINGS

Two compression rings and one oil ring used.

Ring	Width	End Gap	Side Clearance
Compr.(1)	.0930-.0935"	.010-.020"	.003-.005"
Compr.(2)	.0925-.0935"	.010-.020"	.003-.005"
Oil (3)①	.0245"	.015-.055"	.0008-.004".

① - Three-piece steel rail.

Replacement Rings: Sets of Standard and .020" Oversize.

CONNECTING ROD

Length - 6.625" center-to-center. **Weight** - 23 ozs.

Crankpin Journal Diameter - 2.0948-2.0955".

Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*

Bearings - Steel-backed babbitt. No shims.

Clearance - .001-.0015". **Side Play** - .005-.015".

Replacement Bearings: Furnished Std. and .001", .002", .010", .012" Undersize.

Installing Rods: Identification marks (raised surface on center of rod and cap) toward front of engine.

CRANKSHAFT

Journal Diameter - 2.4791-2.4798". Four bearing.

Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*

Bearings - Steel-backed babbitt. No shims.

Clearance - .001-.0015".

Replacement Bearings: Furnished Std. and .001", .002", .010", .012" Undersize.

End Thrust: Taken by flanged front main bearing.

Endplay - .003-.008".

Rear Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Rambler Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Rambler Special Data.*

►*CRANKSHAFT OIL SHEDDER NOTE:* Oil shedder, Part No. 3102770, installed on crankshaft with concave section toward the front, beginning with engine Code No. 20107.

CAMSHAFT

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each cam. *See "Camshaft & Bearings" in Rambler Special Data.*

Bearings - Steel-backed babbitt bushings.

Clearance - .001-.003".

End Thrust: Thrust plate on front face of engine between No. 1 bearing and camshaft sprocket.

Endplay - .004-.008".

Timing Chain: Morse non-adjustable type. **Width** 1", **Pitch** 3/8", **Length** 22½" or 60 links.

Camshaft Setting: Install chain with punch mark on camshaft sprocket and mark on crankshaft sprocket adjacent and in line with each other across centerline of sprockets.

Cover oil seal can be replaced without removing cover by using Remover J-9256 and Installer J-9163.

VALVES

Tappet Clearance: .016" Intake, .018" Exhaust.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.469"	.3407-.3412"	4.781"
Exhaust	1.281"	.3407-.3412"	4.7835"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°①	.340"	.002-.0035"
Exhaust	45°①	.340"	.002-.0035"

① - Valve Face angle 44°.

►*VALVE GRINDING CAUTION:* Replace valves when refacing reduces distance from top of valve face to top valve to less than 1/32".

Valve Seat Width - 5/64-3/32".

Valve Stem Oil Seal - None used.

Valve Springs: Single spring used on each valve. Specifications as follows:

Valve	Lbs. Pressure	Length
Open	75-82	1 7/16"
Closed	37-41	1 3/4"

Valve Guides: Use Tool J-1429-1 to remove and replace guides. Guides should be flush with guide bore opening in block. Finish ream all guides after installation.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves - Open 10° BTDC, Close 58° ALDC.

Exhaust Valves - Open 49° BLDC, Close 19° ATDC.

Valve Timing Check - Set valves on No. 1 cylinder at .003" lash. With No. 6 piston at TDC in firing position, timing will be correct if exhaust valve opens the same amount before DC on vibration dampener as intake valve opens after DC as engine is rocked back and forth over DC.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engin Lubrication" under OILING SYSTEM in Rambler Special Data.*

Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 12 lbs. minimum at 600 RPM, 50 lbs. at 3000 RPM.

Pressure Regulator Valv - Non-adjustable spring loaded valve located in cylinder block just ahead of oil pump.

Oil Pressure Indicator: Light on instrument panel comes on when ignition switch turned on, goes out after engine starts and oil pressure reaches 4-6 lbs. Oil pressure indicator switch located on right side of block to rear of fuel pump.

Oil Pump: Gear type. Mounted on right side of engine. *See "Oiling System" in Rambl r Sp cial Data.*

Oil Filter: Partial flow type. Replace element every 4000 miles or sooner as needed.

►*OIL FILTER NOTE:* Oil pressure line should be connected to outer fitting on filter, and return line to center fitting. If lines found reversed, connect properly and install new element.

Replacement Filter Element - Rambler No. 8990508.

Crankcase Ventilation: Standard Cars - Filter in crankcase filler cap and breather tube in valve chamber front side plate.

Positive Crankcase Ventilati n Cars - Usual breather tube in valve chamber front side plate replaced by vacuum line to manifold, with valve in line to vary the air flow through crankcase to meet changing conditions at all engine speeds and loads. *S "Closed Crankcas Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 11 qts. Add 1 qt. for heater.

Pressure Valve: 12-15 lb. radiator cap, Rambler No. 3160667.

Thermostat: Dole - 150° Rambler No. 3201251, 167-173° No. 3201249, 177-182° No. 3201250, 192-197° No. 3202389; **Thompson** 177-183° No. 3155883.

Water Pump: Centrifugal, double row ball bearing type. Requires no lubrication. Serviced as an assembly.

Temperature Gauge: King-Seeley "CV" electric type with Gauge Voltage Regulator, King-Seeley No. 57603.

Dash Unit - King-Seeley No. 57596.

Engine Unit - King-Seeley No. 44255.

LUBRICATION

FLASH-O-MATIC TRANSMISSION LUBRICATION: Check fluid level every 1,000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level - Apply parking brake and run engine until normal operating temperature attained. Move selector lever through all positions and back to "N". Check fluid level and add fluid as required. Level should be maintained at "F" mark on dipstick. 1½ pints fluid required to raise level from "L" to "F" mark.

Capacity - 10 qts.

S INDEXES on Pgs. 4 to 9 for compl te CARBURETION, ELECTRICAL, MECHANICAL data.

►*AMERICAN DELUXE & SUPER NOTE:* These models have "L" Head engine and Autolite electrical equipment. *Se "Rambler American (Deluxe & Super)" for all data.*

MODEL IDENTIFICATION

M d l	Series
Rambler American (Custom)	① 6101
Rambler Classic 6	② 6110

① - Overhead Valve Engine. 6101-2 (Custom).
② - Cast Iron & Aluminum Blocks used, see data below.

SERIAL NUMBER: Stamped on plate attached to right hand wheelhouse panel.

Starting Serial Numb rs - Custom - B-221001 (Dom.) BK-10701 (Exp.); **Classic 6** - C-400001 (Dom.), CK-10401 (Exp.).

Car C de Number: Stamped on bottom of body and number plate located on left front door hinge pillar post. Number indicates date of manufacture but is not used for licensing.

Engin Code Numb r: Stamped on machined pad on upper left front corner of cylinder block below cylinder head. Indicates date of manufacture but is not used for licensing.

ENGINE NUMBER LETTERS: Located at upper left front (Early Aluminum Block), upper left rear (Later Aluminum Block), left fr nt (Other 6 Cyl.) corner of cylinder block. First letter is size of bore, second letter is size of main bearings, and third letter is size of connecting rod bearings. Engines not so marked are standard in all respects. "A" - Standard, "B" - .010" Undersize, "C" - .010" Oversize.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. min. at cranking speed with throttle wide open. Maximum variation between cylinders 10 lbs.

VACUUM READING: 18-20" at idling speed.

VALVE TAPPET CLEARANCE: Classic 6 & American (Ov rh ad Valv & Cast Iron Block). .012" Intake, .016" Exhaust. Hot.

Classic 6 (Aluminum Bl ck). "O" lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: American - Water heater tube incorporated in intake manifold. **Classic** - None used. Intake manifold cast as integral part of engine.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .033-.037".

Spark Plugs - Autolite AL-7, AL-82, ARL-82, or Champion H-10, H18Y. 14 mm. Torque to 30 ft. lbs.

COIL: D lco-R my 1115066.

Igniti n Curr nt - 1.7 amps. idling, 3.75 amps. stopped.

R sistor - Delco-Remy 1927809. 1.52±.04 ohms at 80°F.

►*COIL RESISTOR NOTE:* Resistor connected in series between ignition switch and coil. Bypassed during cranking by direct lead from solenoid to coil.

DISTRIBUTOR: Delco-R my 1112434.

C nd ns r - Delco-Remy 1928111. **Capacity** .18-.23 mfd.

Contact P int Set - Delco-Remy 1924571 or 1944375 (pre-assembled).

Breaker Gap - .016".

Cam Angle - 28-35°.

Breaker Arm Spring Tension - 17-21 ozs.

Rotation - Counterclockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
.5-2.5	600	1-5	1200
5-7	900	10-14	1800
7.5-9.5	1500	15-19	3000
10-12	2100	20-24	4200

Vacuum Spark Control: Delco-Remy 1116174.

Vacuum Advance

Distr. Degrees	Engine Degrees	Vacuum (" of Hg)
1	2	5-7
11	22	16-17

IGNITION TIMING

Series	Ignition Setting Regular - Fuel - Premium
American (S.M. Trans.)	8° BTDC ..... 12° BTDC
American (Auto. Trans.)	10° BTDC ..... 14° BTDC
Classic	①5° BTDC ..... 8° BTDC

① - Supersedes previous setting of 8° BTDC. *NOTE* - Cars are set 8° BTDC at factory.

Timing Mark - Vibration damper has five notches (TDC, 3°, 5°, 8°, 10° BTDC). Align notch with pointer on timing chain cover.

CARBURETOR

►*CARBURETOR APPLICATION:* Carter & Holley Single & Dual Carburetors used as follows:

Model	Carburetor
American & Classic (Std. Trans.)	Holley
Classic (Auto. Trans.)	Carter AS
Classic Optl. (All Trans.)	Carter WCD

THROTTLE LINKAGE ADJUSTMENT (FLASH-O-MATIC CARS): None required. Transmission shift points controlled by Vacuum & Solenoid unit on transmission case.

CARTER AS

Carter AS 3169S (Early), AS 3206S (Later). Single Barrel Downdraft type.

Idle Setting - ½-1¼ turns open. Turn screw out for richer mixture.

Idle Speed - 475 RPM (Flash-O-Matic in "N"), 500 RPM (Air Cond. "ON").

Float Level - ¼" (Gauge T109-282, 3169S), 5/32" (3206S), from top of each float (at free end) to top of casting with carburetor inverted. To adjust, bend float lip.

Accelerating Pump - No seasonable adjustment.

Fast Idle: .037" (Gauge T109-193) between lower edge of throttle valve and bore with fast idle link on high step of cam. To adjust bend choke connector rod. Fast idle speed on car is 1800-2000 RPM with engine hot and fast idle link on high step of fast idle cam.

Automatic Choke Setting: Center on index.

►*OTHER DATA: See "Cart r AS Carbur t rs" in Carbur r tion Section.*

HOLLEY SINGLE BARREL

H ll y M d l 1908FC. No. R-2269-A (Early American), No. R-2381-1 (Later American); No. R-2138-1 (Classic). Single barrel, downdraft type. Similar in design to Holley "Visi-Flo" except for design of float.

Idle Setting - 1¼ turns (R-2269-A & R-2381-1), 1 turn (R-2138-1) open approximately. Set idle adjusting needle to give highest vacuum or smoothest running and maximum idle speed. If idle speed too high, reset idle speed screw and again adjust idle setting needle, leaving it slightly on rich side.

Idle Speed - 550 RPM (Std. Trans.), 475 RPM (Auto. Trans. in "N"), 500 RPM with Air Cond. "ON".

Fuel Level - 3/4"±1/32" (Gauge J-10231) measured through economizer hole at 4½ lbs. pressure.

Accelerating Pump - No seasonable adjustment.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Automatic Choke Setting: Center on index (2138, 2269), 3 notches lean (2381).

►*OTHER DATA: See "Holley Visi-Flo" in Carburetion Section.*

CARTER WCD

Carter WCD 3170S. 2-Barrel, downdraft type.

Idle Setting - ½-2 turns out. Turn screws out for richer mixture.

Idle Speed - 550 RPM (Synchro-mesh & O.D.) 475 RPM (Flash-O-Matic in "N"), 500 RPM (Air Cond. "ON").

Float Level - 5/32" (Gauge T109-196). Distance from top of each float and machined surface of casting.

Accelerating Pump - No seasonal adjustment.

Fast Idle: .010" (Gauge T109-200) clearance between lip of fast idle cam and boss on body with choke valve closed (loosen clampscrew and adjust lever on choke shaft). .020" (Gauge T109-29) between throttle valve and bore (side opposite idle port) with choke fully closed (adjust fast idle screw) with idle adjusting screw on high step of fast idle cam.

Automatic Choke Setting: Centered on index.

►*OTHER DATA: See "Carter WCD Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: (American) - Carter MDOF-3184S. Fuel & Vacuum, diaphragm type. **(Classic)** - Carter No. MPF-3025-S. Fuel & Vacuum, with piston type vacuum pump.

Pressure - 4-5½ lbs. minimum at 16" above inlet at 1800 RPM (American), 4-5½ lbs. maximum, using 6" hose and "T" fitting 6" above carb. inlet (Classic 6).

Gasoline Gauge: King-Seeley Electric Constant-Voltage ("CV") type with Voltage Regulator, King-Seeley No. 57603.

Dash Unit - King-Seeley No. 57592.

Tank Unit - King-Seeley No. 59040 (Pass.), No. 59050 (Sta. Wgn.).

Air Cleaner: Replaceable element (Dry type) or oil bath type used. Clean replaceable element type every 1,000 miles, service oil bath type every 2,000 miles. Replace dry type filter element every 6 months or at 10,000 mile intervals whichever occurs first.

►*DRY TYPE CLEANING CAUTION:* Remove filter element, tap lightly to remove dirt particles, DO NOT use compressed air or liquid solvents to clean element.

CONTINUED ON NEXT PAGE

Se INDEXES on Pgs. 4 to 9 for complet CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

BATTERY

Autolit . Used as follows.

Model	Bat.No.	Plates	℄Hr. Capacity
Amer.&Classic ②	11-HS-45	7	45 Amp.
All with AC	11-HS-60	11	60 Amp.
Fleet Hvy. Duty	11-HS-70		70 Amp.

℄ - 20 hr. rate. ② - Less Air Cond.

Battery Ground - Negative to cylinder head.

Engine Ground - Transmission case to rear engine crossmember.

STARTER

Delco-Remy 1107201.

Drive - Overrunning clutch (solenoid pinion shift).

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. minimum.

Performance Data

Torque	RPM	Volts	℄Amperes
0 ft. lbs.	6200-9400	10.6	49-76
	Lock	4.25	270-310

℄ - Includes Solenoid.

Starter Switch: Delco-Remy Solenoid No. 1119798 mounted on starter and controlled by Ignition & Starter Switch Rambler No. 3158414 for key starting (Synchro-mesh). Automatic Trans. Cars controlled as follows:

American - Same as Synchro-mesh above with Neutral Safety & Back-Up Light Switch Rambler No. 3202684.

Classic - Neutral Safety Switch No. 3201826 (Early Dom.), No. 3201827 (Early Exp.), No. 3203007 (Late Dom.), No. 3203008 (Late Exp.) and Relay No. 3156115 with Push Button Control. Switch mounted on gear shift control and operated by pushing in "Neutral Button" with ignition turned "ON". Vacuum Switch prevents starter operation with engine running.

►*VACUUM NEUTRAL STARTER SWITCH CAUTION:* DO NOT apply a hot lead direct to switch for test purpose as it will overheat loading spring and/or burn contacts. Disconnect lead to switch and ground lead to to engine. If engine will start, switch is defective. Switch opens at 11-14" of vacuum. Starter gear clash that occurs when engine started Cold and on low fast. idle setting with choke fully closed is the result of low engine vacuum and is normal.

Neutral Safety Switch Adjustment (American) - *See "Rambler Automatic Transmission" in Transmission Section.*

ALTERNATOR & REGULATOR

Leece-Neville. Alternator A0012036 with Regulator R-0013533.

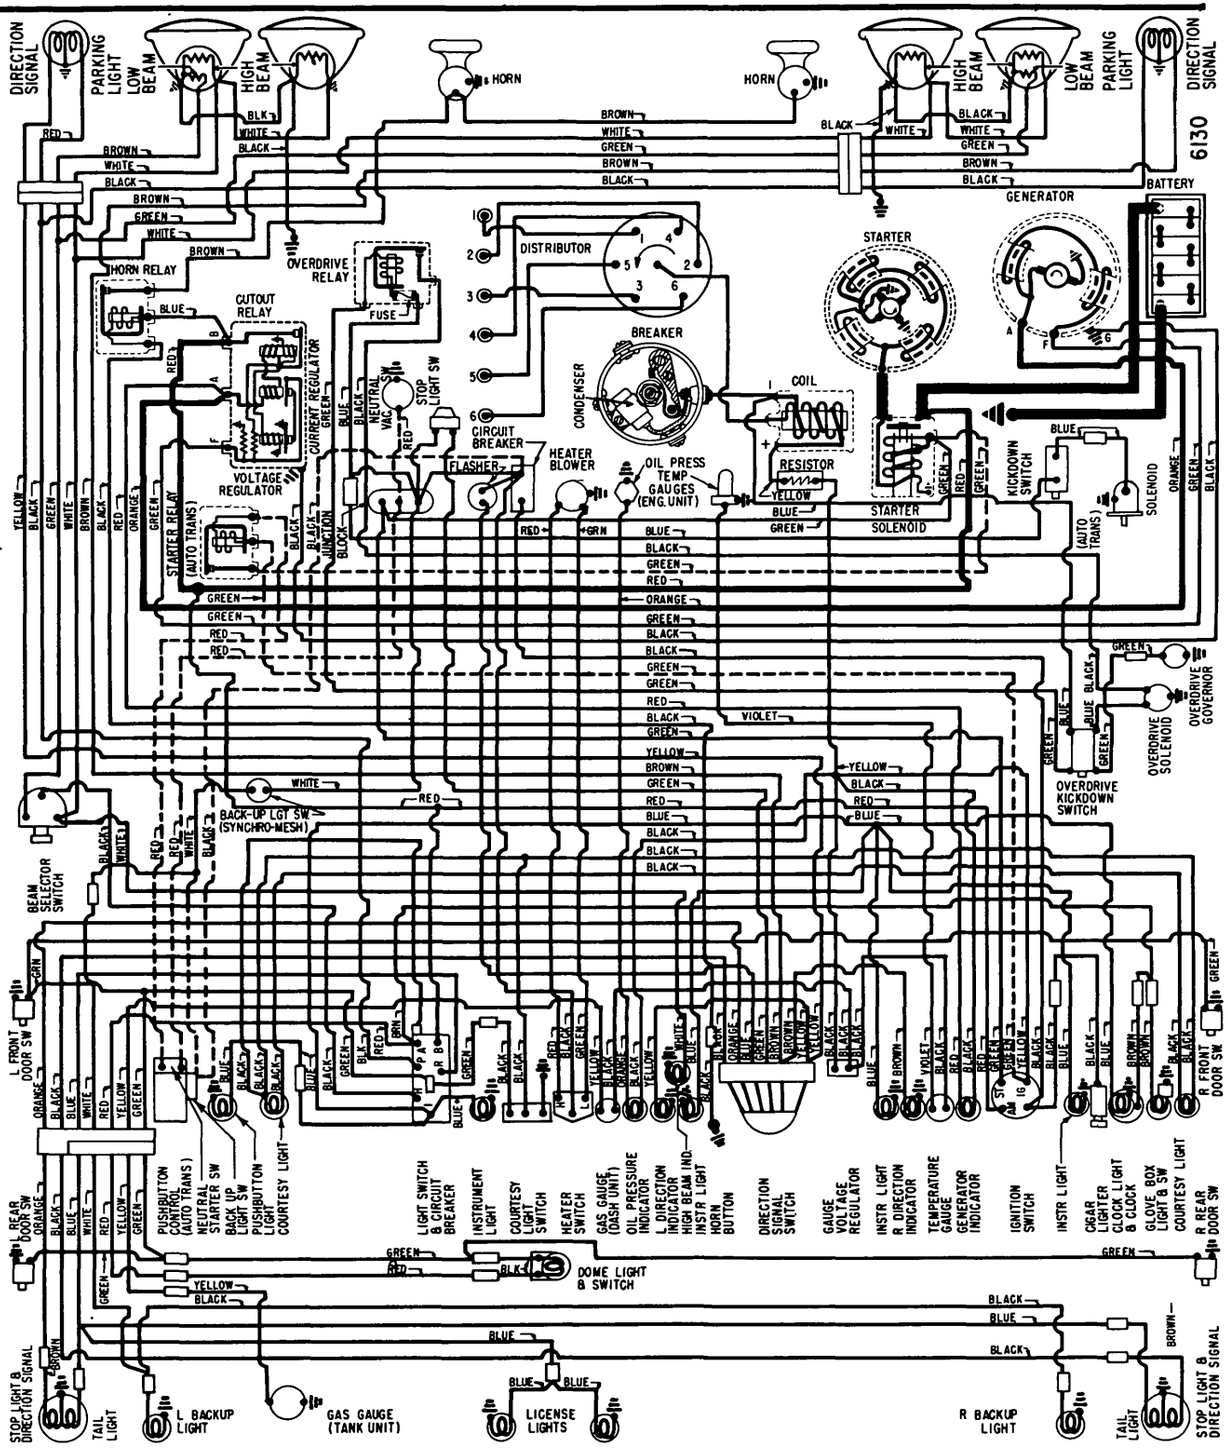
Rotation - Clockwise at drive end.

Field Current - 2.5-3.0 Amps. at 12 Volts.

Rated Output - 60 Amps. at 14 Volts at 4400 RPM (1800 Eng. RPM).

►*OTHER DATA: See "Leece-Neville Alternator & Regulator" in Electrical Section.*

Delco-Remy. Alternator No. 1117070 with Regulator No. 9000552.



Rotation - Clockwise at drive end.

Brush Spring Tension - 20 ozs.

Field Current - 5.6-6.3 amps. at 12 volts (80°F).

Rated Output - 58 amps. (cold), 60 amps. (hot) at 14 volts and 2500 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: See "Delco-Remy 12-Volt Alternator (Internal Rectifier) & Transistorized Regulator" in Electrical Section.*

GENERATOR

Delco-Remy. Used as follows:

Model	Generator	Armature
Standard	1100324	1928952
Air Cond.	1102113	1923535
Heavy Duty	1102123	

Performance Data

Generator	Amperes	Volts	RPM
1100324	25	14.0	2570
1102113	30	14.0	2240
1102123	45	14.0	2600

Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 28 ozs.
Field Current - 1.5-1.62 Amps. (1100324), 1.69-1.79 Amps. (1102113), 2.66-2.86 Amps. (1102123), at 12 volts and 80°F.
Belt Adjustment: 110-120 lbs. (New), 70-80 lbs. (Used) tension, using a belt tension gauge at center of longest span between pulleys. Move generator in its mounting bracket to adjust. *NOTE* - When using gauge on notched belt, finger of gauge should be in notch.

GENERATOR REGULATOR

Delco-Remy. Used as follows:

Model	Regulator	Generator
Standard	1119122	1100324
Air Cond.	1119003	1102113
Heavy Duty	1119600	1102123

►*DOUBLE CONTACT REGULATOR NOTE:* Regulator 1119600 has double contacts for voltage regulation. *NOTE* - Specifications below are for "NORMAL" settings.

►*REGULATOR ADJUSTMENT NOTE (1119003,122):* "Post Type" design with nylon adjusting nuts above voltage & current regulation units for air gap adjustment.

Cut out Relay

Cuts In - 11.8-13.5 volts (1119003, 122), 11.8-13.0 volts (1119600).
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage Regulator

Setting - (1119003, 122) - 13.8-14.7 volts at 125°F.
Setting (1119600) - 13.8-14.6 volts operating on upper contacts, .1-.3 volts lower on lower contacts. At ambient temperature of 125°F.
Contact Gap (1119600) - .016" (upper contacts) with lower contacts just touching.
Air Gap - .075" (1119003, 122) .067" (1119600) with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting (1119122) - 23-27 amperes (hot).
Setting (1119003) - 27-33 amperes (hot).
Setting (1119600) - 38-45 amperes (hot).
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: (American) Two headlights, one in each fender. **(Classic)** Dual headlights. (4-Headlight System).
Light Switch Removal: Disconnect battery, place switch in full "Off" position and press button (on top of Switch) to release switch shaft and knob assembly, then remove (French) nut. Remove switch and disconnect wires.
Stop Light Switch: Located on fitting at front end of master cylinder (American), in fitting located on front face of firewall (Classic). Use thread sealer when installing new switch.
CIRCUIT BREAKERS: 18 Ampere. Headlights & High Beam Indicator. In light switch.
12 Ampere. Parking, Tail, License Plate, Instrument, Dome and Clock lamps. In light switch.
30 Ampere. Stop, Direction, Back-up lamps. On ceiling of cowl beneath dash panel.
FUSES: AGA-5. In Radio lead.
AGC-15. Overdrive. Clipped to "B" terminal of relay.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 6 Cyl., valve-in-head.

►*SERIES 6110 ENGINE NOTE:* Both Cast Iron and Aluminum blocks used. Specifications are the same for either type block except as noted below.

Bore	Stroke	Displacement
3.125"	4.25"	195.6 cu. ins.

Model	Compr. Ratio	Rater H.P.	Developed H.P.
All ①	8.7-1	23.44	127 at 4200 RPM
Classic ②	8.7-1	23.44	138 at 4500 RPM

① - 1-Bbl. Carb. ② - 2-Bbl. Carb.

Compression & Vacuum Reading - *See TUNE-UP.*

►*ENGINE SERVICE NOTE: For Aluminum Engine Service Cautions see "Engine" in Rambler Special Data.*

►*SERIES 6110 ALUMINUM BLOCK OIL SEEPAGE AT RIGHT FRONT CORNER CORRECTION:* Remove cylinder head and install new dowel pin Part No. 3164362 (with the two "O" ring seals). Sharp edges of dowel pin holes should be chamfered with crocus cloth to save damage to seals. Either the earlier or later type gasket Part No. 3161430 (with head along push-rod side) may be used. Apply "Perfect Seal" sealing compound on both sides of gasket.

►*SERIES 6101 & 6110 CAST IRON ENGINE BREATHER TUBE PRODUCTION CHANGE AND OIL LEAKAGE AT HIGH SPEED CORRECTION:* New Breather Tube Part No. 3203458 (2 5/16" shorter and without 45° angle cut at lower end), used in production starting with Engine No. 30601. To correct loss of oil on earlier models, cut 2 5/16" off lower end of old breather tube, cutting at right angles to tube (not 45°)

►*SERIES 6110 ALUMINUM ENGINE VALVE SPRING PRODUCTION CHANGE & LOSS OF POWER CORRECTION:* New Valve Spring Part No. 3163019 (Int. & Exh.), with increased spring tension (identified by strip of white paint) used in production starting with Engine No. 31027. Replace early type valve spring with this part No. for correcting power loss due to sticking valves.

►*SERIES 6101 & 6110 CAST IRON ENGINE MAIN BEARING CAP SCREW LENGTH AND LOCATION CAUTION:* Use shorter (2 7/16") cap screw Part No. 3105769 for front and rear main bearing caps **only.** Use capscrew Part No. 3148821 (2 13/16") long for both intermediate bearing caps. Longer capscrews will bottom in front & rear positions before bearing cap is tight.

►*ENGINE THRUST ROD ASSEMBLY (Series 6110 with Auto. Trans.):* Limits forward movement of engine. Attached by bracket to lower left side of block and to front suspension crossmember at rear.

ENGINE REMOVAL: *See "ENGINE" in Rambler Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Rambler Special Data.*
CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Rambler Special Data.*

PISTONS

Aluminum alloy, solid skirt, steel strut, tin plated type with contoured top.
Original Bore & Pistons - *See "ENGINE NUMBER LETTER" under Model Identification above.*
Clearance - .0006-.0012" at bottom of skirt.
Weight (Piston only) - 14.7 ozs.
Removal - Pistons and rods removed from above.
Fitting New Pistons: Piston to bore clearance .0006-.0017" (Skirt Top), .0006-.0012" (Skirt Bottom). Piston properly fitted should support its own weight with piston and bore dry
Replacement Pistons: Std., .002", .005", .010" and .020" Oversize. Furnished with fitted pins.
Installing Pistons: Notch in perimeter must be to front of engine.

PISTON PIN

Press fit in connecting rod. No locking device.
Diameter - .8595-.8598". **Length** - 2.75".
Clearance in Piston - Palm press fit in piston at room temperature.
Pin Removal & Installation - *See "Piston Pins" in Rambler Special Data.*
Replacement Pins: Furnished Std. and .001", .003", .005" Oversize.

PISTON RINGS

Two compression rings and one oil ring per piston.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0930-.0935"	.010-.020"	.003-.005"
Compr. (2)	.0925-.0935"	.010-.020"	.003-.005"
Oil (3) ①	.0245"	.015-.055"	.0001-.0084".

① - Three-piece steel rail.

Installing Rings: *NOTE* - Top compression ring outer edges beveled. Install both compression rings with inner notched edge up.
Replacement Rings: Sets of Standard and .020" Oversize.

CONNECTING ROD

Length - 6.625" center-to-center. **Weight** - 23 ozs.
Crankpin Journal Diameter - 2.0948-2.0955".
Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Bearings - Steel-Backed "Mircro-Babbitt" (Cast Iron Eng.), "Sintered Copper-Lead" (Aluminum Eng.). No shims.
Clearance - .001-.0015". **Sideplay** - .005-.015".

Replacement Bearings: Furnished Std. and .001", .002", .010", .012" Undersize.

Installing Rods: Install rods in respective cylinders with cylinder numbers on rods and caps toward camshaft side of engine and notch in top of piston to front of engine.

CRANKSHAFT

Journal Diameter - 2.4791-2.4798". Four Bearing.
Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*
Bearings - Steel-Backed "Micro-Babbitt" (Cast Iron Eng.). "Sintered Copper-Lead" (Aluminum Eng.). No shims.
Clearance - .001-.0015".

End Thrust: Taken by flanged front main bearing
Endplay - .003-.008".

Replacement Bearings: Furnished Std. and .001", .002", .010", .012" Undersize.

Rear Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Rambler Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Rambler Special Data.*

►*CRANKSHAFT OIL SHEDDER NOTE:* Oil shedder Part No. 3102770 installed on crankshaft with concave section toward the front, beginning with engine Code No. 20107.

CAMSHAFT

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each cam. *See "Camshaft & Bearings" in Rambler Special Data.*
Bearings - Steel-backed babbitt bushings.
Clearance - .001"-.003".

End Thrust: Thrust plate on front face of engine between No. 1 bearing and camshaft sprocket.
Endplay - .004-.008".

Timing Chain: Morse non-adjustable type. **Width** 1", **Pitch** 3/8", **Length** 22½" or 60 links.

Camshaft Setting: Install chain with punch mark on camshaft sprocket and mark on crankshaft sprocket adjacent and in line with each other across centerline of sprockets.

Engine Front Cover Removal: *See "Engine Front Cover" in Rambler Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): Cover oil seal can be replaced without removing cover by using Remover J-9256 and Installer J-9163.

VALVES

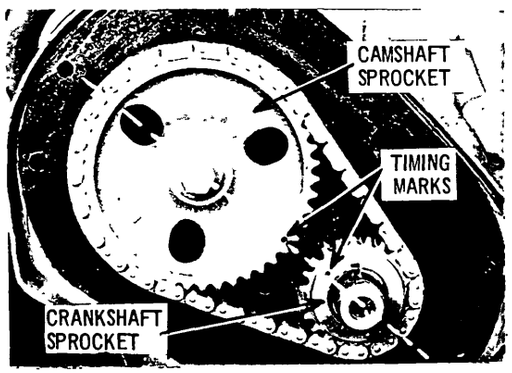
Tappet Clearance: (Cast Iron Eng.) .012" Intake, .016" Exhaust, with engine hot and running.
(Series 6110 Aluminum Block) "0" lash, hydraulic lifters.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.594"	.341-.342"	4.791"
Exhaust	③	.3405-.3415"	②

Valve	Seat Angle	Lift	Stem Clearance
Intake	①45°	④	.002-.0035"
Exhaust	①45°	⑤	.0025-.004"

① - Valve face angle 44° Intake & Exhaust.
② - 4.791" Cast Iron Eng., 4.808" Aluminum Eng.
③ - 1.343" Cast Iron Eng., 1.250" Aluminum Eng.
④ - .371" Cast Iron Eng., .388" Aluminum Eng.
⑤ - .369" Cast Iron Eng., .388" Aluminum Eng.

Valve Seat Width - .078-.093".



►*VALVE GRINDING CAUTION:* Replace valves when refacing reduces distance from top of valve face to top of valve to less than 1/32".
Valve Stem Oil Seals - Rubber deflectors mounted on all valve stems at upper end of guide.

Valve Springs: Single spring used on each valve. Specifications as follows:

Valve	Lbs. Pressure	Length
Open	115-125	1 7/16"
Closed	65-70	1 13/16"

Valve Guides: Use Tool J-1429-B to remove and install all guides. Install guide so it extends 23/32" above surface of cylinder head. Finish ream all guides after installation.

Rocker Arm Assembly: *See "Valve System" in Rambler Special Data.*

RAMBLER SIX VALVE TIMING MARKS

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Cast Iron Engine

Intake Valves - Open 12°39' BTDC. Close 51°30' ALDC.
Exhaust Valves - Open 53°30' BLDC. Close 10°30' ATDC.

Aluminum Engine

Intake Valves - Open 15° BTDC. Close 55° ALDC.
Exhaust Valves - Open 55° BLDC. Close 15° ATDC.

Valve Timing Check - Set valves on No. 1 cylinder at .003" lash. With No. 6 piston at TDC in firing position, timing will be correct if exhaust valve opens the same amount before DC on vibration dampener as intake valve opens after DC as engine is rocked back and forth over DC.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Rambler Special Data.*
Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.
Normal Oil Pressure (Cast Iron Engine) - 12 lbs. at 600 RPM, 50 lbs. at 3000 RPM.
Normal Oil Pressure (Aluminum Engine) - 15 lbs. at 600 RPM, 55 lbs. at 3000 RPM.
Pressure Regulator Valve - Non-adjustable spring loaded valve located in cylinder block (Cast Iron Engine), in oil pump cover (Aluminum Engine).
Oil Pressure Indicator: Light on instrument panel comes on when ignition switch turned on, goes out after engine starts and oil pressure reaches 4-6 lbs. Oil pressure indicator switch located on right side of engine block.
Oil Pump: Gear type, mounted on right side of engine. *See "Oiling System" in Rambler Special Data.*
Oil Filter: Partial flow type optional (Cast Iron Eng.), full flow standard (Aluminum Engine). Replace element at 4,000 mile intervals.
►*FULL-FLOW OIL FILTER BYPASS VALVE NOTE & FILTER CHANGE CAUTION:* When making filter change, check to be sure that bypass valve is properly secured in retainer.
Replacement Filter Element - Rambler No. 8990508 (Cast Iron Eng.), No. 8990873 (Alum. Eng.).
Crankcase Ventilation: Standard Cars - Filter in crankcase filler cap and breather tube in valve tappet cover.
Positive Crankcase Ventilation Cars - Usual breather tube in valve chamber front side plate replaced by vacuum line to manifold with valve in line to vary the air flow through crankcase to meet changing conditions at all engine speeds and loads. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 10 qts. Add 1 qt. for heater.
Pressure Valve: 12-15 lb. radiator cap. Rambler No. 3160667.
Thermostat: Dole 150° Rambler No. 3201251, 167-173° No. 3201249, 167-172° No. 3201255, 177-182° No. 3201250, 192-197° No. 3202389, 192-197° No. 3202647; Thompson 177-183° No. 3155883.
Water Pump: Centrifugal, double row ball bearing type. Requires no lubrication. Serviced as an assembly.
Dash Unit - King-Seeley No. 57592.
Engine Unit - King-Seeley.

LUBRICATION

FLASH-O-MATIC TRANSMISSION LUBRICATION: Check fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".
Checking Fluid Level - With engine running and engine and transmission at normal operating temperature, shift transmission into all ranges and then place in "N" position for fluid check. Maintain level at "F" mark. Approximately 1½ pints required to raise level from "L" to "F" mark.
Capacity - 10 qts.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

MODEL IDENTIFICATION

Model	Series
Classic V8	6120
Ambassador V8	6180

SERIAL NUMBER: Stamped on plate attached to right hand wheelhouse panel under hood

Starting Serial Numbers - (Ser. 20) A-118001 (Dom) AK-10001 (Exp) **(Ser. 80)** H-125001 (Dom), HK-10001 (Exp)

Car Code Number: Stamped on bottom of body and number plate located on left front door hinge pillar post Number indicates date of manufacture but is not used for licensing

Engine Code Number: Stamped on plate attached to generator support bracket Number indicates date of manufacture but is not used for licensing

►*ENGINE NUMBER LETTERS (Adjacent to Engine Code Number)* First letter is size of bore, second letter is size of main bearings, and third letter is size of connecting rod bearings Engines not so marked are standard in all respects "A" - Standard "B" - 010" Undersize "C" - 010" Oversize

TUNE-UP

COMPRESSION PRESSURE: 140 lbs minimum at 315 RPM (cranking speed) with throttle wide open

VACUUM READING: 18-21" at idle speed

VALVE TAPPET CLEARANCE: Classic - 012" Intake 014" Exhaust, HOT and running **Amb. -** Zero lash, hydraulic lifters

MANIFOLD HEAT CONTROL: Automatic thermostatic type Located between left bank exhaust manifold and exhaust crossover pipe (exhaust gases diverted through heat passages in manifold when valve closed)

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-up" for ignition and carburetion troubles *See "Closed Crankcase Ventilation Systems" in Carburetion Section*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2

Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7

SPARK PLUG GAP: 033- 037"

Spark Plugs - Autolite AL-7, AL-82, ARL-82 or Champion H-10, H-18-Y 14 mm Torque to 30 ft lbs

COIL: Autolite No. 200571.

Ignition Current - 3 amps at 12 5 volts with resistor in circuit

Resistor - Autolite No PU-5003

►*COIL RESISTOR NOTE* - Connected in circuit between positive terminal of coil and ignition switch *Resistor must be in circuit when testing coil output*

DISTRIBUTOR: Autolite IBP-4107.

Condenser - Autolite 2-32 or 2-34 **Capacity** 18- 23 mfd

Contact Point Set - Autolite No 1-47

Breaker Gap - 017" **Cam Angle** - 29°

Breaker Arm Spring Tension - 17-20 ozs

Rotation - Counterclockwise viewed from above

Automatic Advance - IBP-4107

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	300	0	600
1	350	2	700
8	750	16	1500
17	1775	34	3550
18	1900	36	3800

Vacuum Spark Control: Autolite integral type

Vacuum Advance - IBP-4107

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6
1	2	6 7/8
5	10	10 3/8
9	18	14
10	20	15

IGNITION TIMING

Series	Ignition Setting Regular - Fuel - Premium
6120 (S M Trans)	TDC 3° BTDC
6120 (Auto Trans)	5° BTDC 8° BTDC
6180 (S M Trans) ①	TDC 3° BTDC
6180 (Auto Trans) ①	5° BTDC 8° BTDC
6180 (All Trans) ②	5° BTDC

① - 2-Barrel Carb ② - 4-Barrel Carb

Timing Mark - Timing indicator on front cover and three grooves on vibration damper Groove painted white is TDC, other grooves indicate 5° and 10° BTDC

CARBURETOR

►*CARBURETOR APPLICATION Holley 2-Barrel carburetor standard, Holley 4-Barrel optional*

THROTTLE LINKAGE ADJUSTMENT (FLASH-O-MATIC CARS): None required Transmission shift points controlled by Vacuum & Solenoid Unit on transmission

HOLLEY 2 & 4-BARREL

	Holley Carb. No.
2-BARREL CARBURETOR	
Series 20 & 80 (Std)	Model 2300, No 2228
4-BARREL CARBURETOR	
Series 20 Optl	Model 4150C, No 1958-1
Series 80 Optl	Model 4150C, No 1957-1

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls 2-3-5-8, LEFT barrels feed 1-4-6-7*

Idle Setting - Initial setting 1 turn open Turn screws out for richer mixture

Idle Speed - 550 RPM (Synchro-mesh & O D), 475 RPM (Flash-O-Matic in Neutral), 500 RPM (Air Conditioning "ON")

►*OTHER DATA See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

CARB. EQUIPMENT

Fuel Pump: Carter No MPF-3158-S Fuel & Vacuum, with piston type vacuum pump

Pressure - 4-5½ lbs maximum, using 6" hose and "T"

Gasoline Gauge: King-Seeley Electric Constant-Voltage ("CV") type with Gauge Voltage Regulator, King-Seeley No 57603

Dash Unit - King-Seeley No 57592

Tank Unit - King-Seeley No 59040 (Pass), No 59050 (Sta Wgn)

Air Cleaner: Replaceable element (dry type) used for all models Clean element every 1,000 miles, replace element every 6 months or at 10,000 mile intervals whichever occurs first

►*DRY TYPE CLEANING CAUTION* Clean filter element by tapping and shaking to remove dirt particles DO NOT wash element in solvent or other liquids and DO NOT oil, lubricate or blow out with compressed air

BATTERY

Autolite 11-HS-50 (Ser. 20, Std.), 12 volts, 9 plate, 50 ampere hour capacity (20 hr rate)

Autolite 11-HS-60 (Ser. 20 Air Cond.; Ser. 80 Std.).

Autolite 11-HS-70 (Fleet Hvy. Duty), 12 volts, 70 ampere hour capacity (20 hr rate)

Battery Ground - Negative to cylinder block

Engine Ground - Transmission case to rear engine crossmember

STARTER

Autolite MEC-6003 (Ser. 20), MDY-6009 (Ser. 80).

Armature - Autolite 16-77 (MEC & MDY)

Drive - Overrunning clutch (solenoid pinion shift)

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 42-53 ozs

Performance Data - MEC-6003

Torque	RPM	Volts	Amperes
0 ft lbs	5300	10 0	48
6 5 ft lbs	Lock	4 0	285

Performance Data - MDY-6009

Torque	RPM	Volts	Amperes
0 ft lbs	4200	10 0	60
9 0 ft lbs	Lock	4 0	405

Starter Switch: Autolite Solenoid No 15-70 (MEC, MDY) mounted on starter and controlled by Ignition & Starter Switch Rambler No 3158414 (Synchro-mesh) On Auto Trans Cars, Solenoid controlled by Ignition Switch Rambler No 3158613, a Neutral Safety Switch No 3201826 (Early Dom), No 3201827 (Early Exp), No 3203007 (Late Dom), No 3203008 (Late Exp) and a Relay No 3156115 with Push Button Control Neutral Switch is mounted on gear shift control and operated by pushing in "Neutral Button" with ignition "ON" Vacuum Switch prevents starter operation with engine running

►*VACUUM NEUTRAL STARTER SWITCH CAUTION* DO NOT apply a hot lead direct to switch for test purpose as it will overheat loading spring and/or burn contacts Disconnect lead to switch and ground lead to engine If engine will start, switch is defective Switch opens at 11-14" of vacuum Starter gear clash that occurs when engine started "Cold" and on low fast idle setting with choke fully closed is the result of low engine vacuum and is normal

ALTERNATOR & REGULATOR

Leece-Neville. Alternator A0012036 with Regulator R-0013533.

Rotation - Clockwise at drive end

Field Current - 2 5-3 0 Amps at 12 Volts

Rated Output - 60 Amps at 14 Volts at 4400 RPM (1800 Eng RPM)

►*OTHER DATA See "Leece-Neville Alternator & Regulator" in Electrical Section*

Delco-Remy. Alternator No. 1117070 with Regulator No. 9000552.

Rotation - Clockwise at drive end

Brush Spring Tension - 20 ozs

Field Current - 5 6-6 3 Amps at 12 Volts (80°F)

Rated Output - 58 Amps (cold), 60 Amps (hot) at 14 Volts and 2500 RPM

►*OTHER DATA See "Delco-Remy 12-Volt Alternator (Internal Rectifier) & Transistorized Regulator" in Electrical Section*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

GENERATOR

Autolite GJO-7101A (Ser. 20 Std.), GJP-7101A (Ser. 20 Air Cond. & Ser. 80 Std.).

Armature - Autolite 10-72 (GJO) 10-53 (GJP).

►*CHARGING CIRCUIT CAUTION:* "B" type circuit used with generator field grounded in generator. For wiring diagrams and testing cautions, see *"Autolite B Circuit Regulators" in Electrical Section.*

Performance Data - GJO (Cold - 70°F)

Amperes	Volts	RPM
13 min.	15.0	1750
25	15.0	2300
30	15.0	2700

Performance Data - GJP (Cold - 70°F)

Amperes	Volts	RPM
16 min.	15.0	1750
30	15.0	2300
35	15.0	2600

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 18-36 ozs.

Field Current - 1.6-1.7 amperes at 10.0 volts.

Motoring Current (GJO) - 2.9-3.3 amperes at 10.0 volts.

Motoring Current (GJP) - 3.1-3.5 amperes at 10.0 volts.

B It Adjustment: 110-120 lbs. (new belt), 70-80 lbs. (used belt) strand tension using a belt tension gauge. Move generator in its mounting bracket to adjust. *NOTE* - When using gauge on notched belt, finger of gauge should be in notch.

GENERATOR REGULATOR

Autolite. Used as follows:

Model	Early Regulator	Later
Ser. 20	VBO-6201B-2	VBO-6221B
Ser. 80	VBO-6201A-2	VBO-6221A

Cutout Relay

Cuts In - 12.5-13.5 volts.

Cuts Out - 3-5 amps. discharge current after a charge of 7 amps.

Contact Gap - .015".

Air Gap - .025-.027".

Voltage Regulator

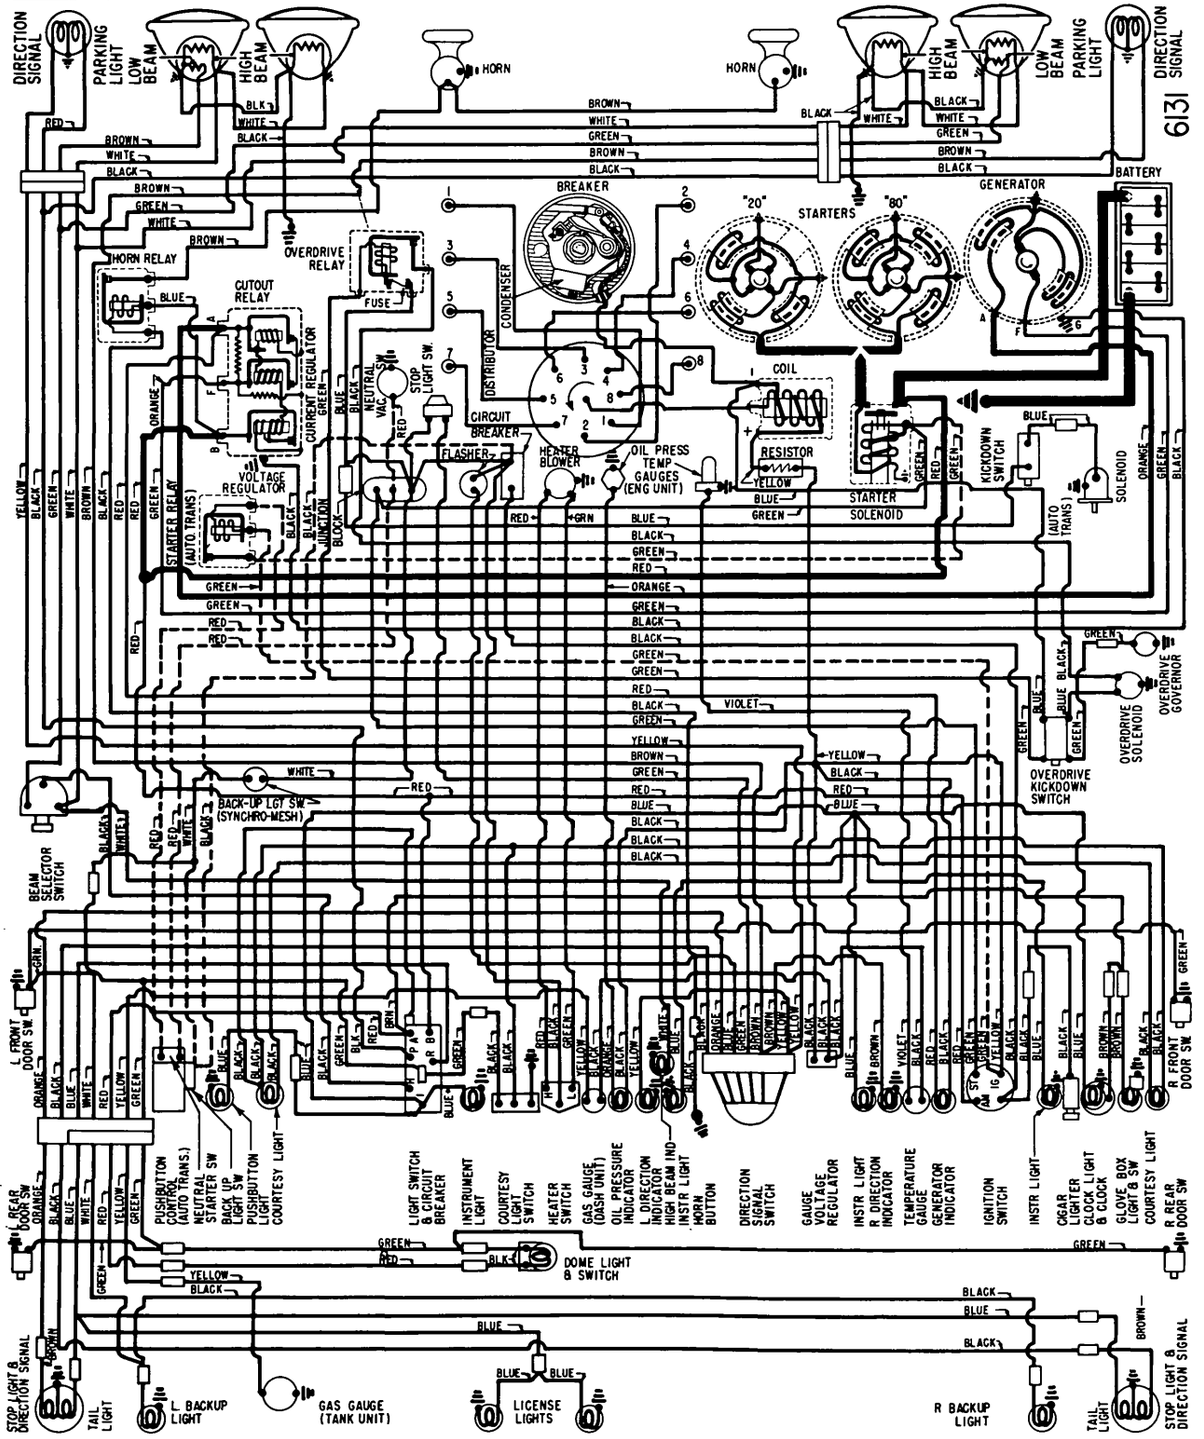
Setting - 14.2-14.8 volts at 80°F charging at 7 amperes, or with a .25 ohm resistor in series with regulator and battery.

Air Gap - .048-.052" (check at brass armature stop pin).

Checking & Adjusting - See *"Autolite B Circuit Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*



Regulator	Test A - Operating Amperes	Test B
VBO-6201A-1	44 Max.	35 (33-37)
VBO-6201B-1	37 Max.	30 (28-32)

Test A - After 15 minutes operation charging at 7 amps.

Test B - After additional 15 minutes operation with current regulator operating and load applied to hold voltage down to 13.6-13.8 volts.

Air Gap - .048-.052" with contacts just opening (check at brass armature stop pin).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: See "Autolite "B" Circuit Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: Dual headlights (4-Headlight System).

Light Switch Removal: Disconnect battery, place switch in full "Off" position and press button (on top of switch) to release switch shaft and knob assembly, then remove (French) nut. Remove switch and disconnect wires.

Stop Light Switch: Located in fitting on front face of firewall. Use thread sealer when installing new switch.

CIRCUIT BREAKERS: 18 Ampere. Headlights & High Beam Indicator. In light switch.

12 Ampere. Parking, Tail, License Plate, Instrument, Dome and Clock lamps. In light switch.

30 Ampere. Stop, Direction, Back-up lamps. On ceiling of cowl beneath dash panel.

FUSES: AGA-5. In Radio lead.

AGC-15. Overdrive. Clipped to "B" terminal of relay.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme caution when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own, V8, valve-in-head.

Series	Bore	Stroke	Displacement
20	3½"	3¼"	250 cu. ins.
80	4"	3¼"	327 cu. ins.

Series	Compr. Ratio	Rated HP	Developed HP
20 (2-Bbl. Carb.)	8.7-1	39.2	200 at 4900 RPM
20 (4-Bbl. Carb.)	8.7-1	39.2	215 at 4900 RPM
80 (2-Bbl. Carb.)	8.7-1	51.2	250 at 4700 RPM
80 (4-Bbl. Carb.)	9.7-1	51.2	270 at 4700 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

CYLINDER HEAD INSTALLATION: *See "Cylinder Head & Manifolds" in Rambler Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Rambler Special Data.*

ENGINE REMOVAL: *See "ENGINE" in Rambler Special Data.*

PISTONS

Aluminum alloy, slipper type, tapered skirt, cam ground with steel reinforcement. Piston pin offset to thrust side of piston.

Original Bore & Piston Size - *See "ENGINE NUMBER LETTER" under Model Identification, above.*

►*AMBASSADOR LOW COMPRESSION (8.7-1) PISTON IDENTIFICATION:* This piston has two notches in piston head.

Weight - 18 ozs. (Ser. 20), 23-45 ozs. (Ser. 80).

Removal - Pistons and rods removed from above.

Clearance - .0009-.0015" (skirt bottom).

Installing Pistons: Install with "F" cast in piston strut and notch in piston head toward front of engine. *See Rod Installation.*

Replacement Pistons: Furnished Std. and .002", .005", .010", .020" (All), plus .030" (Ser. 80 with 4-Bbl. Carb.).

PISTON PIN

Press fit in connecting rod. No locking device.

Diameter - .9307". **Length** 3.1870".

Pin Fit in Piston - Palm press fit at room temperature.

Pin Fit in Connecting Rod - Tight press fit, no locking device used.

Piston Pin Removal & Installation - Tool Set 6360 should be used to prevent damage to piston. *See "Piston Pins" in Rambler Special Data.*

Replacement Pins: Std. and .003", .005" Oversize.

PISTON RINGS

Two compression rings and one oil ring.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0775-.0780"	.010-.020"	①
Compr. (2)	.0775-.0780"	.010-.020"	②
Oil (3)	.0245"③	.015-.055"	.0001-.0079"

① - (Ser. 20) .002-.0035". (Ser. 80) .002-.006".

② - (Ser. 20) .002-.004". (Ser. 80) .002-.006".

③ - Each rail.

Installing Rings - Install upper compression ring (both outside edges beveled), and lower compression ring (outside edges not beveled) with beveled inner edge on inside diameter up.

Replacement Rings: Sets of Std. and .020", .030" Oversize.

CONNECTING ROD

Length - 6.3750" center-to-center. **Weight** - 27.6 ozs.

Crankpin Journal Diameter - 2.2483-2.2490".

Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*

Lower Bearing - Steel-backed, sintered copper lead alloy precision type.

Clearance - .0007-.0028". **Side Clearance** - .004-.012".

Replacement Bearings: Std. and .001", .002", .010", .012" Undersize.

Installing Rods: Assemble connecting rod to piston with notch in piston to front of engine. Cylinder numbers on connecting rod and cap should be toward outside bank in which they are installed.

CRANKSHAFT

Journal Diameter - 2.4983-2.4990".

Original Bearing Sizes - *See "ENGINE NUMBER LETTERS" under Model Identification above.*

Bearings - Steel-backed, sintered copper lead alloy, precision type.

Clearance - .0006-.0032".

Replacement Bearings: Std., .001", .002", .010", .012" Undersize.

End Thrust: Taken by No. 1 flanged bearing.

Endplay - .003-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Rambler Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Rambler Special Data.*

CAMSHAFT

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each cam. *See "Camshaft & Bearings" in Rambler Special Data.*

Bearings - Steel-backed babbitt lined bushings.

Clearance - .001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket.

Endplay - .003-.006".

Timing Chain: Non-adjustable side guide type. **Width** .875". **Pitch** .375". **Length** 23¼" or 62 links.

Camshaft Setting: Both sprockets marked "O". Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers. To check assembly, rotate crankshaft until timing mark on camshaft sprocket is on horizontal line at either 3 or 9 o'clock position. There should be 10 links or 20 pins between timing marks.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Rambler Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Rambler Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): Cover oil seal can be replaced without removing cover by using Remover J-9256 and Installer J-9163.

VALVES

Tappet Clearance: Ser. 20 - .012" Intake, .014" Exhaust. Hot and running. **Ser. 80** - Zero lash, hydraulic lifters.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.787"	.3715-.3725"	4.859"
Exhaust	1.406"	.3715-.3725"	4.859"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	30°①	.375"	.0015-.0025"
Exhaust	45°②	.375"	.0015-.0025"

① - Valve face angle 29°. ② - Valve face angle 44°.

Valve Seat Width - .078-.093" (Int.), .093-.140" (Exh.).

Valve Stem Seals - Rubber deflector installed on valve stem and over top of valve guide on all valves.

Valve Springs: Install springs with closed coil end against cylinder head. **Free Length** - 2.20".

Valve Spring Specifications

Valves	Spring Pressure	Spring Length
Closed	85-91 lbs.	1 13/16"
Open	150-160 lbs.	1 7/16"

Valve Guides: Drive old guides out, drive new guides in to a height of 3/4"±1/64" above cylinder head (measured from top of guide to flat machined surface for lower spring retainer on head). Finish ream all guides after installation.

Valve Lifters: Amb. - Hydraulic type.

Hydraulic Valve Lifter Removal, Overhaul & Testing - *See "Valve System" in Rambler Special Data.*

Rocker Arm Assembly: *See "Valve System" in Rambler Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valve - Open 12°30'BTDC. Close 51°30' ALDC.

Exhaust Valves - Open 53°30'BLDC. Close 10°30'ATDC.

Valve Timing Check: Remove rocker arm cover and spark plugs. Turn crankshaft to bring No. 6 piston to TDC of compression stroke (No. 1 will be on exhaust stroke in overlap position). Rotate crankshaft 90° **counterclockwise.** Install dial indicator on No. 1 intake rocker arm pushrod end. Crank engine in a **clockwise** direction until dial indicator indicates pushrod movement (hydraulic lifter should be fully charged for this check). At time indicator moves, ignition timing pointer on front cover

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

should align with a point approximately 25/32" before TDC position on vibration damper. *NOTE* - If more than ½" variation in either direction, remove timing chain cover and inspect timing chain for stretch. Chain deflection should not exceed ½". Replace as necessary.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Rambler Special Data.*

Crankcase Capacity: 4 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure - 10 lbs. at 600 RPM, 55 lbs. at 3000 RPM.

Pressure Regulator - In oil pump. Opens at 55-60 lbs. Not adjustable.

Oil Pressure Indicator: Light on instrument panel comes on when ignition switch turned on, goes out after engine starts and oil pressure reaches 4-6 lbs. Oil pressure indicator switch located on engine block.

Oil Pump: Gear type. Mounted on rear main bearing cap and driven by distributor drive shaft. Removal of oil pump does not disturb ignition timing.

Oil Pump Removal, Overhaul & Installation: *See "Oiling System" in Rambler Special Data.*

Oil Filter: Full-flow, disposable type with bypass valve incorporated in filter adapter.

►*FULL-FLOW OIL FILTER BYPASS VALVE NOTE & FILTER CHANGE CAUTION:* When making filter change, check to be sure that bypass valve is properly secured in retainer. Loss of bypass valve will result in loss of filter action.

Replacement Filter Element - Rambler No. 8890688.

Crankcase Ventilation: Standard Cars - Filter element in oil filler cap and breather pipe attached to valve lifter cover.

Positive Crankcase Ventilation Cars - Usual breather tube normally at rear of engine is replaced by vacuum line to carburetor base insulator with valve in line to vary air flow through crankcase to meet changing conditions at all engine speeds and loads. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 19 qts. (Classic), 18 qts. (Amb.). Add 1 qt. for heater.

Pressure Valve: 12-15 lb. radiator cap, Rambler No. 3160667.

Thermostat: Dole 167-172° Rambler No. 3201255, 177-182° No. 3201245; **Thompson** 177-182° No. 3201252.

Water Pump: Centrifugal, double row ball bearing type. Requires no lubrication. Serviced as an assembly.

Temperature Gauge: King-Seeley "CV" electric type with Gauge Voltage Regulator, King-Seeley No. 57603.

Dash Unit - King-Seeley No. 57596.

Engine Unit - King-Seeley No. 44255.

"Power-Saver" Fan (Amb. with Air Cond.): Fan operates normally up to 2600 RPM ± 100 RPM and then the viscuous fluid clutch will slip to maintain speed of 2600 RPM. Serviced as an assembly.

LUBRICATION

FLASH-O-MATIC TRANSMISSION LUBRICATION: Check Fluid level every 1000 miles, drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level - With engine running and engine and transmission at normal operating temperature, shift transmission into all ranges and then place in "N" position for fluid level check. Maintain level at "F" mark. Approximately 1½ pints required to raise level from "L" to "F" mark.

Capacity - 10 qts. (Classic V8), 11 qts. (Ambassador).

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

ALUMINUM ENGINE SERVICE CAUTIONS

SERVICE PRECAUTIONS: *NOTE* - Extreme caution must be observed when working on aluminum engines to prevent damage by scratching, nicking, or scoring Note the following

1) Do not drop or slide machined surfaces on bench or floor
2) Do not use gasket cement (Except as indicated under Cylinder Head Installation)
3) Lubricate all bolts or screws entering an aluminum part See "Bolt Thread Lubrication Note" below
4) Tighten bolts and nuts to the specified torque DO NOT overtighten Torque valves are for clean lubricated threads

►*BOLT THREAD LUBRICATION NOTE* Use engine oil or special thread lubricant on all threads entering an aluminum part

DAMAGED OR WORN THREAD REPAIR (ALUMINUM BLOCK): "Heli-Coils" are available locally for repairing damaged or worn threads in aluminum The repair consists of drilling out worn or damaged threads, tapping hole with special "Heli-Coil" tap, and installing a "Heli-Coil" insert in tapped hole This brings hole back to original thread size See following table for inserts and tools required

"Heli-Coil" Thread Inserts

Thread Size	Insert Part No.	Drill Size	Special Tap Part No.	Inserting Tool No.
1/4"-20	1185-4	266"	4 CPB	528-4N
5/16"-18	1185-5	332"	5 CPB	528-5N
3/8-16	1185-6	397"	6 CPB	528-6N

14 MM Long	513		137-11	542

ENGINE

6 CYLINDER ENGINE

REMOVAL: Remove hood, drain cooling system, remove battery and air cleaner Remove radiator (plug transmission oil cooler lines) Remove crankcase vent pipe and disconnact all lines, wires, cables and linkage from engine Disconnect exhaust pipe from manifold Remove clutch torque shaft, brake cables and rods, speedometer cable, gear shift rods, transmission oil cooler lines and filler tube (drain transmission and torque converter), and push button cable Support rear of engine (Support Tool C-3806). Remove transmission. Attach Lifting Fixture C-3804 to cylinder head and disconnect engine front mounts Remove engine

V8 ENGINES

REMOVAL: Remove hood, drain cooling system, remove battery, fan shroud, and radiator (plug transmission oil cooler lines) Disconnect all lines, wires, cables and linkage from engine Remove carburetor Attach Lifting Fixture C-3466 to carburetor flange studs and disconnect engine front mounts Remove No 6 spark plug Disconnect exhaust pipes from manifolds Support rear of engine with Tool C-3487 and remove engine rear crossmember Remove transmission Remove engine

CYLINDER HEAD & MANIFOLD

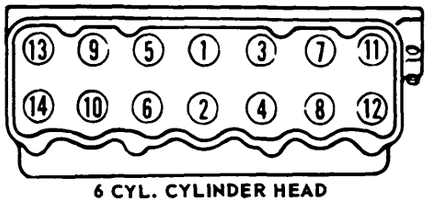
6 CYLINDER ENGINE

CYLINDER HEAD· Removal - Drain cooling system disconnect all lines and wires on cylinder head *(CAUTION Disconnect spark plug cables by pulling straight out in line with plug)* Remove carburetor air cleaner disconnect exhaust pipe at exhaust manifold flange remove carburetor as a unit with intake and exhaust manifolds Remove rocker arm cover Remove rocker arm assembly by taking out bolts in rocker shaft support pedestals Remove pushrods *(CAUTION Keep pushrods in order and reinstall in same positions)* Take out bolts and remove cylinder head

Installation: Coat new head gasket with suitable sealer, install gasket and head over dowels in block *(CAUTION - Rocker arm oil feed hole at right rear corner of head must register with oil hole in block)* Tighten all cylinder head bolts in sequence shown in diagram to 65 ft lbs then retighten all bolts in same sequence to 65 ft lbs *NOTE* - Use Sealing Compound Part No 1057794 on both sides and place copper side of gasket toward cylinder block

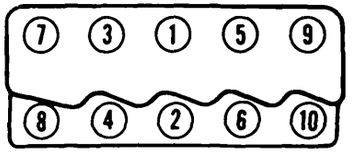
MANIFOLD ASSEMBLY: Installation - *CAUTION - Loosen 3 intake manifold-to-exhaust manifold bolts before installing assembly (necessary to maintain correct alignment) and also note "Manifold Stud Replacement" note below* Install manifold and carburetor assembly on cylinder head with cup side of conical bolt washers against manifold. Tighten nuts to 15 ft lbs, then tighten intake manifold-to-exhaust manifold bolts to 15 ft lbs

318" ENGINE



CYLINDER HEAD INSTALLATION: Coat new gasket with sealer and install on block Assemble rocker arm shaft assembly in cylinder head struts *(see "Valve System" below)* Install cylinder head on block and tighten attaching bolts to specified torque in sequence shown in diagram **Retighten in same sequence to same torque.** Install pushrods with small ends in lifters (use Valve Spring Compressor Tool C-3695 to position large end of pushrod under rocker arm and make sure low point of camshaft lobe is under lifter) Complete reassembly procedure

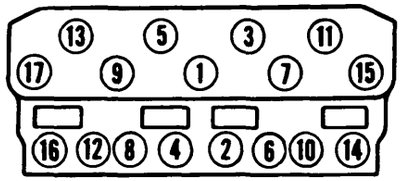
361", 383" & 413" ENGINES



CYLINDER HEAD: *REMOVAL NOTE* - On air conditioned cars, No 8 cylinder exhaust valve must be open to provide removal clearance between rocker arm cover and heater housing

Installation: Coat new head gasket with Mopar Sealer No 1122893 Install cylinder head and tighten bolts to correct torque in sequence shown in diagram **Retighten in same sequence to same torque.** Complete reassembly procedure

CONTINUED ON NEXT PAGE



6 CYL. CYLINDER HEAD

V8 318" ENGINE CYLINDER HEAD

CONTINUED FROM PRECEDING PAGE

V8 361", 383", & 413" ENGINE CYLINDER HEAD

PISTON PINS

6 CYLINDER ENGINE
361" & 383" ENGINES

PISTON PIN REMOVAL: Use Tool C-3724 (6 Cyl.), C-3684 (V8) as shown in illustration to remove pin from piston and rod. *CAUTION* - When pin falls freeof rod, stop press to prevent damage to anvil of tool.

PISTON PIN INSTALLATION: *CAUTION - DO NOT ream pistons or connecting rods.* Lubricate pin bores in piston and rod and use Tool C-3724 (6 Cyl.), C-3684 (V8) as shown in illustration. Notch or "front" on piston must face upwards when assembled in tool and with connecting rod properly positioned (see below), press piston pin in until pin bottoms on pilot.

►*CONNECTING ROD POSITION:* **6 Cyl.** - With notch on piston to front of engine, oil hole in rod must be to left side of engine. **V8** - For right bank cylinders, large chamfer on lower end of connecting rod must be opposite to notch in piston head (rod facing downward in tool). For left bank cylinders, large chamfer on rod must be on same side as piston head notch (rod facing upward in tool).

T sting For Proper Fit - Assemble piston and rod with tool in same manner as for pin removal (see illustration). Clamp screw shaft end of tool in a vise. With torque wrench at nut (anvil end of tool), apply 15 ft. lbs. torque. If pin does not move, fit is correct. If pin moves in rod, fit is incorrect and rod should be replaced.

CRANKSHAFT & MAIN BEARINGS

ALL ENGINES

►*TOOL NOTE:* Use Seal Installer C-3743 for 6 Cyl., C-3511 for 318" engine, C-3625 for 361", 383" & 413" engines. *NOTE* - On 6 Cyl., 361", 383" & 413" engines, use bridge of tool over seal retainer when installing seal, but **do not** use bridge when installing seal int block.

REAR MAIN BEARING OIL SEAL: Install new seal in block and cut off ends of seal flush with block. Install new seal in cap or seal retainer in same manner and cut off ends of seal flush with cap or retainer. Install side seals in cap or retainer. *NOTE - On 318" engine, short cap seal must be on doweled side of cap.*

ENGINE FRONT COVER

6 CYLINDER ENGINE

ENGINE FRONT COVER: R m val - Drain cooling system and remove radiator and fan. Remove vibration damper (Puller Tool C-3732). Loosen oil pan attaching bolts to provide clearance. Remove engine front cover.

Installati n: Reverse removal procedure and make sure mating surfaces of cover and block are free of burrs.

FRONT OIL SEAL: R m val - Use Tool C-3506. With inside of cover up, put puller screw through seal and position puller blocks directly opposite each other under flange of seal retainer. With washer and nut on puller screw tighten nut so puller blocks distort seal retainer lip. Place sleeve over retainer and place removing and installing plate into sleeve. Place flat washer and nut on puller screw, hold center screw and tighten nut to remove seal.

Installation: Insert puller screw through removing and installing plate so thin shoulder faces up. Insert assembly through seal opening in front cover (inside of cover up), and place seal in opening with neoprene part of seal down. Place seal installing plate into seal with protective recess toward lip of seal retainer. With flat washer and nut on puller screw, hold screw and tighten nut until neoprene is tight against face of front cover. If a .0015" feeler gauge **cannot** be inserted between neoprene and cover, seal is installed correctly.

V8 ENGINES

ENGINE FRONT COVER: Removal - Drain cooling system, remove radiator and fan, fan shroud and belts. Remove water pump and housing. On 361" & 383" engines, remove crankshaft pulley from vibration damper. On all engines, pull damper or pulley with Puller C-3033. Remove engine front cover.

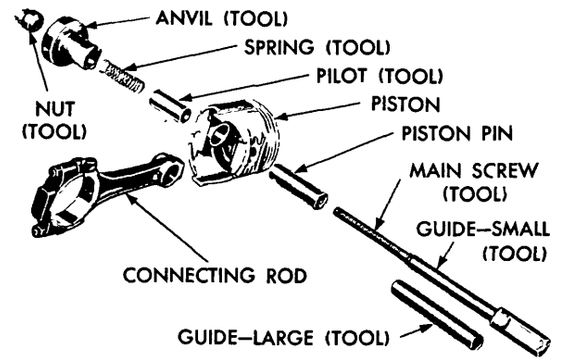
Installation: Reverse removal procedure and tighten bolts to specified torque. Use extreme care not to damage oil pan gasket.

FRONT OIL SEAL: Removal - *See 6 Cyl. above.*

Installation: *See 6 Cyl. above.*

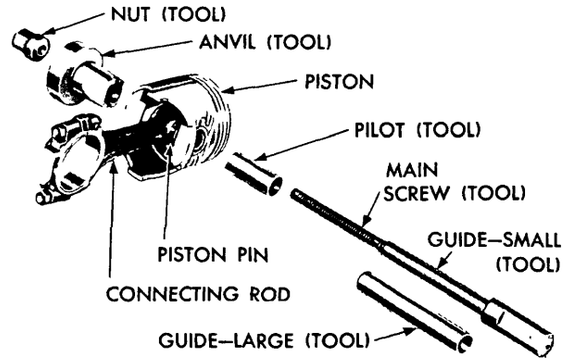
CAMSHAFT & BEARINGS

6 CYLINDER ENGINE



►*ALUMINUM ENGINE CAMSHAFT REAR PLUG REMOVAL NOTE:* To prevent damage to aluminum block, punch a hole in center of plug with 1/8" sharp punch (do not drill hole), then tap hole for threads with 10-24 tap. Use a steel bar 1/4"x1"x6" with 1/4" hole drilled in center, across supports to plug pull with a 10-24 x 1 1/8" long screw placed in hole in bar. Remove all foreign material from block before inserting new plug.

CAMSHAFT REMOVAL: Remove engine. Remove valve lifters with Lifter Removing Tool C-3661 (after removing rocker arm shaft assembly and pushrods). Remove engine front cover, timing sprockets, distributor, oil pump, and fuel pump. Remove camshaft carefully.



Bearing Installation: Use Tool C-3132A to install bearings. No. 1 bearing must be installed 3/32" in from front face of cylinder block. Make sure oil holes in bearings index with oil holes in block. Use Tool C-897 to install rear welch plug.

318" ENGINE

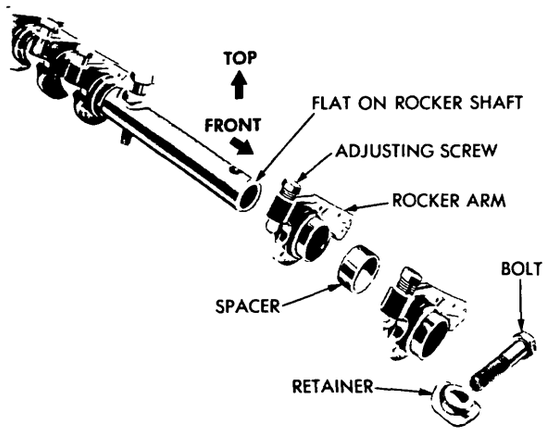
CAMSHAFT: Removal - Remove engine. Back off valve lash adjusting screws, slide rocker arms to one side and remove pushrods. Remove valve lifters (accessible after intake manifold removed). Remove timing sprockets, distributor, and distributor-oil pump drive gear. Remove camshaft.

PISTON PIN INSTALLATION

PISTON PIN REMOVAL

Installation: Lubricate cam lobes and bearing journals and install camshaft. When shaft within 1¾-1½" of final position, install Camshaft Holding Tool C-3509 to prevent disturbing welch plug at rear of block and causing oil leak as follows: Install tool in place of distributor drive gear and against rear side of cam gear, and attach with distributor retainer plate bolt. Now push camshaft in to final position and leave tool in place until sprockets and timing chain are installed.

361", 383" & 413" ENGINES



CAMSHAFT: Removal - Remove engine. Remove lifters (see below). Remove timing sprockets, distributor, oil pump-distributor drive shaft, and fuel pump. Remove camshaft.

Installation: Modify Tool C-3509 by grinding off index lug holding upper arm on tool and rotate arm 180°. Sliding bar will now extend outward in direction opposite to fixed tongue. Proceed as for 318" engine above.

►*BEARING INSTALLATION NOTE:* No. 1 bearing must be 1/32" in from front face of cylinder block.

CONTINUED ON NEXT PAGE

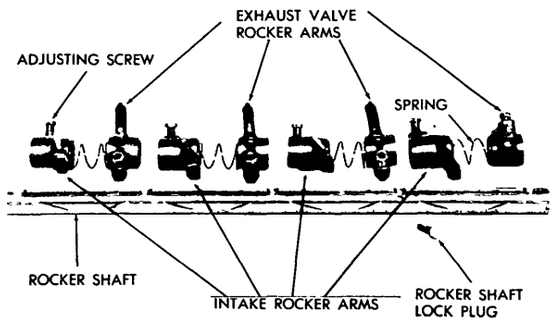
CONTINUED FROM PRECEDING PAGE

6 CYL. ROCKER ARM ASSEMBLY

VALVE SYSTEM

318" ENGINE

►*VALVE SERVICE NOTE:* For access to valve assemblies or for pushrod removal without removing rocker arm shaft assembly or cylinder head, back off valve lash adjusting screw and slide rocker arm to one side.

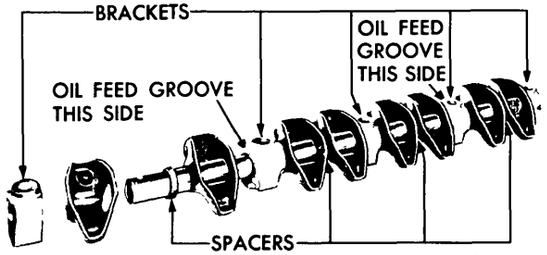


ROCKER ARMS

6 CYLINDER ENGINE

ROCKER ARM SHAFT ASSEMBLY: Installation - Install assembly with flat on end of rocker shaft upward and toward front of engine. *CAUTION - This is necessary to provide correct lubrication of rocker arms.* Make certain that shaft retainers are seated on shaft **between** extended bushings of adjacent rocker arms. Long rocker shaft retainer bolt is at rear of engine. Tighten bolts to specifications.

318" ENGINE



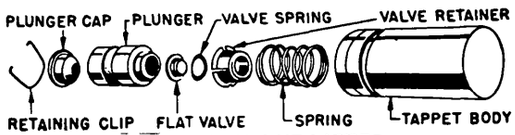
ROCKER ARM SHAFT ASSEMBLY: Installation - Slide rocker arm shaft into bore of strut, engage intake rocker arm. Install spring and engage exhaust rocker arm. Repeat this procedure until all intake and exhaust rocker arms are installed. Make sure that rocker shaft bolt grooves align with head bolt holes in rocker shaft struts. *NOTE* - The plug hole in strut must align with hole in rocker shaft. Install new rocker shaft plug.

V8 318" ROCKER ARM ASSEMBLY

361", 383" & 413" ENGINES

ROCKER ARM SHAFT ASSEMBLY: Installation - Install rocker shafts so that the 3/16" lubrication holes point downward into rocker arms and 15° angle of holes points outward toward valve end of rocker arm. Disregard arrows stamped on shafts when determining shaft position. This procedure supersedes all previous data on installation.

V8 361", 383" & 413" ENGINE ROCKER ARM ASSY.



HYDRAULIC LIFTERS

361", 383" & 413" ENGINES

Removal: *NOTE - Unnecessary to remove cylinder heads or intake manifold if following procedure observed:* Remove rocker arm shaft assembly and pushrods. Slide Puller C-3661 through pushrod hole in cylinder head and seat firmly in lifter. Remove lifter with a twisting motion. *Keep lifters and pushrods together and reinstall in bores from which removed.*

Disassembly: *CAUTION - Disassemble one lifter at a time to avoid intermixing parts (parts not interchangeable between lifters).* Pry out plunger retainer spring clip. Invert body and remove plungercap, plunger, check valve, check valve spring, check valve retainer, and plunger spring. Separate plunger, check valve retainer, and check valve spring.

Inspection: Clean all parts in solvent and check for any nicks, scratches or wear. Replace entire lifter if any parts damaged.

HYDRAULIC VALVE LIFTER

Reassembly: Reverse disassembly procedure making sure lifter is assembled as shown in illustration.

Testing: With cap removed from plunger, submerge upright lifter completely in a pan of clean kerosene and allow to fill. Replace cap. Place lifter upright in Lifter Testing Pliers C-3160 and check leakdown. If lifter collapses immediately, disassemble, clean and test again. If leakdown persists, replace lifter.

Installati n: Lubricate lifters and reverse removal procedure.

OILING SYSTEM

ENGINE LUBRICATION

6 CYLINDER ENGINE

ENGINE LUBRICATION: Force feed type with oil supplied to all crankshaft, connecting rod, and camshaft bearings, and to valve mechanism on cylinder head (metered by rear camshaft bearing). All other points are lubricated by spray or oil mist in crankcase.

OPERATION: Rotor type oil pump mounted externally on right side of crankcase (assembly consists of oil pump, oil filter, and oil pressure regulator). Pump draws oil from oil pan through fixed strainer and intake pipe screwed into crankcase wall at pump mounting pad. Pump delivers oil directly into main oil gallery extending along right side of crankcase (slot in gallery registers with pump outlet port when pump installed). Oil is distributed through main oil gallery as follows:

Crankshaft & Camshaft Bearings - Oil channel in each crankcase web furnishes oil from main oil gallery to each crankshaft and camshaft bearing.

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing. Oil groove in main bearings provides continuous flow of oil to crankshaft passages.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from oil hole on left (upper) side of connecting rod when this hole registers with oil passage in connecting rod journal.

Timing Chain & Sprockets - Lubricated by oil from front main bearing (bearing is chamfered to provide this oil spray).

Rocker Arms, Pushrods & Valve Stems - Oil from rear camshaft bearing flows up through vertical channel in block and head, and through rear rocker shaft bracket to hollow rocker shaft. Rocker arms are lubricated through oil hole in shaft and each rocker arm has trough on upper surface (for adjusting screw and pushrod lubrication) and oil hole (for valve tip lubrication). Excess oil drains down through pushrod chamber to valve lifters and returns to crankcase.

Valve Lifters - Lubricated by connecting rod oil spray and oil drainage from rocker arm chamber on head.

OIL FILTER: Full flow type mounted on oil pump body. Integral relief valve permits oil to bypass filter if element is clogged.

V8 ENGINE (318")

ENGINE LUBRICATION: Force feed type with oil supplied under pressure to all crankshaft, connecting rod, and camshaft bearings, and to hydraulic lifters. Oil metered by camshaft bearing supplies other valve parts (rocker arms, pushrods, valve stems). All other parts are lubricated by oil spray.

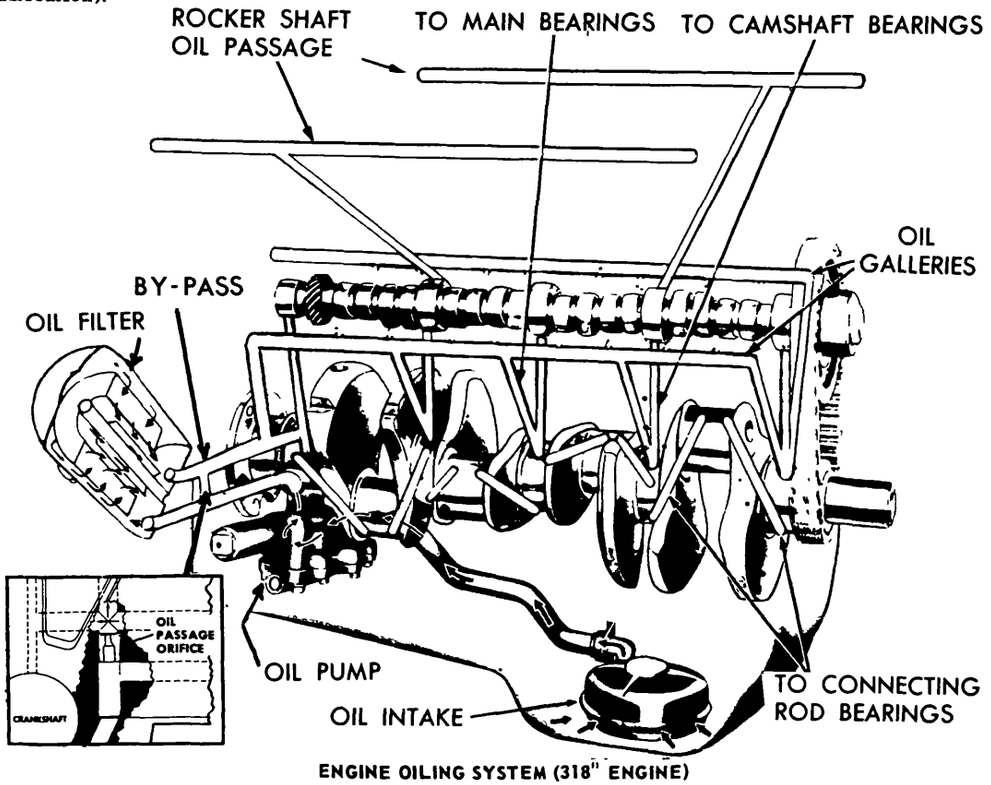
OPERATION: Rotor type oil pump mounted on rear main bearing cap, draws oil through floating oil strainer and intake pipe mounted on pump cover and delivers oil through a channel in pump body and rear main bearing cap to oil filter intake port (filter is mounted on pad at right rear corner of crankcase). From the filter outlet port on the pad, a horizontal cross channel and vertical

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

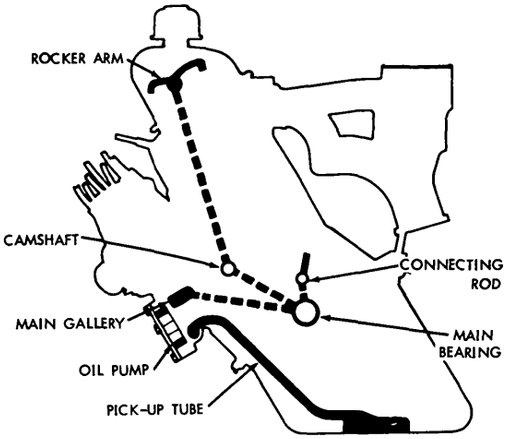
channel connect with the right main oil gallery extending the full length of the engine just below the right bank valve lifters. At the forward end of this gallery, a "V" channel connects to the front main bearing and the forward end of the left main oil gallery which extends back the full length of the engine. Oil is distributed from these main oil galleries as follows:

Crankshaft & Camshaft Bearings - Rear crankshaft and camshaft bearings are lubricated by a vertical channel connecting to an extension of the horizontal cross channel leading from the oil filter outlet port (see above). **Other** crankshaft and camshaft bearings are lubricated by a "V" shaped oil channel in each crankcase web leading down from the right main oil gallery to the crankshaft bearing and then up to the camshaft bearing (an additional channel at the front crankshaft bearing supplies oil to the left main oil gallery).



Connecting Rod Bearings - Crankshaft is drilled. Each connecting rod bearing is lubricated by passage from **adjacent** main bearing (separate oil lead to each rod on each crankshaft throw).

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from slot in side of rod bearing cap of the rod for opposite bank of cylinders (slot in rod must be upward or toward center of engine to provide this cross-lubrication).



Valv Lifters - Right and left main oil galleries intersect lifter bores so that separate oil passage to each lifter is not required.

Rocker Arms, Pushrods, & Valves - On these engines oil channel from No. 4 camshaft bearing (for left bank), No. 2 camshaft bearing (for right bank) connect with cylinder head bolt holes in block (Nos. 3 & 5 bolts as shown in Cylinder Head Diagram). These bolt holes in block and head are oversize so that oil passes up around bolts to angle passage in shaft bracket and through this drilled hole into the hollow rocker arm shaft *(NOTE - A setscrew in the shaft bracket positions shaft and aligns these oil holes).* All rocker arms have drilled passage to pushrod socket end. Intake arms have drilled passage terminating at end of arm directly above valve stem contact point. Exhaust arms have drilled hole from rocker arm bushing to upper surface of arm and valve stems are lubricated by gravity flow of oil from this oil hole.

OIL FILTER: Shunt type used. Filter mounted on pad at right rear corner of engine crankcase. Bypass passage in block has restriction or metering orifice which controls oil flow directly into engine or through oil filter.

ENGINE OILING SYSTEM (318" ENGINE)

ENGINE OILING SYSTEM (6 CYLINDER ENGINE)

V8 ENGINES (361", 383" & 413")

►*ENGINE IDENTIFICATION:* These engines may be identified by distributor mounting (at front of engine) and oil pump and filter assembly mounted externally at left front corner of engine block.

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, and to hydraulic lifters. Oil metered by camshaft bearing supplies other valve parts (rocker arms, pushrods, valve stems). All other parts are lubricated by oil spray.

OPERATION: Rotor type oil pump mounted externally on left front corner of block draws oil through fixed oil strainer and intake pipe in crankcase. From the pump, oil flows through filter (Filter, bypass valve, and oil pressure regulator valve are located in pump body) and then through transverse channels in front end of block to the right main oil gallery extending the full length of engine block just below right bank valve lifters. At rear end of right main oil gallery, two angled transverse channels connect the right and left main oil galleries. Left main oil gallery extends full length of engine block just below left bank valve lifters. Oil is distributed from these main oil galeries as follows:

Crankshaft & Camshaft Bearings - Front crankshaft and camshaft bearings are lubricated by a vertical channel intersecting the transverse channel in the front of the block (feed to right main oil gallery). **Other** crankshaft and camshaft bearings are lubricated by a "V" shaped channel in each crankcase web leading down from the right main oil gallery to the crankshaft bearing and then up to the corresponding camshaft bearing.

Connecting Rod Bearings - Crankshaft is drilled. Each connecting rod is lubricated by passage from **adjacent**

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

main bearing (separate oil lead to each rod on each crankshaft throw).

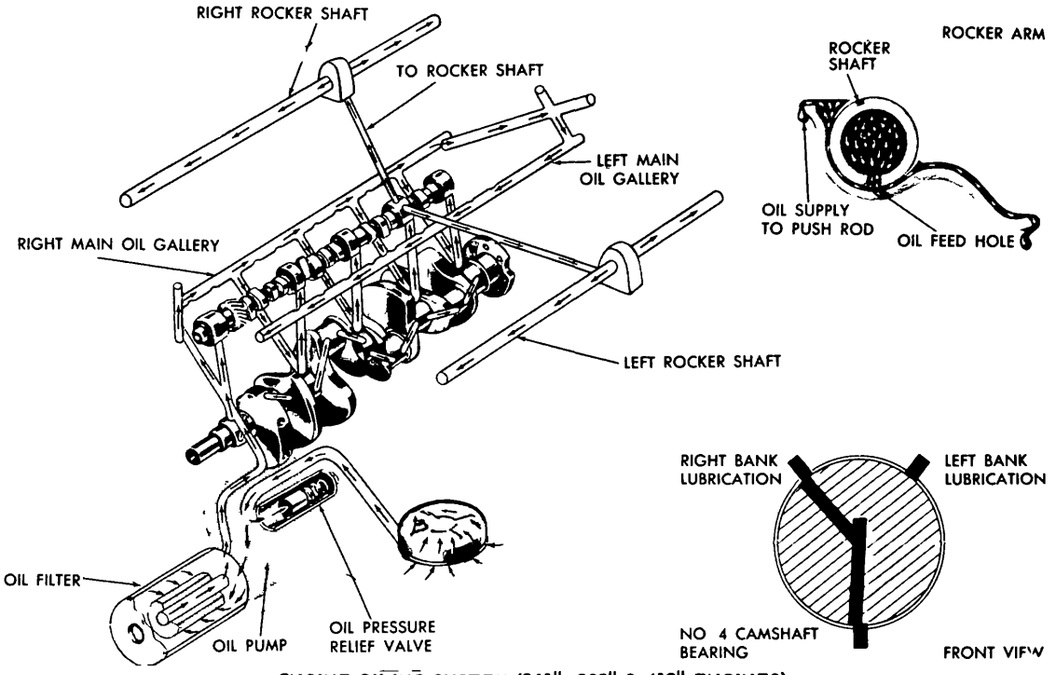
Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from slot in side of bearing cap for rod of opposite bank of cylinders (slot in rod must be upward or toward center of engine to provide this cross-lubrication).

Valve Lifters - Right and left main oil galleries intersect lifter bores for direct oil supply to lifters.

Rocker Arms, Pushrods, & Valves - Hollow rocker arm shaft on each head is supplied with oil through channel in block leading from No. 4 camshaft bearing (both banks - camshaft journal is drilled and registers with each channel in turn as camshaft rotates). Channel in block registers with drilled hole in head which terminates at rocker shaft support bracket pad on head (oil holes provided at Nos. 2 and 4 brackets - one hole and oil lead in head will register with channel in block when head installed). Nos. 2 and 4 (wider) rocker shaft support brackets have oil passage connecting oil lead in head with rocker arm shaft (*CAUTION* - These brackets must be installed with oil passage toward center of engine to align with oil hole in head). Rocker arms are stamped steel with channel section which forms oil reservoir. Oil flows from valve tip end of arm to lubricate valve stem and through hole at pushrod end of arm to lubricate pushrod seat.

OIL FILTER: Full flow and shunt types used. Filter has bypass valve (full flow type), bypass passage (shunt type), which ensures engine lubrication if filter element is clogged.

OIL PUMP



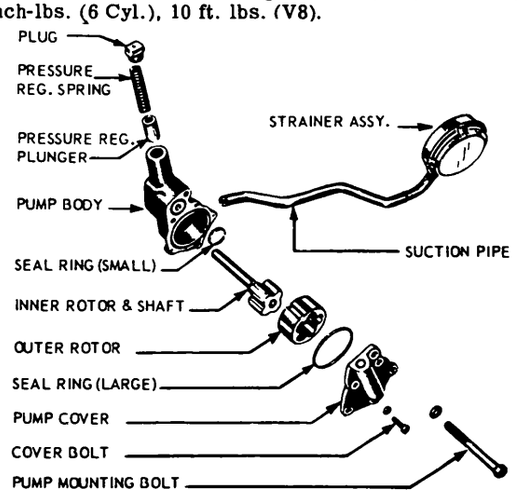
ALL ENGINES

OIL PUMP: Removal (6 Cyl., 361", 383", 413") - Remove attaching bolts and remove oil pump and filter assembly.

Removal (318") - Remove oil pan (see Car Model Pages), and remove pump from rear main bearing cap.

Disassembly (All Engines): Remove cover. On 6 Cyl., press off drive gear (support gear to keep load off aluminum housing). Remove inner rotor and shaft and outer rotor. Remove pressure relief valve plug and and valve assembly.

Inspection (All Engines): Clean all parts. Replace cover if mating surface scratched or grooved. Lay a straightedge across cover. If .0015" feeler gauge can be inserted between cover and straightedge, replace cover. Measure thickness of inner and outer rotors, and diameter of outer rotor. *NOTE - Minimum dimensions listed in table below. Replace rotors if measurements below these specifications.* With inner and outer rotors assembled in pump body, place a straightedge across surface of body and rotors. If a .004" feeler gauge can be inserted under straightedge, replace pump body. Remove inner rotor and press outer rotor against pump body. If clearance between outer rotor and body is more than .012", replace body. If clearance between inner and outer rotors is more than .010", replace both rotors. Test pressure relief valve spring (see below), and replace spring (if necessary) with same type previously used.



ENGINE OILING SYSTEM (361", 383" & 413" ENGINES)

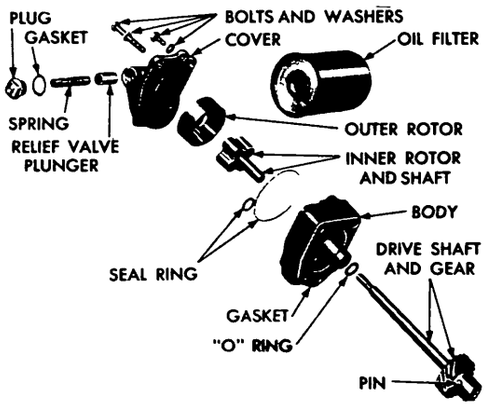
Oil Pump Rotor Specifications

Engine	Rotor Thickness	Outer Rotor Diameter
6 Cyl.	.649"	2.469"
318"	.998"	2.244"
361", 383" & 413"	.943"	2.469"

Reassembly (All Engines): Reverse disassembly procedure. On 6 Cyl., press drive gear on shaft until it is flush with end of shaft. Tighten cover screws to 130 inch-lbs. (6 Cyl.), 10 ft. lbs. (V8).

V8 318" ENGINE OIL PUMP

Installation (All Engines): Reverse removal procedure.



ALL ENGINES

OIL PRESSURE RELIEF VALVE: Three types of springs are available. Replace with correct type as follows:

Relief Valve Spring Specifications
(6 Cyl., 361", 383" & 413" Engines)

Color	Free Length	Load Length
Gray (Light)	2 3/16"	1 39/64" at 11.85-12.85 lbs.
Red (Std.)	2 19/64"	1 39/64" at 14.85-15.85 lbs.
Brown (Heavy)	2 25/64"	1 39/64" at 17.90-18.90 lbs.

6 CYL. OIL PUMP

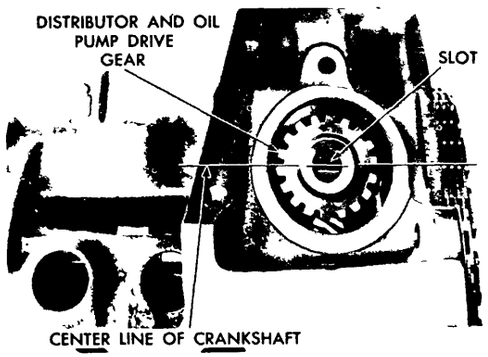
COOLING SYSTEM
WATER PUMP
6 CYLINDER ENGINE

►*SERVICE NOTE:* Water pump body and shaft and support plate are serviced as an assembly only. Only impeller. seal. and hub are replaceable.

Hub Replacement: Use Puller Tool C-412 to remove hub from shaft. To install hub, support pump body on impeller end of shaft to avoid damage to body and press hub on shaft until shaft projects 13/32" beyond front face of hub.

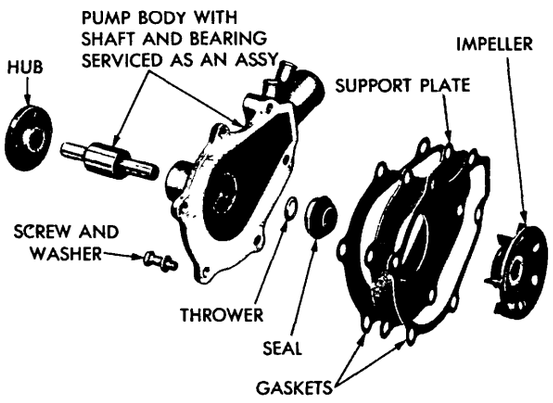
Impeller & Seal Replacement: Support pump at hub end and remove impeller by breaking it away from metal insert. With Splitter C-3773, split metal insert and remove from shaft. Remove rubber part of shaft seal. Use Puller C-3753 to pull retainer part of seal (do not pry from pump body), then remove thrower. Install new thrower over shaft and press new seal into body with Seal Installer C-3775. Support pump body on shaft, use a sleeve which will bear on impeller metal insert only and press impeller in flusn with end of shaft.

Installati n: Reverse removal procedure.



V8 ENGINES

Disassembly: Remove fan hub with Puller C-412. Support hub end of pump and remove impeller by breaking it away from metal insert. Remove seal by sliding over shaft and insert. With Splitter C-3476, split metal insert and remove from shaft. Support hub end of pump body and press shaft and bearing through **front** of pump.



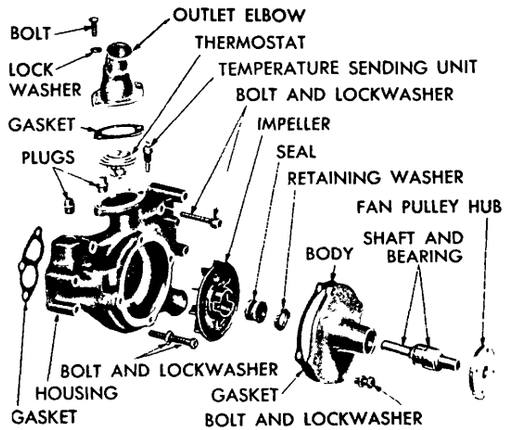
Reassembly: With pump body supported as close to center bore of pump as possible, press shaft and bearing assembly into body with Sleeve C-3468 and a press. **Distance from shoulder of seal retainer to front face of pump body must be .090".** Reface pump seal seat of housing (see below). Install new seal into impeller with ears on retaining washer engaged in slots in impeller. Support shaft at hub end and press impeller on shaft until it is flush with end of shaft. Support impeller end of shaft and press hub on shaft until shaft projects .330" beyond front face of hub.

Refacing Seal Seat - Place Tool C-551 over pump shaft. Turn tool in an even continuous clockwise motion until smooth surface is obtained. Remove tool and install abrasive disc SP-1527 over end of tool and down against cutters. Polish seat surface to a high polish. **Turn by hand in a clockwise direction. Do not use motor.** Blow out with compressed air.

Installation: Reverse removal procedure.

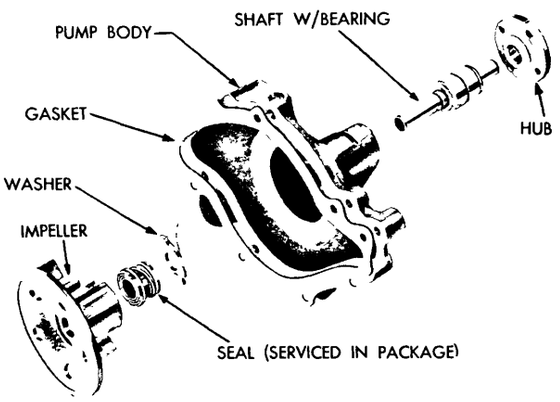
V 8 ENGINE DISTRIBUTOR D RIVE SHAFT

6 CYL. WATER PUMP



IGNITION NOTES
V8 ENGINES

DISTRIBUTOR-OIL PUMP DRIVE SHAFT BUSHING:



Removal - Thread Tool C-3052 into bushing, hold puller screw and tighten puller nut to remove bushing.

Installation: Slide new bushing over burnishing end of Tool C-3053. Insert tool and bushing into bore of block. Drive bushing and tool down into position using a soft hammer. As the burnisheris pulled through the bushing by pressure applied to puller nut, tool will wedge bushing tight in its bore and will burnish bore to correct size. *DO NOT REAM THE BUSHING.*

DISTRIBUTOR BASIC TIMING: Before installing distributor, time the engine as follows: Place No. 1 piston at TDC of firing stroke. Mark on vibration damper should be under DC mark on timing pointer. Coat shaft and drive gear with engine oil. Install shaft so that, after gear spirals into place indexing with oil pump shaft, slot in top of drive gear will point to first intake manifold bolt on left side of engine (318"), will be parallel to centerline of crankshaft (361", 383" & 413").

361", 383" & 413" ENGINE WATER PUMP

V8 318" ENGINE WATER PUMP

►*JACKING & HOISTING CAUTION: Be for jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Model	Model Designation
Chrysler Newport	RC-1-L
Chrysler Windsor	RC-2-M
Chrysler New Yorker	RC-3-H
Chrysler 300G	RC-4-P
Imperial Custom	RY-1-L
Imperial Crown	RY-1-M
Imperial LeBaron	RY-1-H
DeSoto (All Models)	RS-1-L

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
8 3 1 3 100001

① - Car Make. 6 DeSoto, 8 Chrysler, 9 Imperial.
② - Model Series. 1 DeSoto, Chrysler Newport, Imperial Custom. 2 Chrysler Windsor, Imperial Crown. 3 Chrysler New Yorker, Imperial LeBaron. 4 Chrysler 300G. 5 Chrysler Newport Station Wagon. 7 Chrysler New Yorker Station Wagon.
③ - Year. 1 1961.
④ - Assembly Plant. 3 Jefferson (Detroit), 4 Imperial (Detroit), 5 Los Angeles, 6 Delaware, 7 St. Lous, 8 Wyoming, 9 Canada.
⑤ - Beginning vehicle number.

ENGINE NUMBER: Stamped on boss on top right side of cylinder block just behind water pump. Number (example below) includes identification data.

① ② ③ ④ ⑤
R 38 ... 8 4

① - Year. R 1961.
② - Displacement. 36 361 cu. ins., 38 383 cu. ins., 41 413 cu. ins.
③ - If this space blank, engine is standard. *For identifying marks see below.*
④ - Month Assembled. 8 August, etc.
⑤ - Day Assembled. 4 4th day, etc.

►*ENGINE NUMBER MARKS: Identified as follows:*
"A" - All cylinder bores .020" oversize.
"Malt s Cross" - One or more bearing journals .001" undersize. *See "Connecting Rods" & "Crankshaft" below.*
"X" & "Maltes Cr ss" - One or more bearing journals .010" undersize. *See "Connecting Rods" & "Crankshaft" below.*
"♦" - One or more valve lifters .008" oversize. *See "Valve Lifters" below.*
"H.P." - High Performance Engine.

TUNE-UP

►*HARD COLD WEATHER START CORRECTION (Carburetors with Choke Vacuum Unloader Piston in Air Horn):* Hard starting caused by choke piston sticking. To correct, remove gum formation by removing air cleaner and squirting Carburetor Cleaner, Lacquer Thinner or Alcohol through piston link opening, while operating choke valve to flush out gum formation.

COMPRESSION PRESSURE: 135-165 lbs. (361"), 150-180 lbs. (383" & 413") at 150 RPM (plugs removed, throttle wide open). Maximum variation between cylinders 20 lbs. (361"), 25 lbs. (383" & 413").

VACUUM READING: 19.5" at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters. *NOTE - Optional mechanical lifters on 300G, .016" Intake, .028" Exhaust, COLD.*

MANIFOLD HEAT CONTROL: Thermostatically controlled valve located at exhaust manifold outlet on right side of engine. Valve must operate freely (lubricate with special lubricant, Part No. 1879318), Coil spring should have approximately ¾ turn wrap with manifold heat control in closed position. *300G NOTE - Coil should have approximately 182° wrap counterclockwise right manifold, clockwise left manifold.*

►*300G (RAM MANIFOLD) HEAT CONTROL VALVE NOTE:* Two heat control valves used, one in each cylinder bank exhaust manifold outlet. When valve is closed, exhaust gases are diverted through bypass pipe around hot spot in intake manifold.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plugs - Autolite A42 (All except 300G). Autolite A32 - Hydraulic Lifters, Autolite A901 or Champion J79 - Mechanical Lifters (300G). 14mm. Torque to 30 ft. lbs. *CAUTION* - Do not use higher heat range spark plugs to correct spark plug fouling on 300G (severe engine damage may result).
COIL: Autolite No. 200567 or Essex No. 62-160-2.
Ignition Current - 1.9 amps. idling, 3.0 amps. stopped.
Resistor - Chrysler No. 2095501. 0.6 ohms. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

DISTRIBUTOR: Chrysler Own or Autolite. As follows:

Engine	Distributor No.
361" & 383"	Autolite **IBP-4005E**
413" ②	Chrysler **2095530** or ① Autolite **IBP-4006C**
413" (300G)	③ Autolite **IBS-4011**

① - Used between Eng. No. R41-10-13 & R41-10-17 with white paint on Engine No. pad.
② - Except 300G. ③ - "Double Breaker" type.

Condenser - Autolite 2-32. **Capacity** .25-.285 mfd.
Contact Point Set - Autolite 1-47 (IBP), 1-43 (IBS).
Breaker Gap - .014-.019".
Cam Angle (Single Breaker) - 27-32° with vacuum line disconnected.
Cam Angle (Double Breaker) - 27-32° (single set of points), 31-37° (both sets operating together).
Breaker Arm Spring Tension - 17-21.5 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance - IBP-4005E

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	250-450	0	500-900

Distributor Basic Timing & Drive Shaft Bushing: *See "Ignition Notes" in Chrysler Corp. Special Data.*

IGNITION TIMING

Setting (Exc. 300G) - 10° BTDC at 475-500 RPM with vacuum line disconnected.
Setting (300G) - 5° BTDC (TorqueFlite), 10° BTDC (Synchro-mesh). Set timing with vacuum line disconnected and engine idling below 600 RPM (transmission in neutral and air conditioning compressor off). After timing correctly set, readjust engine idle speed to 725-750 RPM.
Timing Mark - Mark on vibration damper and pointer on chain case cover. Align vibration damper mark with correct mark on pointer.

CARBURETOR

►*CARBURETOR APPLICATION: As follows:*

Engine	Carburetor
361"	One Carter or Stromberg 2-Barrel
383"	One Carter 2-Barrel
413" (Except 300G)	One Carter 4-Barrel
413" (300G)	Two Carter 4-Barrel

►*IDLE SETTING CAUTIONS:* When making Idle Speed & Mixture adjustments, observe the following: 1) Turn headlights on to High Beam to compensate for alternator load (alternator charges battery at idle speed). 2) On automatic transmission cars (except 300G), loosen nut on sliding link of carburetor-to-bellcrank rod so transmission internal stop will not interfere with carburetor throttle lever. When adjustments completed, move

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

carburetor throttle rod to rear against its stop and tighten locknut.

THROTTLE LINKAGE ADJUSTMENT (EXCEPT 300G): Loosen locknuts on carburetor throttle rod and on transmission throttle rod. Insert a 3/16" diameter rod 10" long into holes in accelerator shaft bracket and lever. Move transmission throttle lever forward against its stop and tighten transmission throttle rod locknut. Disconnect accelerator pedal rod at one end and adjust rod to give accelerator pedal angle of 113°-115°. Remove 3/16" rod. Make sure carburetor is on slow idle, move carburetor throttle rod rearward against stop and tighten carburetor throttle rod locknut.

THROTTLE LINKAGE ADJUSTMENT (300G WITH RAM INDUCTION): Bring engine to normal operating temperature with carburetor off fast idle and transmission in "N", then proceed exactly as follows:

1) Loosen locknuts on transmission throttle rod and on bellcrank-to-accelerator shaft rod. Insert a 3/16" diameter rod into holes in accelerator shaft bracket and lever. Move transmission throttle lever forward against its stop and tighten transmission throttle rod locknut.

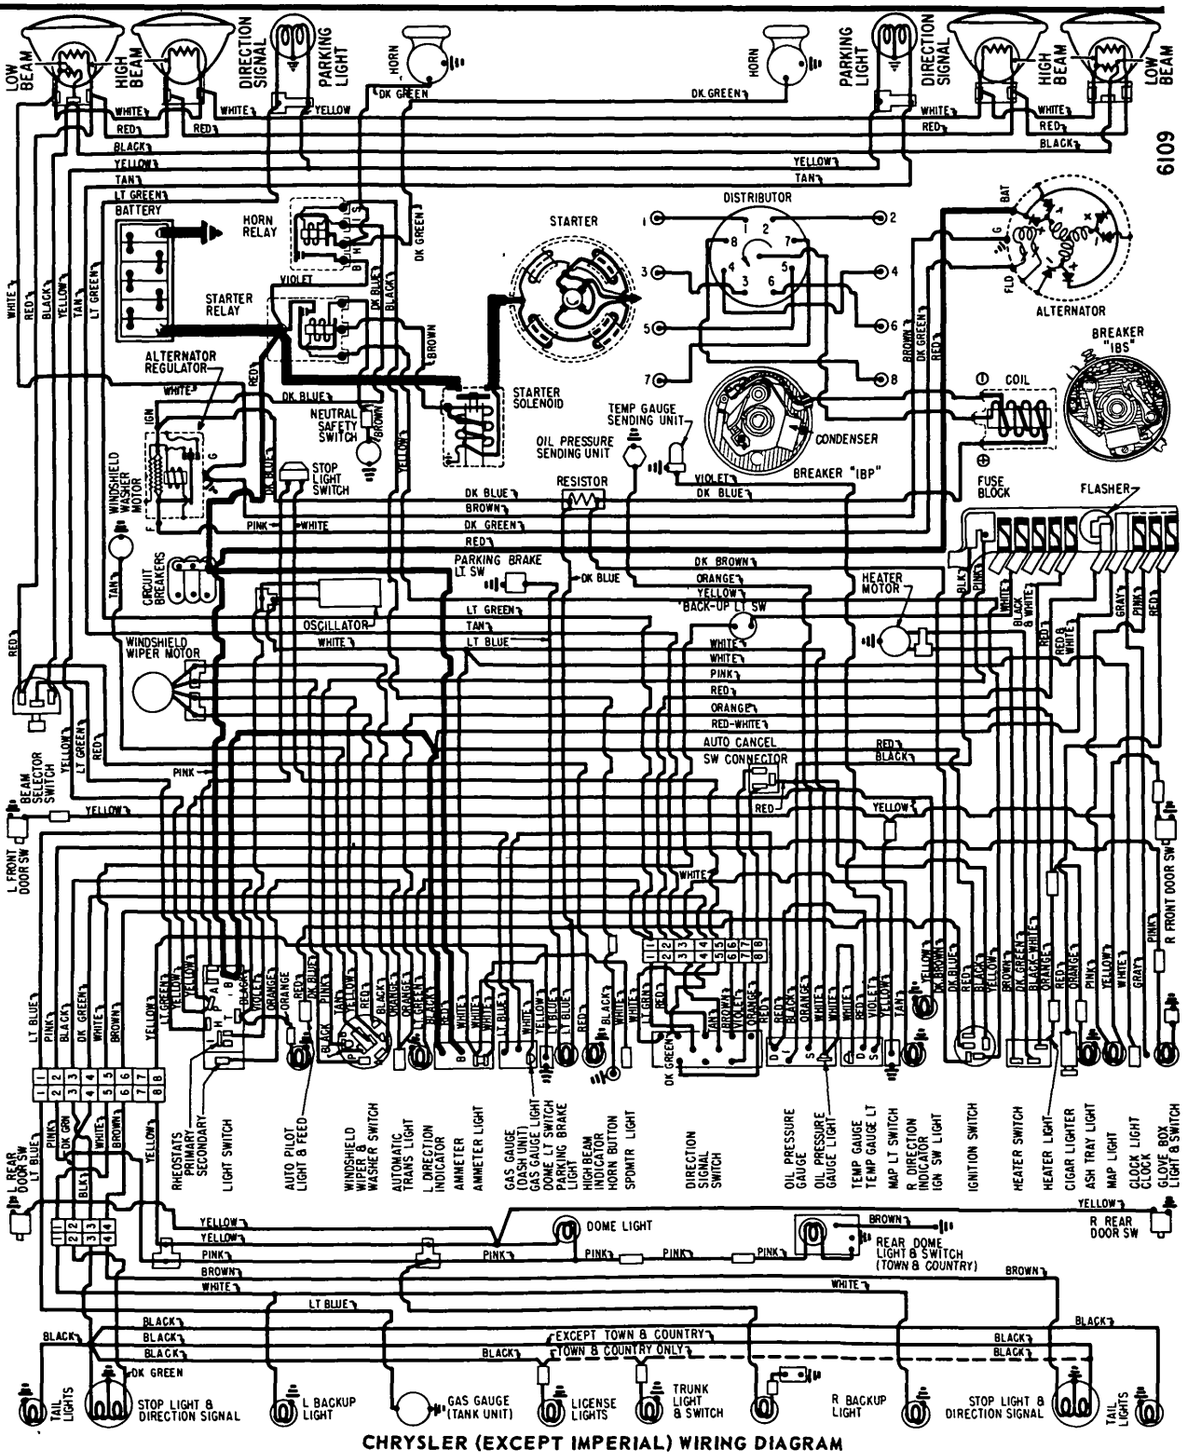
2) With accelerator pedal disconnected from accelerator shaft rod, adjust length of rod so accelerator pedal is 114° to horizontal measured on flat face of accelerator pedal. Reconnect rod and remove 3/16" diameter rod from accelerator shaft bracket.

3) Loosen locknuts on both right and left carburetor-to-bellcrank rods and back off anti-stall dashpot plunger sufficiently so bellcrank will pivot (hold dashpot push-rod when turning setscrew to prevent damage to diaphragm). Pivot bellcrank so 3/16" diameter rod can be inserted through hole in bellcrank and into locating hole in intake manifold. Make sure choke valves are open, fast idle cams released and throttle valves are closed on both carburetors. Tighten carburetor-to-bellcrank rod locknuts and remove 3/16" diameter rod. Now push adjusting link on bellcrank-to-accelerator shaft rod rearward until stop is felt and tighten adjusting link locknut.

4) Start engine and adjust idle speed to 725-750 RPM with engine warm and transmission in neutral.

5) Adjust anti-stall dashpot as follows: Disconnect vacuum tube to anti-stall dashpot and tape open end of tube to prevent air leaks. Anti-stall plunger will extend and increase engine speed. Adjust plunger length so that engine speed is no higher than 1500 RPM. Reconnect vacuum tube (engine idle speed should return to 725-750 RPM).

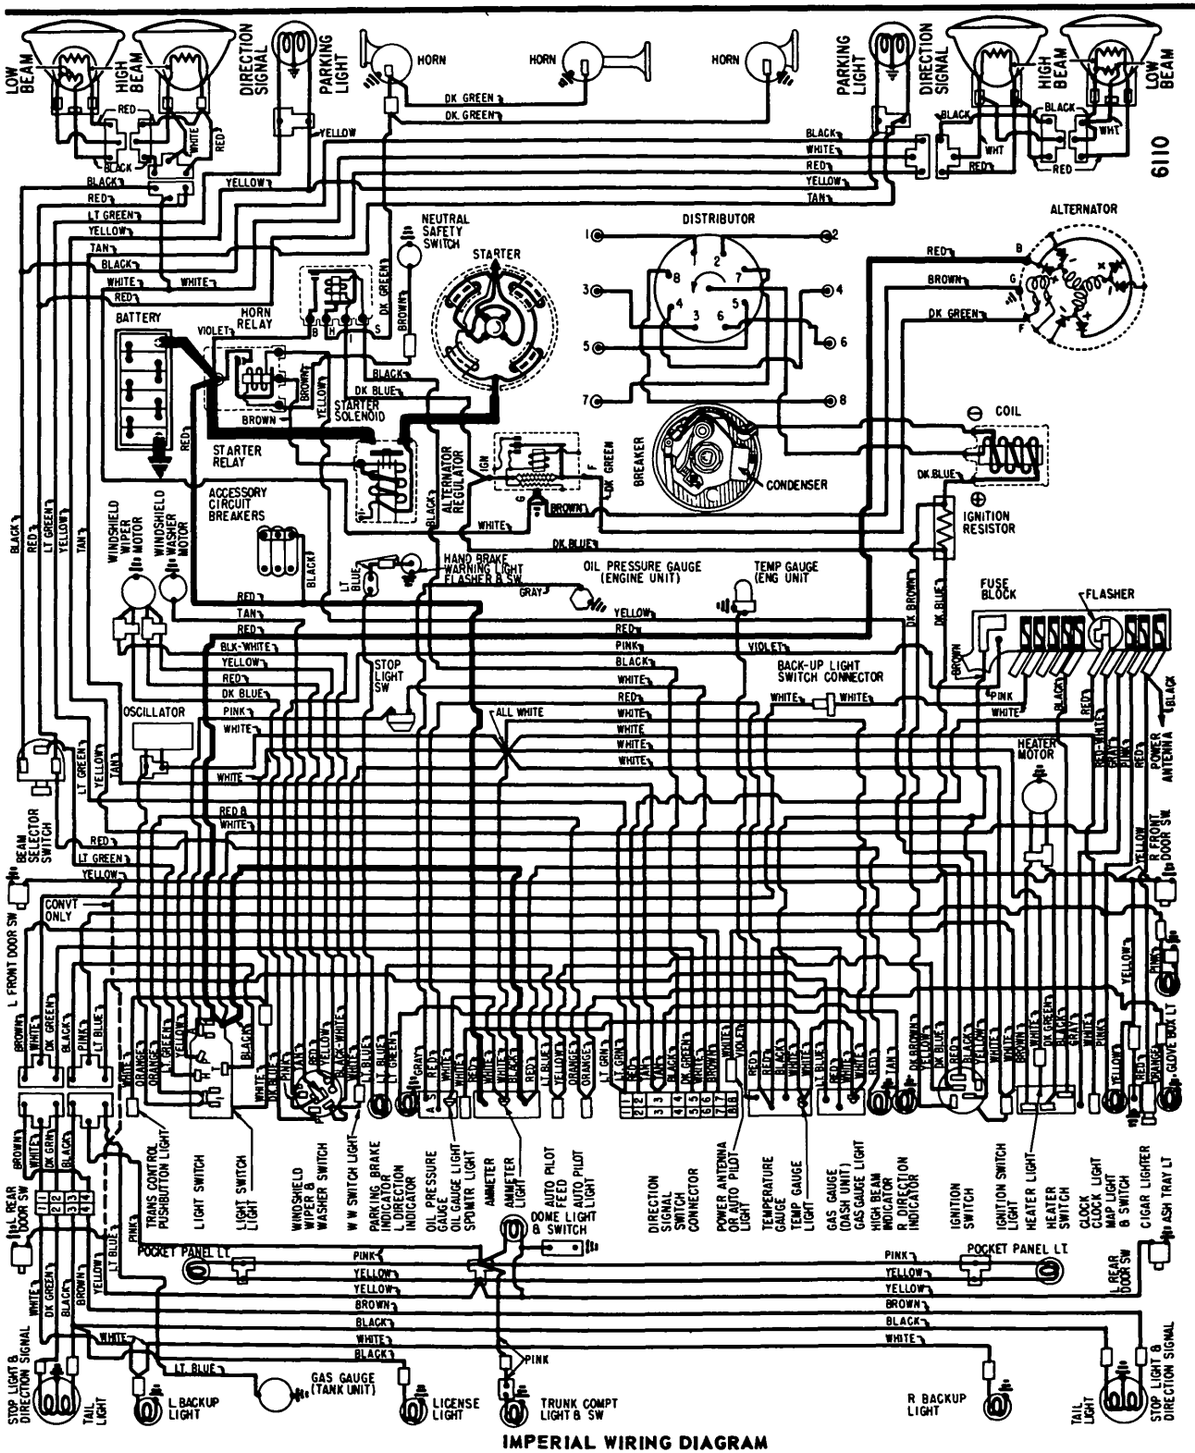
STROMBERG WWC 2-BARREL
361" Engine



Stromberg WWC, Code 3-188 (All Trans.). Downdraft type with automatic choke. *NOTE - Cars with Closed Crankcase Ventilation use Carter BBD, see below.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - 1/2-5/8 turns open. Adjust both screws alike. Turn screws out for richer mixture.



Idle Speed - 500 RPM (550 RPM on Air Cond. cars with Air Cond. "ON"), with automatic transmission in "N", headlights on High Beam, and carburetor throttle rod locknut loosened, see *"Cautions"* above.

CONTINUED ON NEXT PAGE

CHRYSLER (EXCEPT IMPERIAL) WIRING DIAGRAM

Form 2-A

IMPERIAL WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Float Lev l - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant float holds float lip firmly against fuel inlet needle (On Car), float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to top of float at center should be 1/8" or use Gauge 73725. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float level setting will result.*

Accelerating Pump - Pump connector rod in center hole in pump lever (normal setting).

Fast Idle Speed: 1375-1425 RPM with fast idle adjusting screw on high step (against shoulder) of fast idle cam.

Automatic Choke: "Cross-Over" type. Set 1 notch rich.

Throttle Linkage Adjustment: See CARBURETOR abov .

►*OTHER DATA: See "Stromberg WWC Carburetors" in Carburetion Section.*

CARTER BBD 2-BARREL
361" (Late) & 383" Engines

Carter BBD No. 2923SA (Late 361" & 383"), No. 3132S (361" & 383" Closed Crankcase Ventilati n Cars).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - 1/8-1 1/2 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 500 RPM (575 RPM on Air Cond. cars with Air Cond."ON"), with automatic transmission in "N", **headlights on High Beam, and carburetor throttl rod locknut loosened, see "Cautions" above.**

Float Level - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant float holds float lip firmly against fuel inlet needle (On Car), and with float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to crown of floats at center should be 9/32" measured with Gauge T109-239. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float l vel setting will result.*

Accelerating Pump - Install connector rod in center hole (medium stroke) of throttle lever.

Fast Idle Speed: 1375-1425 RPM with engine at operating temperature and fast idle adjusting screw contacting top step of fast idle cam at index mark.

Automatic Choke: "Cross-Over" type. Set at index.

Throttle Linkage Adjustment: See CARBURETOR abov .

►*OTHER DATA: See "Carter BBD Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL
413" Engine (Except 300G)

Carter AFB No. 3108S (Std.), No. 3134S (Closed Crankcase Ventilation).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Setting - 1-2 turns open. Turn screws out for richer mixture.

Idle Speed - 500 RPM (550 RPM on Air Cond. cars with Air Cond. "ON"), with automatic transmission in "N", **h adlights n High B am, and carburet r throttl r d l cknut l sened, see "Cautions" abov .**

Thr ttl Linkage Adjustm nt: See CARBURETOR abov .

►*OTHER DATA: See "Cart r AFB 4-Barrel Carburetors" in Carburetion Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARTER AFB 4-BARREL
300G With Ram Manifold

Carter AFB No. 2903S (TorqueFlite), No. 3084S (Synchro-mesh). Two carburetors (one for each bank).

▶*MANIFOLD FUEL DISTRIBUTION: RIGHT carburetor feeds left bank cylinders, LEFT carburetor feeds right bank cylinders.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

Throttle Linkage & Carburetor Interconnecting Linkage Adjustments: *See CARBURETOR above.*

▶*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter No. M2769S.
Fuel Pump Pressure - 3½-5 lbs.

Fuel Filter: Disposable type located in carburetor inlet line. Replace every 10,000 miles or if clogged. Do not attempt to clean.

Gasoline Gauge: Constant Voltage type with voltage regulator inside oil pressure gauge (Chrysler), inside t mperature gauge (Imperial), fuel gauge (DeSoto).
Dash Unit - Part No. 2258137 (Chrysler), No. 2197225 (Imperial), No. 2197059 (DeSoto).
Tank Unit - King-Seeley. Chrysler No. 2240547 (Chrysler exc. Suburban & Imperial), No. 2240548 (Chrysler Suburban). No. 2240549 (DeSoto).

Air Cleaner: Paper element type. Clean every 6000 miles, replace element every 15,000 miles or sooner if needed.

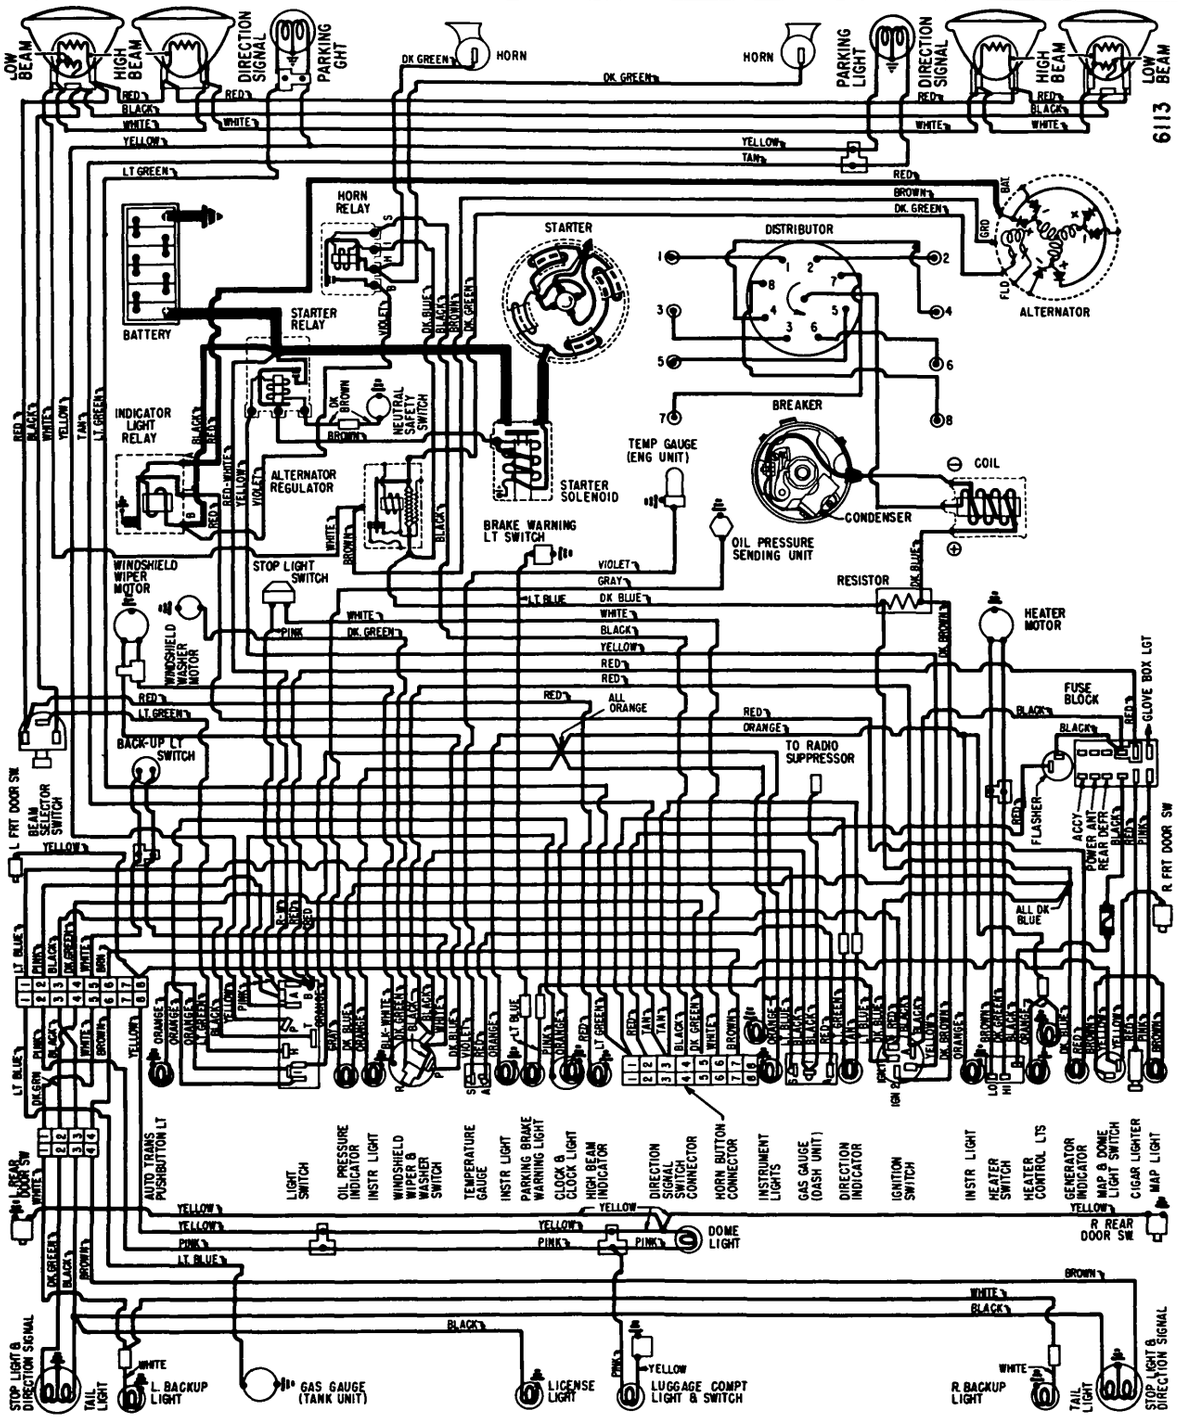
▶*CLEANING CAUTION:* Clean filter element by blowing ut with compressed air from ihside surface of element. Hold air nozzle 2" from element to avoid damage. DO NOT oil, lubricate or wash element.

Auto Pilot: Automatic speed control unit. *See "Auto Pilot" in Carburetion Section.*

BATTERY

361", 383". Autolite 11-HS-59B or Gould 11-B-OE-59 or Willard MB-24-59. 12 volt, 11 plate, 59 ampere hour capacity (20 hr. rate).
413". Autolite 13-HB-70B or Willard MB-27-70. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Left front of engine.

STARTER



Chrysler Own No. 1889200. Armature No. 1889079.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 32-48 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3800 Min.	11.0	78 Max.
8.5 ft. lbs.	Lock	4.0	350

Starter Switch: Solenoid, Chrysler & DeSoto No. 1889146, mounted on starter and controlled by Ignition & Starter Switch, Chrysler & DeSoto No. 2097628. Neutral Safety Switch, Chrysler & DeSoto No. 1704283, mounted on transmission on automatic transmission cars.
Neutral Safety Switch Adjustment - *S "Torqu Flit Six", "Pow rFlit " & "Torqu Flit " in Transmissi n Secti n.*

DESOTO WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

ALTERNATOR

Chrysler Own. Three-phase AC unit with full-wave rectifier Used as follows

Model	Chrysler No.
Standard	2095060
Air Conditioning	2095100
Special Equipment Heavy Duty	2095425

Rotation - Clockwise at drive end

Rated Output - 35 amperes (2095060), 40 amperes (2095100 & 2095425)

Field Coil Draw - 2 38-2 75 amps at 12 volts (alternator turned by hand), 2 97-3 43 amps at 15 volts, 70°F & 750 Alternator RPM

►*OTHER DATA See "Chrysler Alternator & Regulator" in Electrical Section*

Belt Adjustment: Use Torque or Deflection methods as follows

Belt Torque Specifications - Ft. Lbs.

Belt	New	Used
Alternator (No Air Cond.)	30	20
Alternator (With Air Cond.) ©	60	40
Fan Idler (Water Pump)	50	35

© - Supersedes previous specification of 100 & 65 lbs

Belt Deflection Specifications

Belt	New	Used
Alternator (No Air Cond.)	1/8"	1/4"
Alternator (With Air Cond.)	1/4"	3/8"
Fan Idler (Water Pump)	1/16"	1/8"

REGULATOR

Chrysler Own Part No. 2095700 (All Models).

Field control type No Cutout Relay or Current Regulator

Air Gap - 048-052" **Point Gap** - 014-016"

Voltage Setting - 13 7-14 3 volts at 75°F

►*OTHER DATA See "Chrysler Alternator & Regulator" in Electrical Section*

MISC. ELECTRICAL

Headlights: 4-Headlight System

Automatic Beam Changer: *See Electrical Section*

Electronic Rear View Mirror: *See Electrical Section*

Instrument Panel Lighting (Chrysler & Imperial): *See "Chrysler & Imperial Panelescent Lighting" in Electrical Section*

Stop Light Switch Location: Hydraulic type (early cars) located on forward end of hydraulic master cylinder Mechanical type (later cars) mounted on brake pedal lever bracket

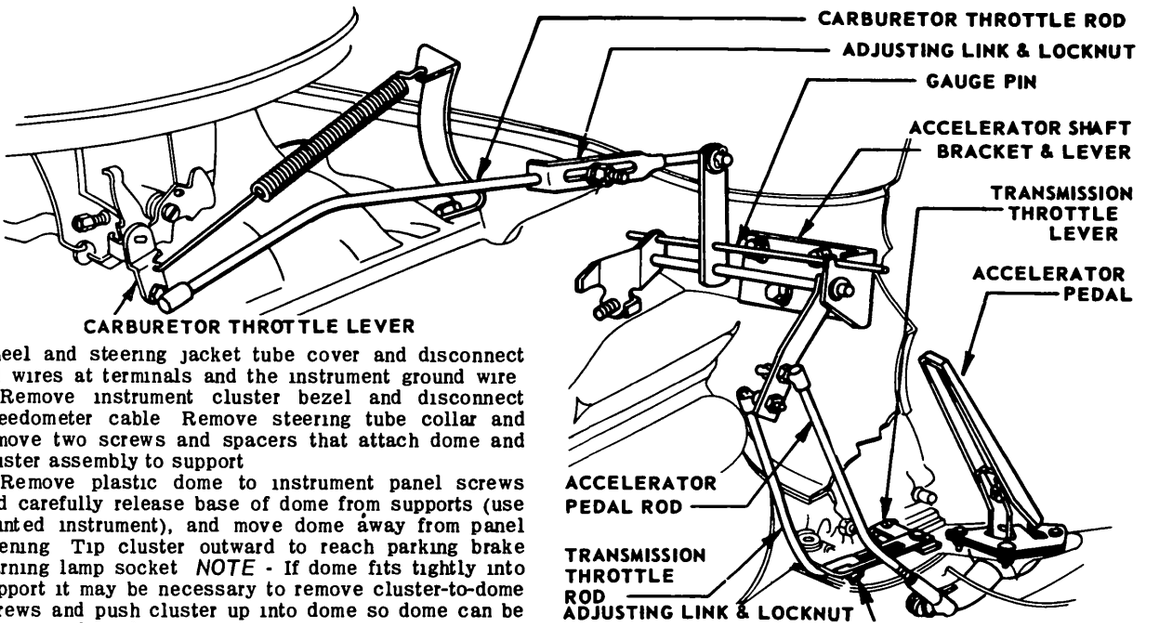
Adjustment (Mechanical Type) - *NOTE* - Switch bracket mounting hole on brake pedal lever bracket is slotted for switch position adjustment Adjust position of switch in slotted hole with switch plunger extended correct distance (from bracket surface to tip of plunger) See table below for position and distance

	Hole Position	Distance
Standard Brakes	Rearward	© 86"
Power Brakes	Forward	78"

© - With switch No 2257769 78" with switch No 2257770

Instrument Cluster & Speedometer (Chrysler): Removal - 1) Disconnect battery ground cable Remove steering wheel and steering jacket tube cover and disconnect all wires at terminals and the instrument ground wire 2) Remove instrument cluster bezel and disconnect speedometer cable Remove steering tube collar and remove two screws and spacers that attach dome and cluster assembly to support 3) Remove plastic dome to instrument panel screws and carefully release base of dome from supports (use pointed instrument), and move dome away from panel opening Tip cluster outward to reach parking brake warning lamp socket *NOTE* - If dome fits tightly into support it may be necessary to remove cluster-to-dome screws and push cluster up into dome so dome can be compressed to clear supports 4) Snap out lamp socket and bulb and remove dome and cluster assembly 5) Remove speedometer head assembly

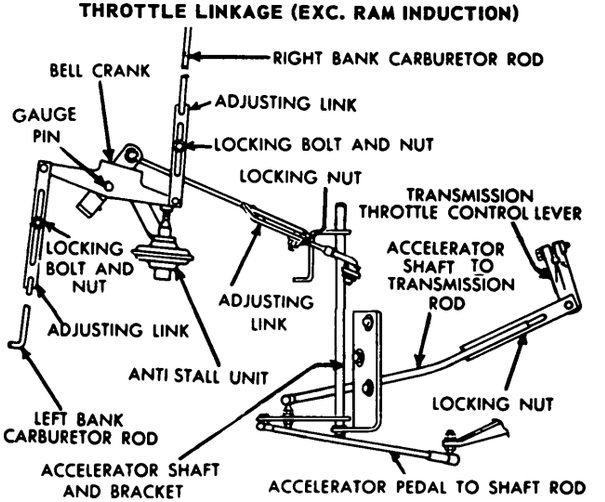
Installation - Reverse removal procedure



Instrument Cluster & Speedometer (Imperial): Removal - 1) Disconnect battery ground cable *NOTE - When equipped with Heater and/or Air Cond., remove defroster and spot cooler hoses* 2) Disconnect speedometer cable at head and odometer reset cable at instrument panel cluster *NOTE - Mask steering jacket tube* 3) Remove instrument cluster-to-panel screws and remove cluster by tilting lower end outward 4) Disconnect all electrical connections and disengage wire harness loom from clips and remove cluster

Installation - Reverse removal procedure

Instrument Cluster and Speedometer (DeSoto): Removal - 1) Disconnect battery positive cable and mask jacket tube area to protect paint, then remove cluster-to-panel screws 2) Remove panel slightly at center to release overlap clip at center of gauge housing, then carefully pull gauge housing out of panel recess by tilting cluster down to disconnect the lamp sockets and the connectors, then remove gauge housing assembly 3) Remove heater switch trim plate and heater push buttons Remove transmission push button trim plate and push buttons 4) Remove two nuts and washers that attach push button bracket and three screws that attach heater switch and heater control cable bracket to upper instrument panel *NOTE - Do not remove push button bezel or heater switch bezel*



5) Remove five screws attaching upper housing to lower housing and remove upper housing, speedometer, and transmission push button bezel and heater push button bezel as an assembly (raise assembly straight up until speedometer clears lower housing) Remove screws securing speedometer to upper housing

Installation - Reverse removal procedure

CARBURETOR THROTTLE LEVER

THROTTLE LINKAGE (EXC. RAM INDUCTION)

THROTTLE LINKAGE (RAM INDUCTION)

CIRCUIT BREAKERS: 22.5 Ampere - Headlights & High Beam Indicator On headlight switch

15 Amp - Parking, Tail, Stop, License, Instrument Panel Oscillator (Chrysler & Imperial), Instrument Panel lights (DeSoto) On headlight switch

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

8 Ampere - Rear cigar lighter (Imperial).
6 Ampere - Variable speed windshield wiper & DeSoto Back-up lights. On wiper switch.
5 Ampere - Single speed windshield wiper & DeSoto Back-up lights. On wiper switch.

FUSES: *On Chrysler & Imperial, fuses are in fuse block behind instrument panel to left of radio.*
20 Ampere - Heater.
20 Ampere - Front Air Conditioner.
20 Ampere - Rear Air Conditioner.
14 Ampere - Front Cigar Lighter (Chrysler & Imperial).
10 Ampere - Rear Cigar Lighter (Chrysler).
10 Ampere - Auto-Pilot. **7.5 Ampere** - Radio
7.5 Ampere - Rear Window Defroster (DeSoto).
6 Ampere - Rear Window Defroster (Chrysler & Imperial)
6 Ampere - Back-up lights (Chrysler & Imperial).
6 Ampere - Body, Glove Box, Trunk, Map lights.
2 Ampere - Mirror-Matic. **1 Ampere** - Clock.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Misc. Sect.*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head. Different engines used as follows:

Car Model	Engine
DeSoto, Chrysler Newport	361"
Chrysler Windsor	Ⓒ 383"
Chrysler New Yorker, 300G, Imperial	413"

Ⓒ - See Note below for partial production.

►*WINDSOR ENGINE NOTE:* Some cars have 383" engine (4.031" x 3.75") used in early 1960 production. Engine number pad stamped "RB-38". *For all data on this engine, See 1960 Chrysler & Imperial car pages.*

►*300G ENGINE NOTE:* Engine used on this model is same as standard 413" engine except for Ram Induction Manifold (two carburetors) and High Performance Camshaft (different valve specifications).

Engine	Bore	Stroke	Displacement
361"	4.125"	3.375"	361 cu. ins.
383"	4.250"	3.375"	383 cu. ins.
413"	4.190"	3.750"	413 cu. ins.

Engine	Compr.Ratio	Rated HP	Developed HP
361"	9.0-1	54.3	265 at 4400 RPM
383"	10.1-1	57.8	305 at 4800 RPM
413" (Exc.300G)	10.1-1	55.9	350 at 4600 RPM
413" (300G) Ⓒ	10.1-1	55.9	375 at 5000 RPM
413" (300G) ②	10-1-1	55.9	400 at 5200 RPM

Ⓒ - Ram Induction and TorqueFlite.
② - Ram Induction and Synchro-mesh.

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chrysler Corp. Special Data.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Chrysler Corp. Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chrysler Corp. Special Data.*

OIL PAN REMOVAL: Remove dipstick, drain crankcase, disconnect battery ground cable and remove No. 6 spark plug. Raise car and disconnect steering linkage from idler and pitman arms. Remove outlet breather pipe and disconnect exhaust pipe branches from manifolds. Remove exhaust pipe and converter dust shield. On DeSoto, Newport and Windsor, remove engine front mount retaining nuts and raise engine about 2". Remove oil pan bolts. Rotate crankshaft so front counterweight and connecting rods are at highest position and lower pan, turning counterclockwise to clear oil screen and suction pipe. *NOTE* - When installing, bottom surface of oil strainer must be on a horizontal plane with machined surface of cylinder block.

PISTONS

Aluminum alloy, elliptically turned, tin-plated, thermally controlled by steel strut.

►*CYLINDER BORE OVERSIZE NOTE:* Letter "A" within engine number indicates that cylinder bores are .020" Oversize.

Weight - 25.3 ozs. (361"), 27.2 ozs. (383"), 27.5 ozs. (413").

Removal - Pistons and rods removed from above.

Fitting New Pistons: Clearance - .0005-.0010" between thrust face of piston and cylinder wall, measured at top of skirt on piston, and halfway down cylinder wall, crosswise to engine.

Installing Pistons: Notch in piston head must be toward front of engine. Assemble piston to rod with notch on same side as large chamfer on lower end of connecting rod (left bank cylinders, 1-3-5-7), with notch on side opposite to large chamfer at lower end of connecting rod (right bank cylinders, 2-4-6-8). *See Rod Installation.*

Replacement Pistons: Furnished Std., .005", .020" & .040" Oversize with fitted pins.

PISTON PIN

Pin is tight press fit in connecting rod and special removal and installation procedures are required. Piston pins are available only with new pistons.

Diameter - 1.0935-1.0937".
Length - 3.555-3.575".
Clearance in Piston - .00045-.00075". Light thumb press fit at 70°F.
Clearance in Rod - .0007-.0012" interference fit.
Piston Pin Removal & Installation - *See "Piston Pins" in Chrysler Special Data.*

Replacement Pins: Furnished standard size only with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1 & 2)	.0775-.0780"	.013-.025"	.0015-.0030"
Oil (3)	.1860-.1865"	.013-.025"	.0010-.0030"

Installing Rings: Install compression rings with "Top" mark toward top of piston.

Replacement Rings: Furnished for oversize ranges of: Std. to .009", .020" to .029", .040" to .049".

CONNECTING ROD

Length (Center-to-Center) - 6.766-6.770".
Weight - 29.4 ozs.
Crankpin Journal Diameter - 2.374-2.375".

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE): See CRANKSHAFT below.*

Lower Bearing - Removable precision type. Lead base babbitt on steel.
Clearance - .0005-.0015". Wear limit .0025".
Sideplay - .009-.017". Total for both rods.

Installing Rods: With piston correctly installed on connecting rod (see PISTONS above), larger chamfer on lower end of rod should be installed toward nearest crankshaft journal fillet. Oil grooves in rod and bearing cap must be together.

Replacement Bearings: Std., & .001", .002", .003", .010", .012" Undersize.

CRANKSHAFT

Journal Diameter - 2.6245-2.6255" (361",383"), 2.7495-2.7505" (413").

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:* **.001" UNDERSIZE** - Indicated by "Maltese Cross" within engine number. **.010" UNDERSIZE** - Indicated by "X" and "Maltese Cross" within engine number. Position of undersize Main Journals is stamped on No. 2 counterweight, and position of undersize Connecting Rod Journals is stamped on No. 3 counterweight. Connecting rod journals will be identified by letter "R" and main journals by letter "M". The number following letter "R" or "M" indicates journal number.

Clearance - .0005-.0015".
Wear Limit - .0025". **Endplay** - .002-.007".
End Thrust - Taken by No. 3 (center) main bearing.

Replacement Bearings: Std. & .001", .002", .003", .010", .012" Undersize.

►*BEARING INTERCHANGEABILITY NOTE:* Upper bearings 1,2,4 & 5 are interchangeable. Lower bearings 1,2,4 & 5 are interchangeable. Upper and lower No. 3 bearings are not interchangeable with other bearings or in position.

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Corp. Special Data.*

CAMSHAFT

►*NOTE:* Special "High Performance" Camshafts used on 300G.

Journal Diameter: (1) 1.998-1.999". (2) 1.982-1.983". (3) 1.967-1.968". (4) 1.951-1.952". (5) 1.748-1.749".
Bearing Diameter: (1) 2.000-2.001". (2) 1.984-1.985". (3) 1.969-1.970". (4) 1.953-1.954". (5) 1.750-1.751".
Bearings - Removable, lead base babbitt on steel.
Clearance - .001-.003". Wear limit .005".

End Thrust: Controlled by camshaft sprocket hub riding against front face of cylinder block.

Timing Chain: Width .88". **Pitch** .50". **Length** 50 links.

Camshaft Setting: Marks on both sprockets adjacent and in line with straightedge across shaft centers.

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Chrysler Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Special Data.*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters. **300G - (Optl. Mechanical Lifters)** .016" Intake, .028" Exhaust.

Valve	Head Diam.	Stem Diam.	Length
Intake	2.08"	.372-.373"	4.87"
Exhaust	1.60" Ⓒ	.371-.372"	4.89"

Ⓒ - 1.74" on 300G with mechanical lifters.

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Valve	Seat Angl	Lift	St m Cl aranc
Intake	45°	①.389"	③④.001-.003"
Exhaust	45°	②.389"	⑤.002-.004"

① - .430" (300G with hydraulic lifters), .449" (300G with mechanical lifters).
② - .430" (300G with hydraulic lifters), .454" (300G with mechanical lifters). ③ - .002-.004" on 300G.
④ - Wear limit .004". ⑤ - Wear limit .006".

Valv Seat Width - .060-.085" Intake, .040-.060" Exhaust.

Valv Stem Oil Seal - Cup type seals used on all valve stems.

►*VALVE GRINDING CAUTION:* Check valve height in head after grinding valves using Tool C-3648. If valve tip exceeds maximum (end of cylindrical gauge), grind tip down to approach, but do not go below minimum height (slotted area on gauge).

Valv Springs: Damper springs used inside valve springs on 300G.

Spring Specifications (Except 300G)

Valv	Pressure	Length
Closed	95-105 lbs.	1.86"
Open	187-203 lbs.	1.47"

①Spring Specifications (300G)

Valv	Pressure	Length
Closed	92-105 lbs.	1.86"
Open	197-213 lbs.	1.43"

① - Includes damper.

Spring Free Length - 2.38" (300G), 2.34 (Others).

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are ground, check installed height of spring (from counterbore in head to lower surface of spring retainer). If height exceeds 1 29/32" (300G), 1 57/64" (Others), install 1/16" spacer under spring to bring height within limits of 1 53/64-1 57/64".

►*VALVE SPRING LOAD CAUTION:* Hydraulic valve lifter "fill-up" will restrict engine speed and cause valves to burn if spring loads are not maintained.

Spring Installati n: Install all springs with closed coil end toward cylinder head.

►*CAUTION:* Spring ends must be square within 1/16".

Valv Guid s: Guides are cast integral with cylinder head. When clearance is excessive, ream guides and install valves with oversize stems. Valves furnished with .005", .015" & .030" oversize stems. Use Tool C-3433 (.005"), C-3430 (.015"), and C-3427 (.030") to ream guides in progressive steps of .005", .015" & .030".

►*PUSHROD INSTALLATION CAUTION:* Small diameter end of pushrod must seat in lifter. Large diameter end must contact rocker arm. Improper installation will cause valves to be held open partially.

Hydraulic Valve Lifters: Used on all engines except special mechanical lifter option (300G).

►*OVERSIZE LIFTER NOTE:* A "♦" on engine serial number pad indicates that lifters are .008" Oversize. If only certain lifters are oversize, the diamond will be placed on lifter boss facing engine centerline. These oversize lifters will also have notches on top surface of lifter body.

Diameter - .9040-.9045". **Clearanc** - .0005-.0018".

R placement Lifters - Furnished Std. & .001", .008", .030" Oversize.

Lifter Overhaul & Testing - S *"Valve System" in Chrysler Corp. Special Data.*

Rocker Arm Assembly: *See "Valve System" in Chrysler Corp. Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

①Valve Timing Specifications (Except 300G)

Intake Valves - Open 15° BTDC. Close 57° ALDC.
Exhaust Valves - Open 57° BLDC. Close 15° ATDC.

(300G With Hydraulic Lifters)

Intake Valves - Open 20° BTDC. Close 68° ALDC.
Exhaust Valves - Open 60° BLDC. Close 28° ATDC.

(300 With Mechanical Lifters)

Intake Valves - Open 25° BTDC. Close 79° ALDC.
Exhaust Valves - Open 74° BLDC. Close 30° ATDC.

① - With valve train solid.

Valve Timing Check: Rotate crankshaft until No. 6 exhaust valve is closing and No. 6 intake valve is opening. Insert a ¼" spacer between rocker arm pad and stem tip of No. 1 intake valve (second valve on left bank). Install dial indicator so pointer contacts valve spring retainer as nearly perpendicular as possible. Allow spring load to bleed lifter down to provide a solid lifter. Turn crankshaft in normal running direction until valve has lifted .024" (300G), .017" (Others). Timing on timing indicator should read from 10° BTDC to 2° ATDC. *CAUTION - Remove spacer before turning crankshaft any further in normal direction.*

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under "OILING SYSTEM" in Chrysler Corp. Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 45-65 lbs. at 40-50 MPH.

Oil Pressure Relief Valve - Mounted in oil pump. For various springs used, *see "Oiling System" in Chrysler Corp. Special Data.*

Oil Pressure Gauge (Chrysler & Imperial): Constant Voltage type with voltage regulator inside oil pressure gauge (Chrysler), inside temperature gauge (Imperial). **Dash Unit** - Chrysler No. 2258138 (Chrysler), No. 2197222 (Imperial).
Engine Unit - King-Seeley No. 44060. Chrysler No. 1972241.

Oil Pressure Indicator (DeSoto): Warning light on instrument panel operated by Oil Pressure Switch, Part No. 1818830.

Oil Pump: Rotor type mounted on cylinder block at lower left front side of engine.
Pump Overhaul - *See "Oiling System" in Chrysler Corp. Special Data.*

Oil Filter: Full-flow disposabl type. Replac filter every 4000 miles to coincide with engine oil change.

►*OIL FILTER INSTALLATION CAUTION:* Before installing, make sure that drain-back valve is free by unseating valve with blunt instrument inserted in four holes in oil filter base. Screw new filter on base until gasket contacts base. **Tighten ½ turn additional by hand.** DO NOT overtighten.

Crankcase Ventilation: Standard Cars - Filter element in crankcase filler cap and breather tube in right valve rocker cover. Clean filter in filler cap at every oil change or sooner under heavy dust conditions.
Positive Crankcase Ventilation Cars - A vacuum tub is connected to air outlet vent cap on right valve rocker and to lower part of carburetor throttle body. A ventilation valve is installed in outlet cap to regulate crankcase ventilation. *See "Closed Crankcase Ventilati n Systems," in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 16 qts. Add 1 qt. for heater.

►*AIR CONDITIONING OPERATION CAUTION:* Engine cooling system must be protected to a temperature of 15°F for summer operation.

Pressure Valve: 14 lb. (Std.), 16 lb. (Air Cond.) radiator filler cap used on all models.

Thermostat: Pellet type. Located in water outlet housing. (160°F) Chrysler No. 1734957, (180°F) No. 1735011.

Water Pump: Sealed ball bearing type. No lubrication.
Water Pump Removal - Drain cooling system and remove upper half of fan shroud. Remove all belts. Remove fan, spacer, and pulley. Remove water pump from housing. *NOTE* - On Air Conditioned cars, remove pulley from fan hub and then remove fan drive.
Water Pump Overhaul - *See "Cooling System" in Chrysler Corp. Special Data.*

Fluid Fan Drive: Used on air conditioned cars and standard and all 300G models.

Temperature Gauge: Constant Voltage type with voltage regulator inside oil pressure gauge (Chrysler), inside temperature gauge (Imperial), inside fuel gauge (DeSoto).

►*INACCURATE TEMPERATURE READING CORRECTION (Air Cond. Cars):* Caused by sending unit interference with air cond. compressor. To correct, install NEW Temperature Gauge Sending Unit Part No. 2256302 for air conditioned models. Part No. 2240744 may be used for other models.
Dash Unit - Part No. 2257660 (Chrysler), 2197224 (Imperial). 2197060 (DeSoto).
Engine Unit - King-Seeley 44265, Chrysler 2240744.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 1,000 miles, drain and refill every 10,000 miles or sooner if used in heavy duty service.
Checking Fluid Level - Bring engine and transmission to normal operating temperature with parking brake applied. Push selector buttons in turn to assure fluid distribution and check fluid in "N" (engine idling). Maintain fluid level at (or slightly below) "F" mark on dipstick. *NOTE* - If fluid checked with transmission cold, maintain fluid level at (or slightly below) "L" mark. Us nly Automatic Transmissi n Fluid Typ "A", Suffix "A".

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

DODGE DART

Model	Model Identification
Seneca	RD3-L
Pioneer	RD3-M
Phoenix	RD3-H

PLYMOUTH

Savoy; Deluxe Suburban	RP1-L
Belvedere; Custom Suburban	RP1-M
Fury; Sport Suburban	RP1-H

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
2 1 1 1 100001

① - Car Make. 2 Plymouth 6 Cyl. 4 Dodge Dart 6 Cyl.
② - Model Series. 1 Seneca or Savoy. 2 Pioneer or Belvedere. 3 Phoenix or Fury. 5 Seneca Station Wagon or Savoy Suburban. 6 Pioneer Station Wagon or Belvedere Suburban. 8 Taxi. 0 Fleet. ③ - Model Year. 1 1961
④ - Assembly Plant. 1 Plymouth (Detroit). 2 Dodge (Detroit). 5 Los Angeles. 6 Delaware. 7 St. Louis. 8 Wyoming. 9 Canada.
⑤ - Beginning vehicle number at each assembly plant regardless of car make or model.

ENGINE NUMBER: Stamped on right side of block below cylinder head opposite No. 1 cylinder. Number (example below) includes identification data.

① ② ③ ④ ⑤
R 22 ... 8 1

① - Year. R 1961.
② - Displacement. 22 225 cu. ins. 17 170 cu. ins.
③ - If this space blank, engine is standard. *For identifying marks see below.*
④ - Month Assembled. 8 August, etc.
⑤ - Day Assembled. 4 4th day, etc.

►*ALUMINUM ENGINE NOTE:* Engines with Aluminum block are identified by prefix "A" in engine serial number (AR-22 for aluminum engines, R22 cast iron engines).

►*ENGINE NUMBER MARKS: Identified as follows:*
"A" - All cylinder bores .020" oversize.
"Maltese Cross" - One or more bearing journals .001" undersize. *See "Connecting Rods" & "Crankshaft" below.*
"X" and "Maltese Cross" - One or more bearing journals .010" undersize. *See "Connecting Rods" and "Crankshaft" below.*
"♦" - One or more valve lifters .008" oversize. *See "Valve Lifters" below.*

►*HARD COLD WEATHER START CORRECTION (Carburetors with Choke Vacuum Unloader Piston in Air Horn):* Hard starting caused by choke piston sticking. To correct, remove gum formation by removing air cleaner and squirting Carburetor Cleaner, Lacquer Thinner or Alcohol through piston link opening, while operating choke valve to flush out gum formation.

►*HARD STARTING & STALLING IN WET WEATHER CORRECTION:* Caused by moisture entering coil and distributor towers. To correct, install Coil Secondary Cable Package Part No. 2084428 consisting of cable, nipples and terminals. In this package, the distributor nipples are 1.315" long (were 1.19") and terminal nipples are 1.50" and are redesigned neoprene.

►*POOR FUEL ECONOMY OR PERFORMANCE CORRECTION:* Caused by use of incorrect gasket between carburetor and intake manifold or incorrect installation of correct gasket. Use Gasket Part No. 2205582 with single small hole to left front of car.

TUNE-UP

COMPRESSION PRESSURE: 130-160 lbs. at 150 RPM (plugs removed). Maximum variation between cylinders 20 lbs.

VACUUM READING: 19.5" at idle speed.

VALVE TAPPET CLEARANCE: .010" Intake, .020" Exhaust, Hot.

►*ALUMINUM ENGINE NOTE:* When setting tappet clearance, after engine reaches normal temperature, remove rocker arm cover and operate engine for additional 5 minutes at 550 RPM before making adjustments.

MANIFOLD HEAT CONTROL: Thermostatic coil spring type. Valve must operate freely. When installing, coil spring should be installed so that about one full turn (355° wrap) is required to hook outer end around stop stud.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .035".

Spark Plugs - Autolite AG-52 (AG-82 on Taxi). "Long Reach" 14 mm type. Plugs are installed in aluminum sleeves which serve as plug gaskets. Torque to 30 ft. lbs.

COIL: Autolite No. 200567 or Essex No. 62-160-2.
Ignition Current - 1.9 amps. idling, 3.0 amps. stopped.
Resistor - Chrysler No. 2095501. 0.6 ohms. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

DISTRIBUTOR: Chrysler Own. No. 2095270 (225" Eng.), No. 1889750 (170" Eng. on Plymouth Taxi).
Condenser - Chrysler 1818757. Capacity .25-.285 mfd.
Contact Point Set - Chrysler No. 1838643.
Breaker Gap - .017-.023".
Cam Angle - 36-42°.
Breaker Arm Spring Tension - 17-21.5 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance - 2095270

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	250-450	0	500-900
0-2	450	0-4	900
5.5-7.5	1000	11-15	2000
10.5-12.5	2200	21-25	4400

Automatic Advance - 1889750

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	325-475	0	650-950
0-2.5	475	0-5	950
6-8	820	12-16	1640
11.5-13.5	1925	23-27	3850

Vacuum Spark Cntrl: Integral type.

Vacuum Advanc - 2095270

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4.9-6.9
4.5-7	9-14	9.5
7.8-10.3	15.6-20.6	12

Vacuum Advanc - 1889750

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4.7-7.1
5.5-8	11-16	11
9.5-12.5	19-25	14.5

IGNITION TIMING

Transmission Type	Ignition Setting
Synchro-mesh	2½° BTDC
TorqueFlite 6	Ⓒ 5° BTDC

Ⓒ - Supersedes previous setting of 2½° BTDC for improved performance and economy.

►*TIMING NOTE:* Set timing with vacuum line disconnected at distributor and engine idling at 500 RPM with transmission in Neutral.

Timing Mark - Timing tab on chain case cover marked "O" and "10" with 5° marks before and after "10". Align timing mark on vibration damper with correct mark on tab.

CARBURETOR

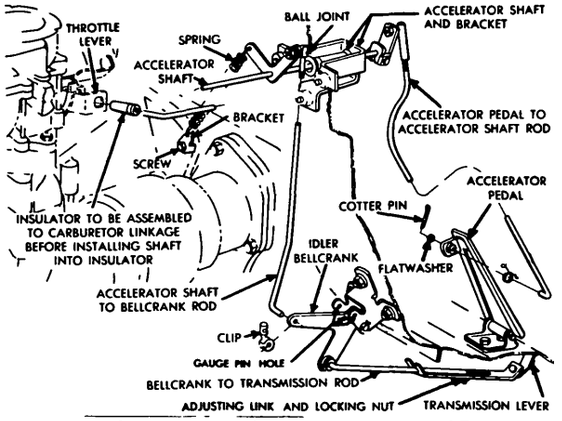
►*CARBURETOR APPLICATION: One Carter BBS single barrel carburetor used.*

►*IDLE SETTING CAUTION:* When making Idle Speed & Mixture adjustments, observe the following: 1) Turn headlights on to High Beam to compensate for alternator load (alternator charges battery at idle speed). 2) On automatic transmission cars, unsnap ball joint connection at accelerator shaft bellcrank so transmission internal stop will not interfere with carburetor throttle lever. When adjustments completed, screw ball joint up or down until ball on bellcrank will mate exactly with socket.

THROTTLE LINKAGE ADJUSTMENT: Loosen locknut on sliding link at idler bellcrank-to-transmission rod and unsnap ball joint connection of accelerator shaft rod at accelerator shaft bellcrank. Insert a 3/16" diameter rod through holes in idler bellcrank bracket and lever, move transmission lever forward against transmission internal stop and tighten sliding link locknut. Remove 3/16" rod. Adjust accelerator shaft-to-bellcrank rod by rotating ball joint socket so socket will mate exactly with ball (pull upward on rod to take up all freeplay in linkage). Snap ball joint connection together. Unsnap accelerator pedal-to-accelerator shaft bellcrank rod and rotate threaded end of rod to obtain accelerator pedal angle of 114° between floor pan and flat face of pedal. Connect rod.

CARTER BBS

Carter BBS. Used as follows:



Model	Carburetor No.
Std. Synchro-mesh	BBS 3098S
Std. TorqueFlite	BBS 3099S
Closed Crankcase Vent. All Trans.	BBS 3128S
Taxi All Trans.	BBS 3097S
Taxi All Trans. Closed Crankcase Vent.	BBS 3129S

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Idle Setting - ½-1½ turns open (3098S, 3099S, 3128S), 1-2 turns open (3097S, 3129S). With engine at normal operating temperature, adjust idle mixture screw for highest RPM, then turn mixture screw in until speed starts to drop. Turn screw out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.

TORQUEFLITE 6 THROTTLE LINKAGE

Idle Speed - 550 RPM with headlights on High Beam, and accelerator shaft rod ball joint unsnapped, see *"Cautions"* above.

Float Level - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant float holds float lip firmly against fuel inlet needle (On Car), float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to crown of floats at center should be 7/32" (3098S, 3099S, 3128S), 9/32" (3097S, 3129S) measured with Gauge T109-239. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float level setting will result.*

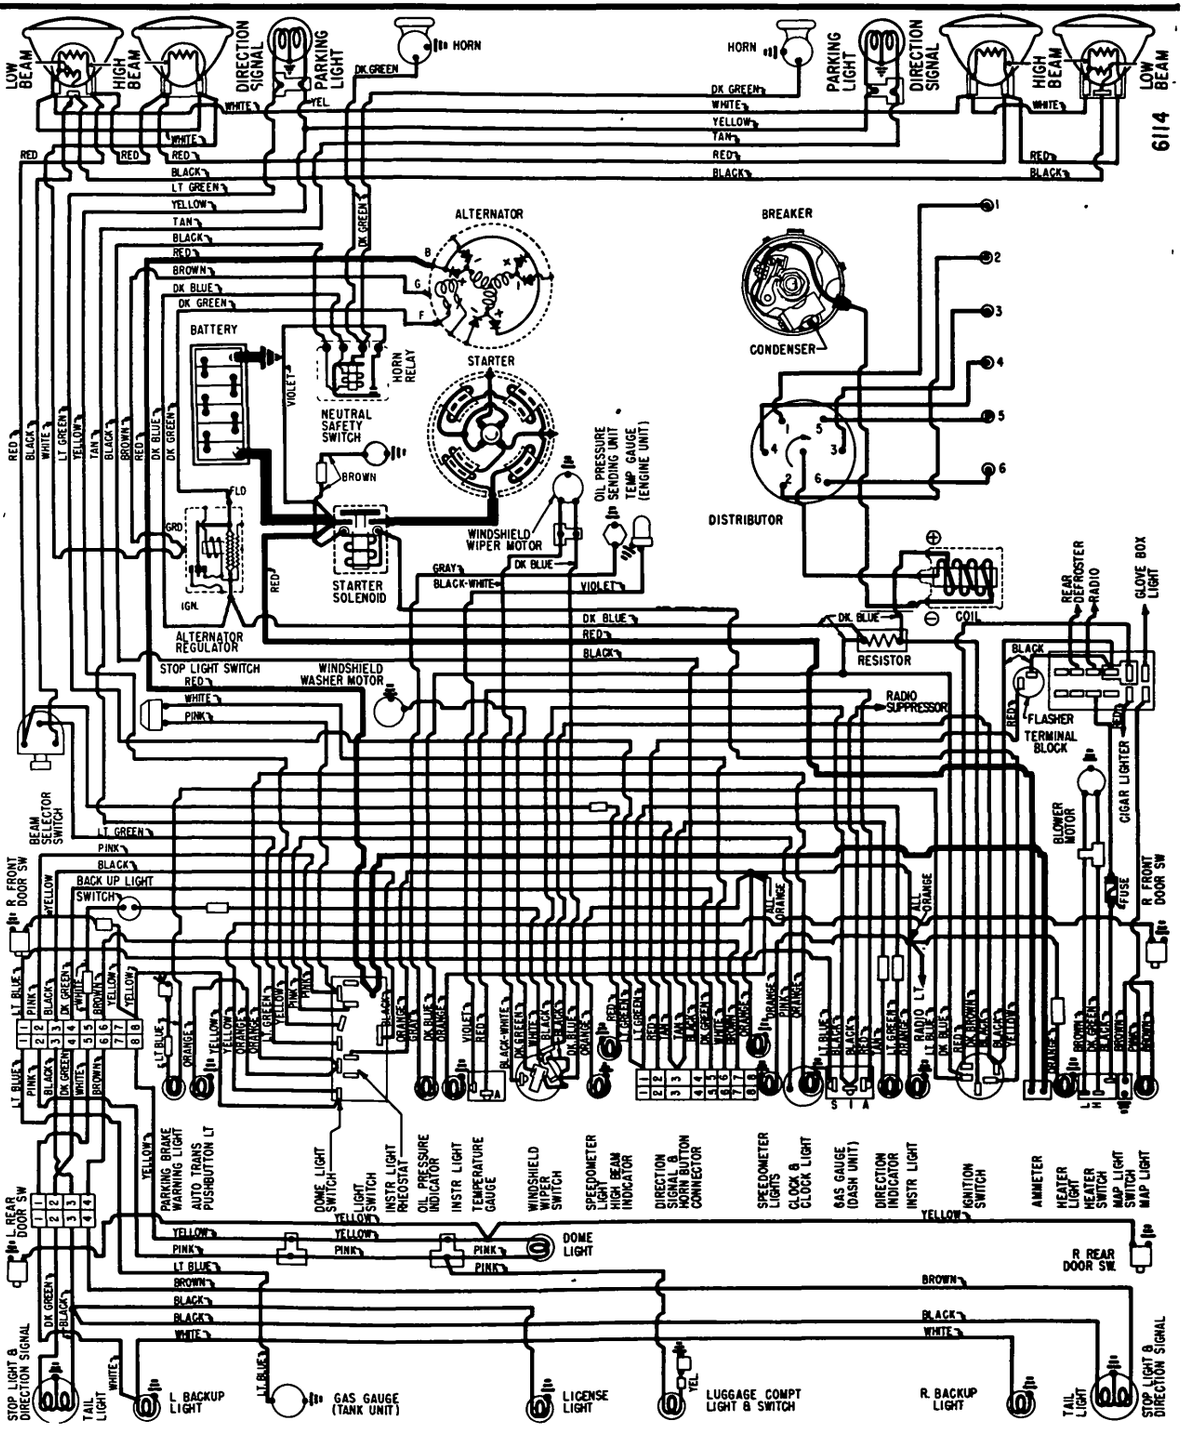
Accelerating Pump - Install throttle connector rod in center hole (3098S, 3099S, 3128S), upper hole (3097S, 3129S) of throttle lever.

Fast Idle : 1800 RPM (Synchro-mesh Trans.), 1600 RPM (Auto. Trans.) with adjusting screw on second step of fast idle cam.

Automatic Choke: "Cross-Over" type. Set at index.

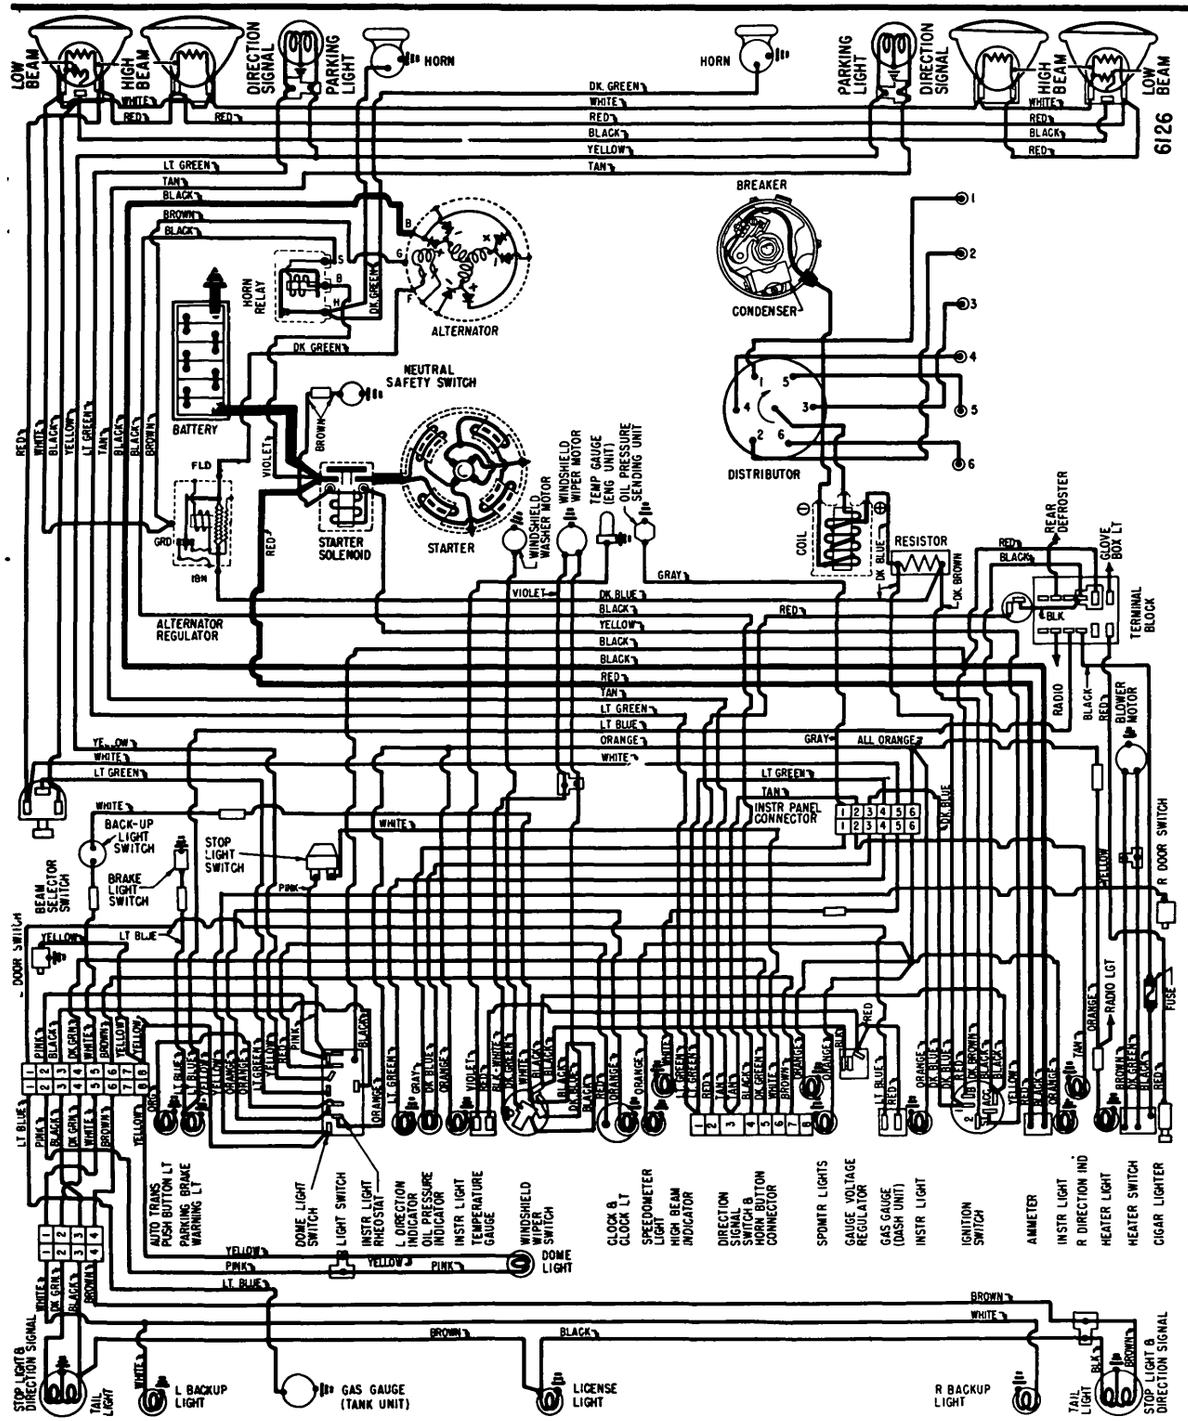
Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Carter BBS Carburetors" in Carburetion Section.*



CARB. EQUIPMENT

Fuel Pump: Carter M2996S. Mechanical type.
Pressure - 3½-5 lbs. at 500 RPM.



Fuel Filter: Disposable paper type, located in fuel line between pump and carburetor. Replace every 10,000 miles.

Gasoline Gauge (Dodge Dart): Constant Voltage type with voltage regulator inside gauge.
Dash Unit - Dodge No. 2197059.
Tank Unit - King-Seeley No. 59200 (Pass.), 59210 (Sub.), 59205 (Sp.Tank).

CONTINUED ON NEXT PAGE

DODGE 6 CYL. WIRING DIAGRAM

PLYMOUTH 6 CYL. WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Gas lin Gaug (Plymouth): King-Seeley Electric "CV" (Constant Voltage) type with separate Voltage Regulator King-Seeley No. 57918.
Dash Unit - King-Seeley No. 57890.
Tank Unit - King-Seeley No. 59200 (Pass.), 59210 (Sub.), 59205 (Sp. Tank).

Air Cleaner: Paper element type, clean every 5,000 miles, replace element every 15,000 miles. More frequent servicing may be necessary under severe operation.

►*CLEANING CAUTION:* Remove filter element from housing. Blow compressed air gently from inside out (2" away) to remove dust particles. DO NOT tap these filters to loosen dirt and DO NOT immerse in any fluid.

BATTERY

Standard: Autolite 11-HS-50B r Willard MB-24-50 r Gould 11B-OE-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr. rate).
Optional: Autolite 11-HS-70B r Willard MB-27-70. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.

STARTER

Autolite MDT-7002. Armatur - Autolite N . 16-84.
Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 31-47 ozs.

Performanc Data.

Torque	RPM	Volts	Amperes
0 ft. lbs.	3600	10.0	56
8.5 ft. lbs.	Lock	4.0	350

Starting Switch: Dodge & Plymouth Part No. 2095607 (Synchro-mesh), No. 2095606 (Auto. Trans.). Magnetic switch controlled by Ignition & Starter Switch No. 2097628. Neutral Safety Switch No. 1704283 mounted mounted on transmission on automatic transmission cars.
Neutral Safety Switch Adjustment - *S e "TorqueFlit Six", "PowerFlite" & "TorqueFlite" in Transmission Section.*

ALTERNATOR

Chrysler Own. Three-phase A.C. unit with full-wave rectifier. Used as follows:

Model	Chrysl r N .
Standard	2095060
Special Equipment Heavy Duty	2095425

Rotation - Clockwise at drive end.
Rated Output - 35 amperes (2095060), 40 amperes (2095425).
Field Coil Draw - 2.38-2.75 amps. at 12 volts (alternator turned by hand); 2.97-3.43 amps. at 15 volts, 70°F & 750 Alternator RPM.
Checking & Adjusting - *Se "Chrysl r Alt rnat r & Regulator" in Electrical S ction.*

Belt Adjustment: Use Torque or Deflection methods as follows:

Belt Torque (Ft. Lbs.)		Belt D flecti n	
N w	Us d	N w	Us d
30	20	5/32"	1/4"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Chrysler Own N . 2095700 (All Mod ls). Field Control type. No Cutout Relay or Current Regulator.
Air Gap - .048-.052". **P int Gap** - .014-.016".
V ltage Setting - 13.7-14.3 volts at 70°F.
Ch cking & Adjusting - *See "Chrysler Alternator & R gulator" in El ctrical Section.*

MISC. ELECTRICAL

H adlights: 4-Headlight System.
El ctr nic Rear Vi w Mirror: *See Electrical Section.*
Lighting Switch Rem val: Disconnect battery. Pull switch knob out and rotate until flat on shaft is down. Push knob all the way in. Disconnect wires, press spring-loaded release button on top center of switch, and pull shaft and knob out of switch. Remove switch mounting bezel on instrument panel and remove switch.
St p Light Switch L cati n: Hydraulic type (early cars) located on forward end of hydraulic master cylinder. Mechanical type (later cars) mounted on brake pedal lever bracket.
Adjustment (Mechanical Type) - *NOTE* - Switch bracket mounting hole on brake pedal lever bracket is slotted for switch position adjustment. Adjust position of switch in slotted hole to "REAR" for Std. brakes, to "FRONT" for Power brakes.
Gaug H using Assembly (Dodge Dart): Removal - 1) Disconnect positive battery cable, tape jacket area with masking tape and remove eight instrument cluster to panel screws.
2) Raise panel slightly at center to release overlap (at center of gauge housing) and carefully pull gauge housing from panel recess by tilting cluster down to reach lamp sockets and connectors.
3) Disconnect wire connectors and lamp sockets and remove gauge housing.
Installati n - Reverse removal procedure.
Sp d meter (D dg): R m val - 1) Remove gauge housing, see above, then remove heater switch trim plate screw and remove trim plate and heater push buttons.
2) Remove transmission push button trim plate screws and remove trim plate and push buttons.
3) Work through gauge housing opening to remove two push button bracket and three heater switch and control bracket to upper instrument housing screws. *NOTE - DO NOT remov transmission push button or heater b zel.*
4) Remove five upper housing to lower housing screws and remove upper housing, speedometer and transmission push button and heater switch bezels as an assembly, by raising assembly straight up until bottom of speedometer clears lower housing. Remove assembly then remove speedometer to upper housing screws and remove speedometer.
Installati n - Reverse removal procedure.
Clust r & Speed m ter (Plymouth): Removal - 1) Disconnect negative battery terminal and remove four speedometer and instrument panel cover to base screws. *NOTE - Two screws ar located at front face of instrument clust r b z l and two screws attach speedometer and instrum nt pan l cover t speedomet r and instrum nt pan l at front corn rs of pan l and base (ne ach sid).* To remove panel cover raise front edge slightly to clear instrument cluster and carefully push the panel toward windshield to disengage retaining spring clips from speedometer and instrument panel base.
2) Disconnect high beam indicator wire, ammeter wires and lamp bulb and oil pressure light socket and bulb.
3) Remove four speedometer and instrument cluster and bezel to speedometer and instrument panel base screws. *NOTE - Two screws are located at rear of instrument clusters (one each side) and two screws attach cluster bezel to base at front of bezel. Remove cluster and bezel as an assembly.*
4) Disconnect speedometer cable and lamp connectors at speedometer head. Remove four speedometer to speedometer and instrument panel base screws and remove speedometer assembly.
Installation - Reverse removal procedure.
CIRCUIT BREAKERS: 22.5 Ampere - Headlights & High Beam Indicator. In headlight switch.
15 Ampere - Parking, Tail, Stop, Instruments & Interior lights. In headlight switch.
6 Ampere - Variable speed windshield wiper & Back-up lights. On wiper switch.
5 Ampere - Single speed windshield wiper & Back-up lights. On wiper switch.
FUSES: 20 Ampere - Heater. In feed wire.
7.5 Ampere - Radio. In feed wire.
1 Ampere - Clock. In feed wire.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*
ENGINE SPECIFICATIONS: Own. 6 Cyl., valve-in-head, inclined 30° to right, of same design used previously.
►*ALUMINUM ENGINE NOTE:* Aluminum (die-cast) block engine used in partial production. Specifications are same as for Cast Iron engine except as noted below.
►*ALUMINUM ENGINE NOTE:* Engine block is die cast aluminum with iron cylinder bore liners molded in block and with a cast iron cylinder head. This head carries the word "Special" cast between lifting pads on pads on left side. Use this head on either aluminum or cast iron block but do not use a cast iron engine cylinder head on an aluminum block. Cylinder head bolts are longer and are not interchangeable with bolts for cast iron engine. .Aluminum engine is identified by the Engine Code AR-22 followed by Eng. Ser. No.
►*ALUMINUM ENGINE SERVICE CAUTIONS: See "Aluminum Engine Service Cautions" in Chrysler Corp. Special Data.*
►*PLYMOUTH TAXI NOTE:* 170" Engine optional on this model. Specifications below apply to both engines (225" & 170").

Engine	Bore	Stroke	Displacement
225"	3.40"	4.12"	225 cu. ins.
170"	3.40"	3.12"	170 cu. ins.

Engine	Compr.Ratio	Rated HP	Developed HP
225"	8.2-1	27.7	145 at 4000 RPM
170"	8.2-1	27.7	101 at 4400 RPM

Compression & Vacuum R ading - *See TUNE-UP.*
►*170" ENGINE NOTE: F r all oth r 170" Engin Servic Data, see Dodge Lanc r & Valiant.*
►*ENGINE OIL LEAK AT DISTRIBUTOR CORRECTION:* A large "O" ring Part No. 2095740 and a small "O" ring No. 2095630 have been released for correction of oil leaks at distributor. To correct oil leak, remove distributor and remove cork gasket or early large "O" ring. Install small "O" ring on distributor housing against retainer flange then install large "O" ring. Reinstall distributor and set ignition timing.
►*ENGINE "CHUCKING" OR "HEAVY KNOCK" CORRECTION:* Chucking or heavy knock is caused by loose vibration damper (crack in damper hub). Replace damper making sure that keyway is aligned and that damper is square with shaft at time of installing.
OIL PAN REMOVAL: Remove tie rod at steering and idler arms. Support engine and remove front engine mounting-to-frame bolts, disconnect and remove left side support (connecting converter housing and cylinder block). Raise engine approximately 2". Drain crankcase. Remove oil pan bolts, lower pan and remove it toward the rear. *CAUTION: Do not turn oil pick-up tube and strainer out of position.*
►*OIL PAN INSTALLATION CAUTION (225" Eng.):* To minimize possibility of oil leaks at oil pan gasket, tighten retaining capscrews to specified torque and in following sequence: 1) Left rear. 2) 2nd. from right front corner. 3) 2nd from left front corner. 4) Right rear. 5 & 6) All along right and left side rails – either side first. 7) Remaining capscrews on rear edge. 8) Across front edge.
CYLINDER HEAD: Cast Iron Engine - Either the Std. Cast iron head or the "Special" cast iron head (Aluminum Eng.) may be used.
Aluminum Engine - Cast Iron Head with word "Special" cast between lifting pads on left side of head. Use only this head on Aluminum block.
See "Cylinder Head & Manifold" in Chrysler Corp. Special Data.
TIGHTENING TORQUES: *See "Tightening Specificati ns" in Chrysler Corp. Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, slipper type skirt. Thermally controlled by steel struts.
►*OVERSIZE CYLINDER BORE CAUTION:* Letter "A" (A or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates all cylinder bores and pistons are .020" Oversiz .
Weight - 16.3 ozs.
Removal - Pistons and rods removed from above.
Clearance - .0005-.0015" at top of skirt.
Fitting New Pistons - Use micrometers with piston and cylinder bore clean and dry and at 70°F. Measure piston at top of skirt at right angles to pin hole, measure cylinder bore halfway down and at right angles to crankshaft.
Installing Pistons - Notch in piston head must be toward front of engine. *See Rod Installation.*
Replacement Pistons: Furnished with pins in Std. size and .005", .020", .040" Oversize. *NOTE* - All pistons are machined to same weight.

PISTON PIN

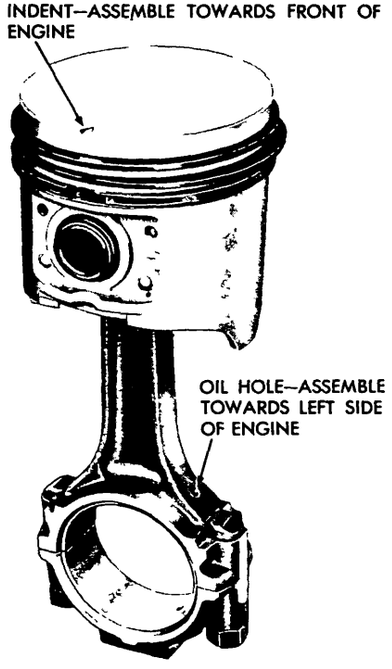
Press fit in connecting rod.
Diam ter - .9007-.9009". **Length** - 2.955-2.975".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pin Fit in Piston - .00045-.00075" clearance. Pin should be sliding fit in piston at 70°F.
Pin Fit in Rod - .0007-.0012" Interference fit. Special procedure and tools used for removal & installation. *See "Piston Pins" in Chrysler Corp. Special Data.*
Replacement Pins: Std. size only. Furnished as an assembly with new pistons.

PISTON RINGS



Compression rings are cast iron (No. 1 is taper twist, tin plated, No. 2 is reverse twist, lubrite coated). Oil ring is three-piece (two-chrome plated rails with stainless steel expander-spacer).

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0775-.0780"	.010-.020"	.0015-.003"
Oil	.1860-.1865"	.015-.055"	.0010-.003"

Installing Rings - Mark "Top" on compression rings must be toward top of engine.
Replacement Rings: Furnished in sets for oversize ranges as follows: Std. to .009", .020" to .029",.040" to .049".

CONNECTING ROD

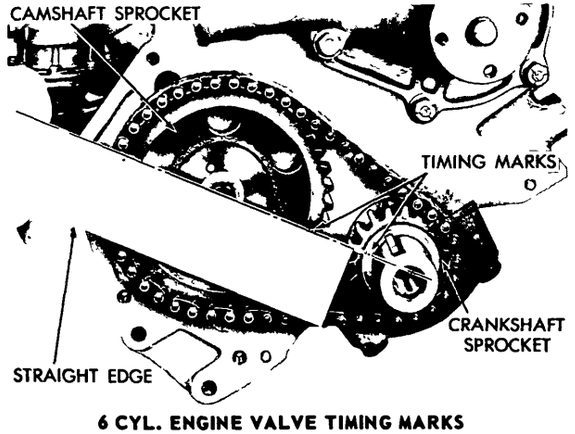
Length (Center-to-Center) - 6.699".
Weight - 27.34 ozs.
Crankpin Journal Diameter - 2.1865-2.1875". Taper and out-of-round limits .001".
►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE): See CRANKSHAFT below.*
Pin Bore in Rod - .8995-.9000".

6 CYL. PISTON ASSEMBLY

Clearance - .0005-.0015". Wear limit .0025".
Side Clearance - .006-.012".
Bearing Adjustment - None, replace bearings.
Installing Rods - Notch in head of piston must be to front of engine, oil squirt hole in lower end of rod must be toward left side of engine.
Replacement Bearings: Std. and .001", .002", .010", Undersize.

CRANKSHAFT

Journal Diameter - 2.7495-2.7505". Taper and out-of-round limit .001".
Bearing Type - Removable, precision type, lead-base babbitt on steel, exc. thrust bearing which is tin-based babbitt on steel.
►*ALUMINUM ENGINE MAIN BEARING NOTE:* Same as for cast iron engine except that oil feed holes in bearings are in a different location and require special inserts. *CAUTION - DO NOT use cast iron block original main bearing inserts in aluminum block.* Upper and lower bearing caps are case iron and are line bored in complete sets. If replacement is required, all four upper and lower main bearing caps must be replaced with a matched set for proper alignment. Identification numbers are stamped on upper caps and cast into lower caps. When upper and lower caps are installed, bearing tab slots should be on left side of engine.
►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*
.010" UNDERSIZE (All Main & Connecting Rod Journals) - Letter "B" (B or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates that ALL Main and Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - Letter (M - Main Journal, R - Connecting Rod Journal) and Number (designates particular journal) stamped on center counterweight of crankshaft indicate that particular journal is .001" Undersize and fitted with .001" thicker wall bearing insert.
►*MAIN BEARING NON-INTERCHANGEABILITY CAUTION:* Nos. 1 & 2 **upper** bearings are chamfered along right inside edge at tab end and are interchangeable. No. 4 **upper** bearing is not chamfered and is NOT interchangeable with other bearings *(NOTE* - This bearing identified by blue marking on edge). No. 3 **upper** and **lower** bearings are flanged and NOT interchangeable with other bearings. **Upper** and **lower** bearing halves are NOT interchangeable (upper bearings grooved, lower bearings plain). Nos. 1, 2, 4 **lower** bearings are interchangeable. *CAUTION - Use of No. 1 or 2 upper bearing in No. 4 position may cause oil leak, use of No. 4 upper bearing in No. 1 position would prevent proper lubrication of timing chain and sprockets.*
Clearance - .0005-.0015".
End Thrust - Taken by No. 3 (rear intermediate) flanged bearing. **Endplay** - .0035-.0085".
Replacement Bearings: Std. and .001", .002", .010" Undersize.
►*MAIN BEARING SERVICING NOTE:* Bearing caps are numbered and must be installed in correct position (not interchangeable).
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Corp. Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chrysler Corp. Special Data.*



CAMSHAFT

Journal Diameters - (1) 1.998-1.999", (2) 1.982-1.983", (3) 1.967-1.968", (4) 1.951-1.952".
Bearings (Cast Iron Eng.) - Lead - based babbitt on steel.
Bearings (Aluminum Eng.) - Bearing inserts not used. Camshaft bearing journals run directly in finished bores in block.
Clearance - .001-.003". **Wear Limit** - .005".
End Thrust: Taken by rear face of sprocket hub on front face of block. No thrust plate used.
Timing Chain: Side guide type. **Width** .88", **Pitch** .50", **Length** 50 links. Replace chain when slack as measured on rim of camshaft sprocket exceeds 11/64" (hold) crankshaft sprocket stationary, use torque wrench to turn camshaft in both directions applying 30 ft. lbs. turning torque (if cylinder head installed), 15 ft. lbs. turning torque (if head off).
Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Corp. Special Data.*
Tappet Clearance: **(Cast Iron Eng.)** - .010" Intake, .020" Exhaust. Hot.
(Aluminum Eng.) - Same as for Cast Iron Eng. *See below.*
►*ALUMINUM ENGINE NOTE:* When setting tappet clearance, after engine reaches normal temperature, remove rocker arm cover and operate engine for an additional 5 minutes at 550 RPM before making adjustments.
Camshaft Setting: Marks on sprockets must be adjacent and in line across shaft centers.
Engine Front Cover Installation: *See "Engine Front Cover" in Chrysler Corp. Special Data.*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Corp. Special Data.*

VALVES

Valve	Head Diam.	① Stem Diam.	Length
Intake	1.615-1.625"	.372-.373"	4.774"
Exhaust	1.355-1.365"	.371-.372"	4.797"

CONTINUED ON NEXT PAGE

6 CYL. ENGINE VALVE TIMING MARKS

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Valve	Seat Angle④	Lift	Stem Clearance
Intake	45°	.375"	②.001-.003"
Exhaust	45°	.360"	③.002-.004"

① - Std. Also furnished .005", .015", .030" Oversize. ② - Wear Limit .004". ③ - Wear Limit .006". ④ - Valve face angle 45° (Int.), 47° (Exh.).

Valve Seat Width: 5/64-3/32" Int., 3/64-1/16" Exh.

Valve Stem Oil Seals: Cup type seals used on all valve stems (long seal on intake, short seal on exhaust).

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .005", .015", .030" Oversize. Use Reamer Tool No. C-3433 (.005" O.S.), C-3430 (.015" O.S.), C-3427 (.030" O.S.) in sequence.

Valve Springs: Free Length 2".

Valve Spring Specifications

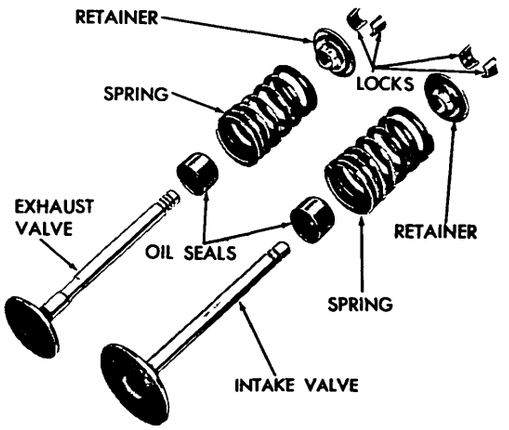
Valve	Pressure	Length
Closed	68-76 lbs.	1 11/16"
Open	160-172 lbs.	1 5/16"

Valve Spring Installation - Valve spring ends must be square within 1/16". Check installed height of spring which must not exceed 1 11/16" (measure from face of spring seat in cylinder head to lower face of spring retainer) If height greater, install 1/16" spacer in head counterbore to bring spring height within limits of 1 5/8" to 1 11/16"

Valve Lifters: Barrel type, removed from above.

Rocker Arm Assembly: See *"Valve System" in Chrysler Corp. Special Data.*

VALVE TIMING



See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

Intake Valves - Open 8° BTDC. Close 44° ALDC.

Exhaust Valves - Open 48° BLDC. Close at TDC.

Valve Timing Check - Turn crankshaft until No. 6 exhaust valve is closing and No. 6 intake valve is opening. Install dial indicator so pointer contacts No. 1 intake valve spring retainer parallel to axis of valve stem. Turn No. 1 intake valve adjusting screw one full turn to remove all lash, zero dial indicator and rotate crankshaft clockwise (normal running direction) until valve has lifted .018". Timing on timing tab should read from 12° BTDC to TDC.

6 CYL. VALVE ASSEMBLY

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under "OILING SYSTEM" in Chrysler Corp. Special Data.*

►*ALUMINUM ENGINE OILING SYSTEM NOTE:* Same as for Cast Iron Eng. except that oil to main bearings passes through upper main bearing caps, then to bearings.

Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 45-60 lbs. at 40-50 MPH.

Oil Pressure Relief Valve - Located in pump body.

►*RELIEF VALVE SPRING NOTE:* Three types of springs available. Replace with same color spring, *see "Oiling System" in Chrysler Corp. Special Data.*

Oil Pressure Indicator: Indicator light on Instrument panel operated by Oil Pressure Switch, Autolite No. 14272A. On oil pump on right side of block.

Oil Pump: Rotor type. On right side of crankcase.

Overhaul - *See "Oiling System" in Chrysler Corp. Special Data.*

Oil Filter: Full-flow type. Replace filter element every 4,000 miles, to correspond with oil changes.

Crankcase Ventilation: (Standard Cars) - Filter in filler cap (air intake) and outlet vent tube extending from rocker arm cover to right rear of engine. Wash filler cap in kerosene and re-oil every 5000 miles or more often in dusty areas.

Positive Crankcase Ventilation Cars - Vacuum tube connects outlet breather cap with lower part of throttle body. A ventilation valve is located in outlet vent cap and regulates crankcase ventilation. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 13 qts. Add 1 qt. for heater.

►*AIR CONDITIONER OPERATION CAUTION:* Engine cooling system must be protected to a temperature of 15°F (above zero) for summer operation.

►*FAN-RADIATOR CORE CLEARANCE CAUTION:* Clearance should be ¾"±¼". Use thinner fan spacer, Part No. 2120510 to correct.

Pressure Valve: 14 lb. radiator cap (All Models).

Thermostat: Pellet type. In water outlet connection on cylinder head (160°F) Dodge & Plymouth No. 2129206, (180°F) No. 2129205.

Water Pump: Sealed ball bearing, packless type. No lubrication required.

See "Cooling System" in Chrysler Corp. Special Data.

Pump Removal - Drain cooling system, remove shroud (Air Conditioned Cars), loosen fan belt and idler (Air Conditioned Cars). Remove fan spacer and pulley. Remove retaining bolts and washer and remove pump.

Temperature Gauge: (Dodge) - Constant voltage type with voltage regulator inside gas gauge for instruments.

Dash Unit - Dodge No. 2197060.

Engine Unit - King-Seeley No. 44265.

Temperature Gauge (Plymouth): King-Seeley ("CV") Constant Voltage with separate Voltage Regulator King-Seeley No. 57918.

Dash Unit - King-Seeley No. 57891.

Engine Unit - King-Seeley No. 44265.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 2,000 miles, drain and refill every 10,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level - Bring engine and transmission to normal operating temperature with parking brake applied. Push all selector buttons in turn to insure fluid distribution, then check fluid level in "N" with engine idling. Maintain fluid level between "Add 1 Pint" and "Full" marks on dipstick. *CAUTION* - Dipstick on 1961 models is 2½" shorter than on 1960 models (do not intermix).

NOTE - If fluid level checked with transmission cold, level should be at "Add 1 pint" mark or slightly below.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, working under car, see "Jacking & Hoisting Precautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

DODGE

Model	Model Identification
Polara	RD1-L

DODGE DART

Seneca	RD4-L
Pioneer	RD4-M
Phoenix	RD4-H

PLYMOUTH

Savoy; Deluxe Suburban	RP2-L
Belvedere; Custom Suburban	RP2-M
Fury; Sport Suburban	RP2-H

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
5 1 1 2 100001

① - Car Make. 3 Plymouth V8. 5 Dodge & Dodge Dart V8.
② - Model Series. 1 Seneca or Savoy. 2 Pioneer or Belvedere. 3 Phoenix or Fury. 4 Polara. 5 Seneca Station Wagon or Savoy Suburban. 6 Pioneer Station Wagon or Belvedere Suburban. 7 Fury Suburban. 8 Taxi. 9 Police. 0 Fleet.
③ - Model Year. 1 1961.
④ - Assembly Plant. 1 Plymouth (Detroit). 2 Dodge (Detroit). 5 Los Angeles. 6 Delaware. 7 St. Louis. 8 Wyoming. 9 Canada.
⑤ - Beginning vehicle number at each assembly plant

ENGINE NUMBER: (Exc. 318" Engine) - Stamped on boss on top right side of cylinder block just behind water pump. Number (example below) includes identification data.

① ② ③ ④ ⑤
R 36 ... 8 4

① - Year. R 1961.
② - Displacement. 36 361 cu. in., 38 383 cu. in., 41 413 cu. in.
③ - If this space blank, engine is standard. *For identifying marks see below.*
④ - Month Assembled. 8 August, etc.
⑤ - Day Assembled. 4 4th day, etc.

318" Engine: Stamped on front face of left hand cylinder block. Number (example below) includes identification data.

① ② ③
R 318 0001

① - Year. R 1961.
② - Engine Displacement. 318 318 cu. ins.
③ - Beginning sequence number.

►*318" ENGINE NUMBER NOTE: To identify marks following the engine number, see "Engine Number Marks"*

►*ENGINE NUMBER MARKS: Identified as follows:*
"A" - All cylinder bores .020" oversize.
"Maltese Cross" - One or more bearing journals .001" undersize. *See "Connecting Rods" and "Crankshaft"*
"X" and "Maltese Cross" - One or more bearing journals .010" undersize. *See "Connecting Rods" and "Crankshaft" below.*
"♦" - One or more valve lifters .008" oversize. *See "Valve Lifters" below.*
"SP" - Special Police cars. "HP" - High Performance

TUNE-UP

►*HARD COLD WEATHER START CORRECTION (Carburetors with Choke Vacuum Unloader Piston in Air Horn):* Hard starting caused by choke piston sticking. To correct, remove gum formation by removing air cleaner and squirting Carburetor Cleaner, Lacquer Thinner or Alcohol through piston link opening, while operating choke valve to flush out gum formation.

►*HARD STARTING - STALLING IN WET WEATHER CORRECTION:* Caused by moisture entering coil and distributor towers. To correct, install Coil Secondary Cable Package Part No. 2084428 consisting of a cable, nipples and terminals. In this package the distributor nipples are 1.315" long (were 1.19") and terminal terminal nipples are 1.50" and are redesigned neoprene.

►*318" ENGINE (2-BARREL CARB.) HARD START CORRECTION:* Caused by improperly positioned air cleaner. To index air cleaner properly, place loop end of clamp so it is located on right side 2" to rear of center line of air cleaner.

COMPRESSION PRESSURE: 135-165 lbs. (318" & 361"), 150-180 lbs. (383") at 150 RPM (plugs removed, throttle wide open). Maximum variation between cylinders 20 lbs. (318" & 361"), 25 lbs. (383" & 413").

VACUUM READING: 19.5" at idle speed.

VALVE TAPPET CLEARANCE: 318" .010" Intake, .018" Exhaust, Hot.

361", 383" & 413" - Zero lash, hydraulic lifters. *NOTE* - On High Performance engines with Mechanical Lifters, .016" Intake, .028" Exhaust, COLD.

MANIFOLD HEAT CONTROL: Thermostatically controlled valve located at exhaust manifold outlet on right side of engine. Valve must operate freely (lubricate with special lubricant, Part No. 1879318). Coil spring should have approximately ¾ turn wrap with manifold heat control in closed position. *RAM MANIFOLD NOTE - Coil should have approximately 182° wrap counterclockwise on right manifold, clockwise on left manifold.*

►*RAM MANIFOLD HEAT CONTROL VALVE NOTE:* Two heat control valves used, one in each cylinder bank exhaust manifold outlet. When valve is closed, exhaust gases are diverted through bypass pipe around hot spot in intake manifold.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-up" for ignition or carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".
Spark Plugs - Autolite A42 (318" & 361" with 2-Bbl. Carb.), A32 (All Others). 14 mm. Torque to 30 ft. lbs.

COIL: Autolite No. 200567 or Essex No. 62-160-2 (Std.), No. 62-160-3 (Ram Induction).
Ignition Current - 1.9 amps. idling, 3.0 amps. stopped.
Resistor - Chrysler No. 2095501. 0.6 ohms. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

DISTRIBUTOR: Chrysler Own & Autolit. Used as follows:

Engine	Distributor No.
318" 2-Bbl. (Synchro-mesh)	Chrysler 2095647
318" 2-Bbl. (Auto. Trans.)	Chrysler 1838505
318" 4-Bbl. (All Trans.)	Chrysler 1889710
361" 2-Bbl.	Autolite IBP-4005E
361" & 383" (Exc. Ram Ind.)	Autolite IBS-4006F
383" (Ram Induction)	Autolite IBS-4006E
413" (Exc. Ram Ind.)	IBS-4006-F
413" (Ram Induction)	IBS-4006-E

NOTE - "IBS" distributors are double breaker type.
Condenser - Autolite No. 2-32 (Chrysler No. 1818757). Used on all distributors. **Capacity** - .25-.285 mfd.
Contact Point Set - Chrysler No. 1838643 (Chrysler Distr.), Autolite No. 1-47 (IBP), No. 1-43 (IBS).
Breaker Gap - .014-.019".
Cam Angle (Single Breaker) - 27-32° with vacuum line disconnected.
Cam Angle (Double Breaker) - 27-32° (single set of points), 34-40° (both sets operating together).
Breaker Arm Spring Tension - 17-21.5 ozs.
Rotation - Counterclockwise viewed from above.

CARBURETOR

►*CARBURETOR APPLICATION: Carter and Stromberg carburetors used as follows:*

Engine	Carburetor
318" Std.	One Carter BBD or Stromberg WW 2-Bbl.
318" Power Pack	One Carter AFB 4-Bbl.
361" Dodge Std.	One Stromberg WWC 2-Bbl.
361" Dodge CCV ①	One Carter BBD 2-Bbl.
361" High Performance	One Carter AFB 4-Bbl.
383", 413", High Perf. & Police....	One Carter AFB 4-Bbl.
383", 413" Police (2 Carbs.)	②Two Carter AFB 4-Bbl.
313", 413" High Perf. & Police....	③Two Carter AFB 4-Bbl.

① - With Closed Crankcase Ventilation.

② - Carburetors mounted front & rear on a single manifold.

③ - Ram Induction Manifold.

►*IDLE SETTING CAUTIONS:* When making Idle Speed & Mixture adjustments, observe the following: 1) Turn headlights on to High Beam to compensate for alternator load (alternator charges battery at idle speed). 2) On automatic transmission cars (except Ram Induction), loosen nut on sliding link of carburetor-to-bellcrank rod so transmission internal stop will not interfere with carburetor throttle lever. When adjustments completed, move carburetor throttle rod to rear against its stop and tighten locknut.

THROTTLE LINKAGE ADJUSTMENT (EXCEPT RAM INDUCTION): Loosen locknuts on carburetor throttle rod and on transmission throttle rod. Insert a 3/16" diameter rod 10" long into holes in accelerator shaft brackets and lever. Move transmission throttle lever forward against its stop and tighten transmission throttle rod locknut. Disconnect accelerator pedal rod at one end and adjust rod to give accelerator pedal angle of 113-115°. Remove 3/16" rod. Make sure carburetor is in slow idle, move carburetor throttle rod rearward against stop and tighten carburetor throttle rod locknut.

THROTTLE LINKAGE ADJUSTMENT (RAM INDUCTION): Bring engine to normal operating temperature with carburetors off fast idle and transmission in "N", then proceed exactly as follows:

1) Loosen locknuts on transmission throttle rod and on bellcrank-to-accelerator shaft rod. Insert a 3/16" diameter rod into holes in accelerator shaft bracket and lever. Move transmission throttle lever forward against its stop and tighten transmission throttle rod locknut.

2) With accelerator pedal disconnected from accelerator shaft rod, adjust length of rod so accelerator pedal is 114° to horizontal measured on flat face of accelerator pedal. Reconnect rod and remove 3/16" diameter rod from accelerator shaft bracket.

3) Loosen locknuts on both right and left carburetor-to-bellcrank rods and back off anti-stall dashpot plunger sufficiently so bellcrank will pivot (hold dashpot pushrod when turning setscrew to prevent damage to diaphragm). Pivot bellcrank so 3/16" diameter rod can be inserted through hole in bellcrank and into locating hole in intake manifold. Make sure choke valves are open, fast idle cams released and throttle valves are closed on both carburetors. Tighten carburetor-to-bellcrank rod locknuts and remove 3/16" diameter rod.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Now push adjusting link on bellcrank-to-accelerator shaft rod rearward until stop is felt and tighten adjusting link locknut.

4) Start engine and adjust idle speed to 725-750 RPM with engine warm and transmission in neutral.

5) Adjust anti-stall dashpot as follows: Disconnect vacuum tube to anti-stall dashpot and tape open end of tube to prevent air leaks. Anti-Stall plunger will extend and increase engine speed. Adjust plunger length so that engine speed is no higher than 1500 RPM. Reconnect vacuum tube (engine idle speed should return to 725-750 RPM).

CARTER BBD

Carter BBD. Used as follows:

Engine	Carter Carburetor No.
318" Dart & Plymouth (Synchro-mesh)	BBD 2921S
318" Dart & Plymouth (Auto. Trans.)	BBD 2922S
361" Dodge (Closed Crankcase Vent.)	BBD 3132S

NOTE - Dart & Plymouth with Closed Crankcase Ventilation use Stromberg WW (following).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - 1/8-1 1/2 turns open (3132S); 1 turn open (2921S, 2922S). With engine at normal operating temperature, adjust idle mixture screws for highest RPM, then turn in until speed drops. Turn out just enough to recover lost engine speed. Readjust idle speed screw for correct engine idle speed.

Idle Speed - 500 RPM Std., 550 RPM (2921S, 2922S), 575 RPM (3132S) Air Cond. with headlights on high beam and carburetor throttle rod locknut loosened, see *"Cautions" above.*

Float Level - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant floats hold float lip firmly against fuel inlet needle (On Car), and with float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to crown of floats at center should be 9/32" measured with Gauge T109-239. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float level setting will result.*

Accelerating Pump - Install connector rod in center hole (medium stroke) of throttle lever. On 2921S & 2922S, if connector rod moved to other holes, bowl vent clip must be changed correspondingly.

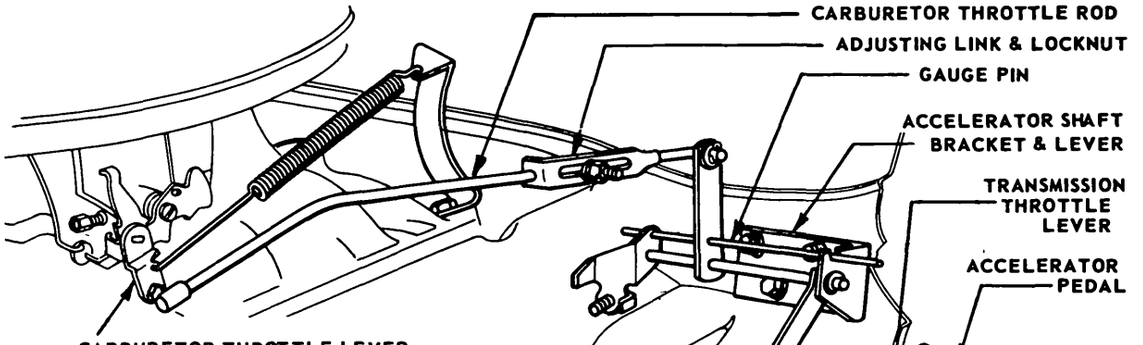
Fast Idl (2921S, 2922S): 1400 RPM with fast idle adjusting screw aligned with index mark on cam.

Fast Idl (3132S): 1375-1425 RPM with fast idle adjusting screw touching top step of fast idle cam.

Automatic Ch k : "Cross-Over" type. Set at index.

Throttl Linkag Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter BBD Carburetors" in Carburetion Section.*



STROMBERG WW 2-BARREL

Stromberg WW. Used as follows:

Engine	Stromberg Code No.
318" Dart & Plymouth (Synchro-mesh)	15-43
318" Dart & Plymouth (Auto. Trans.)	15-44
318" Dart & Plymouth (Closed Crankcase Vent.)Ⓒ	15-45

Ⓒ - All Transmissions.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

CARBURETOR THROTTLE LEVER

Idle Setting - 1¼ turns open. With engine at normal operating temperature, adjust idle mixture screws for highest RPM, then turn mixture screws in until speed starts to drop. Turn screws out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.

Idle Speed - 500 RPM (550 RPM with Air Cond.), with headlights on high beam and carburetor throttle rod locknut loosened, see *"Cautions" above.*

Float Level - With main body inverted and float hanging freely and float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to top of float at center should be 7/32" measured with Gauge 73725. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float level setting will result.*

Accelerating Pump - Install connector rod in center hole (medium stroke) of throttle lever. If connector rod moved to other holes, bowl vent clip must be changed correspondingly.

Fast Idle: 1250 RPM with fast idle adjusting screw contacting top step of fast idle cam.

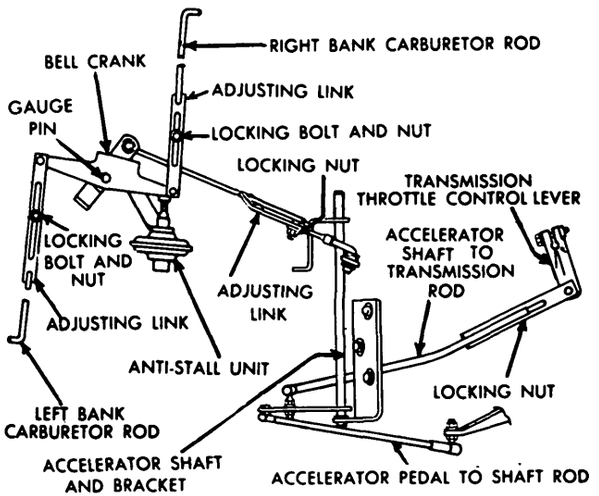
Automatic Choke: "Cross-Over" type. Set at index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg WW (Buick, Dodge, Plymouth) Carburetors" in Carburetion Section.*

STROMBERG WWC 2-BARREL

Stromberg WWC, Code 3-188A (361" Eng., Dodge, All Trans.). *NOTE - Cars with Closed Crankcase Ventilation use Carter BBD (above).*



►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - 1/2-5/8 turns open. With engine at normal operating temperature, adjust idle mixture screws for highest RPM, then turn mixture screws in until speed starts to drop. Turn screws out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.

Idle Speed - 500 RPM (550 RPM with Air Cond.) with headlights on high beam and carburetor throttle rod locknut loosened, see "Cautions" above.

Float Level - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant floats holds float lip firmly against fuel inlet needle (On Car), float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to top of float at center should be

THROTTLE LINKAGE (EXC. RAM INDUCTION)

THROTTLE LINKAGE (RAM INDUCTION)

1/8" or use Gauge 73725. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip of fuel inlet needle as incorrect float level setting will result.*

Accelerating Pump - Install connector rod in center hole of pump arm.

Fast Idle: 1375-1425 RPM with fast idle adjusting screw contacting top step of fast idle cam.

Automatic Ch k : "Cross-Over" type. Set 1 notch rich.

Ⓒ - With Closed Crankcase Ventilation.
② - Not used on Plymouth.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Setting - For initial idle screw setting, see table below. With engine at normal operating temperature, adjust idle mixture screws for highest RPM, then turn mixture screws in until speed starts to drop. Turn screws out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.

Idle Mixture Screw Setting

Carburetor	Idle Screw Opening
3103S, 3131S	¾-2¾ turns
3105S, 3106S, 3140S, 3152S, 3133S	¾-2¼ turns
2968S	⅛-1¾ turns

Idle Speed - 500 RPM (550 RPM with Air Cond.) with headlights on high beam and carburetor throttle rod locknut loosened, *see "Cautions" above.*
Throttle Linkage Adjustment: See CARBURETOR above.
►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL
(Ram Induction With Two Carburetors)

Carter AFB-2903S (All Rams), AFB-3084S (Short Ram) 383", 413" Eng. Two carburetors used, one each side of engine.

►*MANIFOLD FUEL DISTRIBUTION: RIGHT carburetor feeds left bank cylinders. LEFT carburetor feeds right bank cylinders.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air Bypass screw on throttle body used to adjust idle speed. Throttle valves are normally closed on slow idle.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw setting. *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*
Throttle Linkage & Carburetor Interconnecting Linkage Adjustment: See CARBURETOR above.
►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL
(Front & Rear Carburetors)

Carter AFB, No. 2790S (Front), 2791S (Rear) used in Plymouth 383" Engine Special Police Package.

Interconnecting Linkage Adjustment - Both front and rear carburetor levers should operate freely and in same plane. Correct either bent or damaged levers. *NOTE* - Install interconnecting rod with slotted end connected to **lower hole** in **front** carburetor throttle lever, and end connected at **top hole** of **rear** carburetor throttle lever. Hold **rear** carburetor throttle wide open (choke in full open position) and adjust slotted end of rod so **front** carburetor throttle valves will also be in wide open position. Tighten locknut and check operation. Interconnecting rod must rotate slightly on pivots without bind in any position.

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air Bypass screw on throttle body used to adjust idle speed. Throttle valves are normally closed on slow idle.*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw setting. *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*
Throttle Linkage Adjustment: See CARBURETOR above.
►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter M2999GS. Mechanical type.
Pressure - 3½-5 lbs. at 500 RPM.
Fuel Filter: Disposable paper type, located in fuel line between pump and carburetor. Replace every 10,000 miles.
Gasoline Gauge: (Dodge): Constant Voltage type with voltage regulator in gauge.
Dash Unit - Dodge No. 2197059.
Tank Unit - King-Seeley No. 59200 (Pass.), 59210 (Sub.), 59205 (Sp. Tank).
Gasoline Gauge (Plymouth): King-Seeley Electric "CV" (Constant Voltage) type with separate Voltage Regulator King-Seeley No. 57918.
Dash Unit - King-Seeley No. 57890.
Tank Unit - King-Seeley No. 59200 (Pass.), 59210 (Sub.), 59205 (Sp. Tank).
Air Cleaner: Paper element type, clean every 5,000 miles, replace element every 15,000 miles. More frequent servicing may be necessary under severe operation.

►*INSTALLATION CAUTION: See 318" (2-Bbl. Carb.) Hard start correction, under "Tune-Up" above.*

►*CLEANING CAUTION:* Remove filter element from housing. Blow compressed air gently from inside out (2" away) to remove dust particles. DO NOT tap these filters to loosen dirt and DO NOT immerse in any fluid.
Fuel Filter: Disposable type in carburetor inlet line. Replace every 10,000 miles or if clogged.
Auto Pilot (Polaris): Automatic speed control unit. *See "Auto Pilot" in Carburetion Section.*

BATTERY

318" - Autolite 11-HS-50 or Willard MB-24-50 or Gould 11B-OE-50. 12 volt, 9 plate, 50 ampere capacity (20 hr. rate).
361", 383", 413" (Exc. High Perf. & Police) - Autolite 11-HS-59B or Willard MB-24-59 or Gould 11B-OE-59. 12 volt, 11 plate, 59 ampere hour capacity (20 hr. rate).
383", 413" High Perf. & Police - Autolite 12-HBR-70B or Willard MB-27-70R. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).
Optional (All Eng. except High Perf. & Police) - Autolite 12-HB-70B or Willard MB-27-70. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.

STARTER

Chrysler Own No. 1889100 (318"), 1889200 (361, 383" & 413"). Armature - No. 1889079 (All Engins).
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 32-48 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3800 Min.	11.0	78 Max.
8.5 ft. lbs.	Lock	4.0	350

Starting Switch: Solenoid, Dodge & Plymouth No. 1889146 mounted on starter and controlled by Ignition & Starter Switch, Dodge & Plymouth No. 2097628. Neutral Safety Switch, Dodge & Plymouth No. 1704283, mounted on transmission on automatic transmission cars.
Neutral Safety Switch Adjustment - *See "TorqueFlite Six", "PowerFlite" & "TorqueFlite" in Transmission Section.*

ALTERNATOR

Chrysler Own. Three-phase A.C. unit with full wave rectifier. Used as follows:

Model	Chrysler No.
All Engines, Std.	2095060
All Engines, Air Cond.	2095100
All Engines, Sp. Equip. H.D.	2095425

Rotation - Clockwise at drive end.
Rated Output - 35 amperes (2095060), 40 amperes (2095100 & 2095425).
Field Coil Draw - 2.38-2.75 amps. Max., at 12 volts (Alternator turned by hand), 2.97-3.42 amps. Min., at 15 volts, 70°F & 750 RPM.
►*OTHER DATA: See "Chrysler Alternators & Regulators" in Electrical Section.*
Belt Adjustment: Measure deflection of belt midway between pulleys under 5 lbs. load.

Belt	318" Engine New	318" Engine Used	361", 383", 413" Engs. New	361", 383", 413" Engs. Used
Altnr. No. A.C.	5/32"	1/4"	5/32"	1/4"
Altnr. A.C.	1/8"	3/16"	1/4"	3/8"
Idler Ⓒ	3/32"	3/16"	1/16"	1/8"

Ⓒ - Water Pump Idler Pulley on Air Cond. cars.

REGULATOR

Chrysler Own No. 2095700 (All Models). Field control type. No Cutout Relay or Current Regulator.
Air Gap - .048-.052". **Point Gap** - .015"±.001".
Voltage Setting - 13.7-14.3 volts at 70°F.
►*OTHER DATA: See "Chrysler Alternators & Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 4-Headlight System.
Electronic Rear View Mirror: *See Electrical Section.*
Lighting Switch Removal: Disconnect battery. Pull switch knob out and rotate until flat on shaft is down. Push knob in all the way. Disconnect wires, press spring-

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

loaded release button on top center of switch, and pull shaft and knob out of switch. Remove switch mounting bezel on instrument panel and remove switch.

Stop Light Switch Location: Hydraulic type (early cars) located on forward end of hydraulic master cylinder. Mechanical type (later cars) mounted on brake pedal lever bracket.

Adjustment (Mechanical Type) - *NOTE* - Switch bracket mounting hole on brake pedal lever bracket is slotted for switch position adjustment. Adjust position of switch in slotted hole to "REAR" for Std. brakes, to "FRONT" for Power brakes.

Gauge Housing Assembly (Dodge): Removal - 1) Disconnect positive battery cable, tape jacket area with masking tape and remove eight instrument cluster to panel screws.

2) Raise panel slightly at center to release overlap (at center of gauge housing) and carefully pull gauge housing from panel recess by tilting cluster down to reach lamp sockets and connectors.

3) Disconnect wire connectors and lamp sockets and remove gauge housing.

Installation - Reverse removal procedure.

Speedometer (Dodge): Removal - 1) Remove gauge housing, see above, then remove switch trim plate screw and remove trim plate and heater push button.

2) Remove transmission push button trim plate screws and remove trim plate and push buttons.

3) Work through gauge housing opening to remove two push button bracket and three heater switch and control bracket-to-upper instrument housing screws. *NOTE - DO NOT remove transmission push button or heater bezel.*

4) Remove five upper housing-to-lower housing screws and remove upper housing, speedometer and transmission push button and heater switch bezels as an assembly, by raising assembly straight up until bottom of speedometer clears lower housing. Remove assembly, then remove speedometer to upper housing screws and remove speedometer.

Installation - Reverse removal procedure.

Cluster & Speedometer (Plymouth): Removal - 1) Disconnect negative battery terminal and remove four speedometer and instrument panel cover and base screws. *NOTE - Two screws are located at front face of instrument cluster bezel and two screws attach speedometer and instrument panel cover to speedometer and instrument panel at front corners of panel and base (one each side).* To remove panel cover, raise front edge slightly to clear instrument cluster and carefully push the panel toward windshield to disengage retaining spring clips from speedometer and instrument panel base.

2) Disconnect high beam indicator wire, ammeter wires, and lamp bulb and oil pressure light socket and bulb.

3) Remove four speedometer and instrument cluster and bezel to speedometer and instrument panel base screws. *NOTE - Two screws are located at rear of instrument clusters (one each side) and two screws attach cluster bezel to base at front of bezel. Remove cluster and bezel as an assembly.*

4) Disconnect speedometer cable and lamp connectors at speedometer head. Remove four speedometer to speedometer and instrument panel base screws and remove speedometer assembly.

Installation - Reverse removal procedure.

CIRCUIT BREAKERS: 22.5 Amper - Headlights & High Beam Indicator. In headlight switch.

15 Ampere - Parking, Tail, Stop, Instruments & Interior lights. In headlight switch.

6 Ampere - Variable speed windshield wiper & back-up lights. On wiper switch.

5 Ampere - Single speed windshield wiper & back-up lights. On wiper switch.

FUSES: 20 Ampere - Heater. In feed wire.

7.5 Ampere - Radio. In feed wire.

1 Ampere - Clock. In feed wire.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chrysler Corp. Special Data.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Chrysler Corp. Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chrysler Corp. Special Data.*

OIL PAN REMOVAL (318" Engine): Remove dipstick, drain crankcase and disconnect steering linkage from steering arm. Remove starter, exhaust crossover pipe, and converter dust shield. Disconnect front engine mounts and raise engine about 1¼". Remove oil pan bolts and remove pan, turning sideways to clear crossmember. *NOTE* - When installing, bottom surface of oil strainer must be parallel to lower machined surface of cylinder block.

OIL PAN REMOVAL (361", 413" Eng.): Disconnect battery. Raise car and disconnect steering linkage from idler and steering arms. Remove outlet breather pipe and disconnect exhaust pipe branches from both manifolds. Remove exhaust pipe. Drain crankcase and remove converter dust shield. Remove oil pan bolts and remove pan, turning counterclockwise to clear oil screen and suction pipe. *NOTE* - When installing, bottom surface of oil strainer must be on a horizontal plane with machined surface of cylinder block.

PISTONS

Aluminum alloy, elliptically turned, tin-plated, thermally controlled by steel band (318"), steel struts (361", 383", 413").

►*CYLINDER BORE OVERSIZE NOTE:* Letter "A" within engine number indicates that cylinder bores are .020" Oversize.

Weight - 20.9 ozs. (318"), 25.3 ozs. (361"), 27.2 ozs. Standard, 27.5 ozs. Optional (383", 413").

Removal - Pistons and rods removed from above.

Fitting New Pistons: Clearance (318") - .0005-.0015" on thrust side at top of skirt. With .0015" x ½" feeler inserted between cylinder wall and piston at thrust face, pull to withdraw feeler should be 5-10 lbs. **Clearance (361", 383", 413")** - .0005-.0010" between thrust face of piston and cylinder wall, measured at top of skirt on piston and halfway down cylinder wall, crosswise to engine.

Installing Pistons: Notch in piston head must be toward front of engine. Assemble piston to rod with notch on same side as large chamfer on lower end of connecting rod (left bank cylinders, 1-3-5-7), with notch on side opposite to large chamfer at lower end of connecting rod (right bank cylinders, 2-4-6-8). *See Rod Installation.*

Replacement Pistons: Furnished Std., .005", .020" & .040" Oversize with fitted pins.

PISTON PIN

318" Engine - Floating type with lock ring at each end.

361", 383" & 413" - Piston pin is tight press fit in connecting rod and special removal and installation procedures required. Piston pins furnished with new pistons.

Diameter - .9842" (318"), 1.0935-1.0937" (361", 383" & 413").

Length - 2.995" (318"), 3.555-3.575" (361", 383", & 413").

Clearance in Piston (318") - .0000-.0004" (selective). Thumb press fit at 70°F.

Clearance in Piston (361", 383" & 413") - .00045-.00075" Light thumb press fit at 70°F.

Clearance in Rod (318") - .0001-.0004" (selective). Thumb press fit at 70°F.

Clearance in Rod (361", 383", 413") - .0007-.0012" interference fit.

Piston Pin Removal & Installation (361", 383", 413") - *See "Piston Pins" in Chrysler Corp. Special Data.*

Replacement Pins: Std. .003", .008" Oversize (318"). Furnished only with new pistons (361", 383", 413").

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0775-.0780"	①	.0015-.0030"
Oil (3)	.1860-.1865"	①	.0010-.0030"

① - .010-.020" (318"), .013-.025" (361", 383" & 413").

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installing Rings: Install compression rings with "Top" mark toward top of piston.

Replacement Rings: Furnished for oversize ranges of: Std. to .009", .020" to .029", .040-.049".

CONNECTING ROD

Length (Center-to-Center) - 6.123" (318"), 6.36" (361" & 383"), 6.77" (413").

Weight - 25.6 ozs. (318"), 28.6 ozs. (361" & 383"), 29.8 ozs. (413").

Crankpin Journal Diameter - 2.124-2.125" (318"), 2.374-2.375" (361", 383" & 413").

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE):* See CRANKSHAFT below.

Lower Bearing - Removable precision type. Bi-metal Grid (318"), Lead base babbitt on steel (361", 383" & 413").

Clearance - .0005-.0015". Wear limit .0025". All Engines.

Sideplay - .006-.014" (318"), .009-.017" (361", 383" & 413"). Total for both rods.

Installing Rods: With pistons correctly installed on connecting rod (see PISTONS above), larger chamfer on lower end of rod should be installed toward nearest crankshaft journal fillet. Oil grooves in rod and bearing cap must be together.

Replacement Bearings: Std. & .001", .002", .003", .010", .012" Undersize.

CRANKSHAFT

Journal Diameter - 2.4995-2.5005" (318"), 2.6245-6255" (361" & 383"), 2.75" (413").

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:* **.001" UNDERSIZE** - Indicated by "Maltese Cross" within engine number. **.010" UNDERSIZE** - Indicated by "X" and "Maltese Cross" within engine number. Position of undersize Main Journals is stamped on No. 2 counterweight, and position of undersize Connecting Rod Journals is stamped on No. 3 counterweight. Connecting rod journals will be identified by letter "R" and main journals by letter "M". The number following letter "R" or "M" indicates journal number.

Bearings - Removable precision type. Tin based babbitt on steel (No. 3 thrust bearing), lead based babbitt on steel (Others).

Clearance - .0005-.0015". Wear limit .0025" All Engines.

Replacement Bearings: Std. & .001", .002", .003", .010", .012" Undersize.

►*BEARING INTERCHANGEABILITY NOTE:* Upper and lower halves of any bearing are not interchangeable. No. 3 bearing is not interchangeable with other bearings. On 318" engine, No. 5 bearing is not interchangeable with other bearings.

End Thrust: Taken by flanged No. 3 (center) main bearing.

Endplay - .002-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Corp. Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chrysler Corp. Special Data.*

CAMSHAFT

►*CAMSHAFT USAGE NOTE:* Various camshafts used depending on carburetion, lifters or other equipment. *See "Valves" and "Valve Timing" below for lift, springs, and valve timing specifications.*

Journal Diameter: (1) 1.998-1.999". (2) 1.982-1.983". (3) 1.967-1.968". (4) 1.951-1.952". (5) 1.5605-1.5615" (318"), 1.748-1.749" (361",383", & 413").

Bearing Diameter: (1) 2.000-2.001". (2) 1.984-1.985". (3) 1.969-1.970". (4) 1.953-1.954". (5) 1.5625-1.5635" (318"), 1.750-1.751" (361",383" & 413").

Bearings - Removable, lead base babbitt on steel.

Clearance - .001-.003". Wear limit .005".

End Thrust (318"): Taken by thrust plate behind camshaft sprocket hub. **Endplay** - .002-.006". Wear limit .010".

End Thrust (361", 383" & 413"): Controlled by camshaft sprocket hub riding against front face of cylinder block.

Timing Chain (318"): Width 1.02". **Pitch** .375". **Length** 68 links.

Timing Chain (361",383" & 413"): Width .88". **Pitch** .50" **Length** 50 links.

Camshaft Setting: Marks on sprockets adjacent and in line with straightedge across shaft centers.

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Corp. Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Chrysler Corp. Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Corp. Special Data.*

VALVES

318" Engine

Valve	Head Diameter	Stem Diameter	Length
Intake	1.844"	.372-.373"	4.60"
Exhaust	1.563"	.371-.372"	4.54"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	①	③ .001-.003"
Exhaust	45°	②	④ .002-.004"

316", 383" & 413" Engines

Valve	Head Diameter	Stem Diameter	Length
Intake	2.08"	.372-.373"	4.87"
Exhaust	1.60"	.371-.372"	4.89"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	⑤	③ .001-.003"
Exhaust	45°	⑤	④ .002-.004"

① - .380" (2-Bbl. Carb.), .400" (Pwr. Pkg.).
② - .386" (2-Bbl. Carb.), .406" (Pwr. Pkg.).
③ - Wear limit .004". ④ - Wear limit .006".
⑤ - .389" All valves (361" 2-Bbl. Carb. Hydr. Lifters). .430" All Valves (361", 383", 413" All 4-Bbl. & Hydr. Lifters).
.446" Int., .458" Exh. (361", 383", 413" 4-Bbl. Carbs., Std. Man., or Long Ram, Mech. Lifters).
.448" Int., .454" Exh. (383", 413", 4-Bbl. Carbs., Short Ram, Mech. Lifters).

Valve Seat Width - .060-.085" Intake, .040-.060" Exhaust.

Valve Stem Oil Seal - Cup type seals used on all intake valves (All engines), on exhaust valves (361", 383" & 413" engines only).

►*VALVE GRINDING CAUTION:* Check valve height in head after grinding valves using Tool C-3648. If valve tip exceeds maximum (end of cylindrical gauge), grind tip down to approach, but do not go below minimum height (slotted area on gauge).

Valve Springs: Damper springs used inside all valve springs on High Perf. & Special Police Packages.

Spring Specifications - 318" Engine

Valve	Pressure	Length
Closed	78-88 lbs.	1 11/16"
Open	170-184 lbs.	1 5/16"

Spring Specifications - 361" (2-Bbl.)

Valve	Pressure	Length
Closed	95-105 lbs.	1.86"
Open	187-203 lbs.	1.47"

①Spring Specifications - 361", 383" & 413" (High Perf. & Sp. Police)

Valve	Pressure	Length
Closed	100 lbs.	1.86"
Open	195 lbs.	1.47"

① - Includes damper.

Spring Free Length - 2.34" (361", 383" & 413").

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are ground, check installed height of spring (from counterbore in head to lower surface of spring retainer). If height exceeds 1 11/16" (318"), 1 57/64" (361", 383" & 413"), install a 1/16" spacer under spring to bring height within limits of 1 5/8-1 11/16" (318"), 1 53/64-1 57/64" (361", 383" & 413").

►*VALVE SPRING LOAD CAUTION:* Hydraulic valve lifter "Fill-up" will strict engine speed and cause valves to burn if spring loads are not maintained.

Spring Installation (361", 383", 413"): Install all springs with closed coil end toward cylinder head.

►*CAUTION:* Spring ends must be square within 1/16" (all engines).

Valve Guides: Guides are cast integral with cylinder head. When clearance is excessive, ream guides and install valves with oversize stems. Valves furnished with .005", .015" & .030" oversize stems. Use Tool C-3433 (.005" OS.), C-3430 (.015" OS.), C-3427 (.030" OS.) to ream guides in progressive steps.

►*OVERSIZE VALVE STEM IDENTIFICATION NOTE (318" Eng.):* "I" or "E" on boss above nearest appropriate valve guide indicates that valve stem is .005" Oversize.

►*PUSHROD INSTALLATION CAUTION:* Small diameter end of pushrod must seat in lifter. Large diameter end must contact rocker arm. Improper installation will cause valves to be held open partially.

Hydraulic Valve Lifters: Used on all 361", 383" & 413" engines. *NOTE* - Mechanical lifters also used on 361", 383" & 413" engines with one 4-Bbl. Carb., 383" & 413" with two 4-Bbl. Carbs. and either "Runner" or "Short Ram" Manifold.

►*OVERSIZE LIFTER NOTE:* A "♦" on engine serial number pad indicated that lifters are .008" Oversize. If only certain lifters are oversize, the diamond will be placed on lifter boss facing engine centerline. These oversize lifters will also have notches on top surface of lifter body.

Diameter - .9040-.9045". **Clearance** - .0005-.0018".

Replacement Lifters - Furnished Std. & .001", .008", & .030" Oversize.

Lifter Overhaul & Testing - *See "Valve System" in Chrysler Corp. Special Data.*

Rocker Arm Assembly: *See "Valve System" in Chrysler Corp. Special Data.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

①Valve Timing Specifications

(318" Engine With 2-Bbl. Carb.)

Intake Valves - Open 17° BTDC. Close 47° ALDC.
Exhaust Valves - Open 55° BLDC. Close 9° ATDC.

(318" Engine With 4-Bbl. Carb.)

Intake Valves - Open 13° BTDC. Close 55° ALDC.
Exhaust Valves - Open 51° BLDC. Close 17° ATDC.

(361" Engine With 2-Bbl. Carb.)

Intake Valves - Open 15° BTDC. Close 57° ALDC.
Exhaust Valves - Open 57° BLDC. Close 15° ATDC.

361", 383", 413" Engines With One 4-Bbl. or 2 Carbs. Less Ram Induction

Intake Valves - Open 24° BTDC. Close 64° ALDC.
Exhaust Valves - Open 64° BLDC. Close 24° ATDC.

383", 413" Engines With Ram Induction & Mechanical Lifters

Intake Valves - Open 20° BTDC. Close 68° ALDC.
Exhaust Valves - Open 60° BLDC. Close 28° ATDC.

383", 413" Engines With Ram Induction & Hydraulic Lifters

Intake Valves - Open 25° BTDC. Close 79° ALDC.
Exhaust Valves - Open 74° BLDC. Close 30° ATDC.

① - With valve train solid.

Valve Timing Check (318"): Rotate crankshaft until No. 6 exhaust valve is closing and the No. 6 intake valve is opening. Install a dial indicator on No. 1 intake valve so indicator pointer contacts spring retainer as nearly perpendicular as possible. Turn No. 1 intake valve adjusting screw in one full turn. Adjust indicator to zero. Turn crankshaft clockwise until valve has lifted .033" (2-Bbl.), .024" (4-Bbl.). Timing on timing indicator should read from 10° BTDC to 2° ATDC.

Valve Timing Check (361", 383", 413"): Rotate crankshaft until No. 6 exhaust valve is closing and No. 6 intake valve is opening. Insert a ¼" spacer between rocker arm pad and stem tip of No. 1 intake valve (second valve on left bank). Install dial indicator so pointer contacts valve spring retainer as nearly perpendicular as possible. Allow spring load to bleed lifter down to provide a solid lifter. Turn crankshaft in normal running direction until valve has lifted .017" (361" with 2-Bbl. Carb.) .025" all other engines. Timing on timing indicator should read 10° BTDC to 2° ATDC. *CAUTION* - Remove spacer before turning crankshaft any further in normal direction.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under "OILING SYSTEM" in Chrysler Corp. Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 45-65 lbs. at 40-50 MPH.
Oil Pressure Relief Valve - Mounted in oil pump. For various springs used, *see "Oiling System" in Chrysler Corp. Special Data.*

Oil Pressure Indicator: Warning light on instrument panel operated by Oil Pressure Switch Part No. 2256300 (King-Seeley No. 44265).

Oil Pump (318"): Mounted on rear main bearing cap. Rotor type with strainer mounted on pump body. Strainer must be installed parallel with bottom of cylinder block.

Oil Pump (361",383",413"): Rotor type mounted on cylinder block at lower left front side of engine. **Pump Overhaul (All Pumps)** - *See "Oiling System" in Chrysler Corp. Special Data.*

Oil Filter (318"): Partial flow type. Replace filter element every 4000 miles to coincide with engine oil change.

Oil Filter (361",383",413"): Full-flow disposable type. Replace filter element every 4000 miles to coincide with engine oil change.

►*OIL FILTER REPLACEMENT CAUTION (361", 383", 413"):* Use only Filter Element Part No. 1851658 for service replacement. Before installing, make sure that drain-back valve is free by unseating valve with a blunt instrument inserted in four holes in oil filter base.

►*OIL FILTER INSTALLATION CAUTION (361", 383", 413"):* Screw new filter on base until gasket contacts base. Tighten ½-turn additional by hand. DO NOT overtighten.

Crankcase Ventilation (Standard Cars): Filter element in crankcase filler cap and breather tube in right valve rocker arm cover. Clean filter in filler cap every 5000 miles or sooner under heavy dust conditions.
Positive Crankcase Ventilation Cars - Breather tube replaced by tube connecting breather tube with lower part of carburetor throttle body. Ventilation valve located in outlet vent cap regulates crankcase ventilation. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 20 qts. (318"), 16 qts. (361", 383" & 413"). Add 1 qt. for heater.

►*AIR CONDITIONER OPERATION CAUTION:* Engine cooling system must be protected to a temperature of 15°F (above zero) for summer operation.

►*FAN-RADIATOR CORE CLEARANCE CAUTION:* Clearance should be ¾"-1¼". Use thinner fan spacer, Part No. 2120510 to correct.

Pressure Valve: 14 lb. radiator cap. (All Models).

Thermostat: Pellet type. In water outlet connection on cylinder head. Starts to open at 177-182°F.

Water Pump: Sealed ball bearing, packless type. No lubrication required.

See "Cooling System" in Chrysler Corp. Special Data.
Pump Removal - Drain cooling system, remove shroud (Air Conditioned Cars), loosen fan belt and idler (Air Conditioned Cars). Remove fan spacer and pulley. Remove retaining bolts and washer and remove pump.

Fluid Fan Drive: Used on air conditioned cars.

Temperature Gauge (Dodge): Constant voltage type with voltage regulator inside gas gauge for instruments.
Dash Unit - Dodge No. 2197060.
Engine Unit - King-Seeley No. 44265.

Temperature Gauge (Plymouth): King-Seeley "CV" (Constant Voltage) type with separate Voltage Regulator King-Seeley No. 57918.
Dash Unit - King-Seeley No. 57891.
Engine Unit - King-Seeley No. 44265.

LUBRICATION

POWERFLITE & TORQUEFLITE TRANSMISSION LUBRICATION: Check fluid level every 2,000 miles, drain and refill every 10,000 miles or 12 months. Use only Automatic Transmission Fluid Type "A", Suffix "A".
Checking Fluid Level - Bring engine and transmission to normal operating temperature and with parking brake applied, push selector buttons slowly returning to "N" position. With engine idling, check level on dipstick. Maintain fluid level at (or slightly below) "F" mark. If checking fluid level with transmission cold, level should be at (or slightly below) "Add One Pint" mark on dipstick. DO NOT OVERFILL.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section*

MODEL IDENTIFICATION

DODGE LANCER

Body Style	Series 170	Series 770
2-Door Sedan	RW1-L-21	
2-Door Hardtop		RW1-H-23
4-Door Sedan	RW1-L-41	RW1-H-41
4-Door Station Wagon	RW1-L-45	RW1-H-45

VALIANT

Body Style	Series V100	Series V200
2-Door Sedan	RV1-L-21	
2-Door Hardtop		RV1-H-23
4-Door Sedan	RV1-L-41	RV1-H-41
4-Door Station Wagon	RV1-L-45	RV1-H-45

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
1 3 1 1 100001

① - Car Make. 1 Valiant. 7 Lancer.
② - Model Series. 1 2 or 4-Door Sedan (Series 170 & V100). 3 2-Door Hardtop or 4-Door Sedan (Series 770 & V200). 5 Station Wagon (Series 170 & V100). 7 Station Wagon (Series 770 & V200). 8 Taxi. 9 Police. 0 Fleet.
③- Model Year. 1 1961.
④ - Assembly Plant. 1 Plymouth (Detroit). 2 Dodge (Detroit). 5 Los Angeles. 6 Delaware. 7 St. Louis. 8 Wyoming. 9 Canada.
⑤ - Beginning vehicle number at each assembly plant regardless of car make or model.

ENGINE NUMBER: Stamped on right side of block below cylinder head opposite No. 1 cylinder. Number (example below) includes identification data.

① ② ③ ④ ⑤
R 17 ... 8 1

① - Year. R 1961.
② - Displacement. 17 170 cu. ins. 22 225 cu. ins. (Cast Iron). AR22 225 cu. ins. (Aluminum).
③ - If this space blank, engine is standard. *For identifying marks see below.*
④ - Month Assembled. 8 August, etc.
⑤ - Day Assembled. 4 4th day, etc.
►*ENGINE NUMBER MARKS: Identified as follows:*
"A" - All cylinder bores .020" oversize.
"Maltese Cross" - One or more bearing journals .001" undersize. *See "Connecting Rods" & "Crankshaft" below.*
"X" and "Maltese Cross" - One or more bearing journals .010" undersize. *See "Connecting Rods" and "Crankshaft" below.*
"♦" - One or more valve lifters .008" oversize. *See "Valve Lifters" below.*

TUNE-UP

►*HARD COLD WEATHER START CORRECTION (Carburetors with Choke Vacuum Unloader Piston in Air Horn):* Hard starting caused by choke piston sticking. To correct, remove gum formation by removing air cleaner and squirting Carburetor Cleaner, Lacquer Thinner or alcohol through piston link opening, while operating choke valve to flush out gum formation.
►*HARD STARTING & STALLING IN WET WEATHER CORRECTION:* Caused by moisture entering coil and distributor towers. To correct, install Coil Secondary Cable Package Part No. 2084428, consisting of cable, nipples and terminals. In this package the distributor nipples are 1.315" long (were 1.19") and terminal nipples are 1.50" and redesigned neoprene.
►*POOR FUEL ECONOMY OR PERFORMANCE:* Caused by use of incorrect gasket between carburetor and intake manifold or incorrect installation of correct gasket. Use Gasket Part No. 2205582 with single small hole to left front of car

COMPRESSION PRESSURE: 130-160 lbs. at 150 RPM (plugs removed). Maximum variation between cylinders 20 lbs.
VACUUM READING: 19.5" at idle speed.
VALVE TAPPET CLEARANCE: .010" Intake, .020" Exhaust, Hot.
►*ALUMINUM ENGINE NOTE:* When setting tappet clearance, after engine reaches normal operating temperature, remove rocker arm cover and operate engine for additional 5 minutes at 500 RPM before making adjustments.
MANIFOLD HEAT CONTROL: Thermostatic coil spring type. Valve must operate freely. When installing, coil spring should be installed so that about one full turn (355° wrap) is required to hook outer end around stop stud.
CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: .035".
Spark Plugs - Autolite AG-52 (Std.), AG-32 (Hyper Pack), AG-82 (Taxi). "Long Reach" 14mm. type. Plugs are installed in aluminum sleeves which serve as plug gaskets. Torque to 30 ft. lbs.
COIL: Autolite No. 200567 or Essex No. 62-160-2.
Ignition Current - 1.9 amps. idling, 3.0 amps. stopped.
Resistor - Chrysler No. 2095501. 0.6 ohms. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

DISTRIBUTOR: Chrysler Own. No. 1889750 (170" Eng.), No. 2095270 (225" Eng.).

Condenser - Chrysler 1818757. **Capacity** .25-.285 mfd.
Contact Point Set - Chrysler No. 1838643.
Breaker Gap - .017-.023".
Cam Angle - 36-42°.
Breaker Arm Spring Tension - 17-21.5 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance - 1889750

Degrees Start	Distr. RPM	Degrees Eng.	RPM
	325-475	0	650-950
0-2.5	475	0-5	950
6-8	820	12-16	1640
11.5-13.5	1925	23-27	3850

Automatic Advance - 2095270

Degrees Start	Distr. RPM	Degrees Eng.	RPM
	250-450	0	500-900
0-2	450	0-4	900
5.5-7.5	1000	11-15	2000
10.5-12.5	2200	21-25	4400

Vacuum Spark Control: Integral type.

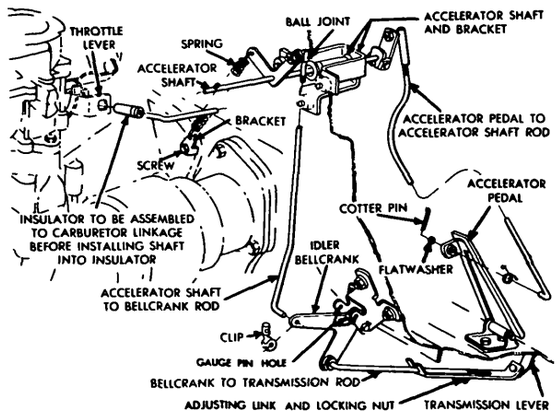
Vacuum Advance - 2095270

Distr. Degrees Start	Eng. Degrees	Vacuum (" of Hg)
	0	4.9-6.9
4.5-7	9-14	9.5
7.8-10.3	15.6-20.6	12

Vacuum Advance - 1889750

Distr. Degrees Start	Eng. Degrees	Vacuum (" of Hg)
	0	4.7-7.1
5.5-8	11-16	11
9.5-12.5	19-25	14.5

IGNITION TIMING



Engine	Std. Ignition Setting
170" & 225" Std. Synchro-mesh	2½° BTDC
170" TorqueFlite	2½° BTDC
225" TorqueFlite	5° BTDC
170" & 225" Hyper Pack	10° BTDC

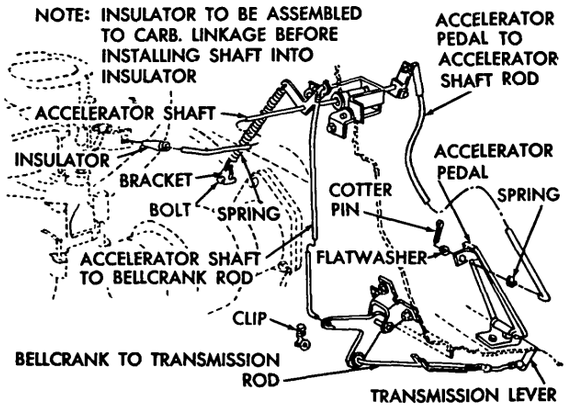
NOTE - Set timing with distributor vacuum line disconnected and engine idling at 500 RPM (700 RPM on Hyper Pack) with transmission in Neutral.
Timing Mark - Timing tab on chain case cover marked "O" and "10" with 5° marks before and after "10". Align timing mark on vibration damper with correct mark on tab.

CARBURETOR

►*CARBURETOR APPLICATION: On Carter BBS single barrel carburetor used (Std.); One Carter AFB 4-Bbl. carburetor used on Hyper Pack.*
►*IDLE SETTING CAUTION:* When making Idle Speed & Mixture adjustments, observe the following: 1) Turn headlights on to High Beam to compensate for alternator load (alternator charges battery at idle speed). 2) On automatic transmission cars unsnap ball joint connection at accelerator shaft bellcrank (Lancer), loosen

CONTINUED ON NEXT PAGE

LANCER THROTTLE LINKAGE



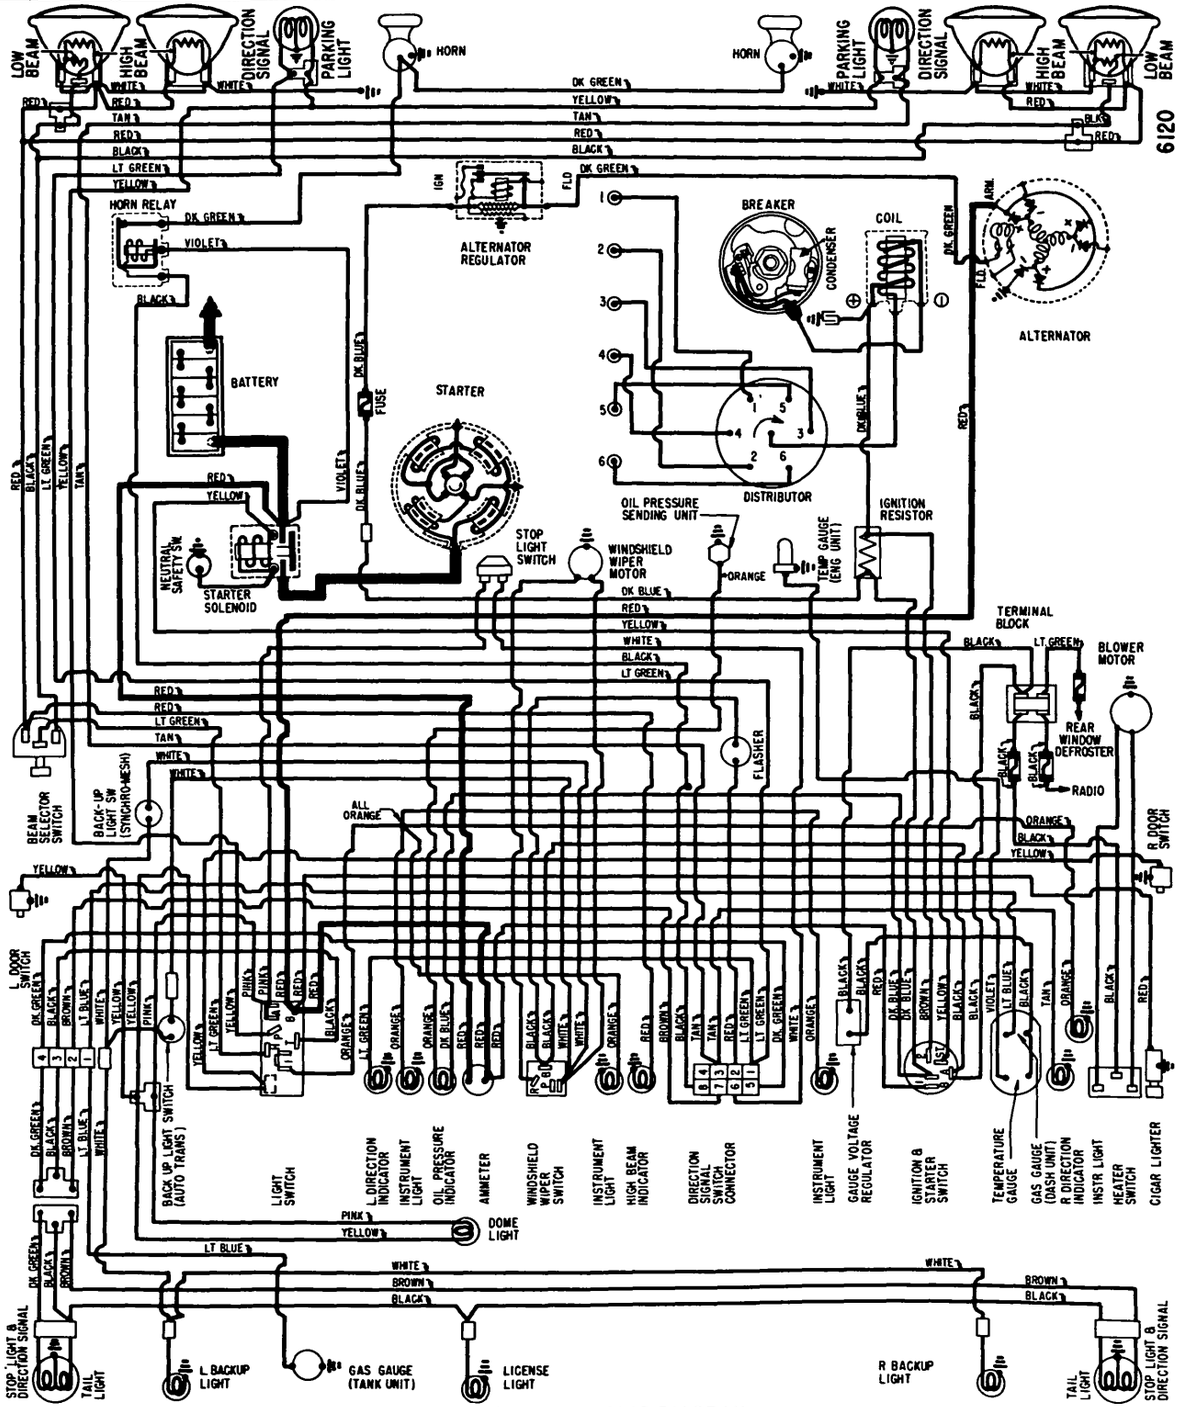
See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

sliding link of bellcrank-to-transmission rod (Valiant) so transmission internal stop will not interfere with carburetor throttle lever. When adjustments completed, screw ball joint up or down until ball on bellcrank will mate exactly with socket (Lancer), tighten sliding link locknut (Valiant).

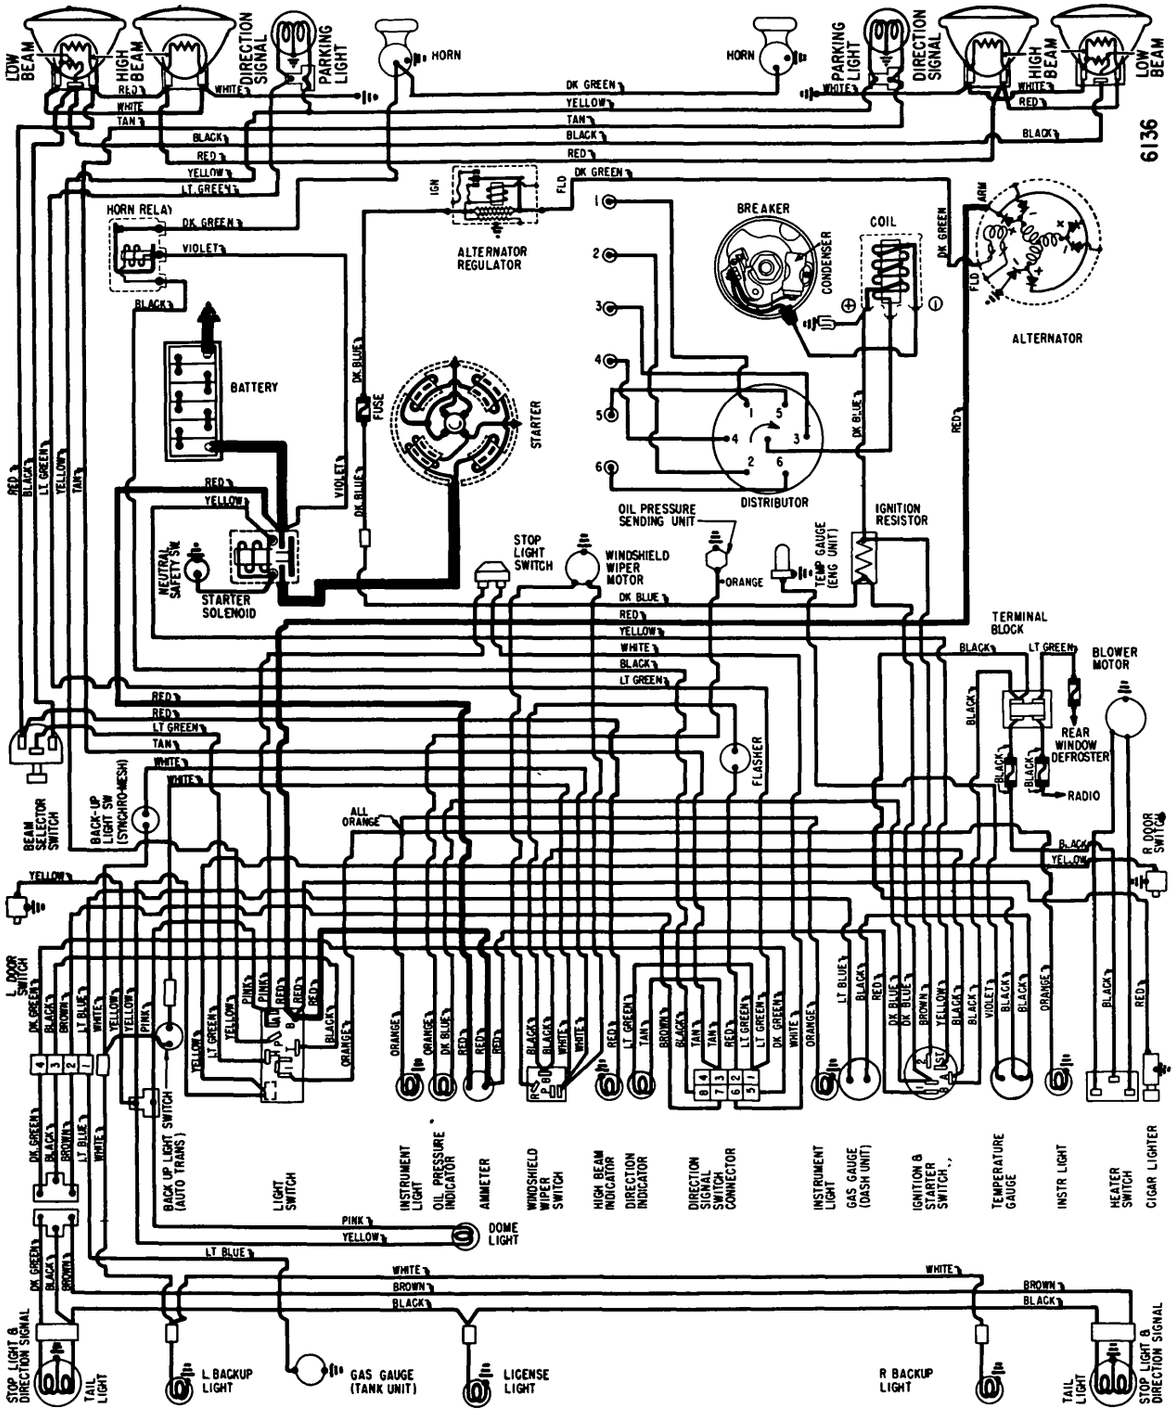
THROTTLE LINKAGE ADJUSTMENT (LANCER): Loosen locknut on sliding link at idler bellcrank-to-transmission rod and unsnap ball joint connection of accelerator shaft rod at accelerator shaft bellcrank. Insert a 3/16" diameter rod through holes in idler bellcrank bracket and lever, move transmission lever forward against transmission internal stop and tighten sliding link locknut. Remove 3/16" rod. Adjust accelerator shaft-to-bellcrank rod by rotating ball joint socket so socket will mate exactly with ball (pull upward on rod to take up all freeplay in linkage). Snap ball joint connection together. Unsnap accelerator pedal-to-accelerator shaft bellcrank rod and rotate threaded end of rod to obtain accelerator pedal angle of 114° between floor pan and flat face of pedal. Connect rod.

THROTTLE LINKAGE ADJUSTMENT (VALIANT): Adjust engine idle speed (see below). With engine at operating temperature, and throttle stopscrew on low step of fast idle cam, loosen locknut and move transmission throttle control lever forward until it stops, tighten locknut. Set protractor at 115° and place lengthwise on flat surface of accelerator pedal. Disconnect accelerator pedal rod and adjust length of rod so that pedal will be in correct 115° position when rod connected. Reconnect rod.



VALIANT THROTTLE LINKAGE

CARTER BBS



Cart r BBS. Used as follows:

Mod l	Carburetor No.
170" Synchro-mesh	3093S
170" TorqueFlite	3094S
170" Closed Crankcase Ventilation (All Trans.)	3127S
225" Synchro.mesh	3098S
225" TorqueFlite	3099S
225" Closed Crankcase Ventilation (All Trans.)	3128S
Taxi All Trans.	3097S
Taxi All Trans. Closed Crankcase Ventilation	3129S

CONTINUED ON NEXT PAGE

LANCER WIRING DIAGRAM

VALIANT WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Idl Setting - ⅛-1½ turns open (3093S, 3094S, 3127S), ½-1½ turns open (3098S, 3099S, 3128S), 1-2 turns open (3097S, 3129S). With engine at normal operating temperature, adjust idle mixture screw for highest RPM, then turn mixture screw in until speed starts to drop. Turn screw out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.

Idle Speed - 550 RPM with headlights on High Beam, and accelerator shaft rod ball joint unsnapped or transmission rod locknut loosened, *see "Cauti ns" abov .*

Float Level - With main body inverted and float hanging freely (Off Car), or with sufficient fuel in bowl so only pressure of buoyant float holds float lip firmly against fuel inlet needle (On Car), float fulcrum pin seated against fulcrum pin retainer, distance from bowl surface (gasket removed) to crown of floats at center should be 7/32" (Except 3097S, 3129S), 9/32" (3097S, 3129S) measured with Gauge T109-239. To adjust, bend float lip. *CAUTION - DO NOT compress rubber tip f fuel inlet needle as incorrect float level setting will result.*

Accelerating Pump - Install throttle connector rod in center hole (Except 3097S, 3129S), upper hole (3097S, 3129S) of throttle lever.

Fast Idle: 1800 RPM (Synchro-mesh & Taxi), 1600 RPM (Auto. Trans.) with adjusting screw on second step of fast idle cam.

Automatic Choke: "Cross-Over" type. Set at index.

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Carter BBS Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 3083S (All Hyp r Pack Engines). Four barrel downdraft type with manual choke.

Idle Speed - 700 RPM with headlights on high beam and transmission rod sliding link locknut loosened, *see "Cautions" above.*

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Carter AFB 4-Barr l Carbur tors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter M2996S. Mechanical type.
Pressure - 3½-5 lbs. at 500 RPM.

Gasoline Gauge: (Lancer) - King-Seeley Electric "CV" (Constant Voltage) type with separate Voltage Regulator King-Seeley No. 58245.
Dash Unit - King-Seeley No. 58203 (With Temp. Gauge).
Tank Unit - Dodge No. 2208462 (Std.), No. 2208458 (Suburban).

Gasoline Gauge: (Valiant) - Constant Voltage type with voltage regulator in temperature gauge.
Dash Unit - Chrysler No. 2209203.
Tank Unit - Chrysler No. 2209296.

Air Cleaner: Paper element type. Clean every 5,000 miles, replace element every 15,000 miles. More frequent servicing may be necessary under severe conditions.

►*CLEANING CAUTION:* Remove filter element from housing. Blow compressed air gently from inside out

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

(2" away) to remove dust particles. DO NOT tap these filters to loosen dirt and DO NOT immerse in any fluid.

BATTERY

Standard - Autolite 11-HS-50B, Willard MB-24-50 or Gould 11B-OE-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr. rate).
Optional - Autolite 12-HB-70B or Willard MB-27-70. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.

STARTER

Autolite. As follows:

Engine	Autolite Starter No.
170" Synchro-mesh	MDU-7020
170" TorqueFlite Six	MDT-7009
225" All Trans.	MDT-7002

Drive - Bendix "Folo-Thru" type.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 31-47 ozs.

Performance Data - MDU

Torque	RPM	Volts	Amperes
0 ft. lbs.	3600	10.0	56
8.5 ft. lbs.	Lock	4.0	350

Performance Data - MDT

Torque	RPM	Volts	Amperes
0 ft. lbs.	5300	10.0	50
6.2 ft. lbs.	Lock	4.0	280

Starting Switch: Dodge & Plymouth Part No. 2095624 (Synchro-mesh), No. 2095625 (Auto. Trans.). Magnetic Switch controlled by Ignition & Starter Switch No. 2097628. Neutral Safety Switch No. 1704283 mounted on transmission on automatic transmission cars.
Neutral Safety Switch Adjustment - *See "TorqueFlite Six", "PowerFlite", & "TorqueFlite" in Transmission Section.*

ALTERNATOR

Chrysler Own. Three-phase A.C. unit with full-wave rectifier. Used as follows:

Model	Chrysler No.
Standard	2095060
Special Equipment Heavy Duty	2095425

Rotation - Clockwise at drive end.
Rated Output - 35 amperes (2095060), 40 amperes (2095425).

Field Coil Draw - 2.38-2.75 amps. at 12 volts (alternator turned by hand); 2.97-3.43 amps. at 15 volts, 70°F & 750 Alternator RPM.
Checking & Adjusting - *See "Chrysler Alternator & Regulator" in Electrical Section.*

Belt Adjustment: Use Torque or Deflection methods as follows:

Belt Torque (Ft. Lbs.)		Belt Deflection	
New	Used	New	Used
30	20	5/32"	1/4"

REGULATOR

Chrysler Own. No. 2095700 (All Models).
Air Gap - .048-.052". **Point Gap** - .014-.016".
Vltag Setting - 13.7-14.3 volts at 70°F.
Checking & Adjusting - *See "Chrysler Alternator & Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 4-Headlight System.

Lighting Switch Removal (Valiant): With switch knob in full "IN" position, depress spring-loaded retainer on switch body to release knob stem and pull knob and stem out. Remove switch bezel, remove switch from instrument panel and disconnect wires.

Lighting Switch Removal (Lancer): Remove Instrument Cluster, see below, then push switch in to full "IN" position. Depress release button on body of switch and pull out switch knob. Disconnect wires, remove switch body nut and remove switch.

Ignition & Starter Switch: Removal - Remove Instrument Cluster, see below, remove spanner nut, push switch towards cowl to release switch from panel and disconnect wires and remove switch through cluster housing opening.

Stop Light Switch Location: Hydraulic type (early cars) located on forward end of hydraulic master cylinder. Mechanical type (later cars) mounted on brake pedal lever bracket.
Adjustment (Mechanical Type) - *NOTE* - Switch bracket mounting hole on brake pedal lever bracket is slotted for switch position adjustment. Adjust position of switch in slotted hole to "REAR" for std. brakes, to "FRONT" for Power Brakes.

Instrument Cluster (Lancer): Removal - 1) Disconnect positive battery cable and tape upper part of jacket tube and cover jacket tube area between steering wheel and instrument panel.
2) Remove two heater to trim plate screws and remove plate and felt. Remove two transmission push button trim plate screws and remove trim plate and felt.
3) Loosen panel to steering jacket tube clamp screws several turns (DO NOT REMOVE) and remove steering wheel.
4) Loosen steering jacket to lower end of panel bracket screws (DO NOT REMOVE). Work speedometer cable through cowl panel to allow pulling cluster forward to disconnect speedometer cable at speedometer head.
5) Remove three instrument cluster bezel to cluster housing screws and pull cluster panel and lower casting forward and tilt left side of cluster far enough to allow access to speedometer head.
6) Pull cluster and casting from instrument panel housing, separate cluster panel from panel cluster casting by removing the four attaching screws. Disconnect all electrical connections. Snap out lamp bulb sockets and remove instrument panel cluster.
Installation - Reverse removal procedure.

Speedometer (Lancer): Removal - Remove instrument cluster, see above, and remove four slotted head screws that attach instrument bezel to cluster base and remove bezel. Remove nuts and flat insulators that attach gauges to cluster base and remove gauges from base. Remove two screws, washers and rubber bushings and harness clip then remove speedometer from cluster base.

Cluster & Speedometer (Valiant): Removal - 1) Disconnect negative battery cable and remove headlamp switch knob by placing switch in "ON" position and depressing release on knob stem.
2) Remove four instrument cluster attaching screws and pull top of cluster forward to disconnect speedometer cable at speedometer and connectors to instruments and switches.
3) Remove cluster, then remove speedometer head from cluster.

CIRCUIT BREAKERS: 22.5 Ampere - Headlights & High Beam Indicator. In headlight switch.
15 Ampere - Parking, Tail, Stop, License, Instruments and Interior lights. In headlight switch.
6 Ampere - Variable speed windshield wiper & Back-up lights. On wiper switch.
5 Ampere - Single speed windshield wiper & Back-up lights. On wiper switch.
FUSES: 20 Ampere - Heater. In feed wire.
7.5 Ampere - Radio. In feed wire.
1 Ampere - Clock. In feed wire.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE OIL LEAK AT DISTRIBUTOR CORRECTION:* A large "O" ring Part No. 2095740 and a small "O" ring No. 2095630 have been released for correction of oil leaks at distributor. To correct oil leak, remove distributor and remove cork gasket or early large "O" ring. Install small "O" ring on distributor housing against retainer flange then install large "O" ring. Reinstall distributor and set ignition.

►*ENGINE "CHUCKING" or "HEAVY KNOCK" CORRECTION:* Chucking or heavy knock is caused by loose vibration damper (crack in damper hub). Replace damper making sure that keyway is aligned and that damper square with shaft at time of installation.

ENGINE SPECIFICATIONS: Own. 6 Cyl., valve-in-head, inclined 30° to right, of same design used previously.

►*ALUMINUM 225" ENGINE NOTE:* Aluminum (die-cast) block engine used in partial production.

►*ALUMINUM ENGINE NOTE:* Engine block is die cast aluminum with iron cylinder bore liners molded in block and with a cast iron cylinder head. This head carries the word "Special" cast between lifting pads on left side. Use this head on either aluminum or cast iron block but DO NOT use a cast iron engine cylinder head on an aluminum block. Cylinder head bolts are longer and are not interchangeable with bolts for cast iron engine. Aluminum engine is identified by Engine Code AR-22 followed by engine serial number. *See "ENGINE" in Chrysler Corp. Special Data.*

Car Model	Engine
Lancer & Valiant Std. (1-Bbl. Carb.)	170"
Lancer & Valiant Optl. (1-Bbl. Carb.)	225"
Lancer Hyper Pack (4-Bbl. Carb.)	170" or 225"
Valiant Hyper Pack (4-Bbl. Carb.)	170"

Engine	Bore	Stroke	Displacement
170"	3.40"	3.12"	170 cu. ins.
225"	3.40"	4.12"	225 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
170" (1-Bbl.)	8.2-1	27.7	101 at 4400 RPM
170" (4-Bbl.)	8.2-1	27.7	148 at 5200 RPM
225" (1-Bbl.)	8.2-1	27.7	145 at 4000 RPM
225" (4-Bbl.)	8.2-1	27.7	196 at 5200 RPM

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chrysler Corp. Special Data.*

CYLINDER HEAD: Cast Iron Engine - Either the Std. cast iron head or the "Special" cast iron head (Aluminum Eng.) may be used.

Aluminum Engine - Cast Iron Head with word "Special" cast between lifting pads on left side of head. Use only this head on Aluminum block.

See "Cylinder Head & Manifold" in Chrysler Corp. Special Data.

TIGHTENING TORQUES: *See "Tightening Specifications" in Chrysler Corp. Special Data.*

OIL PAN REMOVAL: Disconnect battery, drain cooling system and disconnect both radiator hoses. Move alternator as close to engine as possible. Disconnect throttle rod at carburetor and exhaust pipe at manifold. With Tie Rod Puller C-3742 remove steering and idler arm ball joints from steering linkage center link. Disconnect engine front mounts and raise front of engine about 2". *CAUTION - Raise engine with wood block under oil pan. DO NOT raise at vibration damper.* Let engine rest on 2" wood blocks under front mounts. Remove clutch or converter cover plates. Drain crankcase and remove pan, moving down and forward, then lowering rear.

►*OIL PAN INSTALLATION CAUTION (225" Eng.):* To minimize possibility of oil leaks at oil pan gasket, tighten retaining capscrews to specified torque and in the following sequence: 1) Left rear. 2) 2nd from right front corner. 3) 2nd from left front corner. 4) Right rear. 5 & 6) All along right & left side rails - either side first. 7) Remaining capscrews on rear edge. 8) Across front edge.

PISTONS

Aluminum alloy, steel strut, elliptically turned, tin plated, slipper type.

►*CYLINDER BORE OVERSIZE CAUTION:* Letter "A" or "AB" incorporated in Engine Number indicates all cylinder bores and pistons are .020" oversize.

Weight - 16.4 ozs.

Removal - Pistons and rods removed from above.

Clearance - .0005-.0015" at top of skirt.

Fitting New Pistons - Use micrometers with piston and cylinder bore clean and dry and at 70°F. Measure cylinder bore halfway down and at right angles to crankshaft.

Installing Pistons - Notch in piston head must be toward front of engine.

Replacement Pistons: Furnished with pins in Std. and .005", .020", .040" Oversize. *NOTE* - All pistons are machined to same weight.

PISTON PIN

Press fit in connecting rod.

Diameter - .9007-.9008". **Length** - 2.995-2.975".

Pin Fit in Piston - .00045-.00075" clearance. Pin should be sliding fit in piston at 70°F.

Pin Fit in Rod - .0007-.0012" interference fit. Special procedure and tools used for removal and installation. *See "Piston Pins" in Chrysler Corp. Special Data.*

Replacement Pins: Std. size only. Furnished as an assembly with new pistons.

PISTON RINGS

(170" Engine) - Compression ring cast iron, low taper and twist, tin plated. Oil ring single piece cast iron.

(225" Engine) - No. 1 compression ring taper twist, tin plated, No. 2 compression ring reverse twist, taper face, Lubrite coated. Oil ring, three-piece with two chrome plated rails and stainless steelexpander (spacer).

Ring	Width	End Gap	Side Clearance
Compr.(1&2)	.0775-.0780"	.010-.020"	.0015-.003"
Oil (3)	.1860-.1865"	.010-.020"	.0010-.003"

Installing Rings - Mark "Top" on compression rings must be toward top of engine.

Replacement Rings: Furnished in sets for oversize ranges as follows: Std. to .009", .020-.029", .040-.049".

CONNECTING ROD

Length (Center-to-Center) - **(170")** 5.707", **(225")** 6.999".

Weight - **(170")** 25.68 ozs. **(225")** 27.3 ozs.

Journal Diameter - 2.187". Out of round limits .001".

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals machined UNDERSIZE):* See *CRANKSHAFT below.*

Clearance - .0005-.0015".

Side Clearance - .006-.012"

Bearing Adjustment - None, replace bearings.

Installing Rods: Notch in head of piston must be toward front of engine and oil squirt holes in lower end of rod must be toward left side of engine.

Replacement Bearings: Std. and .001", .002", .010" Undersize.

CRANKSHAFT

Journal Diameter - 2.7495-2.7505".

Bearing Type - Removable precision type, lead-base babbitt on steel, exc. thrust bearing which is tin-base babbitt on steel.

►*ALUMINUM ENGINE MAIN BEARING NOTE:* Same as for cast iron engine except that oil feed holes in bearings are in a different location and require special inserts. *CAUTION* - DO NOT use cast iron block original main bearing inserts in aluminum block. Upper and lower bearing caps are cast iron and are line bored in complete sets. If replacement is required, all four upper and lower main bearing caps must be replaced with a matched set for proper alignment. Identification numbers are stamped on upper caps and cast into lower caps. When upper and lower caps are installed, bearing tab slots should be on left side of engine.

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:* **.001" UNDERSIZE** - Indicated by "Maltese Cross" within engine number. **.010" UNDERSIZE** - Indicated by "X" and "Maltese Cross" within engine number. Position of undersize Main Journals is stamped on No. 2 counterweight, and position of undersize Connecting Rod Journals is stamped on No. 3 counterweight. Connecting rod journals will be identified by letter "R" and main journals by letter "M". The number following letter "R" or "M" indicates journal number.

►*MAIN BEARING INTERCHANGEABILITY NOTE:* Upper and lower halves are not interchangeable. No. 1 upper bearing is not interchangeable. No. 3 bearing shells are not interchangeable with any other bearing. No. 1, 2, & 4 lower halves are interchangeable. No. 2 & 4 upper halves are interchangeable.

Clearance - .0005-.0015". Wear limit .0025".

Endplay - .0035-.0085".

End Thrust - Taken by No. 3 (rear intermediate) main bearing.

Replacement Bearings: Std. and .001", .002", .010" Undersize.

►*MAIN BEARING SERVICING NOTE:* Bearing caps are numbered and must be installed in correct position (not interchangeable).

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Corp. Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chrysler Corp. Special Data.*

CAMSHAFT

Journal Diameter - **(1)** 1.998-1.999", **(2)** 1.982-1.983", **(3)** 1.967-1.968", **(4)** 1.951-1.952".

Bearings (Cast Iron Eng.) - Lead-based babbitt on steel.

Bearings (Aluminum Eng.) - Bearing inserts not used. Camshaft bearing journals run directly in finished bores in block.

Clearance - .001-.003". Wear limit .005".

End Thrust: Taken by rear face of sprocket hub on front face of block. No thrust plate used.

Timing Chain: Side guide type. **Width** .88". **Pitch** .50", **Length** 50 links. Replace chain when slack as measured on rim of camshaft sprocket exceeds 11/64" (hold crankshaft sprocket stationary, use torque wrench to turn camshaft in both directions applying 30 ft. lbs. turning torque (if cylinder head installed), 15 ft. lbs. turning torque (if head off).

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Corp. Special Data.*

Camshaft Setting: Marks on sprockets must be adjacent and in line across shaft centers.

Engine Front Cover Installation: *See "Engine Front Cover" in Chrysler Corp. Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Corp. Special Data.*

VALVES

Tappet Clearance: (Cast Iron Eng.) - .010" Intake, .020" Exhaust. Hot.

(Aluminum Eng.) - Same as for Cast Iron Eng. *See below.*

►*ALUMINUM ENGINE NOTE:* When setting tappet clearance, after engine reaches normal temperature, remove rocker arm cover and operate engine for an additional 5 minutes at 550 RPM before making adjustments.

Valve	Head Diameter	① Stem Diameter	Length
Intake	1.615-1.625"	.372-.373"	4.774"
Exhaust	1.355-1.365"	.371-.372"	4.797"

Valve	Seat Angle ②	Lift	Stem Clearance
Intake	45°	.375" ⑤	③ .001-.003"
Exhaust	45°	.360" ⑤	④ .002-.004"

① - Std. Also furnished .005", .015", .030" Oversize.

② - Valve face angle 47° Intake & Exhaust.

③ - Wear limit .004". ④ - Wear limit .006".

⑤ - All Hyper Pack are .430".

Valve Seat Width - .070-.090" Intake, .040-.060" Exhaust.

Valve Stem Oil Seals - Cup type seals used on all valve stems (long seal on intake, short seal on exhaust).

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .005", .015", .030" Oversize. Use Reamer Tool No. C-3433 (.005" O.S.), C-3430 (.015" O.S.), C-3427 (.030" O.S.) in sequence.

Valve Springs: Free length 2". *NOTE* - Damper spring used inside valve spring on Hyper Pack engine.

Valve Spring Specifications
(All Models Except Hyper Pack)

Valve	Pressure	Length
Closed	68-76 lbs.	1 11/16"
Open	160-172 lbs.	1 5/16"

(All Hyper Pack)

Valve	Pressure	Length
Closed	91 lbs.	1.66"
Open	226 lbs.	1.22"

Valve Spring Installation - Valve spring ends must be square within 1/16". Check installed height of spring which must not exceed 1 11/16" (measure from face of spring seat in cylinder head to lower face of spring retainer). If height greater, install 1/16" spacer in head counterbore to bring spring height within limits of 1 5/8" to 1 11/16".

Valve Lifters: Mechanical type on all engines.

►*OVERSIZE LIFTER NOTE:* A "♦" on engine serial number pad indicates that lifters are .008" oversize. If only certain lifters are oversize, the diamond will be placed on lifter boss facing engine centerline. These oversize lifters will also have notches on top surface of lifter body.

Rocker Arm Assembly: *See "Valve System" in Chrysler Corp. Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications
(All 170" & 225" Std. Engines)

Intake Valves - Open 8° BTDC. Close 44° ALDC.
Exhaust Valves - Open 48° BLDC. Close at TDC.

(All 170" & 225" Hyper Pack Engines)

Intake Valves - Open 22° BTDC. Close 74° ALDC.
Exhaust Valves - Open 66° BLDC. Close 22° ATDC.

Valve Timing Check - Turn crankshaft until No. 6 exhaust valve is closing and No. 6 intake valve is opening. Install dial indicator so pointer contacts No. 1 intake valve spring retainer parallel to axis of valve stem. Turn No. 1 intake valve adjusting screw one full turn to remove all lash, zero dial indicator and rotate crankshaft clockwise (normal running direction) until valve has lifted .018". Timing on timing tab should read from 12° BTDC to TDC.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under "OILING SYSTEM" in Chrysler Corp. Special Data.*

►*ALUMINUM ENGINE OILING SYSTEM NOTE:* Same as for Cast Iron Eng. except that oil to main bearings passes through upper main bearing caps, then to bearings.

Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 45-60 lbs. at 40-50 MPH.

►*RELIEF VALVE SPRING NOTE:* Three types of springs available. Replace with same color spring, *see "Oiling System" in Chrysler Corp. Special Data.*

Oil Pressure Indicator: Indicator light on Instrument Panel operated by Oil Pressure Switch, Autolite No. 14272A. On oil pump on right side of block.

Oil Pump: Rotor type. On right side of crankcase.
Overhaul - *See "Oiling System" in Chrysler Corp. Special Data.*

Oil Filter: Full-flow type. Replace filter element every 4,000 miles, to correspond with oil changes.

Crankcase Ventilation: (Standard Cars) - Filter in filler cap (air intake) and outlet vent tube extending from rocker arm cover to right rear of engine. Wash filter cap in kerosene and re-oil every 5,000 miles or more often in dusty areas.
Positive Crankcase Ventilation Cars - Vacuum tube connects outlet breather cap with lower part of throttle body. A ventilation valve is located in outlet vent cap and regulates crankcase ventilation. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 13 qts. Add 1 qt. for heater.

►*AIR CONDITIONER OPERATION CAUTION:* Engine cooling system must be protected to a temperature of 15°F (above zero) for summer operation.

►*FAN-RADIATOR CORE CLEARANCE CAUTION:* Clearance should be ¾"±¼". Use thinner fan spacer. Part No. 2120510 to correct.

Pressure Valve: 14 lb. radiator cap. (All Models).

Thermostat: Pellet type. In water outlet connection on cylinder head. 160°F Dodge & Plymouth No. 2129206, 180°F, No. 2129205.

Water Pump: Sealed ball bearing, packless type. No lubrication required.
See "Cooling System" in Chrysler Corp. Special Data.
Pump Removal - Drain cooling system, remove shroud (Air Conditioned Cars), loosen fan belt and idler (Air Conditioned Cars). Remove fan spacer and pulley. Remove retaining bolts and washer and remove pump.

Temperature Gauge: (Lancer) - King-Seeley ("CV") Constant Voltage, with separate Voltage Regulator King-Seeley No. 58245.
Dash Unit - King-Seeley No. 58203 (with Gas Gauge).
Engine Unit - King-Seeley No. 44265.

Temperature Gauge: (Valiant) - Constant voltage type with Voltage Regulator in Dash Unit.
Dash Unit - Chrysler No. 2209204.
Engine Unit - King-Seeley No. 44265.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 2,000 miles, drain and refill every 10,000 miles or sooner if needed. Use only Automatic Transmission Fluid Type "A", Suffix "A".
Checking Fluid Level - Bring engine and transmission to normal operating temperature. With parking brake applied, push selector lever buttons in turn to assure fluid distribution and check fluid in "N" position (with engine idling). Maintain fluid level between "Add 1 Pint" and "Full" marks on dipstick. *CAUTION* - Dipstick on 1961 models is 2½" shorter than on 1960 models (do not intermix).
Capacity - 14 pints.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

TIGHTENING SPECIFICATIONS

ENGINE

COMET & FALCON

ENGINE REMOVAL: *NOTE* - Engine only is removed. D not remove transmission. Proceed as follows:

1) Remove hood, drain cooling system and crankcase, remove air cleaner and disconnect battery ground cable. Remove radiator, drive belt, fan and pulley. Disconnect heater hoses at water pump and at carburetor heater spacer outlet, generator and starter wires at units, accelerator rod and choke control cable at carburetor.

2) Disconnect windshield wiper hose at vacuum pump. Remove fuel pump bowl and disconnect flexible fuel line from tank line (plug tank line). Disconnect primary wire at coil and oil and temperature sending unit wires at units. Remove starter and dust seal.

3) Disconnect clutch retracting spring and remove equalizer shaft and arm bracket from underbody rail. Remove flywheel or converter upper retaining bolts (accessible through floor pan) and disconnect exhaust pipe from manifold. Disconnect engine mounts and remove flywheel or converter housing cover. Remove flywheel housing lower bolts (synchro-mesh), disconnect converter from flywheel and remove converter housing lower bolts (auto. trans.).

4) Support transmission and flywheel or converter, attach lifting hooks under exhaust manifold, remove engine.

FORD 6 CYLINDER CARS

ENGINE REMOVAL: *NOTE - Unnecessary to remov transmission. Procedure bel w is for removal of engin only.* Drain cooling system and crankcase. Disconnect all wires, cables, and hoses from engine units (also disconnect and plug automatic transmission oil cooler lines at radiator). Remove radiator and air cleaner. Disconnect accelerator and throttle linkage (tie accelerator bracket to dash). Disconnect exhaust manifold, remove starter and automatic transmission filler tube bracket. Remove engine rear plate upper right bolt and disconnect clutch linkage (remove bracket from rear of engine). Remove flywheel or converter housing cover. Remove flywheel-to-converter nuts and hold converter in housing. Disconnect flywheel or converter housing from engine, support transmission and remove rest of engine rear plate bolts. Disconnect engine front mounts and remove engine (Lifting Hook, T52L-6000-C, may be used).

MERCURY 6 CYLINDER CARS

ENGINE REMOVAL: *NOTE - Procedure below is for removal of engine only.* 1) Remove hood. Drain cooling system and crankcase. Disconnect all wires, cables, and hoses from engine units (also disconnect and plug automatic transmission oil cooler lines at radiator). Remove radiator and fan guard assembly, and air cleaner. Disconnect accelerator and throttle linkage from carburetor and engine. Disconnect power steering pump from water pump and position out of way so oil will not drain out (unnecessary to disconnect hoses). Remove starter and dust seal and crankcase ventilation tube. Disconnect exhaust pipe from exhaust manifold. Disconnect engine front mounts at frame.

2) **Synchr -m sh Cars** - Disconnect clutch linkage from flywheel housing. Remove propeller shaft. Disconnect shift rods, wires, and cables from transmission. Support rear of engine and disconnect engine rear mount from transmission. Remove flywheel housing lower cover. Disconnect transmission from flywheel housing and slide transmission rearward so input shaft clears housing. Disconnect engine front mount brackets from engine and remove engine. *NOTE* - Lifting Bracket 6000-AB may be attached to cylinder head bolts (after valve rocker cover removed) to aid in lifting engine.

3) **Automatic Transmission Cars** - Remove converter housing bolts. Support transmission, remove converter housing lower cover, and disconnect converter from flywheel. Secure converter in housing. Attach Lifting Bracket 6000-AB to cylinder head bolts (remove valve rocker cover), and remove engine.

FORD V8 CARS & THUNDERBIRD

ENGINE REMOVAL: *NOTE - Procedure b l w is f r removal of engine only.* Drain crankcase and cooling system. Remove hood and air cleaner. Disconnect all wires, hoses, cables, lines, and brackets from engine (do not disturb radiator supply tank, remove with engine). Remove dipstick. Disconnect accelerator and throttle linkage from carburetor and engine (remove accelerator cross shaft bracket). Remove power steering pump from engine and position to prevent loss of oil (unnecessary to disconnect hoses). Isolate air conditioning compressor and disconnect hoses. *See "Ford Motor Co. Air Conditioning" in Miscellaneous Section.* Swing coil out of way (292"), remove coil (352" & 390"). Place distributor cap near center of engine (292"). Remove flywheel or converter housing-to-engine upper bolts. Remove starter, dust seal, and automatic transmission filler tube bracket. Remove oil filter (292"). Disconnect muffler inlet pipes from exhaust manifolds and engine support insulators from frame. Remove flywheel housing lower cover, disconnect clutch linkage (remove bracket from engine), disconnect converter from flywheel(secure converter in housing), and remove remaining flywheel or converter-to-engine bolts. Support transmission, attach lifting hooks, Tool T53L-6000-B (292"), T58P-6000-A (352" & 390"), and sling T53-L-300-A, and remove engine.

MERCURY V8 CARS

ENGINE REMOVAL: *NOTE - Proc dur b l w is for removal of engine only.* 1) Remove hood, battery, and battery carrier. Drain cooling system and crankcase. Remove radiator. Remove fan, spacer, and pulley assembly from water pump. Remove oil filter (292"). Remove coil (352" & 390"). Remove crankcase and automatic transmission dipstick. Isolate air conditioning compressor and disconnect hoses. *See "Ford Motor Co. Air Conditioning" in Miscellaneous Section.* Remove power steering pump from engine and position to prevent loss of oil (unnecessary to disconnect hoses). Place distributor cap near center of engine (292"). Disconnect all wires, hoses, cables, lines, and brackets from engine. Disconnect accelerator and throttle linkage from carburetor and engine (remove accelerator cross shaft bracket). Disconnect exhaust pipes from exhaust manifolds. Disconnect engine front mounts from engine.

2) **Synchro-m sh Cars** - Remove flywheel housing lower cover. Disconnect clutch linkage from flywheel housing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Disconnect shift rods and speedometer cable from transmission. Remove propeller shaft. Disconnect engine rear mount from transmission and disconnect transmission from flywheel housing. Slide transmission rearward until input shaft clears flywheel housing. With Lifting Hooks, 6000-E (292"), 6000-BD (352" & 390"), and Lifting Sling, 6000-BA, remove engine.

3) Aut matic Transmission Cars - Remove converter housing lower cover and disconnect converter from flywheel. Secure converter in housing. Disconnect converter housing from engine (support transmission and converter, and rear of engine). With Lifting Hooks, 6000-E (292"), 6000-BD (352" & 390"), and Lifting Sling, 6000-BA, remove engine.

LINCOLN CONTINENTAL

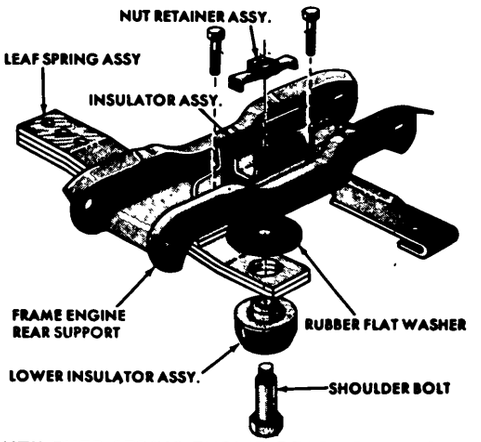
ENGINE REMOVAL: *NOTE - Following procedure is for removal f engine nly.* Remove hood. Drain cooling system and crankcase. Remove air cleaner and air intake duct assembly. Remove speed control unit. Remove battery. Disconnect all wires, lines, hoses, cables, and brackets from engine (disconnect and plug transmission oil cooler line at radiator). Remove transmission fluid filter. Remove fuel pump heat shield and fan shield. Remove fan, fluid fan drive and pulley as an assembly. Remove radiator. Isolate air conditioning compressor and disconnect hoses. *See "Ford Motor Co. Air Conditioning" in Miscellaneous Section.* Remove compressor and mounting bracket. Disconnect accelerator and throttle linkage from carburetor and engine (tie linkage to dash for clearance). Remove converter housing access cover and underbody splash shield from lower front of transmission. Disconnect exhaust pipes from exhaust manifolds. Disconnect power steering pump outlet line from pump. Remove oil filter. Disconnect engine front mounts from engine. Remove starter and dust seal, and generator splash shield. Disconnect converter from flywheel, engine lateral restrictor from converter housing, and remove converter housing lower retaining bolts. Support transmission and remove converter housing-to-engine upper bolts. Secure converter in housing. Install lifting eyes in each cylinder head lower front mounting bolt hole, and in rear of each exhaust manifold. With suitable lifting chains and hooks, remove engine from car.

ECONOLINE TRUCKS

ENGINE REMOVAL: *NOTE - Following procedure is for r moval of engine and transmission assembly.* Drain cooling system and crankcase, and remove air cleaner. Disconnect all wires, hoses, cables, and lines from engine. Raise and support truck. Remove propeller shaft. Disconnect transmission shift rods from transmission. Disconnect clutch linkage from flywheel housing and underbody. Remove exhaust pipe, muffler, and tail pipe assembly. Lower truck after half-way for safety. Use Transmission Jack KRW-7020 and Engine Adapter T61E-6000-A or other suitable equipment and support engine and transmission assembly after securing engine to adapter. Disconnect engine right and left front mounts from engine, and remove right and left support members from underbody. Disconnect transmission extension from hanger bracket. Lower jack and raise truck to remove engine assembly from beneath truck.

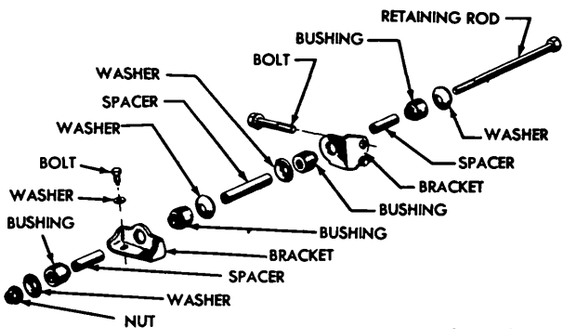
FORD 6 CYLINDER TRUCKS

ENGINE REMOVAL (F & B SERIES): Procedure is same as for Ford 6 Cyl. Cars after removing hood, fan, spacer, and pulley.



ENGINE REMOVAL (P SERIES): *NOTE - Procedure below is for removal of engine only.* Drain cooling system and crankcase. Remove driver's seat assembly, master cylinder inspection cover, and steering column cover plates. Disconnect accelerator linkage from pedal and all wires from headlight dimmer switch. Remove left wheelhouse panel and center floor plate, disconnect right side of engine rear cover panel from right wheelhouse panel, and rear flange of engine rear cover from frame crossmember and center floor plate front bracket. Remove air cleaner tube (leave air cleaner attached to engine cover). Remove engine rear cover plate (wedge frame gussets open so rear flange will clear slots). Remove accelerator bracket assembly and carburetor. Disconnect throttle control rod. Disconnect exhaust manifold from muffler inlet pipe. Disconnect all wires, cables, lines, and hoses from engine. Remove starter, radiator and fan. Disconnect engine from front mounts. Remove flywheel or converter housing cover and disconnect housing from engine. Disconnect converter from flywheel. Remove crankcase ventilation tube. Remove automatic transmission filler tube and drain transmission. Loosen engine rear support screws, raise transmission, remove engine (swing 30° to right and lift rear to clear compartment).

FORD V8 TRUCKS



ENGINE REMOVAL (F & B SERIES): Procedure is the same as for Ford V8 Cars except the following: Remove radiator and shroud assembly, fan, spacer, and belt. Disconnect power steering hoses and let system drain (unnecessary to remove pump). *NOTE* - Access cover provided in floor pan to remove converter housing bolts, accelerator assembly, and other parts.

ENGINE REMOVAL (C SERIES): Tilt the cab and drain cooling system and crankcase. Remove radiator and shroud assembly, fan, and air cleaner. Remove all wires, cables, clips, lines, and hoses from engine. Remove clutch release lever retracting spring and starter. Disconnect exhaust pipes from manifolds. Remove flywheel housing inspection cover and disconnect engine from flywheel and front mounts (support transmission). With lifting hooks (Tool T53L-6000-B) and sling (Tool T53L-300-A) remove engine.

ENGINE REMOVAL (P SERIES): *NOTE - Procedure below is for removal of engine and transmission as an assembly.* Drain cooling system and crankcase. Remove driver's seat, master cylinder inspection cover, steering column cover plate, left wheelhouse panel, and center floor plate. Disconnect accelerator linkage at pedal and all wires from headlight dimmer switch. Disconnect right side of engine rear cover from right wheelhouse panel, rear flange of engine rear cover from crossmember and center floor plate front bracket. Remove engine rear cover plate (wedge frame gussets open so plate will clear slots). Remove crossmember and air cleaner. Disconnect all wires, cables, lines, and hoses from engine and transmission (remove radiator hoses, hand brake cable and bracket). Disconnect engine from front mounts and exhaust pipes from manifolds. Remove air cleaner stud. Disconnect engine rear support, front universal joint, transmission shift rods, and clutch slave cylinder hose. With lifting hooks (Tool T53L-6000-B), sling (Tool T53L-300-A), and floor crane, remove engine and transmission assembly.

CANTILEVER SPRING ENGINE REAR MOUNT ASSEMBLY

LINCOLN CONTINENTAL LATERAL RESTRICTOR

ENGINE MOUNTINGS

COMET & FALCON

ENGINE REAR MOUNT (CANTILEVER SPRING TYPE): Consists of a leaf type spring mounted on rear support and extending to front of car. Spring is bolted to transmission extension. Spring is insulated from support by two rubber insulators and a rubber flat washer. Spring-to-support attaching bolt is a shoulder type bolt.

Installation - *CAUTION - To prevent high frequency high speed vibration caused by transmission extensi n contact with rear mount, ¼" minimum clearance must b maintained between rear mount upper insulator and transmission extension.* Tighten spring-to-support attaching shoulder bolt until bolt bottoms (22-32 ft. lbs. torque). *CAUTION - Do not add washers between lower insulator and spring as noise and vibration would result.* Tighten other bolts to specified torque *(see "Engine Mounting Tightening Table" below).*

LINCOLN CONTINENTAL

►*1961 LINCOLN CONTINENTAL 45-80 MPH MOAN, ROAR OR VIBRATION CORRECTION & ENGINE REAR MOUNT PRODUCTION CHANGE:* To correct noise and vibration, install later design engine rear mount, Lincoln Kit No. C1VY-6A024-A. This design mount

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

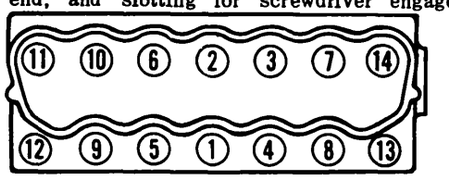
has a bracket between transmission extension and insulators and redesigned support. Later type mount used in production after April 15, 1961.

ENGINE LATERAL RESTRICTOR: Consists of rubber bushed rods and spacers mounted on brackets from converter housing to underbody side rail to restrict engine side movement.

Removal - Remove outer bracket from underbody side rail. Remove inner bracket from converter housing. Remove lateral restrictor assembly.

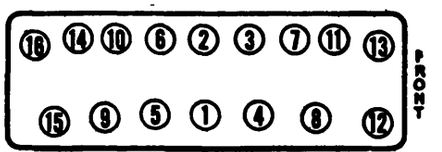
Disassembly - Remove restrictor rod retaining nut and disassemble unit. Clean all parts in solvent and replace worn or damaged parts.

Reassembly - With head of large restrictor rod in a vise, assemble all parts in same order as removed (see illustration). *NOTE - Lips of rubber bushings must be seated properly in bores of inner and outer brackets.* Torque retaining nut to 13-18 ft. lbs.



Installation - Position unit on car with outer bracket resting on underbody side rail. Insert inner bracket dowel pin into converter housing, install inner bracket retaining bolt and torque to 40-50 ft. lbs. Torque outer bracket retaining bolts to 13-18 ft. lbs.

CYLINDER HEAD & MANIFOLD



6 CYLINDER ENGINES

►*223" & 262" ENGINES CYLINDER HEAD BOLT NOTE:* All 262" and later production 223" engines have cylinder heads with 1/2" bolts. Previous bolt size was 7/16". Bolt torque specifications for each size bolt are different. *See below.*

CYLINDER HEAD: Removal - When removing head, install guide studs in front and rear cylinder head bolt holes on manifold side of head. Make guide studs from 7/16" - 14 x 6" or 1/2" - 13 x 6" bolts, depending on cylinder head bolt size, by cutting off bolt head, tapering end, and slotting for screwdriver engagement.

144" & 170" CYLINDER HEAD

223" & 262" CYLINDER HEAD

Installation - Coat both sides of new gasket with head gasket sealer. *CAUTION - "Sandwich" type gasket (steel core bonded between rubber-asbestos sheets) used on 223" and all 262" engines. DO NOT use sealer on this gasket.* On 144" & 170" engines, coat right side front and rear head bolts with sealer. On 223" & 262" engines, coat all left side bolts with sealer. Install head over guide studs (see "Removal" above), install two end bolts finger tight to hold head, then install remaining bolts. Tighten bolts in sequence shown in diagrams in three steps to torque limits shown in table below. **Do not disturb bolts after final step completed.**

ENGINE MOUNTINGS TORQUE SPECIFICATION TABLE

(Specifications Listed Are For Foot-Pounds Torque)

FRONT MOUNT	Comet	Falcon	Econoline	Ford & Mercury 6 Cyl.	Ford & Mercury V8	T-Bird	Lincoln
Insulator or Bracket-To-Engine	23-28	18-24	23-28	35-40 ①	35-40 ①	34-40	50-65

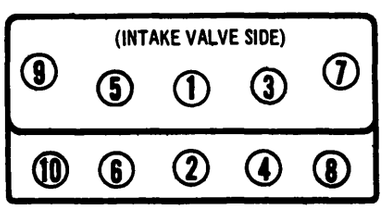
Support Retainer-To-Trans.		25-30

① - Trucks: 1/2" - 45-55 ft. lbs.; 7/16" - 35-45 ft. lbs.
② - Insulator-To-Intermediate Bracket 30-42 ft. lbs.; Bracket-To-Crossmember 30-42 ft. lbs.
③ - Comet All Models; Falcon Station Wagon & Ranchero.
④ - Trucks: 70-90 ft. lbs.
⑤ - Early type mount, *see "Production Change & Noise Correction".*



V8 ENGINES

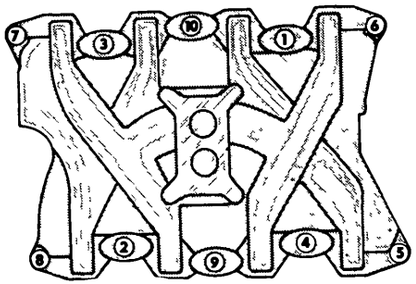
CYLINDER HEAD: Removal - *NOTE - On 352" & 390" engines, observe rocker arm shaft removal procedure detailed below.*

Installation - Coat new gasket on both sides with head gasket sealer. Gasket must be installed with "Front" to front of engine, and "Top" facing upwards. On 292" engine, install long cylinder head bolts at the dowel locations. On all engines, tighten bolts in sequence shown in diagrams in **three** steps to torque limits shown in table below. **Do not disturb bolts after final step completed.**

Head Bolt Torque Specifications (Ft. Lbs.)

Engine	Step 1	Step 2	Step 3
144" & 170"	55	65	75
223" (7/16" bolts)	55	65	75
223" (1/2" bolts)	95	105	115
262"			65-75
292" Cars	55	65	75
292" MD Trucks	55	65	75
292" HD Trucks	65	75	85
352" & 390"	70	80	90
430"	85	95	105

V8 ENGINES CYLINDER HEAD



V8 ENGINES

INTAKE MANIFOLD: Removal (352" & 390") - *Observe rocker arm shaft removal procedure detailed below.*

Installation (292") - Make sure gaskets are in place and tighten manifold attaching bolts to correct torque, starting from the center bolts.

Installation (352" & 390") - Coat mating surfaces of manifold and cylinder heads with oil resistant sealer. Make sure front and rear manifold seals do not slip out of place when installing manifold. Tighten manifold attaching bolts to correct torque, starting from the center bolts.

Installation (430") - Manifold gaskets must be installed with "Front" to front of engine. Tighten attaching bolts to correct torque, and in correct sequence (see diagram).

430" ENGINE INTAKE MANIFOLD TIGHTENING SEQUENCE

PISTONS

FITTING PISTONS: To check piston fit in cylinder and to determine clearance between piston and cylinder walls, position a length of ½" wide feeler stock (see

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

table below for feeler thickness) between inverted piston and cylinder wall 90° from piston pin holes. Hold piston in bore so bottom of piston skirt is about 1½" below top of block and piston pin bore is parallel to crankshaft. *NOTE - F eler must extend entire length f piston.* Pull feeler from cylinder with a spring scale and note reading. Specifications should agree with table below.

PISTON CLEARANCE CHART

PISTON PINS

144" & 170" ENGINES

►*TOOL T60K-6135-A MODIFICATION NOTE:* If tool not previously modified to prevent damage to piston, make following modification so piston will not be damaged when Detail 2 of tool seats against piston pin boss: Grind a 1/16" - 45.° chamfer around outer edge of Detail 2.

REMOVAL: Press pin out of piston and connecting rod using Tool T60K-6135-A and vise and wrench, or Tool 6135-J and arbor press, as shown in illustrations.

INSTALLATION: Lightly coat all parts with engine oil, assemble piston and connecting rod correctly and press pin into piston and connecting rod as follows: 1) With Tool T60K-6135-A and vise and wrench, draw pin into assembly until pin seats in Detail 2. 2) With Tool 6135-J and arbor press, press pin into assembly until Detail 2 is seated firmly in Detail 1. See *illustrations.*

430" ENGINE

REMOVAL: Press or pull pin out of piston and connecting rod assembly with Piston Pin Remover and Replacer Set, Tool 6135-F, using an arbor press or vise and wrench as shown in illustrations.

INSTALLATION: Press or pull pin into piston and connecting rod with Tool 6135-F and an arbor press or vise and wrench as shown in illustrations. Pin must be ⅛" beyond face of piston boss. To check pin fit install all parts of Tool 6135-F for vise installation and place in a vise. Turn nut with torque wrench until pilot (Part No. 2 of tool) bottoms in anvil (Part No. 1 of tool). Minimum torque required to s at pilot is 20 ft. lbs. If less torque required replace c nnecting rod.

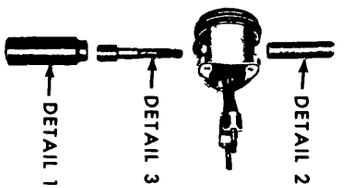
CRANKSHAFT & MAIN BEARINGS

ALL ENGINES

►*MAIN BEARING CAP INSTALLATION NOTE:* Caps are numbered from front of engine and should be installed in correct position with arrow on cap pointing to front of engine.

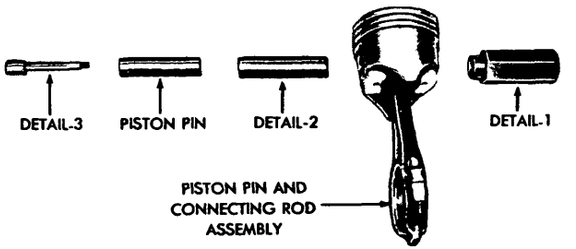
CRANKSHAFT THRUST BEARING ALIGNMENT: Install all bearing caps except thrust bearing cap and torque to specifications. Install thrust bearing cap with bolts finger tight. Pry crankshaft forward against upper half of bearings, then pry bearing cap to rear to align thrust surfaces of both bearing halves. While holding crankshaft forward, tighten thrust bearing cap bolts to specifications. Move crankshaft to rear of engine and check crankshaft endplay.

REAR MAIN BEARING OIL SEAL: *NOTE - On 292" engine, coat entire mating surface of seal retainer with oil resistant sealer before installation. On other engines, coat only rear mating surface of cap with sealer - do not use sealer forward of side seal groove. Use of sealer prevents oil leaks.*



►*OVERSIZE REAR MAIN BEARING SEAL NOTE:* When main bearing cap side seal does not compress firmly when forced into cap (cause of oil leak), an oversize seal is available for installation. DO NOT use oversize seal unless inspection shows that standard seal does not function properly.

Upper & L w r Seal Installati n: *CAUTION - Us Installing & Forming Tool as listed bel w and foll w procedure listed exactly to prevent seal shift and il leaks.* Preform seal by hand and install into block or cap (or retainer) with thumbs, seating seal at center and then working from the ends toward the center. Now place installing tool properly in block or cap as follows: Large flanged face of tool must be toward rear of engine for upper seal, and toward rear face of cap or retainer for lower seal. Tool flanges must bottom on seal groove rear flange and bearing saddle (insert removed). Hold tool firmly and strike top of tool sharply. Cut seal ends flush with block or cap (or retainer). Trim frayed ends. Install cap or retainer and tighten bolts to specifications.



Side Seal Installation: Dip side seals in light engin oil and install **immediately** into grooves. *CAUTION - DO NOT use sealer. Seals expand with oil.* Tap seals firmly into position. Do not trim ends.

Testing Seal Installation - Squirt a few drops of oil into parting lines between cap and cylinder block from the outside. Blow compressed air against seals from the inside of block. If air bubbles appear in oil, it is an indication of oil leakage.

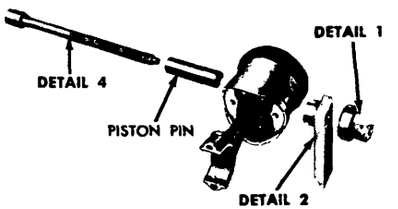
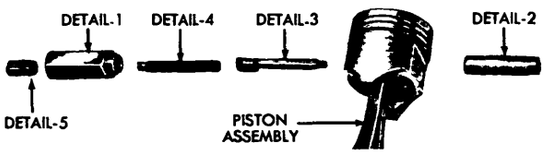
REMOVAL

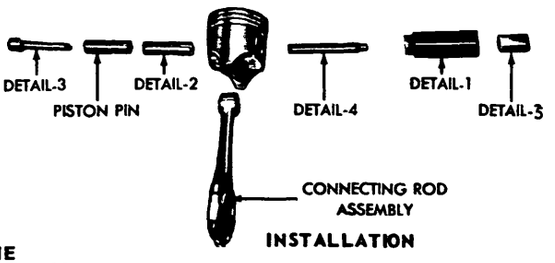


INSTALLATION

ARBOR PRESS METHOD



REMOVAL



INSTALLATION

144" & 170" ENGINES

REMOVAL

INSTALLATION

430" ENGINE
VISE & WRENCH METHOD

CONTINUED FROM PRECEDING PAGE

Crankshaft Rear Seal Installing Tool

Engine	Tool No.
144" & 170"	T60K-6701-A or 6701-D
223", 262", & 292"	T52L-6701-AGD or 6701-A
352" & 390"	T58P-6701-A or 6701-C
430"	6701-B

ENGINE FRONT COVER

6 CYLINDER ENGINES (EXCEPT TRUCKS)

ENGINE FRONT COVER: Removal - Drain crankcase and cooling system. Remove radiator, fan, belt, pulley, and damper. Remove water pump. Remove oil pan *(see individual Car Model Pages)*. Remove front cover. **Installation** - Use Pilot, T61K-6019-A or 6059-E (144" & 170"), T52L-6059-AEE or 6059-B (223") to center cover on crankshaft. Push in on tool and tighten cover bolts to specifications. Reverse removal procedure to complete installation.

292" V8 ENGINE (EXCEPT TRUCKS)

ENGINE FRONT COVER: Removal - Drain cooling system, remove radiator, fan, belt, pulley, spacer, power steering pump pulley, and pull crankshaft damper. Remove oil pan *(see Car Model Pages)*, and fuel pump. Disconnect hoses from water pump. Disconnect power steering pump from water pump (place so oil will not drain). Move generator support bracket and adjusting arm out of way. Remove front cover and water pump assembly. *NOTE* - Air conditioner compressor brackets are attached by front cover screws.

Installation - Place large diameter end of Cover Aligning Tool T52L-6059-AEE or 6059-B in bore of cover and place cover on block. Push in on tool and tighten cover bolts to specifications. Complete installation by reversing removal procedure.

352" & 390" V8 ENGINES

ENGINE FRONT COVER: Removal - Drain cooling system, remove radiator. Remove belts. Remove water pump, fan, pulley, and generator adjusting arm as an assembly. Remove power steering pump pulley. Pull crankshaft damper. Remove oil pan *(see Car Model Pages)*. Remove fuel pump (unnecessary to disconnect flexible line). Remove stepped-down crankshaft sleeve with a three-jawed puller. Remove non-stepped-down sleeve with Puller, Tool T56P-6362-A. Remove front cover. *NOTE* - Air conditioner compressor brackets are attached by front cover bolts.

Installation - Use Pilot, Tool T61P-6019-B or 6059-F to center cover on crankshaft. Push in on tool and tighten cover bolts to specifications. Reverse removal procedure to complete installation.

430" ENGINE

ENGINE FRONT COVER: Removal - Drain cooling system and disconnect battery. Remove radiator supply tank, fan shield, drive belts, fluid fan and pulley assembly. Remove water pump (loosen power steering reservoir bracket mounting bolts for clearance). Remove crankshaft damper. Remove power steering pump (disconnect and plug lines). Remove fuel pump heat shield and fuel pump. Remove cup type plug from top of front cover and then remove fuel pump pushrod. Remove engine front cover.

Installation - Reverse removal procedure and note the following: 1) Power steering pump rubber insulators must be properly installed. 2) Lips of front cover seal must maintain proper contact with power steering pump.

6 CYL. & V8 TRUCK ENGINES

ENGINE FRONT COVER: Removal - Drain cooling system and crankcase. On P Series, remove hood, then remove grille, headlights, parking lights, wind deflector and hood lower weatherstrip as an assembly. Remove accelerator cross shaft. On all trucks, remove radiator, fan shroud, fan, spacer, brackets, pulleys, and damper. On V8 trucks, remove fuel pump, disconnect engine front mounts and raise engine slightly. On all trucks, remove oil pan and flywheel housing inspection cover. Remove engine front cover.

Installation - *See 292" V8 Engine above for aligning tool and procedure.* Reverse removal procedure to complete installation.

ALL ENGINES

FRONT COVER OIL SEAL REPLACEMENT: *NOTE - On 430" engine, seal must be seated in cover. No special tool required. For other engines, proceed as follows:* Remove old seal with punch and clean recess in cover. Drive new seal in cover with proper tool (see below) until seal is fully seated and make sure spring is positioned properly in seal.

Front Cover Seal Installing Tool

Engine	Tool No.
144" & 170"	T60K-6700-A or 6700-C
223", 262", 292"	T52L-6700-BEE or 6700-B
352" & 390"	T58P-6700-B or 6700-B

CAMSHAFT & BEARINGS

►*CAMSHAFT REMOVAL PROCEDURE NOTE: See other sections of this Special Data for removal of Cylinder Head, Engine Front Cover, Intake Manifold, Rocker Arm Shaft Assembly, and Oil Pump. See individual Car Model pages for Oil Pan removal.*

144" & 170" ENGINES

CAMSHAFT REMOVAL: On Econoline, remove front passenger seat and engine cover. On Comet & Falcon, remove grille. On all models, remove radiator, engine front cover, oil pan and oil pump, sprockets and timing chain, distributor, fuel pump, oil filter, rocker arm shaft assembly, pushrods, cylinder head, lifters, and camshaft thrust plate. Remove camshaft.

223" & 262" ENGINES

CAMSHAFT REMOVAL: Remove headlight trim rings and grille, radiator, engine front cover, oil pan, dampers and pulleys, rocker arm shaft assembly, pushrods, distributor, fuel pump, oil filter, pushrod chamber cover, sprockets (or gears) and timing chain, and camshaft thrust plate and spacer. Raise and hold lifters clear of camshaft. On F Series Truck, disconnect engine front mounts and raise engine so camshaft can be removed through grille opening. On all models, remove camshaft.

292" V8 ENGINES

CAMSHAFT REMOVAL: Remove grille, radiator, engine front cover and water pump, intake manifold, oil pan, rocker arm shaft assemblies, pushrods, pushrod chamber cover, distributor, sprockets and timing chain, camshaft thrust plate and spacer. Raise and hold lifters clear of camshaft. Remove camshaft.

352" & 390" V8 ENGINES

CAMSHAFT REMOVAL: Remove grille (unnecessary on T-Bird), radiator, engine front cover, sprockets and timing chain, distributor, rocker arm shaft assemblies, pushrods, intake manifold, lifters, and oil pan and screen. Remove camshaft.

430" ENGINE

CAMSHAFT REMOVAL: Remove hood, air conditioning condenser (unnecessary to disconnect lines), radiator, lower center grille, engine front cover, sprockets and timing chain, rocker arm shaft assemblies, pushrods, and lifters. Remove chamshaft.

ALL ENGINES

►*CAMSHAFT BEARING INSTALLATION CAUTION:* When installing bearings, special care must be taken to align oil holes in bearings with drilled oil passages in cylinder block bearing bore. Also, bearings with 2 holes provide lubrication to valve system and extensive engine damage would result if these holes were blocked. *DO NOT install any bearing with 1 hole in a 2 hole bearing position.*

CAMSHAFT BEARING REPLACEMENT: 144" & 170" - Use Tool 6261-M & Adapter Set 6261-AB. No. 1 & No. 4 bearings are not interchangeable with any other bearing. No. 1 bearing must be installed to .100-.140" below front face of bearing bore in block. No. 4 bear- No. 4 bearing has two oil holes and must be installed so forward edge of bearing is $24\frac{3}{4}$"±1/64" from thrust plate mounting surface of block.

223" & 262": Use Tool T52L-6261-CEE & Adapter Set T54L-6250-B or Tool 6261-C. No. 1 bearing is not interchangeable with other bearings. No. 1 bearing must be installed to .005-.020" below front face of cylinder block. No. 3 bearing has 2 oil holes.

292": Use Tool T52L-6261-CEE or 6261-C & Adapter Set T54L-6250-B or 6261-E. No. 1 & No. 3 bearings are not interchangeable with other bearings. No. 1 bearing must be installed to .005-.020" below front face of cylinder block. No. 3 bearing has 2 oil holes.

352" & 390": Use Tool T52L-6261-CEE or 6261-F & Adapter Set T54L-6250-B or 6261-E. None of the bearings are interchangeable. No. 1 bearing must be installed to .005-.020" below front face of cylinder block.

430": Use Tool 6261-F & Adapter Set 6261-AC. *NOTE - Camshaft bearing journals and I.D. of bearings are stepped (largest journal and smallest bearing at front). DO NOT interchange bearings. Position number of bearing is stamped on each bearing.* No. 1 bearing must be installed with notch on bearing to front of engine and facing down toward bottom of block; and bearing must be .005-.020" below front face edge of cylinder block bearing bore. On other bearings, split in bearing must be up toward top of cylinder block.

VALVE SYSTEM

ALL ENGINES

ROTATABLE VALVES: Valves operate directly in valve guide holes in cylinder head. Remove and install as follows:

Valve Removal: Use Tool 6513-EE to compress valve springs. Remove all parts of assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Installation: Lubricate valve guides and stems with engine oil. Apply Lubriplate to valve stem tip. Install all parts in same order as removed, making sure closed coil end of valve spring is toward cylinder head and damper spring, if used, is not caught in valve spring.

262" & 292" HD TRUCK ENGINES EXHAUST VALVES

FREE TURNING VALVE CAP CLEARANCE CHECK: Clearance between end of valve stem and inside surface of cap with valve locks and spring retainer installed should be .0002-.004" measured with Tool 6513-CE-2. Lap open end of cap if clearance more than .004".

EXHAUST VALVE SEAT INSERT INSTALLATION: Counterbore the recess in head about .001-.002" below old counterbore depth to clean recess. Clean all chips and oil from recess. Chill new oversize insert and tool in dry ice for ½ hour. Place insert on tool with small radius on outer edge facing outward, pilot tool in guide and drive insert into recess until fully seated. DO NOT peen around insert. Reface insert. *CAUTION - Installation must be made quickly after tool and insert removed from dry ic .*

VALVE GUIDES

ALL ENGINES

VALVE GUIDE REAMING (To Install Valves With Oversiz St ms): Reamers are furnished .003" oversize with standard diameter Pilot, .015" oversize reamer with .003" oversize pilot, and .030" oversize reamer with .015" oversize pilot. Always use reamers in sequence and reface valve seat after valve guide is reamed. Use Reamer Tool as follows:

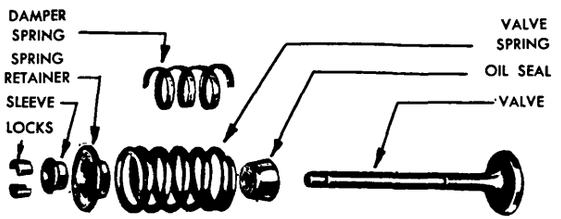
Valv Guid Reaming Tool

Engin	Tool No.
144" & 170"	T60K-6085-A or 6085-AE
223" & 262"	T52L-6085-AEE or 6085
292"(Except HD Truck Exhaust)	T52L-6085-AEE or 6085
292" (HD Truck Exhaust)	T56T-6085-A
352" & 390"	T58P-6085-B or 6085-H
430"	6085-H

VALVE TAPPET ADJUSTMENT & CHECKING

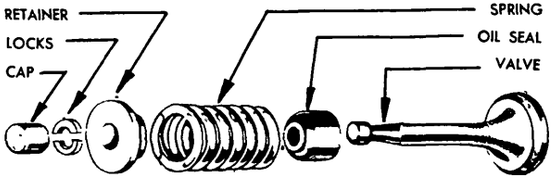
MECHANICAL LIFTER TYPE ENGINE

"CONVENTIONAL" TYPE ROCKER ARMS



INITIAL VALVE LASH ADJUSTMENT (After Overhaul): Check rocker arm adjusting screw for proper setting. Torque required to turn screw after interference noted must be 3 ft. lbs. minimum. Replace adjusting screw or rocker arm if necessary.

6 Cylinder: Adjust intake and exhaust valves of each cylinder in firing order (1-5-3-6-2-4) with each piston at TDC of compression stroke.



292" V8: 1) Place No. 1 piston at TDC of compression stroke. Adjust following valve clearances: No. 1,4,5 Exhaust; No. 1,2,7 Intake.

2) Turn crankshaft ½-turn or 180° (No. 4 piston at TDC). Adjust following valve clearances: No. 6 & 8 Exhaust; No. 4 & 5 Intake.

3) Turn crankshaft ¾-turn or 270° from second position above (No. 3 piston at TDC) and adjust following valve clearances: No. 2,3,7 Exhaust; No. 3,6,8 Intake.

ROTATABLE VALVE ASSY. (WITH DAMPER)

FREE-TURNING VALVE ASSY.

390"V8: 1) Place No. 1 piston at TDC of compression stroke. Adjust following valve clearances: No. 1,4,5 Exhaust; No. 1,7,8 Intake.

2) Turn crankshaft ½-turn or 180° (No. 4 piston at TDC). Adjust following valve clearances: No. 2 & 8 Exhaust; No. 4 & 5 Intake.

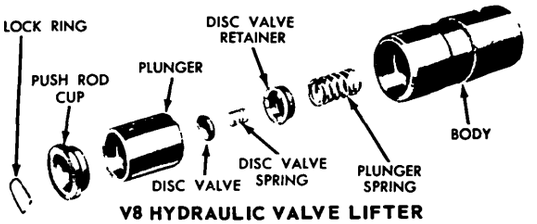
3) Turn crankshaft ¾-turn or 270° from second position above (No. 3 piston at TDC) and adjust following valve clearances: No. 3, 7, 8 Exhaust; No. 2, 3, 6 Intake.

All Engines: Make final clearance check. *See TUNE-UP on Car or Truck Model Pages.*

"ZERO LASH" TYPE ROCKER ARM ENGINES

INITIAL VALVE LASH ADJUSTMENT (After Overhaul): Adjust intake and exhaust valves of each cylinder in turn in firing order (1-5-3-6-2-4) with each piston at TDC at end of compression stroke as follows:

1) Push rocker arm eccentric in toward rocker arm until recess mark on eccentric is inboard of valve stem tip (eccentric will remain in position when released and should be near limit of its travel). Push eccentric end of rocker arm down until eccentric contacts valve stem tip and all vertical and horizontal clearance in eccentric is removed.



2) Tighten rocker arm adjusting screw to remove all lash between screw and pushrod socket. *CAUTION - Do not turn screw beyond this position or valve will be forced open.* Push outward slightly on eccentric. If all vertical clearance was not removed, eccentric will move out slightly until upper edge of eccentric bottoms in rocker arm. but recess mark must still be inboard of valve stem tip.

3) Continue to push eccentric outward and loosen rocker arm adjusting screw until recess mark in eccentric is centered directly over valve stem tip. Tighten adjusting screw locknut.

Final Adjustment - With engine idling at normal temperature, make minor adjustment with adjusting screw until eccentric recess mark is centered over valve stem tip during entire valve cycle of operation. Tighten adjusting screw locknut to 35 ft. lbs.

HYDRAULIC LIFTER TYPE ENGINE

HYDRAULIC LIFTER OPERATING RANGE CHECK: Clearance between valve stem and rocker arm should

V8 HYDRAULIC VALVE LIFTER

be .078-.218" with lifter fully collapsed. To check operating range of lifter, proceed as follows:

1) Place No. 1 piston at TDC of compression stroke. Following valves will be adjusted: No. 1, 3, 7, 8 Intake; No. 1, 4, 5, 8 Exhaust. Bleed lifter down with Tool T58P-6565-A or 6513-K and hold collapsed. Insert first step of gauge part of Tool T58P-6565-A or .078" feeler gauge between valve stem and rocker arm. If first step or gauge enters, use standard length pushrod. If first step or gauge does not enter, use .060" **shorter** pushrod (coded White). If second step of tool or .218" gauge can be inserted between valve stem and rocker arm, operating range is excessive (incorrect pushrod, excessive wear on pushrods, rocker arms, or valve stems). If all other parts of valve train are within limits, install .060" **longer** pushrod (coded Yellow).

2) Repeat above procedure with No. 6 piston at TDC of compression stroke and check the following valves: No. 2, 4, 5, 6 Intake; No. 2, 3, 6, 7 Exhaust.

►*CAUTION:* To avoid damage to valve or piston when compressing spring to remove pushrod, make sure piston is below TDC.

HYDRAULIC LIFTERS

352", 390", & 430" ENGINES

►*CAUTION:* Observe the following cautions when servicing hydraulic lifters: 1) Lifters must be reinstalled in bores from which removed. 2) DO NOT intermix parts of one lifter with parts of any other lifter. 3) Absolute cleanliness must be observed to keep lifters free of lint, dust, or other foreign material.

HYDRAULIC LIFTER OVERHAUL: Removal - Lifters can be removed with a magnet after removal of intake manifold (352" & 390" Engines), through pushrod holes (430" Engine).

Disassembly: Remove lock ring (depress plunger fully if necessary), pushrod cup, plunger and spring. Invert plunger and remove disc valve retainer (pry up gently with a screwdriver), disc valve and spring.

Reassembly: With plunger inverted, install disc valve, spring, and retainer. Insert plunger spring and plunger (open end up) into lifter body. Place pushrod cup on plunger and install lock ring (closed end first).

Lifter Testing: Leakdown rate should be 10-80 seconds under a 50 lb. load. Use a lifter tester according to directions of manufacturer.

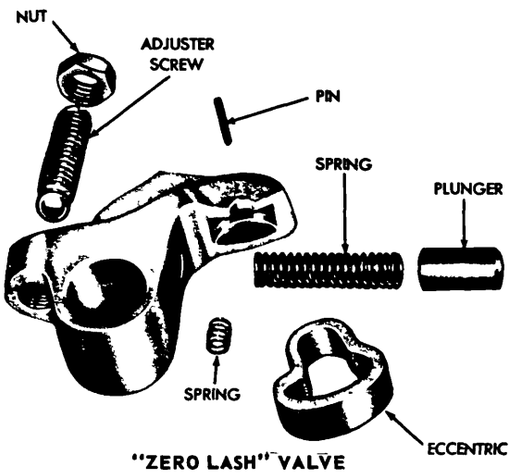
ROCKER ARMS

►*1961 COMET & FALCON INSUFFICIENT ROCKER ARM SHAFT LUBRICATION & EXCESSIVE WEAR CORRECTION & PRODUCTION CHANGE:* 1) If there is excessive wear, noise, or insufficient lubrication of valve train parts, check first for clear passages in camshaft rear bearing journal and that rear camshaft

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

bearing has been properly installed with both oil holes properly aligned with holes in block *(s "Camshaft & B arings" above).*



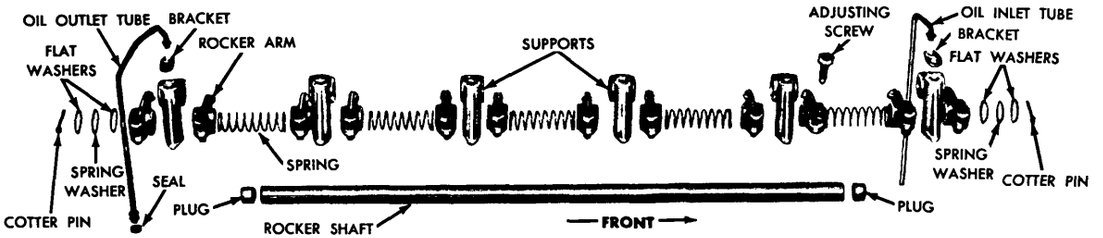
2) Cars built after February 28, 1961 (Comet), May 1, 1961 (Falcon) have revised rear rocker arm shaft support bracket to correct above conditions and following procedure should **not** be performed (will cause high oil consumption).

3) On early cars without new design rear bracket, proceed as follows: Remove rear support bracket retaining bolt and grind two flats on bolt threads (with flat centers 180° apart) to root diameter of bolt threads from chamfered part of shank to 2 7/16" from base of bolt head. Reinstall bolt and check for adequate lubrication.

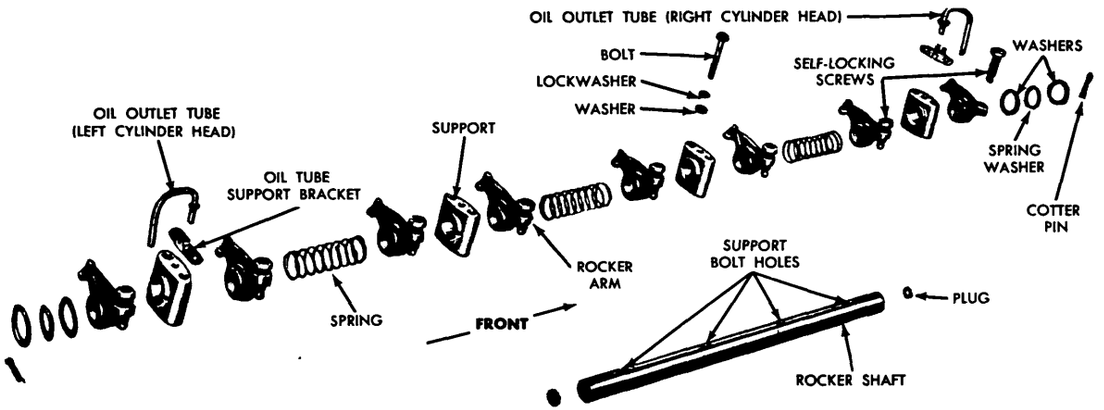
223" 6 CYL. ENGINES

"ZERO LASH" TYPE ROCKER ARMS: Conventional type aluminum rocker arm modified to hold a spring-loaded hardened eccentric cam between rocker arm and valve stem. Plunger and spring mounted on underside or rocker arm work against eccentric and hold eccentric outward during engine cycle of rocker arm movement maintaining zero clearance at valve stem tip.

Overhaul - Disassemble rocker arm and eccentric assembly by removing eccentric retaining pin. Eccentric recess depth in rocker arm should not exceed .300" measured from radius corners of front cutout (below pin hole) perpendicular to greatest depth of recess. Reassemble all parts in correct positions (see illustration). *For rocker arm shaft assembly overhaul, see "6 Cyl. & 292" V8 Engines" below.*

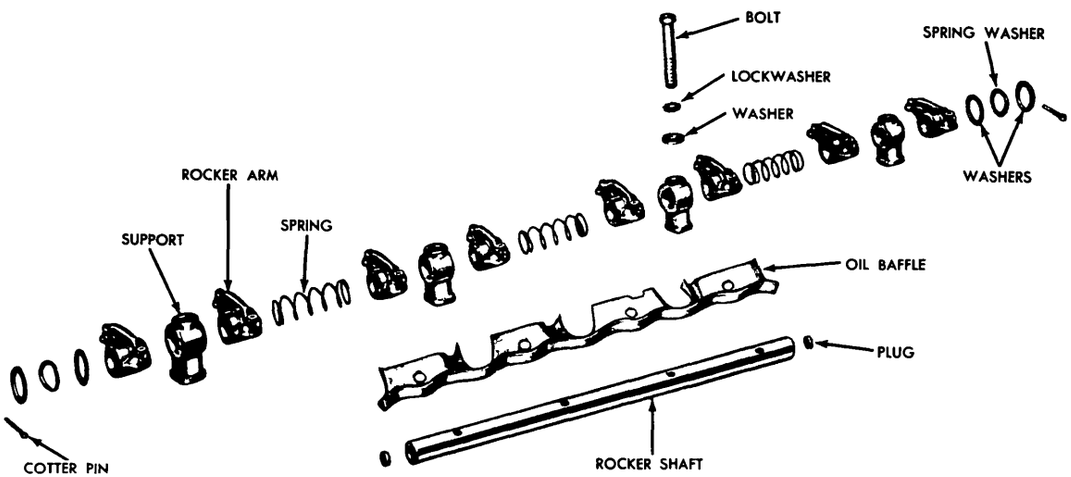


"ZERO LASH" VALVE ROCKER ARM ASSEMBLY



6 CYL. & 292" ENGINES

ROCKER ARM ASSEMBLY OVERHAUL: Removal - Remove oil inlet and outlet pipes. Loosen rocker arm adjusting screws to relieve spring tension. Loosen rocker arm shaft support retaining bolts evenly in turn, then remove rocker arm shaft assembly.



CONTINUED ON NEXT PAGE

6 CYLINDER 223" & 262" ROCKER ARM ASSEMBLY

V8 292" ENGINE ROCKER ARM ASSEMBLY

V8 352", 390" & 430" ENGINE ROCKER ARM ASSEMBLY

CONTINUED FROM PRECEDING PAGE

Disass mbly: Remove cotter pins from ends of shaft and remove all parts, noting order in which assembled. To remove plugs from ends of shaft, pierce one plug and remove and push out other plug with a rod.

R ass mbly: Lubricate all moving parts with engine oil and apply Lubriplate to rocker arm pads. Install shaft end plugs with cup side out. Install all parts in same order as removed, with oil holes in shaft facing downward.

Installation: Reverse removal procedure, making sure that inlet line "0" ring seals are in place, and that support end of outlet pipe enters locating hole in shaft to position shaft properly.

352", 390" & 430" ENGINES (MECHANICAL LIFTERS)

ROCKER ARM ASSEMBLY OVERHAUL: Removal Loosen rocker arm adjusting screws to relieve spring tension. Loosen rocker arm shaft support retaining bolts evenly in turn, then remove rocker arm shaft assembly.

Disass mbly: S *"6 Cyl. & 292" V8 Engines" above.*

R ass mbly: S *"6 Cyl. & 292" V8 Engines" above.*

Installati n: Reverse removal procedure.

352", 390" & 430" ENGINES (HYDRAULIC LIFTERS)

ROCKER ARM ASSEMBLY OVERHAUL: Removal - *CAUTION - Foll w procedure below exactly to prev nt damag to valv train parts.* Place No. 1 piston at TDC at end of compression stroke and rotate crankshaft damper an additional 45°. Loosen right bank rocker arm shaft support bolts in sequence 2 turns at a time, starting at No. 4 (rear) cylinder. When bolts are loosened, remove rocker arm shaft assembly. Follow same procedure for right bank rocker arm shaft bolts, starting at No. 5 (front) cylinder.

Disass mbly: *"6 Cyl. & 292" V8 Engines" above.*

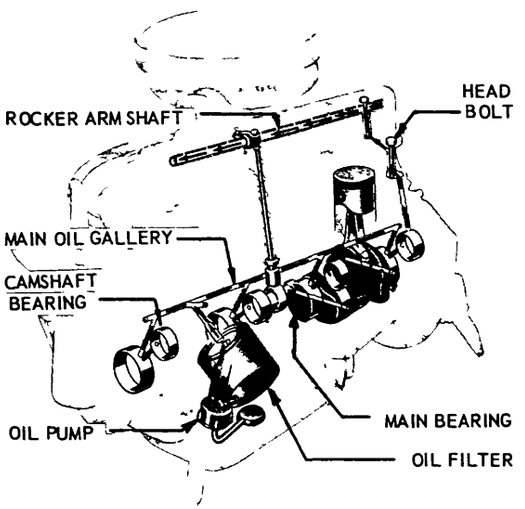
R ass mbly: *Se "6 Cyl. & 292" V8 Engines" above.* *430" ENGINE NOTE* - Identification notch on rocker arm shaft must be down and to rear of engine on left bank, down and to front of engine on right bank.

Installati n: *CAUTION - Follow procedure below exactly to p rmit hydraulic lifters to leak down and to pr vent damage to valve train parts.* Place No. 1 piston at TDC of compression stroke and rotate crankshaft damper an additional 45°. Tighten right bank rocker arm shaft support bolts in sequence, 2 turns at a time, starting at No. 4 (rear) cylinder, until torque specification is reached. Follow same procedure for right bank rocker arm shaft support bolts, starting at No. 5 (front) cylinder.

OILING SYSTEM

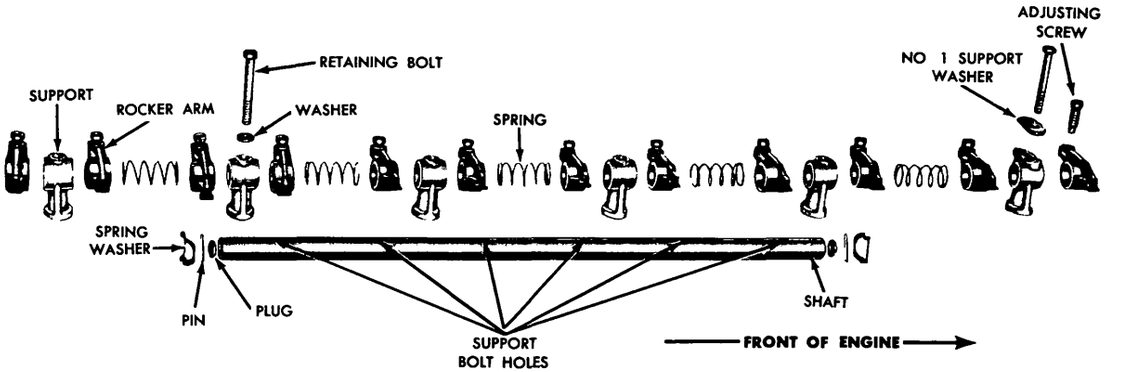
ENGINE LUBRICATION

144" & 170" ENGINES



ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil under reduced pressure (metered by camshaft bearing) lubricates distributor drive gear and valve mechanism on cylinder head. All other parts are lubricated by oil spray or splash.

OPERATION: Rotor type oil pump mounted in crankcase at left front corner of engine. Pump draws oil through fixed strainer and intake pipe mounted on pump cover and delivers oil to full flow type filter mounted externally on front left side of crankcase. From the filter, oil passes through transverse passage to main oil gallery extending along full length of engine block directly above the camshaft. Oil is distributed through main oil gallery as follows:



Crankshaft & Camshaft Bearings - Oil passages in crankcase webs supply oil from main gallery to each crankshaft bearing and then up to corresponding camshaft bearing. Distributor drive gear is lubricated from front camshaft bearing.

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing. Oil groove in main bearings provide continuous flow of oil to connecting rod bearings.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from oil hole on right side of rod when this hole registers with oil hole in connecting rod journal.

144" & 170" ENGINE OILING SYSTEM

6 CYLINDER 144" & 170" ENGINE ROCKER ARM ASSEMBLY

Timing Chain & Sprockets - Lubricated by splash from oil pan.

Rocker Arms, Pushrods & Valve Stems - Oil from rear camshaft bearing flows through vertical passage in block and around left rear corner cylinder head bolt to oil port at rear rocker arm shaft bracket pad. Oil then flows around this bracket bolt to hollow rocker arm shaft, and is distributed to each rocker arm for rocker arm, pushrod, and valve tip lubrication. Excess oil is discharged from rocker arm shaft at front shaft bracket. Oil from rocker chamber runs down pushrods to lubricate pushrod seat and lifter and drains back into the oil pan through cored openings in the block.

OIL FILTER: Full flow type. Mounted externally on left front corner of engine. Filter has integral bypass valve and anti-drain back diaphragm.

223" & 262 ENGINES

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil metered by No. 3 camshaft bearing lubricates rocker arms, pushrods, and valve stems. All other parts are lubricated by oil spray or directed oil return flow.

OPERATION: Gear type oil pump mounted in crankcase on right hand side draws oil through fixed oil inlet and strainer mounted on pump cover and delivers all oil through a passage in the pump body and crankcase wall to the oil filter intake port (filter mounted on pad on right side of crankcase). Filter outlet port on filter pad is connected to main oil gallery by a vertical passage and cross-passage in the block. Main oil gallery extends along right side of crankcase and oil is distributed from this gallery as follows:

Crankshaft & Camshaft Bearings - Lubricated by drilled passages in each crankcase web through which oil is supplied from main oil gallery to each crankshaft bearing. A transverse passage connects this passage with each camshaft bearing.

Connecting Rods - Crankshaft is drilled and each connecting rod bearing is lubricated from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in connecting rod when this hole lines up with connecting rod bearing lubricating hole.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Timing Chain & Sprock ts - Lubricated through drilled passage in front end of block which directs oil from front camshaft bearing to crankshaft sprocket (camshaft journal has flat which registers with bearing supply oil hole and timing chain lubrication hole once in each revolution). Oil slinger on front end of crankshaft also throws oil onto chain.

R cker Arms. Pushrods, & Valves - Drilled passage in No. 3 (rear intermediate) camshaft journal feeds oil at reduced pressure to drilled passage in block. A tube extending up through block and cylinder head directs this oil to the No. 6 (rear) rocker shaft bracket and into the hollow rocker arm shaft. Oil then flows through drilled passages in rocker arm to lubricate rocker arm bushing, pushrod socket and valve tip. Oil drainage from rocker arm drains down pushrods for valve lifter lubrication (below). Excess oil from rocker arm shaft flows through outlet pipe at No. 1 (front) rocker shaft bracket. This pipe terminates at drilled hole in lifter chamber directly above distributor driveshaft for distributor and drive gear lubrication (see below).

►*"ZERO LASH" ROCKER ARM NOTE:* Spring in rocker arm recess between arm and eccentric separates arm and eccentric for increased oil flow around eccentric. Rocker arm plunger and spring assembly is filled with oil to provide a cushioning effect to eccentric movement.

Valv Lifter & Fu l Pump Ecc ntric - Oil drainage from rocker arm flows down pushrods into lifter chamber for valve lifter and pushrod seat lubrication. A drilled hole in the lifter chamber floor directly above fuel pump eccentric on camshaft provides lubrication for the eccentric. A return hole at rear of lifter chamber allows oil to drain back into the crankcase.

Distributor & Drive Gear - Oil return pipe from rocker arm shaft terminates at drilled hole in lifter chamber. This hole is directly above distributor drive gear on camshaft and gears are lubricated by this return oil. A transverse passage in the block at the oil return pipe location in the lifter chamber directs drain oil to relieved section of distributor housing. Oil holes in housing direct oil to distributor lower bushing and drive gear.

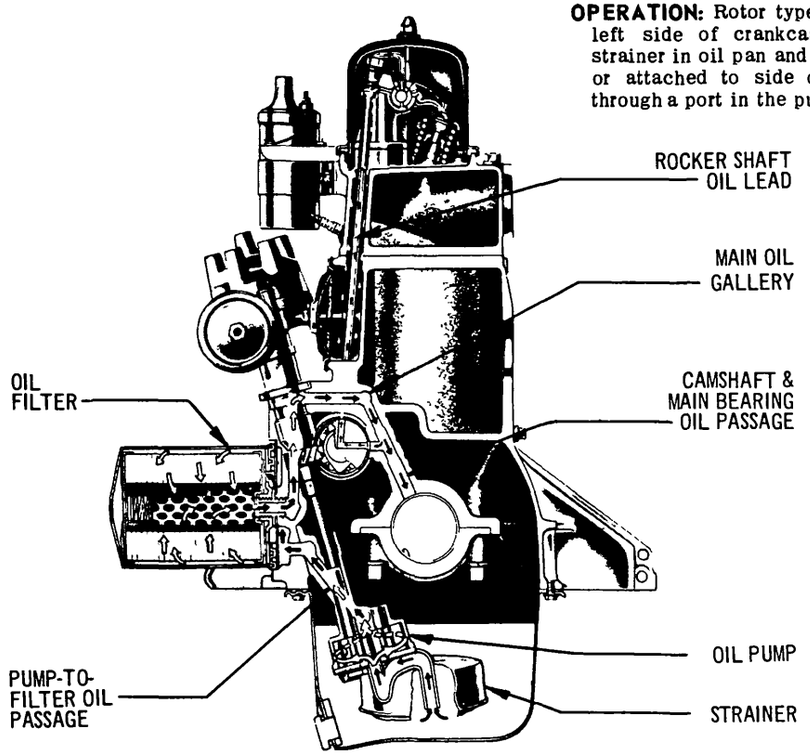
OIL FILTER: Full-flow type mounted on pad on right side of crankcase. Relief valve in filter assures engine lubrication if filter element clogged. An anti-drainback diaphragm in the filter mounting recess traps oil in filter to insure quick oil circulation when engine is started up.

292" V8 ENGINE

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil metered by camshaft bearings lubricates rocker arms, pushrods, and valves. All other parts are lubricated by oil spray or directed oil return flow.

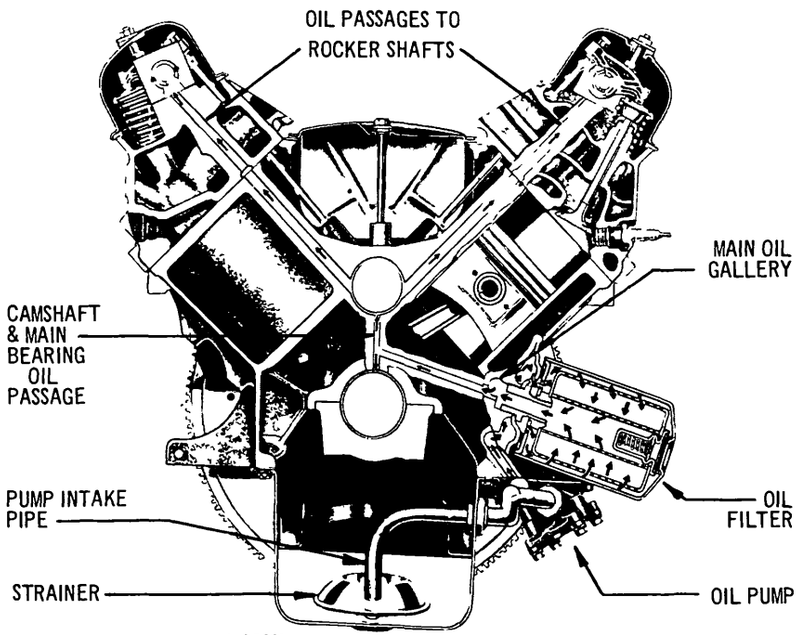
OPERATION: Rotor type oil pump mounted externally on left side of crankcase draws oil through fixed oil strainer in oil pan and external oil pipe (passes through or attached to side of oil pan) and delivers all oil through a port in the pump mounting base and passages in crankcase to oil filter intake port (filter mounted on pad on left side of crankcase). Filter outlet port on crankcase connects directly with main oil gallery extending along left side of crankcase. Oil is distributed from this main oil gallery as follows:

Crankshaft & Camshaft Bearings - Lubricated by drilled passage in each crankcase web through which oil is supplied from main oil gallery to intersecting passage leading to corresponding main and camshaft bearings.



Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in side of connecting rod lower end when this hole lines up with oil hole in crankpin.



Rocker Arms, Pushrods & Valv s - Drilled passages in block at No. 3 camshaft bearing extend up through block and matching passages in cylinder heads (with offset formed by channel on lower face of head) and oil then flows up through drilled passage in No. 2 rocker shaft support bracket (Right Bank), No. 3 rocker shaft support bracket (Left Bank) to hollow rocker arm shaft. Oil holes in shaft and rocker arm provide lubrication for rocker arm bushing, pushrod ball end and valve tip. Oil drainage from rocker arm drains down pushrods for valve lifter lubrication (below). Excess oil from rocker shaft flows through outlet pipe at No. 1 rocker shaft bracket (Right Bank), No. 4 rocker shaft bracket (Left Bank) for timing chain and distributor lubrication (see below).

Valve Lifters & Pushrod Seats - Oil drainage from rocker arm flows down pushrods into lifter chamber for

CONTINUED ON NEXT PAGE

223" & 262" ENGINE OILING SYSTEM

V8 292" ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

valve lifter and pushrod seat lubrication. Oil for this purpose is also supplied by rocker shaft outlet pipes which terminate in lifter chamber. Oil in lifter chamber is returned to oil pan through large opening at rear of chamber. This oil lubricates distributor drive gear.

Distributor, Intermediate Shaft & Bushing - Lubricated by oil supplied through drilled passage from No. 5 camshaft bearing (camshaft journal is drilled and oil flows through this passage from camshaft bearing oil hole to distributor oil passage). *NOTE* - Distributor drive gear is lubricated by oil return from lifter chamber to oil pan through large opening at rear of lifter chamber.

Timing Chain & Sprockets - Oil return from right bank rocker chamber (outlet pipe at No. 1 rocker shaft bracket) is channeled by trough in lifter chamber to hole in front cylinder block wall through which the oil is directed on timing chain and sprockets. Oil slinger on crankshaft also throws oil on timing chain.

OIL FILTER: Full-flow type mounted on pad on left side of crankcase. Relief valve in filter assures engine lubrication if filter element clogged. An anti-drainback diaphragm in the filter mounting recess traps oil in filter to insure quick oil circulation when the engine is started up.

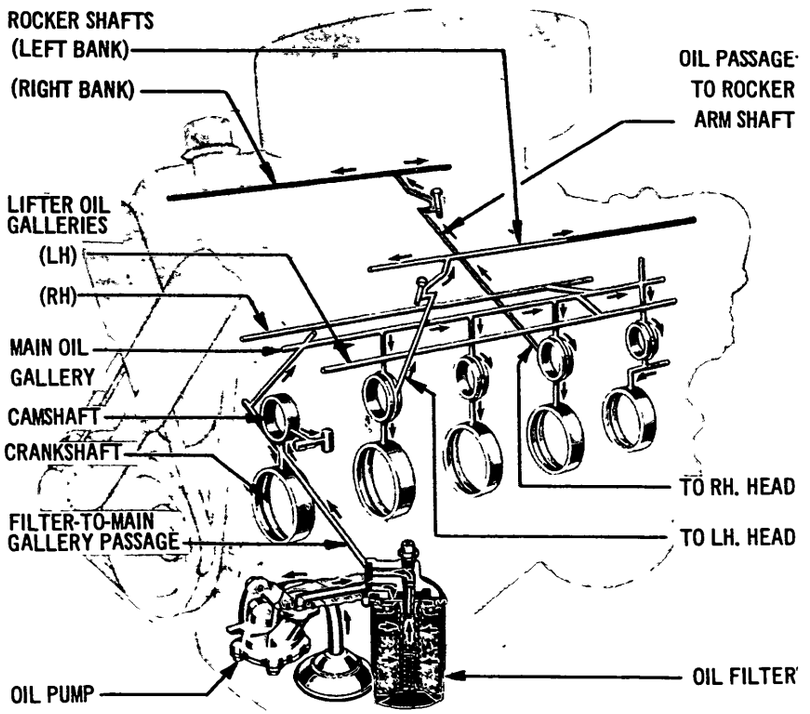
352" & 390" V8 ENGINES

►*MECHANICAL LIFTER ENGINE NOTE:* On engines with mechanical lifters, engine oiling system is changed as follows: 1) Jiggle pin in main oil gallery replaced by a cap plug. 2) Passages from main oil galleries to right and left lifter galleries are plugged.

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, hydraulic valve lifters, and rocker arms. All other parts are lubricated by oil spray or directed oil return flow.

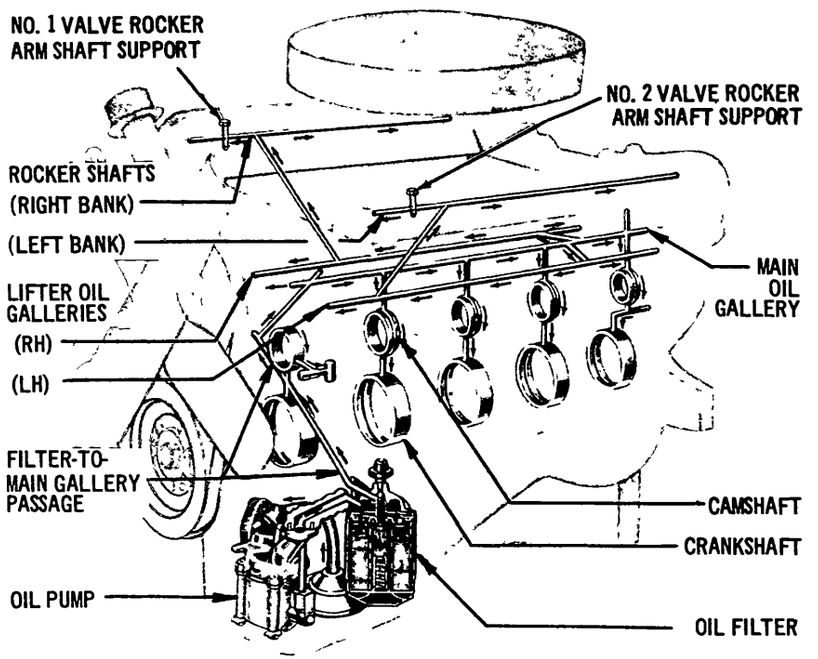
OPERATION: Rotor type oil pump mounted in crankcase draws oil through fixed intake pipe and oil strainer mounted on pump body and delivers oil through passage in crankcase to oil filter inlet port on filter mounting pad. From the filter, oil flows through transverse passages in the front wall of the cylinder block to forward end of main oil gallery which extends the entire length of the crankcase in the floor of the lifter chamber. At a point near the rear of the engine, cross-passages connect the main gallery with the right and left valve lifter galleries which extend along the length of the crankcase in line with the valve lifters. Oil is distributed through these galleries as follows:

Crankshaft & Camshaft Bearings - Front camshaft and crankshaft bearings are lubricated directly from the oil filter outlet passage (vertical passage in front cylinder wall between bearings intersects the filter cross-passage). **Other** camshaft and crankshaft bearings are lubricated through vertical passage in crankcase web at each bearing which extends down from main oil gallery to corresponding camshaft and crankshaft bearings (camshaft bearing bore in block is grooved to permit oil flow around bearing and on to the crankshaft bearing).



Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder wall by connecting rod of the same cylinder in opposite bank. Spray hole consists of a slot in parting face of rod bearing cap through which oil is sprayed when this slot lines up with oil hole in crankpin. *NOTE - Rods must be installed with this slot upward toward camshaft to effect this cross-lubrication.*



Valve Lifters - Right and left lifter oil galleries intersect lifter bores and lifters are supplied with oil directly from these galleries.

Rocker Arms, Pushrods & Valves - Drilled passages in block at No. 2 camshaft bearing (left bank), No. 4 camshaft bearing (right bank) extends up through block and matching passages in cylinder head (passage in head is around one cylinder head bolt with offset channel in lower face of head to connect this bolt hole with passage in block). An angle passage in the head connects cylinder head bolt hole with rocker shaft support bolt hole (No. 2 support bracket for left bank, No. 3 bracket for right bank). Oil then flows up around bracket bolt and through an angle passage into the hollow rocker arm shaft. Oil holes in shaft and arm provide lubrication for rocker arm bushings, pushrod ends and valve tips (baffle under rocker shaft assembly shields valve stems from oil splash). Oil drainage down pushrods lubricates pushrod seat in lifter. Excess oil in rocker chamber is returned to oil pan through drain holes at each end of cylinder head and in lifter chamber.

CONTINUED ON NEXT PAGE

V8 352" & 390" ENGINE OILING SYSTEM

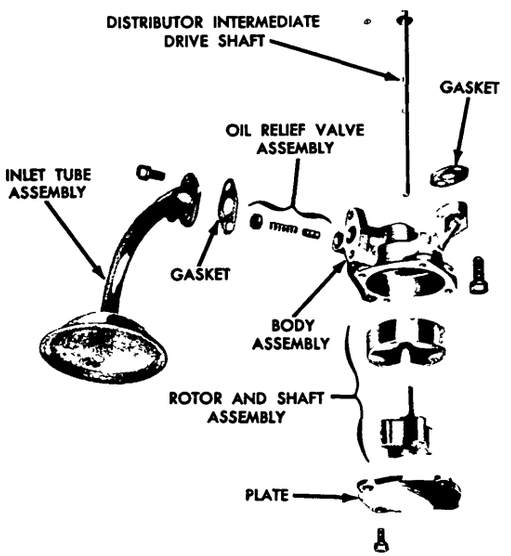
V8 430" ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

Timing Chain & Sprockets - Plug at forward end of main oil gallery has vent hole and jiggle pin to vent air trapped in gallery. Oil passing through this vent lubricates timing chain and sprockets.

Distributor & Drive Gear - Lubricated through cross-passage from No. 1 camshaft bearing (see illustration).

OIL FILTER: Full flow type mounted on adapter at right front of crankcase. Relief valve in filter assures engine lubrication if filter element clogged.



430" V8 ENGINE

DESCRIPTION: *Oiling system for this engine is same as for 352" & 390" V8 Engines (see above) except for the following details:*

Crankshaft & Camshaft Bearings - All bearings are lubricated through vertical passages from main oil gallery (oil flow from filter is direct to main oil gallery).

Rocker Arms, Pushrods, & Valves - Drilled passages in block lead from right and left lifter oil galleries and connect with matching passages in cylinder head (passage in head is around one cylinder head bolt with offset channel in lower face of head to connect passage in block with this bolt hole). An angle passage in the head connects the cylinder head bolt with the rocker shaft support bracket hole (No. 1 support bracket for right bank, No. 2 bracket for left bank). Oil then flows up around bracket bolt and through angle passage in bracket into hollow rocker arm shaft. Oil holes in shaft and arm provide lubrication for rocker arm bushings, pushrod ends and valve tips. Oil drainage down pushrods lubricates pushrod seat in lifter. Excess oil in rocker chamber drains back into lifter chamber through holes at front and rear lower corners of head.

Timing Chain & Sprockets - Oil draining from front camshaft bearing flows onto thrust face of camshaft sprocket and is sprayed on timing chain and crankshaft sprocket.

V8 352", 390" & 430" ENGINE OIL PUMP

OIL PUMP

►*6 CYLINDER ENGINE GEAR TYPE OIL PUMP NOTE: For data on this type pump, see "Ford Special Data" in 1960 Final Data or later Manual edition.*

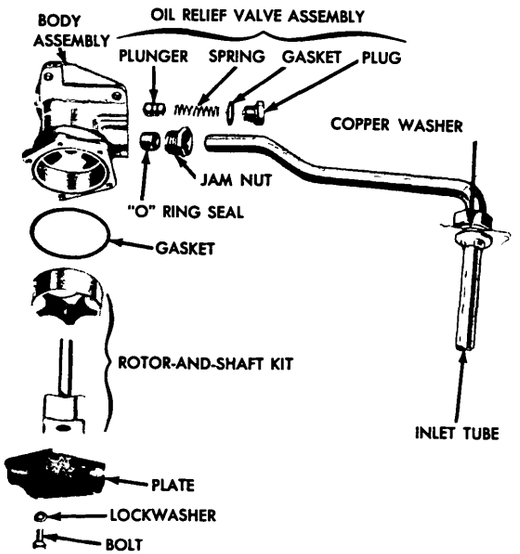
ALL ENGINES

OIL PUMP: Removal - Remove oil pan. On 223" Engine, remove distributor. On all 6 Cyl. & 292" V8 Engines, remove oil pump and intermediate shaft. On 352", 390", & 430" V8 Engines, remove oil pump after oil pan removed, or drop oil pump into pan while removing pan.

Disassembly: Remove inlet tube and cover. Remove inner rotor and shaft, then remove outer race. Remove relief valve chamber cap with self-threading screw, then remove relief valve spring and plunger.

Inspection: Clean all parts and dry thoroughly. Check all parts for wear or damage and replace as necessary. Check clearances as given in table below. Rotor endplay is measured with straightedge across housing with pump assembled. *NOTE* - Outer race, inner rotor and shaft are serviced as an assembly only.

Oil Pump Specifications

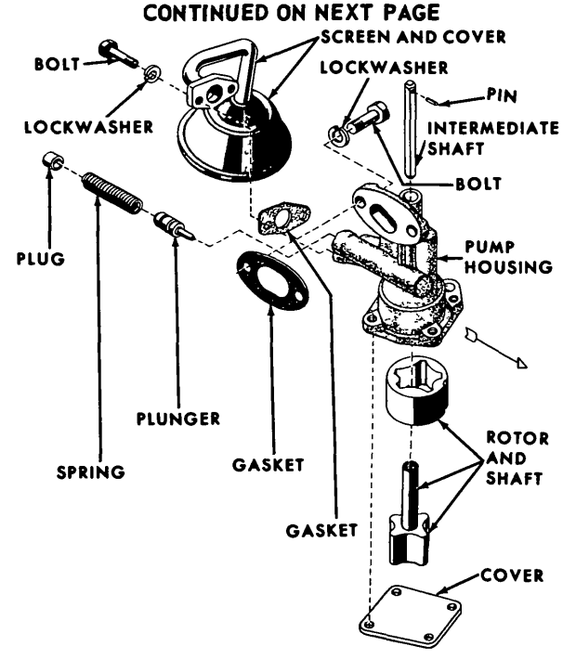


Item	All Engines
Outer Race-To-Housing	① .006-.012"
Rotor Endplay	② .0011-.0041"
Shaft-To-Housing	③ .0015-.0029"
Relief Valve-To-Bore	.0015-.0029"

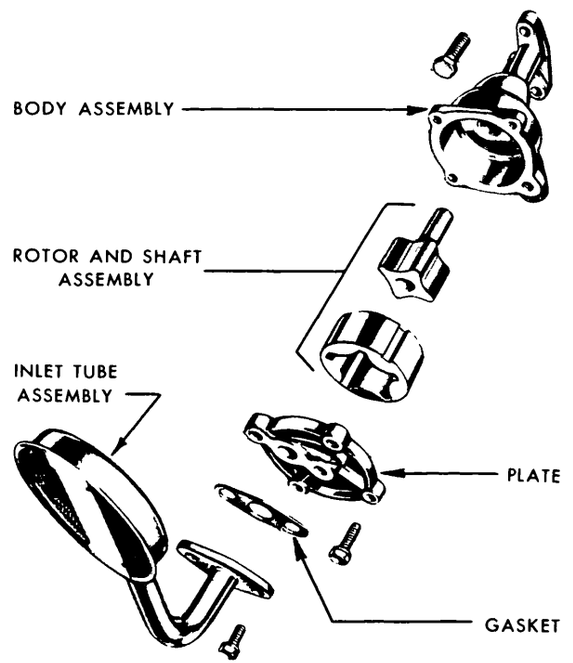
① - .003-.008" (V8 Truck). ② - .0010-.0035" (V8 Truck). ③ - .0025-.0039" (223" & 262" Engines).

Relief Valve Spring Specifications

Engine	Lbs. Pressure	Length
144" & 170"	8.6-9.5	1.078"
223" & 262"	9.0-9.6	1.53"
292"	8.7-9.9	1.71"
352", 390", 430"	9.0-9.6	1.53"



Reassembly: Reverse disassembly procedure. Torque cover attaching screws to 6-9 ft. lbs. (except 430" Eng.), 90-100 inch-lbs. (430" Engine).



V8 292" ENGINE OIL PUMP

Installation: Reverse removal procedure.

ENGINE COOLING SYSTEM

WATER PUMP

ALL ENGINES

►*TOOL NOTE:* Special tool sets are available for water pump overhaul. Other suitable support plates and drivers may be used providing they support and apply pressure properly to shaft, bearing, housing, and other parts.

WATER PUMP OVERHAUL: Removal - Drain cooling system and disconnect hoses from pump. Remove belt, fan, and water pump pulley. Remove any other brackets or accessories attached to water pump (unnecessary to disconnect power steering pump hoses). Remove radiator supply tank on Continental. Remove water pump.

Disassembly: Remove back plate (if equipped). Press or pull hub or pulley from shaft. Support housing and press shaft and bearing out of impeller, seal, and housing (or press shaft from housing, then press impeller from shaft). Press seal from housing. Remove slinger from shaft if slinger damaged.

Reassembly: *NOTE - See table below for specifications.* Support shaft and press new slinger on shaft for specified clearance between underside of slinger flange to end of bearing race (144" & 170"), or specified distance from slinger flange to end of shaft (Others). On 144" & 170" Engines, coat shaft and bearing with a light coat of grease and press shaft into housing, with housing properly supported. On all engines, coat seal with waterproof sealer and press into housing, applying pressure to seal flange only. On all other engines, support housing and press shaft and bearing into housing until bearing is flush with hub edge of housing. On all engines, coat rubbing face of impeller with grease and press impeller on shaft with shaft properly supported until impeller-to-housing clearance is as specified. *NOTE - On pumps without back plate, impeller clearance is between front face of impeller to rear mounting face of housing. On pumps with back plate, impeller clearance is distance rear face of impeller is below housing mounting face.* Support shaft and press hub on shaft to dimension specified from front face of hub to pump housing mounting face (front face of pulley to face of housing mounting legs on 430" Engine).

Installation: Reverse removal procedure.

Water Pump Dimensions & Clearances

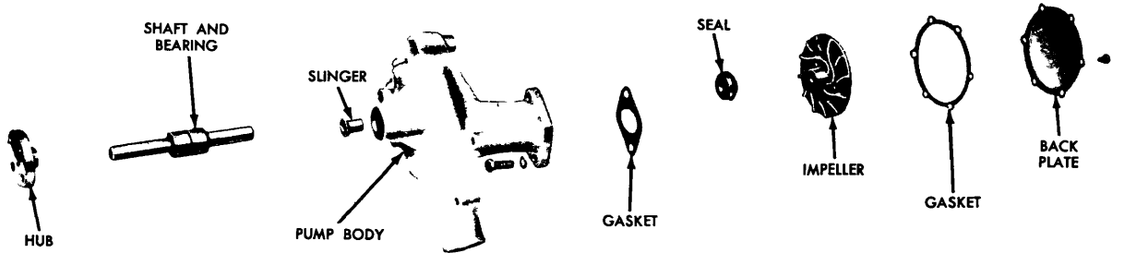
POWER BOOSTER FAN

FORD & MERCURY

POWER BOOSTER FAN: Fluid coupling filled with silicone oil attached to water pump pulley at input side and to fan at output side. Unit is designed to provide driving force for maximum fan operation at low speeds and to limit top speeds of fan at higher engine speeds. This is accomplished by the torque carrying capacity of the fluid and also by the amount of fluid admitted to the coupling depending on various engine and ambient temperatures. A bi-metal strip on front of clutch moves out under higher temperatures and allows metal rod in center of clutch to move out. This rod actuates a valve inside clutch to control amount of fluid admitted to coupling from a reserve chamber. This action increases fan speed when air becomes hotter. Reverse action takes place under colder temperatures. Maximum fan speed is reached at approximately 3700 Engine RPM. Maximum fan speed at about 75MPH under extremely high ambient temperatures is 2700 RPM. Under low ambient temperatures, maximum fan speed is approximately 1500 RPM.

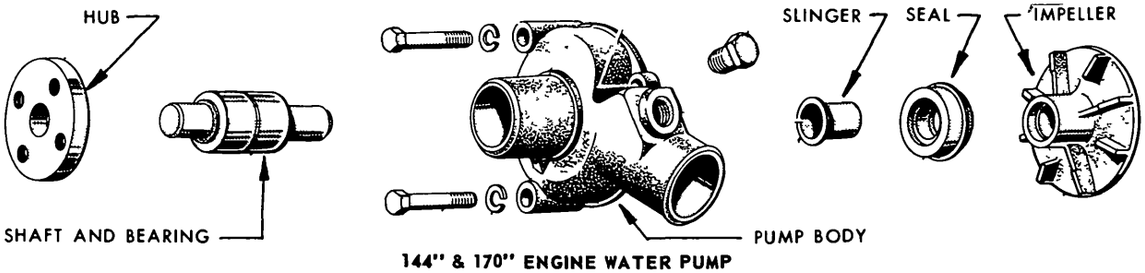
Trouble Shooting & Diagnosis: Poor cooling or noise may be caused by: Actuating rod sticking; Bi-metal strip deformed or kinked; Excessive fluid leakage from clutch unit.

Disassembly: Push bi-metal strip from retaining brackets and remove. Clean clutch unit with rag dipped in solvent. *CAUTION - DO NOT immerse clutch unit in any kind of liquid. Clean unit before removing actuating rod to prevent damage.* Remove actuating rod with fingers or needle-nose pliers.



Inspection: Replace entire clutch assembly if there is excess fluid leakage or if bi-metal strip kinked or bent. *NOTE - Bi-metal strips not interchangeable among units.* Clean actuating rod bore in clutch with crocus cloth. Clean rod in solvent and make sure rod moves freely in clutch bore. Replace damaged rod with replacement rod. *CAUTION - Replacement rod must be same length as old rod. Adjust Allen screw in service rod to obtain proper length.*

Reassembly: Reverse disassembly procedure.



LINCOLN CONTINENTAL

POWER BOOSTER FAN: Fluid coupling mounted between fan and water pump pulley. Unit is regulated by underhood temperatures to control fan RPM as engine cooling requirements change. Bi-metal coil spring on clutch front cover expands under higher temperatures and

223" & 262" ENGINE

V8 292" ENGINE

WATER PUMPS

CONTINUED FROM PRECEDING PAGE

causes a plate inside unit to uncover opening between reserve and drive chambers and control amount of fluid in drive chamber. Reverse operation takes place under lower temperatures.

►*SAFETY CAUTION: Do not permit silicone oil to come in contact with the eyes as irritation will result.*

►*TESTING CAUTION:* Before testing, oil in unit must have minimum temperature of 65-70°F (park in heated garage overnight or operate engine at 1000 RPM for 20 minutes); and fan unit must be warm (operate for at least 5 minutes regardless of ambient air temperatures).

T sting & Trouble Shooting: *NOTE - Unit cannot be repaired and is serviced as an assembly only. If unit does not operate properly under any of the following t sts, it must be replaced.*

1) With engine stopped, fan should rotate under light finger pressure. If unit locked, replace it.

2) Make sure belt tension is properly adjusted and thermostatic spring is free of dirt and other foreign matter. Disengage spring from adjusting slot and rotate spring counterclockwise (toward No. 1 cylinder of engine) until internal valve is felt seating against a stop. Tape spring in this position. Unit should not provide engine torque to fan regardless of underhood temperatures.

3) Mark one fan blade with chalk, connect a tachometer to engine and a timing light to No. 1 spark plug. Start engine and hold light beam at fan. Marked blade of fan should be stopped between 1700 and 1900 engine RPM. If above or below this range, replace unit. Remove tape from spring and insert spring in proper adjustment position (see below).

Adjustment: Three adjustment slots in coil spring retaining bracket. End of spring should be positioned in proper slot depending on engine cooling requirements and ambient air temperaturds as follows:

Position A - Left hand slot when viewed from front of fan. Lowers underhood temperature requirements necessary to engage coupling to fan. Use this slot for high ambient air temperature zones and on cars with high engine operating temperatures.

Position B - Center slot. Use under normal operating conditions.

Position C- Right hand slot when viewed from front of fan. Permits higher underhood temperatures before drive torque applied to fan. Use in low ambient air temperature zones to increase engine operating temperature.

FUEL SYSTEM NOTES

430" ENGINE

CARBURETOR AIR INTAKE DUCT ASSEMBLY (WITH THERMOSTAT CONTROL): Thermostatically controlled valve in air intake duct assembly should be fully closed at temperatures below 75°F (for air intake from rear "heated" opening) and should start to open at 85°F. Valve should be wide open at 100°F (for air intake from outside through left radiator side air deflector). If valve does not operate satisfactorily, remove duct assembly and test operation as follows:

Duct Assembly Removal: Loosen clampscrew and slide flexible hose off end of duct. Remove wing nut retaining air cleaner on carburetor, remove nut and washer retaining duct assembly on bracket. Lift air cleaner and duct assembly off engine. Loosen two clampscrews and slide duct assembly from air cleaner.

Testing: Place duct assembly in pan of water at temperature below 75°F. (thermostat must be covered by water). Valve should be in closed "heat on" position. Heat the water slowly. At temperature of 85°F, valve should start to open *(NOTE* - If valve does not start to open, hold water temperature at 85°F for eight minutes before discarding thermostat as defective). Increase water temperature to 100°F. Valve should now be wide open in "heat off" position *(NOTE* - If valve not wide open, hold water temperature at 100°F for eight minutes before discarding thermostat as defective). If valve operation not satisfactory, remove thermostat and spring assembly and check valve shaft for binding. If valve moves freely, replace thermostat and duct assembly. If valve does not operate correctly, adjust thermostat rod as follows:

Adjustment: Increase rod length to move valve toward "heat off" position, decrease rod length to move valve toward "heat on" position.

►*JACKING & HOISTING CAUTION: B fore jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

M d l	Series
Passenger Cars	10
Station Wagons & Falcon Ranchero	20

SERIAL NUMBER: Stamped on patent plate on rear face of left front door inner panel. Number (example below) includes identification data.

① ② ③ ④ ⑤
1 H 12 S 100001

① - Year. 1 1961.
② - Assembly Plant. H Lorain, K Kansas City, R San Jose, S Pilot Plant, T Metuchen.
③ - Model Series. 11 2-Door Sedan, 12 4-Door Sedan, 21 2-Door Station Wagon, 22 4-Door Station Wagon, 27 Falcon Ranchero.
④ - Engine. S 144 cu. ins., D 144 cu. ins. (Low Compr. Ratio), U 170 cu. ins., E 170 cu. ins. (Low Compr. Ratio).
⑤ - Beginning vehicle number at each assembly plant (100001 for Falcon; 800001 for Comet).

ENGINE IDENTIFICATION NUMBER: Stamped on top of block on front left side near crankcase breather pipe. Designates Engine Plant, Year, Month & Day of manufacture, and Inspector's Identification. Not used for licensing. *NOTE* - Letter stamped on this boss to rear of Identification Number indicates engine type as follows: N - 144" engine, T - 170" engine.

►*ENGINE IDENTIFICATION NOTE (COMET):* Carburetor Air Cleaner and Valve Rocker Cover painted yellow (144"), silver (170").

TUNE-UP

COMPRESSION PRESSURE: 170 lbs. ± 20 lbs. All cylinders must be equal within 10 lbs.

VACUUM READING: Steady 18" at idle speed.

VALVE TAPPET CLEARANCE: .016" All Valves. Use step-type feeler gauge (.015" GO, .017" NO GO). If tappet clearance set with engine cold, reset clearance after operating engine for 30 minutes at 1200 RPM to stabilize temperature.

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE:* Torque required to turn screw after interference noted must be 3 ft. lbs. minimum.

MANIFOLD HEAT CONTROL: "Hot Spot" in intake manifold at lower center and engine coolant heated spacer between carburetor and intake manifold.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for carburetion and ignition troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .032-.036".

Spark Plugs - Champion F-14Y or 870. 18 mm. Torque to 15-20 ft. lbs. *NOTE* - Plugs have tapered seat and do not require a gasket. Correct torque is important.

COIL: C met & Falcon No. B6A-12029-B.

Igniti n Current - 2.5 amps. idling, 4.5 amps. stopped.

R sist r - Comet & Falcon No. COLF-12250-A- Pink resistance wire in harness between ignition switch and dash panel connector. Bypassed during cranking by lead from starter switch.

DISTRIBUTOR: F rd. "Loadomatic" type of same design used previously. As follows:

Engine & Transmission	① Distributor No.
144" Eng. S.M. ②	CODF-12127-A, ③ C1DF-12127-A
144" Eng. A.T. ④	CODF-12127-B, C1DF-12127-D
170" Eng. Synchro-mesh	C1DF-12127-B
170" Eng. Auto. Trans.	C1DF-12127-C

① - Stamped on distributor housing for identification.
② - Synchro-mesh Transmission.
③ - Replaced by CCDF-12127-A on Falcon.
④ - Automatic Transmission.

Condenser - Comet & Falcon No. 7RA-12300-C.
Condenser Capacity - .21-.25 mfd.
Contact Point Set - Comet & Falcon No. FAA-12171-A.
Breaker Gap - .024-.026".
Cam Angle - 35-38°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Clockwise viewed from above.

Advance Performance

③ - Set test stand to 0° at 600 RPM & 0.21" of Hg.
④ - Set test stand to 0° at 600 RPM & 0.48" of Hg.

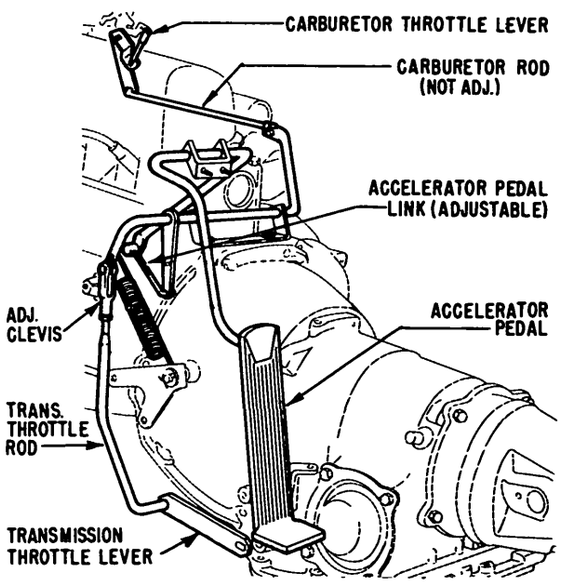
IGNITION TIMING

Setting - 4° BTDC (Synchro-mesh), 10° BTDC (Auto. Trans.). *NOTE - Allowable range 2° to 10° BTDC. Set timing with engine idling and vacuum line disconnected. Set timing at 10° BTDC on all engines when operated over 5000 ft. alt.*

Timing Mark - Notch in crankshaft pulley and timing pointer on left side of chain case cover. Pointer marked "TDC", "2" (Falcon), "3" (Comet), "6", "10". Align pulley notch with correct mark on pointer.

CARBURETOR

►*CARBURETOR APPLICATION: Holley "Visi-Flo" single barrel carburetor used on all models.*



►*HIGH FUEL CONSUMPTION CORRECTION:* May be caused by improperly installed power valve or damaged power valve diaphragm. *See "Holl y Visi-Flo Carbur tors" in Carbur tion Secti n.*

►*INCONSISTENT RETURN TO IDLE SPEED CORRECTION (Cars Without Vacuum Controlled Thr ttl Linkage):* If engine fails to return to same idle speed every time, check for sticking carburetor throttle plates, binding carburetor throttle shaft, binding throttle linkage, and proper dashpot adjustment before replacing dashpot. A synchro-mesh transmission accelerator retracting spring, No. CODD-9737-E, cut and formed to old spring dimensions, may also be installed to correct this condition.

►*1961 COMET & FALCON AUTOMATIC TRANSMISSION & THROTTLE LINKAGE PRODUCTION CHANGE:* Beginning April 16, 1961 (Falcon) approximately May 1, 1961 (Comet), transmission throttle valve is controlled by a vacuum unit at rear of transmission case. *Thr ttl linkage adjustment procedures for non-vacuum and for vacuum controlled throttle valve transmission are different as detailed below.*

THROTTLE LINKAGE ADJUSTMENT (Non-Vacuum Controlled Type): With engine at normal operating temperature, idle speed correctly set, and anti-stall dashpot correctly adjusted (see below), proceed as follows: Disconnect throttle control rod at clevis and push rod downward so transmission throttle lever is against stop in transmission. Hold pressure on rod and adjust length of throttle control rod so clevis pin fits freely, **then turn clevis 3½ turns clockwise to shorten rod.** Install clevis pin. Accelerator pedal height should be 4" from top front corner of pedal to floor mat (Comet); 4¼" from top rear corner of pedal to floor pan (Falcon). To adjust, turn threaded trunnion at accelerator connecting link. *Make final adjustment using pressure method as follows:* Connect a tachometer to engine, remove cap from pressure tube fitting at rear of engine and install Pressure Gauge 77820-B and Adapter

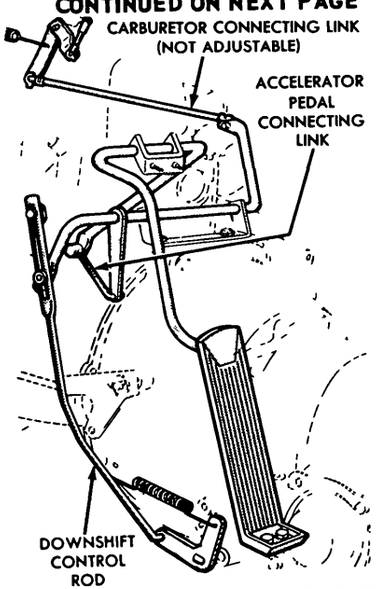
CONTINUED ON NEXT PAGE

THROTTLE LINKAGE (NON-VACUUM TYPE)

S e INDEXES on Pgs. 4 to 9 for complet CARBURETION, ELECTRICAL, MECHANICAL data.

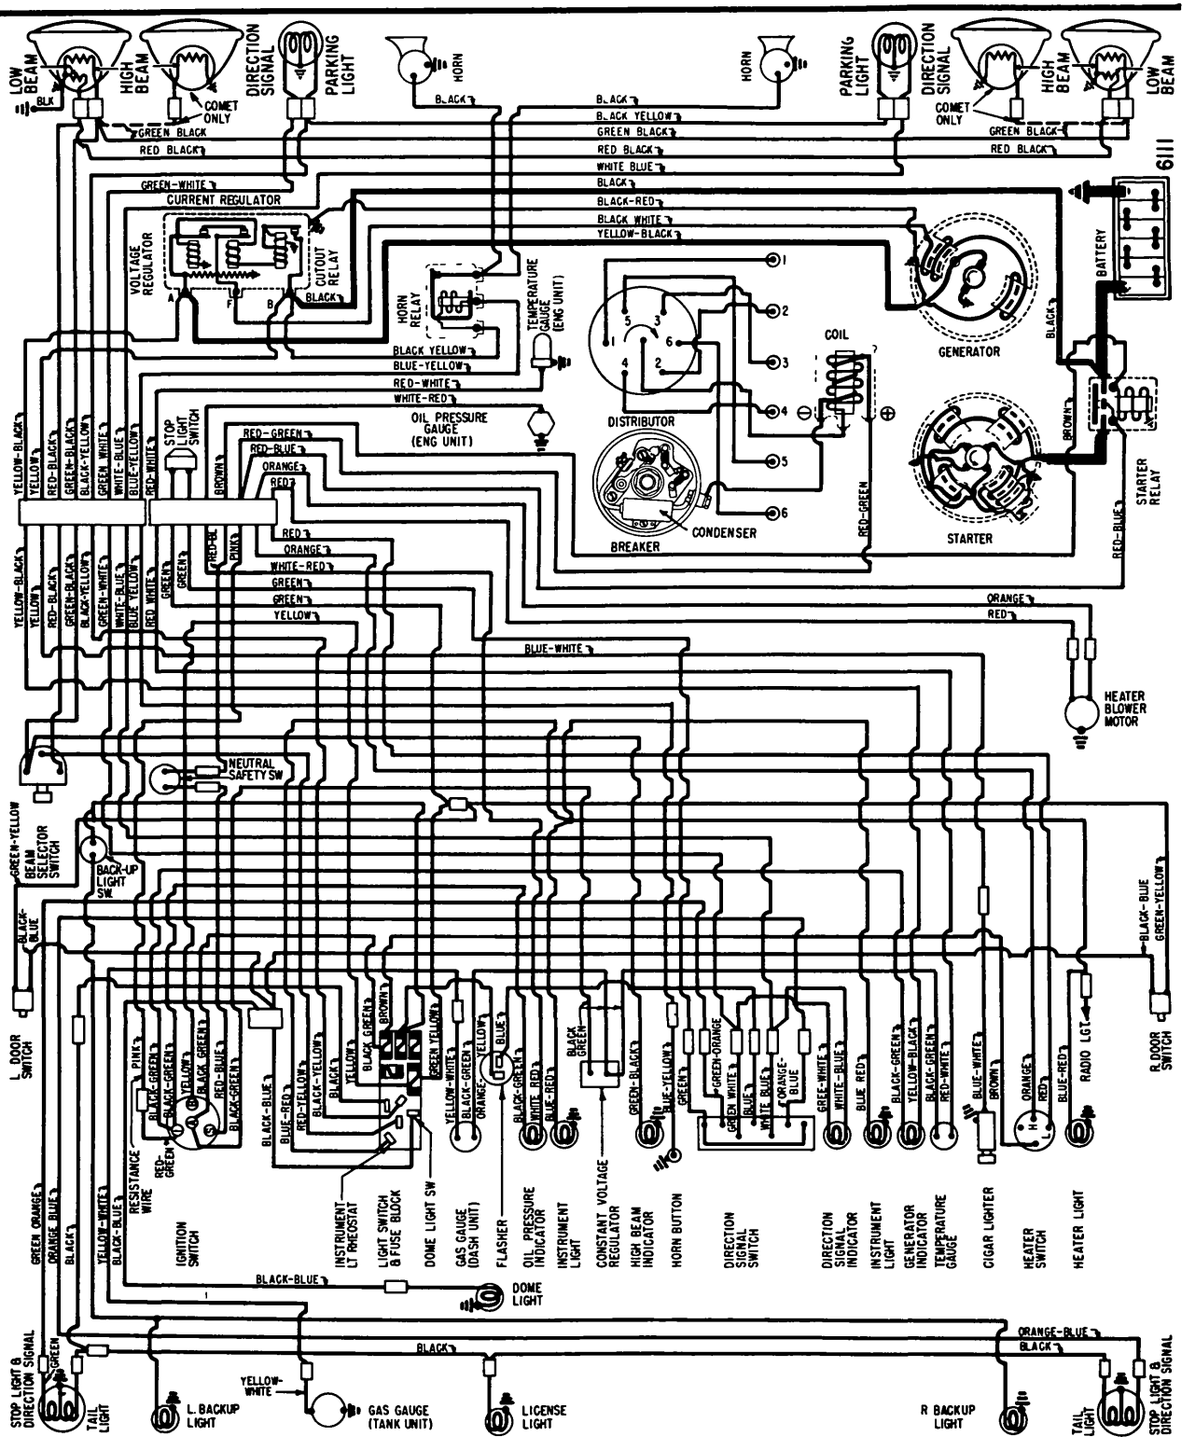
CONTINUED FROM PRECEDING PAGE

77820-C (Comet), Adapter T60L-7000-B and Pressure Gauge Hose T57L-77230-A (Falcon). Apply parking brake and accelerate engine to 1200 RPM with selector lever in "D". If pressure below 53 lbs. (144"), 77 lbs. (170" Comet), 78 lbs. (170" Falcon), shorten throttle control rod. If pressure above 57 lbs. (144"), 84 lbs. (170" Comet), 82 lbs. (170" Falcon), lengthen throttle control rod. *CAUTION - If correct pressure cannot be secured within 2½ turn range either way from preliminary setting, other transmission trouble is indicated.*



THROTTLE LINKAGE ADJUSTMENT (Vacuum Controlled Type): With engine at normal operating temperature, hot idle speed correctly set, and anti-stall dashpot correctly adjusted (see below), stop engine and proceed as follows:

Accelerator Pedal Height Adjustment - Distance from top front corner of accelerator pedal to floor mat should be 4½" (Falcon) 4 5/16" (Comet). To adjust, turn threaded trunnion on accelerator connecting link. With accelerator pedal fully depressed, make sure carburetor throttle plate is fully open. Readjust pedal height as necessary.



Downshift Rod Adjustment - Disconnect accelerator return spring at manifold, and kickdown spring at transmission. Loosen sliding stop bolt on downshift rod and "Z" bar. Pull downshift rod and "Z" bar up to full limit of travel (or hold accelerator pedal depressed and pull on downshift rod only). Slide stop bolt down against "Z" bar and tighten bolt securely. Install return springs. Check throttle and downshift linkage for full travel and see that no bind exists in linkage.

Anti-Stall Dashpot Adjustment: With carburetor hot or slow idle speed correctly adjusted, hold throttle valve closed. Clearance between end of dashpot plunger and adjusting screw in throttle lever with dashpot plunger fully depressed should be .120-.150". To adjust, turn adjusting screw in throttle lever.

CONTINUED ON NEXT PAGE

THROTTLE LINKAGE (VACUUM TYPE)

CONTINUED FROM PRECEDING PAGE

Manual Throttle Control Adjustment (Air Conditioned Cars): Attach a tachometer to engine and place transmission selector lever in "N" or "P". Turn air conditioning unit on and make sure magnetic clutch is engaged. Using hand throttle, bring engine speed up to 700 RPM and secure stop on bowden wire against cable armor so engine cannot be operated above 700 RPM with hand throttle.

Ⓒ - Stamped on fuel inlet boss.
② - With Closed Crankcase Ventilation.
③ - Stamped on main body.
④ - When used with Synchro-mesh, remove dashpot and attaching parts.

Idle Setting - Initial setting 1-1½ turns open. With engine at normal operating temperature, adjust idle speed, then turn mixture adjusting screw in until engine runs roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Then turn screw in until engine runs smoothly. Favor a slightly rich mixture. Recheck idle speed.

Idle Speed - 500-525 RPM (Synchro-mesh), 475-500 RPM (Auto. Trans. in "D").

Fuel Level - 23/32"±1/32" below power valve mounting surface (remove power valve and use Tool 9550-AE-4 Comet, T52L-9550-AEE Falcon. Fuel should touch end of "low" pin, but not touch end of "high" pin.

Accelerating Pump Setting - Connect link in inner hole of throttle lever for average or hot weather operation, outer hole for cold weather operation.

Fast Idle (Falcon): No adjustment (will be correct when hot or slow idle correctly set).

Fast Idle (Comet): Adjust fast idle screw for 1600 RPM with screw on first (lowest) step of fast idle cam.

Automatic Choke Setting (Comet): At Index.

Throttle Linkage Adjustment: See *CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Comet & Falcon No. CODE-9350-J (Fuel & Vacuum), No. CODE-9350-K (Fuel Only).

Fuel Pump Pressure - 3½-5½ lbs. at 500 RPM.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator. Comet & Falcon No. B9MF-10804-A.

Dash Unit - Comet No. C1KF-9280-A (Comet); Falcon No. CODF-9280-B (Falcon).

Tank Unit - Comet & Falcon No. CODZ-9275-A (Sedans); No. C1DF-9275-A (Station Wagons & Ranchero).

Fuel Filter: Disposable type in fuel inlet line. Replace filter every 8000 miles (Falcon), 12,000 miles (Comet) or if clogged. *NOTE - Filter must be installed with arrow on filter case pointing toward carburetor.*

Air Cleaner: Dry filter element type. Clean every 4000 miles, replace every 24,000 miles.

►*CLEANING CAUTION:* Clean filter element by shaking or tapping squarely on a flat surface. If compressed air used, direct air stream against inside of element (reversed from normal air flow). *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

►*INSTALLATION CAUTION:* Locating notch in carburetor and mating tab on air cleaner must be engaged and mark "FRONT" must be to front of engine.

BATTERY

Comet & Falcon No. CODZ-10654-A (Std.). 12 volt, 9 plate, 40 ampere hour capacity (20 hr. rate).

Comet & Falcon No. CODZ-10654-B (Optl.). 12 volt, 9 plate, 55 ampere hour capacity (20 hr. rate).

NOTE - Batteries listed are dry type for service replacement.

Battery Ground - Negative, to right front corner of cylinder head.

STARTER

Comet & Falcon No. CODF-11001-A (Falcon Synchro-mesh, Comet All Trans.); Falcon No. CODF-11001-D (Falcon Auto. Trans.) Starter & Drive Assembly. Integral Positive Engagement type.

Armature - Comet & Falcon No. CODF-11005-A.

Drive - Integral Positive Engagement type, Comet & Falcon No. CODF-11350-A.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 250-290 RPM, 150 amperes maximum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	Ⓒ	12.0	70
15.5 ft. lbs.		5.0	670

Ⓒ - With starter on engine and engine idling.

Starting Switch: Magnetic type, Comet & Falcon No. B6A-11450-A, controlled by ignition switch.

Neutral Safety Switch: Comet & Falcon No. C1KF-7A217-A (With Back-up Lights); No. CODF-7A217-A (Without Back-up Lights).

Adjustment - *See "Ford Motor Co. 2-Speed Automatic Transmission" in Transmission Section.*

GENERATOR

Ford. Used as follows:

Generator	Armature	Rating
CODF-10000-C	ⒸC1TF-10005-A	25 Amp.
C1DF-10000-A③	②C1TF-10005-A	25 Amp.

Ⓒ - Serviced by No. C1DF-10002-A, replacing No. CODF-10002-C.
② - Or No. C1TF-10027-A (Armature & Bearing Assy.).
③ - Serviced by No. C1DF-10002-A.

Performance Data

Generator	Amperes	Volts	Gen. RPM
25 Amp.	25	15.0	2450
30 Amp.	30	15.0	2550

Brush Spring Tension - 32-40 ozs.

Field Current - 1.2-1.8 amps. at 12.0 volts, hot.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: Use Burroughs Belt Tension Gauge No. 33-73F or equivalent and measure belt tension as follows:

Belt Tension Specifications (Lbs.)

Engine	Ⓒ New Belt	Ⓒ Used Belt
All	90-120	60-90

Ⓒ - Run belt for 5 minutes and reset tension.
② - Any belt operated 10 minutes or longer.

REGULATOR

Ford. As follows:

Regulator	Rating
CODF-10505-A	25 Amp.
B7A-10505-B or C1TZ-10505-A	30 Amp.

►*SETTING CAUTION:* "Temperature Compensated" type. Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.

Cutout Relay

Cuts In - 12.4-13.2 volts.

Cuts Out - 6-9 amperes discharge current.

Voltage Regulator

Setting - 14.6-15.4 volts at 75°F ambient temperature.

Current Regulator

Setting - 23-27 amps. (25 Amp.), 28-32 amps. (30 Amp.).

►*OTHER DATA: See "Ford Motor Co. 12-Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 2-Headlight System (Falcon), 4-Headlight System (Comet).

Stop Light Switch Location: On forward end of brake master cylinder.

Lighting Switch: Combination lighting switch and fuse junction block.

Removal - Disconnect battery. Remove switch control knob and shaft by pressing spring-release button on top of switch (switch in "off" position). Unscrew retaining nut and remove switch. Separate switch from fuse junction block.

Speedometer Removal: Disconnect speedometer cable, remove instrument cluster bezel retaining screws and remove bezel, lens, and cluster mask plate from cluster housing. Remove speedometer retaining screws and remove speedometer.

CIRCUIT BREAKERS: 18 Ampere - Integral with headlight switch, protects headlight circuit.

12 Ampere - Electric windshield wipers. On right side of instrument panel near ignition switch.

FUSES: *Fuses located in fuse junction block of lighting switch.*

15 Ampere - Parking, Tail, Instrument Panel, and Dome lights.

14 Ampere - Direction Signals and Back-up Lights.

14 Ampere - Heater Blower.

7.5 Ampere - Radio.

Cigar Lighter - Sulphur disc on back of lighter.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Motor Co. Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Motor Co. Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Motor Co. Special Data.*

►*ENGINE REAR MOUNT PRODUCTION CHANGE & INSTALLATION CAUTION: See "Engine Mounts" in Ford Motor Co. Special Data.*

OIL PAN REMOVAL (COMET): Drain crankcase and remove dipstick. Disconnect engine front mounts, raise engine and place 2" wood blocks between mounts and engine. Let engine rest on blocks. Remove stabilizer bar attaching nuts and pull stabilizer bar down. Remove oil pan. *NOTE* - Rotate crankshaft as necessary to provide clearance.

OIL PAN REMOVAL (FALCON): Drain crankcase and remove dipstick. Remove clutch retracting spring. Remove front crossmember. Remove stabilizer bar retaining nuts and pull stabilizer bar down. Remove oil pan. *NOTE* - Rotate crankshaft as necessary to provide clearance.

PISTONS

Solid skirt type with three rings.

Removal - Pistons and rods removed from above.

Clearance - .0021-.0027" (Comet), .0018-.0036" (Falcon & Trucks) at bottom of skirt.

Checking Clearance & Fitting New Pistons: *See "Pistons" in Ford Motor Co. Special Data.*

Replacement Pistons: Furnished Std. (2 sizes - Red & Blue), and .020", .030", .040", .060" Oversize with fitted pins.

Installing Pistons: Notch on piston head should be to front of engine. *See Rod Installation.*

PISTON PIN

Press fit in connecting rod, no locking device used.

Diameter - .9120-.9123" (rod hole diameter .9107-.9112").

PISTON & ROD ASSEMBLY

Length - 3.010-3.030".

Pin Fit in Piston - .0001-.0003". Wear limit .0008".

Pin Removal & Installation - *See "Piston Pins" in Ford Motor Co. Special Data.*

Replacement Pins: Furnished in assembly with new pistons. *See "Replacement Pistons" above.*

PISTON RINGS

Top compression ring is chrome plated, lower compression ring is phosphate coated. Oil ring is three-piece type with chrome plated rails.

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0774-.0781"	.010-.020"	.0024-.0041"
Compr. (2)	.0770-.0780"	.010-.020"	.0025-.0045"
Oil (3)		.015-.055"	Ⓒ

Ⓒ - Snug (side sealing type ring).

Replacement Rings: Furnished Std. & .020", .030", .040", .060" Oversize.

CONNECTING ROD

Length (Center-to-Center) - 4.854-4.856" (144" Eng.); 4.714-4.716" (170" Eng.). *DO NOT interchange rods between engines.*

Journal Diameter - 2.1236-2.1240" (Code Red), 2.1232-2.1236" (Code Blue). Taper wear limit .001", Out-of-round wear limit .0006".

Clearance - .0005-.0027".

Side Clearance - .004-.011". Wear limit .014".

Installing Rods - Numbers on rods and caps must be on same side and installed in same numbered cylinder. Oil squirt hole should be toward right side of engine on all rods and notch in piston head toward front of engine.

Replacement Bearings: Furnished Std. (2 sizes - Red & Blue), & .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

CRANKSHAFT

Journal Diameter - 2.2486-2.2490" (Code Red), 2.2482-2.2486"(Code Blue). Taper wear limit .001", Out-of-round wear limit .0006".

Bearings - Steel backed copper lead alloy.

Clearance - .0006-.0025",

Replacement Bearings: Furnished Std. (2 sizes – Red & Blue), & .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

End Thrust: Taken by No. 3 main bearing.

Endplay - .004-.008". Wear limit .012".

Thrust Bearing Alignment - *See "Crankshaft & Bearings" in Ford Motor Co. Special Data.*

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Bearings" in Ford Motor Co. Special Data*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated in front of crankshaft sprocket to reduce oil leakage at front oil seal.

CAMSHAFT

Journal Diameter - 1.8095-1.8105".

Clearance - .001-.003". Wear limit .006".

End Thrust: Taken by thrust plate and spacer behind camshaft sprocket.

Endplay - .003-.007". Wear limit .012".

Replacement Bearings: Furnished Std. & .015" Undersize. *NOTE* - No. 4 bearing has two oil holes and is not interchangeable with other bearings.

Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*

Camshaft Setting: Marks on both sprockets must be adjacent and in line with straightedge across shaft centers.

Timing Chain: Side guide type, 50 links.

►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds ½" (take up slack on driving side, measure slack on opposite side). Remove and install chain as a unit with both sprockets.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Motor Co. Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

VALVES

►*1961 INSUFFICIENT ROCKER ARM SHAFT LUBRICATION & EXCESSIVE WEAR CORRECTION & PRODUCTION CHANGE: See "Valve System" in Ford Motor Co. Special Data.*

Tappet Clearance: .016" All Valves, Hot & Cold. *See TUNE-UP.*

Valve	Head Diameter	① Stem Diameter
Intake	②	.3100-.3107"
Exhaust	1.261-1.271"	.3090-.3097"

Valve	Seat Angle	③ Lift	④ Stem Clearance
Intake	45°⑤	⑥ .2405"	.0008-.0025"
Exhaust	45°⑤	⑦ .2395"	.0018-.0035"

① - Std. Also furnished .003", .015", .030" Oversize.
② - 1.462-1.472" (144" Eng.), 1.522-1.532" (170" Eng.).
③ - Cam Lobe Lift. Maximum allowable lift loss .005".
④ - Wear limit .0045" Intake, .0055" Exhaust.
⑤ - Valve Face Angle 44°.
⑥ - Valve Lift .361". ⑦ - Valve Lift .359".

►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Ford Motor Co. Special Data.*

Valve Seat Width - .070-.080".

Valve Stem Oil Seals - Cup type seals installed on all valve stems below upper spring retainer.

Valve Springs: Free Length - 2.00" approximately.

Valve Spring Specifications

Valve	Pressure	Length
Closed	① 47.75-56.25 lbs.	1.585"
Open	② 112-122 lbs.	1.222"

① - Wear limit 40 lbs. at 1.585".
② - Wear limit 101 lbs. at 1.222".

Valve Spring Installation: Valve spring ends must be square within .069". Install springs with damper (closed) coil end down toward head. Check installed height of spring from surface of cylinder head spring pad to underside of spring retainer. If height greater than 1 39/64", install .030" spacers as necessary on head under spring to bring height within limits of 1 9/16-1 39/64". *CAUTION - Install spacers only if necessary. DO NOT use more than 2 spacers (will overstress springs and overload camshaft lobes).*

CONTINUED ON NEXT PAGE

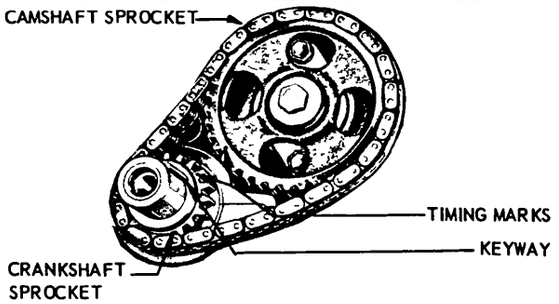
See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems. *See "Valve System" in Ford Motor Co. Special Data.*

Valve Lifters: Barrel type. Remove from above after removing cylinder head.

Clearance - .0005-.0020". Wear limit .004".



Rocker Arm Assembly: *See "Valve System" in Ford Motor Co. Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT for alignment of sprocket marks, and "Lift" under VALVES for checking of camshaft lobe wear.

Valve Timing Specifications

Intake Valves - Open 15° ① BTDC. Close 37° ② ALDC.
Exhaust Valves - Open45° ① BLDC. Close 7° ③ ATDC.
① - Camlift .012". ② - Camlift .015". ③ - Camlift .014".

VALVE TIMING MARKS

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Motor Co. Special Data.*

Crankcase Capacity: 3½ qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 35-55 lbs. (hot) at 2000 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Indicator light on instrument panel, controlled by Engine Oil Pressure Switch, Comet & Falcon No. B6A-9278-B, located on left rear side of engine to rear of coil.

Oil Pump: Rotor type, located in crankcase.

Pump Overhaul - *See "Oiling System" in Ford Motor Co. Special Data.*

Oil Filter: Full-flow disposable type. Replace every 4000 miles to coincide with engine oil change.

►*OIL FILTER INSTALLATION NOTE:* Coat gasket face of filter with engine oil. Install filter on adapter until gasket contacts adapter face. Then tighten ½-turn by hand. *Do not overtighten.*

Crankcase Ventilation: Conventional - Filter in oil filler cap (inlet) and outlet (road draft) tube at left front corner of engine. Clean filter in filler cap at 4000 mile intervals.

Positive - Road draft tube replaced by an adapter tubing, and hose routed to ventilation valve installed in spacer between carburetor and intake manifold. Service system at regular intervals check valve operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 8.7 qts. Add 1 qt. for heater.

Pressure Valve : 12-15 lb. radiator filler cap, Comet & Falcon No. B8A-8100-A.

Thermostat: Comet & Falcon No. CODE-8575-A (157-162°) Standard. No. CODE-8575-B (173-183°) for use with permanent type anti-freeze.

Water Pump: Packless, sealed ball bearing type.

Pump Overhaul - *See "Cooling System" in Ford Motor Co. Special Data.*

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator, Comet & Falcon No. B9MF-10804-A.

Dash Unit - Comet No. C1KF-10883-A (Comet); Falcon No. CODF-10883-B (Falcon).

Engine Unit - Comet & Falcon No. CODF-10884-A.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: *Check fluid level every 1,000 miles, drain and refill interval not recommended by manufacturer.* Use only Automatic Transmission Fluid Type C1AZ-19582-A or Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level - With transmission at normal operating temperature, move selector lever through all ranges, then back to "P" position. With engine idling, check fluid level and add as necessary to maintain level at "F" mark on dipstick. DO NOT OVERFILL.

Capacity - 6¼ qts. (approx.).

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
1 E 32 V 100001

① - Year. 1961.
② - Assembly Plant. See below.
③ - Body Series. See table above.
④ - Engine. V 6 Cyl., 223 cu. ins.
⑤ - Beginning vehicle number at each assembly plant (100001 for Ford, 500001 for Mercury).

Assembly Plant Designation

A - Atlanta	H - Lorain	S - Pilot Plant
C - Chester	J - Los Angeles	U - Louisville
D - Dallas	K - Kansas City	W - Wayne
E - Mahwah	N - Norfolk	Z - St. Louis
F - Dearborn	P - Twin City	
G - Chicago	R - San Jose	

TUNE-UP

COMPRESSION PRESSURE: 150 lbs. ± 10 lbs. at cranking speed. Maximum variation between cylinders 10 lbs.

VACUUM READING: 18" at idle speed.

►*1961 FORD & MERCURY ROCKER ARM PRODUCTION CHANGES:* "Zero Lash" type used on later production engines. See *"Valve System" in Ford Motor Co. Special Data for description and initial adjustment. See "Valve Tappet Clearance ("Zero Lash" Type)" below for minor operating adjustment.*

VALVE TAPPET CLEARANCE (Conventional Type): .019" Intake & Exhaust (Hot & Cold). Adjust all tappets to .019" clearance while engine is cold, then again check all tappets for .019" clearance after running engine for 30 minutes to normalize temperature.

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE:* Torque required to turn screw after interference noted must be 3 ft. lbs. minimum.

VALVE TAPPET CLEARANCE ("Zero Lash" Type): Long recess mark on lower side of rocker arm eccentric cam must be centered over valve stem when engine is idling. To make minor adjustment, turn rocker arm adjusting screw. *For initial adjustment and checking, see "Valve System" in Ford Motor Co. Special Data.*

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM. Spring is installed with ¾ turn windup and hooked over stop pin. Valve must operate freely. Lubricate every 4000 miles with special Exhaust Gas Control Valve Solvent, Ford & Mercury Part No. COAA-19A501-A.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .032-.036".

Spark Plugs - Champion 870 (Ford - Std.), F-14Y (Ford with Econ. Carb.), 860 (Mercury). 18 mm. Torque plugs to 15-20 ft. lbs.

NOTE - When new plug is installed in a replacement cylinder head, torque plug to 20-30 ft. lbs.

COIL: Ford & Mercury No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.

Resistor - Pink resistance wire (1.30-1.40 ohms at 75°F) used between ignition switch and multiple connector on dash. Bypassed during cranking by lead from multiple connector to starter solenoid.

DISTRIBUTOR: Ford. Used as follows:

Model	Distributor No.	Type
Synchro-mesh	①COAF-12127-G	Loadomatic
Auto. Trans.	①C1AF-12127-D	Step-Stop

① - Stamped on distributor housing for identification.

Condenser - Ford & Mercury No. 7RA-12300-C.

Condenser Capacity - .21-.25 mfd.

Contact Point Set - Ford & Mercury No. FAA-12171-A.

Breaker Gap - .024-.026".

Cam Angle - 35-38°.

Breaker Arm Spring Tension - 17-20 ozs.

Rotation - Clockwise viewed from above.

Advance Performance
►With Distributor On Test Stand
①COAF-12127-G

Distr. Degrees	Vacuum ("of Hg)	Distr. RPM
0	0.38	450
2½-3½	0.79	650
6¾-7¾	2.85	1100
8¾-9¾	4.33	1400
10¼-11¼	5.99	1800

②C1AF-12127-D

Test	Distr. Degrees	Vacuum ("of Hg)	Distr. RPM
A	3½-4½	1.08	800
A	6¼-7¼	1.70	1000
B	7½-8½	2.38	1200
C	7½-8½	5.63	2000
C	13	6.50	1450

A - Adjust primary spring. **B** - Adjust stop washers. **C** - Adjust spring washers.

① - Set test stand to 0° at 200 RPM and 0" Hg.

② - Set test stand to 0° at 400 RPM and 0" Hg.

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in oil pump. Rotate engine with starter if necessary after distributor gear partially engaged to seat shaft fully in oil pump.

IGNITION TIMING

Setting - 4° BTDC (Synchro-mesh & Overdrive), 10° BTDC (Auto. Trans.). *NOTE - Allowable range 2° to 10° BTDC. Set timing with engine idling and vacuum line disconnected.*

Timing Mark - Vibration damper marked "TDC", "3", "5", "7", "9". Align correct mark with pointer on engine front cover.

CARBURETOR

►*CARBURETOR APPLICATION: On Holley "Visi-Flo" 1-barrel carburetor used on all models.*

►*HIGH FUEL CONSUMPTION CORRECTION:* May be caused by improperly installed power valve or damaged power valve diaphragm. *See "Holley Visi-Flo Carburetors" in Carburetion Section.*

►*INCONSISTENT RETURN TO IDLE SPEED CORRECTION:* If engine fails to return to same idle speed every time, check for sticking carburetor throttle plates, binding carburetor throttle shaft, binding throttle linkage and proper dashpot adjustment before replacing dashpot.

►*1961 FORD & MERCURY AUTOMATIC TRANSMISSION & THROTTLE LINKAGE PRODUCTION CHANGE:* Beginning March 20, 1961, transmission throttle valve is controlled by a vacuum unit at rear of transmission case. Throttle linkage adjustment procedures for non-vacuum and for vacuum controlled throttle valve transmissions are different as detailed below.

THROTTLE LINKAGE ADJUSTMENT (Non-Vacuum Controlled Type): With engine at normal operating temperature, hot idle speed correctly set and anti-stall dashpot correctly adjusted (see below), proceed as follows: Remove turnbuckle lock on upper end of throttle control rod, loosen locknut and disconnect turnbuckle from lever. Pull throttle control rod upward to hold throttle control lever against transmission internal stop, rotate turnbuckle so pin freely enters hole in lever, **then lengthen throttle control rod by 3½ turns of turnbuckle.** Secure turnbuckle and tighten locknut. Distance from top rear corner of accelerator pedal to floor mat should be 3½". Adjust by turning threaded trunnion on accelerator connecting link. Connect a tachometer to engine and install a pressure gauge with Adapter T60L-7000-B (Ford), 77820-C (Mercury) to transmission testing line at lower end of accelerator connecting link. With parking brake applied and selector lever in "D", accelerate engine to 1000 RPM. Pressure should be 77-84 lbs. If too low, lengthen throttle control rod; if too high, shorten rod. *CAUTION - If correct pressure cannot be obtained by rotating turnbuckle 2½ turns in either direction from preliminary setting above, other transmission trouble is indicated.*

THROTTLE LINKAGE ADJUSTMENT (Vacuum Controlled Type): With engine at normal operating temperature, hot idle speed correctly set and anti-stall dashpot correctly adjusted (see below), stop engine and proceed as follows:

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data

CONTINUED FROM PRECEDING PAGE

Accelerator Pedal Height Adjustment (Ford & Mercury) - Distance from top front corner of accelerator pedal to floor mat should be 3¾". To adjust, turn threaded trunnion on accelerator connecting link.

Downshift Rod Adjustment (Ford) - Disconnect downshift rod from accelerator bellcrank and block accelerator pedal to floor mat. Push downshift rod down to limit of its travel and adjust sleeve on rod until end of rod freely enters bellcrank. Tighten locknut and release accelerator pedal.

Downshift Rod Adjustment (Mercury) - Insert ¼" gauge pin through gauging holes in bellcrank and downshift rod actuating lever. Disconnect downshift rod from bellcrank. With downshift rod in full "up" position, adjust length of rod so it fits freely in bellcrank lever. Tighten locknut.

Anti-Stall Dashpot Adjustment: With carburetor hot (slow) idle speed correctly adjusted, hold throttle valve closed. Clearance between dashpot plunger and throttle lever with dashpot plunger fully depressed should be .060-.090". Adjust by loosening locknut and turning dashpot in bracket.

Manual Throttle Control Adjustment (Air Conditioned Cars): Attach a tachometer to engine and place transmission selector lever in "N" or "P". Turn air conditioning unit on and make sure magnetic clutch is engaged. Using hand throttle, bring engine speed up to 700 RPM and secure stop on bowden wire against cable armor so engine cannot be operated above 700 RPM with hand throttle.

HOLLEY "VISI-FLO"

Model	① Carburetor No.
Synchro-mesh & O.D. ②	COAE-9510-E or U
Auto. Trans. ②	COAE-9510-Z
Economy ②	COAE-9510-Y
Synchro-mesh & O.D. ③	C1AE-9510-E
Auto. Trans. ③	C1AE-9510-F
Economy Synchro-mesh & O.D. ③	C1AE-9510-G
Economy Auto. Trans. ③	C1AE-9510-H
Economy Auto. Trans. ③	⑨ C1AE-9510-H
Economy All Trans. ③	C1AE-9510-AR

① - Stamped on fuel inlet boss.
② - Without Closed Crankcase Ventilation.
③ - With Closed Crankcase Ventilation.
⑨ - Replaced by C1AE-9510-AR.

Idle Setting - Initial setting 1-1½ turns open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture.

Idle Speed - 500-525 RPM (Synchro-mesh), 475-500 RPM (Auto. Trans. in "D").

Fuel Level - 11/16"±1/32" below power valve mounting surface (remove power valve and use Tool T52L-9550-AEE for Ford, 9550-AE-3 for Mercury). Fuel should touch end of "low" pin, but not touch end of "high" pin.

Accelerating Pump - Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: No adjustment (will be correct when hot or slow idle correctly set).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Ford & Mercury No. COAE-9350-D (Fuel & Vacuum), No. COAE-9350-C (Fuel Only).
Fuel Pump Pressure - 3½-5½ lbs. at 500 RPM.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford & Mercury No. B9MF-10804-A.
Dash Unit - Ford & Mercury No. C1AF-9305-A.
Tank Unit - Ford No. COAZ-9275-B (Early Ford Pass. Cars), Ford & Mercury No. COAZ-9275-C (Later Ford Pass. Cars & All Mercury Pass Cars); Ford & Mercury No. C1AF-9275-A (All Station Wagons).

Fuel Filter: Disposable type (except Taxicab), replaceable element type (Taxicab) in fuel inlet line. Replace filter or element every 8000 miles or if clogged. *NOTE - Disposable type filters must be installed with arrow on filter case pointing toward carburetor.*

Air Cleaner: Dry filter element type. Clean every 4000 miles, replace element every 25-30,000 miles or sooner if needed.

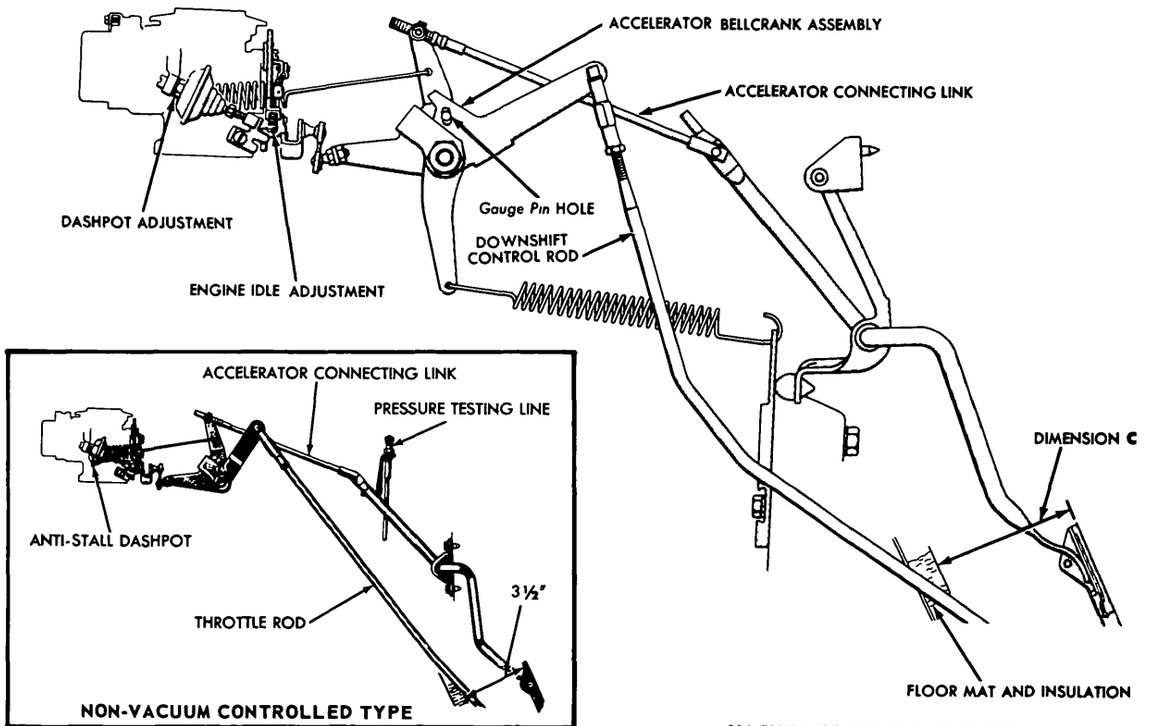
►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. If compressed air used, direct air stream from inside surface of filter element. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.

ELECTRICAL

►*SEE FORD & MERCURY V8 PAGES (FOLLOWING) FOR ALL BATTERY, STARTER, GENERATOR, ALTERNATOR, REGULATOR & MISCELLANEOUS ELECTRICAL DATA.*

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*



ENGINE SPECIFICATIONS: Own. 6 Cyl., Valve-in-head.

Bore	Stroke	Displacement
3.62"	3.60"	223 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.4-1	31.54	135 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*ENGINE NOISE CORRECTION:* May be caused by upper part of valve pushrod grounding against pushrod hole in cylinder head. If pushrods are not bent and cylinder head is properly installed and noise continues, enlarge pushrod hole with a rat-tail file. *CAUTION - Cylinder head must be properly installed, using guid pins for proper alignment, to prevent the above condition. See "Cylinder Head & Manifold" in Ford Motor Co. Special Data.*

►*ROCKER ARM COVER INSTALLATION NOTE:* Torque cover attaching bolts to specifications twice, once initially and again after two minutes from initial torquing to prevent oil leaks.

FORD & MERCURY 6 CYL. AUTOMATIC TRANS. THROTTLE LINKAGE

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

►*1961 CYLINDER HEAD PRODUCTION CHANGES & CAUTIONS:* Some early engines with conventional (adjustable) type rocker arms use cylinder heads with 7/16" head bolts. Later engines with either adjustable or "zero lash" type rocker arms use cylinder heads with ½" head bolts. "Zero lash", ½" bolt heads are of two designs: 1) With cast valve guide bosses as used previously. 2) With new machined valve guide bosses for improved valve stem seal and oil consumption. Type 2) heads can be used with later improved valve springs and valve stem seals. *See "Valves" below for data on springs and seals. CAUTION - 1) Do not interchange adjustable and "zero lash" type cylinder heads. 2) Cylinder head bolt torque specifications differ for 7/16" and 1/2" bolt heads. See "Cylinder Head & Manifold" in Ford Motor Co. Special Data.*

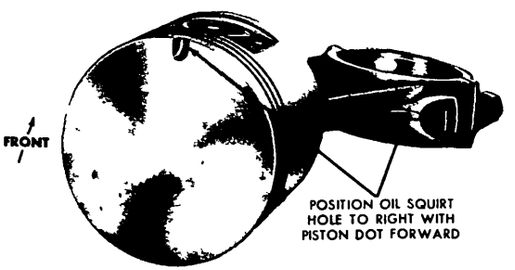
►*1961 CYLINDER HEAD GASKET PRODUCTION CHANGE & CAUTION:* New cylinder head gasket, Part No. C1AZ-6051-A, with steel core bonded between synthetic rubber- asbestos sheets used in later production ½" bolt type heads for improved sealing. Use this gasket for service replacement. *DO NOT use sealer on this gasket.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Motor Co. Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Motor Co. Special Data.*

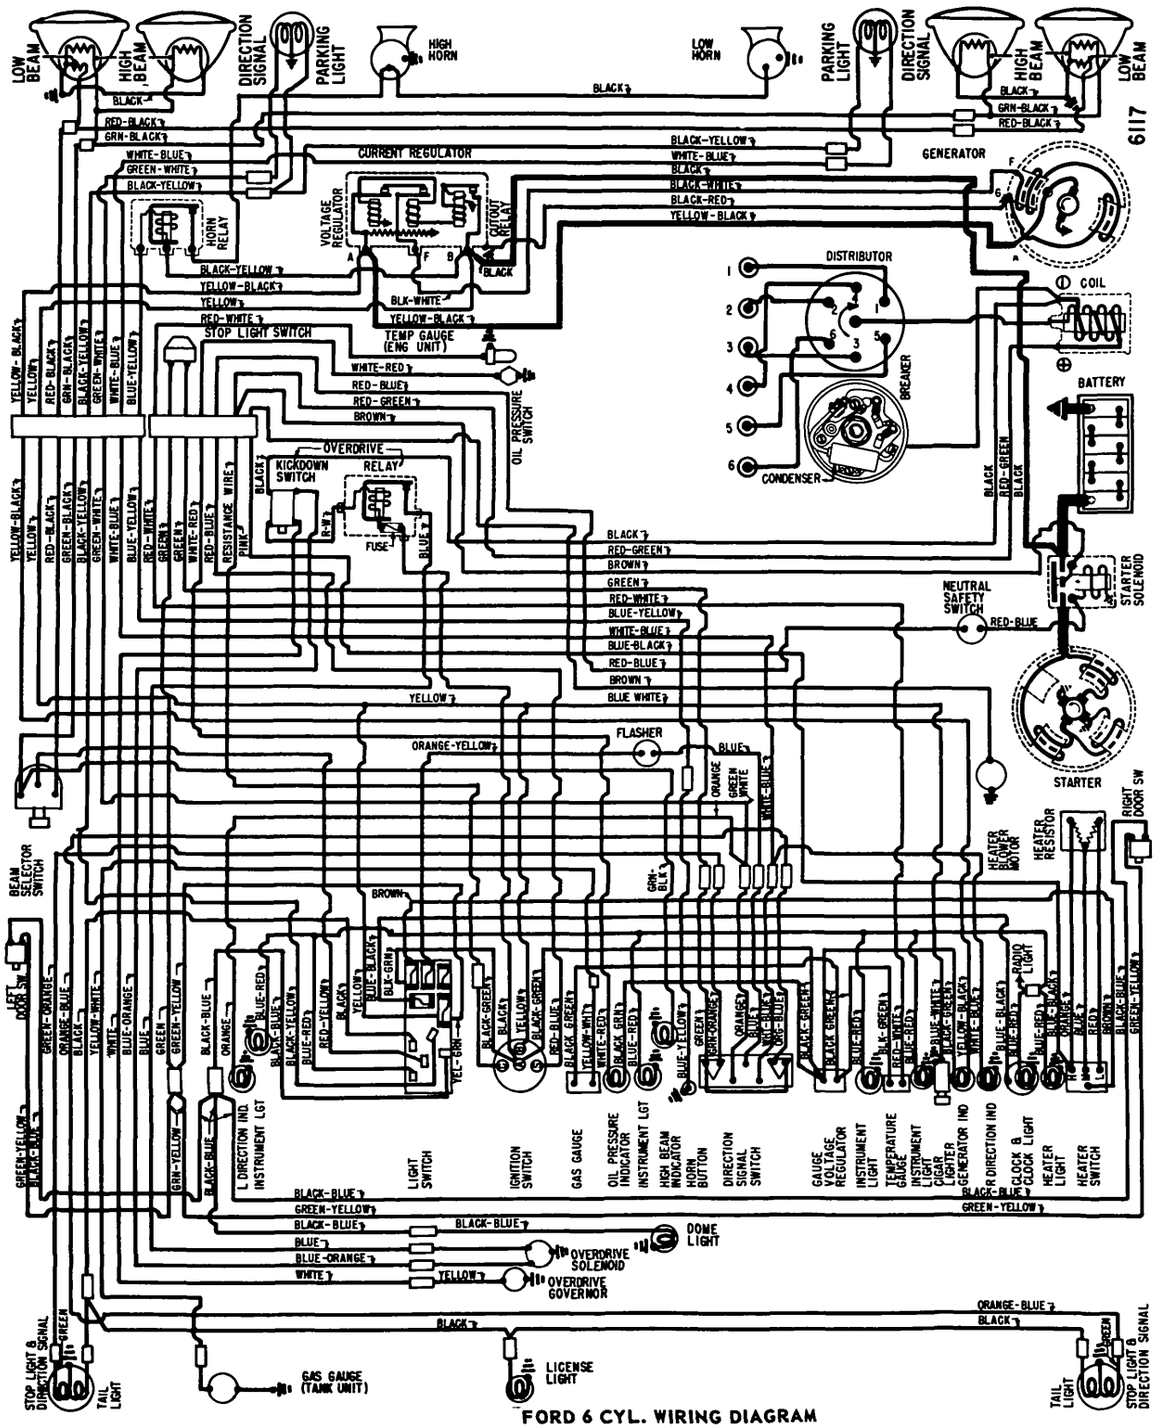
ENGINE REMOVAL: *See "Engine" in Ford Motor Co. Special Data.*

OIL PAN REMOVAL (FORD): Drain crankcase and remove flywheel housing inspection cover and dipstick. On Station Wagons; remove stabilizer bar-to-lower control arm and frame rail retaining nuts and move stabilizer bar as far forward as possible. On All Models, remove crankcase ventilation tube assembly. Remove oil pan retaining screws, rotate crankshaft for clearance, and remove oil pan.



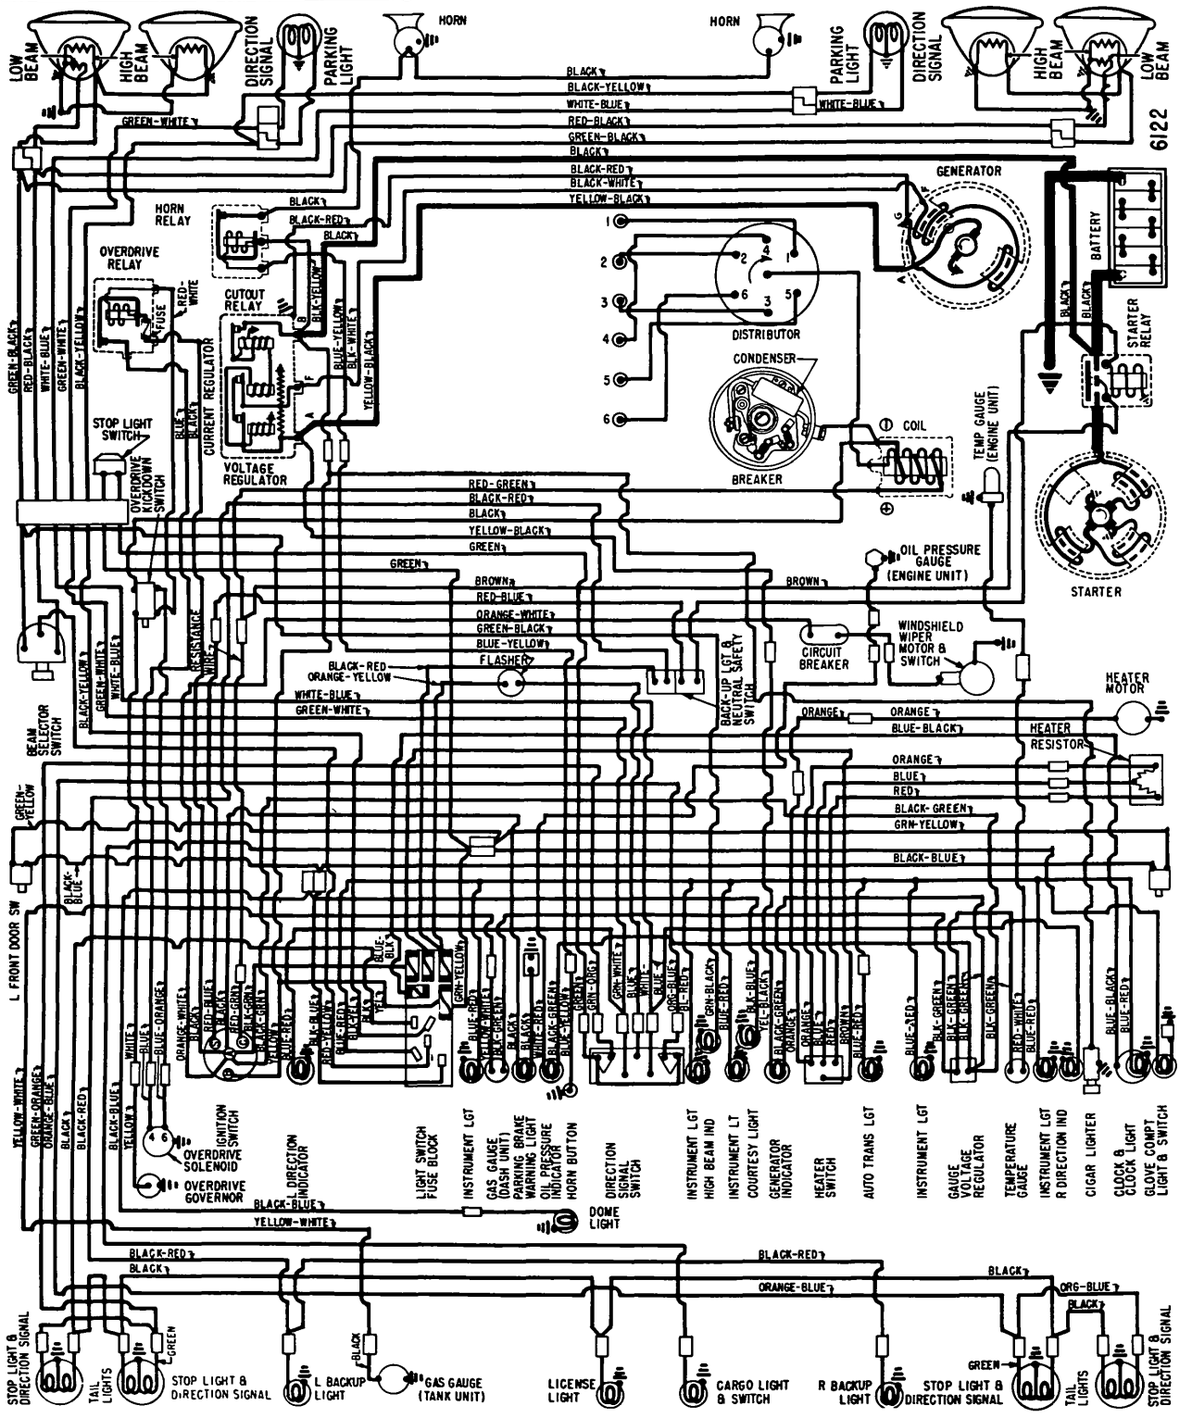
OIL PAN REMOVAL (MERCURY): Drain crankcase and remove dipstick. Remove stabilizer bar-to-lower control arm nuts and loosen right and left stabilizer bar-to-frame clamps. Pry stabilizer bar to right and pull arms downward for clearance. Remove oil pan.

PISTONS



Autothermic type. Solid skirts with three rings.

►*ORIGINAL BORE & PISTON NOTE:* Production standard cylinder bore range is 3.6250-3.6274". Pistons used in this standard bore are 2 sizes: 3.6236-3.6242" (color coded Red), and 3.6248-3.6254" (Color coded



CONTINUED ON NEXT PAGE

PISTON & ROD ASSEMBLY

FORD 6 CYL. WIRING DIAGRAM

MERCURY 6 CYL. WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Blue). Production cylinder bore also may be .003" Oversize (3.6274-3.6286") with .003" Oversize pistons (3.6260-3.6266").

Removal - Pistons and rods removed from above.

Clearance - .0008-.0026" at bottom of skirt.

Fitting New Pistons: *See "Pistons" in Ford Motor Co. Special Data.*

Replacement Pistons: Ford - Furnished Std. (1 size only), and .020", .030", .040", .060" Oversize with fitted pins. **Mercury** - Furnished Std. (2 sizes - Red & Blue), and .020", .030", .040" Oversize with fitted pins.

Installing Pistons: Install piston with indentation in head of piston toward front of engine. *See Rod Installation.*

PISTON PIN

Floating type with lock ring at each end.

Diameter - .9120-.9123". **Length** - 3.010-.3.030".

Pin Fit in Piston - .0001-.0003". Wear limit .0008".

Pin Fit in Rod Bushing - .0001-.0005". Wear limit .001".

Replacement Pins: Std. (Code Green), .001" (Code Blue), .002" (Code Yellow) Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr. (1)	.0929-.0936"	.010-.020"	①.0019-.0036"
Compr. (2)	.0930-.0940"	.010-.020"	①.0015-.0035"
Oil (3)		.015-.055"	②

① - Wear limit .006".

② - Snug - side sealing type ring.

Replacement Rings: Std., & .020", .030", .040" Oversize. Also .060" Oversize on Ford.

CONNECTING ROD

Journal Diameter - 2.2984-2.2988" (Red), 2.2980-2.2984" (Blue).

Clearance - .0006-.0025". Wear limit. .0035".

Side Clearance - .003-.009". Wear limit .012".

Length - 6.258-6.262" center-to-center.

Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

Installing Rods: Install rod in piston so that oil squirt hole is to **right** when indentation on piston head is to front of engine. Rods and caps are numbered 1 to 6. Numbers on rods and caps must be on same side and installed in same numbered cylinders.

CRANKSHAFT

Journal Diameter - 2.4984-2.4988" (Red), 2.4980-2.4984" (Blue).

Bearings - Steel backed copper lead alloy.

Clearance - .0006-.0028". Wear limit .0038".

Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

End Thrust: Taken by rear intermediate (No. 3) bearing.

Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Motor Co. Special Data.*

Endplay - .004-.008". Wear limit .012".

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Motor Co. Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all car and truck engines to reduce oil leakage at front oil seal. Slinger is held in place by crankshaft pulley hub and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

CAMSHAFT

►*CAMSHAFT NON-INTERCHANGEABILITY CAUTION:* Different camshafts used in Adjustable and Zero Lash type engines. DO NOT interchange camshafts unless rocker arm and shaft assemblies are also changed.

Journal Diameter - 1.9255-1.9265".
Clearance - .001-.003". Wear limit .006".

End Thrust: Taken by thrust plate and spacer behind camshaft sprocket. *NOTE* - Chamfer on inside of spacer must be toward camshaft journal.
Endplay - .001-.007". Wear limit .012".
Replacement Bearings: Finished bearings furnished Std. & .015" Undersize. *CAUTION* - No. 3 bearing is not interchangeable with other bearings.

Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*

Timing Chain: Side guide type, 56 links. Replace chain when side deflection exceeds ½" on slack side (establish reference mark on block with sprocket turned so that all slack removed, then turn sprocket in opposite direction so that slack is present, measure deflection by pressing out on chain midway between sprockets).

Camshaft Setting: Sprockets are marked by "0" at one tooth. Mesh chain so that there are 12 pins between "0" marks with marks on driving side of chain.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Motor Co. Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

VALVES

Tappet Clearance: Conventional (Adjustable) Type - .019" Intake & Exhaust, Hot. *See TUNE-UP.*

"Zero Lash" Type - For initial adjustment and checking, *see "Valve System" in Ford Motor Co. Special Data.* For minor operating adjustment, *see TUNE-UP above.*

Valve	Head Diameter	①Stem Diameter
Intake	1.775-1.785"	.3416-.3423"
Exhaust	1.505-1.520"	.3398-.3405"

Valve	Seat Angle	②Lift	③Stem Clearance
Intake	45°④	⑤	.0010-.0024"
Exhaust	45°④	⑤	.0028-.0042"

① - Furnished also with .003", .015", .030" Oversize stems.
② - Cam Lobe Lift. Wear limit .005".
③ - Wear limit .0045" Intake, .0055" Exhaust.
④ - Valve Face Angle 44°.
⑤ - .273" Adjustable Lash type; .260" "Zero Lash" type.

►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Ford Motor Co. Special Data.*

Valve Stem Seals - Umbrella type seals used on all valve stems. Install with cupped side down. *See "Production Change" below.*

►*1961 VALVE STEM SEAL PRODUCTION CHANGE:* New Valve Stem Seal, Part No. C1AE-6571-H, with three inner ribs and longer overall height of .610" (increased from .450") used on later production "Zero Lash" engines for improved valve stem sealing and to minimize oil consumption. *CAUTION - Use this seal only on "Zero Lash" type engines.*
Valve Seat Width - .070-.090", all valves.

Valve Springs: Free Length - 2.09" (All Adjustable & Early "Zero Lash" engines); 2.33" (Later "Zero Lash" engines). *See "Production Change" below.*

►*1961 VALVE SPRING PRODUCTION CHANGE:* New Valve Spring, Part No. C1AE-6513-R, identified by color code red with pink stripe, used on later production "Zero Lash" engines to reduce valve burning and float at high speed. This spring has different free length (see above) and different pressure specifications (see below). *CAUTION - Use this spring only on "Zero Lash" type engines.*

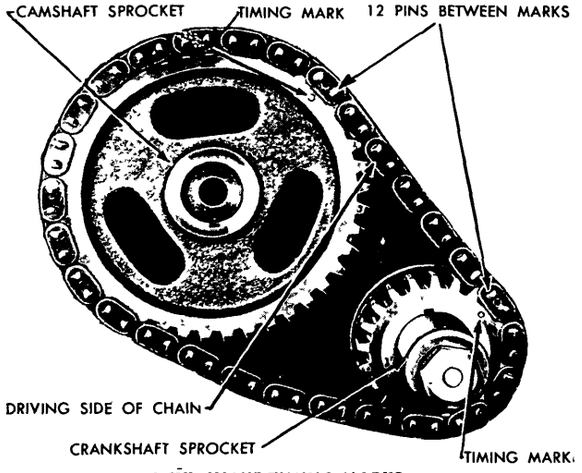
►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Spring ends must be square within .073". Install springs with damper (closed) coil end down toward head. Check installed height of spring which must not exceed 1 25/32" (from surface of cylinder head spring pad to underside of spring retainer). If height greater, install .030" spacers as necessary on head under spring to bring height within limits of 1 3/4-1 25/32". *CAUTION - Install spacers only if necessary. DO NOT use more than 2 spacers (will overstress springs and overload camshaft lobes).*

Valve Spring Specifications

(2.09" Free Length Type)

Valve	Lbs. Pressure	Length
Closed	①71-79	1.780"
Open	②161-177	1.390"

(2.33" Free Length Type)



Valve	Lbs. Pressure	Length
Closed	③97-105	1.780"
Open	④160-178	1.410"

① - Wear limit 64 lbs. at 1.780".
② - Wear limit 145 lbs. at 1.390".
③ - Wear limit 90 lbs. at 1.780".
④ - Wear limit 152 lbs. at 1.410".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems. *See "Valve System" in Ford Motor Co. Special Data.*

Valve Lifters: Mushroom type. Remove from below with camshaft out.
Clearance - .0011-.0027". Wear limit .0055".

Rocker Arm Assembly: Two different types used. Type 1 is conventional type with adjusting screw for tappet clearance adjustment. Type 2 is "Zero Lash" type to provide no valve operating clearance. *See "Valve System" in Ford Motor Co. Special Data.*

6 CYL. VALVE TIMING MARKS

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT for alignment of sprocket marks, and "Lift" under VALVES for checking of camshaft lobe wear.

Valve Timing Specifications

Intake Valves - Open 23°①BTDC. Close 59°②ALDC.
Exhaust Valves - Open 71°①BLDC. Close 10°②ATDC.
① - Camlift .002". ② - Camlift .005".

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Motor Co. Special Data.*

Crankcase Capacity: 4 qts. refill, 5 qts. with filter change.

Normal Oil Pressure: 35-55 lbs. at 2000 RPM.
Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Indicator light on instrument panel controlled by Oil Pressure Switch, Ford & Mercury No. B6A-9278-B, mounted on right rear side of engine above starter.

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Oil Pump: Gear type early, Rotor type later. Rotor type only furnished for replacement. Pump located in crankcase.
Pump Overhaul - *See "Oiling System" in Ford Motor Co. Special Data.*

Oil Filter: Disposable type. Replace every 4000 miles.
Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional ½-turn. **Do not overtighten.**

►*OIL LEAK AT OIL FILTER CORRECTION:* If no diaphragm plate installed between cylinder block and filter, install diaphragm plate included in Filter Adapter Kit, No. B7A-6882-A.

Crankcase Ventilation: Conventional - Filter in oil filler cap (inlet) and outlet pipe in rear of crankcase at left side. Clean filter in filler cap every 4000 miles.
Positive - Outlet pipe replaced by adapter and tube into intake manifold just below carburetor. Ventilation valve located at manifold end of tube. Service system at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 15 qts. Add 1 qt. for heater.
Thermostat: Ford & Mercury No. COAZ-8575-A (160°), or No. COAZ-8575-B (178°) for use with permanent type anti-freeze.
Pressure Valve: Radiator filler cap, Ford & Mercury No. B8A-8100-A. 12-15 lb. type.
Water Pump: Packless, sealed ball bearing type.
Overhaul - *See "Cooling System" in Ford Motor Co. Special Data.*
Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator, Ford & Mercury No. B9MF-10804-A.
Dash Unit - Ford & Mercury No. C1AF-10970.A.
Engine Unit - Ford & Mercury No. B7A-10884-A.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level at 4,000 mile intervals. Drain and refill transmission only when disassembled for repair. Use only Ford Automatic Transmission Fluid C1AZ-19582-A or Automatic Transmission Fluid Type A, Suffix A.
Checking Fluid Level: With parking brake applied, engine and transmission at normal operating temperature, engine idling at normal idle speed, and car on level floor, shift transmission selector lever through all positions, then place selector lever in P position. Check fluid level on dipstick. Add sufficient fluid through filler tube to bring level to F mark on dipstick. *CAUTION - Do not overfill.*
Capacity: 9 qts. approximately.
CHASSIS LUBRICATION: The steering knuckle ball joints and steering connector rod ends are packed with special lubricant and sealed. Lubrication fittings have been eliminated at these points. However, service plugs are provided in steering knuckle ball joints and steering connector rod ends so they may be repacked when necessary.
►*LUBRICATION CAUTION: Engine accessories (generator, distributor, etc.), steering gear, wheel bearings, transmission, rear axle and universal joints must be checked and lubricated at intervals recommended by manufacturer.*
►*SPECIAL LUBRICANT RECOMMENDATION CAUTION: Only the recommended lubricants (see below) are to be used when servicing steering knuckle ball joints and steering connector rod ends. Other lubricants will cause early failure of parts.*
Lubrication (Ford & Mercury): Every 30,000 miles or 2 years, remove lubrication service plugs (threaded) from upper and lower steering knuckle ball joints (four locations) and from steering connector rod ends (five locations) and install lubrication fittings. Lubricate all fittings with Lubricant, Part No. C1AZ-19590-A. then replace threaded service plugs.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*THUNDERBIRD JACKING & HOISTING PRECAUTIONS: Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
1 E 52 W 100001

① - Year. 1961.
② - Assembly Plant. *See below.*
③ - Body Series. *See table above.*
④ - Engine. *See below.*
⑤ - Beginning vehicle number at each assembly plant (100001 for Ford & Thunderbird, 500001 for Mercury).

Assembly Plant Designation

A - Atlanta	H - Lorain	S - Pilot Plant
C - Chester	J - Los Angeles	U - Louisville
D - Dallas	K - Kansas City	W - Wayne
E - Mahwah	N - Norfolk	Y - Wixom
F - Dearborn	P - Twin City	Z - St. Louis
G - Chicago	R - San Jose	

Engine Code Designation

Engine	Code Letter
292" Engine 2-Bbl. Carb.	W
292" Engine 2-Bbl. Carb. (Export)	T
352" Engine 2-Bbl. Carb.	X
390" Engine 4-Bbl. Carb.	Z
390" Engine 4-Bbl. Carb. (Export)	R

►*ENGINE IDENTIFICATION NOTE:* Valve Rocker Arm Cover and Carburetor Air Cleaner painted as follows: **Ford 390** - Silver; **Mercury 292** - Ivory; **Mercury 352** - Turquoise; **Mercury 390** - Gold Bronze.

Engine Production Code Numbers: Indicates place, day and month of engine manufacture. Not used for licensing.

►*ENGINE DESIGNATION NOTE: On the following data pages, engines will be referred to as follows:*

Engine	Designation
292" V8	292
352" V8	352
390" V8 (Std. Engine) ①	390 Std.
390" V8 (Police Interceptor)	390 Police
390" V8 (High Performance)	390 High Perf.

① - If specifications apply to all three 390" V8 Engines, designation will be **390.**

TUNE-UP

COMPRESSION PRESSURE: 292 - 160±10 lbs. **352 & 390** - 180±20 lbs. All at cranking speed. Maximum variations between cylinders 10 lbs.

VACUUM READING: 18" at idle speed.

VALVE TAPPET CLEARANCE: 292 - .019" Hot & Cold, All Valves. Adjust to .019" clearance while engine is cold, then again check for .019" clearance after running engine for 30 minutes to normalize temperature. Minimum torque required to turn self-locking tappet adjusting screw must be 3 ft. lbs. minimum after interference noted.

352 & 390 Std. - Zero lash, hydraulic lifters.

390 High Perf. & Police - .028" Cold, .025" Hot, All Valves.

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight located in right exhaust manifold (left manifold on some 390" Engines). Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM. Spring is installed with ¾ turn windup and hooked over stop pin. Valve must operate freely. Lubricate every 4000 miles with special Exhaust Gas Control Valve Solvent, Ford & Mercury No. COAA-19A501-A.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 292 - 1-5-4-8-6-3-7-2. **352 & 390** - 1-5-4-2-6-3-7-8.

Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032-.036".

Spark Plugs - 292 - Champion F-14Y; **352 & 390 Std.** - Champion F-11Y. **390 High Perf. & All Police** - F-9Y. All plugs 18 mm. with tapered seat. No gasket used. Torque to 15-20 ft. lbs.

►*390 POLICE ENGINE SPARK PLUG FOULING CORRECTION:* If plugs foul because of prolonged idling, install hotter plug, No. F-11Y.

COIL: Ford & Mercury No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.

Resistor - Pink resistance wire (1.30-1.40 ohms at 75°F) used between ignition switch and multiple connector on dash. Bypassed during cranking by lead from multiple connector to starter solenoid.

DISTRIBUTOR: Ford. Used as follows:

Engine	① Distributor No.
292	COAF-12127-A
352 Synchro-mesh	COAF-12127-E
352 Auto. Trans.	COAF-12127-D
390 Std. & Police	C1SF-12127-A
390 High Perf.	② COAF-12127-K

① - Stamped on distributor housing for identification.
② - Double Breaker type with Centrifugal Advance only.

Condenser - Ford & Mercury No. B9AF-12300-A (Except COAF-12127-K), No. 7RA-12300-C (COAF-12127-K).

Condenser Capacity - .21-.25 mfd.

Contact Point Set - Ford & Mercury No. B7A-12171-A (Except COAF-12127-K), No. FDS-12171-A (COAF-12127-K - 2 sets required).

Breaker Gap - .014-.016" (Except COAF-12127-K), .019-.021" (COAF-12127-K). Set both sets of points to same gap on double breaker distributor.

Cam Angle (Single Breaker) - 26-28½°.

Cam Angle (Double Breaker) - 26-28½° for each set of points operating separately. Maximum variation between point sets 1°. Total angle 33° (both sets operating together).

Breaker Arm Spring Tension - 17-20 ozs. (exc. Double Breaker), 27-32 ozs. (Double Breaker).

Rotation - Counterclockwise viewed from above.

Automatic Advance - COAF-12127-A

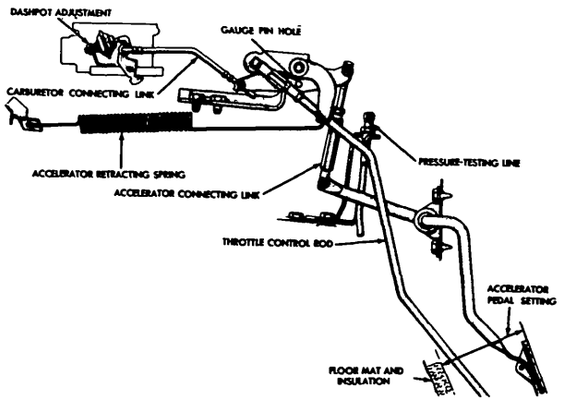
Ⓒ - Allowable range 2-10° BTDC. Set timing with vacuum line disconnected.

Timing Mark - Timing pin located in crankshaft pulley and pointer on engine front cover marked 0, 3, 6, 10. Align pin with correct mark on pointer.

CARBURETOR

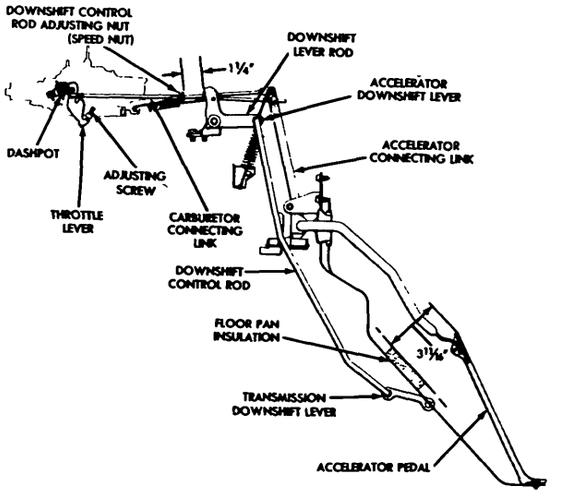
►*CARBURETOR APPLICATION: As follows:*

Engin	Carburetor
292, 352	One Ford 2-Bbl.
390 Std. & Police	One Ford 4-Bbl.
390 High Performance	One Holley 4-Bbl.
390 High Performance	Three Holley 2-Bbl.



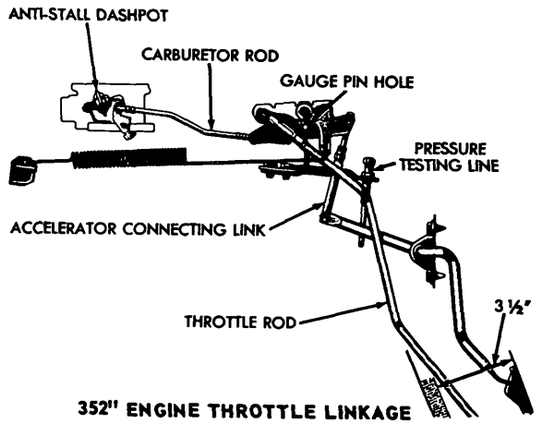
►*1961 HARD COLD START CORRECTION:* May be caused by incorrect automatic choke thermostatic spring. See *"Ford 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*INCONSISTENT RETURN TO IDLE SPEED CORRECTION:* If engine fails to return to same idle speed every time, check for sticking carburetor throttle plates, binding carburetor throttle shaft, binding throttle linkage and proper dashpot adjustment before replacing dashpot.

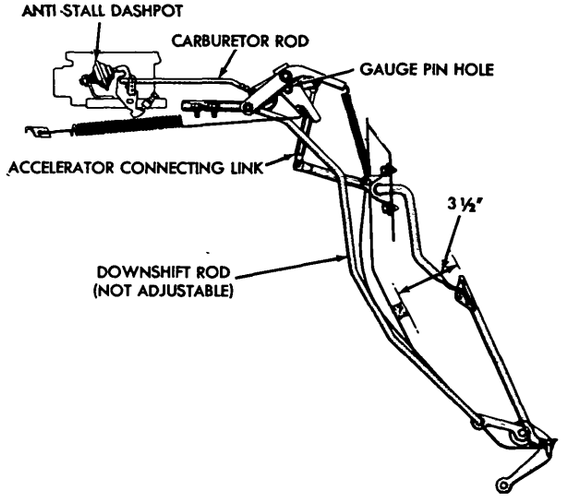


►*1961 FORD & MERCURY 2-SPEED AUTOMATIC TRANSMISSION & THROTTLE LINKAGE PRODUCTION CHANGE:* Beginning March 20, 1961, transmission throttle valve is controlled by a vacuum unit at rear of transmission case. Throttle linkage adjustment procedures for non-vacuum and for vacuum controlled throttle valve transmissions are different as detailed below.

THROTTLE LINKAGE ADJUSTMENT (Non-Vacuum Contr lled Type): Make correct idle speed adjustment, stop the engine, and make anti-stall dashpot adjustment (see below), then proceed as follows: Disconnect throttle control rod at upper end and disconnect carburetor connecting link from carburetor lever. Insert ¼" gauge pin through holes in carburetor lever and bracket. With carburetor connecting link held in normal position, push forward on link so throttle lever is firmly against carburetor idle adjusting screw and adjust length of carburetor connecting link so it fits freely into carburetor lever. Then lengthen link 1 full turn. Remove gauge pin and connect link to lever. Make sure gauge pin holes are aligned (readjust carburetor connecting link if necessary). Pull upward on throttle control rod until transmission lever is held against transmission internal stop. Rotate turnbuckle on throttle control rod so pin fits freely in carburetor lever, then lengthen rod by 3½ turns of turnbuckle. Connect throttle control rod. Distance from top rear corner of accelerator pedal to floor mat should be 3½". Adjust by turning threaded trunnion on accelerator connecting link. *Make final adjustment using pressure method as follows:* Connect a tachometer to engine and install a pressure gauge with Adapter T60L-7000-B (Ford), 77820-C (Mercury) to transmission testing line at lower end of accelerator connecting link. With parking brake applied and selector lever in "D", accelerate engine to 1000 RPM. Pressure should be 77-84 lbs. (2-Speed), 80-85 lbs. (3-Speed). If too low, lengthen throttle control rod; if too high, shorten rod (rotate turnbuckle). *CAUTION - If correct pressure cannot be obtained by rotating turnbuckle 2½ turns in either direction from preliminary setting above, other transmission trouble is indicated.*



CONTINUED ON NEXT PAGE



292" ENGINE THROTTLE LINKAGE (NON-VACUUM CONTROLLED TYPE)

THUNDERBIRD THROTTLE LINKAGE

352" ENGINE THROTTLE LINKAGE (NON-VACUUM CONTROLLED TYPE)

VACUUM CONTROLLED TYPE THROTTLE LINKAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

THROTTLE LINKAGE ADJUSTMENT (Vacuum Controlled Type): Make engine idle speed and anti-stall dashpot adjustments (see below), then make carburetor rod, accelerator pedal, and downshift rod adjustments as follows:

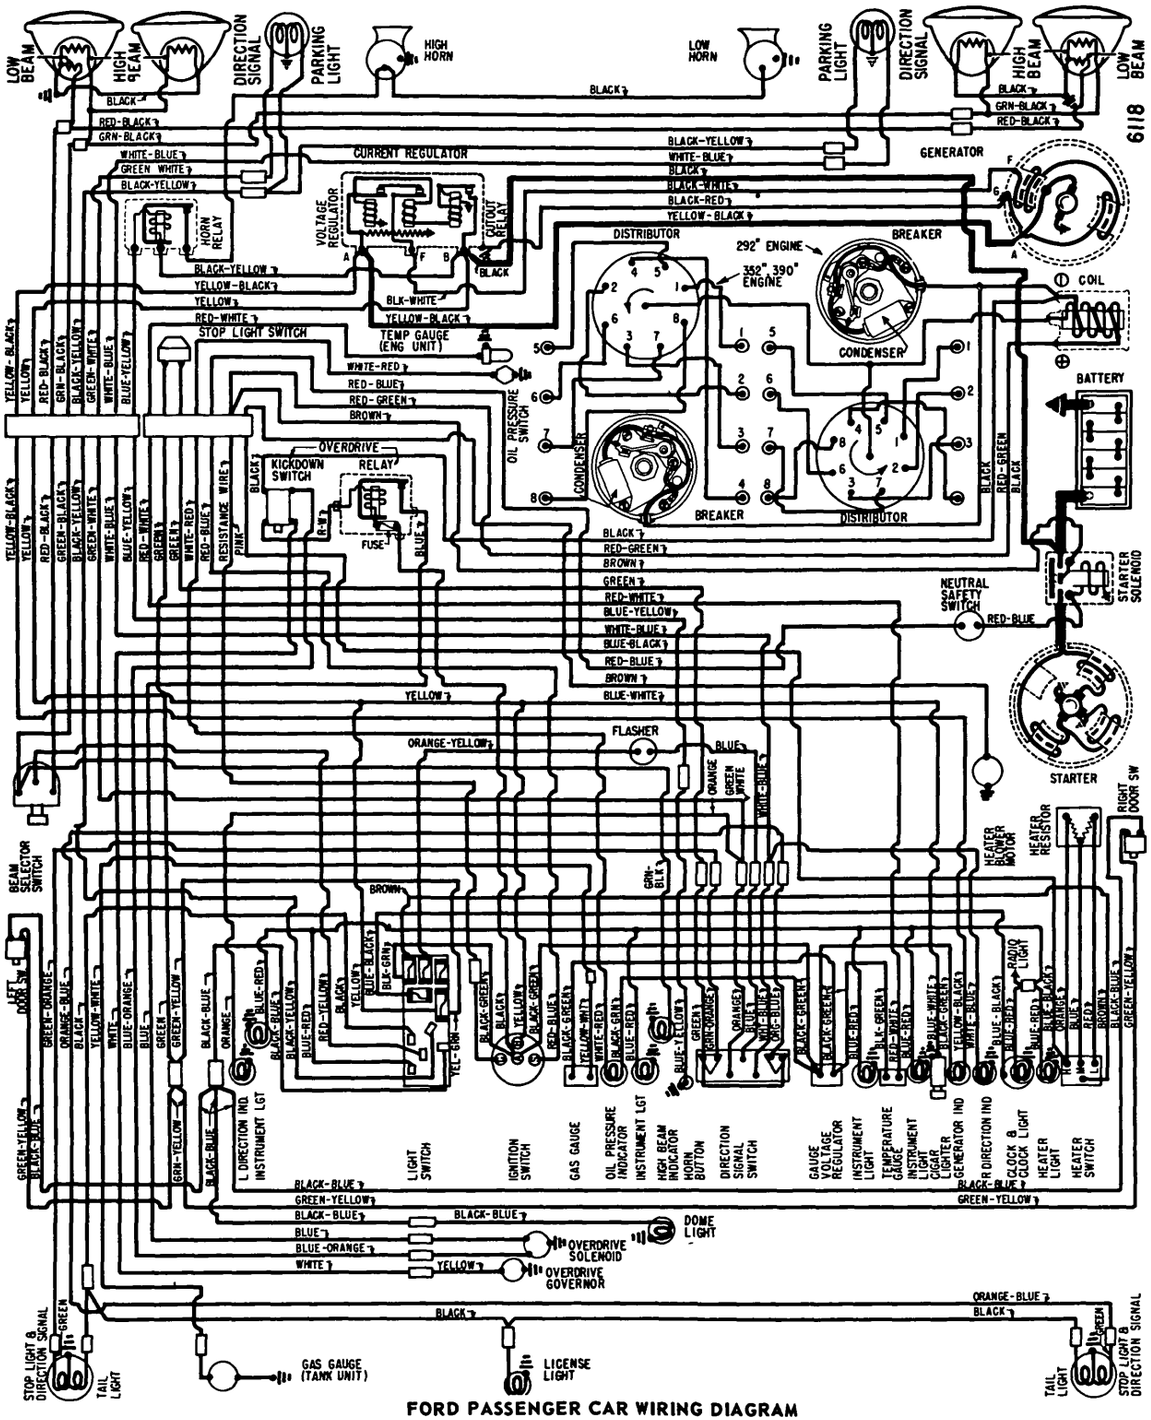
1) Ford & Mercury - Disconnect carburetor connecting link from carburetor lever. Insert ¼" gauge pin through holes in carburetor lever and bracket. With carburetor connecting link held in normal position, push forward on link so throttle lever is firmly against carburetor idle adjusting screw and adjust length of carburetor connecting link so it fits freely into carburetor lever. Then lengthen link 1 full turn. Remove gauge pin and connect link to lever. Make sure gauge pin holes are aligned (readjust carburetor connecting link if necessary).

2) All Cars - Distance from top rear corner of accelerator pedal to floor mat should be 3¾" (Ford 2-Speed), 3½" (Mercury 2 & 3-Speed), 3 11/16" (Ford & T-Bird 3-speed). Adjust by turning threaded trunnion on accelerator connecting link (Ford & Mercury), carburetor connecting link (T-Bird).

3) Thunderbird - Position speed nut on downshift lever rod 1¼" from forward face of bushing in downshift lever.

4) Ford & Mercury - Tailor transmission "kickdown" operation after road test by adjusting accelerator pedal height.

Anti-Stall Dashpot Adjustment: With carburetor hot or slow idle speed correctly adjusted, hold throttle valve closed. Clearance between dashpot plunger and throttle lever with dashpot plunger fully depressed should be .060-.090". Adjust by loosening locknut and turning dashpot in bracket.



Manual Throttle Control Adjustment (Air Conditioned Cars): Attach a tachometer to engine and place transmission selector lever in "N" or "P". Turn air conditioning unit on and make sure magnetic clutch is engaged. Using hand throttle, bring engine speed up to 700 RPM and secure stop on bowden wire against cable armor so engine cannot be operated above 700 RPM with hand throttle.

CARB. EQUIPMENT

Fuel Pump: Fuel only or Fuel & Vacuum as follows

Fuel & Vacuum - F rd & Mercury No. -	Fuel Only
COAE-9350-A	COAE-9350-E or B
C1AE-9350-A	C1SE-9350-A

Fuel Pump Pressure - 4 6 lbs at 500 RPM

CONTINUED ON NEXT PAGE

MERCURY PASSENGER CAR WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Gas lin Gaug : King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford & Mercury No B9MF-10804-A.

Dash Unit - Ford & Mercury No. C1AF-9305-A (Pass.), Ford No. C1SF-9307-A (T-Bird - Fuel & Temp. Gauge Unit).

Tank Unit - Ford No. COAZ-9275-B (Early Ford Pass. Cars), Ford & Mercury No. COAZ-9275-C (Later Ford Pass. Cars & All Mercury Pass. Cars); Ford & Mercury No. C1AF-9275-A (All Station Wagons), Ford No. C1SF-9275-C (T-Bird).

Fu l Filter: Disposable type (except Taxicab & 390 High Perf. Engine), replaceable element type (Taxicab & 390 High Perf. Engine) in fuel inlet line. Replace filter or element every 8000 miles or if clogged. *NOTE - Disposable type filters must be installed with arrow on filter case pointing toward carburetor.*

Air Cleaner: Dry filter element type. Clean every 4000 miles, replace element every 25-30,000 miles or sooner if needed.

►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. If compressed air used, direct air stream from inside surface of filter element. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.

BATTERY

Ford Part No. ①	Volts	Plates	②Capacity
B9A-10654-D③	12	11	55 Ampere Hr.
B9A-10654-E④	12	13	65 Ampere Hr.
B9A-10654-F⑤⑥	12	11	70 Ampere Hr.

① - Numbers are for dry type batteries for service replacement. ② - At 20 hour rate.
③ - Replaces original battery with red filler caps.
④ - Replaces original battery with gray filler caps.
⑤ - Replaces original battery with yellow filler caps.
⑥ - Optional on Ford & Thunderbird For Mercury, optional battery is 13 plate, 75 amp. type.

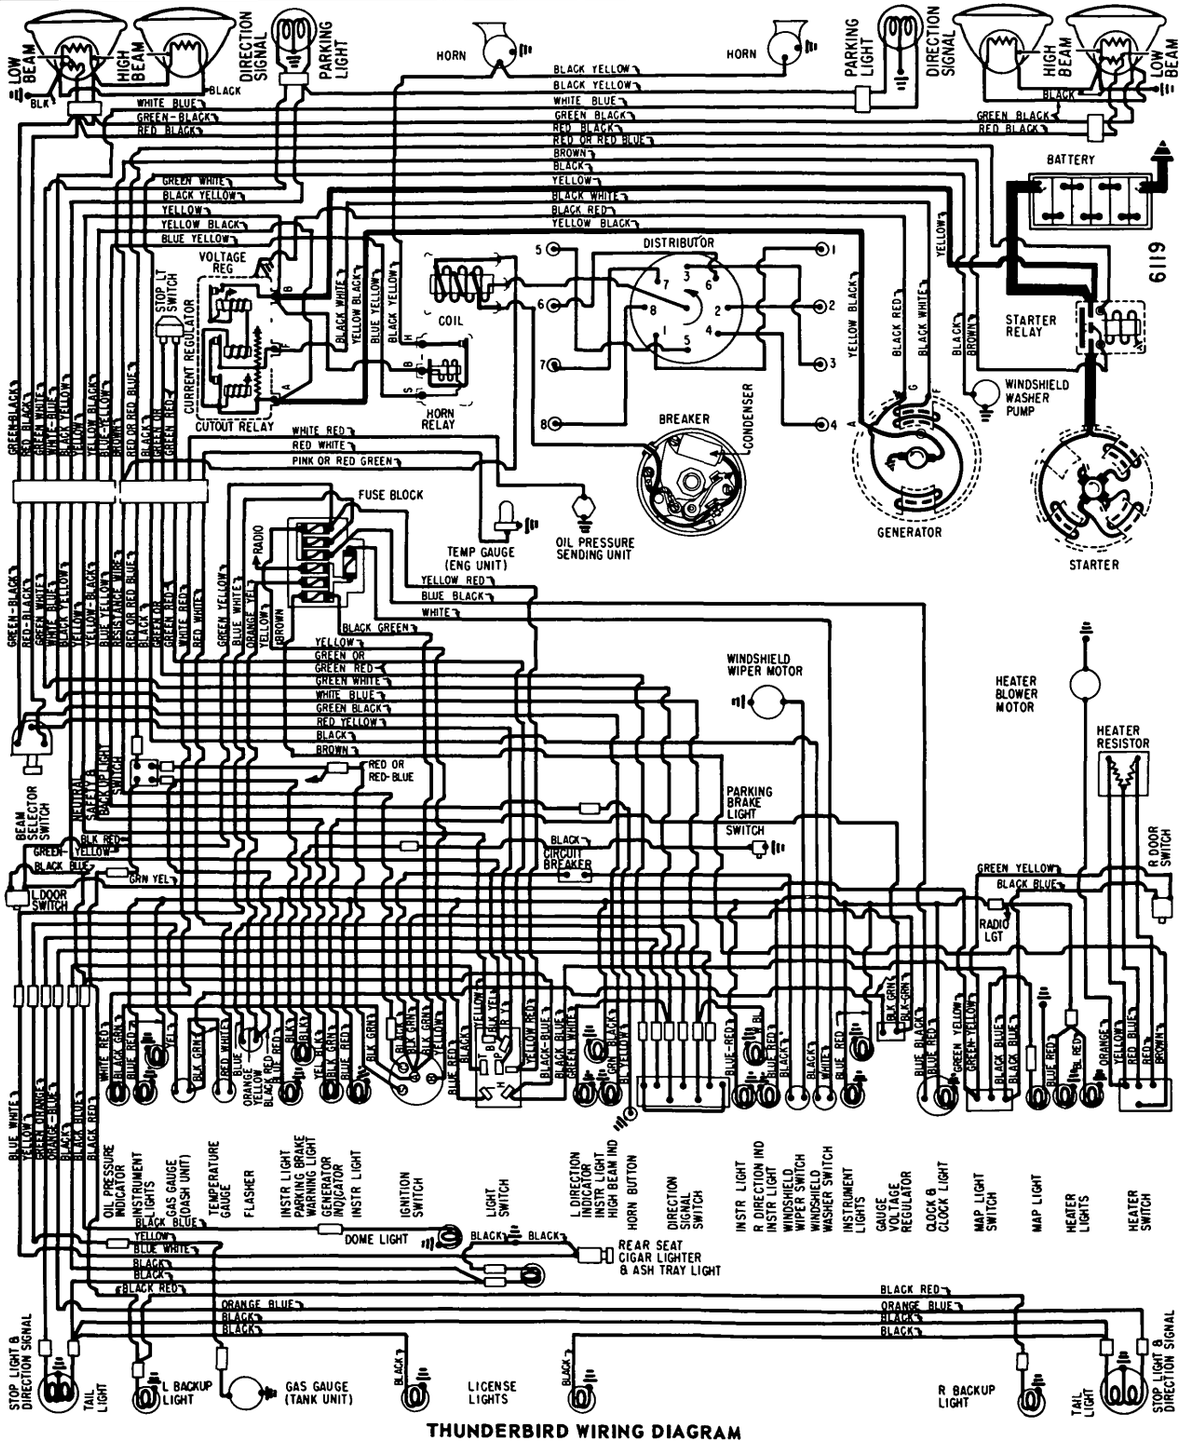
Battery Ground - Negative, to engine.

Engine Ground - Converter or flywheel housing to frame (6 Cyl.), Rear of cylinder head or intake manifold to body (Ford & Mercury V8), Generator mounting bracket to underbody (T-Bird)

STARTER

Ford No. B6A-11002-A (Ford Pass.), Ford & Mercury No. FAY-11002-A (Mercury & T-Bird). *NOTE - Starter FAY-11002-A identified by No. FAY-11001-A on tag attached to frame of starter.*

Armature - Ford No. B6A-11005-B (All).
Drive - Bendix "Folo-Thru". Ford No. 1CM-11350-C.



Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM, 155-190 amperes.

Performance Data - B6A-11002-A

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	80-110
14.8 ft. lbs.		5.0	580

CONTINUED ON NEXT PAGE

THUNDERBIRD WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Performance Data - FAY-11002-A

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	80-85
15.5 ft. lbs.		5.0	550

① - With starter on engine and engine idling.

Starting Switch: Magnetic type, Ford & Mercury No. B6A-11450-A, controlled by ignition switch.

Neutral Safety Switch (Aut. Trans.): As follows:

Car & Transmission	Ford & Mercury No.
Ford (2-Speed)	C1AA-7A247-A
Mercury Meteor 600 (2-Speed)	C1AA-7A247-A
Ford (3-Speed, Dual Range)	C1AA-7A247-B
Mercury Meteor 600 (3-Speed,DualRange)	C1AA-7A247-B
Other Mercury (3-Speed, Single Range)	C1MF-7A247-B
Other Mercury (3-Speed, Dual Range)	C1MF-7A247-A
Thunderbird (3-Speed, Dual Range)	C1SF-7A217-B

Adjustment - *See "Ford Motor Co. Automatic Transmissions" in Transmission Section.*

GENERATOR

Ford, Autolite & Delco-Remy. Used as follows:

Generator	Armature	Regulator
B9A-10002-A①	B6A-10005-C	B7A-10505-B
COTF-10002-C①	C1TF-10005-A	B7A-10505-B
C1TF-10002-A①	C1TF-10005-A	B7A-10505-B
C1TZ-10002-A①	C1TZ-10005-A	B7A-10505-B
COAF-10002-A②	B8A-10005-A	COMF-10505-A
COAZ-10002-C②	B8A-10005-A	COMF-10505-A
B8QH-10002-A③	B8QH-10005-A	B8E-10505-C
COTF-10002-B③	B8QH-10005-A	B8E-10505-C
B6A-10002-F④	B6C-10005-C	C1TF-10505-D
COAF-10002-B⑤	C1AF-10005-A	COAF-10505-B

① - 30 Amp. Ford type. ② - 35 Amp. Ford type.
③ - 40 Amp. Ford type. ④ - 40 Amp. Autolite type.
⑤ - 40 Amp. Delco-Remy type.

►*CHARGING CIRCUIT FUSE CAUTION (DELCO-REMY REGULATOR): Battery charging circuit protected by fuse, Ford & Mercury No. COAF-10602-A, clipped to BAT terminal of generator regulator. Check for blown fuse when diagnosing battery, generator, or regulator failure.*

Performance Data

Generator	Amperes	Volts	Gen. RPM
Ford 30 Amp.	30	15.0	2525
Ford 35 Amp.	35	15.0	2670
Ford 40 Amp.	40	15.0	2650
Autolite 40 Amp.	40	15.0	1800
Delco-Remy 40 Amp	40	15.0	2300

Brush Spring Tension - Ford 32-40 ozs., Autolite 34-41 ozs., Delco-Remy 28 ozs.

Field Current - 1.2-1.8 amps. (Ford & Autolite), 2.4-3.0 amps. (Delco-Remy), at 12 volts, Hot.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: Use Burroughs Belt Tension Gauge No. 33-73F or equivalent and measure belt tension as follows:

Belt Tension Specifications (Lbs.)

Engine	①New Belt	②Used Belt
223, 292 (Exc. 40 Amp. Gen.)	90-120	60-90
223 (40 Amp. Gen.)	100-120	80-110
352, 390	100-130	80-110

① - Run belt for 5 minutes and reset tension.
② - Any belt operated 10 minutes or longer.

GENERATOR REGULATOR

Regulator	Generator
B7A-10505-B①	B9A-10002-A, COTF-10002-C
B7A-10505-B①	C1TF-10002-A, C1TZ-10002-A
COMF-10505-A②	COAF-10002-A,COAZ-10002-C
B8E-10505-C③	B8QH-10002-A, COTF-10002-B
C1TF-10505-D④	B6A-10002-F
COAF-10505-B⑤	CCAF-10002-B

① - Ford 30 Amp. ② - Ford 35 Amp. ③ - Ford 40 Amp.
④ - Autolite 40 Amp. ⑤ - Delco-Remy 40 Amp.

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE (DELCO-REMY).*

►*SETTING CAUTION:* "Temperature Compensated" type. Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.

Cutout Relay

Cuts In - 12.0-12.8 volts (30 Amp.), 12.4-13.2 volts (35 Amp.), 12.3-13.5 volts (40 Amp. Ford & Delco-Remy), 12.5-13.9 volts (40 Amp. Autolite).

Cuts Out - 6-9 amps. (30 Amp.), 8 amps. (35 Amp., 40 Amp. Ford & Delco-Remy), 2-6 amps. (40 Amp. Autolite) reverse current.

Voltage Regulator

Setting (Ford & Autolite) - 14.6-15.4 volts (Ford), 14.2-14.9 volts (Autolite) at 75°F ambient temperature.

Setting (Delco-Remy) - 14.6-15.4 volts at 75°F ambient temperature when operating on upper contacts. .1-.3 volts lower when operating on lower contacts.

Current Regulator

Setting (30 Amp.) - 28-32 amperes.

Setting (35 Amp.) - 33-37 amperes.

Setting (40 Amp.) - 38-42 amperes (Autolite), 39.5-44.2 amperes (Ford & Delco-Remy), at 75°F ambient temperature.

►*OTHER DATA: See "Ford Motor Co. 12-Volt Regulators", or "Autolite 6 & 12-Volt B Circuit Regulators", or "Delco-Remy 1119600 Series Double Contact Regulators" in Electrical Section.*

ALTERNATOR & REGULATOR

Leece-Neville Type. Ford & Mercury No. C1AF-10346-A with Regulator No. B8Q-10505-A. Three phase type with externally mounted rectifier.

►*OTHER DATA: See "Leece-Neville Alternator & Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 4-Headlight System.

Stop Light Switch Location: On forward end of brake master cylinder.

Lighting Switch: Combination lighting switch and fuse junction block.

Removal - Disconnect battery. Remove switch control knob and shaft by pressing spring-release button on top of switch (switch in "off" position). Unscrew retaining nut and remove switch. Remove retaining clip (Ford & Mercury) and separate switch from fuse junction block (All Cars).

Instrument Cluster Removal: Ford - Disconnect battery and remove steering column cover plate. Turn automatic transmission indicator needle down on shifting shaft. Disconnect speedometer cable and instrument cluster wiring harness from retaining clips at rear of panel. Protect steering column from scratches. Remove instrument panel retaining screws and pull cluster from panel and lay on steering column. Disconnect the wires to the gauges and instruments, remove the lights, and remove cluster assembly. *NOTE* - Individual instruments may be removed after assembly removed from car.

Mercury - Disconnect battery. Disconnect speedometer cable and remove wires from retaining clip on clock right hand retaining nut. Remove wires from two clips holding harness to back of instrument cluster. Protect steering column from scratches. Remove automatic transmission selector lever cover as follows: On Meteor 600, remove cover attaching screws and remove cover. On other models, pull trim from below selector dial, remove pointer mechanism attaching screws from bottom of steering column and remove selector cover-to-instrument panel attaching screws. Remove selector cover. *NOTE - May be necessary to remove screw on bottom side of steering column which attaches shroud to steering column.* On Meteor 600, place selector lever in "Low" position. On all cars, remove instrument cluster-to-instrument panel retaining screws (four long screws on top, four short screws on bottom, two screws just above steering column). On Meteor 600, turn transmission pointer to one side. On all cars, pull instrument cluster forward and lay on steering column. Remove wires from gauges and lights or individual instrument as necessary.

Speedometer Removal (Thunderbird): Remove chrome trim ring (attached by one screw). Remove speedometer mounting screws and pull speedometer from instrument panel so speedometer cable can be disconnected and pilot lights removed. Remove speedometer. *NOTE - When installing, pilot lights must be secure in mounting holes. Top pilot light is high beam indicator.*

Cruise Control: Automatic speed control and warning device. *See "Cruise Control" in Carburetion Section.*

CIRCUIT BREAKERS: 1) Circuit breaker (18 Ampere - Mercury) built into lighting switch protects headlights. **2) 12 Ampere** - Windshield wiper. On lower edge of instrument panel.

FUSES: *NOTE - On Ford & Mercury, fuses are located in fuse junction block of lighting switch. On Thunderbird, fuses are in fuse block on left hand air duct. All fuses are in above locations except as noted.*

15 Ampere - Parking, Tail, Stop, Instrument Panel, & Interior lights.
15 Ampere - Overdrive circuit. On overdrive relay.
14 Ampere - Heater Blower.
14 Ampere - Direction Signals & Back-up lights.
14 Ampere (T-Bird) - Windshield Washer Pump.
7.5 Ampere (Ford & Mercury) - Windshield Washer Pump. In feed wire.
7.5 Ampere - Radio.
1 Ampere - Clock.
Cigar Lighter - Sulphur disc or reset circuit breaker on back of lighter.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head. 292", 352" & 390" engines of same design used previously.

Engine	Bore	Stroke	Displacement
292	3.75"	3.30"	292 cu. ins.
352	4.00"	3.50"	352 cu. ins.
390	4.05"	3.78"	390 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
292	8.8-1	45.00	175 at 4200 RPM
352	8.9-1	51.20	220 at 4400 RPM
390	9.6-1	52.49	300 at 4600 RPM
390 ①	9.6-1	52.49	330 at 5000 RPM
390 ②	10.6-1	52.49	375 at 6000 RPM

① - Police Special. ② - High Performance.

Compression & Vacuum Reading - *See TUNE-UP.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Ford Motor Co. Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Motor Co. Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Motor Co. Special Data.*

►*1961 352 & 390 ENGINES OIL LEAK AT OIL PAN CORRECTION:* If oil leak exists at screws holding oil pan to rear main bearing cap, install plastic coated spring washer, No. 373994-S, on oil pan retaining capscrews. *NOTE* - I.D. of washer is smaller than O.D. of capscrew, making it necessary to thread washer onto screw.

OIL PAN REMOVAL: 292 - Drain crankcase and disconnect oil pump inlet tube at oil pump. Remove oil pan retaining screws and remove oil pan. *NOTE* - On Mercury, remove ends of stabilizer bar from mounting studs and pull ends of bar down to provide clearance for oil pan removal.

352 & 390 (Except T-Bird) - Drain crankcase and remove dipstick. Place No. 1 piston at TDC. On Ford, remove flywheel housing lower cover. On Mercury, remove stabilizer bar from mounting studs and pull ends of bar down for clearance. On all cars, remove oil pan retaining screws and let pan rest on frame crossmember. Swing oil pump pick-up tube and screen out of way or let drop into oil pan. Remove oil pan by moving forward and tilting down.

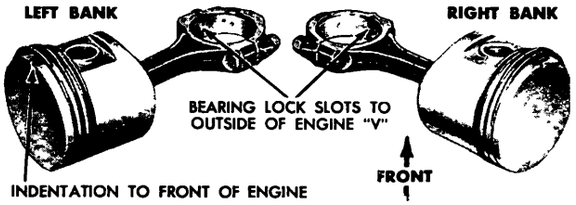
390 (T-Bird) - Drain crankcase and cooling system. Disconnect radiator upper hose at supply tank. Remove oil pan retaining screws and let pan rest on underbody crossmember. Rotate crankshaft so counterweight will clear pan and move pan forward. Raise engine so there is tension on front engine mounts, disconnect mounts and raise engine so oil pump retaining bolts can be removed. Remove oil pan and pump.

PISTONS

Autothermic type. Solid skirts with three rings.

►*ORIGINAL BORE & PISTON NOTE:* Production standard cylinder bore range is .024" on all engines. Pistons used in this standard bore are 2 sizes, coded Red and Blue. Production cylinder bore may also be .003" Oversize with .003" Oversize pistons. *See tables below for specifications.*

Production Cylinder Bore Range



Engine	Standard	.003" Oversize
292	3.7500-3.7524"	3.7524-3.7536"
352	4.0000-4.0024"	4.0024-4.0036"
390	4.0500-4.0524"	4.0524-4.0536"

Production Piston Sizes

Engine	Red - Standard - Blue	.003" Oversize
292	3.7486-3.7492"	3.7498-3.7504"	3.7510-3.7516"
352	3.9982-3.9988"	3.9994-4.000"	4.0006-4.0012"
390	4.0477-4.0483"	4.0489-4.0495"	4.0501-4.0507"

Removal - Pistons and rods removed from above.

Clearance - **292** .0008-.0026", **352** .0012-.0030", **390** .0017-.0035". Wear limit .006" (All).

V8 ENGINE PISTON & ROD ASSY.

Checking Clearance & Fitting New Pistons - *See "Original Bore & Pistons" in Ford Motor Co. Special Data.*

Installing Pistons - Install pistons with notch in piston head toward front of engine. *See Rod Installation.*

Replacement Pistons: Ford - Furnished Std. (1 size only), and .020", .030", .040" (All), .060" (292 & 352) Oversize with fitted pins.

Mercury - Furnished Std. (2 sizes - Red & Blue), and .020", .030", .040" Oversize with fitted pins.

PISTON PIN

Floating type with lock ring at each end.

Diameter - **292** .9120-.9123", **352 & 390** .9750-.9753".

Length - **292** 3.010-3.030", **352 & 390** 3.156-3.170".

Clearance in Piston - .0001-.0003". Wear limit .0008". Thumb press fit at 70°F.

Clearance In Rod - .0001-.0005". Wear limit .001". Light thumb press fit at 70°F.

Replacement Pins: Std. (Code Green), .001" (Code Blue), .002" (Code Yellow) Oversize.

PISTON RINGS

Two compression rings and one oil ring per piston. Oil ring is "Side Sealing" type (two steel rails with spring spacer between).

292 Engine

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0775-.0780"	.010-.020"	①.0020-.0035"
Compr. (2)	.0770-.0780"	.010-.020"	①.0020-.0040"
Oil (3)		.015-.055"	②

352 & 390 Engines

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0774-.0781"	.015-.025"	①.0024-.0041"
Compr. (2)	.0930-.0940"	.015-.025"	①.0020-.0040"
Oil (3)		.015-.055"	②

① - Wear limit .006".

② - Snug. Side sealing type ring.

Replacement Rings: Furnished Std. & .020", .030", .040" Oversize. Also .060" Oversize for Ford 292 & 352 engines.

CONNECTING ROD

Length (Center-to-Center) - **292** 6.320-6.324", **352** 6.538-6.542", **390** 6.486-6.490".

Journal Diameter (Std. Size)

Engine	Red	Blue
292	2.1884-2.1888"	2.1880-2.1884"
352 & 390	2.4384-2.4388"	2.4380-2.4384"

Lower Bearing - Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.

Clearance - **292** .0005-.0024". Wear limit .0034". **352 & 390 (Exc. T-Bird)** .0006-.0026". Wear limit .0038". **390 (T-Bird)** .0006-.0031". Wear limit .0038".

Sideplay - .006-.016". Wear limit .019".

Installing Rods - Install rods in correct numbered cylinder with oil squirt hole to center of engine, bearing lock slots to outside of engine, and notch in piston head to front of engine.

Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030", .040" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

CRANKSHAFT

Journal Diameter (Std. Size)

Engine	Red	Blue
292	2.4984-2.4988"	2.4980-2.4984"
352 & 390	2.7488-2.7492"	2.7484-2.7488"

Bearings - Steel backed copper lead alloy.

Engine	Main Bearing Clearance	Wear Limit
292	.0006-.0032"	.0042"
352	.0006-.0031"	.0039"
390 T-Bird	.0007-.0029"	.0039"
390 Police	.0008-.0012" (No. 1)	
	.0006-.0027" (Others)	
390 Others	.0006-.0031"	.0039"

Replacement Bearings: Furnished Std. (2 sized marked Red and Blue), and .002", .010", .020", .030", .040" Undersize.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.

End Thrust: Taken by No. 3 (center) main bearing.

Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Motor Co. Special Data.*

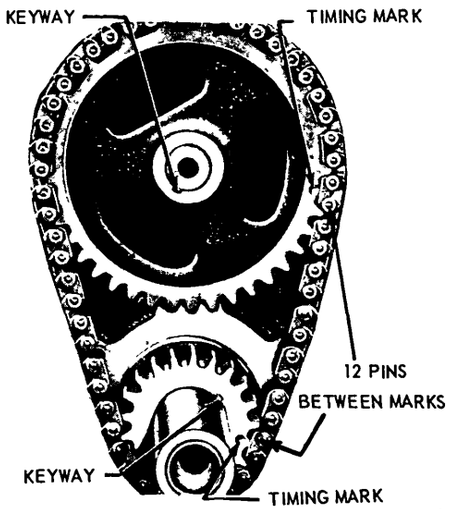
Endplay - .004-.008". Wear limit .012".

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Motor Co. Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

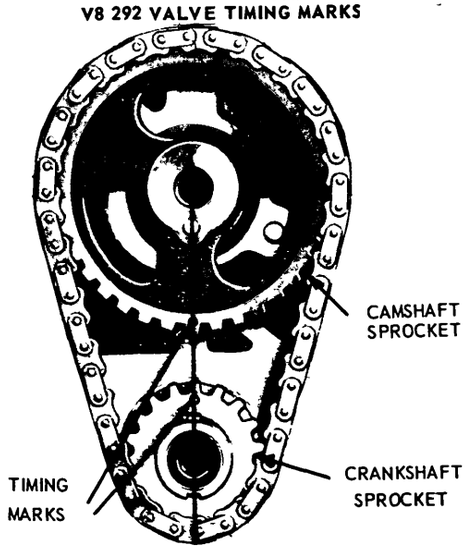
►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all car and truck engines to reduce oil

CONTINUED ON NEXT PAGE



See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE



leakage at front oil seal. Slinger is held in place by crankshaft pulley hub and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

CAMSHAFT

Journal Diameter - 292 1.9255-1.9265", **352 & 390** 2.1238-2.1248".
Bearings - Steel backed babbitt lined bushings.
Clearance - .001-.003". Wear limit .006".
End Thrust: 292 Taken by thrust plate and spacer located between camshaft sprocket and shoulder on camshaft. **Endplay** - .001-.007". Wear limit .012". **352 & 390** - Controlled by spring-loaded thrust button on fuel pump eccentric bolt.
Replacement Bearings: Std. & .015" Undersize.
Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*
Timing Chain: Side guide type. **Length** - 56 links (292) 48 links (352 & 390).
►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds ½" (take up slack on driving side, measure slack on opposite side). Remove and install chain as a unit with both sprockets.
Camshaft Setting (292): Sprockets marked by round depression on one tooth. Mesh chain so that there are 12 chain link pins between timing marks on sprockets when marks are on drive side.
Camshaft Setting (352 & 390): Timing marks on both sprockets adjacent and in line with straightedge across shaft centers.
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Motor Co. Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

V8 292 VALVE TIMING MARKS

V8 352" & 430" ENGINE VALVE TIMING MARKS

VALVES

Tappet Clearance: 292 .019" Hot & Cold, All Valves. *For preliminary adjustment after overhaul, see "Valve System" in Ford Motor Co. Special Data.*
352 & 390 Std. - Zero lash, hydraulic lifters. *For hydraulic lifter operating range check, see "Valve System" in Ford Motor Co. Special Data.*
390 High Perf. & Police - .028" Cold, .025" Hot, All Valves. *For preliminary adjustment after overhaul, see "Valve System" in Ford Motor Co. Special Data.*

352 Engine

Valve	Head Diameter	① Stem Diameter
Intake	2.022-2.2037"	.3711-.3718"
Exhaust	1.551-1.566"	.3693-.3700"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	45°③	.232"	④ .0010-.0024"
Exhaust	45°③	.232"	⑤ .0028-.0042"

390 Engine

Valve	Head Diameter	① Stem Diameter
Intake	2.022-2.037"	.3711-.3718"
Exhaust	1.551-1.566"	.3693-.3700"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	45°③	⑥ .2316"	④ .0010-.0024"
Exhaust	45°③	⑥ .2316"	⑤ .0028-.0042"

① - Furnished with .003", .015" & .030" Oversize stems.
② - Cam lobe lift. Wear limit .005".
③ - Valve Face Angle 44°.
④ - Wear limit .0045". ⑤ - Wear limit .0055".
⑥ - Std. Engine. .298" High Perf., .264" Police.

Valve Seat Width - .070-.090" All Engines, All Valves.
Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seals with cup side down over valve guide.
►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Ford Motor Co. Special Data.*
Valve Springs: Single spring used on 292 & 352 engines. Spring and damper used on all 390 engines.
Spring Free Length - 292 2.09", **352** 2.26", **390 Std.** 2.15", **390 High Perf. & Police** 2.09".

Spring Specifications - 292

Valve	Spring Pressure	Length
Closed	71-79 lbs. ①	1.780"
Open	161-177 lbs. ②	1.390"

Spring Specifications - 352

Valve	Spring Pressure	Length
Closed	94-104 lbs. ③	1.820"
Open	180-198 lbs. ④	1.420"

⑤ **Spring Specifications - 390 Std.**

Valve	Spring Pressure	Length
Closed	74-85 lbs. ⑥	1.820"
Open	190-208 lbs. ⑦	1.420"

⑤ **Spring Specifications - 390 High Perf. & Police**

Valve	Spring Pressure	Length
Closed	80-90 lbs. ⑧	1.820"
Open	255-280 lbs. ⑨	1.320"

① - Wear limit 64 lbs. at 1.780".
② - Wear limit 145 lbs. at 1.390".
③ - Wear limit 89 lbs. at 1.820"
④ - Wear limit 163 lbs. at 1.420".
⑤ - Spring and damper assembly together.
⑥ - Wear limit 62 lbs. (Ford), 67 lbs. (Mercury & T-Bird) at 1.820".
⑦ - Wear limit 171 lbs. at 1.420".
⑧ - Wear limit 72 lbs. at 1.820".
⑨ - Wear limit 230 lbs. at 1.320".
Valve Spring Installation: Spring ends must be square within .073" (292), .072" (352), .075" (390). Install springs with damper (closed) coil end down toward cylinder head. *NOTE - On 390 Engines, end of damper spring coil must be 135° counterclockwise from coil end of valve spring.* Check installed height of spring which must not exceed 1 25/32" (292), 1 27/32" (352, 390) from surface of cylinder head spring pad to underside of spring retainer. If height greater, install .030" spacers as necessary on head under spring to bring height within limits of 1 3/4-1 25/32" (292), 1 13/16-1 27/32" (352 & 390). *CAUTION - Install spacers only if necessary. DO NOT use more than 2 spacers (will overstress springs and overload camshaft lobes).*
Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems. *See "Valve System" in Ford Motor Co. Special Data.*
Valve Lifters (292): Mechanical, mushroom type. Remove from below after camshaft removed.
Clearance - .0011-.0027". Wear limit .0055".
Valve Lifters (352 & 390): Hydraulic (Std. Engine), Mechanical (High Perf. & Police Engines) barrel type. Can be removed through pushrod holes without disturbing valve chamber cover or manifold.
Clearance - .0005-.0020". Wear limit .005".

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Motor Co. Special Data.*
Crankcase Capacity: 5 qts. refill, 6 qts. with filter change.
Normal Oil Pressure: 292, 352, 390 Std. 35-55 lbs. at 2000 RPM. **390 High Perf. & Police** 52-72 lbs. at 2000 RPM.
Pressure Regulator Valve - In pump body, not adjustable.
Oil Pressure Indicator: Indicator light on instrument panel controlled by Engine Oil Pressure Switch, Ford & Mercury No. B6A-9278-B.
Oil Pump: Rotor type driven by distributor through intermediate drive shaft. Located outside crankcase on left side (292), inside crankcase at front (352 & 390).
Pump Overhaul - *See "Oiling System" in Ford Motor Co. Special Data.*
Oil Filter: Full flow, disposable type. Replace every 4000 miles.
Filter Replacement - Coat gasket face of filter with oil, thread filter on bracket by hand until gasket contacts adapter face, then tighten filter an additional ½-turn. Run engine and check for leaks. *CAUTION - Do not overtighten.*
Crankcase Ventilation: Conventional - Filter in oil filler cap (inlet) and ventilation (road draft) tube at rear of engine. Clean and lubricate filler cap filter every 4000 miles.
Positive - Road draft tube replaced by an adapter, tubing, and hose routed to ventilation valve installed in intake manifold. Service system at regular intervals and check valve operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*
►*OIL FILLER CAP & PIPE CAUTION:* Oil filler cap used on Closed Crankcase Ventilation engines has a rectangular opening on each side of retaining spring clip. DO NOT use this cap on engines with conventional ventilation system. Oil filler pipe on all 352 engines and 390 engines with conventional ventilation system has an air scoop. When installing this pipe, open end of air scoop must be to front of engine.

ENGINE COOLING SYSTEM

Water Capacity: 19 qts. Add 1 qt. with heater.
Pressure Valve: Ford & Mercury No. B8A-8100-A. 12-15 lb. radiator filler cap.
Thermostat: Located in water outlet connector. Ford & Mercury No. COAZ-8575-A (160°) Std. No. COAZ-8575-B (178°) for use with permanent type anti-freeze.
Water Pump: Packless, sealed ball bearing type.
Pump Overhaul - *See "Cooling System" in Ford Motor Co. Special Data.*
Fluid Fan Drive: Used on Air Conditioned Cars. *See "Cooling System Notes" in Ford Motor Co. Special Data.*
Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator, Ford & Mercury No. B9MF-10804-A.
Dash Unit - Ford & Mercury No. C1AF-10970-A (Pass.), Ford No. C1SF-9307-A (T-Bird - Fuel & Temp. Gauge Unit).
Engine Unit - Ford & Mercury No. B7A-10884-A (Std.), No. C1AZ-10884-A (Air Cond.).

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level at 4,000 mile intervals. Drain and refill transmission only when disassembled for repair. Use only Ford Automatic Transmission Fluid C1AZ-19582-A or Automatic Transmission Fluid Type A, Suffix A.

Checking Fluid Level: With parking brake applied, engine and transmission at normal operating temperature, engine idling at normal idle speed, and car standing on a level floor, shift transmission selector lever through all positions, then place selector lever in "P" (Park) position. Check fluid level on dipstick. Add sufficient fluid through filler tube to bring level to "F" (Full) mark on dipstick. *CAUTION - Do not overfill.*

Capacity: 10 qts. approximately.

CHASSIS LUBRICATION: The steering knuckle ball joints and steering connector rod ends are packed with special lubricant and sealed. Lubrication fittings have been eliminated at these points. However, service plugs are provided in steering knuckle ball joints and steering connector rod ends so they may be repacked when necessary.

►*LUBRICATION CAUTION: Engine accessories (generator, distributor, etc.), steering gear, wheel bearings, transmission, rear axle and universal joints must be checked and lubricated at intervals recommended by manufacturer.*

►*SPECIAL LUBRICANT RECOMMENDATION CAUTION: Only the recommended lubricants (see below) are to be used when servicing steering knuckle ball joints and steering connector rod ends. Other lubricants will cause early failure of parts.*

Lubrication (Except T-Bird): Every 30,000 miles or 2 years, remove lubrication service plugs (threaded) from upper and lower steering knuckle ball joints (four locations) and from steering connector rod ends (five locations) and install lubrication fittings. Lubricate all fittings with Lubricant, Part No. C1AZ-19590-A. then replace threaded service plugs.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*"ECONOLINE" TRUCK NOTE: This model is E-100 Series. Data for this series is listed below.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate on rear face of left front door inner panel, or on left front cab pillar, or glove box door, or right hand dash panel, depending on truck model. *Number (example below) includes identification data.* ① ② ③ ④

C55 C U 100001

① - Letter and number (first two digits of series designation). See Truck Model Table below.
② - Engine Type Code. See Engine Code Table below.
③ - Assembly Plant. See Assembly Plant Table.
④ - Consecutive Unit No. Code. Starting with 100,001 for October 1960 through 249,999 for December 1961.

Engine Code Table

Letter	Engine Type	Sales Designation
S		144 Six
A	(Economy)	223 Six
J	(Standard)	223 Six
B		262 Six
C	(2-Bbl. Carb.)	292 V8
D	(4-Bbl. Carb.)	292 V8

Truck Model

Letter	Type	Letter	Type
E	Econoline	B	School Bus
F	Conventional	P	Parcel Delivery
C	Tilt Cab		

Number	Size
100, 250, 350, 400	Light Duty
500, 550, 600	Medium Duty

Assembly Plant

A - Atlanta	H - Lorain	E - Mahwah
G - Chicago	U - Louisville	R - San Jose
D - Dallas	N - Norfolk	S - Pilot Plant
K - Kansas City	P - St. Paul	

►*ENGINE DESIGNATION NOTE: In the following data pages, engines will be referred to as follows:*

Engine	Designation
6 Cyl. 144"	144
6 Cyl. 223"	223
6 Cyl. 262"	262
V8 292" 2-Bbl. Carb. Medium Duty	292MD
V8 292" 4-Bbl. Carb. Heavy Duty	292HD

TUNE-UP

COMPRESSION PRESSURE: 144 170±20 lbs., 223, 262, 292 150±20 lbs. All at cranking speed. Cylinders must be equal within 10 lbs.

VACUUM READING: 18" at idle speed (All Engines).

VALVE TAPPET CLEARANCE: Can be set with engine cold but must be rechecked with engine at operating temperature (30 minutes operation at 1200 RPM) and idling. Use step-type feeler gauge only (.001" undersize for "go"; .001" oversize for "no go").

Cold Clearance - 144 .018" All Valves. 223, 262, 292 .019" All Valves.

Hot Clearance - 144 .018" All Valves. 223, 262 .019" All Valves. 292 .018" All Valves.

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE:* Torque required to turn screw (after interference noted) must be 3 ft. lbs. minimum.

MANIFOLD HEAT CONTROL: 144 - "Hot Spot" in intake manifold at lower center and engine coolant heater spacer between carburetor and intake manifold.

223 & 292MD - Automatic thermostatic type located at center of exhaust manifold (6 Cyl.), between crossover pipe and right exhaust manifold (292MD). Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM. Spring is installed with ¾-turn windup and hooked over stop pin. Valve must operate freely. Lubricate every 4000 miles with special Exhaust Gas Control Valve Solvent, Ford No. COAA-19A501-A.

262 - Automatic thermostatic type as for 223 & 292MD above, and also engine coolant heater spacer between carburetor and intake manifold.

292HD - None used.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

6 CYLINDER ENGINES

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: 144 .032-.036". 223, 262 .028-.032".

Spark Plugs - Champion F14-Y (144 & 170), 860 (223), F10 (262). 18 mm. Torque to 15-20 ft. lbs. *NOTE* - Plugs have tapered seat, no gasket used. Correct torque is important.

COIL: Ford No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - Ford No. COLF-12250-A. 1.30-1.40 ohms at 75°F. Pink resistance wire in harness between ignition switch and dash panel connector. Bypassed during cranking by lead from starter switch.

DISTRIBUTOR: Used as follows:

Engine	Type	① Distributor No.
144	Loadomatic	CODF-12127-A
223	Loadomatic	COAF-12127-G
262	"Step Stop"	C1TF-12127-C
262	"Step Stop"	② C1TF-12127-D

① - Stamped on distributor housing for identification.
② - Also daub of blue paint on distributor housing.
Condenser - Ford No. 7RA-12300-C.
Condenser Capacity - .21-.25 mfd.
Contact Point Set - Ford No. FAA-12171-A.
Cam Angle - 35-38°.
Breaker Gap - .024-.026".
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Clockwise viewed from above.

① Advance Performance - CODF-12127-A

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
0	0.33	400
½-1½	0.78	600
3½-4½	1.30	800
10-11¼	3.45	1400
12½-13¾	5.00	1800
12¾-14	5.35	2000

① - Set test stand at 0° at 300 RPM and 0" Hg.

② Advance Performance - COAF-12127-G

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
0	0.38	450
2½-3½	0.79	650
6¾-7¾	2.85	1100
8¾-9¾	4.33	1400
10¼-11¼	5.99	1800

② - Set test stand at 0° at 450 RPM and 0" Hg.

③ Advance Performance - C1TF-12127-C

Test	Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
A	0-1¼	0.42	400
A	5-6	1.03	800
A	7½-8½	1.62	1000
B	8½-9½	2.32	1200
C	8½-9½	5.65	2000
C	10½-11¾	7.30	1600
D	13	10.00	1600

③ - Set test stand at 0° at 250 RPM and 0" Hg.
A - Adjust primary spring. **B** - Adjust stop washers.
C - Adjust spring washers. **D** - Replace breaker plate assembly.

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION:* Scribe marks on distributor body to indicate rotor-to-body position and body-to-block position before removing. Align marks when installing. Make sure oil pump intermediate shaft engages distr. shaft properly.

V8 ENGINES

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .028-.032".
Spark Plugs - Champion 860 (292MD), F10 (292HD). 18 mm. Torque to 15-20 ft. lbs. *NOTE* - Plugs have tapered seat, no gasket used. Correct torque is important.

COIL: Ford No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - Ford No. COLF-12250-A. 1.30-1.40 ohms at 75°F. Pink resistance wire in harness between ignition switch and dash panel connector. Bypassed during cranking by lead from starter switch.

DISTRIBUTOR: Centrifugal & Vacuum Advance type used on 292MD, Centrifugal Advance only type used on 292HD, as follows:

Engine	① Distributor No.
292MD	COTF-12127-B
292HD	COTF-12102-C

① - Stamped on distributor housing for identification.
Condenser - Ford No. B9TF-12300-A (COTF-12127-B), No. B7A-12300-C (COTF-12102-C). **Capacity** - .21-.25 mfd.
Contact Point Set - Ford No. B7A-12171-A (COTF-12127-B). No. B8Q-12171-A (COTF-12102-C).
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

IGNITION TIMING

Engine	Std. Ignition Setting
144	4° BTDC
223 Synchro-mesh	4° BTDC
223 Auto. Trans.	6° BTDC
262	© 2° BTDC
292	6° BTDC

© - Allowable range 2-6° BTDC.

►*TIMING SETTING CAUTION:* Set timing with engine idling and vacuum line disconnected. Check advance operation by accelerating engine after vacuum line connected.

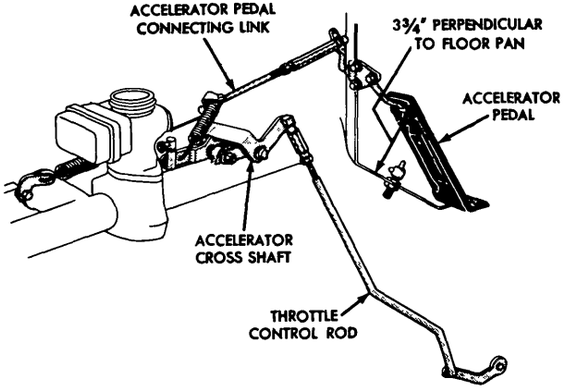
Timing Mark (144 & 292) - Notch or pin in crankshaft pulley and timing pointer on chain case cover. Pointer marked "0", "3", "6", "10". Align pulley notch or pin with correct mark on pointer.

Timing Mark (223) - Vibration damper marked by lines TDC (Long Mark) & 3°, 5°, 7°, 9°, BTDC (Short Marks). Align pointer on chain case cover with correct mark (or space between marks) on pointer.

Timing Mark (262) - Same as for 223 above except that vibration damper marks (after long mark) are 2°, 4°, 6°, 8°, 10°.

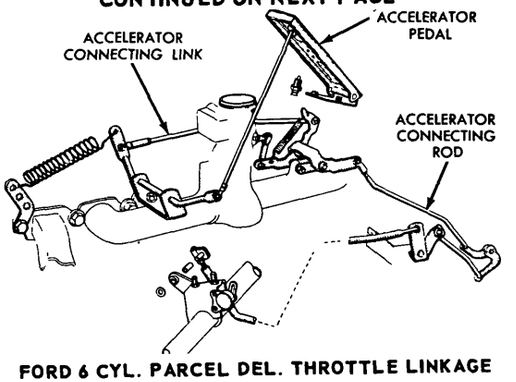
CARBURETOR

►*CARBURETOR APPLICATION: Holley carburetors used. "Visi-Flo" (1-Bbl.) used on 6 Cyl. 2-Barrel used on 292 MD, 4-Barrel used on 292 HD.*



Throttle Linkage Adjustment (6 Cyl. Fordomatic & Cruise-O-Matic): Adjust engine idle speed to 475-525 RPM in Drive and make anti-stall dashpot adjustment (see below). With engine stopped and carburetor on hot idle, remove lock from clevis pin on upper end of throttle control rod and loosen clevis locknut. Remove clevis and pull throttle control rod upward so throttle lever will be held against internal stop in transmission. Turn throttle rod clevis until pin enters hole in lever and **lengthen throttle rod 3 turns.** Connect throttle control rod, tighten locknut, install clevis lock. Measure accelerator pedal height from point where linkage connects to pedal to floor mat. Distance should be 3¾" (Exc. "P" Series). On "P" Series, measure distance from center of hole in cross shaft (for accelerator rod) to a line parallel to bottom line of bracket. Distance should be 1 7/8". To adjust, turn threaded adjusting sleeve on accelerator pedal adjusting link. Adjust pedal detent so it barely contacts pedal at full throttle. Make final adjustment by pressure method, see below.

Throttle Linkage Adjustment (V8 Fordomatic & HD Cruise-O-Matic: Adjust idle to 475-525 RPM in Drive range. Disconnect throttle control rod and carburetor connecting rod from cross shaft assembly. Insert a ⅛" gauge pin (¼" drill) through gauge holes. Hold connecting rod to normal operation position so throttle lever is solidly against idle adjusting screw. Adjust connecting rod length to fit freely into accelerator assembly lever, then turn adjusting sleeve **one full turn counterclockwise to lengthen rod.** Remove gauge pin and connect rod. Check alignment of gauge pin holes, and set throttle to hot idle position. Pin must enter freely. Readjust connecting rod as necessary. Remove gauge pin, pull upward on throttle control rod, so transmission lever is against its internal stop. Rotate adjusting sleeve so rod fits freely into accelerator lever assembly. Lengthen throttle control rod (turn adjusting sleeve counterclockwise) **three turns for approximate setting.** Connect control rod to accelerator assembly lever. Adjust pedal height to 3¾" measured from floor mat to point where linkage connects to pedal (Except "P" Series, so center of hole in cross shaft lever (for pedal rod) is 9/16" above horizontal ("P" Series). To adjust height, turn sleeve on accelerator pedal connecting rod. Adjust pedal detent so it just contacts pedal at full throttle. Make a final adjustment of throttle linkage by pressure method, see below.



Pressure Method of Throttle Linkag Adjustm nt: With carburetor or accelerator pedal linkage adjusted and transmission at normal operating temperature, apply parking brake. Stop engine, and remove threaded cap from pressure linkage tube (in engine compartment) and connect pressure gauge to tube using Tool T60L-7000-B so it can be read from drivers seat, then connect tachometer to engine. Note gauge reading at 1000 RPM. If pressure below 80 lbs. lengthen throttle rod by rotating sleeve. If pressure is over 85 lbs. shorten rod. Tighten locknut to hold rod adjustment.

Anti-Stall Dashpot Adjustment: After engine idle speed has been adjusted to specifications, loosen dashpot locknut. Hold throttle in hot-idle position, bottom dashpot plunger. Distance from plunger to throttle shaft lever should be .060-.090". Adjust by turning dashpot or dashpot adjusting nut.

FORD TRUCK (CONVENTIONAL) WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels feed 1-4-6-7.*

Idle Setting - *NOTE - Idle mixture adjusting needles used only on SECONDARY side (one on each side of Fuel Metering Block).* Initial setting 1-1½ turns open. Turn mixture needles in until engine runs rough (lean mixture), then back needles out until engine begins to roll (rich mixture). Turn needles in until engine runs smoothly. Always favor a rich mixture.

Idle Speed - (292 MD Synchro-mesh) 500-550 RPM, (292 HD (Synchro-mesh) 525-575 RPM, (All with Auto. Trans.) 475-525 RPM in Drive.

Fuel Level - At lower edge of sight plug opening (on side of bowl) ±1/16". To adjust, loosen lock screw on top of fuel bowl just enough to permit rotation of adjusting nut underneath. 1/6 turn of nut changes level 3/64". To lower level always lower float 1/2 turn, then raise in 1/6 turns as necessary.

Accelerating Pump - Inner hole (closest to throttle shaft) is for warm weather, Outer hole is for cold weather.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Fuel only or Fuel & Vacuum as follows:

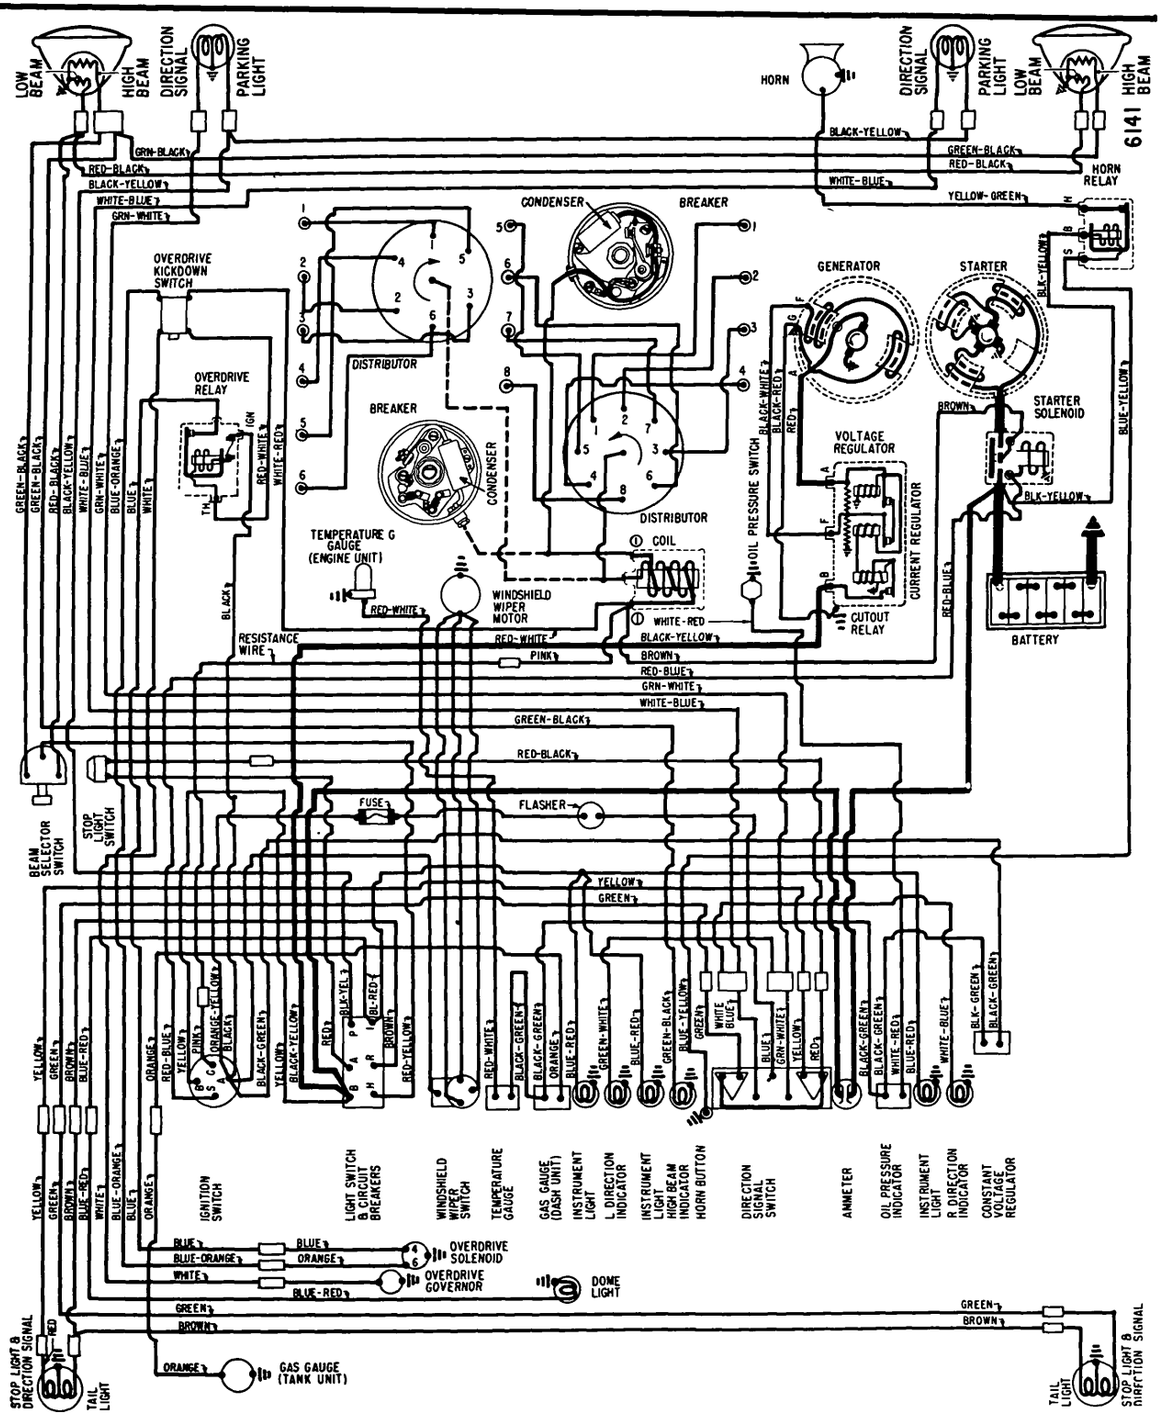
Engine	Ford Pump No.
144 Fuel Only	C1UE-9350-A
223 Fuel Only	B8A-9350-E
223 Fuel & Vacuum	B9A-9350-B
262 Fuel Only	C1TE-9350-A
262 Fuel Only (Carter)	C1TE-9350-C
292MD Fuel Only	B9TE-9350-A
292HD Fuel Only	B8T-9350-B

Fuel Pump Pressure - 144, 223, 262, 292MD - 3½-5½ lbs. at 500 RPM. **292HD** - 3½-6½ lbs. at 500 RPM.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator as follows:

Series & Body Type	Ford Regulator No.
E Series	B7A-10804-B
F & B Series (Cowl, No Windshield)	B7A-10804-B
F & B Series (Others)	B9MF-10804-A
P Series	B7J-10804-A
C Series	C0MF-10804-A

Dash Unit - As follows:



Series & Body Type	Ford Gauge No.
E Series	C1TF-9280-A
F & B Series (Cowl, No Windshield)	C1TF-9280-A
F & B Series (Others)	C1TF-9280-C
P Series	B7J-9280-A
C Series	C1TF-9280-B

Tank Unit - As follows:

Series & Body Type	Ford Gauge No.
E Series	C0DZ-9275-A
F & B Series ①②	C1TF-9275-C
F-100, 250, 350; All P Series ③④	B8C-9275-A
F-350③; F-500, 600; B-500, 600⑤	B8T-9275-A
C Series ⑤⑥	B8T-9275-A
P-350, 400, 500; F-500, 600; B-500, 600⑥	B8T-9275-A

① - Conventional Closed Cab & Pickups.
② - 18 gallon "in cab" tank. ③ - Without Cab.
④ - 17 gallon tank mounted inside frame.
⑤ - 18 gallon side mounted tank. ⑥ - 30 gallon tank.

FORD TRUCK (PARCEL DELIVERY) WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

Fu l Filt r: Disposable or replaceable element type in fuel inlet line, or magnetic type in fuel pump bowl, depending on truck model. Clean filter (except disposable type) every 8000 miles (On Highway), 4000 miles (Off Highway). Replace disposable type every 12,000 miles. Replace element type every 12,000 miles (Off Highway), 24,000 miles (On Highway).

Air Cl an r: Oil Bath and Dry Filter Element types used. Clean and replace as follows:

Air Cl an r Service Interval (Miles)

	On Highway		Off Highway	
Typ	Cl an	R place	Clean	Replace
Oil Bath	4,000		500	
Dry Type	4,000	24,000	500	12,000

►*DRY TYPE CLEANING CAUTION:* Clean element by directing a stream of compressed air from inside surface of element. DO NOT wash in solvent or other liquids. DO NOT oil or lubricate.

BATTERY

F rd N . CODZ-10654-A (E Series). 12 volt, 9 plate, 40 ampere hour capacity (20 hr. rate).

F rd N . CODZ-10654-B (E Series). 12 volt, 9 plate, 55 ampere hour capacity (20 hr. rate).

F rd N . B9A-10654-D (Exc. E & B Series). 12 volt, 11 plate, 55 ampere hour capacity (20 hr. rate).

F rd N . B6A-10654-C (Exc. E & B Series). 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).

F rd N . B9A-10654-F (B Series). 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

►*NOTE:* Batteries are dry type for service replacement.

Battery Gr und - Negative.

Engin Gr und - At flywheel housing (6 Cyl.), at left cylinder head (V8).

STARTER

Engin & Trans.	Starter No.
144 E Series, Synchro-mesh	① CODF-11001-D
144 P Series, Synchro-mesh	② B6A-11002-A
223, 262, 292 Synchro-mesh	② B6A-11002-A
223 Auto. Trans.	③ B8C-11002-A
292 Auto. Trans.	④ B7T-11002-A

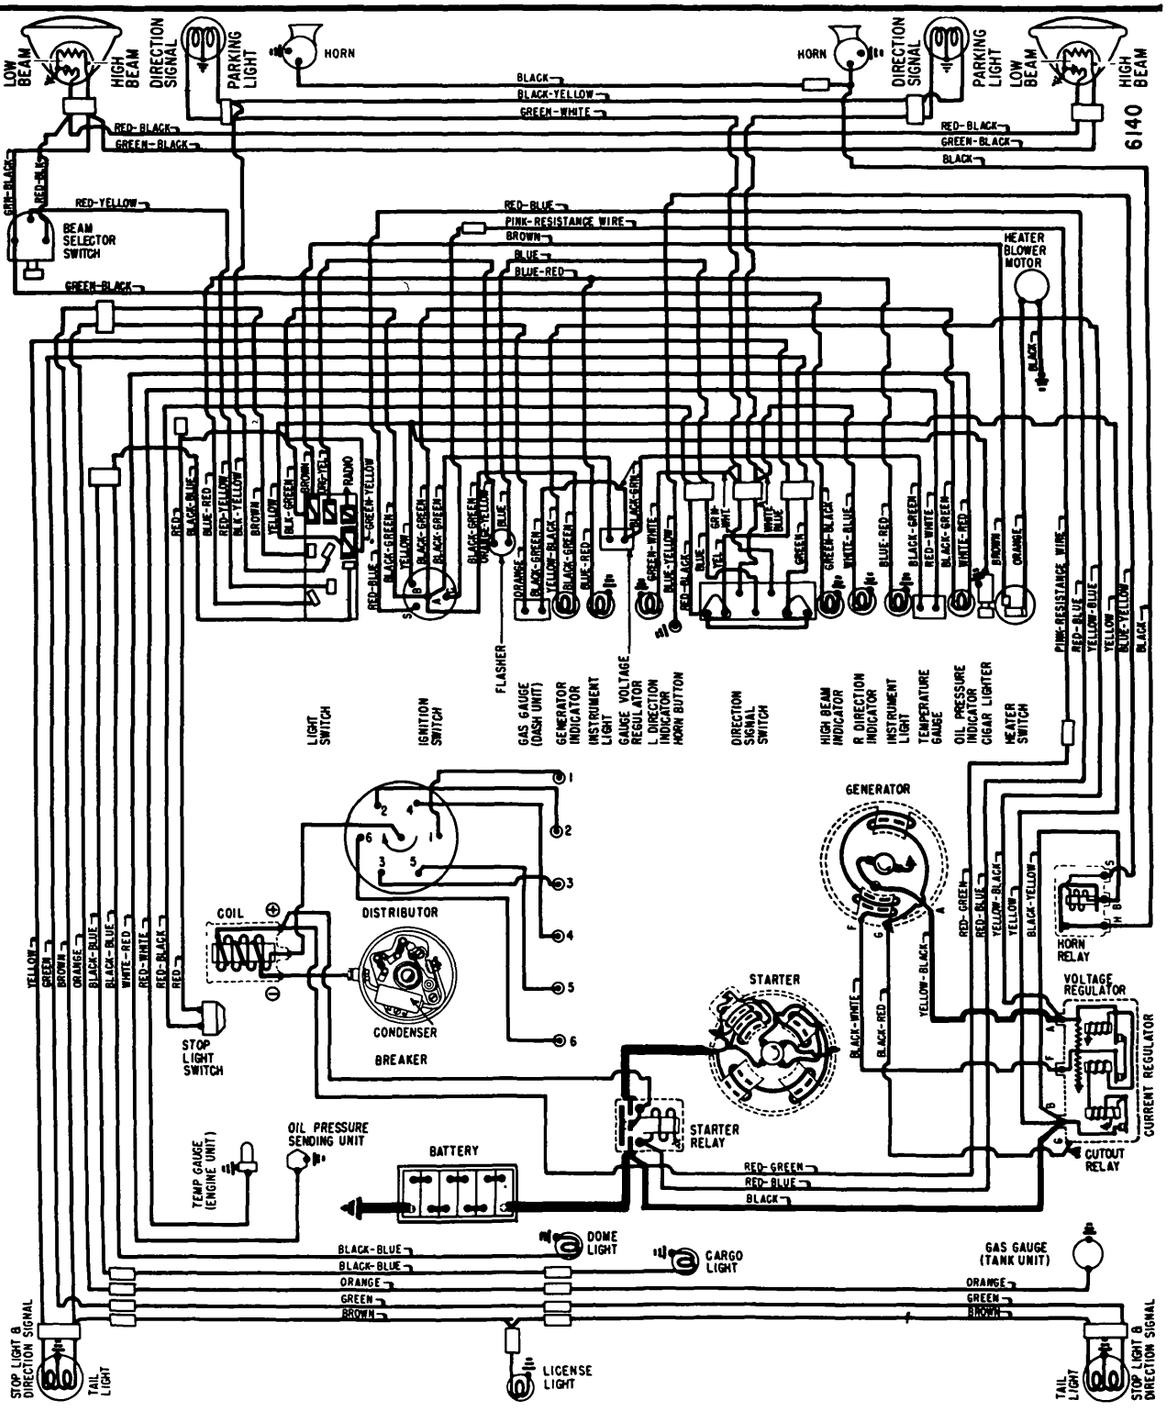
① - Ford Integral Positive Engagement type.
② - Ford Conventional type.
③ - Autolite No. MDF-6013.
④ - Delco-Remy type.

Armature - Ford No. CODF-11005-A (CODF-11001-D); No. B6A-11005-B (B6A-11002-A; No. B9TF-11005-B (B8C-11002-A); No. B8C-11005-A (B7T-11002-A).

Driv (CODF-11001-D) - Integral Positive Engagement type. Ford No. CODF-11350-A.

Drive (B6A-11002-A) - Bendix "Folo-Thru" type. Ford No. 1CM-11350-C.

Driv (B8C-11002-A) - Autolite Solenoid Pinion Shift type. Ford No. B6C-11350-A.



Driv (B7T-11002-A) - Delco-Remy Solenoid Pinion Shift type. Ford No. B8C-11350-A.

Rotation- Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs. (CODF-11001-D & B6A-1002-A); 42-53 ozs. (B8C-11002-A); 35 ozs. (B7T-11002-A).

Cranking Speed - 250-290 RPM (CODF-11001-D); 150-180 RPM (B6A-11002-A); 140-160 RPM (B8C-11002-A); 150-160 RPM (B7T-11002-A).

C1TF-10000-H, K, L, M, AA④	C1TF-10005-A	30 Amp.
COTF-10000-C⑤	B8QH-10005-A	40 Amp.

① - Serviced by C1DF-10002-A, replacing CODF-10002-C.
② - Serviced by C1DF-10002-A.
③ - Serviced by COTF-10002-C, replacing B9A-10002-A.
④ - Serviced by COTF-10002-C.
⑤ - Serviced by COTF-10002-B, replacing B8QH-10002-A.

Performance Data

Generator	Amperes	Volts	Gen. RPM
25 Amp.	25	15.0	2450
30 Amp. ①	30	15.0	2550
30 Amp. ②	30	15.0	2525
40 Amp.	40	15.0	2650

① - No. CODF-10000-D & C1DF-10000-B.
② - Others.

Brush Spring Tension - 20-26 ozs. (C1TF-10000-H, K, L, M, AA); 32-40 ozs. (Others).

Field Current - 1.2-1.8 amps. at 12.0 volts, hot.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: ½" deflection measured midway between generator and water pump pulleys with light thumb pressure (or use Tension Gauge No. 33-73F).

GENERATOR REGULATOR

F rd. As follows:

Regulator	Rating
CODF-10505-A	25 Amp.
B7A-10505-B, C1TZ-10505-A, C1TF-10505-A, B	30 Amp.
B8E-10505-C	40 Amp.

►*SETTING CAUTION:* "Temperature Compensated" type. Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.

Cutout Relay

Cuts In - 12.4-13.2 volts.

Cuts Out - 6-9 amperes discharge current.

Voltage Regulator

Setting - 14.6-15.4 volts at 75°F ambient temperature.

Current Regulator

Setting - 23-27 amps. (25 Amp.). 28-32 amps. (30 Amp.), 38-42 amps. (40 Amp.).

►*OTHER DATA: See "Ford Motor Co. 12-Volt Regulators" in Electrical Section.*

ALTERNATOR & REGULATOR

Leece-Neville Type. Three phase type with internal rectifier and three-unit regulator. As follows:

Alternator - Ford Nos. -	Regulator
C1TF-10300-D, E, G, H①②	PB8M-10316-A
COTF-10300-E; C1TF-10300-C, K ①③	PB8M-10316-A
C1TF-10300-F, J, M①④	PB8M-10316-A

① - 60 Amp. Type.
② - Serviced by No. C1TF-10346-B.
③ - Serviced by No. C1TF-10346-C.
④ - Serviced by No. C1TF-10346-D.

►*OTHER DATA: See "Leece-Neville Alternator & Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlights: 4-Headlight System.

Stop Light Switch Location: On brake master cylinder or on frame left side rail at brake pipe connector.

Lighting Switch Removal: Removal control knob and shaft by pressing spring-release button on switch housing (knob in "off" position). Turn shaft slightly and pull from switch. Remove retaining nut and remove switch, disconnecting wires, or unplugging fuse block.

Speedometer & Instrument Cluster Removal: *NOTE - Individual gauges (except speedometer) may be removed without removing instrument cluster.* Disconnect battery. Remove instrument cluster bezel mounting screws and tilt cluster toward steering column. Disconnect speedometer cable and remove speedometer mounting plate and all gauges from cluster. Remove speedometer retaining screws and remove speedometer.

CIRCUIT BREAKERS: 1) 12 Ampere - In headlight switch, protects headlight circuit and instrument panel lights.
2) 12 Ampere - On windshield wiper motor mounting bracket, protects electric windshield wiper.
3) 12 Ampere - On P Series only, in headlight switch, protects auxiliary lights.

FUSES: E, F, B, C Series - *Fuses located in fuse junction block of lighting switch except as noted.*
15 Amp re - Interior & Tail lights.
15 Amp r - Overdrive. On overdrive relay.
14 Amp re - Direction Signals (E Series).
14 Amp r - Heater Blower.
10 Amp r - Windshield Wiper Vacuum Pump. In feed wire.
7.5 Ampere - Direction Signals (F, B, C, Series).
7.5 Ampere - Radio.
P Series: 7.5 Ampere - Direction Signals. In lead from ignition switch.

ENGINE

ENGINE SPECIFICATIONS: Own. Valve-in-head. 6 Cyl. 144", 170", 223 & 262", and V8 292" engines used.

Engine	Bore	Strok	Displac ment
144	3.50"	2.50"	144 cu. ins.
170	3.50"	2.94"	170 cu. ins.
223	3.625"	3.60"	223 cu. ins.
262	3.718"	4.03"	262 cu. ins.
292	3.75"	3.30"	292 cu. ins.

Engine	Compr. Ratio	Rat d HP	D v l p d HP
144	8.7-1	29.4	90 at 4200 RPM
170	8.7-1	29.4	101 at 4400 RPM
223	8.4-1	31.50	135 at 4000 RPM
262	8.0-1	33.18	152 at 4000 RPM
292MD①	8.0-1	44.60	160 at 4000 RPM
292HD②	8.0-1	44.60	173 at 4000 RPM

① - Medium Duty - With 2-Bbl. Carburetor.
② - Heavy Duty - With 4-Bbl. Carburetor.

Compression & Vacuum Reading - *See TUNE-UP.*

►*ROCKER ARM COVER INSTALLATION NOTE (6 CYL.):* Torque cover attaching bolts to specifications twice, once initially and again after two minutes from initial torquing, to prevent oil leaks.

►*1961 223" & 262" ENGINES CYLINDER HEAD GASKET PRODUCTION CHANGE & INSTALLATION CAUTION:* "Sandwich" type gasket with steel core bonded between synthetic rubber-asbestos sheets for improved sealing used in all P Series trucks with 223" engine and in all 262" engines. Gasket also used in later production 223" engines used in all series trucks. Use this gasket for service replacement. *DO NOT us sealer on this gasket, and obs rv cylinder head tightening sequence and bolt torqu specifications. See "Cylinder Head & Manif ld" in Ford Motor Co. Special Data.*

CYLINDER HEAD: *See "Cylinder H ad & Manifold" in Ford Motor Co. Special Data.*

TIGHTENING TORQUES: *See "Tight ning Sp cifications" in Ford Motor Co. Special Data.*

ENGINE REMOVAL: *See "Engin " in Ford Motor Co. Special Data.*

OIL PAN REMOVAL (6 Cyl.): Drain crankcase and remove oil level dipstick. Remove flywheel housing inspection cover. Remove oil pan retaining screws and remove oil pan.

OIL PAN REMOVAL (V8): Drain crankcase and remove dipstick. Remove converter housing dust cover (Auto. Trans. Trucks). On C Series, position No. 1 piston at TDC. On all trucks, disconnect oil inlet tube from oil pump and remove "0" ring seal from tube. Remove oil pan retaining screws and remove oil pan.

CONTINUED ON NEXT PAGE

S INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

144" & 170" 6 CYLINDER ENGINES

►*See 1961 Comet & Falcon Passenger Car Pages.* Engines are similar to those used on these cars, and all car engine data applies to truck engines.

223" 6 CYLINDER ENGINE

►*See 1961 Ford & Mercury 6 Cylinder Passenger Car Pages.* Engine is similar to that used in 1961 Passenger Cars, and all car engine data applies to truck engine, *except the following*

Piston Clearance: .0008-.0023". Wear limit .005".
Piston Ring Gap: Compression Rings - .010-.020". **Oil Ring** - .015-.062".

262" 6 CYLINDER ENGINE

This 262" 6 Cylinder Engine is similar in design to 223" 6 Cylinder Engine. The camshaft is driven directly by a gear in mesh with the crankshaft gear instead of by a timing chain. The exhaust valves are "free turning" type.

►*See 1961 Ford & Mercury 6 Cylinder Passenger Car Pages for data on this engine. Specifications for 262" engine which differ from the 223" engine are listed below.*

Piston Clearance : .0008-.0023". Wear limit .005"
Cylinder Standard Bore : 3.7190-3.7214".
Connecting Rod Length (Center-To-Center): 6.043-6.047".
Crankshaft Journal Diameter: 2.4980-2.4984" (Code Red), 2.4976-2.4980" (Code Blue).
Main Bearing Clearance : .0005-.0027".
Timing Gear Backlash: .002-.004"
VALVES: *NOTE - Following valve data is complete data for 262" engine.*
Tappet Clearance : .019" All Valves, Cold & Hot. *See TUNE-UP.*

Valve	Head Diameter	①Stem Diameter
Intake	1.775-1.785"	.3710-.3720"
Exhaust	1.505-1.515"	.3693-.3703"

Valve	Seat Angl	②Lift	③Stem Clearance
Intake	45°④	.273"	.0008-.0025"
Exhaust	45°④	.273"	.0025-.0042"

① - Furnished also with .003", .015", .030" Oversize stems.
② - Cam Lobe Lift Wear limit .005".
③ - Wear limit .0045" Intake, .0055" Exhaust.
④ - Valve Face Angle 44°.

►*ROTATABLE & FREE TURNING VALVE NOTE:* Free turning type valve (cap over end of valve stem) used on exhaust valves. Intake valves are "rotatable" type sleeve between spring retainer and lock). *See "Valve System" in Ford Motor Co. Special Data.*

Exhaust Valve Cap Clearance: *See "Valve System" in Ford Motor Co. Special Data.*
Exhaust Valve Insert Installation: *See "Valve System" in Ford Motor Co. Special Data.*
Valve Stem Seals - Umbrella type seals used on all valve stems. Install with cupped side down.
Valve Seat Width - .070-.090" Intake, .090-.110" Exhaust.
Valve Springs: Free Length - 1.96".

►*VALVE SPRING INSTALLED HEIGHT CAUTION:* Spring ends must be square with .068". Install springs with damper (closed) coil end down toward head. Check installed height of spring which must not exceed 1 11/16" from surface of cylinder head spring pad to underside of spring retainer. If height greater, install .030" spacers as necessary on head under spring to bring height within limits of 1 5/8-1 11/16". *CAUTION - Install spacers only if necessary. DO NOT use more than 2 spacers (will overstress springs and overload camshaft lobes).*

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	①71-79	1.65"
Open	② 161-177	1.26"

① - Wear limit 64 lbs. at 1.65".
② - Wear limit 145 lbs. at 1.26".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems. *See "Valve System" in Ford Motor Co. Special Data.*
Valve Lifters: Mushroom type. Remove from below with camshaft out.
Clearance - .0005-.0021".
Rocker Arm Assembly: *See "Valve System" in Ford Motor Co. Special Data.*
VALVE TIMING: *Checking timing by use of quadrant on pulley not recommended by manufacturer. See "Camshaft Setting" below and alignment of timing gear marks, and "Lift" under VALVES for checking of camshaft lobe wear.*
Camshaft Setting: Mesh marked tooth of crankshaft gear with marked notch in camshaft gear, with marks in line with shaft centers.

292" V8 ENGINES

►*See 1961 Ford & Mercury V8 Passenger Car Pages.* Engines are similar to 1961 292" passenger car engine, and all passenger car engine data applies to truck engine, *except as follows:*

Piston Rings: Compression Ring Side Clearance - .0019-.0036".
Compression Ring End Gap - .010-.025".
Oil Ring End Gap - .015-.062".
Connecting Rod Length (Center-To-Center): 292MD 6.320-6.324". **292HD** - 6.250-6.254".

►*PISTON & CONNECTING ROD NON-INTERCHANGEABILITY CAUTION:* Higher pistons and shorter connecting rods used in 292HD engine. DO NOT interchange with those used in 292MD engine.

Exhaust Valve Length (292HD): 4.92".
Exhaust Valve Stem Diameter (292HD): .4343-.4350".
Exhaust Valve Stem Clearance (292HD): .0018-.0032" Wear limit .0055".
Valve Seat Width (All Engines): .055-.085" Intake, .065-.095" Exhaust.
Lifter-To-Bore Clearance (All Engines): .0005-.0021". Wear limit .0055"
Exhaust Valve Cap Clearance (292HD): *See "Valve System" in Ford Motor Co. Special Data.*
Exhaust Valve Insert Installation (292HD): *See "Valve System" in Ford Motor Co. Special Data.*

►*ROTATABLE & FREE TURNING VALVE NOTE:* Free turning type valve (cap over end of stem) used for sodium cooled exhaust valves on 292HD engine. All other valves (both engines) are "rotatable" type (sleeve between spring retainer and lock).

►*EXHAUST VALVE CAUTION (292HD):* Exhaust valves are sodium cooled and require special disposal handling to prevent fire or explosion due to chemical reaction. DO NOT DISCARD SODIUM COOLED VALVES with other scrap material. Bury in ground not subjected to excavation or in deep water not subjected to dredging.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Motor Co. Special Data.*
Crankcase Capacity: 144 & 170 - 3½ qts. refill. **223 & 292** - 5 qts. refill. **262** - 6 qts. refill. Add 1 qt. with filter change on all engines.
Normal Oil Pressure: 35-55 lbs. at 2000 RPM.
Pressure Regulator Valve - In pump body, not adjustable.
Oil Pressure Indicator (E & F Series): Indicator light on instrument panel controlled by Engine Oil Pressure Switch, Ford No. B6A-9278-A (E Series), No. B6A-9278-B (F Series)

Oil Pressure Indicator (B, C. & P Series): King-Seeley Electric "CV" (Constant Voltage) type with a gauge voltage regulator. *See "Gasoline Gauge" under CARB. EQUIPMENT above for Gauge Voltage Regulator application.*
Dash Unit - Ford No. C1TF-9273-A (B Series), No. C1TF-9273-B (C Series), No. B7J-9273-A (P Series).
Engine Unit - Ford No. B7T-9278-A (B, C & P Series).

Oil Pressure Engine Unit Location: On right side of engine above starter (6 Cyl.), at rear of oil filter (V8).

Oil Pump: Rotor type. Mounted in crankcase (6 Cyl.), outside crankcase on left side (V8).
Pump Overhaul - *See "Oiling System" in Ford Motor Co. Special Data.*

Oil Filter: Full flow replaceable element or "disposable" type. Replace element or filter every 4000 miles (On Highway), 2000 miles (Off Highway), or sooner under severe operating conditions.

Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on bracket by hand until gasket contacts adapter face, then tighten filter an additional ½-turn. Run engine and check for leaks. *CAUTION - Do not overtighten.*

Crankcase Ventilation: Conventional - Filter in oil filler cap (inlet) and outlet pipe at rear of engine. Clean system every 4000 miles (On Highway) 500 miles (Off Highway), or sooner under severe operating conditions.
Positive - Road draft tube replaced by an adapter, tubing, and hose routed to ventilation valve installed in intake manifold or in spacer between carburetor and intake manifold Service system at regular intervals and check valve operation before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

Form 4-B

CONTINUED FROM PRECEDING PAGE

ENGINE COOLING SYSTEM

Cooling System Capacity

Truck Model	Capacity
144 E Series	①8 7 qts
223 F & B Series	②18 qts
223 P-350, 400, 500	②18 5 qts
292MD F-100, 250, 350③	②17 5 qts
292MD F-350④, F-500, 600, B-500, 600	②⑤21 5-22 qts
292MD P-350③	②⑤21 5-22 qts
292MD P-350④, P-400, 500	②23 qts
292MD C Series	②⑤28 qts
292HD F-500, 600, B-500, 600	②⑤21 5-22 qts
292HD C Series	②⑤28 qts

① - Add 2 qts for heater
② - Add 1 qt for heater
③ - With single rear wheels
④ - With dual rear wheels
⑤ - Add 1½ qts with Transmatic Drive

Pressure Valve: Radiator filler cap Ford No C1UU-8100-A (E Series - 12-15 lbs), No B8A-8100-A (P-100), No OL-8100-A (Others - 7 lbs)

Thermostat: As follows

Model	Low Temp.	High Temp.
E Series	C1UE-8575-B①	②C1UE-8575-A
F, B, P, C Series	COAZ-8575-A①	②COAZ-8575-B

① - 160°type
② - 178° type for use with permanent type anti-freeze

Water Pump: Packless, sealed ball bearing type
See "Cooling System" in Ford Motor Co. Special Data.

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with a gauge voltage regulator. *See "Gasoline Gauge" under CARB EQUIPMENT above for Gauge Voltage Regulator application*

Dash Unit - As follows

Series & Body Type	Ford Gauge No.
E Series	C1UF-10883-A
F & B Series (Cowl, No Windshield)	C1TF-10883-A
F & B Series (Others)	C1TF-10883-C
P Series	B7J-10883-A
C Series	C1TF-10883-B

Engine Unit - Ford No CODF-10884-A (E & P-100 No B7A-10884-A (Others)

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 4,000 miles (On highway), every 500 miles (Off highway). Periodic change of fluid not recommended When adding fluid, use Ford Automatic Transmission Fluid C1AZ-19582-A or Automatic Transmission Fluid Type "A", Suffix "A"

Checking Fluid Level - Truck should be level and the hand brake firmly applied With engine and transmission at normal operating temperature, shift selector lever through all positions and back to "P". With engine idling, check fluid level and add fluid as needed through the filler tube to bring level up to "F" mark on dipstick. DO NOT OVERFILL

Capacity - 10 qts , drain and refill

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on Patent Plate riveted to base of left front body pillar. *NOTE* - Number (example below) includes identification data.

① ② ③ ④ ⑤
1 Y 82 H 400001

① - Year. 1 1961.
② - Assembly Plant. Y Wixom.
③ - Body Series. See Body Series table below.
④ - Engine. H 430" Domestic. K 430" Export.
⑤ - Beginning Vehicle Number.

Body Series Table

Body Type	Code No.
4-Door Sedan	82
4-Door Hardtop	84
4-Door Convertible	86

VEHICLE SPECIFICATION CODE: Vehicle specification codes (on Patent Plate) contain Body Style, Color, Trim and Day and Month vehicle was assembled.

Engine Production Code Number: Stamped on cylinder block directly in front of left hand cylinder head and indicates place, year, month, day of month and plant inspector. Not used for licensing.

TUNE-UP

►*1961 (EARLY PRODUCTION) MODEL SLUGGISH PERFORMANCE OR INSUFFICIENT TOP SPEED CORRECTION:* Resonator inlet pipe may be restricted or collapsed. Check by rolling a 1" diameter steel ball through exhaust pipe (long resonator inlet pipe). If restriction exists, replace with new pipes, Lincoln Part No. C1VV-5218-F (R.H.), C1VV-5A265-F (L.H.). New pipes in production about April 1, 1961.

►*1961 CARS PARTIAL LOSS OF POWER OR COLLAPSED FUEL TANK:* A crimp or kink in vent hose between fuel and surge tanks may cause fuel tank ventilation loss, or collapse the tank. On cars built before Nov. 18, 1960, shorten hose 3". On later cars, correct the bind.

►*FUEL FILTER NOTE:* Detachable fuel tank filter assembly located at Fuel Gauge sender unit and outlet tube assembly. Serviced as separate unit.

COMPRESSION PRESSURE: 180±20 lbs. All cylinders must be equal within 10 lbs.

VACUUM READING: Steady17-18" at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Water jacketed intake manifold with thermostat controlled circulation eliminates need of heat valve.

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See FUEL SYSTEM NOTES in Ford Motor Co. Special Data.*

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. Recommended servicing intervals is 6000 miles or 6 months. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-5-4-2-6-3-7-8.
Cylinders - RIGHT BANK 1-2-3-4; LEFT BANK 5-6-7-8.
SPARK PLUG GAP: .032-.036".
Spark Plugs - Champion F-11Y. 18 mm. Tapered seat, no gasket used. Torque to 15-20 ft. lbs.
COIL: Lincoln No. B6A-12029-B.
Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - COLF-12250-A (Resistance Wire). 1.3-1.4 ohms at 75°F.

►*COIL RESISTOR NOTE:* Pink Ignition Resistor Wire Assembly is connected to a small pigtail from ignition switch and to a multiple quick disconnect at left side of dash panel. Resistor Assembly is bypassed during cranking by lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Lincoln No. C1VF-12127-A.
Condenser - Lincoln No. B9AF-12300-A.
Capacity - .21-.25 mfd.
Contact Point Set - Lincoln No. B8Q-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance ①

Degrees	Distr. RPM	Degrees	Eng. RPM
0	300	0	600
1-2	550	2-4	1100
6-7¼	1100	12-14½	2200
14½-15¾	2000	29-31½	4000

① - Adjust Test Stand to 0° at 200 RPM, with vacuum diaphragm disconnected.

Vacuum Spark Control: Integral type mounted in distributor housing and linked directly to breaker plate.

Vacuum Advance ②

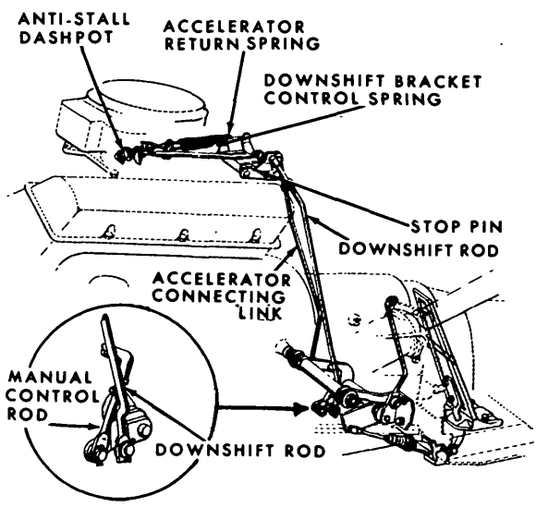
Distr. Degrees	Eng. Degrees	Vacuum (" of Hg.)
½-3½	1-7	7
6-9	12-18	12
8½-11½	17-23	16
9½-12½	19-25	18

② - Adjust Test Stand to 0° at 1000 RPM and 0" of Hg.

IGNITION TIMING

Setting - 6° BTDC. Range 2°-10°. Set with vacuum line disconnected and carburetor opening taped closed.
Timing Mark - Ball pin on damper to be aligned with 0,3,6,10 sawtoothed marks of pointer on cover.

CARBURETOR



►*CARBURETOR APPLICATION:* New design Carter ABD 2-Barrel Carburetor with an air conditioning idle speed-up device and a bypass idle air system. *NOTE* - A green-colored date code tag attached to air horn screw indicates carburetor adapted to "Closed Crankcase Ventilation" system.

►*HIGH ALTITUDE CARBURETOR IDENTIFICATION:* Identify by red tag attached to carburetor air horn. Accelerator pump rod and throttle closing spring should be positioned to the summer (S) position. Designed to operate at 5000 ft. elevation.

►*LOSS OF KICKDOWN AND/OR UPSHIFT:* May be caused by binding or rust in throttle linkage. Lubricate pivot points with good grade light weight engine oil.

Throttle Linkage Adjustment: Make adjustments in the following sequence.
Engine RPM Adjustment - Bring engine to normal operating temperature, connect tachometer and place selector lever in D2. Hold throttle lever against hot idle screw and adjust engine idle speed to 450-475 RPM. *NOTE* - Trip fast idle cam to be sure automatic choke has positioned the lever against hot idle screw.
Anti-Stall Dashpot Adjustment - With carburetor lever against hot idle screw and dashpot plunger fully depressed, clearance between dashpot plunger and lever should be .090-.120". To adjust, loosen locknut and turn dashpot in mounting bracket.
Down Shift Rod Adjustment - Loosen downshift rod locknut and disconnect rod from ball stud on bellcrank assembly, then slide spring clip off rod. *NOTE* - Be sure movable outer bracket of bellcrank is against stop pin on inner mounting bracket on bellcrank assembly. Hold downshift rod upward against transmission internal stop and adjust length of rod until hole in rod is aligned with ball stud on bellcrank assembly. Lengthen rod one turn and position it on ball stud. Slide spring clip over end of rod to lock rod to ball stud. Tighten locknut securely. *CAUTION* - If bellcrank outer bracket does not remain against stop pin, lengthen downshift rod an additional turn.
Accelerator Pedal Height Adjustment - *CAUTION - Make this adjustment at the accelerator connecting link only.* Stop engine and measure distance from top of accelerator pedal to carpet. **Nominal measurement should be approximately 3¾".** Depress accelerator pedal and

CONTINUED ON NEXT PAGE

LINCOLN CONTINENTAL THROTTLE LINKAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

check detent feel and kickdown action of bellcrank. Adjust height to obtain proper downshift rod operation. *NOTE* - Throttle plates in carburetor must be fully opened before making this adjustment. Road test to check kickdown operation.

CARTER ABD 2-BARREL

Carter ABD 3148S (Without Air Cond.); ABD 3149S (With Air Cond.). Similar in design to carburetors used on 1960 models except for the following features:

Idle Air Bypass System - Throttle valves are completely closed at slow (hot) idle speed. An Idle Air System is used consisting of an air bypass passage through which air for closed throttle operation is taken from top pf primary venturi through an adjustable orifice to throttle bores below throttle valves. An Idle Air Speed Screw controls adjustable orifice and all idle speed adjustments are made with this screw (throttle stopscrew not used).

Idle Speed-Up (Air Conditioned Cars) - Consists of two separate devices as follows:

Initial Assist (Carburetor) - Consists of an external air bypass passage and solenoid controlled valve on the carburetor which provides additional air below throttle valves when compressor clutch is engaged. Upper end of tube is located in air horn and vacuum can be checked with air cleaner removed. With air conditioner operating, suction should be felt at end of tube and engine speed should decrease approximately 30-40 RPM when tube closed with the finger. *NOTE - It is no longer necessary to operate air conditioner when adjusting slow (hot) idle speed.*

Supplemental Assist (Throttle Linkage) - Consists of a vacuum diaphragm operated rod connected to the throttle linkage. Diaphragm operation is controlled by a solenoid valve in the vacuum line so that the rod is pulled down and the engine speed increased only when the engine is idling with the transmission selector lever in Park or Neutral. *See "Idle Speed-Up Control Adjustment" below.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Adjustments: Idle Mixture and Speed Setting - Turn idle mixture screws (one for each throttle bore) 1-1½ turns open from a lightly seated position, then turn Idle Air Speed Screw 3½ turns open from a lightly seated position. *NOTE - On air conditioned cars, remove air cleaner and turn air conditioner off.* With engine at normal operating temperature, adjust Idle Air Screw for correct idle speed of 450-475 RPM (Transmission selector lever in "D" position), or 500-550 RPM (Transmission selector lever in "N"). Adjust each idle mixture screw for smooth idling and highest vacuum reading and engine RPM. Recheck and if necessary, reset idle speed, then recheck idle mixture setting.

Float Level - With bowl cover gasket removed, distance from top machined surface of main body to top of each float at free end with float shaft retainer pressed down and float assembly in uppermost position against inlet needle. Use 5/16" tab of Gauge 9550-DB to check level.

Acc l rating Pump - With pump operating rod in hole furthest from throttle shaft (marked "W") and throttle lever in closed position, distance from top of accelerator plunger to top surface of fuel bowl cover should be 17/32". To adjust, bend pump operating rod.

Fast Idle: With fast idle adjusting screw on low step of fast idle cam, engine speed should be 600-650 RPM (Transmission selector lever in "D2" range).

Automatic Choke: Centered at index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

Idle Speed-Up Control Adjustment (Air Conditioned Cars): *NOTE* - This unit mounted on bracket bolted to left rear cylinder block. Check idle speed after other carburetor adjustments completed by idling engine with transmission selector lever in Park or Neutral and air conditioner on. Idle speed should be 800-900 RPM. To adjust, loosen locknut on upper end of operating rod and turn adjusting nut down to increase engine speed or up to decrease engine speed. Tighten locknut after adjustment completed.

►*IDLE SPEED-UP CONTROL (AIR CONDITIONED CARS) PRODUCTION CHANGE:* The above unit was discontinued in production approximately June 15, 1961.

►*OTHER DATA: See "Carter ABD 2-Bbl. Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Lincoln No. C1VE-9350-B. Fuel only.
Pressure - 4.5-6.5 lbs. at 500 RPM.

DISPOSABLE TYPE FUEL FILTER: Lincoln No. CODE-9155-A.

Installation - To save damage to filter and possibility of leaks, proceed as follows:

1) Use only the filter hex connection adjacent to mating part for applying torque.

2) Bend filter line so that normal free floating position of the end of line is in proper alignment with filter to avoid induction stress on filter case.

3) Use second wrench on filter hex connection to avoid transferring stress through filter case and tighten fuel filter inlet to fuel pump hand tight plus 2½ turns. Tighten fuel filter outlet to fuel line to 180-200 inch lbs.

Replacement - Remove fuel filter to carburetor fuel tube, and old filter assembly. Remove brass nipple from pump outlet. Install new filter in fuel pump outlet. *CAUTION - DO NOT transfer force through filter case when installing filter or fuel tube.* Assemble filter to carburetor fuel tube at filter end then to carburetor. Check for leaks.

DISPOSABLE FUEL FILTER FLOW CHECKS: Check fuel flow at both inlet and outlet side of fuel filter Minimum flow required for engine operation is 1 pint within 20 seconds at 500 RPM. Static pressure will not vary because of restricted filter. Procedure for checking fuel pump pressure remains the same.

Gas lin Gaug : King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator, Lincoln No. B9MF-10804-A.
Dash Unit - Lincoln No. C1VF-9280-B.
Tank Unit - Lincoln No. C1VF-9275-F

Air Cleaner: Dry filter element type. Clean every 2,000 miles, replace every 20,000 miles.

►*AIR CLEANER SERVICE NOTE:* Filter element can be cleaned by tapping or shaking or by using compressed air directed opposite to air intake flow. Use care not to rupture element. *DO NOT wash element in solvent or other liquid and DO NOT oil or lubricate.*

►*AIR CLEANER PRE-FILTER ELEMENT NOTE:* Synthetic fibre, wrap-around element Part No. B8A-9601-A is available for use with dry-type cleaner element, in abnormally dusty areas.

►*PRE-FILTER ELEMENT INSTALLATION & SERVICING:* Remove dry element and slip pre-filter element over outer surface, locating it between upper and lower gasket surfaces. To clean pre-filter element, remove it from dry element and wash or rinse it in plain water. Use a detergent to remove contaminated oil. DO NOT WASH dry element.

Automatic Speed Control: *See "Cruise Control" in Carburetion Section.*

BATTERY

Lincoln No. C1VY-10655-A. 12 volt, 13 plate, 80 ampere hour capacity (20 hr. rate).
Battery Ground - Negative to generator adjusting strap mounting screw.
Body Ground - Body to generator adjusting strap mounting screw.

STARTER

Lincoln No. C1VY-11001-D. Armatur - C1VF-11005-A.
Drive - Lincoln No. C1VF-11350-A. Solenoid pinion shift.
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 42-53 ozs.
Cranking Speed - 150 RPM (warm engine). 9.5 volts, 250 amps. draw.

Performance Data

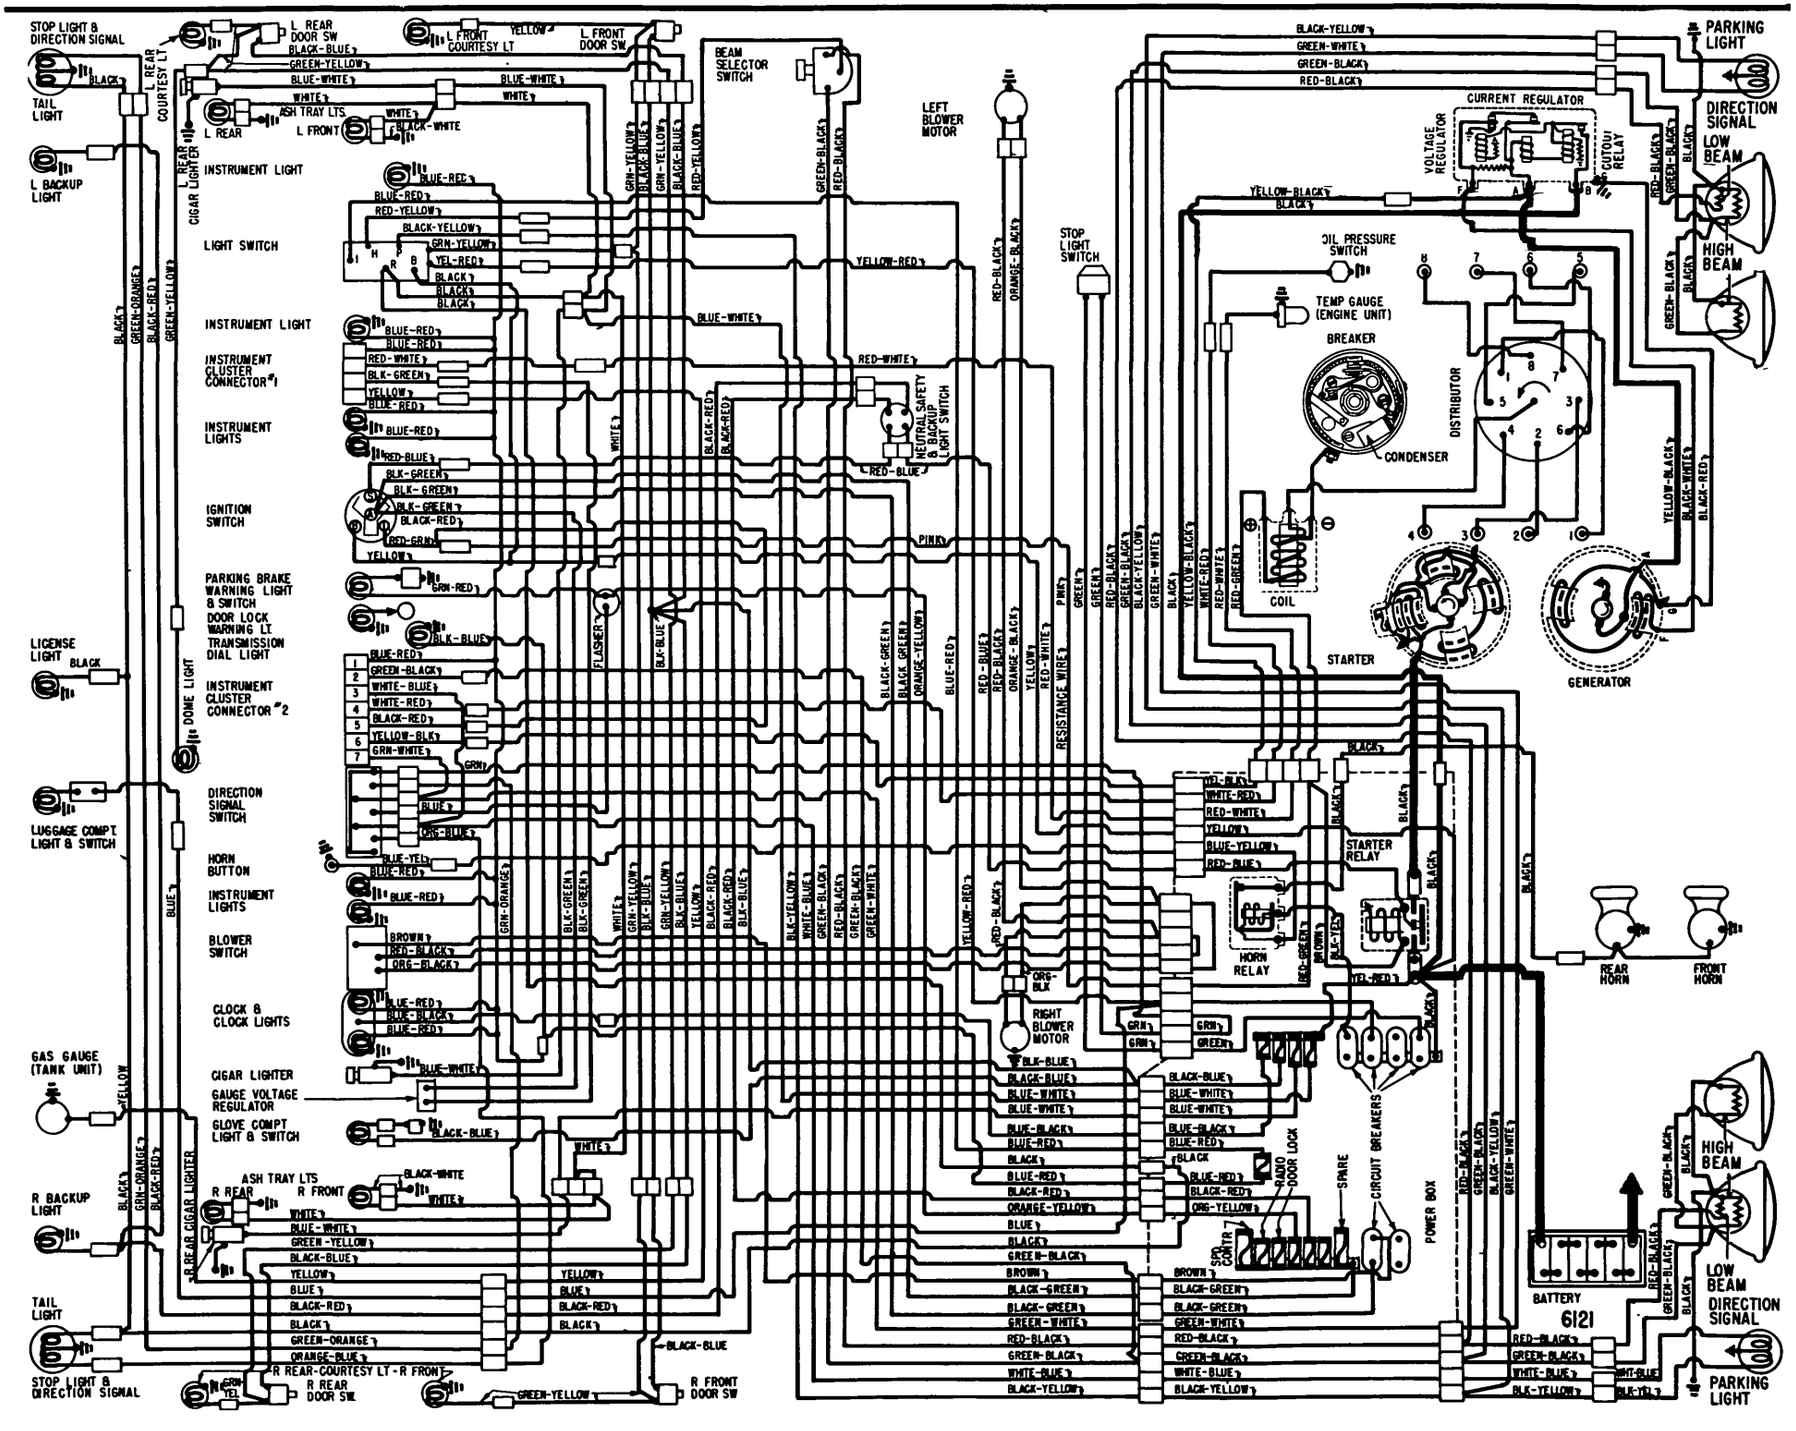
Torque	RPM	Volts	Amperes
0 ft. lbs.	9500	12.0	70

Starting Switch: Lincoln No. B6A-11450-A, magnetic type, controlled by ignition and starter switch Lincoln No. COLF-11572-A and Neutral Safety Switch Terminal Block Lincoln No. C1VP-7B217-B.

Neutral Safety Switch Terminal Bl ck Adjustm nt: *Se "Lincoln Automatic Transmission" in Transmission Section.*

GENERATOR

Lincoln No. C1VF-10002-A. Armatur - Linc ln N. C1VF-10027-A.



Performanc Data

Generator	Amperes	Volts	RPM
C1VF-10002-A	40	15.0	2650

Brush Spring Tension - 20 ozs. minimum.
Field Current - 1.5-2.0 Amps. at 10 Volts.
R tati n - Counterclockwise at commutator end.

Belt Adjustm nt: Use Tool 33-73F (Borroughs) or proper substitute for belt tension measurement. 110-120 lbs. (new belt), 90-100 lbs. (used belt). Reset New Belt tension to 90-100 lbs. after 15 minutes operation.

GENERATOR REGULATOR

Lincoln No. C1VF-10505-A. *NOTE* - Double Contact Voltage Regulator and new terminal arrangement, may be used with earlier generators (40 amp.). However, **do not use** earlier regulators with new generators (new 6 Ohm field coil).

►*SETTING CAUTION:* "Temperature Compensated" type. Set to following specifications at 75°F, ambient (engine compartment) temperature after 15-20 minutes operation (at fast idle) until regulator temperature gauge reads steady for 5 minutes.

Cutout Relay

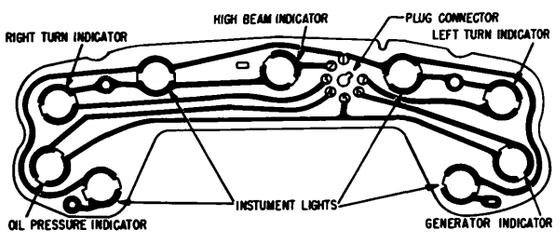
Cuts In - 12.3-13.0 volts.
Cuts Out - 8 amps. (discharge current).

Voltage Regulator

Setting - 14.7-15.3 volts at 75°F, not to exceed .3 volts variation between upper and lower contacts.
Air Gap - .037" (Lower Contacts Closed), .040" (Upper Contacts Closed).

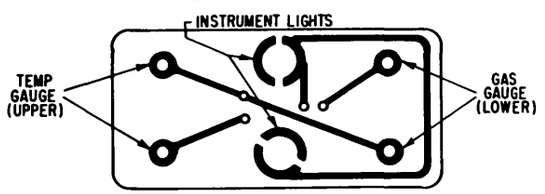
Current Regulator

Setting - 38-42 amperes.



►*OTHER DATA: See "Lincoln 12-Volt (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL



Instrument panel has upper and lower clusters. Upper cluster (three housings) can be serviced from front. Lower cluster (controls) removable in two sections.

Sp edometer Removal: Loosen screws on bottom of housing and pull bezel away. Remove light shields. Remove attaching screws and pull speedometer from housing. To install, reverse removal procedure.

Speedometer Housing Printed Circuit Board Removal: Remove negative cable from battery. Remove clock by removing attaching screw and lifting up and away. Remove attaching wires. Remove speedometer cable from speedometer housing. Remove hood release handle from bracket and remove lower left instrument panel cover. Remove lower section of left vent from car. Remove main light switch from lower left cluster and remove ignition switch. With 5/16" socket, remove mounting plate-to-speedometer housing screws. Disconnect plug from printed circuit board then remove housing. Remove bulb sockets, then remove attaching screws. To install reverse removal procedure.

INSTR. CLUSTER PRINTED CIRCUIT (2)

INSTR. CLUSTER PRINTED CIRCUIT (1)

Gauge Housing Printed Circuit Board Removal: Loosen screw below gauge housing and pull bezel out. Remove plate attaching screws and pull gauges from housing. Disconnect connector from printed circuit board, then remove lamp sockets. Remove gauges from printed circuit board, then remove attaching screw. Remove printed circuit board from plate. To install, reverse removal procedure.

Instrument Lamp Removal: Fuel & Temperature Gauge - Loosen screw below housing and pull bezel out. Remove plate attaching screws and pull gauges from housing. Disconnect connector from printed circuit board, then remove socket and replace lamp(s).

Speedometer Housing - Loosen screws below housing and pull bezel out. Carefully replace lamp (s). *NOTE - Do not press socket out of printed circuit board.* To replace high beam or two upper background lights, remove speedometer.

Clock - Remove screw below clock and remove clock. disconnect wires, then replace bulb.

►*POWER BOX NOTE:* A power box mounted on right side of dash panel in engine compartment contains fuse panel, starter and horn relays, power circuit breakers and dash panel wiring connector assemblies. Power box acts as a distribution point for all circuits. A decal inside cover gives circuit breaker and fuse application, ratings, location, and wiring color codes. Fuses may be removed by using ignition key. Heater and air conditioning circuit breakers are installed individually and can be lifted from their spring-loaded holders. Other circuit breakers are mounted on a bus bar and should be removed from holder as an assembly.

Lighting Switch Removal: Disconnect battery negative (ground) cable. Press inward on headlamp switch spring release button and carefully remove switch knob and shaft. Remove switch bezel nut and bezel. Lower switch below panel, note wire color codes and disconnect wires.

Stop Light Switch Location: On lower side of brake master cylinder. *CAUTION - After replacing switch, brakes must be bled.*

CIRCUIT BREAKERS: 18 Ampere. Integral with Light Switch. Protects Headlamps.
12 Ampere. In Power Box, protects Instrument Panel, Dome, Luggage, Rear, License, and Parking lamps.

FUSES: In Power Box except as noted.
AGW 4 Amp. Instrument panel (Rheostat).
SFE 14 Amp. Interior lamps.
SFE 7.5 Amps. Turn Signal & Stop lamps.
SFE 7.5 Amps. Back-up Lamps.
SFE 14 Amps. Speed Control.
1AG2 or AGA2. Clock.
3AG15 r AGC15. Instrument Panel & L. Rear Door Cigar Lighter.
3AG15 r AGC15. R. Rear Door Cigar Lighter.
SFE 7.5 Amps. Radio.
Sulphur Disc or Reset Circuit Br ak r. In lighter socket of cigar lighter.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. Se "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, valve-in-head, of same design as previous models.

Bore	Stroke	Displacem nt
4.30"	3.70"	430 cu. ins.
Compr. Ratio	**Rated HP**	**D v l ped HP**
10.0-1	59.17	300 at 4100 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

OIL PAN REMOVAL: Remove dipstick, and turn crankshaft so No. 1 piston is 15° BTDC (use crankshaft timing marks). Remove generator splash shield and auto. trans. line bracket bolt. Remove engine front support insulator-to-mounting pad nut. Raise engine approximately 1" (use block of wood on jack placed under leading edge of oil pan), and insert a ¾" wood block between insulator and underbody engine support pads. Remove both stabilizer arm bolts, washers, insulators, spacers, and nuts. Lower stabilizer arms for clearance. Remove oil pan bolts and free oil pan from block. Remove oil pump pick-up tube and screen assembly bolts, and drop assembly in oil pan. Remove oil pan from under vehicle.

►*1961 CAR OIL PAN REINFORCEMENT (BOLT-LOAD SPREADER):* When replacing oil pan bolt, use new spreader Lincoln Part No. C1VY-6A674-A. Oil pan retaining bolts torque remain 50-70 in. lbs.

►*1961 LINCOLN CONTINENTAL 45-80 MPH MOAN, ROAR OR VIBRATION CORRECTION & ENGINE REAR MOUNT PRODUCTION CHANGE: S "Engin M unt-ings" in Ford Motor Co. Special Data.*

ENGINE LATERAL RESTRICTOR: *S "Engin M unt-ings" in Ford Motor Co. Special Data.*

PISTONS

Step head, slipper type, aluminum alloy with a steel strut. Piston pin is interference fit in piston. Retaining rings are not used.

Removal - Piston & Rod removed from above.
Clearance - .0017-.0035".

Fitting New Pistons: *See "Pistons" in Ford Motor Co. Special Data.*

Installing Pistons: Pistons for right and left hand cylinders are NOT interchangeable. Install piston so indentation notch on head of piston is toward front of engine. *See Rod Installation.*

R placement Pist ns: Std., .003", .020", .030", .040" Oversize.

CONTINUED ON NEXT PAGE

S INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

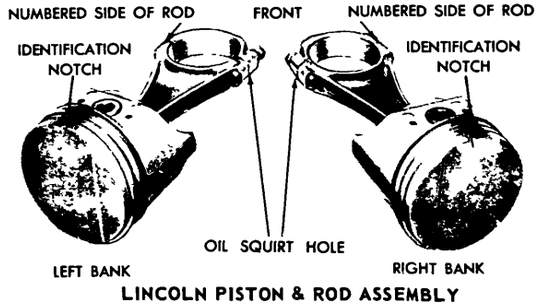
PISTON PIN

Press fit in connecting rod, no retaining device.
Diamet r - .9749-.9752". **Length** - 3.48-3.50".
Cl arance in Piston - .0002-.0004". **Wear Limit** - .0008".
Pist n Pin R m val & Installation: *See "Piston Pins" in Ford Motor Co. Special Data.*
Replac m nt Pins: Standard size. Furnished with new pistons only.

PISTON RINGS

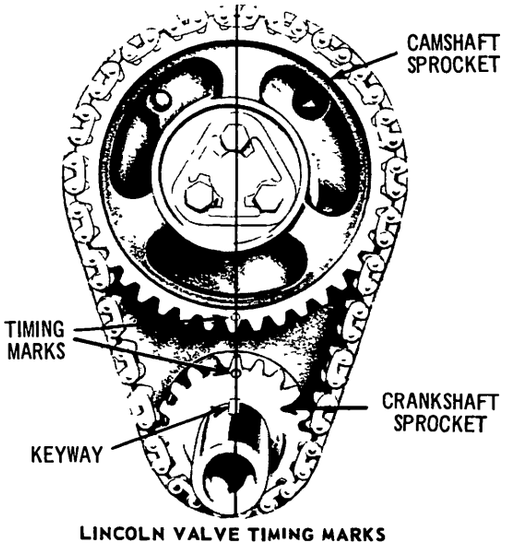
Ring	Width	End Gap	Side Clearance
Compr.(1)	.0774-.0781"	.015-.025"	① .0014-.0031"
Compr.(2)	.0930-.0940"	.015-.025"	① .0010-.0030"
Oil (3)		.025-.038"	②

① - Wear limit .006". ② - Snug. Side sealing type.



Installing Rings: Install second compression ring with outside counterbore down. Oil ring expander spacer gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of expander spacer gap.
Replac ment Rings: Furnished Std. .020", .030", .040" Oversize.

CONNECTING ROD



L ngth (Cent r-to-C nter) - 6.599-6.601".

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Motor Co. Special Data.*

CAMSHAFT

Journal Diameter - (1) 2.3243-2.3248", (2) 2.3093-2.3098", (3) 2.2943-2.2948", (4) 2.2793-2.2798", (5) 2.2643-2.2648".
Out-of-Round Limits - .0005". **Wear Limit** - .001".
Bearings - Babbitt lined, steel backed.
Clearance - .0012-.0027". **Wear Limit** - .005".
Endplay - Thrust to rear. Taken by thrust face of camshaft sprocket riding against front surface of block.
Camshaft Bearing Service: *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*
Replacement Bearings: Std. and .015" Undersize.
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Motor Co. Special Data.*
Camshaft Setting - Timing marks should be adjacent and in line with straightedge across shaft centers.

Timing Chain Deflection: Not more than ½" deflection from straight to outward deflected position.
Timing Chain Cover Seal Installati n (Crankshaft Front S al): *See "Engine Front Cover" in Ford Motor Co. Special Data.*
Engin Fr nt Cov r Removal & Installation: *See "Engin Front Cover" in Ford Motor Co. Special Data.*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters.

Valve	Head Diameter	Stem Diamet r
Intake	1.955-1.970"	①
Exhaust	1.645-1.660"	②

Valve	③Seat Angle	④Lift	Stem Clearanc
Intake	45°	.2316"	⑤ .0008-.0018"
Exhaust	45°	.2316"	⑥ .002-.003"

① - Std., .3712-.3717" (Code Red), .3717-.3722" (Code Green) and .003", .015", .030" Oversize.
② - Std., .3701-.3705" (Code Red), .3705-.3709" (Code Green) and .003", .015", .030" Oversize.
③ - Face angle 44° (Intake & Exhaust).
④ - Cam lobe lift. Wear loss limit .005".
⑤ - Wear limit. 0045". ⑥ - Wear limit .0055".

Valve Seat Width - .070-.090" Intake and Exhaust.
►*VALVE TRAIN NOTE:* Valve rocker arms and shafts have been modified for improved lubrication. Use new rocker arm and shaft in conjunction only.
Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seals with cup side down over guide.
►*PUSHROD COVER BOLT & ROCKER ARM COVER BOLT LOAD SPREADERS NOTE:* When removing or replacing these parts use new bolt load spreader (pushrod cover bolt), 3/8" flat washer between bolt load spreader and cover (rocker arm cover bolts).
Oversize Valve Stem Installation: *See "Valve System" in Ford Motor Co. Special Data.*
Valve Springs: Roto-Coil design valve rotators used on all exhaust valves eliminating spring retainer and sleeve. No damper springs used.

Valve Spring Specifications

Valve	Lbs. Pressure	L ngth
Closed	65-75 ①	1.640"
Open	179-199 ②	1.230"

① - Wear limit 58 lbs. at 1.640".
② - Wear limit 161 lbs. at 1.230".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum .0045" (Intake), .0055" (Exhaust), ream valve guides and install valves with oversize stems. *See "Valve System" in Ford Motor Co. Special Data.*
Valve Lifters: Hydraulic barrel type. No adjustment.
Diameter - .8740-.8745".
Clearance in Lifter Bore - .0005-.0020".
Wear Limit - .005".
Hydraulic Lifter Operating Range Check - *See "Valv System" in Ford Motor Co. Special Data.*
Hydraulic Lifter Overhaul - *See "Valve System" in Ford Motor Co. Special Data.*
Rocker Arm Assembly: *See "Valve System" in Ford Motor Co. Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
►*VALVE TIMING NOTE: Following valve opening and closing p ints ar with camlift as indicated.*

CONTINUED ON NEXT PAGE

S INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Valve Timing Specifications

Intake Valves - Open 22° BTDC ①. Close 68° ALDC ②.
Exhaust Valves - Open 63° BLDC ①. Close 27° ATDC ②.

① Camlift .002". ② - Camlift .005".

Valve Timing Check: Install a quadrant on crankshaft damper. Remove right rocker arm assembly. Install Dial Indicator Tool 6565 and Indicator Adapter Tool 6565-AB on cylinder head using Holding Fixture Tool 4201-D. Pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers cam lobe lift shown in Valve Timing Table above. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner. If reading not correct, check for bent pointer, worn timing chain or sprocket before replacing camshaft.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Motor Co. Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.
Normal Oil Pressure: 35-55 lbs. at 2000 RPM.
Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Light on instrument panel. Light goes on when ignition switch turned on or when oil pressure is low.
Oil Pressure Switch - Lincoln No. B6A-9278-B.

Oil Pump: Rotor type mounted inside oil pan on lower left corner of block. Driven by distributor through an intermediate shaft.

Pump Overhaul - *See "Oiling System" in Ford Motor Co. Special Data.*

Oil Filter: Full-flow disposable type. Mounted on lower left front corner of cylinder block. Replace element every 4000 miles or 4 months. *NOTE* - Replacement filter Lincoln No. C1AZ-6731-A. Use no other filter.
Installation - Coat gasket with light film of oil. Screw filter onto adapter (by hand) until snug. Then tighten ¼ turn additional. DO NOT OVERTIGHTEN.
►*OIL FILLER CAP NOTE:* Disposable type. Replace every 12,000 miles or 12 months.
Crankcase Ventilation: Standard Cars - Filter in oil filler cap and ventilator tube at rear of engine. Replace oil filler cap every 12,000 miles or 12 months.
Positive Crankcase Ventilation Cars - Road draft tube replaced by hose to manifold with valve in line. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Three stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.

NOTE - Cylinder block thermostats are accessible by removing water pump.

Water Capacity: 23 qts. without heater, 26 qts. with heater or air conditioning.

Pressure Valve: Radiator filler cap, Lincoln No. LA-8100-A. Operating pressure 12-15 lbs.
Thermostat: 157-162°F (No. 8BE-8575-B); 175°F (B9S-8575-A): Located in water outlet connection. Two 137-142°F (B9S-8575-B) thermostats located in front face of cylinder banks.

Water Pump: Packless, sealed ball bearing type. *See "Cooling System" in Ford Motor Co. Special Data.*
Temperature Gauge: King-Seeley electric Constant Voltage ("CV") type with Gauge Voltage Regulator Lincoln No. B9MF-10804-A.
Dash Unit - Lincoln No. C1VF-10883-A.
Engine Unit - Lincoln No. CODF-10884-A.
Power Booster Fan: Standard on Air Conditioned Cars. *See "Cooling System" in Ford Motor Co. Special Data.*

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 6,000 miles or 6 months. Add fluid as necessary. Use only Automatic Transmission Fluid. Lincoln Part No. C1AZ-19582-A or Automatic Transmission Fluid Type A, Suffix A. *CAUTION - Drain and refill only after disassembly for repair. Do not overfill.*
Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in neutral position. Move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. Maintain level to "FULL" mark on dipstick.
Capacity - 10.5 qts. (approx.).

CHASSIS LUBRICATION: The steering knuckle ball joints and steering connector rod ends are packed with special lubricant and sealed. Lubrication fittings have been eliminated at these points. However, service plugs are provided in steering knuckle ball joints and steering connector rod ends so they may be repacked when necessary.

►*LUBRICATION CAUTION: Engine accessories (generator, distributor, etc.), steering gear, wheel bearings, transmission, rear axle and universal joints must be checked and lubricated at intervals recommended by manufacturer.*

►*SPECIAL LUBRICANT RECOMMENDATION CAUTION: Only the recommended lubricants (see below) are to be used when servicing steering knuckle ball joints and steering connector rods. Other lubricants will cause early failure of parts.*

Lubrication: Every 30,000 miles or 2 years, remove lubrication service plugs (threaded) from upper and lower steering knuckle ball joints (four locations) and from steering connector rod ends (five locations) and install lubrication fittings. Lubricate steering knuckle ball joint fittings with Lubricant, Part No. C1AZ-19590. Lubricate steering connector rod ends with Lubricant, Part No. C1VV-19B545. Replace lubrication fittings with threaded service plugs.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

TIGHTENING SPECIFICATIONS

SPECIAL 40, 4100 SERIES

	Ft. Lbs.
Cylinder Head	50-55
Rocker Arm Bracket	25-30
Rocker Arm Cover	3-5
Intake Manifold	25-30
Carb to Int. Man	12-15
Water Outlet to Int Man	20-25
Exhaust Manifold	10-15
Oil Pan	6-15
Engine Front Cover	20-25
Oil Pump Cover	10-15
Fuel Pump to Front Cover	20-25
Water Pump to Front Cover	6-8
Main Bearing Caps (Exc Rear)	50-60
Main Bearing Cap (Rear Only)	65-70
Connecting Rods	30-35

44, 46, 47, 4800 SERIES

Cylinder Head	65-75
Intake Manifold	25-30
Exhaust Manifold	10-15
Oil Pan	6-15
Main Bearing Caps	100-110
Flywheel	50-60
Harmonic Balancer	Ⓒ 200-220
Con Rod Caps	40-45
Rocker Arm Support Brackets	30-35
Rocker Arm Cover	3-5
Valve Lifter Cover	3-5
Water Manifold	25-30

Ⓒ - No lockwasher used on later cars (specification unchanged)

ALUMINUM ENGINES SERVICE CAUTIONS

SERVICE PRECAUTIONS: *NOTE* - Extreme caution must be observed when working on aluminum engines, to prevent damage by scratching, nicking, or scoring Note the following

1) Do not drop or slide machined surfaces on bench or floor

2) Do not use gasket cement (Except as indicated under Cylinder Head Installation)

3) Lubricate bolts and screws entering any aluminum part *See "Bolt Thr ad Lubrication Note" below*

4) Tighten bolts and nuts to the specified torque DO NOT overtighten Torque values are for clean lubricated threads

►*BOLT THREAD LUBRICATION NOTE* Use "Buick Special Thread Lubricant"

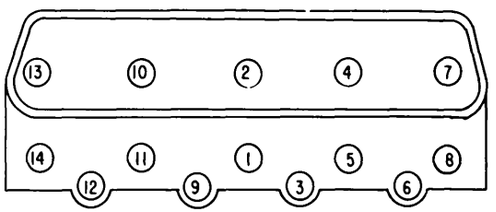
DAMAGED OR WORN THREAD REPAIR (ALUMINUM BLOCK): "Heli-Coils" are available locally for repairing damaged or worn threads in aluminum The repair consists of drilling out worn or damaged threads tapping hole with special "Heli-Coil" tap, and installing a "Heli-Coil" insert in tapped hole This brings hole back to original threaded size See following table for inserts and tools required

"Heli-C il" Thread Inserts

Thread Siz	Insert Part N .	Drill Siz	Sp cial Tap Part N .	Ins rting T I N .
1/4"-20	1185-4	266"	4 CPB	528-4N
5/16"-18	1185-5	332"	5 CPB	528-5N
3/8-16	1185-6	397"	6 CPB	528-6N
7/16"-14	1185-7	453"	7 CPB	528-7N
1/2"-13	1185-8	516"	8 CPB	528-8N
Spark Plug				
14 MM Short	512		137-11	542
14 MM Long	513		137-11	542

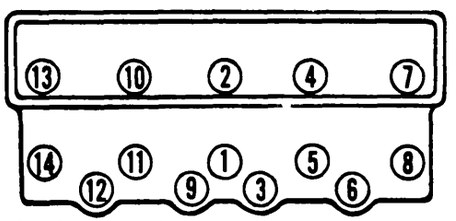
ENGINE MOUNTINGS

44, 46, 47, 4800 SERIES



►*ENGINE MOUNTING NOTE:* When properly aligned, engine and transmission should rest in normal position without any strain on the rubber mounting pads Engine alignment is determined by transmission support location Before loosening or removing support, mark support and frame at each end to insure reinstallation in original position with exact number and location of shims used originally

ENGINE MOUNTINGS: Adjustment - Disconnect exhaust pipe from exhaust manifold and loosen four engine mount-to-frame bolts. With support shims in place, support in original position (fore and aft), and transmission support-to-frame bolts tight, raise engine to allow mounts to normalize, then lower engine and tighten mount-to-frame bolts Reassemble exhaust system making certain system is free of binding and that there is no interference between exhaust pipes and chassis members



CYLINDER HEAD & MANIFOLD

SPECIAL 40, 4100 SERIES

CYLINDER HEAD & GASKET INSTALLATION: Install new cylinder head gasket over dowels on block *CAUTION - DO NOT use sealing compound of any kind* Install cylinder head, then coat threads of cylinder head bolts with Buick Perfect Seal Install and tighten bolts a little at a time about three times around in sequence indicated in diagram, then tighten

BUICK SPECIAL CYLINDER HEAD

BUICK (EXC. SPECIAL) CYLINDER HEAD

bolts in same sequence to specifications *CAUTION - DO NOT ov rtighten*

44, 46, 47, 4800 SERIES

CYLINDER HEAD & GASKET: When handling the thin crimped steel gasket, use care not to damage lacquered surface coat or kink sealing rings stamped in gasket. *(CAUTION* - Do not coat lacquered surface of gasket with any sealing material and DO NOT RE-USE THE OLD GASKET as stamped sealing rings ar flattened in a used gasket). Right and left cylinder heads are identical except that the water inlet port is open at front end and is plugged at rear end as installed on engine. After installation of cylinder head, tighten bolts a little at a time, three times around in sequence shown in diagram, then in same sequence to specifications After engine brought to operating temperature, recheck head bolts to specifications

►*CYLINDER HEAD REMOVAL NOTE:* All of the cylinder head bolts and pushrods cannot be removed with head in place. When removing head, pull pushrods part way out and tape in place. These same pushrods must be in head before head installation.

PISTON PINS

SPECIAL 40, 4100 SERIES

►*PRESS-FIT PISTON PIN REMOVAL & INSTALLATION: CAUTION - Special tools must be used to avoid damag to piston assembly parts*

Pin Removal: Place Support J-8754-1 in press with full radial face up and install spring in support Place piston, pin and rod in press with Driver J-8355-3 inserted in pin Press out piston pin

Pin Installation: Place Pilot J-8754-2 and spring in Support J-8754-1 and position Support so Pilot J-8754-2 is located in piston pin bore, then place in arbor press Coat pin and connecting rod lightly with graphite lubricant and place Driver J-8355-3 in pin and press pin into piston and connecting rod until pin bottoms against Pilot J-8754-2

44, 46, 47, 4800 SERIES

PRESS-FIT PISTON PIN REMOVAL & INSTALLATION: *CAUTION - Special tools must be used to avoid damag to piston assembly parts.*

Pin Removal: Place Piston Support J-6047-17 in press with radial face up. Place piston assembly on Support and press out pin with Drive Pin J-6047-4. *NOTE* - Guide Pin J-6047-16 is not used for pin removal.

Pin Installation: 1) Place Piston Support J-6047-16 (364" Eng), J-6047-18 (401" Eng), in base plate of press with Piston Support full radial face upward

2) Place rod in piston, with spurt notch on same side as valve depressions in piston dome. Lubriplate pin and enter in boss, forcing rod against opposite boss.

3) Place small end of Drive Pin J-6047-4 in top end of pin and place assembly in press.

4) Be sure all parts are aligned correctly, then force pin through rod and piston bosses until Guide Pin J-6047-16 (364" Eng J-6047-18 (401" Eng) stops downward travel

5) Remove assembly and rotate piston on pin to check fit between piston and pin.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT & MAIN BEARINGS

CRANKSHAFT REAR OIL SEAL: Braided fabric seals pressed into grooves in crankcase and rear bearing cap at rear of oil collecting groove. Neoprene seals are placed in sides of bearing cap. Crankshaft must be removed to replace braided seal in crankcase.

ALL SERIES

Installation - Place new seal in groove in cap and force down with hammer handle or smooth stick until seal projects above groove not more than 1/16". Cut ends of seal flush with surface of cap. Replace seal in crankcase in same manner. *CAUTION - Engine must be operated at slow speed after new braided seal installed.* Neoprene seals are slightly longer than grooves in bearing cap. Seals must **not** be cut to length. Lubricate seals and install in bearing cap with upper ends protruding approximately 1/16". After cap is installed, force seals up into cap with blunt instrument to provide seal at parting line between cap and case.

ENGINE FRONT COVER

SPECIAL 40, 4100 SERIES

TIMING CHAIN COVER: Removal - 1) Drain cooling system, disconnect hoses and remove radiator. Remove fan, pulley and belts.

2) Remove crankshaft pulley and reinforcement, and harmonic balancer.

3) On Pwr. Steering Cars, remove steering pump bracket bolts at timing cover and loosen or remove other bolts so that pump may be moved out of way.

4) Remove fuel pump and generator (not the generator brackets).

5) Remove distributor cap and pull spark plug wires off rocker arm cover brackets. Swing cap and wires out of way and disconnect distributor primary wire. Remove distributor.

6) When timing chain and sprockets are not to be disturbed, note position of distributor rotor for reinstallation in same position.

7) Loosen and slide thermostat bypass front hose clamp rearward. Remove timing cover to engine block bolts and two oil pan to timing cover bolts. Remove cover assembly and gasket.

FRONT OIL SEAL: Removal & Installation - Use a punch to drive out old seal and shedder from front toward rear of cover. To install, coil new packing around opening so ends are at top. Drive in shedder with punch. Stake shedder in place in at least three places. Use hammer handle or other smooth object to size packing until balancer hub can be inserted through opening.

44, 46, 47, 4800 SERIES

TIMING CHAIN COVER: Removal - Drain cooling system, remove radiator core, shroud, fan belt, fan and pulley, vibration dampener. Remove all bolts attaching timing chain cover and water pump manifold to upper and lower crankcase and cylinder heads. *NOTE* - DO NOT REMOVE water pump from chain cover. Remove cover and manifold carefully, making sure not to damage lower crankcase gasket.

FRONT OIL SEAL: Installation - After removing braided fabric packing with a screwdriver and tapping pressed steel shedder out of timing chain cover, work the new packing into the shedder, then drive the shedder into recess in cover with Installer J-5250-1. Push Packing Expander J-5250-2 through seal to expand packing into place and size the opening for the crankshaft. Apply a light coat of vaseline to packing.

FLYWHEEL

SPECIAL 40, 4100 SERIES

FLYWHEEL REPLACEMENT (Auto. Trans. Cars): *Installation same as 44, 46, 47, 4800 Series below.*

44, 46, 47, 4800 SERIES

FLYWHEEL REPLACEMENT: Flywheel or Ring Gear must be replaced as an assembly (gear is welded in place and not furnished separately).

►*FLYWHEEL REPLACEMENT NOTE:* 364" and 401" engine flywheels are not interchangeable. 401" engine flywheel is identified by four scallops cut in edge of flywheel between 1 o'clock and 9 o'clock legs, while 364" engine flywheel has all sides straight.

Installation of Flywheel: Make certain that flywheel and crankshaft are clean and free from burrs which might cause run-out (remove burrs with a mill file). Install flywheel and tighten bolts evenly to specifications. Mount Dial Indicator so stem of indicator bears against float surface of flywheel at inner side of bolt holes. Hold crankshaft end thrust in one direction and turn flywheel to check runout. Runout should not exceed .015". When runout exceeds .015", tap high side of flywheel with mallet. If not corrected, remove flywheel and check for burrs between flywheel and face of crankshaft flange. If not corrected by removing burrs, check runout of flange.

Engine Vibtation: When engine vibration introduced by installation of flywheel, proceed as for "Engine Unbalance" below.

Misaligned Flywheel: Loosen one flywheel attaching bolt and check contact between flywheel legs and converter pump cover. A .010" feeler should slip between flywheel and cover with slight drag. Pry leg away when too much contact exists, or insert ¼" diameter rod on each side of bolt and tighten bolt to spring leg to increase contact. Recheck other legs, to obtain equal contact.

ENGINE BALANCING

►*IF VIBRATION NOTED AFTER INSTALLATION OF CRANKSHAFT, FLYWHEEL, OR OTHER ROTATING PARTS, CORRECT THIS UNBALANCED CONDITION AS FOLLOWS:*

Critical Speed of Vibration - Determine speed at which vibration is most evident (use tachometer) and operate engine at this speed to check results from the following corrective procedures.

►*CAUTION:* Procedure below will correct minor unbalance caused by replacement of individually balanced parts. Extreme vibration caused by parts abnormally out of balance, or different in weight from corresponding parts, should be corrected by replacement of these parts.

1) Remove bell housing cover and install one balance weight (.060" thick) under head of two converter pump cover bolts, and tighten bolts to 25-30 ft. lbs. *(CAUTION - Do not place a weight at a flywheel-to-converter driving bolt as these bolts are not long enough for addition of weights).*

2) Run engine at critical speed and carefully compare vibration with that obtained without the weight, then stop engine. Mark location of balance weight on converter pump, remove weight and tighten bolt to 25-30 ft. lbs. Install the weight at other converter pump cover bolts and compare vibration produced at critical speed.

3) At the point where valance weight produced greatest improvement in vibration, install weights of proper thickness to eliminate objectionable vibration. Balance weights are furnished in the following thicknesses:

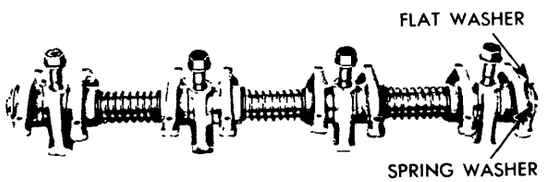
Balance Weight Part Nos.

Thickness	Part No.
.009"	1178106
.018"	1178107
.0345"	1178108
.060"	1178109
.120"	1178110

NOTE: When factory balancing of converter pump is changed to balance an engine, the pump cannot be used with any other engine.

VALVE SYSTEM
ROCKER ARMS

SPECIAL 40, 4100 SERIES



ROCKER ARM ASSEMBLY: Removal - Pull spark plug wires from brackets on rocker arm covers and swing wires and retainer out of way. On right side, remove vent pipe, then remove rocker arm cover and gasket. Remove four rocker arm shaft to cylinder head bolts and remove rocker arm and shaft assembly. *NOTE - Vent pipe oil baffle is mounted under rear bolts on right rocker arm and shaft assembly.*

Disassembly - Remove cotter pin, plain washer and spring washer from each end of shaft. Remove bracket bolts and slide rocker arm, springs and brackets off shaft.

Reassembly - Assemble springs, rocker arms and brackets as shown in diagram. *NOTE - Two types of rocker arms are used, and valve ends of rocker arms slant away from brackets.* Install spring washer, flat washer and cotter pin on each end of shaft in the order named. Install bolts with plain washers through brackets and shaft so notch in one end of shaft is up and at the front (right hand shaft), up and at the rear (left hand shaft).

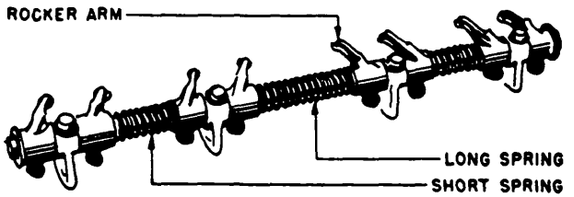
NOTE - Vent pipe oil baffle is mounted under rear bolts on right rocker arm and shaft assembly.

CONTINUED ON NEXT PAGE

BUICK SPECIAL ROCKER ARM ASSEMBLY

CONTINUED FROM PRECEDING PAGE

44, 46, 47, 4800 SERIES



ROCKER ARM ASSEMBLY: One assembly mounted on each cylinder head (see illustration).

Disassembly: Remove cotter pin, flat washer, and spring washer from each end of shaft. Pull mounting bolts out of support brackets and slide rocker arms, springs and brackets off shaft.

Reassembly: See illustration for location of parts. Install longer spring at center of shaft and install rocker arms with offset (slant) toward center of shaft (two types of rocker arms used—see table below for proper location of each type). Turn shaft so that notch in one end of shaft is upward or toward top of bracket and install bolt through bracket and shaft to maintain this position *(CAUTION*—Notch must be upward to place rocker shaft oil holes in proper relationship to rocker arms).

Rocker Arms

Part No.	Location
1173808	4 Right Front & 4 Left Rear
1173809	4 Left Front & 4 Right Rear

BUICK (EXC. SPECIAL) ROCKER ARM ASSEMBLY (ONE ASSEMBLY FOR EACH BANK)

Installation: Make certain that notch in one end of rocker arm shaft is upward, position assembly on head with dowels engaging blind holes in brackets, tighten all bracket bolts evenly to 30-35 ft.lbs.

HYDRAULIC LIFTERS

SPECIAL 40, 4100 SERIES

Removal: *CAUTION - Use air and clean cloths to remove all dirt from cylinder heads and adjacent parts.*

1) Drain cooling system, remove air cleaner and silencer, disconnect all pipes and hoses from carburetor. Remove coil and disconnect temperature wire at switch.

2) Disconnect accelerator and transmission linkage and throttle return spring. Slide front bypass hose clamp rearward and disconnect upper radiator hose at outlet.

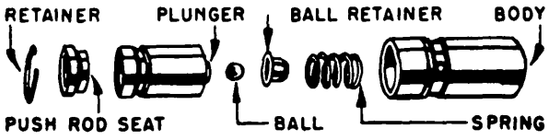
3) Disconnect heater hose at thermostat control valve inlet (push hose down to drain intake manifold).

4) Remove twelve intake manifold-to-cylinder head bolts and remove intake manifold and carburetor assembly (slide rearward to disconnect bypass hose from water pump).

5) Remove intake manifold gasket (sound absorber). Remove intake manifold gasket clamps and gasket and remove rubber gasket seal.

6) Remove rocker arm covers, and rocker arm and shaft assemblies. Remove pushrods and valve lifters. *NOTE - Keep lifters separat (in order) so th y will be returned to original positions in engine.*

44, 46, 47, 4800 SERIES



Removal: Remove air cleaner, disconnect all pipes from carburetor and intake manifold. Disconnect wires from accelerator vacuum switch and remove throttle return spring. Remove coil and equalizer shaft bracket from intake manifold and move them out of way. Remove intake manifold and carburetor as an assembly. Thoroughly clean cylinder heads, rocker arm covers and adjacent areas to prevent dirt entering engine. Remove rocker arm cover and rocker arm assemblies, remove pushrods. Remove valve lifter cover, lift out individual valve lifters and place them in numbered compartments of a holding fixture to insure re-installation in original position in engine.

ALL SERIES

Disassembly: Use a push rod to hold down the push rod seat in lifter while removing plunger retainer from body with Retainer Remover J-5238. Remove push rod seat and plunger from lifter body. Body bore above plunger may be caked with carbon and varnish. In this case, place lifter in large end of Tool J-4160 (Special), J-4160-A (Std.) with plunger inward. While holding lifter with thumb, rap open end of remover against a block of wood with just enough force to jar plunger from body.

►*IMPORTANT NOTE*—Disassemble one lifter at a time to avoid interchanging parts. Be careful not to score or nick lifter parts.

Cleaning and Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or identations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install

HYDRAULIC VALVE LIFTER (ALL)

plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

Reassembly: *NOTE - Current type of ball retainers eliminate need for check of ball travel unless retainer is badly worn or damaged.* It is recommended that all parts be rinsed in clean kerosene and then assembled without drying (this will eliminate all lint and dust adhering to parts). Hold plunger in vertical position with feed hole up, install check ball, ball retainer, spring, and body over plunger. Install pushrod seat and plunger retainer in end of body, use handle of Tool J-5238 to depress parts until retainer engages groove in body. Test lifter for leakdown rate, see below. Protect lifter assembly by wrapping it in clean paper until ready to test or install in engine.

Leakdown Rate - 1) Clean cup of Test Fixture J-5095 and fill it to ½" of top with "Hydraulic Lifter Test Fluid" (Kent-Moore No. J 5268).

2) Remove rubber washer (used for larger lifters) and install Gauge Sleeve J 5180-5 in cup and install Buick V8 Gauge Rod Nose J 5180-15 in ram.

3) Swing arm out of way, raise ram and place lifter (top side up) in Sleeve J-5180-5. *NOTE* - Lifter must be completely covered by fluid during test.

4) Lower ram to rest in lifter pushrod seat, then lower weight arm to rest on roller of ram.

5) Operate lifter plunger, through full travel to force all air out of lifter, until considerable resistance is built up in lifter and a definite grab point is felt at top of stroke when indicator pointer is at bottom of scale.

6) Finally operate lifter plunger approximately 10 additional strokes to be sure all air is out of lifter. *NOTE* - When one stroke (of last ten) has noticeable weak resistance, replace check ball and repeat above procedure.

7) Remove weight arm to allow lifter plunger to come up to its retainer, then lower arm to rest on ram roller. As pointer starts moving upward, start rotating fluid cup by turning handle one revolution every two seconds.

8) Use stop watch to check time required for pointer to move from lower to upper mark on scale (Marked Buick V8).

9) Leakdown rate (time between marks) must be between 12 and 40 seconds for satisfactory lifter operation.

►*LIFTER REPLACEMENT CAUTION:* A doubtful lifter should be checked 3-4 times before deciding to replace it.

OILING SYSTEM

ENGINE LUBRICATION

SPECIAL 40, 4100 SERIES

ENGINE LUBRICATION: Force feed type with oil supplied under pressure to crankshaft, connecting rod and camshaft bearings and to valve lifters. Oil is supplied under controlled pressure to rocker arm bearings and pushrods. All other moving parts are lubricated by gravity flow or splash. See *Engine Oil Flow Diagram.*

OPERATION: Gear type oil pump located in timing chain cover, draws oil through screen and pipe assembly (or over top of screen if clogged) and a drilled passage in crankcase connecting, to drilled passage in timing chain cover. All oil is discharged from pump to cover assembly. Spring loaded relief valve (in cover) limits oil pressure to a maximum of 33 lbs. per square inch. A bypass valve (in cover) opens when filter becomes clogged (4½-5 lbs. pressure difference between filter inlet and outlet) to bypass unfiltered oil directly to oil galleries in engine. Oil from filter (mounted on oil pump cover) supplies oil through oil pump cover and drilled passages in crankcase to two main oil galleries that run full length of the crankcase.

Crankshaft & Camshaft - Both crankshaft and camshaft are supplied oil through drilled passages in crankcase, from right main oil gallery.

Connecting Rod & Pistons - Main bearings supply oil through drilled passages in crankshaft to connecting rod bearings. Pistons and cylinder walls are lubricated by oil forced through small notch in connecting rod bearing parting surface that registers with hole in crankshaft every revolution. Piston pins are lubricated by splash.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Timing Chain & Sprockets - Drilled holes in camshaft connect front camshaft bearing to key slot in front of camshaft. Oil flows from camshaft journal into keyslot over woodruff key in space between key and camshaft sprocket and fuel pump eccentric. A relief in forward end of fuel pump eccentric allows oil to escape between eccentric and camshaft distributor gear. Oil strikes distributor gear once each camshaft revolution, supplying lubrication to timing chain and sprockets.

Hydraulic Lifters - Full pressure lubrication is supplied hydraulic lifters from cutouts in lifter bores in main oil galleries.

Rocker Arms, Valves and Pushrods - These items receive oil from main oil galleries through drilled holes in front of cylinder block and head, leading up from forward end of corresponding main oil gallery. Hole in head ends beneath front rocker arm shaft bracket. A notch cast in base of bracket allows oil to flow up inside bracket (between bracket and bolt) t hollow rocker arm shaft (plugged at both ends). Each rocker arm receives oil trhough hole in underside of shaft. Grooves in arm provide lubrication to bearing surfaces. Oil is metered to pushrod seat and valve stem through holes drilled in rocker arm. Excess oil returns to oil pan through passages in cylinder head and block.

44, 46, 47, 4800 SERIES

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to crankshaft, connecting rods, and camshaft bearings, and under controlled volume to valve lifters, rocker arm bearings and pushrods. All other moving parts are lubricated by gravity flow or splash. *See "Engine Oil Flow" diagram.*

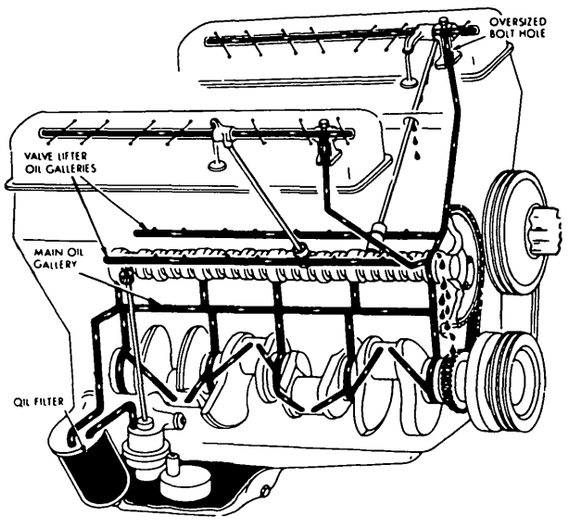
OPERATION: Gear type oil pump at lower side of crankcase (at rear end) draws oil from crankcase sump through screen (or over top of screen if clogged) and delivers it through oil passages in pump body and crankcase to full flow filter. By-pass ball type valve in filter base opens to by-pass filter element when clogged or when difference in oil pressure between inlet and outlet ports is 4½-5½ lbs. Oil from filter passes into main oil gallery (full length of crankcase below camshaft) and through drilled passages in crankcase at full pressure to all crankshaft and camshaft bearings, where it is distributed to all moving parts of engine.

Crankshaft, Connecting Rods & Pistons - Holes drilled in crankshaft carry oil from main bearings to connecting rod bearings. Pistons and cylinder walls are lubricated by oil forced through squirt hole in parting surface of connecting rod that registers with hole in crankshaft at each revolution of crankshaft. Pistons are lubricated by splash.

Camshaft, Sprockets, Lifters - Oil from front camshaft bearing, flows down front face of crankcase to drop on sprocket that transfers it to chain. Oil holes in crankcase and camshaft front bearing align with groove in camshaft bearing journal which meters flow of oil from main gallery to valve lifter oil galleries in each bank of cylinders. The full length of cylinder bank oil gallery cuts into lower sides of all valve lifter guide holes to supply low pressure oil to each lifter.

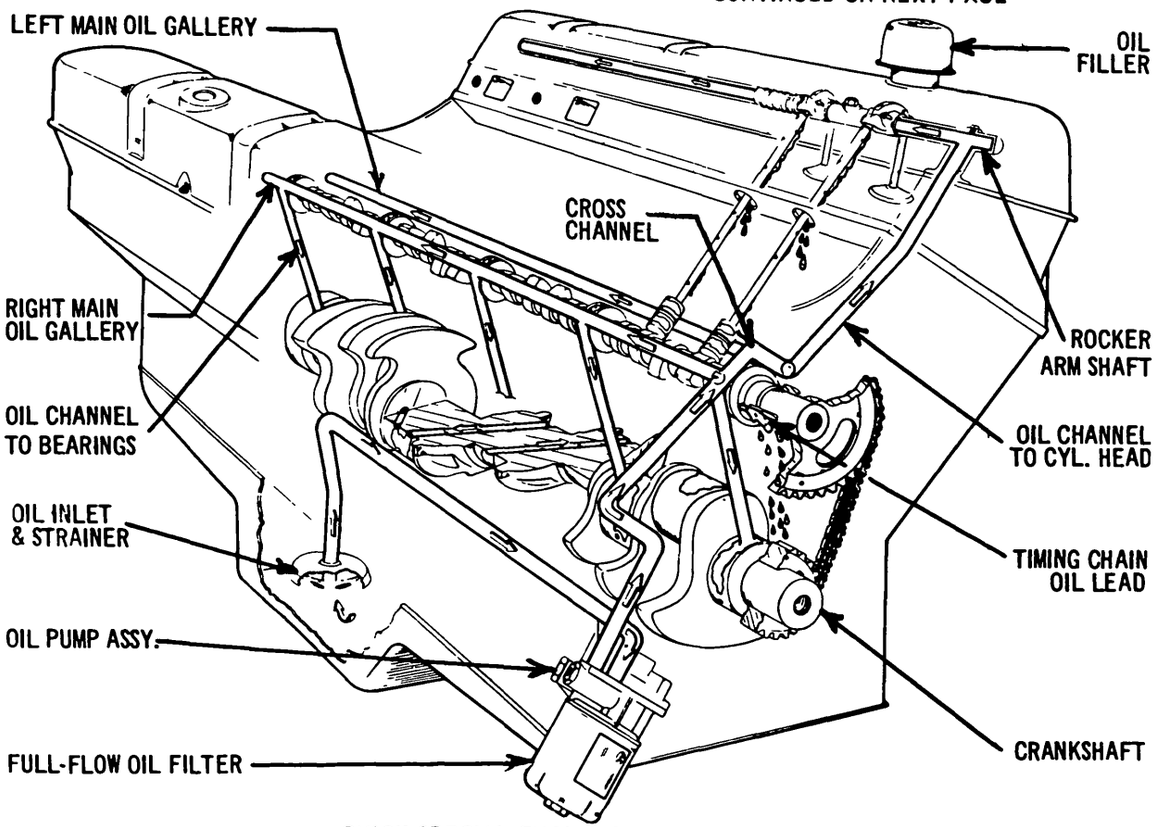
Rocker Arms, Valves & Pushrods - These items receive low pressure oil from valve lifter gallery through connecting passages drilled in front end of cylinder block and head. Oil passage in cylinder head ends in a counterbored recess surrounding front rocker arm shaft bracket bolt. Oversize bolt hole in bracket permits oil to flow into hollow rocker arm shaft (plugged at each end). Holes in rocker arm shaft allow oil to flow to each rocker arm. Oil is metered to pushrod ball seat and to valve stem through drilled holes in rocker arm. Excess oil drains off and returns to oil pan through pushrod opening in cylinder head and block.

OIL PUMP



SPECIAL 40, 4100 SERIES

►*OIL PUMP COVER SPACER INSTALLATION CAUTION (Police Cars):* Spacer must be installed between oil pump cover gasket and spacer gasket and the cover must be installed with switch away from alternator.

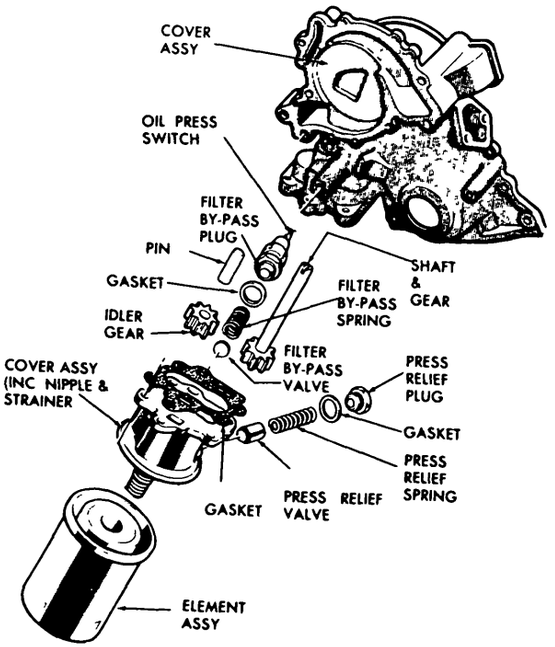


OIL PUMP: Removal & Disassembly - Remove oil filter and disconnect pressure switch wire at bypass valve cap. Remove oil pump cover assembly-to-timing chain cover screws, then remove cover assembly and slide out oil pump gears. Remove oil pressure relief valve cap, spring and valve. Remove oil filter bypass valve cap, spring and valve.

Inspection - Wash all parts thoroughly and inspect all parts for wear or scoring. Replace any relief valve spring that shows side wear or is questionable. Clean screen staked in bore. Valve should be an easy slip fit in bore. Check bypass valve for cracks, nicks or

CONTINUED ON NEXT PAGE

BUICK (EXC. SPECIAL) ENGINE OILING SYSTEM



BUICK SPECIAL ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

warping. Valve should be flat and the face free of nicks or scratches.

Assembly & Installation - Reverse removal and disassembly procedure and note the following: Lubricate relief valve before installation and tighten relief valve and bypass valve caps to 30-35 ft. lbs. *NOTE - Relief valve cap has no hole tapped for pressure switch.* Place straightedge across gears. Clearance between straightedge and gasket surface of timing chain cover should be .0018-.0058". If less, remove gears and check chain cover for wear. If satisfactory, remove gears, fill gear pocket full of petrolatum jelly and force gears into cavity. *CAUTION - This is important as pump will not prime itself with air in cavity.* Install gasket and tighten cover-to-timing chain cover screws alternately and evenly to 10-15 ft. lbs. Install filter and connect switch wire.

BUICK SPECIAL OIL PUMP

44, 46, 47, 4800 SERIES

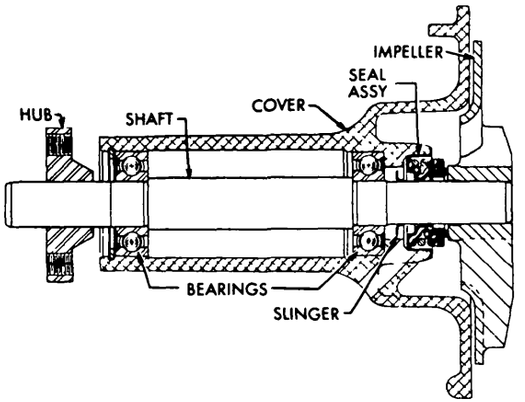
OIL PUMP: Removal & Disassembly - Remove oil pan, then remove oil pump. Remove screen and screen housing, then remove gasket, pipe, and cover from pump body. Remove gears. Remove hex cap, spring and ball valve from pump body.

Reassembly - Install gear and shaft and idler assembly in pump body with chamfered end of idler gear teeth inward away from cover. Use straightedge across pump that it has not collapsed. Check ball for wear and that it seats properly. Inspect body, cover, gears and shaft for wear or scoring. Replace all worn or damaged parts.

Cleaning & Inspection - Clean all parts in solvent and blow dry with air. Check for wear on side of spring and body to check clearance of gears and cover. Clearance should not be more than .005" or less than .0005". Lubricate and assemble parts to pump body by reversing removal procedure. When completely reassembled, pump shaft should turn freely and have slight endplay (.0005-.005").

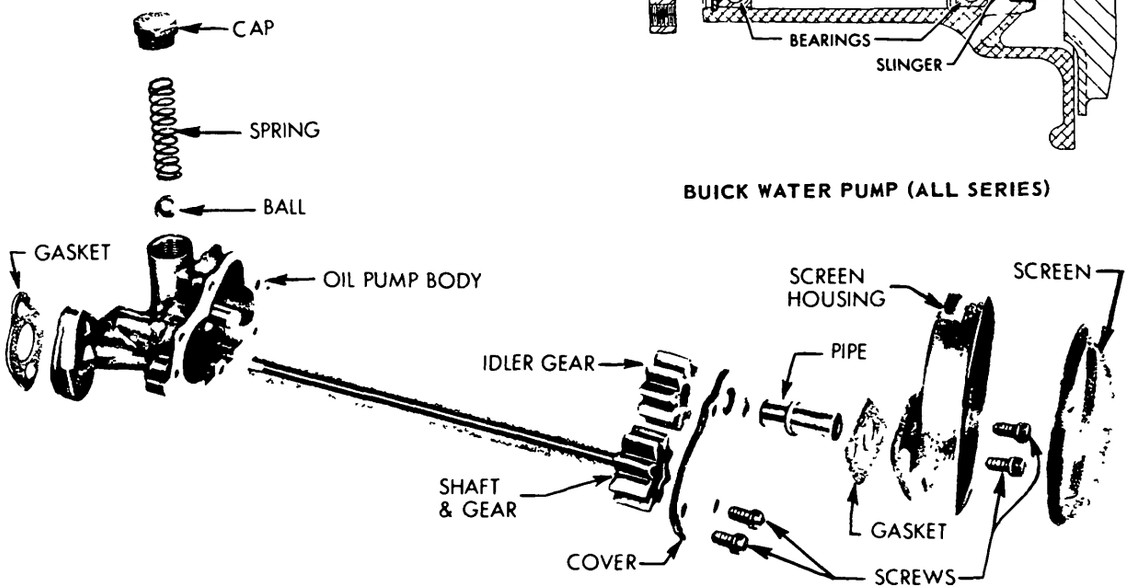
Installation - Install pump with new gasket, tightening screws while turning shaft back and forth through gear lash. *NOTE* - If pump shaft tends to bind as bolts are tightened, rap body lightly with plastic mallet to free shaft. Shaft must be free of bind when bolts are tight.

COOLING SYSTEM



ALL SERIES

WATER PUMP: *NOTE* - Water pump cover is die cast aluminum in which pump bearings are shrunk fit. The cover, shaft, bearings, and hub are not servicable. Seal and impeller are only servicable parts



Disassembly - Pull impeller from pump shaft (avoid end thrust on bearings). Remove carbon washer, rubber bellows and spring from brake sleeve. When necessary to replace sleeve, use drift through vent hole in pump body. *NOTE* - DO NOT use solvent to clean parts as it will destroy bearing lubricant.

Reassembly - Press new brass seal sleeve into body using thick walled tube. When old sleeve not removed, separate new seal bellows from seal bellows by soaking it in hot water to soften cement. Install bellows and spring in sleeve with notches in washer engaging driving dents of sleeve. Coat face of washer and impeller hub with rust preventative and press impeller on shaft until rear face is flush with end of shaft. *CAUTION - Avoid any thrust on shaft bearings.*

Installation - Clean gasket surfaces and use new gasket. Bolts with lockwashers must be tightened uniformly.

BUICK WATER PUMP (ALL SERIES)

BUICK (EXC. SPECIAL) OIL PUMP

►*JACKING & HOISTING CAUTION: Before jacking, hoisting or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Series	Series Designation
LeSabre	4400
Invicta	4600
Electra	4700
Electra "225"	4800

ENGINE & SERIAL NUMBER: Stamped on plate attached to left upper shroud surface adjacent to body number plate, and on top surface of crankcase forward of valve lifter cover on left side. Number (example below) includes identification data.

① ② ③ ④
4 H 1 001001

① - Series. **4** 4400. **6** 4600. **7** 4700. **8** 4800
② - Year Model. **H** 1961.
③ - Assembly Plant. **1** Flint. **2** South Gate. **3** Linden. **4)** Kansas City. **5)** Wilmington. **6)** Atlanta. **8)** Arlington.

④ - Beginning vehicle number at each assembly plant.

Engine Production Code Number: Stamped on same surface as Engine & Serial Number but on **right** side. When viewed from front of engine, number is upside down. Number is **not** used for licensing.

►*ENGINE PRODUCTION CODE NUMBER IDENTIFYING MARKS:* Used as follows
3H - 364" Eng. Std. 10.25-1 Compr Ratio (prefix).
L3H - 364" Eng. Low 9.0-1 Compr. Ratio (prefix).
4H - 401" Eng. 10.25-1 Compr. Ratio (prefix).

TUNE-UP

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel): See Note under Engine Specifications for recommended changes.*

►*FUEL CONSUMPTION CORRECTION (Early Cars):* Caused by failure of distributor vacuum advance diaphragm. Later cars have improved vacuum advance units.

►*THROTTLE LINKAGE INTERFERENCE WITH SPARK PLUG WIRES CORRECTION (4-Bbl. Carb. Cars):* Short spark plug wire bracket should be replaced with longer bracket, Part No. 1349147, furnished for either side of engine.

COMPRESSION PRESSURE: 160 lbs. (9.0-1 ratio), 180 lbs. (10.25-1 ratio) at cranking speed of 160 RPM. Cylinders must be equal within 15 lbs.

VACUUM READING: 14" Min. at 525 RPM.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely (lubricate shaft at each chassis lubrication). Check thermostat at 70°F (room temperature). There should be 180° wrap on spring.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "TUNE-UP" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.
Cylinders - RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .035".
Spark Plugs - AC No. 44S (Std.), No. AC-42 (High Speed Driving). 14 mm. Torque to 25-30 ft. lbs.

COIL: Delco-Remy No. 1115100.
Ignition Current - 3.7 amps. (stopped), 1.7 amps. (idling) all at 12 6 volts
Resistor - Resistance wire (1.80±.05 ohms) connected in circuit from coil to IGN.1 terminal of ignition switch. Bypassed during cranking by lead from IGN.2 terminal of switch to coil.

►*IGNITION CIRCUIT NOTE:* When ignition switch is in "Lock" position, coil resistance wire is grounded.

DISTRIBUTOR: Delco-Remy No. 1110962 (364" Eng. 9.0-1 Ratio), No. 1110961 (All Others).

►*DISTRIBUTOR IDENTIFICATION NOTE:* No. 1110962 has Zinc color oiler, No. 1110961 has Copper color oiler.
Condenser - Delco-Remy. **Capacity** .18-.23 mfd.
Breaker Gap - Gap (.016") will be correct when cam angle correctly set.
Cam Angle - 28-32° Set at 30° (will give .016" point opening).
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Clockwise viewed from above.

Automatic Advance - 1110961 & 962

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	450	0-4	900
3-5	950	6-10	1900
6-8	1425	12-16	2850
9-11	1900	18-22	3800

Vacuum Spark Control: Delco-Remy 1116163 (1110961 Distr.), No. 1116164 (1110962 Distr.).

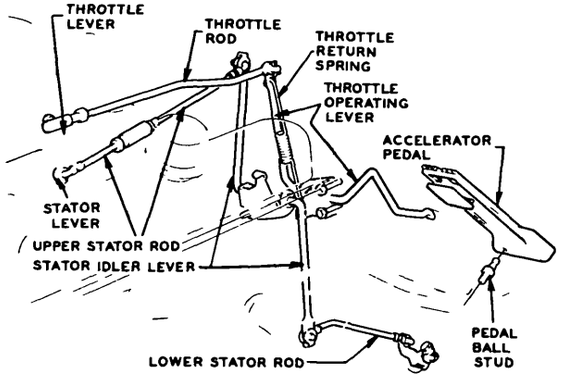
Vacuum Advance - 1116163

Distr Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8-10
8-10	10-20	16.25-18

Vacuum Advance - 1116164

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	6.5-8.5
6.5-8.5	13-17	12-14

IGNITION TIMING



Setting - 12° BTDC at 400 RPM.
Timing Mark - Timing indicator on chain case cover marked "O" (TDC) "5" (5° BTDC), and "12" (12° BTDC) Align correct mark with yellow paint filled groove on harmonic balancer

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg, Carter & Rochester carburetors used as follows:*

Engine & Compr. Ratio	Carburetor
364" (9.0-1)	Rochester 2GC or Stromberg WW 2-Bbl.
364" (10.25-1 Std.)	Rochester 2GC or Stromberg WW 2-Bbl.
364" (10.25-1 Power Pack)	Carter AFB 4-Bbl.
401" (10.25-1 All)	Rochester 4GC or Carter AFB 4-Bbl.

THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS.): Make sure stator linkage is properly adjusted (see below). Then proceed as follows: Disconnect carburetor throttle rod from throttle operating lever. Hold accelerator pedal firmly against floor mat and throttle in wide open position Now hold throttle rod at hole in lever. **Rod must be 1/16" short of notch in lever.** Readjust rod as necessary. Connect rod to lever and again check for wide open throttle with accelerator against floor mat. Check and adjust choke unloader if necessary. Check for smooth operation of linkage Desired wide open throttle position should be when accelerator pedal strikes floor mat rather than stop on throttle lever striking hard against boss on throttle body.

THROTTLE LINKAGE (AUTO. TRANS.)

Stator Linkage Adjustment - Hold upper end of stator idler lever forward against spring tension. Hold throttle lever in wide open position. Throttle lever should just make contact with stator lever on carburetor. Rotate turnbuckle to lengthen upper stator rod when there is clearance or to shorten upper stator rod should contact be made before throttle reaches wide open position. Tighten locknut and recheck for wide open throttle position.

Anti-Stall Dashpot Adjustment - After stator and throttle linkage properly adjusted, engine at normal operating temperature and idle speed correctly set, proceed as follows. Open throttle to clear fast idle cam and rotate cam to extreme fast idle position Let throttle close against cam. Adjust dashpot until it just touches throttle lever . Tighten locknut. Put transmission in "D" with brakes applied and jab accelerator pedal and release quickly. If engine stalls, adjust dashpot toward throttle lever, if too much time necessary for return to idle, move dashpot away from throttle lever. *Always tighten locknut after each adjustment.*

STROMBERG WW 2-BARREL

Stromberg WW, Code 7-114A (364" Eng. Exc. Power Pack).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Idl Setting - 1½ turns out. Adjust both screws alike. Turn screws out for richer mixture.
Idl Speed - 525 RPM (575 RPM on Air Cond. cars) in "N".
Fl at L vel - 3/16" from top of float at center to top of float bowl (gasket removed) with needle seated. To adjust, bend float arm tang.
Acc l rating Pump - Install pump connector rod in center hole of throttle lever.
Fast Idl : With engine at normal operating temperature, rotate fast idle cam so fast idle screw fully contacts low step of cam at edge. Adjust fast idle screw to obtain engine speed of 625 RPM.
Aut matic Ch k Setting: Centered at index.
Thr ttl Linkag Adjustm nt: *See CARBURETOR above.*
►*OTHER DATA: See "Stromberg WW (Buick, Dodge, Plymouth) Carbur tors" in Carburetion Section.*

ROCHESTER 2GC 2-BARREL

R chester 2GC, N . 7019042 (364" Eng. Exc. Power Pack).
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barr l fe ds Cyls. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*
Idl S tting - 1½ turns open. Turn screws out for richer mixture.
Idl Sp d - 525 RPM (575 RPM on Air Cond. cars) in "N".
Fl at Level - 11/16" (Gauge BT-184) from air horn gasket to lower (sharp) edge of float seam at outer end of float with air horn inverted. To adjust, bend float arm at rear.
Fl at Dr p - 1 29/32" (Gauge BT-184) from air horn gasket to bottom of float with air horn upright and float hanging freely. To adjust, bend float tang.
Acc lerating Pump - No seasonal adjustment.
Fast Idl : No adjustment (will be correct when hot or slow idle correctly set).
Automatic Ch ke Setting: One notch rich.
Thr ttle Linkag Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "R chester 2GC 2-Barrel Carburetors" in Carbur ti n Section.*

CARTER AFB 4-BARREL

Cart r AFB. Used as follows:

Engin	Carter No.
364" (10.25-1 Power Pack)	3089S
401" (10.25-1 All)	3088S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed 2-3-5-8.*
►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.
Idl Setting - 3/4 turn open. Adjust both the screws (primary side only) alike. Turn screws out for richer mixture.
Idl Sp d - 525 RPM (575 RPM on Air Cond. cars) in "N".
Thr ttl Linkag Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Carter AFB 4-Barrel Carbur tors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

R ch ster 4GC, No. 7019040 (401" Engin).
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed 2-3-5-8.*
►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.
Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike. Turn screws out for richer mixture.
Idle Speed - 525 RPM (575 RPM on Air Cond. Cars) in "N".
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Rochester 4G & 4GC 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Type HE. No. 4706.
Pressure - 4¾-6½ lbs. at carburetor height.
Fuel Line Filter: Located in line between fuel pump and carburetor. *NOTE* - Some Air Cond. cars have special filter with metering outlet in top and rubber hose for vapor fume return to gas tank.
►*FUEL FILTER NOTE:* Inspect every 1,000 miles, clean if necessary. Drain, clean bowl, and replace element every 5,000 miles.
►*FUEL FILTER ELEMENT REMOVAL CAUTION:* Turn thumbscrew to loosen bail by placing screwdriver in notch of thumbscrew and using bail as fulcrum. DO NOT ROTATE filter assembly on its threads.

Gasoline Gauge: AC electric type.
Dash Unit - AC No. 5643079 (4400, 4600), 5643424 (4700, 4800). *NOTE* - Gauge is a unit with printed circuit.

Tank Unit - AC. *NOTE* - Tank unit on early 4700, 4800 cars is "2-wire" type. *See diagram.*

AC Tank Unit No.

Model	Std. Car	Air Cond. Car
4400, 4600	5641447	5641448
4400 Sta. Wgn.	5641627	5641628
4700, 4800 Ⓒ	5641406	5641407

Ⓒ - "2-Wire" type. Later cars have "1-Wire" type (same as 4400, 4600 Series).

Air Cleaner: Oil wetted plastic foam type. Clean and reoil every 5,000 miles or sooner if needed.

►*AIR CLEANER INSTALLATION CAUTION (2-Bbl. Carb.):* Locate air cleaner with intake pointed about 45° to left of center line of engine and tighten wing nut by hand. On Pwr. Steering cars the intake will be located about 1 inch to rear of power steering pump.

►*PLASTIC ELEMENT CLEANING CAUTION:* Remove element carefully from mesh support and wash in nonflammable solvent. Kerosene or Oleum Spirits may be used if fire hazard precautions are observed. Squeeze element (do not wring out) to remove all solvent and reoil with 10W-30 engine oil. Element should not drip oil.

BATTERY

Delc N . 562 (W t), N . 563 (Dry). 12 volt, 11 plate 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative to cylinder head.
Engine Ground - From rear of each cylinder head to dash.

STARTER

Delco-Remy No. 1107800 (364" Eng.), No. 1107876 (401" Eng.).
Armature - Delco-Remy No. 1935851 (4400 Ser. less Air Cond.), No. 1945688 (All Others).
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. (1107876), 40 ozs. (1107800), minimum.

Performance Data - 1107800

Torque,	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3600-5100	10.6	65-100
	Lock	3.5	300-360

Performance Data - 1107876

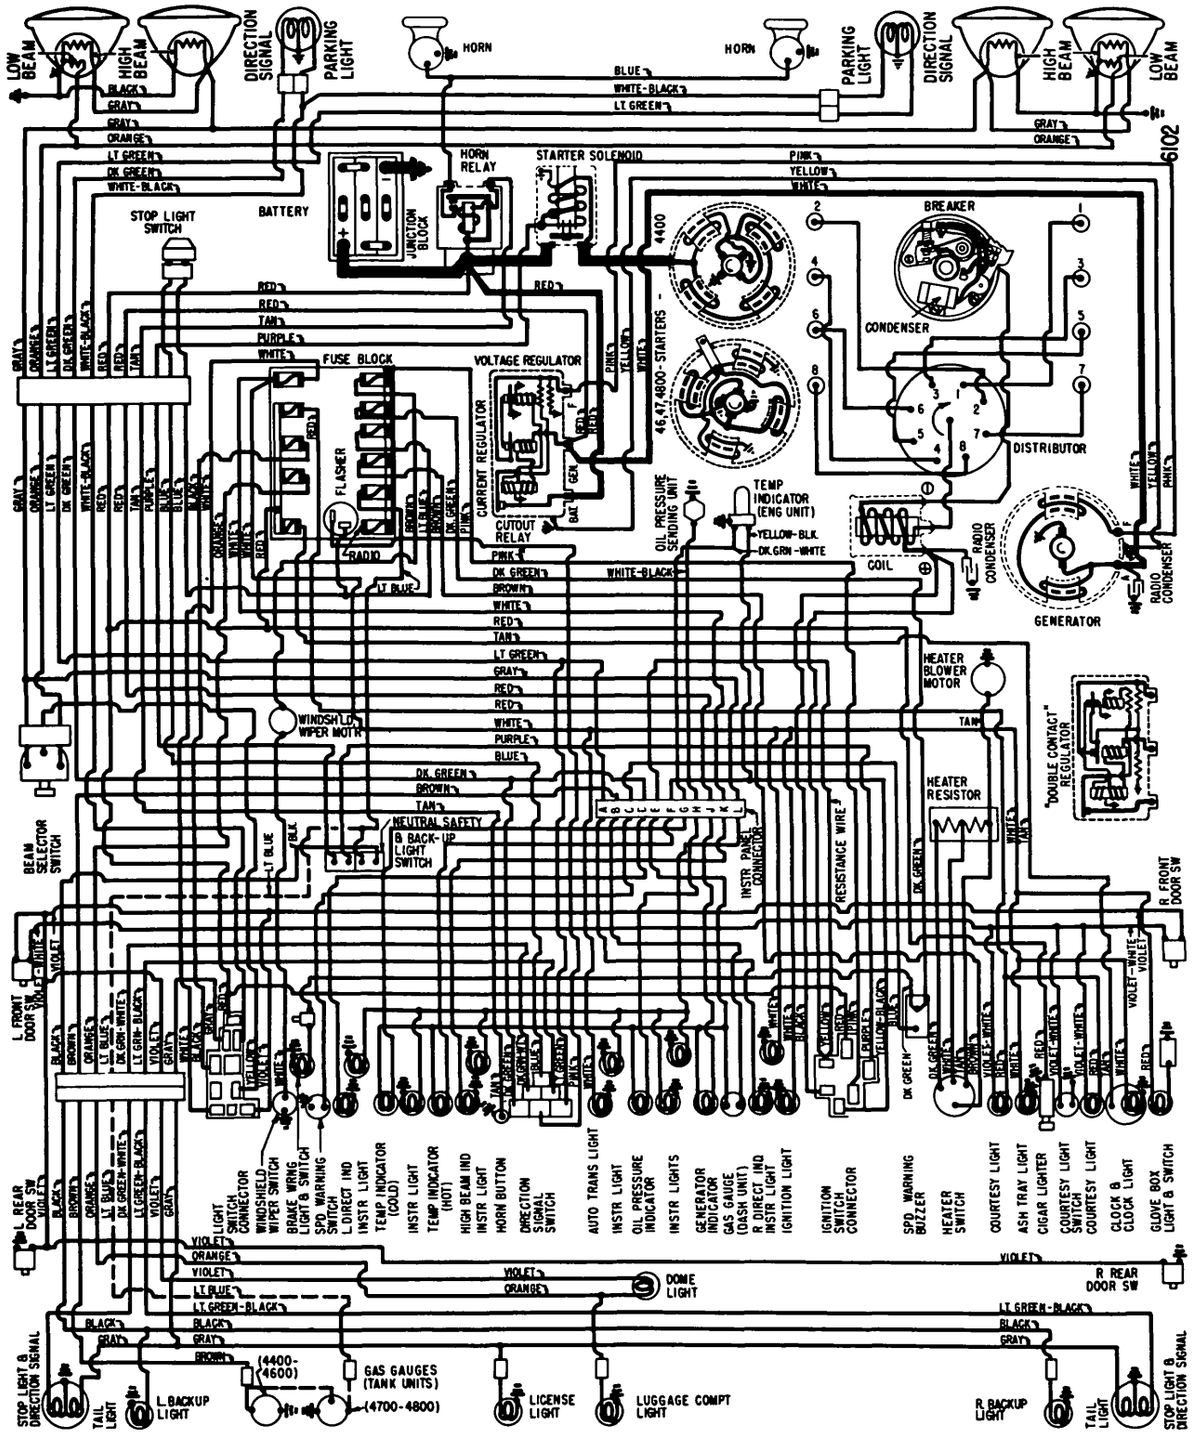
Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	3900-5400	10.6	80-120
	Lock	2.0	290-370

Ⓒ - Includes solenoid.

Starting Switch: Delco-Remy Solenoid No. 1114279 (364" Eng.) No. 1114272 (401" Eng.), controlled by combination Ignition & Starter Switch (Key starting) No. 1116588.
Neutral Safety & Back-up Light Swifch (Auto. Trans.): Buick No. 1178138. Mounted on steering column under cowl. Connected in starter control circuit so that starter operates only when selector lever is in "N" or "P" Parking position.
Adjustment - *See "Buick (Twin Turbine) Dynaflow" in Transmission Section.*

GENERATOR

Delco-Remy No. 1102181 (Std.), No. 1102215 (Air Cond.).
Armature - Delco-Remy No. 1946719 (Std.), No. 1939837 (Air Cond.).
►*CHARGING CIRCUIT FUSE CAUTION:* Battery charging circuit protected by a 40 Amp. (Std. Regulator). 50 Amp. (Air Cond. Regulator) fuse clipped to "BAT" terminal of generator regulator. Check for blown fuse when diagnosing battery, generator or regulator failure.



Performance Data

Generator	Amperes	Volts	RPM
1102181	35	14.0	2630
1102215	45	14.0	2400

Field Current - 1.69-1.79 Amps. (1102181), 2.66-2.86 Amps. (1102215) at 12 volts and 85°F.
Brush Spring Tension - 28 ozs.
Rotation - Counterclockwise at commutator end.

Belt Adjustment: Tension Gauge J-7316 should read "70" on Std. Cars midway between water pump and generator pulleys, "90" on Air Cond. Cars midway between water pump and compressor pulleys.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

GENERATOR REGULATOR

Delco-Remy No. 1119168 (Non Fuse), No. 1119277 (With Fuse) Std. Cars; No. 1119659 Air Cond. Cars.
NOTE - No. 1119659 is "Double Contact" type.

►*REGULATOR 1119168 & 1119277 ADJUSTMENT NOTE:* "Post Type" design with nylon adjusting nuts above Voltage & Current Regulator units for voltage and current adjustment.

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*

NOTE - Specifications below are "Normal" settings.

Cutout Relay

Cuts In - 11.8-13.5 volts (1119168,227), 11.8-13.0 (1119659).
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage Regulator

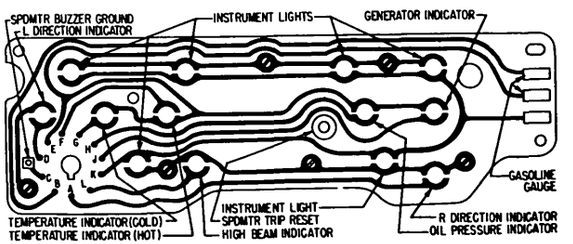
Setting (1119168,227) - 13.8-14.7 volts at 125°F ambient ambient temperature.
Setting (1119659) - 13.8-14.6 volts at 125°F ambient temperature on upper contacts. .1-.3 volts lower, operating on lower contacts.
Contact Gap (1119659) - .016".
Air Gap - .075" (1119168,227), .067" (1119659) with armature pressed down to point where contacts just touch.

Current Regulator

Setting (1119168,227) - 31.0-35.5 amps. at 125°F.
Setting (1119659) - 42.5-47.0 amps. at 125°F.
Air Gap - .075" with armature pressed down to point where contacts just touch.

►*OTHER DATA: See "Delco-Remy (Single Contact) Regulators" and "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL



►*INSTRUMENT CLUSTER ASSEMBLY NOTE:* It is necessary to remove Instrument Cluster Assembly to replace printed circuit and fuel gauge. Light bulb sockets are accessible by lowering either right or left lower plate and are removed by turning bulb socket counterclockwise.

Instrument Cluster Assembly: Removal - 1) Remove Instrument panel screws (4 along front edge) and position mirror in its rearmost position.

2) Lift up cover and pull it toward rear of car to remove it, then disconnect clock wiring connectors.

3) Lower left control plate and disconnect printed circuit plug. *CAUTION* - Use care to prevent damaging pins on printed circuit.

CONTINUED ON NEXT PAGE

BUICK INSTRUMENT CLUSTER PRINTED CIRCUIT

CONTINUED FROM PRECEDING PAGE

4) Remove knob and nut from end of speedometer reset shaft and unplug parking brake warning light socket (if used) from panel.

5) Remove three screws securing cluster to instrument panel and lift cluster up to disconnect speedometer cable and remove assembly.

►*PRINTED CIRCUIT REMOVAL CAUTION:* Safety Buzzer ground wire (if used) must be disconnected from pin on underside of printed circuit before removing printed circuit.

Installation - Reverse removal procedure aligning projection on disconnect plug with keyway when assembling plug on connector pins and be sure that ground clip is installed correctly.

Speedometer Removal: Speedometer can be removed from cluster assembly after assembly removed.

"Guid-Matic" Headlight Control: *See Electrical Section.*

Lighting Switch Removal: Disconnect battery ground cable. Remove light switch and vent control plate to instrument panel screws and pull plate out from instrument panel. Unplug multiple connector and pull switch out to last notch, then depress latch button on top of switch as you draw rod and knob assembly out of switch. *CAUTION - DO NOT depress latch button prior to pulling on knob and rod.* Remove switch escutcheon with wrench J-8563, then remove nut with wide blade screwdriver. Remove switch plate.

CIRCUIT BREAKERS: 15 Ampere - Headlights & High Beam Indicator, Parking & Tail lights. In headlight switch. *NOTE - Tail lights also protected by 10 Amp. fuse in fuse block (see below).*

Special - Cigar lighter. On back of lighter.

FUSES: *NOTE - All fuses in fuse block mounted under instrument panel on left side.*

30 Amper - Heater Blower.
25 Amper - Windshield Wiper.
20 Amper - Dome & Trunk lights.
10 Amper - Tail lights. *Also protected by headlight switch circuit breaker (see above).*
10 Amper - Direction Signals & Stop lights.
10 Amper - Back-up lights & 4700 Series Gas Gauge Tank Unit lead.
7.5 Amper - Radio.
5 Amper - Map & Glove Box lights.
5 Amper - Brake Warning Light & Speed Warning Buzzer.
3 Amper - Instrument Panel Lights.
2 Amper - Clock.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: **Own.** 90°V8, valve-in-head. 364" & 401" engines of same design used previously.

Engin	Bor	Stroke	Displacement

401" 4-Bbl.	10.25-1	56.11	325 at 4400 RPM

① - Regular Fuel Option. ② - Std. Engine.
③ - Power Pack

Compression & Vacuum Reading - *See TUNE-UP.*

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel):* Minimum fuel octane rating for satisfactory operation is 93 for Series 4400 (364" Eng.), 99 for Series 46, 47, 4800 (401" Eng.). If satisfactory fuel cannot be secured for 9.0-1 ratio engines, installation of .045" thick cylinder head gasket will improve performance. For all engines, lower compression ratio to 8.75-1 by using export pistons and head gaskets as listed below. *NOTE - Compression ratio for all export engines is 8.75-1.*

Engine	Piston	Head Gasket
364"	1388541	① 1185646 (.015")
401"	1388539	① 1185646 (.015")

① - All head gaskets are the same.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*

CYLINDER HEAD & GASKET: Cylinder heads are interchangeable between engines. All engines use a .015" cylinder head gasket and lower compression ratio used with Regular Gas Option, is obtained by use of lower dome height pistons. *See "Engine Operation in Low Octane Areas (Foreign Travel)" above.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

PISTONS

Aluminum alloy, cam ground - transverse-slot, divorced skirt.

Clearance - .0008-.0014" (364"), .001-.0016" (401"). Measure clearance at right angle to piston pin ¼" below top of skirt.

Removal - Pistons and rods removed from above.

Replacement Pistons: Furnished Std. and .001", .005", .010", .020" & .030" Oversize. *NOTE - Pistons furnished only with fitted pins.*

Installing Pistons: Install pistons and rods with valve depressions in head of piston on same side as oil spurt notch in lower end of rod. *See Rod Installation.*

PISTON PIN

Pin is press fit in connecting rod.

Diameter - .9994-.9997". **Length** - 3.520".

Clearance in Piston - .0001". Finger push fit.

Clearance in Rod - .0007-.0015". Press fit.

Piston Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION - Pistons may be damaged if special procedure and tools not used.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	.077-.078"	.015-.025"	.003-.005"
Oil	.181-.187"	.015-.035"	.0035-.0095"

►*COMPRESSION RING INSTALLATION NOTE:* **364" Eng.** - Install both (identical) compression rings with inner bevel toward bottom of piston. **401" Eng.** - Install compression rings with side of ring up which is marked either with a dimple, a letter "T", a letter "O" or word "TOP". Top ring with inner bevel toward top of piston and second ring with inner bevel toward bottom of piston.

Replacement Rings: Furnished Std. and .010", .020", .030" Oversize.

CONNECTING ROD

Length - (361") 6.100", (401") 6.220" Center-to-center.

Crankpin Journal Diameter - 2.249-2.250". Out-of-round limit .0015".

Bearings - Steel backed M400 Aluminum, full precision type. Both halves interchangeable.

Clearance - .0002-.0023". Wear limit .003".

Sideplay - .005-.012" (Two rods).

Replacement Bearings: Standard and .001", .002", .020" and .021" Undersize.

Installing Rods: Install piston and rod assembly in engine with spurt notch in lower end of rod and valve depressions in pistons on the high side of cylinder bore. This will bring all spurt notches and valve depressions in piston toward camshaft. Rib on edge of rod cap should be on same side as conical boss on web of rod and both marks should face toward adjacent connecting rod on same crankpin.

CRANKSHAFT

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars): See "Engine Balancing" in Buick Special Data.*

Journal Diameter - 2.498-2.499". Five bearings. Out-of-round limit .0015".

Bearings - Durex 100A (Rear Main), M400 Aluminum (All others), full precision type. Both halves interchangeable.

►*BEARING NOTE:* Bearing upper halves can be rotated out and in by using Tool KMO-734 in oil hole.

Clearance - .0005-.0021".

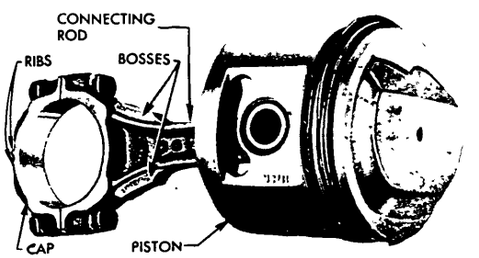
Replacement Bearings: Furnished Std. and .001", .002". .003" Undersize.

End Thrust: Taken by No. 5 (364"), No. 3 (401") main bearing.

Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data.*



Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

CAMSHAFT

Camshaft Part No. 1196037 (4400 Series), No. 1185918 (Others).

CONTINUED ON NEXT PAGE

BUICK PISTON & ROD ASSEMBLY

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

►*CAMSHAFT SPROCKET NOTE:* Two types of die-cast nylon sprockets used on later cars. A thrust washer must be used with plain hub (1st. type) sprocket. Later type, Part No. 1350597, has raised thrust surface (no thrust washer required) and will be furnished as replacement on all 1957-61 cars.

Journal Diameters - (1) 1.785-1.786", (2) 1.755-1.756", (3) 1.725-1.726", (4) 1.695-1.696", (5) 1.665-1.666".

Bearings - Steel-backed babbitt lined bushings.

►*BEARING REPLACEMENT NOTE:* Camshaft bearings must be line reamed after being pressed into block.

Clearance - .0005-.0035". Service limit .0015-.004".

End Thrust: Taken by hub of camshaft sprocket. Distributor and oil pump drive force camshaft to rear at all times.

Timing Chain: Link belt. **Width** - .864", **Pitch** - .500". **Length** - 26" or 52 links.

Camshaft Setting: "O" marks on camshaft and crankshaft sprockets in line with straightedge across shaft centers.

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (Hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	①	4.785"
Exhaust	1.500"	②	4.785"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	③	⑤
Exhaust	45°	④	⑥

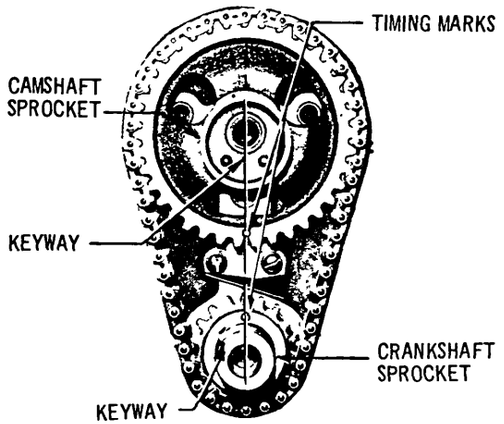
① - Top .373", Bottom .3715".
② - Top .372", Bottom .3705".
③ - .443" (364" Eng.) .439" (401" Eng.).
④ - .439" (364" Eng.), .441" (401" Eng.).
⑤ - (Top) .001-.003". (Bottom) .002-.004".
⑥ - (Top) .0015-.0035", (Bottom) .0025-.0045".

Valve Seat Width - 1/16" average (3/64-5/64").

►*VALVE GRINDING CAUTION:* Normal height of valve stem above rocker arm gasket surface is 1.540". When valve facing or seat grinding raises valve stem height more than .050" above normal, grind off end of valve stem or replace valve.

Valve Springs: Inner and outer springs used on all valves. Install with closed coils against cylinder head.

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Length	Lbs. Press.	Length
Closed	23-28	1.69"	39.5-44.5	1.60"
Open	73-79	1.25"	93-99	1.16"



Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3..

Hydraulic Valve Lifters: Barrel type.

Diameter - .8425". **Clearance in Block** - .0015-.003".

Lifter Overhaul & Testing - *See "Valve System" in Buick Special Data.*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

BUICK VALVE TIMING MARKS

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

(364" Engine)

Intake Valves - Open 31° BTDC. Close 77° ALDC.
Exhaust Valves - Open 69° BLDC. Close 41° ATDC.

(401" Engine)

Intake Valves - Open 33° BTDC. Close 77° ALDC.
Exhaust Valves - Open 75° BLDC. Close 44° ATDC.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

Crankcase Capacity: 4 qts. refill, 5 qts. dry engine. Add 1 qt. for filter change.

Normal Oil Pressure; 40 lbs. at 1600 RPM.

Pressure Regulator Valve - In oil pump body. Not adjustalbe.

Oil Pressure Indicator: Oil pressure warning light on instrument panel and oil pressure switch in oil gallery at right rear of engine. Lights when oil pressure below a safe level.

Engine Unit - AC No. 1508753.

Oil Pump: Spur-gear type oil pump mounted at rear end of crankcase and driven by distributor drive shaft.

Oil Pump Removal & Overhaul - *See "Oiling System" in Buick Special Data.*

Oil Filter: AC full-flow type, mounted on right rear of engine. **Replace element every other oil change.** *NOTE* - Ball check in filter base bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

►*OIL FILTER PRODUCTION CHANGE:* Larger and stronger welded hex Filter AC-PF-7 No. 5577410 used on later cars and for replacement of early filter AC-PF-5 Part No. 5575198.

Replacement Filter Element - AC-PF-5 (Early), AC-PF-7 (Later).

►*OIL FILTER INSTALLATION CAUTION:* DO NOT use a wrench to tighten filter. Tighten by hand until gasket contacts sealing face, then tighten an additional 2/3 turn. This supersedes previous installation instruction.

Crankcase Ventilation: Standard Cars - Air enters through two ventilating type filter caps at top of each rocker arm cover. Air is drawn out through metal gauze filled filter located at rear end of valve lifter cover and ventilator pipe extending down from lifter cover.

Positive Crankcase Ventilation Cars - Same as for standard cars except that ventilator pipe is removed and a vent tube adapter, valve assembly and hose is connected to intake manifold adapter. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Temperature Controlled Fan Clutch (AC Cars): Air Cond. cars equipped with 20" fan have a torque sensitive fan clutch. Flow of silicone (governing fan speed) controlled by temperature sensitive coil. When air through radiator is 80°F or below, fan speed is 800-1200 RPM. At higher temperatures speed of fan into a maximum of 2100 RPM.

Fan Clutch Adjustment - Normal position is in center slot of tab. For hotter fan cut-in, place spring end in right hand slot (facing engine). For colder fan cut-in place spring end in left hand slot (facing engine). To reposition spring, bend retaining tab just enough to move spring.

Water Capacity: 17 qts. Add 1½ qts. for heater.

Pressure Valve: Radiator filler cap. 15 lb. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Poppet type, located in water manifold above pump. Opens at 167-172°F.

Water Pump: Packless sealed ball bearing type with aluminum housing. *NOTE* - Shaft seal and impeller are the only replaceable parts.

See "Cooling System" in Buick Special Data.

Pump Removal - Drain cooling system. loosen belts, and remove fan blade, spacer, and pulleys from water pump hub on pump shaft. Remove belts. Disconnect hose from pump inlet and heater hose from nipple. Remove bolts, then remove pump assembly and gasket from timing chain cover.

Temperature Indicator: Two light system (Red & Green) with temperature switch in engine block. GREEN light is lighted when engine running cold and goes out when engine temperature reaches 110°F. RED light remains off during normal engine operation but comes on when engine temperature reaches 245°F. *NOTE* - Red light circuit is connected to Oil Pressure sender line through a vacuum switch so that the light will come on when ignition switch is turned on (this checks bulb and circuit each time engine is started). As soon as engine starts and manifold vacuum builds up, vacuum switch opens this circuit and red light will go out.

Engine Unit - AC No. 1998746.

LUBRICATION

TWIN-TURBINE AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 1000 miles, drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type A. Suffix A.

Checking Fluid Level: Check with engine idling and transmission at normal operating temperature with selector lever in "P" (Park) position. Maintain fluid level on dipstick under hood on right side of engine between "Add Oil" and "Full" marks. Do not fill above "Full" mark. Use Automatic Transmission Fluid Type A, Suffix A. *NOTE* - One pint of fluid will raise level from "Add Oil" to "Full" mark.

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*STARTING CAR BY PUSHING NOTE (AUTOMATIC TRANSMISSION CARS): Because of transmission design, car cannot be started by pushing.*

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Series	Series Designation
Special (Standard)	4000
Special (Deluxe)	4100

SERIAL NUMBER: Stamped on left hand cowl-to-frame brace in engine compartment (Early Cars), on plate attached to left front door hinge pillar (Later Cars). This number also stamped on crankcase just forward of right cylinder head. Number (example below) includes identification data.

① ② ③ ④
0 H 1 001001

① - Series. **0** - 4000. **1** - 4100.
② - Year **H** - 1961.
③ - Assembly Plant. **1** - Flint. **2** - South Gate.
④ - Beginning vehicle number.

ENGINE NUMBER: Same as Serial Number above.

Engine Production Code No. Stamped on same surface of engine as Engine & Serial No. When viewed from front of engine, number is upside down. Standard compression engines have an "H" prefix. Low compression engines have a prefix "LH". *NOTE - ¼" dash following code number indicates .010" oversize cylinder bores.*

TUNE-UP

►*FUEL CONSUMPTION CORRECTION (Early Cars):* Caused by failure of distributor vacuum advance diaphragm. Later cars have improved vacuum advance unit.

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel): See note under Engine Specifications for recommended changes.*

COMPRESSION PRESSURE: 160 lbs. minimum (standard compression ratio) at normal cranking speed. Cylinders must be equal with 15 lbs.

VACUUM READING: 14" minimum at 525 RPM.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: None used. Intake manifold is heated by engine coolant.

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles. See *"Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plugs - AC No. 45FFS (Std. Eng.), AC No. 44FFS (Hi Perf. Eng.). Tighten to 20 ft. lbs. (Lubricated).14mm.

COIL: Delco-Remy 1115136.

Ignition Current - 1.7 amps. idling. 3.7 amps. stopped.

Resistor - Resistance wire (1.80±.05 ohms) connected in circuit from ignition switch to coil. Bypassed during cranking.

DISTRIBUTOR: Delco-Remy 1110977.

Condenser - Delco-Remy. **Capacity** .18-.23 mfd.

Breaker Gap - .013-.019". Gap will be correct when cam angle properly set.

Cam Angle - 28°-32°. Set to 30°.

Breaker Arm Spring Tension - 19-23 ounces.

Rotation - Clockwise when viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	525	0-4	1050
6.5-8.5	1050	13-17	2100
12-14	1850	24-28	3700

Vacuum Spark Control: Delco-Remy 1116182.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6-8
8	16	14.5-15.75

IGNITION TIMING

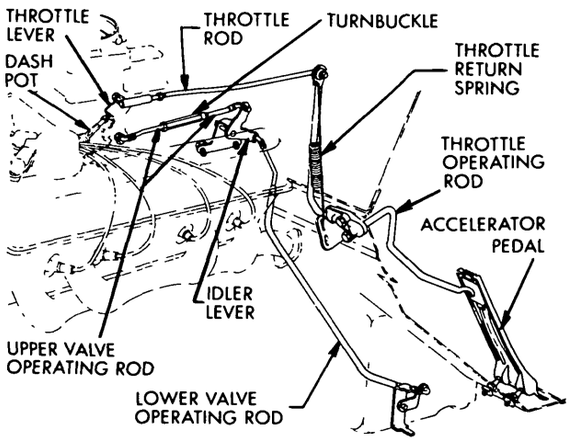
Setting - As follows:

Std. Engine	①BTDC	RPM
All Trans.	7½°	1050
or ③	5°	400
Hi. Perf. Engines		
S.M. Trans.	7½°	1050
Auto. Trans.	②10°	1050
or ④	7½°	400

① - With vacuum line disconnected.
② - This supersedes previous specification of 7½°.
③ - 1050 RPM setting preferred. If 400 RPM setting used, idle speed must be reset after timing completed.
④ - For improved low speed operation. Idle speed must be reset after timing completed.

Timing Mark - Timing indicator on chain case cover marked "O" (TDC), "5" (5° BTDC), "10" (10° BTDC). Align correct mark with yellow paint filled groove on harmonic balancer.

CARBURETOR



►*CARBURETOR APPLICATION: Rochester 2-Barrel Carb. (Std. Eng.), 4-Barrel Carb. (Hi Perf. Eng.).*

►*CARBURETOR THROTTLE LEVER BIND CORRECTION:* Loosen upper bearing block bolt and insert a paper shim (.010") and retighten bolt. If not corrected, remove both blocks and remove all burrs or tool marks from operating lever and reassemble.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels feed Cyls. 2-3-5-8.*

THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS.): Move throttle lever to wide open position and make sure carburetor-to-transmission linkage does not prevent throttle from opening completely. *NOTE - If throttle does not open completely, adjust carburetor-to-transmission linkage (see below).* Disconnect rear end of throttle rod from throttle operating lever, then with accelerator pedal pressed firmly against floor mat, hold throttle in wide open position and hold rear end of throttle rod at hole in throttle operating lever. **Rod end must be approximately 1/16" short of entering hole in lever.** Adjust rod length as necessary, then connect rod to lever and secure with cotter pin. With accelerator pedal pressed to floor mat, recheck throttle for wide open position.

TRANSMISSION LINKAGE ADJUSTMENT (AUTO. TRANS.): Hold throttle in wide open position, check adjustment by pushing transmission idler lever fully forward (through detent). Linkage should have all play just taken out, but not adjusted so short that stop in transmission prevents carburetor from reaching wide open throttle. When throttle does not reach wide open position **lengthen** rod by rotating turnbuckle. When there is any play in linkage, **shorten** rod. Tighten jam nut and recheck linkage operation. *CAUTION* - Never drive car with linkage misadjusted or disconnected as line pressure will be too low and result in burnt clutches.

AUTO. TRANS. THROTTLE LINKAGE

ROCHESTER 2GC 2-BARREL

Rochester 2GC No. 7019093 (Synchro-mesh); No. 7019090 (Auto. Trans.).

Idle Setting - 1½ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed - 525 RPM (575 RPM Air Cond. Cars) with transmission selector lever in Neutral or Park position.

Float Level - With air horn assembly inverted, position Float Level Gauge J-9161-1 (1 17/64") over float so it rests against pump side of power piston shaft, with outer leg in line with center of float. To adjust, bend float arms.

Float Drop - Hold air horn assembly upright and measure distance from gasket to bottom of float pontoon at outer end. The distance should be 1 29/32". To adjust, bend tang on float arm.

Fast Idle - Fast idle speed will be correctly set if slow (hot) idle speed is properly adjusted.

Accelerating Pump - Install rod in outer hole. *CAUTION* - Inner hole is not to be used under any circumstances.

Automatic Choke Setting: Centered on index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 2GC Carburetors" in Carburetion Section.*

ROCHESTER 4GC 4-BARREL

Rochester 4GC No. 7020045 (Synchro-mesh), No. 7020043 (Auto. Trans.).

►*IDLE COMPENSATOR CAUTION:* Idle compensator

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

(thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or other suitable tool inserted in throttle bore to hold valve closed.

Idle Setting - 1½ turns open. Adjust both screws (primary side only) alike.

Idle Speed - 525 RPM (575 RPM on Air Cond. Cars) with selector lever in Neutral or Park Position.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Type HQ. No. 4827.

Pressure - 4½-5¾ lbs. at pump outlet.

Fuel Line Filter: Located in fuel line between fuel pump and carburetor. *NOTE* - Woven plastic filter located at lower end of fuel pick-up pipe in gas tank.

►*FUEL LINE FILTER ELEMENT REMOVAL CAUTION:* Turn thumbscrew to loosen bail by placing screwdriver in notch of thumbscrew and using bail as fulcrum. DO NOT rotate filter assembly on its threads.

►*FUEL FILTER NOTE:* To clean, remove glass bowl and soak bowl in cleaning solvent to loosen any deposits. Replace element (AC type GF-124) every 5000 miles, or more frequently when contamination has entered fuel system.

Gasoline Gauge: AC electric type.

Dash Unit - AC No. 5643354.

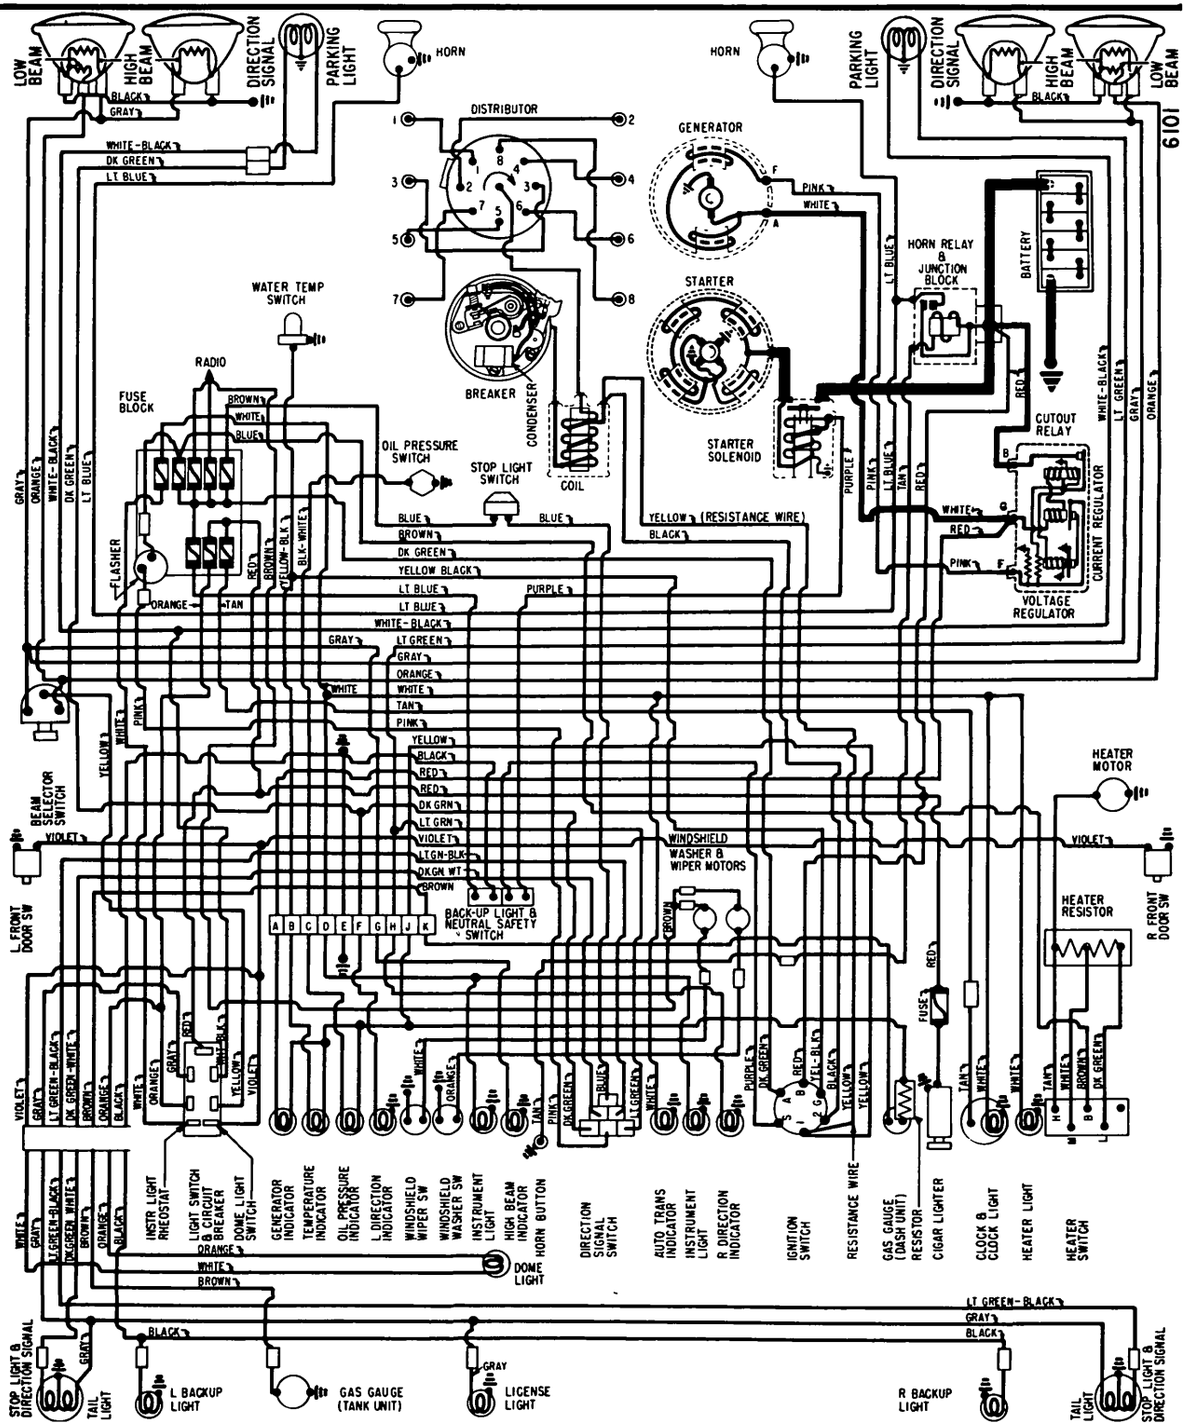
Tank Unit - AC No. 5641760 (exc. Air Cond.), 5641818 (Air Cond. Cars).

Air Cleaner: Oil wetted plastic foam type. Clean and reoil every 5,000 miles or sooner if needed.

►*AIR CLEANER INSTALLATION CAUTION:* No locating tabs used. Install air cleaner on carburetor and securely tighten wing nut **by hand.** The word "FRONT" must be located on the forward center line of engine.

►*PLASTIC ELEMENT CLEANING CAUTION:* Remove element carefully from mesh support and wash in nonflammable solvent. Kerosene or Oleum Spirts may be used if fire hazard precautions are observed. Squeeze element (do not wring out) to remove all solvent and reoil with 10W-30 engine oil. Element should not drip oil.

BATTERY



Delco-Remy No. 454 (Wet), No. 455 (Dry). 12 volt, 9 plate, 40 ampere hour capacity (20 hr rate).

Battery Ground - Negative, to Cylinder head bolt.

►*BATTERY GROUND CABLE PRODUCTION CHANGE:* Later cable has a No. 14 wire at battery terminal end connected to horn and junction block bracket by the bracket mounting screw. This wire properly grounds wiper motor and prevents burning out of voltage regulator should body ground strap be broken.

Engine Ground - Engine to dash ground strap at rear end of right cylinder head and dash. An additional ground strap from front suspension crossmember to frame crossmember at front suspension mount (under grille at front of car) is used.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STARTER

Delco-Remy No. 1108303.
Armature - Delco-Remy No. 1935829.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 35 ozs. min.

Performance Data

Torque	RPM	Volts	℄ Amperes
0 ft. lbs.	6750-10500	10.6	58-80
	Lock	4.0	280-320

℄ - Includes solenoid.

Starting Switch: Delco-Remy Solenoid No. 1114266, mounted on starter and controlled by combination Ignition & Starter Switch Delco-Remy No. 1116588.

Neutral Safety & Back-up Light Switch: Delco-Remy No. 1347209 (without Back-up Lights), No. 1349888 (with Back-up Lights) mounted on steering column under cowl. Connected in starter control circuit so that starter operates only when selector lever is in "N" or "P" position.

Adjustment - *See "Buick Special Automatic Transmission" in Transmission Section.*

GENERATOR

Delco-Remy No. 1100389 & 393 (Early Cars without Air Cond.); 1102235 (Oth rs).
Armature - Delco-Remy No. 1948005 (1102235 Gen.), No. 1951267 (1100389 & 393 Gen.).

►*CHARGING CIRCUIT FUSE CAUTION: Battery charging circuit protected by a 40 amp. fuse clipped to "BAT" terminal of generator. Check for blown fuse when diagnosing battery, generator or regulator failure.*

►*GENERATOR & EXHAUST MANIFOLD PRODUCTION CHANGE:* To improve low speed output, a 1" longer generator used on later cars. The right exhaust manifold boss was shortened 1" to accommodate the longer generator. Both the 11" Part No. 1100389 & 1100393 and the 12" Part No. 1102235 generators will be furnished but only the later type manifold. Use a Generator Spacer Part No. 1348889 and bolt No. 9417281 when installing an 11" generator with later type manifold.

Performance Data

Generator	Amperes	Volts	RPM
1100389 & 393	35	14.0	2670
1102235	35	14.0	2630

Field Current - 1.69-1.79 amps. at 12 volts and 80°F.
Brush Spring Tension - 28 ozs.
Rotation - Counterclockwise at commutator end.
Belt Adjustment: Tension reading on Gauge J-7316 should be 60 lbs. when placed midway between generator and water pump pulleys.

GENERATOR REGULATOR

Delco-Remy 1119277.

►*REGULATOR ADJUSTMENT NOTE:* "Post Type" design with nylon adjusting nuts above Voltage & Current Regulator units for voltage and current adjustment.

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*

NOTE - Specifications below are "Normal" settings.

Cut out Relay
Cuts In - 11.8-13.5 volts.
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage Regulator
Setting - 13.8-14.7 volts at 125°F ambient temperature.
Air Gap - .075" with armature pressed down to point where contacts just touch.

Current Regulator
Setting - 31.0-35.5 amps. at 125°F.
Air Gap - .075" with armature pressed down to point where contacts just touch.

►*OTHER DATA: See "Delco-Remy (Single Contact) Regulators" in Electrical Section.*

ALTERNATOR & REGULATOR

Delco-Remy Alternator No. 1117070 with Transistorized Regulator No. 9000554 and separately mounted Field Relay No. 1116895.
Rated Output - 60 amperes (hot) - 58 amperes at 14 volts and 2500 RPM (Cold - 70°F).
Rotation - Clockwise at drive end.

►*OTHER DATA: See "Delco-Remy (Internal Rectifier) ►Alternators & Transistorized Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*INSTRUMENT CLUSTER ASSEMBLY NOTE:* This assembly is made of plastic and contains speedometer, indicator lights, fuel gauge, light switch, wiper & washer switch, ignition & starter switch and lighter. It is necessary to remove instrument cluster to remove printed circuit which is a part of speedometer housing. Light bulbs are accessible without removing cluster by turning sockets counterclockwise. An external ground is used for lights, switches and lighter. *CAUTION* - Disconnect battery ground cable at battery before removing any instrument panel unit or wiring.

Instrument Cluster Assembly: Removal - 1) Install two pieces of cloth tape 1" wide x 4" long (double thickness) over lower flange of instrument panel to prevent damage to harness.

2) Remove cluster hood, then remove two nuts from under panel that retain cluster at each side. Remove two lower edge of cluster to instrument panel tie bar screws.

3) Disconnect wiring harness connectors from headlight switch, windshield wiper switch, ignition switch and lighter. Disconnect speedometer cable and printed circuit plug.

4) Remove cluster by pulling rearward and upward.

Installation - Reverse removal procedure being careful to line up disconnect plug with keyway in printed circuit when assembling plug on connector pins.

Speedometer Removal: Remove Instrument Cluster Assembly, see above, then remove speedometer from cluster.

Lighting Switch Removal: Disconnect battery ground cable, unplug multiple connector from switch. Pull switch out to last notch and depress loaded latch button on left side of switch while pulling rod and knob assembly out of switch. Remove switch escutcheon with wrench J-8563 and remove switch from instrument panel.

CIRCUIT BREAKERS: 15 Ampere. Headlight & Front Parking Lights. In headlight switch.

FUSES: All fuses in fuse block mounted under instrument panel on left side.
25 Ampere - Wiper & Washer motor.
20 Ampere - Direction Signal, Signal Indicator & Stop Lights.
20 Ampere - Heater, Air Cond. Blower & Compressor Clutch.
9 Ampere - Back-up Lights.
9 Ampere - Tail, License & Dome Lights.
4 Ampere - Radio.
3 Ampere - Panel Lights & Rheostat.
2 Ampere - Clock.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head. Cylinder block is Aluminum (with cast-in cylinder liners). Cylinder head is also Aluminum.

Series	Bore	Stroke	Displacement
4000, 4100	3.5"	2.80"	215 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
Standard	8.8-1	39.2	155 at 4600 RPM
Hi-Perf.	10.25-1	39.2	185 at 4800 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*ENGINE SERVICE NOTE:* For Aluminum Engine *Service Cautions see ENGINE in Buick Special Data.*

►*ENGINE OPERATION IN LOW OCTANE AREAS (Foreign Travel):* Minimum fuel octane rating (research method) for satisfactory operation is 93. If satisfactory fuel cannot be obtained, compression ratio can be decreased to 7.6-1 by installing export pistons, Part No. 1389596. Fuel of 83 octane (research method) may be used with engine having the lower compression ratio.

►*OIL PAN PRODUCTION CHANGE & CAUTION:* Later type oil pan does **not** have oil baffles and the drain plug has been moved rearward. A different oil screen housing pipe and flange used and a different oil gauge rod. Only second type oil pan will be furnished. When installing late type oil pan on early engine, also change oil screen housing pipe and gauge rod to later type.

OIL PAN REMOVAL: Drain oil and remove steering idler arm bracket-to-crossmember attaching bolts, then remove lower flywheel housing. Remove oil pan bolts and lower pan enough to remove oil pump pipe and screen-to-cylinder block bolts. Rotate crankshaft for maximum clearance of forward end of oil pan. Move front of pan to right and lower pan through opening between crossmember and steering intermediate shaft.

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

PISTONS

Aluminum alloy, cam ground, transverse slot, divorced skirt.

Clearance - .001-.0015" measured as follows: **On piston,** ¼" below oil ring groove at right angles to piston pin. **In bore,** at right angles to crankshaft 1½-2" from top of cylinder bore. Piston and bore should be at same temperature.

Removal - Pistons and rods removed from above.

Replacement Pistons: Furnished Std. & .010" Oversize.

Installing Pistons: Pistons may be installed on rods in either direction. Piston pins are not offset and pistons are concentric. *See Rod Installation.*

PISTON PIN

Pin is pressed fit on connecting rod.

Diameter - .8747-.8750". **Length** - 2.870".

Clearance in Piston - .0001" select. At 70°F.

Clearance in Rod - .0005-.0013". Press fit.

Piston Pin Removal & Installation: *See "Piston Pins" in Buick Special Data. CAUTION - Pistons may be damaged if special procedure and tools not used.*

Replacement Pins: Furnished in Std. size only.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.077-.078"	.010-.020"	.003-.005"
Oil (3)	.181-.187"	.015-.035"	.0035-.0095"

►*COMPRESSION RING INSTALLATION NOTE: Install both rings with identification mark up.*

Replacement Rings: Furnished Std. & .010" Oversize.

CONNECTING ROD

Length - 5.660" (Center to Center).

Crankpin Journal Diameter - 2.000".

Bearings - Steel backed Durex 100A. Precision type.

Clearance - .0002-.0022".

Side Play - .006-.014" (Total both rods).

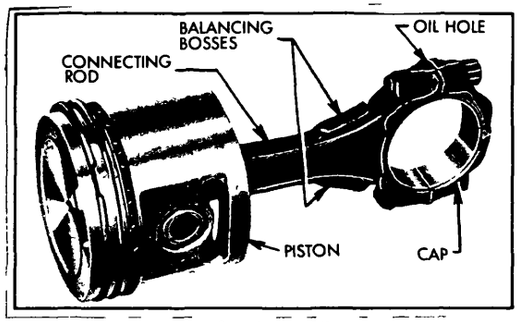
Replacement Bearings: Furnished Std., .001", .002", .010", .020", .021" Undersize.

Installing Rods: Install piston and rod assembly in engine with boss on rod and cap **forward** (right hand cylinders), **rearward** (left hand cylinders) with oil spurt hole upward.

CRANKSHAFT

Journal Diameter - 2.2983". Five bearings.

Bearings - Steel backed Durex 100A. Precision type. Bearing halves are not alike and not interchangeable in cap and crankcase. Front two and rear two assemblies are identical, center bearing flanged for end thrust control. *CAUTION - Ends extend slightly beyond parting surface to fit tightly and not turn. DO NOT FILE FLUSH WITH PARTING SURFACE.*



Clearance - .0005-.0021".

Replacement Bearings: Furnished Std., .001", .002", .003", .010" Undersize.

End Thrust: Taken by center No. 3 main bearing.

Endplay - .004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

PISTON & ROD ASSEMBLY

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

CAMSHAFT

Journal Diameters - 1) 1.785-1.786". 2) 1.755-1.756". 3) 1.725-1.726". 4) 1.695-1.696". 5) 1.665-1.666".

Bearings - Steel backed babbitt. *NOTE* - Bearings must be line reamed after installation.

Clearance - .0005-.0035". Wear limit .0015-.004".

Endplay - .004-.008".

Timing Chain: Link belt. **Width** - .875". **Pitch** - .375". **Length** - 54 links.

Camshaft Setting: "O" marks on camshaft and crankshaft sprockets adjacent and in line across shaft centers.

Engine Front Cover: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: *None in service (hydraulic).*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.500"	①	4.605"
Exhaust	1.3125"	③	4.605"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.383"	②
Exhaust	45°	.383"	④

① - .3412" (top), .3407" (bottom).
② - .0005-.0025" (top), .0015-.0035" (bottom).
③ - .3407" (top), .3397" (bottom).
④ - .001-.003" (top), .002-.004" (bottom).

Valve Seat Width - 1/16-5/64" (all valves).

►*VALVE SEAT NOTE: Seats are "Sintered Iron" shrunk fit at time of assembly and are not replaceable.*

►*VALVE GRINDING CAUTION:* Normal height of valve stem above valve spring seat surface is 1.825". Grind off stem or replace valve when stem is raised more than .050" above normal.

Valve Springs: Single valve spring used (no inner spring or damper). Install with closed coil end toward cylinder head.

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	64	1.640"
Open	168	1.260"

Valve Guides: Drive out old guide from combustion chamber side with Tool J-267. Lubricate and install new guide with Tool J-8813. Tool will bottom when guide properly installed. *NOTE* - Service guides are .001" larger outside diameter for good fit in aluminum head. Ream valve guides to correct size after installation with Reamer J-8814.

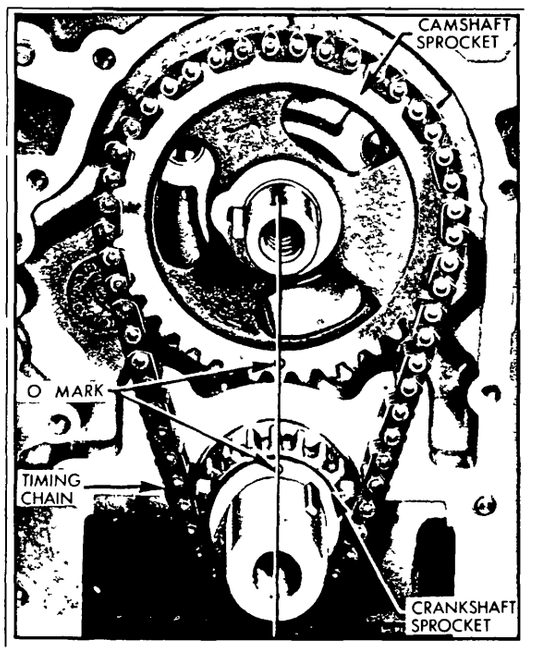
Hydraulic Valve Lifters: Barrel type.

►*HYDRAULIC VALVE LIFTER PRODUCTION CHANGE:* Lifter body has a longer oil groove on later type and incorporates a spring loaded ball check valve. Later types are identified by a copper plated retaining ring. **Diameter** - .8422-.8427". **Clearance in Block** - .0015-.003".

Lifter Overhaul & Testing - *See "Valve System" in Buick Special Data.*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

VALVE TIMING



See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

Intake Valves - Open 29° BTDC, Close 71° ATDC.

Exhaust Valves - Open 67° BLDC, Close 33° ATDC.

CONTINUED ON NEXT PAGE

VALVE TIMING MARKS

S INDEXES on Pgs. 4 to 9 for complet CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

Crankcase Capacity: 4 qts. (refill), 5 qts. (dry). Add 1 qt. with filter change.

Normal Oil Pressure: 33 lbs. at 2400 RPM.

Pressure Regulator Valve - In oil pump cover. *NOTE* - Regulator relief valve cap not drilled for pressure indicator switch. Switch located in bypass valve cap.

Oil Pressure Indicator: Oil pressure indicator light in Instrument Cluster controlled by oil pressure switch in cap of oil bypass valve in oil pump cover. Lights when ignition turned on and goes out when oil pressure reaches a safe level.

Engine Unit - AC No. 1194214.

Oil Pump: Spur gear type, mounted in engine front cover and driven by distributor drive shaft.

Oil Pump Overhaul - *See "Oiling System" in Buick Special Data.*

Oil Filter: AC full-flow type, mounted on oil pump cover at right front of engine. Replace element every 4,000 miles. *NOTE* - Bypass valve in oil pump cover bypasses oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.

►*OIL FILTER PRODUCTION CHANGE:* Larger and stronger molded hex Filter AC-PF-7 Part No. 5577410 used on later cars and for replacement of early filter (AC-PF-5 Part No. 5575198).

Replacement Filter Element - AC-PF-5 (Early), AC-PF-7 (Later).

►*OIL FILTER INSTALLATION CAUTION:* DO NOT use a wrench to tighten filter. Tighten by hand until gasket contacts sealing face, then tighten an additional 2/3 turn. This supersedes previous instructions.

Crankcase Ventilation: Standard Cars - Air is drawn in through a ventilation cap in left rocker arm cover and drawn out through right rocker arm cover vent pipe, past a baffle that prevents oil being exhausted through vent pipe. Vent pipe extends down from lifter cover.

Positive Crankcase Ventilation Cars - Same as above, except that right rocker arm vent is connected by hose directly to plate located between carburetor and intake manifold. A spring loaded check valve is used to restrict ventilation system flow whenever intake manifold vacuum is high. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 12 qts. Add 1½ qts. for heater.

Pressure Valve: Radiator filler cap. 15 lbs. type. *NOTE* - Use of lower test filler cap will cause engine to heat with loss of coolant.

Thermostat: Pellet type, located in forward (outlet) end of intake manifold. Opens at 167-172°F.

Water Pump: Packless sealed ball bearing type with aluminum housing. *NOTE* - Shaft seal and impeller are the only replaceable parts.

See "Cooling System" in Buick Special Data.

Pump Removal - 1) Drain cooling system, loosen belts and remove fan blade and pulleys from hub on water pump shaft and remove belts.

2) Disconnect hose from water pump inlet and heater hose from nipple. Remove water pump-to-timing chain cover bolts and remove pump.

Temperature Indicator: Temperature indicator light in Instrument Cluster controlled by water temperature switch in intake manifold. Bulb will light when starter switch turned on(grounded circuit) to test bulb, and when water temperature reaches 248°F (indicating cooling system not functioning properly).

Engine Unit - AC No. 1993518.

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check transmission fluid level every 1000 miles with transmission at normal operating temperature. Drain and refill every 25,000 miles. Use only Automatic Transmission Fluid Type A, Suffix A.

Checking Fluid Level: With engine idling and selector lever in "P" (Park) position, check fluid level on dipstick in filler pipe in engine compartment on right side. If oil level below "Add" mark, add sufficient fluid to bring level to "Full" mark on dipstick. Use only Automatic Transmission Fluid Type A, Suffix A.

Capacity - Approximately 5 pts. (transmission only), 13 pints (transmission and converter).

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

TIGHTENING SPECIFICATIONS

	Ft. Lbs.
Cylinder Head	65-85
Intake Manifold Bolts	25-35
Intake Manifold Nuts	20-30
Exhaust Manifold	30-35
Oil Pan Screws & Nuts	6-12
Main Bearing Caps	80-105
Vibration Damper	100-120
Connecting Rod Caps	40-50
Camshaft Sprocket	15-20
Rocker Arm Cover Ⓒ	20-30 inch-lbs.
Engine Front Cover	5-15
Water Pump	25-30
Oil Pump	25-35
Flywheel Housing Plate - Lower	10-20
Flywheel Housing to Crankcase	40-50
Flex Plate to Crankshaft	65-85
Engine Front Mount Stud Nut	50-100
Engine Front Mount to Cushion	25-30
Engine Rear Mount Cushion Retainer	50-60
Engine Rear Mount Cushion to Crossmember	50-60
Engine Rear Mount Crossmember to Frame	25-30

Ⓒ - Retorque after running engine.

ENGINE

ENGINE REMOVAL (WITH TRANSMISSION): *CAUTION - Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.* Proceed as follows:

1) Drain cooling system, crankcase and transmission. Remove hood top panel, disconnect battery and wires from generator. Remove upper and lower radiator hoses **and remove radiator core. Remove fan and vibration dampener and loosen distributor.**

2) Disconnect power steering pump to valve body hoses at pump and install caps on fittings to prevent oil leakage. Disconnect refrigerant lines, see Caution above. Disconnect all heater hoses at water pump, power brake vacuum line at intake manifold. Remove carburetor air cleaner, disconnect carburetor linkage and fittings and remove carburetor.

3) Remove transmission linkage slush deflector and disconnect throttle valve levers and speedometer cable at transmission. Disconnect flexible fuel line at steel fuel line and engine to cowl ground straps, primary wire at coil, oil pressure and cooling system temperature switch wires. Remove coil and disconnect wire to porcelain resistor.

4) Remove two center-bearing-support to frame bolts (Nuts are tack welded and should remain fastened to support), "U"-bolts and locks at rear axle pinion, slide propeller shaft and front yoke off transmission mainshaft and through frame tunnel section. DO NOT nick yoke. Remove intermediate support.

5) Remove wires from starter and disconnect exhaust pipe at exhaust manifolds. Disconnect front motor support screws at frame idler arm support screws from frame and lower idler arm and steering connecting link.

6) Install rope or chain around intake manifold, attach **hoist and take weight off engine supports. Disconnect and remove rear engin support bracket from frame and extension housing. Lift engine with transmission ut**

CYLINDER HEAD & MANIFOLD

CYLINDER HEAD REMOVAL: There are six lengths of cylinder head screws used. Carefully note length and position of each cylinder head screw for correct reinstallation.

CYLINDER HEAD INSTALLATION: Use a Torque Wrench and tighten cylinder head capscrews starting from the center row of bolts and working outward and toward each end

Cylinder Head Gasket -Install with side stamped "Top" UP

Tightening Torque - See Tightening (Torque Wrench) Specifications.

ORIGINAL BORE & PISTONS

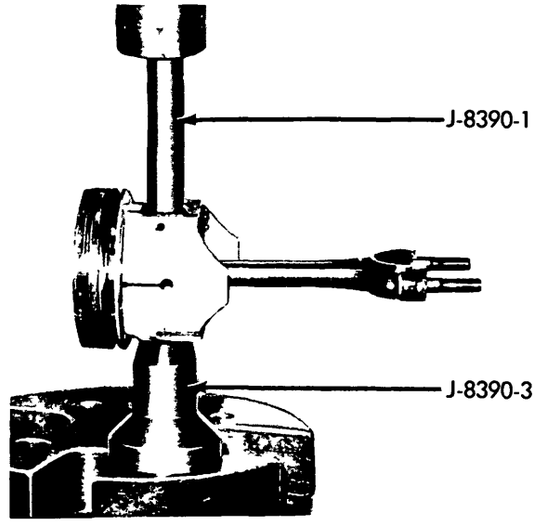
ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES: Piston and cylinder bore size indicated by a letter ("A" through "M", 10 sizes), stamped on top face of block either to right or left of each cylinder bore. Sizes range from 4.0000-4.0002" to 4.0018-4.0020" (Cylinder Size), 3.9985-3.9987" to 4.0003-4.0005" (Piston Size). Only "L" and "M" piston sizes available for service. *NOTE* - An "AA" indicates .010" oversize over letter "A" for example: 4.0100-4.0102" (Cylinder Size), 4.0085-4.0087" (Piston Size).

PISTONS

FITTING NEW PISTONS: Pistons should be fitted by Micrometer Gauge Method or Feeler Gauge Method as described below. Piston skirt clearance is .0015" at top of skirt, and .000" at bottom (with proper allowance for temperature variation).

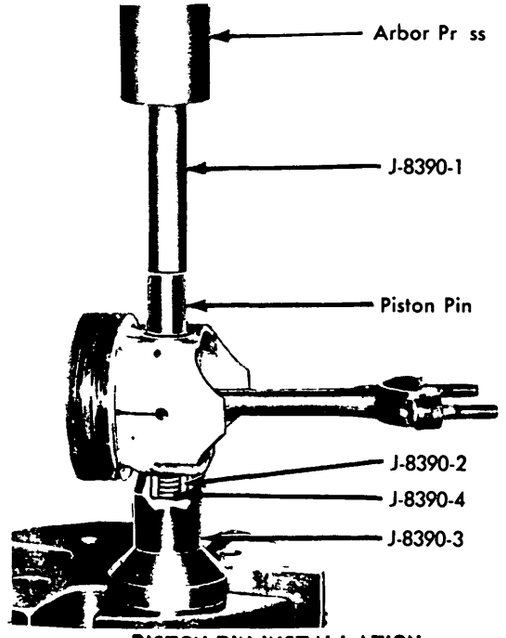
Feeler Gauge Method:—Use ½" feeler stock .002", .0025", or .003" thick (see Feeler Gauge Note and table below) on side of piston directly over "T" slot (center feeler on slot) with lower rounded end of feeler extending ½" down on piston skirt past horizontal slot (feeler must not extend further down on piston skirt because skirt is tapered with greater diameter at bottom). Install piston and feeler in cylinder with piston right side up and feeler toward side, measure pull required to withdraw feeler. Pull will vary in accordance with thickness of feeler gauge used and with piston temperature. See table below for correct pull for each feeler gauge thickness to obtain proper skirt clearance listed above.

Feeler Pull	Piston Clearance (70°F.)		
(In lbs.)	.002" Feeler	.0025" Feeler	.003" Feeler
1	.00225"	.00275"	.00326"
2	.002"	.00252"	.00304"
3	.00175"	.00228"	.0028"
4	.0015"	.00205"	.00258"
5	.00125"	.00182"	.00235"
6	.001"	.00157"	.00213"
7	.00075"	.00133"	.0019"



PISTON PINS

PISTON PIN FITTING: *NOTE* - Special Tool J-8390 is required to fit pins to connecting rods. See following for removal & installation:



Removal - Place Piston Pin Support J-8390-3 on arbor press and place piston assembly on support with "REAR" mark resting on support. Insert pilot end of Remover J-8390-1 into piston pin and press pin out of piston. *NOTE* - Keep pins in order for reinstallation.

Installati n - Lubricate piston pin and holes in piston, place Support J-8390-3 on press with Spring J-8390-4 and Spacer J-8390-2 in position on support. Place connecting rod on its respective piston with "REAR" mark on piston toward rear of engine with number on lower end of rod down. *NOTE* - Nos. 1,3,5,7 are in left bank, 2,4,6,8 in right bank. Place assembly on Support and place pin in piston. Place Pin Remover & Installer J-8390-1 on piston pin and press pin in until it bottoms on spacer in Support.

CONTINUED ON NEXT PAGE

PISTON PIN REMOVAL

PISTON PIN INSTALLATION

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT & MAIN BEARINGS

CRANKSHAFT REMOVAL (Engine in Car): Place stands under car at all four wheels. Remove timing chain and sprockets. Remove transmission and flywheel flex plate. Remove steering gear idler arm from right frame side bar and lower steering linkage to floor. Remove oil pan, oil pan baffle and oil pump. Remove spark plugs, disconnect connecting rods and push piston assemblies up into cylinder bores. Remove front and rear main bearing caps support crankshaft at front and rear and remove three remaining bearing caps Lower crankshaft.

REAR MAIN BEARING OIL SEAL: Raise car on stands and remove oil pan, oil baffle and oil pump. Remove rear main bearing cap and discard seal. Remove and discard upper seal from cylinder block. *NOTE* - Grooves in bearing cap and cylinder block must be clean, dry and free from burrs. Upper and lower seal are identical. **Upper Half Installation** - Start seal in groove in block and rotate seal into position. Press firmly on both ends so it protrudes evenly on each side.

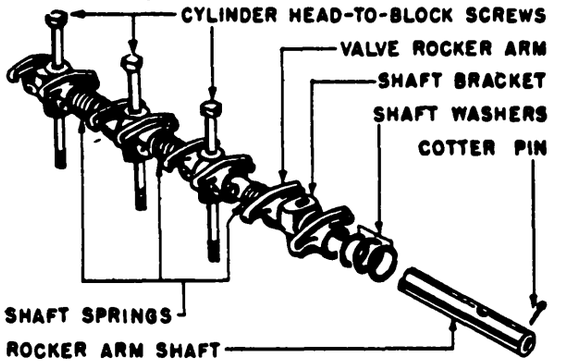
Lower Half Installation - Install lower half in cap with lip facing forward and one end of seal over ridge and flush with split line. Hold this end from slipping and push seal into position with pressure on other end. Seal must be pressed down firmly and protrude uniformly on each side. *NOTE* - DO NOT apply pressure on lip. Coat surface of cap and block with .010" thick film of rubber cement but do not get cement on seal lip or bearing surface. Lubricate lip of seal with thin film of engine oil.

►*REAR MAIN BEARING INSTALLATION CAUTION:* For proper alignment of thrust surfaces of rear main bearing proceed as follows: Install upper and lower inserts in block and bearing cap. With rear oil seal in place and mating surfaces clean, install bearing cap and tighten screws to 1-2 ft. lbs. torque. Using a plastic hammer, drive crankshaft forward, then rearward, then forward again (*CAUTION* - Pound on counterweights, not on connecting rods). Tighten bolts evenly to specifications. Check to make sure crankshaft is not binding.

CAMSHAFT & BEARINGS

CAMSHAFT REMOVAL: Remove Air Conditioner Condenser, *see "Air Conditioning" in Miscellaneous Section.* Remove radiator, timing chain and sprockets and remove valve lifters. Remove fuel pump and fuel pump pushrod. Slide camshaft forward carefully out of engine. *CAUTION* - DO NOT scratch camshaft bearings with camshaft lobes.

Camshaft Bushing Removal & Installation: Use Bearing Remover & Installer Tool J-3063 to pull old bushings out. Install new bushings with same tool and see that oil holes in bushing line up with oil holes in block (check oil leads with piece of wire after tool removed).



Camshaft Installation: Lower camshaft into position between radiator grille and engine and guide it carefully into cylinder block. Be sure distributor is timed correctly when inserting camshaft. Reverse removal procedure.

VALVE SYSTEM

ROCKER ARMS

ROCKER ARM ASSEMBLY: Remove rocker arm covers. Remove secondary wiring and distributor cap as an assembly. Remove four cylinder head cap screws which hold rocker arm assembly to cylinder head and remove rocker arm assembly.

Disassembly & Reassembly: See illustration for correct order of parts. Parts can be removed from shaft by removing cotter pin at end.

CADILLAC ROCKER ARM ASSEMBLY

Installation: Install rocker arm assembly in position on cylinder head with notches on each end of rocker shaft pointing downward and toward center of engine, and rocker arm brackets with larger machined surface next to head. Install four cylinder head screws and tighten to specifications. Install rocker arm covers and secondary wiring with distributor cap assembly. Tighten cover screws to specifications.

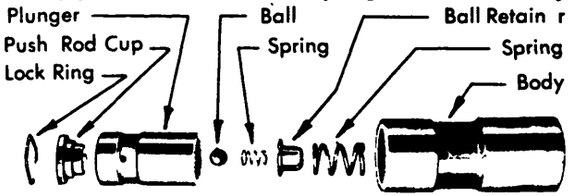
HYDRAULIC LIFTERS

VALVE LIFTERS: Hydraulic, Barrel Type. Consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (See illustration). Oil is introduced to this unit from main oil gallery through hole in side of lifter plunger and body.

Testing Leak Down Rate (On Engine): *NOTE - Procedure below requires use of Lifter Leak Down Rate Tester J-3074 which is designed for this purpose.* 1) On Air Cond. Cars, remove rear bracket and loosen generator. Remove resistor wire from porcelain resistor at coil. Remove distributor cap, coil, and rocker arm covers. Set timing at "C" mark and observe position of distributor rotor. Check each lifter as outlined in the following table:

With rotor at No. 1 firing position (pointing toward rear of engine), check each lifter as shown in (2) below.

No. 1 Intake	No. 3 Exhaust	No. 6 Exhaust
No. 1 Exhaust	No. 4 Exhaust	No. 7 Intake
No. 2 Intake	No. 5 Intake	No. 8 Intake
No. 2 Exhaust	No. 6 Intake	No. 8 Exhaust



Rotate crankshaft one complete turn and with rotor at No. 6 firing position (pointing toward front of engine) check:

No. 3 Intake	No. 5 Exhaust
No. 4 Intake	No. 7 Exhaust

2) Insert feeler gauge of tool between valve stem and rocker arm, at the same time compress the tool "pop-out" spring against the valve spring retainer. *NOTE* - Tool should be installed as quickly as possible to avoid any unnecessary leak down of lifter. Note the interval of time during which tool is held in place by valve spring pressure. It will be found through this test that noisy lifter or lifters will have the shortest leak down time.

Removal - Pushrod holes in cylinder block enlarged to permit removal of valve lifters without removing intake manifold. Remove rocker arm assembly and pushrods, then remove lifters with mechanical finger or magnet attached to long rod.

Disassembly: Press down on center of valve lifter pushrod cup, and with pointed tool remove lockwire from groove. Invert lifter and slide out pushrod cup, plunger, ball, snap spring, ball retainer and spring. *NOTE* - If plunger is stuck in body, place lifter, pushrod end down, in Valve Plunger Remover Tool J-4160. Holding tool firmly in hand with thumb over lifter body, strike tool sharply on block of wood until plunger falls out of body.

HYDRAULIC VALVE LIFTER

Cleaning & Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

Reassembly: Place ball on its seat in lower end of plunger while holding plunger upside down. Place small spring on ball. Position ball retainer over ball and end of plunger. Move retainer up and down to be sure spring is in working order. Place spring over ball retainer. Lower lifter body over plunger assembly on an angle to seat spring. If necessary probe with a small wire through oil hole to allow assembly to be seated. Turn assembly right side up and fill plunger with clean engine oil. Jiggle ball with a small piece of wire until oil drains out of plunger into body and trapped air is released from body. Refill plunger with oil and place push rod cup on plunger. Position lock wire over cup. Using Valve Lifter Lock Wire Installer J-2730, press lock wire into groove.

OILING SYSTEM

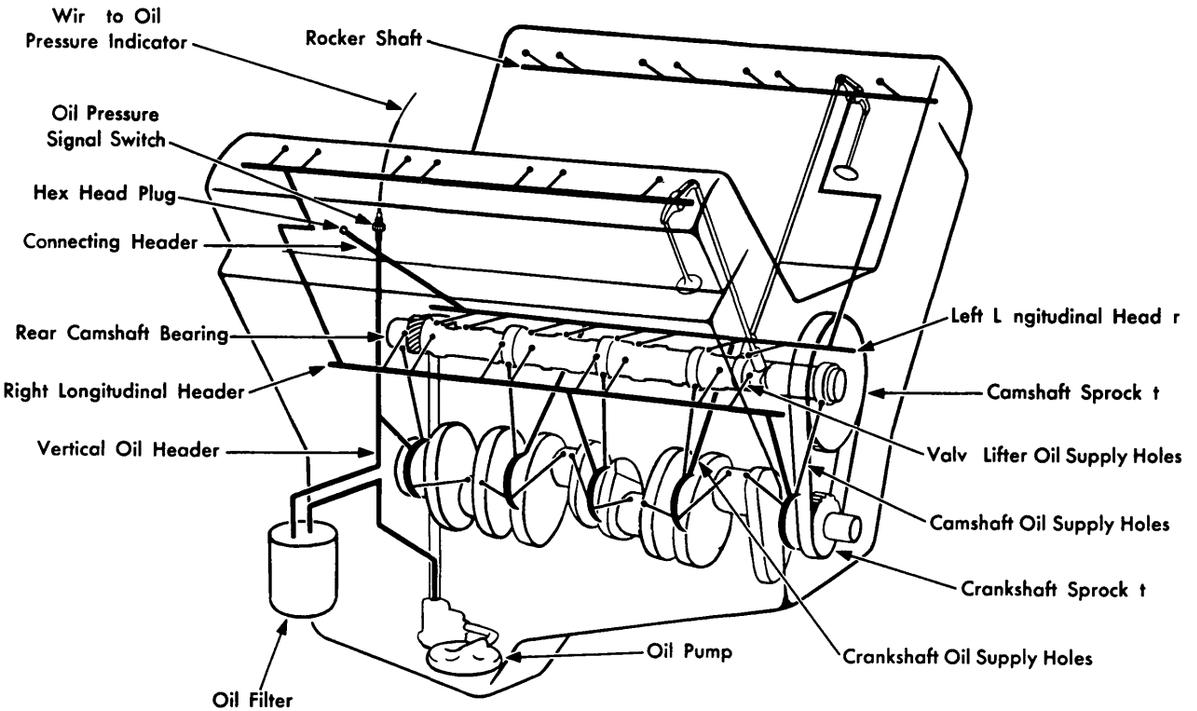
ENGINE LUBRICATION

ENGINE LUBRICATION: Force feed type of lubrication with oil supplied under pressure to crankshaft, connecting rod, and camshaft bearings, valve lifters, rocker arm bearings and metered to upper rocker arms for pushrod surface and valve lubrication. Oil is sup-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

plied from rear main bearing for lubrication of oil pump drive shaft. All other moving parts of engine are lubricated by gravity flow or splash. See "Engine Oil Flow" diagram.



OP ERATION: Gear type oil pump mounted on rear main bearing cap (driven by distributor drive shaft) draws oil through a screened intake floating on oil in crankcase and delivers it through full flow oil filter and to vertical oil header which feeds rear main bearing. This header delivers oil to an intersecting Right Longitudinal Header and through a connecting header, to the Left Longitudinal Header. Upper end of vertical header is plugged. Rear end of right longitudinal header supplies oil through cylinder block and head to right rocker arm shaft, left longitudinal header supplies oil at front end through cylinder block to left rocker arm shaft. Oil from cylinder heads drains back directly to crankcase through left front and both rear holes in each cylinder head. The hole in front end of right cylinder head drains oil back through head and matching hole in block to engine front cover for lubrication of timing chain and sprockets. A drilled hole at rear of valve lifter compartment returns lifter compartment excess oil to crankcase.

Crankshaft, Connecting Rods & Pistons - Vertical header at rear main bearing supplies oil to rear main bearing. The right longitudinal header supplies oil to the front and center main bearings. The left longitudinal header supplies oil to the two intermediate main bearings. Drilled passages in crankshaft supply oil from main bearing journal to connecting rod journal for connecting rod bearing lubrication. Oil is forced out groove in connecting rod bearing cap against cylinder walls for piston lubrication. Piston pins receive oil through drilled passage in piston.

Camshaft, Sprockets and Lifters - Rear camshaft bearing is supplied oil from the connecting header. All other camshaft bearings receive oil from drilled passages in block from respective main bearing. Oil pressure switch is screwed into upper end of connecting header. Drain back hole in front end of right cylinder head returns surplus oil to engine front cover for timing chain and sprocket lubrication. Each longitudinal header supplies oil through drilled passages in block to its respective bank of valve lifters.

R cker Arms, Valves & Pushrods - Oil is supplied to rocker arm shaft on right bank from rear end of right longitudinal header through a vertical branch in cylinder block and head. The left rocker arm shaft is supplied through a vertical branch in cylinder block and head at front end of left longitudinal header. Rocker arm shafts are plugged at each end. One hole in bottom of rocker arm shaft intersects a 45° groove and supplies oil evenly under loaded area of each rocker arm. The other hole is mismatched with an angular passage in the arm and meters oil to the pushrod end of the arm for lubrication of the pushrod surface in the arm. From this point oil flows down to the opposite end of the arm for valve tip lubrication.

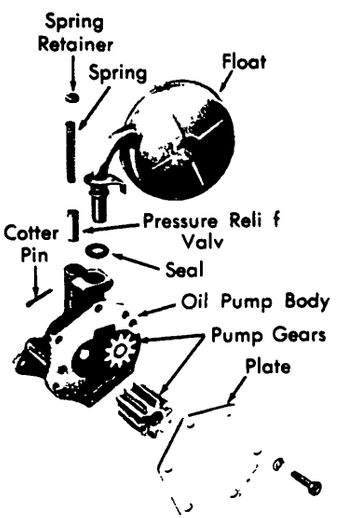
OIL FILTER: Full Flow Type - Mounted on pad on right rear side of crankcase. Oil inlet (from pump) and outlet (to engine oiling system) channels are located in mounting pad and filter mounting bracket.

CADILLAC ENGINE OILING SYSTEM

OIL PUMP

Oil Pump Specifications-Backlash between drive gears - .008-.012". Clearance drive shaft to pump body - .0010-.0025", wear limit .005". Clearance pump body to gears - .003-.005", wear limits .005". Endplay in pump gears - .001-.004", wear limit .006".

Pressure Regulator Specifications - Clearance valve plunger and housing - .0020-.0035" wear limits .005". **Spring Free Length** - 2.65". **Spring Pressure** - 5.28-5.78 lbs. at 1.443".



OIL PUMP REMOVAL: Remove oil pan, oil pan baffle and two nuts holding oil pump to rear main bearing cap and remove oil pump, oil float, and screen assembly.

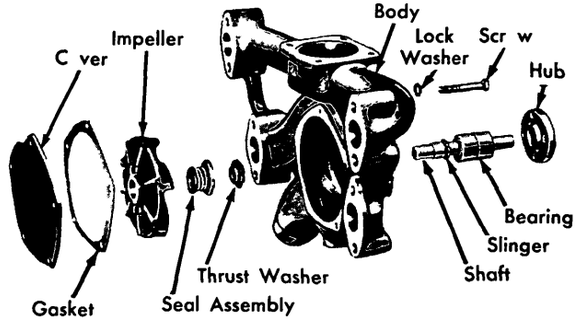
Disassembly: Remove cotter pin securing float to pump body and remove float and felt seal. Remove cotter pin securing oil pressure regulator valve spring and spring retainer in body and remove valve and spring. *NOTE* - DO NOT lose retainer when removing cotter pin. Unlock and remove six cover plate to housing screws and remove plate. Slide idler gear off idler shaft in pump and press collar off drive shaft. Slide pump drive gear out of pump body.

Inspection: Inspect strainer screen for dirt and float for leaks and check float connection seal. *NOTE* - A leaky float will produce air bubble when dipped in water. Inspect oil pressure regulator valve for nicks and burrs. Check free length of regulator valve spring. Inspect drive gear and idler gear for nicks and burrs.

Ass mbly: Install oil pump drive gear in oil pump body. Press collar on end of shaft and slide idler gear into pump body meshing gear with drive gear. Install oil pump cover plate and secure screws with new locks. Slide regulator valve, spring, and spring retainer into pump body and install cotter pin. Check that seal is located correctly.

CONTINUED ON NEXT PAGE

OIL PUMP ASSEMBLY



CONTINUED FROM PRECEDING PAGE

Installation: Install oil pump drive shaft. Place pump assembly over studs so drive shaft does not bind against block and install two nuts and lockwashers and tighten to specifications.

COOLING SYSTEM

WATER PUMP REMOVAL: Non-Air Conditioned Cars - Remove air cleaner, drain cooling system, and disconnect all hoses from water pump. Remove steering pump and generator belts. Disconnect throttle return spring, disconnect steering pump bracket and move pump and bracket to one side (do not disconnect hoses). Remove water pump attaching screws and remove pump and fan.

Air Conditioned Cars - Remove air cleaner, drain cooling system and disconnect all hoses from water pump. Remove all belts. Remove fan, fan clutch, and pulley. Remove fan shroud. Move power steering pump and bracket to one side (do not disconnect hoses). Remove water pump-to-cylinder block screws which also hold Freon compressor front mounting bracket to water pump flanges. Remove compressor front mounting bracket-to-cylinder head screw. Remove water pump attaching screws and remove pump.

WATER PUMP ASSEMBLY

Disassembly: Remove thermostat housing, thermostat, fan blade assembly, cover plate and gasket. With Impeller Puller J-3211 remove impeller. Remove seal, dampener, and seal washer assembly from body. Remove hub, shaft, slinger, and bearing assembly with an arbor press.

Inspection: Check impeller blades for improper clearance, or excessive wear, and spring-loaded seal for wear and cracks. Check shaft bearing for roughness or excessive endplay. Refinish seal surface with Refinisher Tool No. J-8957 to remove scratches or nicks.

Reassembly: Press new bearing, shaft, and slinger assembly in body with Shaft Installer & Hub Spacer Tool No. J-3249, supporting housing on Fixture J-6855-1. Install washer and seal assembly over driving lugs of slinger (washer should slide freely). Press impeller on shaft until outer face is .005-.010" below face of pump (use straightedge and feeler). Press hub on shaft until it is flush with top of shaft. *NOTE - On Air Cond. Cars, insert a .094" Hub Spacer Shim, Tool J-6855-2 inside Tool J-3249 and proceed as follows:* Place .160" Hub Spacer, Tool J-3249-3 on bottom of Hub Installer, place assembly on hub and shaft and press until tool bottoms on shaft. Install cover and gasket. Check shaft for free operation and impeller for proper clearance. Install pulley and fan assembly. Install thermostat and housing and tighten housing screws to 10-12 ft. lbs. *CAUTION - Thermostat spring strap must be parallel to centerline of car (fore & aft).*

Installation: Reverse removal procedure. Run engine and check for leaks.

►*JACKING & HOISTING (ALL MODELS): Before jacking, hoisting, towing or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

►*STARTING CAR BY PUSHING: Car CANNOT be started by pushing because of transmission design.*

►*PARKING BRAKE VACUUM RELEASE CAUTION: Before working on engine with engine running and car in gear, disconnect vacuum supply hose from right hand connector of vacuum switch on neutral safety switch and tape switch opening closed.*

MODEL IDENTIFICATION

ENGINE SERIAL NUMBER: Stamped on lower left hand side of cylinder block between two welch plugs just above edge of oil pan, and on top of frame on left hand side member just behind radiator. *NOTE* - Number (example below) includes identification data as follows:

① ② ③
61 L 000001

① - Year model - 1961.
② - Body Code - *See Series Designation Table below.*
③ - Beginning Engine Serial Number.

Series Designation

Series	Body Style	Body Code
60	6039 Sedans, Sixty Special	M
62	6229 Sedan, 6-Window	K
62	6237 Coupe	G
62	6239 Sedan, 4-Window	A
62	6267 Convertible	F
62	6299 Sedan, Short Deck	C
62	6329 Sedan DeVille, 6-Window	L
62	6337 Coupe DeVille	J
62	6339 Sedan DeVille, 4-Window	B
62	6367 Eldorado Biarritz Convertible	E
75	6723 Sedan, 9-Pass	R
75	6733 Limousine, 9-Pass.	S
CC	6890 Comm. Chassis	Z

Engine Unit Number: Stamped on bell housing portion of crankcase behind left hand cylinder block directly above cast rib. *NOTE* - "L.C." after unit number indicates low compression engine. Mark * following unit number indicates .010" oversize cylinder bore and pistons.

Body Style	Engine Unit Prefix
6039; 6229,37,39,67,99; 6329,37,39,67 (Less AC)	16X
6039; 6229,37,39,67,99; 6329,37,39,67(With AC)	16K
6723,33; 6890 (Less AC)	17X
6723,33; 6890 (With AC)	17K

TUNE-UP

►*VALVE NOISE CORRECTION:* May be diagnosed as engine valve train noise but may be caused by noisy manifold heat control valve. *See "Manifold Heat Control" below.*

COMPRESSION PRESSURE: 165-185 lbs. (Cranking speed), 212-230 lbs. (1000 RPM) with throttle wide open. Maximum variation between highest and lowest cylinders should be not more than 20 lbs.

VALVE TAPPET CLEARANCE: None. Hydr. lifters.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system during warm-up.

►*VALVE NOISE CORRECTION:* May be diagnosed as engine valve train noise but may be caused by noisy manifold heat control valve. To check, hold heat control valve weight stationary while engine is running. If noise stops, replace heat control valve assembly with Part No. 3631814. Do not attempt to repair valve.

CRANKCASE VENTILATION VALVE: Check condition of valve before performing a "Tune-Up" for ignition and carburetion troubles. *See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plugs - AC No. 44. 14mm. Torque to 20-30 ft. lbs.
COIL: Delco-Remy No. 1115134 (Service Replacement).
Ignition Current - 1.25 amps. idling.

►*IGNITION COIL NOTE:* Identified by Brown Bakelite Insulator. DO NOT use these higher inductance coils and 1.35 ohm ignition feed harness on 1959 and earlier cars.

DISTRIBUTOR: Delco-Remy 1110932. "Window" type.

►*DISTRIBUTOR VACUUM DIAPHRAGM FAILURE CORRECTION & PRODUCTION CHANGE:* Improved vacuum diaphragm installed in production at approximately Engine No. 050869 to prevent diaphragm failure. Later units marked "M" stamped on mounting bracket. To correct failure on early cars, install new assembly.

Condenser - Delco-Remy 1932004. **Capacity** .18-.23 mfd.
Contact Point Set - Delco-Remy 1931988.
Breaker Gap - Breaker gap will be correct (.016") when cam angle correctly set.
Cam Angle - 28-32°. Set to 30°.
Breaker Arm Spring Tension - 19-23 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-1½	400	0-3	800
2½-4	600	5-8	1200
5-7	1400	10-14	2800
7-9	2000	14-18	4000

Vacuum Spark Control: Delco-Remy 1116149.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	8-10
11¼	21-24	13.25-15.25

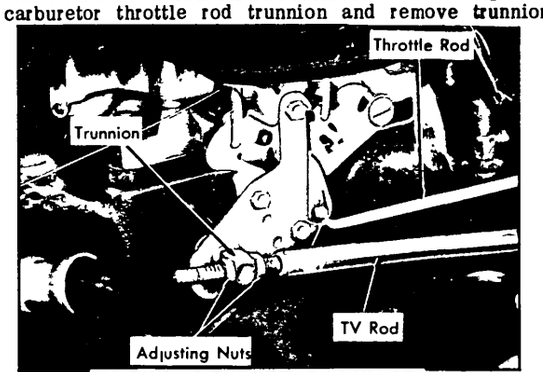
IGNITION TIMING

Setting - 5° BTDC.

►*SETTING NOTE:* When fuel of 100 octane rating or better is not available, retard setting toward "C" mark to eliminate detonation.

Timing - Disconnect vacuum line to distributor (tape pipe). Adjust timing with engine idling at 480 RPM.
Timing Marks - Timing indicator on chain case cover and harmonic balancer marked "C", "5" and "10". "5" & "10" are degrees ahead of "C" mark (TDC).

CARBURETOR



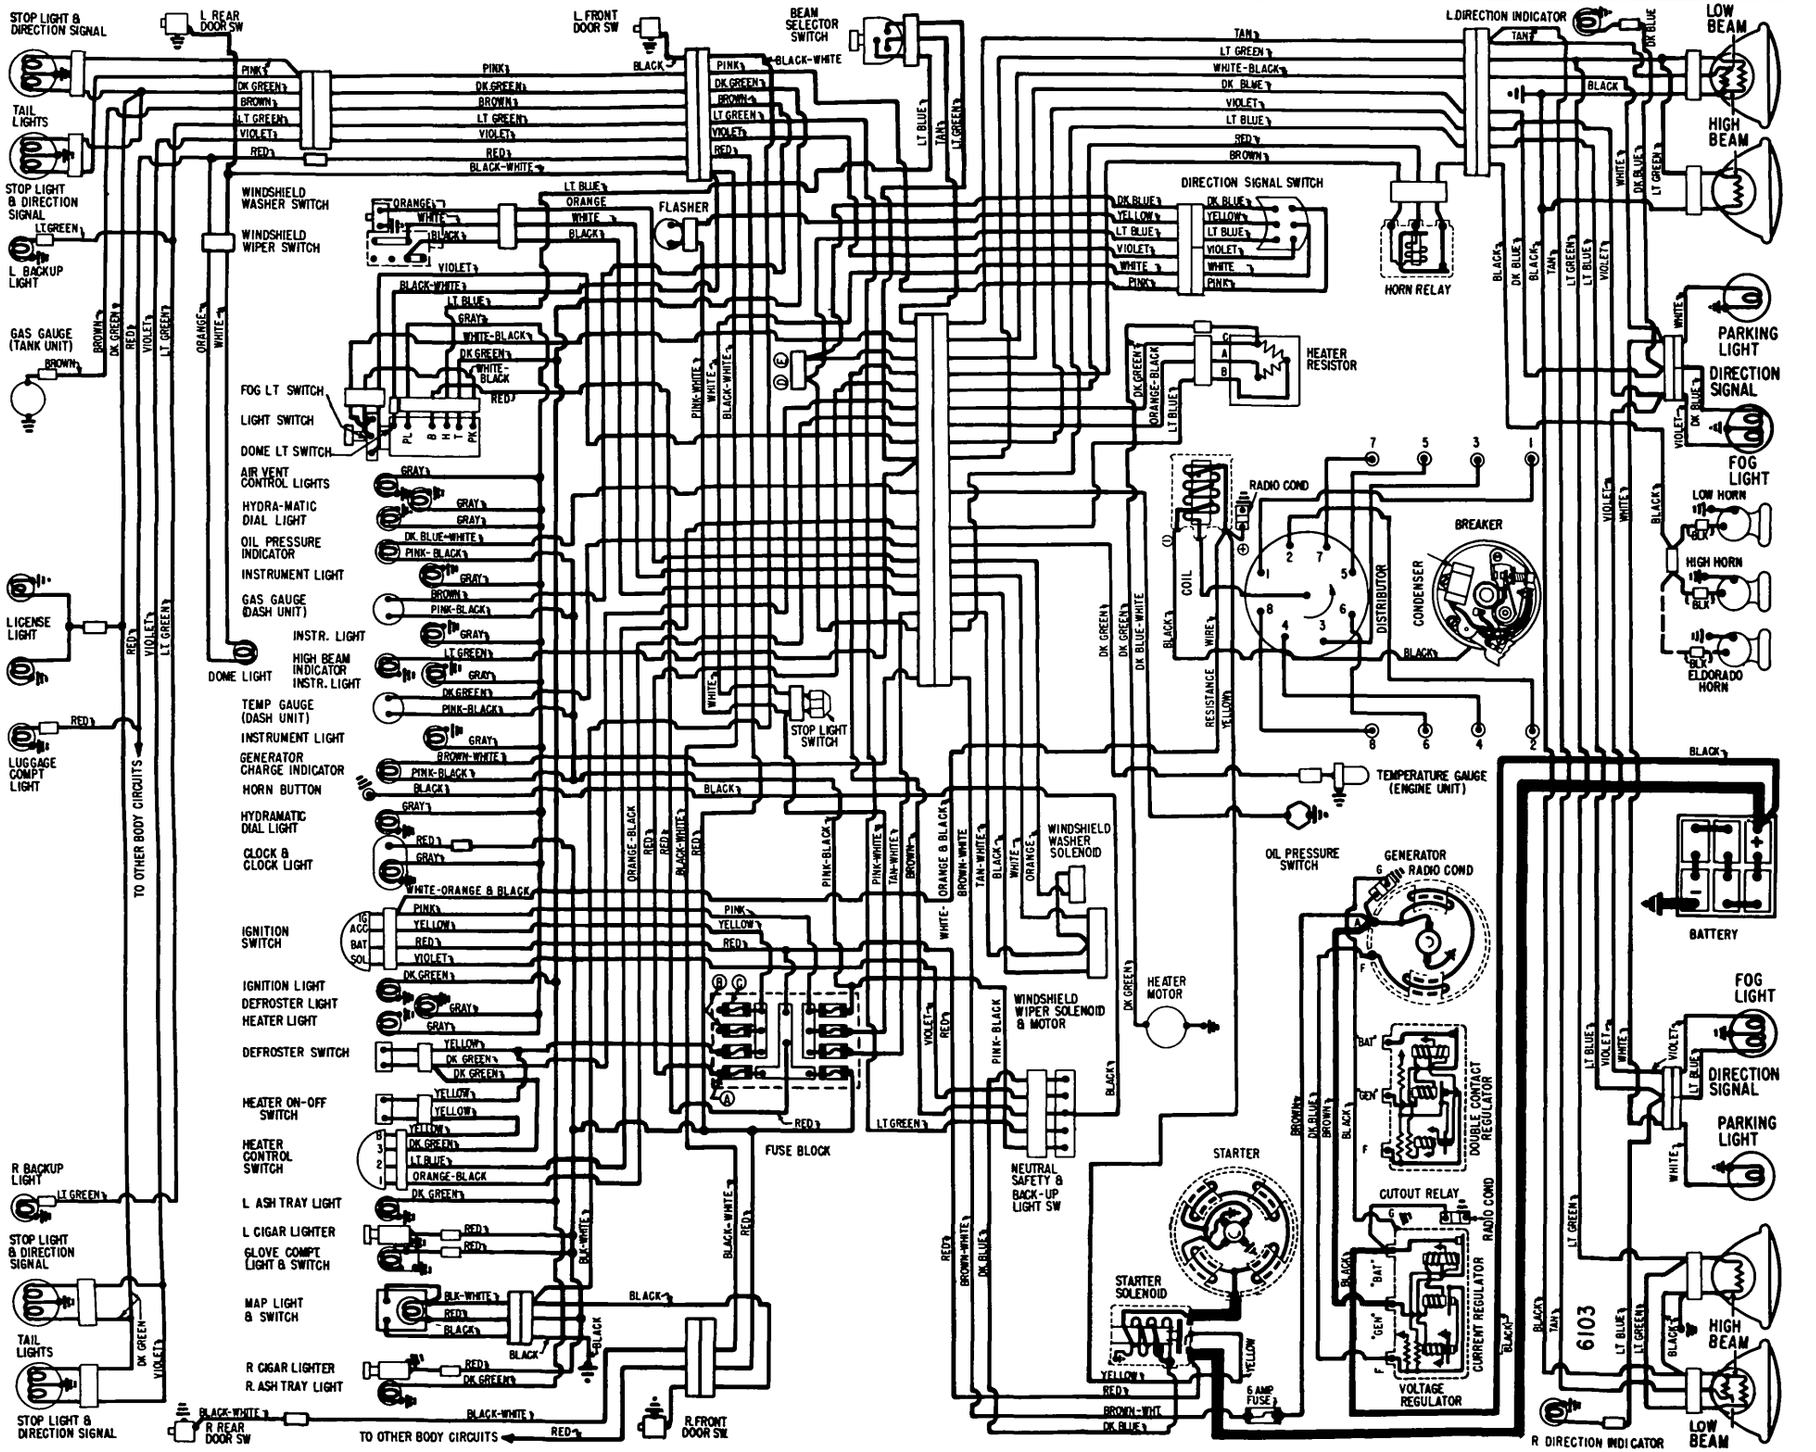
►*CARBURETOR APPLICATION: Carter Rochester 4-Barrel carburetors used.*

►*CARBURETOR NOTE:* On cars with Postive Crankcase Ventilator Unit, check Ventilator Unit before servicing carburetor for carburetion difficulties.

Idle Speed-Up Control Adjustment (Cars With Air Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air conditioner "ON" and place transmission selector lever in "N" position. Adjust engine idle speed to 900-950 RPM by loosening locknut on diaphragm shaft and turning nut to obtain specified RPM. Tighten locknut.

Throttle Return Check Adjustment: Allow engine to idle and make sure that throttle check plunger is not in contact with throttle relay lever. Open throttle wide momentarily to allow engine manifold vacuum to drop and throttle check plunger to come out. Let throttle snap shut and observe delay caused by throttle check. If engine races, throttle check plunger is too long. If engine stalls, plunger is too short. Adjust screw on relay lever as necessary. Clearance between throttle return check plunger and relay with engine running should be approximately .190".

THROTTLE LINKAGE ADJUSTMENT: Remove clip from carburetor throttle rod trunnion and remove trunnion from relay bracket lever (at front of dash). Place a ¼" drill shank through gauging hole in relay lever and dash relay bracket. With engine running, set throttle lever to hot idle position (Air Conditioner turned "OFF"). Adjust carburetor throttle rod trunnion to allow free entry into dash relay lever and install trunnion and spring clip. Push end of throttle valve rod (rod from carburetor to transmission throttle lever) toward rear of car to position transmission throttle lever against its stop. Bring front jam nut on throttle valve rod against trunnion until all slack is taken up. **Then tighten nut 3 full turns.** Tighten rear jam nut.



CADILLAC THROTTLE LINKAGE ADJUSTMENT POINTS

Accelerator Pedal Height Adjustment - Install ¼" drill shank in gauging hole in dash relay bracket and relay lever. Remove cotter key from trunnion on inner side of accelerator pedal arm and remove trunnion from arm. Adjust trunnion up or down as required to obtain wide open throttle with pedal fully depressed. Assemble linkage, install slush deflector and remove drill shank.

ROCHESTER 4GC 4-BARREL

Rochester 4GC No. 7019030 (Std.), 7019031 (Air Cond.):
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 2-3-5-8, LEFT barrels 1-4-6-7.*
►*IDLE ADJUSTMENT NOTE: See "Parking Brake Vacuum Release Caution" above.* Hose must be disconnected and vacuum fitting taped.
►*IDLE SPEED ADJUSTMENT NOTE:* Idle Air Bypass screw on throttle body used to adjust idle speed. Throttle valves are normally closed at slow idle.
►*HARD STARTING CORRECTION (Cars With Rochester Carb.):* May be caused by choke valve sticking. *See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*
Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Rochester 4GC-4-Barrel Carburetors" on Pg. 89.*
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB 3177S (Std.), 3178S (Air Cond.).
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed 2-3-5-8, LEFT barrels feed 1-4-6-7.*
►*IDLE ADJUSTMENT NOTE: See "Parking Brake Vacuum Release Caution" above.* Disconnecting hose at this location eliminates vacuum leakage at neutral switch while making idle mixture calibration.
►*IDLE SPEED ADJUSTMENT NOTE:* Idle Air Bypass screw on throttle body is used to adjust idle speed. Throttle valves are normally closed at slow idle.
Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings. *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*
Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC No. 713. Fuel only.
Pressure - 5¼-6½ lbs. at idling speed.

Fuel Line Filter: Located in line between fuel pump and carburetor. *NOTE* - Air Conditioned cars have special filter and orificed passages for returning fuel vapors to fuel tank.

WIRING DIAGRAM LEGEND

Ⓐ - Trunk Lid Lock circuit feed.
Ⓑ - Radio Antenna Motor Feed.
Ⓒ - Radio Feed.
Ⓓ - Instr. Panel Right Direction Indicator (when used).
Ⓔ - Instr. Panel Left Direction Indicator (when used).

Gasolin Gaug : AC electric type.
Dash Unit - AC No. 5640177 (exc. Comml. Chassis), 5643115 (Comml. Chassis).

Tank Unit - AC. Used as follows:

Model	Std. Car	Air Cond. Car
All (exc. below)	5640177	5640325
Sedan (Short Deck)	5641601	5641602
Comml. Chassis	1598929	

Air Cleaner: Replaceable oil-wetted Polyurethane Foam element type. Replace element every 30,000 miles.
►*CAUTION: Element should NOT be washed, oiled, tapped, or blown out with compressed air.*

Cruise Control: Automatic speed control and warning device. *See "Speed Controls" in Carburetion Section.*

BATTERY

Delco No. 562. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground - Negative.
Engine Ground - Engine to dash.

STARTER

Delco-Remy No. 1107799. Armature - No. 1950563.
Drive - Overrunning clutch (solenoid pinion shift).
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 40 ozs. minimum.

Performance Data

Torque	RPM	Volts	① Amperes
0 ft. lbs.	3600-5100	10.6	65-100
②	Lock	3.5	300-360

① - Includes Solenoid. ② - Armature locked.

Starting Switch: Delco-Remy Solenoid Switch No. 1119910 mounted on starter and controlled by Ignition & Starter Switch Delco-Remy No. 1116594 (Series 75 & CC), No. 1116595 (Others).
Neutral Safety Switch: Combination Neutral Safety & Backup Light Switch mounted on steering column. Delco-Remy No. 1993560. *Supersedes previous numbers.*
Adjustment - *See "Dual-Coupling Hydra-Matic Drive" in Transmission Section*

GENERATOR

Delco-Remy. Used as follows:

Series	Generator	Armature
60, 62 Std. ①	⑤ 1102170	1946719
60, 62 Air Cond. ②	⑥ 1102141	1939837
60, 62 Std. ③	⑦ 1102245	1946719
60, 62 Air Cond. ④	⑦ 1102246	1939837
75, CC ②	⑥ 1102141	1939837
75, CC ④	⑦ 1102246	1939837

① - Before Engine No. 049925.
② - Before Engine No. 049993.
③ - After Engine No. 049924.
④ - After Engine No. 049992.
⑤ - Replacement Generator without Fan & Pulley 1102168.
⑥ - Replacement Generator without Fan & Pulley 1102091.
⑦ - With Fan & Pulley.

Performance Data

Generator	Amperes	Volts	RPM
1102170, 1102245	35	14.0	2630
1102141, 1102246	45	14.0	2520

Rotati n - Counterclockwise at commutator end.
Brush Spring Tension - 28 ozs.
Fi ld Curr nt - 1.69-1.79 amps. (1102170, 1102245), 2.66-2.86 amps. (1102141, 1102246) at 12 volts and 80°F.
B lt Adjustment: Use Universal Belt Tensioner J-7316 as follows: With tool midway between pulleys, tension should be 45-60 lbs. (used belt), 90 lbs. (new belt). Adjust by loosening belt tension adjusting screw and moving generator as required. Tighten tension adjusting screw to 15-20 ft. lbs.

GENERATOR REGULATOR

Delco-Remy No. 1119002 or 1119168 (Std. Gen.), N . 1119601 (Air Cond. & Series 75, CC Gen.) *NOTE - Regulator 1119601 is "Double Contact" type.*
►*NOTE: Specifications below are "Normal" settings.*

Cutout R lay

Cuts In - 11.8-13.5 volts (1119002, 168), 11.8-13.0 volts (1119601).
Contact Gap - .020".
Air Gap - .020" with contacts just closed.

Voltage R gulator

Setting (1119002, 168) - 13.8-14.7 volts at 125°F ambient temperature.
Setting (1119601) - 13.8-14.6 volts at 125°F ambient temperature when operating on upper contacts. .1-.3 volts lower when operating on lower contacts.
Contact Gap (1119601) - .016".
Air Gap - .075" (1119002, 168), .067" (1119601) with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Single Contact Regulators" or "D lco-R my 1119600 Series Double Contact R gulators" in Electrical Section.*

Current R gulator

Setting (1119002, 168) - 31.0-35.5 amps. at 125°F.
Setting (1119601) - 42.5-47.0 amps. at 125°F.
Air Gap - .075" with armature pressed down to point where contacts just touch.
Checking & Adjusting - *See "Delco-Remy 1119000 Series Single Contact Regulators" or "Delco-Remy 1119600 Series Double Contact Regulators" in Electrical Section.*

ALTERNATOR & REGULATOR

Alternator: Delco-Remy No. 1117082. Three phase type with internal rectifiers.
Rated Output - 60 amperes (hot) - 58 amperes at 14.0 volts and 2500 RPM.
Rotation - Clockwise at drive end.
Regulator: Delco-Remy No. 9000554. Transistorized two-unit type containing Voltage Regulator and Indicator Light Relay. Regulator is used with separately mounted Field Relay, Delco-Remy No. 1116895.
►*OTHER DATA: See "Delco-R my (Internal Rectifier) Alternators & Transistorized Regulators" in Electrical Section.*

MISC. ELECTRICAL

Instrument Panel & Cluster Rem val (1961 Seri s 60, 62):1) Upper Panel Cover - Disconnect battery and remove six screws holding upper panel cover to lower panel. Raise upper panel and disconnect multiple connector for map light and Guide-Matic. Unhook upper cover hooks from cowl retainers and remove cover.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

2) Instrument Cluster - Remove upper panel cover (see above) and disconnect odometer reset cable from lower instrument panel flange, and speedometer cable from speedometer head. Disconnect all wires from rear of cluster. Disconnect both lighting switch connectors. Remove clock by turning counterclockwise 90° and pulling from bezel, then disconnect wire connector from back of clock. Remove screws and bracket above radio holding bezel to instrument panel, then remove nut to left of bezel near headlight switch and remove bezel. Remove cluster-to-instrument panel retaining screws and remove cluster.

3) Fuel or Temperature Gauge - Remove upper panel cover (see above) and disconnect wires from gauge. Remove gauge-to-cluster retaining screws and remove gauge.

4) Speedometer - Remove instrument cluster (see above). Remove back plate from cluster housing, then remove speedometer from back plate.

Instrument Panel & Cluster Removal (1960 All Series, 1961 Series 75 & CC): Disconnect battery and remove lower steering column cover and Hydra-Matic indicator pointer. Remove panel cover-to-lower instrument panel screws. Raise front edge of cover and insert wood block. *NOTE - Above procedure provides access to components.* Disconnect two harness connectors at firewall, headlight feed connector, ignition switch connector, shift indicator light, speedometer cable, and trip mileage cable. Disconnect Guide-Matic and Cruise Control. Unhook panel cover hooks from cowl retainers and remove cover.

Instrument Cluster - After cluster and panel assembly removed (see above), separate cluster from panel after marking bulbs and cluster for reassembly.

Fuel & Temperatur Gauge - After cluster and panel assembly removed (see above), disconnect wires and remove gauges from cluster. If removed with cluster installed in car, raise panel cover (see above), loosen cluster harness from retaining clip for access, disconnect wires and remove gauge.

Speedometer - Separate speedometer from cluster after cluster and panel assembly have been removed (see above).

Headlights: Four headlights, two in each fender.

Stop Light Switch Location: Mounted on flange protruding from brake pedal support bracket below instrument panel.

Adjustment - Loosen switch mounting nut and adjust switch position so stop lights are on when brake pedal depressed ½".

CIRCUIT BREAKER: 20 Ampere - On Headlight switch. Protects Head, Fog, Instrument, Parking & Ash Tray Lights.

FUSES: All fuses located in fuse panel in center of dash unless otherwise noted.

25 Amper - Body Feed. Protects cigar lighters, clock, interior lights, glove box and map lights.

25 Amper - Heater and Air Conditioner.

25 Ampere - Windshield Wipers.

25 Ampere - Horn & Trunk Lock Motor. *NOTE* - When car equipped with Power Seats and/or Windows, this fuse is changed to a 40 amp. circuit breaker.

14 Ampere - Turn Signals, Stop Lights & Cruise Control. *NOTE* - Cruise Control also protected by a 4 amp. (before Engine No. 041719), 6 amp. (after Engine No. 041719), 6 amp. (after Engine No. 041719) in-line fuse.

9 Ampere - Instruments, Back-up Lights, Generator & Oil Pressure dash indicator lights. *NOTE* - Generator Teltale light also protected by 6 amp. fuse in the right dust shield.

7½ Ampere - Radio. **14 Ampere** - Antenna.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. V8, valve-in-head.

Bore	Stroke	Displacement
4"	3 7/8"	390 cu. ins.

Compr. Ratio	Rated HP	Developed HP
10.5-1Ⓒ	51.2	325 at 4800 RPM

Ⓒ - 8.75-1 Export.

Compression Pressure - *See TUNE-UP.*

►*OVERSIZE CYLINDER BORE CAUTION:* Engines with mark * following Engine Unit No. have .010" oversize cylinder bore and pistons.

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*

OIL PAN REMOVAL: Disconnect battery ground strap and drain oil. Remove starter and heat control valve (swing exhaust pipe away). Lower idler arm support from frame side bar and remove oil pan-to-cylinder block screws and nuts and remove oil pan.

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifolds" in Cadillac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size 4.000-4.0020".

Original Bore & Pistons - *See "Original Bore & Pistons" in Cadillac Special Data.*

Pistons - Pistons have trough in head to provide fuel turbulance and clearance for valves at high speed.

Clearance - .0015" (Top of skirt), .000" (Bottom of skirt).

Removal - Piston and rod assemblies removed from above. Install connecting rod Guide Studs J-3224 on connecting rod bolts to guide rod out through bore without nicking or damaging it.

Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*

Replacement Pistons: Standard (Code "L" or "M") and .010", .020", .030" Oversize with rings and pins.

Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation on rods.*

PISTON PIN

Pin is pressed fit in connecting rod.

Diameter - .9994-.9997". **Length** - 3 3/32".

Pin Fit in Piston - .00005-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).

Pin Fit in Rod - *(NOTE - Special tools required). See "Pistons" in Cadillac Special Data.*

Replacement Pins: Furnished with new pistons only.

PISTON RINGS

Piston rings are 2-in-1 chrome set with side sealing type oil ring.

Ring	Width	End Gap	Side Clearanc
Compr. (1 & 2)	5/64"	.013-.023"	.0022-.0035"
Oil (3)	3/16"	.013-.023"	Ⓒ

Ⓒ - Three-piece type, side sealing.

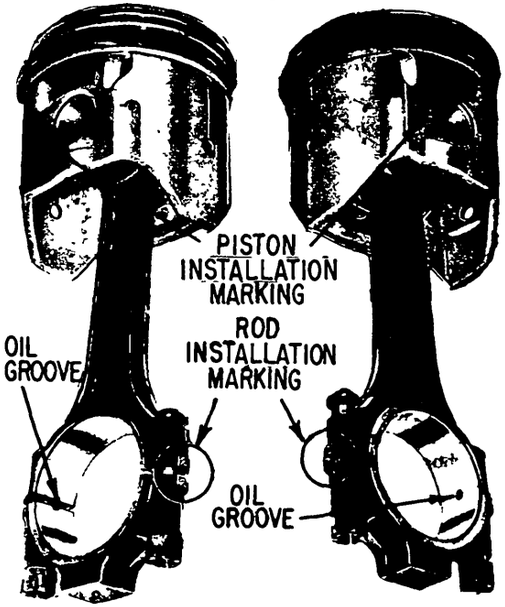
Replacement Rings: Standard, .020" and .030" Oversize.

Installing Rings: Chamfered inner edge of both compression rings must be installed toward top of piston.

CONNECTING ROD

Length - 6.5" (center-to-center).

Crankpin Journal Diameter - 2.2488-2.2493".



Out-of-Round Limits - .00025" maximum.

Bearings - Morgine-400. Bearing shell is steel backed aluminum. Bearing halves are interchangeable. No shims.

Clearance - .0005-.0020" (Service limit .0035").

Replacement Bearings: Furnished in standard size only.

Installing Rods: Install piston and rod in cylinder bore with REAR on piston toward rear of engine and numbers on lower end of rod down. Numbers 1, 3, 5, 7 are in left bank; 2, 4, 6, 8 are in right bank.

RIGHT BANK LEFT BANK

CADILLAC PISTON & ROD ASSY.

CRANKSHAFT

Journal Diameter - 2.625"

Out-of-Round Limits - .00025"

CONTINUED ON NEXT PAGE

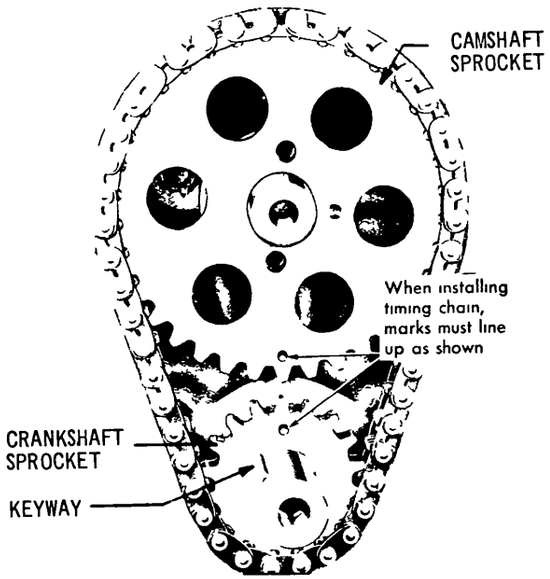
S INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Bearings - Rear, Moraine Durex 100A. All other bearings are Moraine 400 Aluminum
Clearance - .0008-.0025" Wear limit 0045".
Replacement Bearings: Furnished in standard size only
►*REAR MAIN BEARING ALIGNMENT NOTE* For thrust bearing surface alignment see *"Crankshaft & Main Bearings" in Cadillac Special Data*
End Thrust: Taken by flanged rear main bearing.
Endplay - .001-.007". Wear limit .010"
Crankshaft Removal: *See "Crankshaft & Main Bearings" in Cadillac Special Data*
Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage
Removal, Alignment & Installation - *See "Camshaft & Bearings" in Cadillac Special Data.*
Bearings - Steel backed babbitt bushings.
Clearance - .001-.0022" (service limit .004" max.).
Bearing Out-of-Round Limit - .002" max.
Timing Chain: Link-Belt side guide type. **Width** - 11/16", **Pitch** .500", **Length** 23" or 46 links.
Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.



VALVES

Tappet Clearance: None in service, hydraulic.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.875"	.3415-.3425"	4.717-4.688"
Exhaust	1.500"	.3415-.3420"	4.727-4.694"

Valve	Seat Angle	③Lift	Stem Clearance
Intake	①44°	.45"	②.0005-.0025"
Exhaust	①44°	.45"	② .0010-.0025"

① - New valve Valve may be refaced to 45°.
② - New valves & guides. Wear limit .005" max
③ - Cam lobe lift .273".
►*NEW VALVE SEAT CAUTION. DO NOT lap or grind so that seat width is more than 1/64" (due to difference of 1° between valve seat and valve which is designed to provide "hairline" contact.*
Valve Seat Recommendations - 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving) Cut seat so that distance from outer edge to edge of flange on valve head is no more than 1/32"
Valve Stem Oil Seal: Rubber "O" ring seal installed in lower groove on valve stem below valve keeper
Valve Stem Oil Seal Check & Installation - Place 1" diameter suction cup on valve spring retainer Cup will not stick to retainer when pumped up and down if seal leaks To install new seal without removing valve, proceed as follows Remove spark plug at affected cylinder, insert Valve Holder J-3213-1 in plug port to hold valve up and seated Reinstall nearest rocker arm bolt and position Valve Spring Compressor J-5892-1 under bolt head and depress valve spring Remove valve lock and seal Release spring tension to replace spring
Valve Guides: Pressed in cylinder head from combustion chamber side with longest chamfer end pointing toward rocker arm side of head. Use Remover Tool J-3062 to drive out old guide (toward top of head) and installer

CADILLAC VALVE TIMING MARKS

Tool J-3066 to drive new guide in (tool serves as stop for driver).
Valve Springs: Free length 2.25" approximately.

Valve Spring Specifications

	Pressure	Length
Valve Closed	60-65 lbs.	1.946"
Valve Open	155-165 lbs.	1.496"

►*SPRING INSTALLATION CAUTION:* Lower end of valve spring must be seated in cylinder head
Valve Lifters: Hydraulic.
See "Valve System" in Cadillac Special Data.
Valve Lifter Removal - *See "Valve System" in Cadillac Special Data.*
Rocker Arm Assembly: *See "Valve System" in Cadillac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
►*VALVE TIMING NOTE Specifications are "Without Ramp"*
Intake Valves - Open 27° BTDC Close 75° ALDC.
Exhaust Valves - Open 73° BLDC Close 29° ATDC.
Valve Timing Check - Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing gears

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Cadillac Special Data*
Crankcase Capacity: 4 qts refill, 6 qts with filter change
Normal Oil Pressure 30-35 lbs min at 30 MPH 15 lbs at idling speed
Pressure Regulator Valve - On oil pump Not adjustable
Oil Pressure Indicator - Light on instrument panel controlled by pressure switch AC No. 1508767 mounted on engine
Oil Pump: Helical gear, mounted on rear main bearing cap
Oil Pump Removal & Overhaul - *See "Oiling System" in Cadillac Special Data*
Oil Filter: Full-flow disposable type located on right side of engine just ahead of flywheel housing. Replace filter every other recommended oil change (normal operation) or more frequently under severe driving conditions
►*OIL FILTER INSTALLATION CAUTION:* Screw new filter onto stud by hand until gasket touches filter base, then tighten element an additional 2/3 turn.
Crankcase Ventilation: Standard Cars - Air intake in oil filler cap (oil wetted type) with road draft tube from rear of valve rocker cover extending down below engine at right rear corner Clean and re-oil breather cap at every engine oil change.

Positive Crankcase Ventilation Cars - Air intake in oil filler cap with road draft tube replaced by a hose from rear of valve rocker cover to ventilation valve mounted between carburetor and intake manifold to provide complete recirculation of engine gases *CAUTION - On this system, fill r cap air intake must be serviced at recommended interval (whenever oil filt r changed - see Std. Cars above) to insure proper operation of system and to prevent other engine or carburetion troubles. Also, ventilation valve must be serviced at this time. See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: 18½ qts (All Series without heater), 19¼ qts (Series 60, 62, CC with heater), 20¾ qts (Series 75 with heater).
Pressure Valve: AC No RC-15, 13½-16½ lb. Radiator filler cap. Bayonet type with safety catch. Rotate to left against stop to relieve pressure before removing cap
Thermostat: Dole type, Cadillac No 3150205, in water outlet at top of pump body. Starts to open at 173-178°F Fully open at 198°F
Temperature Controlled Fan Clutch (Air Cond. Cars): Thermostatically controlled fan clutch. When ambient temperature around clutch coil is 130-140°F or more, or outside temperature above 80°F, clutch is engaged to limit fan speed to 3500 RPM maximum When ambient temperature around clutch coil is 115-125°F or below, or outside temperature below 70°F, clutch will disengage and limit fan speed to 1700 RPM maximum Unit is serviced as an assembly only
►*THERMOSTATICALLY CONTROLLED FAN CLUTCH NOTE* Use ethylene glycol base anti-freeze in cooling system (for cold weather protection) to protect engine from overheating with slow-warm-up before thermostat opens

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

\ater Pump· Packless type, with sealed ball bearings
R moval & Overhaul - *See Cooling System' in Cadillac Special Data*

f mp ratur Gaug · AC electric type

=ngin Unit - AC No 1513130

CHASSIS LUBRICATION

HYDRA-MATIC AUTOMATIC TRANSMISSION LUBRICATION: Check transmission fluid at every engine oil Change Drain and refill at 30,000 miles (original fluid), 16,000 miles (subsequently) or 1 year intervals For commercial use, heavy driving during hot weather or prolonged idling, all fluid changes should not exceed 16,000 miles

Checking Fluid L v l - Check only with transmission at Normal operating temperature (160-200°F) See OTHER TEMPERATURE NOTE below Run engine for 1½ minutes at 800 RPM with selector in "N" or "P" position Add or remove fluid (with engine running) to bring fluid level to the "F" mark One pint of oil is required to bring levelfrom"Add 1 pint" mark to "F" mark on dipstick DO NOT OVFRFILL Use Automatic Transmission Fluid Type "A" with Suffix A

►*OTHER TEMPERATURE NOTE* If transmission checked at other temperatures level should be as follows

Low Operating Temperature (80-100°F) - Level should be 1/8"below "Add 1 Pint" mark

Extreme Operating Temperature (260-300°F) - Level should be 1/2" above "F" mark

Capacity - 10 qts dry, 9 qts refill

CHASSIS LUBRICATION: The steering knuckle ball joints and steering connector rod ends are packed with special lubricant and sealed Lubrication fittings have been eliminated at these points However, service plugs are provided in steering knuckle ball joints and steering connector rod ends so they may be repacked when necessary

►*LUBRICATION CAUTION Engine accessories (generator, distributor, etc), steering gear, wheel bearings, transmission, r ar axl and universal joints must be ch cked and lubricat d at intervals r commended by manufactur r*

►*SPECIAL LUBRICANT RECOMMENDATION CAUTION. Only the recommended lubricants (see below) are to be used when servicing steering knuckle ball joints and steering connector rod ends Other lubricants will cause early failure of parts*

Lubrication: Every 30,000 miles or 2 years (more frequently if car is operated under severe conditions such as constant driving in wet or dusty areas), pry rubber plugs from upper and lower steering knuckle ball joints and repack with special (red label) lubricant, Cadillac Part No 1474829, using Repacking Gun, J-9280 Fill joint with lubricant but do not permit seal to balloon Pry rubber plugs from steering connector rod ends (five locations) and repack with special (blue label) lubricant, Cadillac Part No 1474830, using Repacking Gun, J-9281 Fill until clean lubricant flows out around seal Install new rubber plugs, Part No 5675444, at all locations *NOTE - Steering knuckle ball joint plugs are located on upper side of upper joint and on lower side of lower joint*

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

TIGHTENING SPECIFICATIONS

	6 Cyl. - Ft. Lbs.	V8
Cylinder Head	90-95	60-70

① - Tighten two center bolts to 25-30 ft lbs
② - Corner bolts. Other screws 6-7½ ft lbs.
③ - 60-70 ft. lbs (283"), 95-105 ft. lbs. (348")
④ - 30-35 ft. lbs. (283"), 35-45 ft. lbs (348").

ENGINE

PASS. CARS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission Remove hood, radiator (on Auto Trans Cars disconnect and plug cooler lines) Remove battery and all electric equipment, wires and remove air cleaner and filter Disconnect fuel and vacuum lines and remove exhaust pipe to manifold bolts Disconnect carburetor control rods at bellcrank, clutch control bellcrank, and transmission rods (overdrive wires and cables). Remove Auto. Trans. filler tube and plug opening. Disconnect speedometer cable, propeller shaft (and remove overdrive solenoid). On V8 cars, remove road draft tube, exhaust crossover pipe and manifold heat control valve. Install lifting hooks (Kit J-4536). Disconnect clutch idler shaft bracket, raise engine slightly and remove all engine and transmission mounting bolts. Remove engine and transmission.

6 CYL. TRUCKS

ENGINE REMOVAL: *NOTE - On Low Cab Forward Models, see "Front Sheet Metal Assembly Removal" below.* On Other Models, drain cooling system, crankcase and transmission. Remove hood, radiator hoses, radiator and shroud. On All Trucks, disconnect all electric equipment wires. Remove coil mounting screws and lay coil and wires out of way. Disconnect engine ground strap, fuel line, and remove air cleaner. Disconnect control cables from carburetor and oil pressure and vacuum lines. Remove exhaust pipe-to-manifold bolts, accelerator rod and on ½, ¾-Ton trucks, remove control rods from bellcrank on clutch housing. On Auto. Trans. Trucks, remove transmission and throttle linkage rods at transmission. On 1-Ton Trucks, remove coolant line clips from dash and frame panels. On All Other Models, remove floor mat and transmission floor pan cover. On 1-Ton Trucks, disconnect parking brake pull rod. On 1½ & 2-Ton Trucks, disconnect inner and outer levers from parking brake operating lever On 1, 1½, 2-Ton Trucks, remove transmission cover (with parking brake and gearshift levers). *NOTE - Cover opening to keep out dirt.* Disconnect speedometer cable, clutch slave cylinder hydraulic line and remove propeller shaft Remove rocker arm assemblies and pushrods. Install lifting Tool J-4536-A and raise engine slightly Remove engine mounts and remove engine and transmission

FRONT SHEET METAL ASSEMBLY REMOVAL (Low Cab Forward): Drain radiator and remove radiator hoses On Air Cond trucks, remove compressor lines Disconnect air cleaner intake hose at fender skirt (if so equipped) wire connectors at dash and toe panel, battery, generator and regulator leads Disconnect Power Steering Reservoir hose at pump Remove hood assembly at hinges, and remove front bumper Remove fender extension bolts (note number and location of shims for reinstallation) Remove fender upper edge-to-plenum and hinge pillar bolts Work from under rear of fender to remove two bolts and spacers at fender extension mounting bracket Remove bolt, locking tab, and flat washer from radiator support to crossmember Remove fender skirt mounting bolts and remove bolt, washer, spacer and grommet from fender skirt bracket Remove steering joint cover bolts and cover from fender skirt and remove snap in clip from seal to skirt. Spread seal from steering column and remove cover Remove sheet metal assembly with radiator, battery, horn and voltage regulator

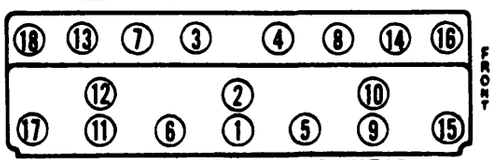
V8 TRUCKS

ENGINE REMOVAL: Drain cooling system, crankcase and transmission Remove hood, battery cables and carburetor air cleaner Remove radiator and heater hoses, fan blade, spacer, pulley, fan shroud and radiator Remove power brake vacuum line, power steering return line and pump pressure line Remove all electrical equipment lines. Disconnect choke and throttle cables Remove accelerator rod from carburetor and dash bellcrank Remove road draft tube and disconnect exhaust pipe at manifolds. Remove transmission control rods and disconnect clutch slave cylinder hydraulic line. Disconnect and plug oil cooler lines (if so equipped). Disconnect speedometer cable and propeller shaft. Remove floor pan and sheet metal, *see "Front Sheet Metal Assembly Removal, Low Cab Forward" above* Remove engine front mount-to-frame crossmember bracket nut and washer, rocker arm covers. Install eye bolts (Kit J-4536-A) in head bolt holes. Raise engine slightly, remove crossmember. Remove engine and transmission as a unit.

OIL PAN

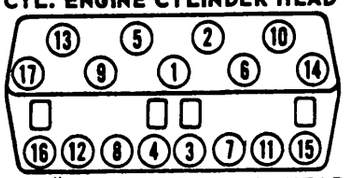
V8 PASS. CARS

OIL PAN REMOVAL: *NOTE - On Turboglide transmission cars, remove transmission control lever cross shaft at transmission shifter lever and shaft assembly in addition to following procedure.* Raise car, drain crankcase and radiator Disconnect radiator hoses at radiator Disconnect battery ground strap at engine Disconnect clutch pushrod at pedal control and disconnect intermediate lever and shaft. Remove clutch pedal control intermediate lever and shaft assembly from frame mounting bracket, but leave shaft assembly attached to engine. Remove carburetor fuel feed pipe at fuel pump and remove the fuel pump Remove the accelerator control rod from its lever On 348" engine, remove oil level gauge tube Remove power brake vacuum hose at check valve on manifold On 283" engine, remove power steering pump at generator and lay on upper control arm (unnecessary to disconnect hoses) On 348" engines, disconnect generator brace and rotate away from engine so power steering pump will clear brake master cylinder Remove transmission lower control rods at shift levers Disconnect exhaust pipes from manifolds and lower pipe and muffler assembly Remove oil filter Loosen transmission mounting bolts Remove long bolts from each front engine mount *NOTE - Turn crankshaft so harmonic balancer keyway slot is at bottom of engine to enable crankshaft counterweights to clear oil pan baffle* Raise engine at harmonic balancer approximately 3" (283"), 2¾" (348") until transmission housing contacts underbody toe pan *CAUTION - While raising engine watch clearance at fan blades and shroud* Remove oil pan bolts and remove pan with a tilting motion



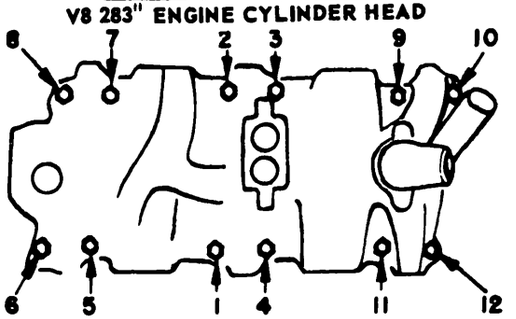
CYLINDER HEAD & MANIFOLD

ALL ENGINES



CYLINDER HEAD INSTALLATION (6 CYL. ENGINES): Use torque indicating wrench to tighten cylinder head cap screws in correct sequence as shown in diagram

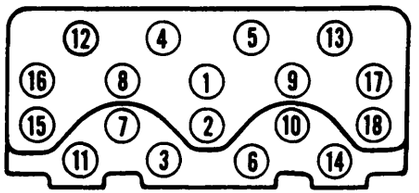
CYLINDER HEAD INSTALLATION (V8 ENGINES): Coat steel gasket with a good grade of head gasket paste and install gaskets in position on cylinder block Install heads over dowels in block Coat threads of all bolts with Permatex No 3 (head bolts protrude into water passages) On 283" Engine, a shorter length head bolt goes in No 17 and No 14 positions Tighten bolts to correct specifications in sequence shown in diagram



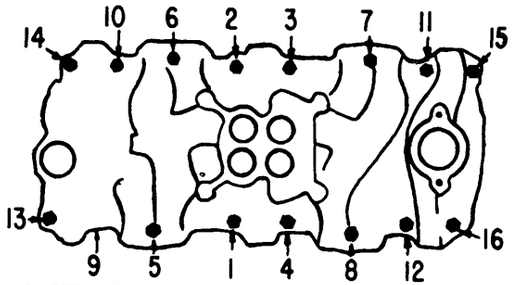
CONTINUED ON NEXT PAGE

6 CYL. ENGINE CYLINDER HEAD

V8 283" ENGINE CYLINDER HEAD



V8 283" ENGINE INTAKE MANIFOLD



CONTINUED FROM PRECEDING PAGE

►*REPLACEMENT CYLINDER HEAD NOTE (348" Eng.):* Service cylinder heads have increased water passages cast around spark plug openings but are not drilled for water passages from block. When this service cylinder head is to be used on a 1959-60 348" engine, drill ¼" (at drill spot near each spark plug) into water passage to match water hole in block. DO NOT drill holes when using this service head on a 1958 engine and DO NOT use a cylinder head gasket (without these holes) on 1959-60 engine. Long reach spark plugs must be used with this type head.

INTAKE MANIFOLD INSTALLATION (V8 ENGINES): Install manifold end gaskets on cylinder block. Coat ends of intake manifold side gaskets around water passages with a good sealing compound and install heads. Tighten bolts a little at a time to 25-35 ft. lbs. torque.

CHEVR LET V8 348" ENGINE CYLINDER HEAD

CHEVR LET V8 348" ENGINE INTAKE MANIFOLD

PISTON PINS
V8 ENGINES

PISTON PINS (283" Engine): Removal - Install pilot of Tool J-5538 (see the alteration note below) on the puller screw, with pilot, through piston and pin. Install tool support over threaded end of puller screw with small end of support against piston. Install nut loosely on puller screw and place assembly in arbor press so that pin can be pressed out through support.

►*283" PISTON PIN TOOL J-5538 ALTERATION NOTE:* Taper d end of support must be cut back at smaller angle to centerline of support to avoid breakage of bottom piston ring land.

Installati n: Lubricate pin holes and position connecting rod in its respective piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (cast depression in head of piston and "F" marks on piston struts) on #1-#3-#5-#7 pistons and rod flange to **rear** of piston on No. 2, No. 4, No. 6, No. 8 pistons. Install piston pin on adapter and pilot on screw. Install puller screw through piston and rod, indexing pilot through piston and rod. Install support over threaded end of puller screw with small diameter toward piston. Install in arbor press and press piston pin in until pilot bottoms in support.

PISTON PINS (348" Engine): Removal - Install pilot of piston pin Tool J-6994 on piston pin. Place piston and rod assembly on support and place assembly in arbor press. Press pin out of connecting rod.

Installation - Lubricate piston pin holes in piston and rod, position rod in respective piston, so flange or heavy side of rod (at bearing end) will be towards **front** of piston (cast depression in piston head and "F" mark on strut) on No. 1-3-5-7pistons,and rod flange or heavy side of rod, to **rear** on No. 2-4-6-8 pistons. Place piston pin on installer and pilot spring and pilot in support. Place piston and rod on support indexing pilot through piston and rod. Place support on arbor press, start pin into piston, and press pin into piston until pilot bottoms.

CRANKSHAFT & MAIN BEARINGS
ALL ENGINES

6 CYL. & V8 MAIN BEARING REPLACEMENT (With Engine in Car): Upper bearing halves can be "rolled" out for replacement. Proceed as follows:

1) Remove spark plugs and remove engine oil pan. Remove bearing cap and bearing shell.

2) Install main bearing shell removing and installing tool (or use a cotter pin bent as required). Rotate crankshaft in direction of usual rotation and roll upper bearing shell out of engine.

3) Oil new bearing shell and insert plain (un-notched) end of shell between crankshaft and block on the indented or notched side. Rotate bearing into place. Install new bearing shell in bearing cap.

REAR MAIN BEARING OIL SEAL (6 Cyl. Eng.): To replace rear bearing oil seal without removing engine proceed as follows:

1) Remove oil pan, oil pump assembly, rear main bearing cap (discard old seal). Loosen all bearing caps (to allow crankshaft to drop a slight amount). *NOTE* - Pry between crankshaft and block to force crankshaft down as necessary.

2) Use screwdriver or similar tool to force old seal out of upper bearing so it can be removed with a pair of pliers (rotate shaft to aid in removal of seal).

3) Pre-form new upper seal in cap.

4) Insert soft wire (tag wire) through new upper seal 1/4" from end and wrap wire around end of seal to keep seal from spreading. Lubricate entire surface of upper seal with lubricant and reform seal in lower cap.

5) Insert wire through seal opening in crankcase and around crankshaft. Use screwdriver or similar tool to start seal accurately, then pull seal into position (working seal into position with tool and rotating crankshaft as necessary). With seal centered, cut off ends ¼" below bearing edge.

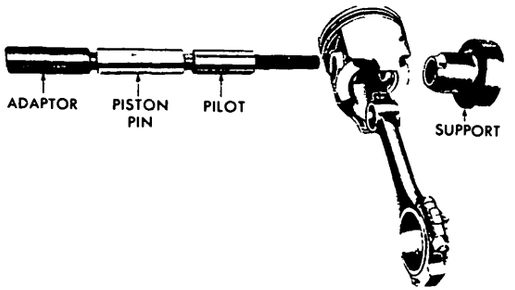
6) Install new lower seal in bearing cap (force it into position with Tool J-5788) and cut ends off flush with surface of bearing cap. Tighten all bearing caps t specifications.

REAR MAIN BEARING OIL SEAL (V8 Eng.): To replace rear main bearing seal without removing engine, first remove oil pan (see above for Pass. Cars, or car model page for Trucks), then proceed as follows:

Cap Seal - Remove bearing cap and pry out old seal with screwdriver. Lubricate new seal (exc. parting surface) and roll seal into place without damaging bead of seal with seal tangs.

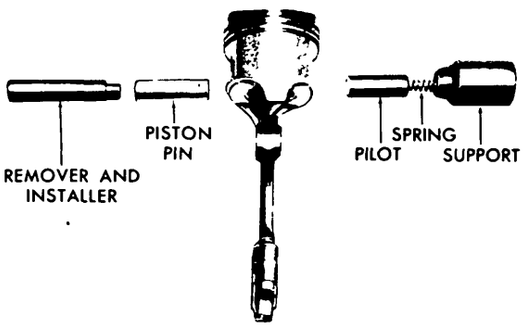
Block Seal - Use small drift to start seal out until it can be removed with pliers. Lubricate new seal (exc. parting surface) and gradually push seal in with hammer handle until seal rolls into place. DO NOT cut seal with seal retainer tang.

VIBRATION DAMPENER
6 CYL. ENGINE



VIBRATION DAMPENER (6 CYL ENGINE): Removal - Drain radiator, disconnect hoses. On Automatic Transmission models, remove oil cooler lines. Remove radiator (note number of shims). Remove fan belt. Install Tool J-6978 or J-1287 and remove vibration dampener and pulley assembly.

Installation: Remove puller and install two 3/8"-16 x 1" (16 thread) capscrews in dampener to support wheel portion during installation. Position dampener on crankshaft with key and keyway on alignment and drive dampener on shaft until it bottoms against crankshaft gear. Use a heavy hammer and bar through the grille, taking care that a straight installation is made. Remove the two capscrews previously installed. Install radiator.



V8 ENGINE

VIBRATION DAMPENER (8 CYL. ENGINE): Removal - Remove radiator hoses. On Automatic Transmission

CONTINUED ON NEXT PAGE

PISTON PIN DISASSEMBLY

PISTON PIN ASSEMBLY

CONTINUED FROM PRECEDING PAGE

models, disconnect cooler lines from radiator core Remove battery, fan belt, fan and pulley Remove fan shroud bolts and remove radiator and fan shroud Remove vibration dampener pulley bolts and remove pulley Use Tool J-6978 to remove vibration dampener

Installation: Coat vibration dampener front cover seal contact with engine oil, align vibration dampener with crankshaft key and use Tool J-5590 to drive vibration dampener on crankshaft until dampener hub bottoms on crankshaft timing gear Install vibration dampener pulley, fan pulley, and fan Place fan shroud over fan blade and lower radiator into place Install bolts Install fan belt

ENGINE FRONT COVER

ALL ENGINES

FRONT OIL SEAL INSTALLATION: Pry old seal out of front cover. Install new seal so that open end of seal is toward inside of cover and drive it into position with Oil Seal Driver J-995 (6 Cyl), J-996 (V8) *CAUTION* - Support cover at sealing area while installing seal

CAMSHAFT & BEARINGS

CAMSHAFT LOBE LIFT (All Eng.): Remove rocker arm shaft and support assembly (6 Cyl) rocker arms and balls (V8) On 6 Cyl Eng install 3/8"-24-16 Stud Adapter from Tool J-8520 in rocker shaft support hole On all engines attach Tool J-8520 to adapter or stud and adjust dial indicator to seal in pushrod cup *NOTE - B sure pushrod is seated in lifter socket* Rotate crankshaft slowly (clockwise) until lifter is on heel of cam lobe (pushrod will be in its lowest position) Set dial indicator to Zero and slowly "BUMP" engine over until pushrod is in **FULLY** raised position Compare total lift on dial indicator with Specifications in "CAMSHAFT-WEAR LIMIT" table below *NOTE Continue to rotate engine until indicator reads Zero for accuracy check on dial indicator*

Camshaft Lobe Lift & Wear Limit

	Intake Lift		Exhaust Lift	
Engine	① New	② Worn	① New	② Worn
235" Pass	.222"	.217"	.222"	.217"

① - Plus or Minus .002". ② - Plus .003", Minus .002".
③ - Pass. Cars with 2-Bbl. Carb.
④ - Pass. Cars (Exc. 2-Bbl. Carb.), Corvette & Trucks.
⑤ - With Hyd. Lifters. ⑥ - With Mech. Lifters.

6 CYL. ENGINES

CAMSHAFT REMOVAL & INSTALLATION: Drain crankcase and radiator Remove radiator and grille Remove rocker arm cover and rocker arm shaft assembly Remove coil and valve side cover, pushrods and lifters Remove vibration damper (see above). Remove oil pan and engine front cover (see above). Remove camshaft thrust plate screws and remove camshaft and gear *CAUTION - Support shaft carefully to prevent bearing damage* . To install, reverse removal procedure

6 CYLINDER CAMSHAFT BEARING REPLACEMENT: Use Bearing Remover & Replacer J-6356. Install No. 1 and No. 2 bearings first, then rear two bearings. *(CAUTION* - Align holes in bearings with oil holes in block before pulling into place). Install plug flush to 1/32" deep from clutch housing face of case.

V8 ENGINES

CAMSHAFT REMOVAL & INSTALLATION: 1) Drain radiator, remove outlet and inlet hoses On Auto Trans models, remove oil cooler lines from radiator and plug lines and fittings Remove attaching bolts and lift radiator straight up to remove

2) Remove air cleaner, disconnect throttle rod at carburetor (On Auto Trans models, disconnect lower transmission throttle lever rod) Disconnect fuel, vacuum, and choke lines at carburetor coil primary wires, and coil to distributor secondary wires Remove distributor

3) On overdrive models, disconnect kickdown switch wires at switch

4) Remove spark plugs, water and heater hoses, and temperature indicator unit from intake manifold Remove intake manifold

5) Remove fan belt, exhaust manifold to exhaust crossover pipe stud nuts and lower crossover pipe Remove exhaust manifold heat control valve from right exhaust manifold

6) Disconnect generator wires, remove exhaust manifolds, choke heat tube and remove rocker arm covers

7) Loosen rocker arm nuts, pivot rocker arms and remove pushrods and valve lifters *NOTE* - Pushrod seats on solid lifters should remain with lifters

8) Remove fuel pump lines at fuel pump, pump mounting bolts, fuel pump, fuel pump pushrod adapter bolts adapter and pushrod

9) Remove bumper, grille-to-fender tie bar screws, grille-to-fender screw and screw and bolt at front end of grille From under fender, remove grille bracket to fender filler panel screw and fender and filler panel to grille screw

10) Remove grille filler panel-to-grille clips, hood lock plate-to-grille support assembly, and fender tie bar bolts

11) From under fender, remove tie bar-to-fender skirt bolts and front bolts at tie bar, then loosen rear bolt at each side Rack tie bar backward to clear top of grille Lift grille assembly to clear tabs at fillerpanel, unplug electrical connections and remove grille

12) Remove vibration dampener (see *"Vibration Dampner Removal"*), timing chain cover, timing chain and sprocket Install two bolts, 5/16"-18 x 4", in camshaft bolt holes and remove camshaft *NOTE* - All camshaft bearings are the same diameter Use care to avoid damage to bearings

V8 CAMSHAFT BEARING REPLACEMENT: Use Bearing Remover & Replacer J-6356. Remove bearing nearest center of block first, then No. 2 and No. 4 bearings, and finally front and rear bearings (with this sequence minimum number of turns are required to locate Remover & Replacer for removal of next bearing). When installing, install No. 1 or front bearing first. This bearing will act as guide for tool and center the No. 2 and No. 3 bearings being pulled into place. *(CAUTION*–Use care when installing rear bearing due to smaller size of oil pressure holes in rear bearing. When installing end plug, install flush to 1/32" deep to maintain level surface on rear of cylinder block).

TIMING GEARS

6 CYL. ENGINES

REPLACEMENT TIMING GEARS: Fibre type camshaft gear and steel crankshaft gear used on passenger cars. Aluminum camshaft gear and steel crankshaft gear used on trucks.

TIMING GEAR INSTALLATION: Gears are press fit on crankshaft and camshaft and must be removed and installed as follows·

Crankshaft Gear–To remove gear, attach Puller J-8105 to the gear and turn handle When installing gear, make certain that two woodruff keys are in the crankshaft, then drive gear on shaft until it bottoms against shoulder

Camshaft Gear–To remove gear, install Gear Remover J-971 on shaft in back of gear (remover consists of support sleeve), place camshaft assembly in arbor press *(CAUTION*–Thrust plate must be positioned so that it will not be damaged by woodruff key in shaft as shaft pressed out), press shaft out of gear. To install gear, place shaft in arbor press (support shaft securely directly back of front bearing journal), install gear spacer ring and thrust plate over end of shaft, and install woodruff key in shaft keyway. Install camshaft gear and press it on shaft until it bottoms against the gear spacer ring. End clearance of thrust plate should be 001 005" Install the camshaft assembly in engine block, being careful not to damage bearings or cams. With crankshaft installed turn camshaft and crankshaft so that valve timing marks on gear teeth will line up, then push camshaft into position. Install camshaft thrust plate-to-block screws and tighten securely. Camshaft and crankshaft gear runout should not exceed .004" for camshaft and .003" for crankshaft. Backlash between timing gear teeth should not be less than .004" nor more than .006". *CAUTION*–Press on hub only when installing camshaft gear.

TIMING CHAIN

V8 ENGINE

TIMING CHAIN: Removal–Remove vibration dampener, timing chain cover, and oil slinger Rotate engine until timing marks on sprockets are in alignment and adjacent Remove three camshaft sprocket screws and remove camshaft sprocket and chain together

Installation Install chain on camshaft sprocket Hold sprocket vertical with chain hanging below, and line

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

up 'O' timing marks on both sprockets so they are adjacent and in line with a straight edge across shaft centers Align dowel in camshaft with dowel hole in sprocket and install sprocket on camshaft Draw camshaft sprocket onto shaft using the three mounting bolts Tighten to 15-20 ft lbs. *CAUTION–Do not attempt to drive sprocket onto shaft as welch plug at rear of engin can be dislodged.*

VALVE SYSTEM
VALVE STEM OIL SEALS
6 CYL. ENGINES

VALVE STEM OIL SEAL INSTALLATION: Seal consists of synthetic rubber ring installed in second groove of valve stem directly under valve locks on all valves. When assembling valves, install seal as follows· Install valve spring and spring retainer on valve stem, compress spring until lower groove on valve stem is exposed, install seal in this groove *(CAUTION* - Seal must seat flat in groove and not be twisted). Install valve locks in upper groove in valve stem, relieve spring tension, check to see that seal is properly retained in spring retainer and that locks are engaged.

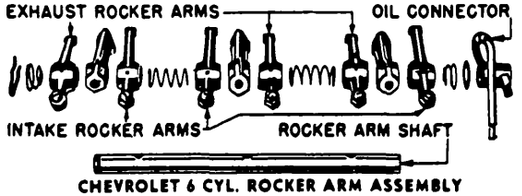
V8 ENGINES

VALVE STEM OIL SEAL INSTALLATION: Seal consists of "O" ring installed in second groove of valve stem directly under valve locks on all valves, and cup shaped metal shield placed over outer end of valve spring under valve cap Install valve spring and damper, with close coiled end against cylinder head and place shield over spring. On trucks, place rotator in position (if used) Install cap, compress spring and install seal in lower groove on stem *NOTE* - Be sure seal is flat and not twisted in groove Install valve locks and release spring tension

VALVE GUIDES
6 CYL. ENGINES

VALVE GUIDE INSTALLATION: Press old guide from cylinder head with an arbor press and Tool J-5600 Press new guides (short guides for exhaust long guides for intake)into head with Tool J-5599 until top of guide is 15/16" (exhaust), 1" (intake) above head *NOTE - When using Tool J-5599, use a 1/16" shim und r tool for intake guides When using Tool J-5734, use a 1/16" shim under tool for exhaust guides* Finish ream all guides with 343" hand reamer, Tool J-4822

ROCKER ARMS
6 CYL. ENGINES



ROCKER ARMS (6 CYL. ENGINES): Diamond bored and "granodized" (no bushings) and fit directly on rocker arm shafts Different rocker arms used as follows and must be installed as indicated

R ck r Arm Identification

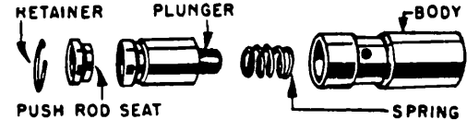
Typ	Cylinder No.	①Casting No.	Part No.
L H Intake	2-4-6	3764485	3764489
L H Exhaust	1-3-5	3764487	3764481
R H Intake	1-3-5	3764486	3764490
R H Exhaust	2-4-6	3764488	3764482

① - Last two digits (85, 87, etc) of this number stamped on rocker arm

Installation Assemble rocker arms as indicated in illustration with open end of shaft toward center, and baffle in rear shaft open end in vertical position

CHEVROLET 6 CYL. ROCKER ARM ASSEMBLY
(REAR ASSY. SHOWN—FRONT ASSY. SIMILAR)

V8 ENGINES



ROCKER ARM STUD REPLACEMENT (V8 ENGINES): Replacement studs furnished 003" & 013" Oversize
Removal - Remove old stud by placing Spacer J-5802 over stud, adding flat washer and nut and turning nut down to pull stud from head
Installation - Ream stud hole for correct oversize stud using Reamer J-5715 for 003", J-6036 for 013" oversize Coat press-fit part of stud with hypoid lubricant and use Tool J-6880 to install stud in head Tool should bottom on head

HYDRAULIC LIFTERS
6 CYL ENGINES

HYDRAULIC VALVE LIFTERS: Barrel type consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (see illustration) Oil is introduced to this unit through oil gallery in block

Removal· Remove rocker arm assemblies pushrod cover pushrods and valve lifters *NOTE* - Keep valve lifters and pushrods in order so they may be returned to original positions

Disassembly: Use Tool J-4274 and hold plunger down and remove plunger and pushrod seat retainer with a small screwdriver blade Remove pushrod seat, plunger,

CHEVROLET 6 CYL. HYDRAULIC VALVE LIFTER

ballcheck valve assembly, and plunger lifter spring Clean all parts in solvent and inspect each part for nicks or burrs and wear Replace lifter assembly if any part damaged or has excessive wear

Reassembly: Drop lifter spring into body Install plunger and ball check valve assembly into body, using care to align feed holes in body and plunger Fill lifter with SAE 10 oil, insert end of Tool J-4274 into plunger, and press down solidly Insert pin (part of J-4274) through oil feed holes to hold plunger against spring tension and remove other part of tool Fill lifter with SAE 10 oil and install pushrod seat and spring retainer Remove tool pin

V8 ENGINES

HYDRAULIC VALVE LIFTERS· Barrel type consisting of lifter body pushrod seat inertia valve check ball ball retainer pushrod seat retainer plunger and plunger spring Oil is supplied under pressure from main oil gallery line

►*HYDRAULIC LIFTER REPLACEMENT NOTE & INTERCHANGEABILITY CAUTION* Hydraulic Valve Lifter Assembly Part No 5231475 is slightly shorter than production lifter but has identical lift action and is completely interchangeable for use in all 1957-60 V8 engines

Removal: Remove rocker arm covers intake manifold back off rocker arm nuts until arms may be pivoted away to remove pushrods Remove hydraulic lifters

Disassembly: Hold plunger down with pushrod, then remove pushrod seat retainer, pushrod seat, inertia valve assembly, plunger and spring from lifter body Pull check valve ball retainer from plunger and remove ball and spring Clean all parts in solvent and inspect them carefully for wear or damage Replace lifter if damaged parts are found

Reassembly: Place check ball on small hole in bottom of plunger, check ball spring in ball retainer and place retainer over ball so spring rests on ball Squeeze retainer and press into position in plunger Place plunger spring over ball retainer and slide lifter body over spring and plunger Install pushrod seat and inertia valve assembly in open end of plunger, push plunger into body and install retainer Compress plunger to open holes and fill with SAE 10 oil Work plunger up and down and again refill

V8 ENGINES

►*1961 V8 ENGINE HYDRAULIC LIFTER PRODUCTION CHANGE & ADJUSTMENT CAUTION Early 283" engines up to Engine No F-0122 & T-0129 and early 348" engines up to Engine No F-, T-0129 use "long travel" lifters Later 283" engines beginning Engine No F-0123 & T-0130 and later 348" engines beginning Engine No F-, T-0130 have "short travel" lifters Procedures for lifter adjustment either with engine running or stopped, are different for each type lifter Severe engine damage will result if improper adjustment is made See below for lifter identification and adjustment*

"Long Travel" Lifter Identification (Lifter R m v d From Engine) - *Pushrod seats on all "long travel" lifters have less depth than seats on "short travel" lifters Identify "long travel" type as follows*

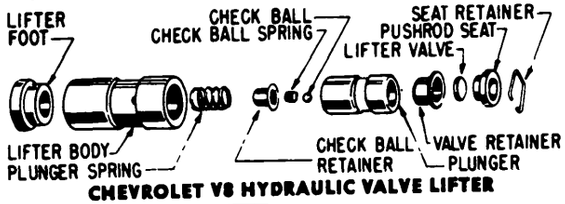
Part No. 5232100 - 1 hole body, 1 hole plunger, pushrod seat steel color, plunger retainer copper plated

Part No. 5232110 - 1 hole body, 6 hole plunger, pushrod seat and plunger retainer copper plated

Part No. 3789175 - 1 hole body, 6 hole plunger, 2 grooves at top of body

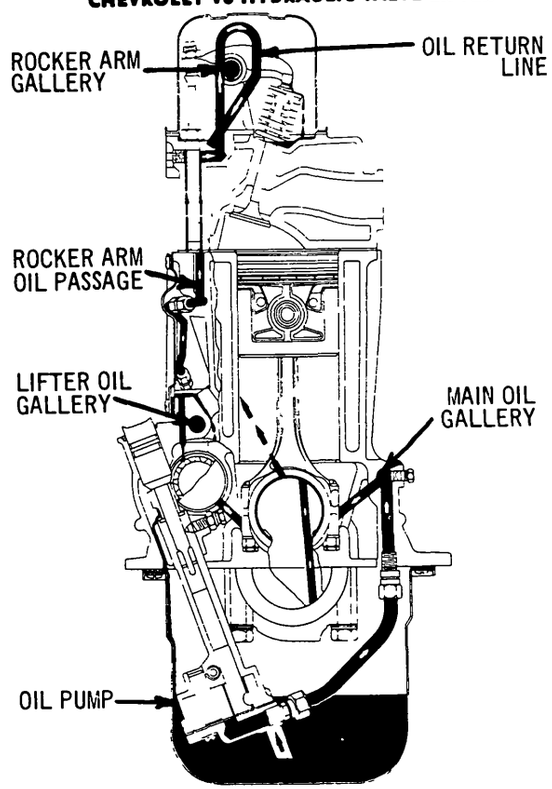
Lifter Identification (Engine Assembled) - See "Lifter Adjustment" below and proceed to point where all freeplay removed from valve train or until rocker arm clatter stops on all valves Now turn rocker arm stud adjusting nut an additional 2½ turns on all valves If engine runs smoothly after lifters have adjusted themselves, lifter is "long travel" type If engine runs roughly, lifter is "short travel" type *CAUTION - This procedure is for identification purposes only For proper adjustment, see "Lifter Adjustment" below*

►*HYDRAULIC LIFTER NON-INTERCHANGEABILITY CAUTION DO NOT intermix "long travel" and "short travel" lifters on any on engine*



LIFTER ADJUSTMENT: Engine Stopp d - With No 1 cylinder at TDC firing position, adjust Exhaust Valves

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

1-3-4-8 and Intake Valves 1-2-5-7 as follows: Back off rocker arm stud adjusting nut until there is play in valve pushrod, then tighten nut until pushrod-to-rocker arm clearance is just removed. Then tighten nut an additional 1 turn (short travel lifters), 2 turns (long travel lifters). This procedure will place hydraulic lifter plunger in the center of its travel. No further adjustment is required. *NOTE - To identify lifters, see above.* Crank engine one complete revolution so No. 6 cylinder is at TDC firing position and adjust Exhaust Valves 2-5-6-7 and Intake Valves 3-4-6-8 in the same manner.

Engine Running - With engine at idle speed, back off rocker arm stud adjusting nuts one at a time until rocker arm starts to clatter. Then turn nut down until clatter just stops. Turn nut an additional 1 turn (short travel lifters), 2 turns (long travel lifters). *NOTE - To identify lifters, see above.*

CHEVROLET V8 HYDRAULIC VALVE LIFTER

6 CYL. ENGINE OILING SYSTEM

OILING SYSTEM

235" & 261" ENGINE

ENGINE LUBRICATION: Force feed type with oil supplied under pressure to all crankshaft, connecting rod and camshaft bearings, lifters and rocker arms. Restricted oil pressure supplied to valve stems and pushrod sockets and timing gears. All other parts oiled by spray or mist from engine crankcase.

OPERATION: Gear type oil pump, mounted on crankcase (at right side) and driven by distributor drive shaft, draws oil from oil pan through a floating oil screen and delivers it by pipe to fitting on lower end of passage, leading to a horizontal oil gallery at left side of crankcase. Pressure regulator valve located in oil pump body. Oil is distributed from main oil gallery as follows:

Crankshaft & Camshaft Bearings - An oil channel from main oil gallery through each crankcase web delivers oil to each crankshaft main bearing. A similar channel in opposite side of each web delivers oil from each crankshaft bearing to each camshaft bearing.

Connecting Rod Bearings - Crankshaft is drilled so that each connecting rod bearing is lubricated through passages from adjacent main bearing. Main bearings provide continuous flow of oil to connecting rod bearings.

Pistons & Pins - Oil spray is thrown on cylinder walls from an oil hole on left side of connecting rod when this hole registers with hole or passage in connecting rod journal.

Timing Chain & Sprockets - Oil from front camshaft bearing passes through a milled slot in rear surface of front engine plate and is directed by a nozzle at timing gears.

Lifter Oil Gallery - A horizontal lifter oil gallery, located directly above camshaft, receives oil from rear camshaft bearing (early cars) from both front and rear camshaft bearings (later cars). This gallery lubricates both mechanical and hydraulic valve lifters.

Rocker Arms, Pushrods, and Valve Stems - Oil is delivered to the horizontal lifter gallery by the front and rear camshaft bearings. A vertical oil gallery from center of lifter gallery, with an 11/32" orifice restriction, delivers oil to a matching passage in cylinder head to fitting on cylinder head. Oil is delivered from fitting on cylinder head through a pipe to a connector between hollow rocker arm shafts, then to return passage in cylinder head and block to crankcase. Oil passes through holes in hollow rocker arm shafts to rocker arms where bleeder holes supply oil for valve stem and pushrod socket lubrication.

OIL FILTER: 235" Eng. - Optional partial flow type mounted on engine bracket.

261" Eng. - A full flow type filter mounted on the intake manifold. Receives oil directly from passage in crankcase leading to main oil gallery and delivers it to main oil gallery. *NOTE* - When filter removed, connect inlet and outlet openings in crankcase with pipe and DO NOT plug openings at any time.

283" ENGINES

DESCRIPTION: Positive pressure lubrication is provided to all main, camshaft and connecting rod bearings and to all valve lifters and rocker arms. Three horizontal oil galleries are located in "V" at center of engine and distribute oil under pressure to all parts of engine.

OPERATION: Gear type oil pump mounted on rear main bearing cap draws oil from engine oil pan sump through a meshed screen intake (with bypass valve at center of screen) and delivers it through rear main bearing cap to a vertical passage leading to main oil gallery. On 1956 and later engines, this vertical oil passage is rerouted through a full flow filter mounting pad at left side of crankcase. Bypass valve is located between filter and mounting pad. Oil distribution from main oil gallery is as follows:

Crankshaft & Camshaft Bearings - An oil passage from vertical oil passage supplies oil to rear main bearing. Oil passages from main oil gallery supply oil to each camshaft bearing and to all except the rear main bearing.

Connecting Rods & Pistons - Oil is delivered from each main bearing to adjacent connecting rod bearing through drilled passages in crankshaft. A hole in connecting rod sprays oil onto cylinder walls, for piston and piston pin lubrication, when hole in rod matches hole in connecting rod journal.

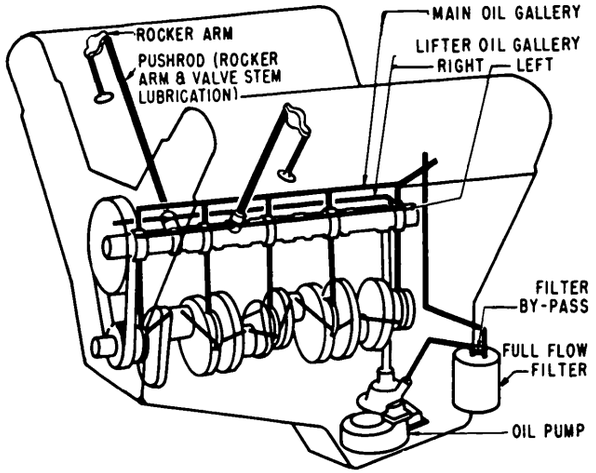
Valve Lifters - Oil passage from rear camshaft bearing supplies oil to lifter oil galleries. Both mechanical and hydraulic valve lifters intersect the gallery. A recess in mechanical lifter permits oil to pass into lower end of pushrod. A larger passage in rear camshaft bearing permits more oil pressure for lubrication of hydraulic lifters. Hydraulic lifters contain an inertia valve which opens permitting oil to pass to hollow pushrods.

Rocker Arms & Valve Stems - Oil passes up through hollow pushrods to a hole in upper end that matches hole in rocker arm. Oil sprayed out this hole and across rocker arm lubricates valve stem tip.

OIL FILTER: Full flow type mounted on left side of crankcase. Receives oil direct from oil passage from oil pump and delivers it back to vertical oil passage. Bypass valve located between filter and mounting pad.

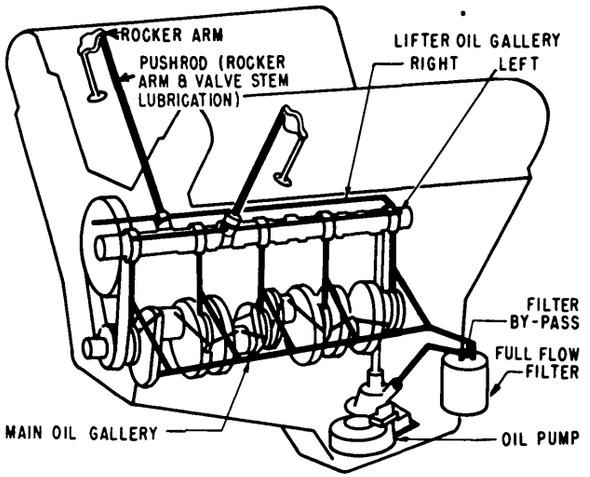
348" ENGINE

DESCRIPTION: 348" engine lubrication system is the same as for the 283" V8 Engine except for the following: The oil pump delivers oil through passage in rear main bearing cap to a filter mounting pad at left side of engine. A passage from filter pad leads to a horizontal main oil gallery running full length of engine. Oil from this main gallery is delivered through diagonal passages to vertical passages leading up to camshaft and down to crankshaft bearings.



OIL FILTER: Full flow type mounted in recess on left lower side of crankcase with bypass valve located in recess. Receives oil through direct passage in bearing cap and crankcase and delivers it through passage to main oil gallery.

OIL PUMP

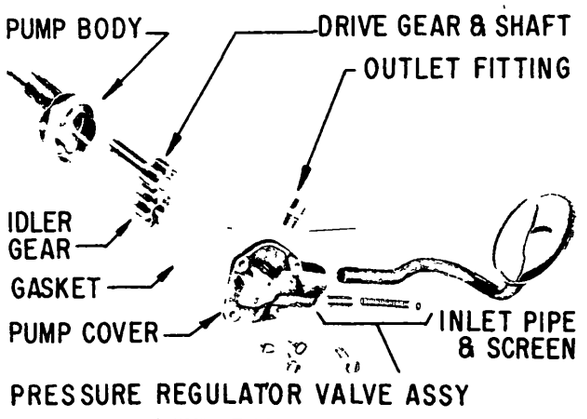


6 CYL. ENGINES

6 CYL. OIL PUMP (Removal & Disassembly): Drain oil, remove oil pan and disconnect oil pump-to-block oil line. Remove oil pump retaining sleeve lock screw and remove oil pump and oil pump-to-block oil line. Remove pressure oil line from pump and remove pump cover attaching screws, cover, gasket, idler gear and drive

CONTINUED ON NEXT PAGE

283" V8 ENGINE OILING SYSTEM



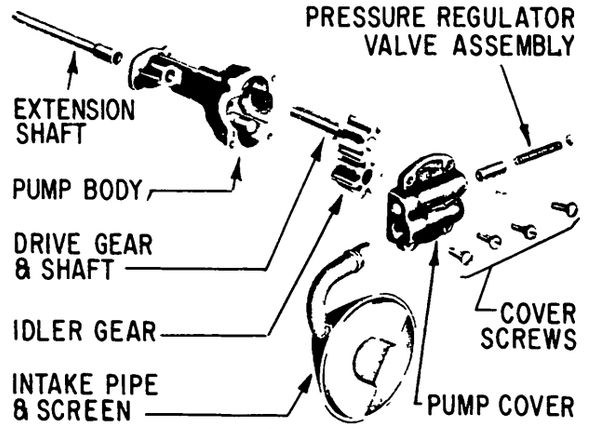
348" V8 ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

gear and shaft. Remove regulator valve pin and valve parts. Remove intake pipe and fixed screen as an assembly. Wash all parts in solvent and inspect pump body for cracks or excessive wear. Check shaft for looseness in housing and gear and cover for wear.

Assembly: Install drive gear and shaft in body. Install idler gear with smooth side toward cover. Install cover and new gasket. Tighten screws securely and check to see that shaft turns freely Install regulator valve plunger, spring, retainer and pin. Install oil line to pump body loosely.

Installati n: Install pump in block and align oil lines and install retaining sleeve lock screw and tighten securely. *(CAUTION*–Make sure tapered end of lock screw draws down into hole in oil pump body. Tighten oil pump-to-block oil line and pump-to-screen oil line connector nuts securely. Replace intake pipe and screen.



6 CYL. ENGINE OIL PUMP

V8 ENGINE

V8 OIL PUMP (Removal & Disassembly): Drain oil, remove oil pan and pump to rear bearing cap bolt Remove pump, extension shaft and collar Disconnect pump shaft from extension, remove pump shaft, pump cover, idler gear, drive gear and shaft If screen or pipe need replacing, hold cover (in soft jawed vise) and pull out pipe Wash all parts in solvent and inspect all parts for cracks, burrs or excessive wear

Reassembly: Assemble drive gear and shaft in body, install idler gear (with smooth side to cover) Install pickup screen and pipe on cover (if removed) but DO NOT twist or collapse suction tube Install cover and

CHEVROLET V8 OIL PUMP

tighten screws to 6-9 ft lbs (shaft must turn freely) Assemble collar end of extension shaft assembly over pump drive shaft, align tang with slot in pump drive shaft Assemble pump and extension shaft to rear bearing cap Align slot in extension shaft, install rear bearing cap bolt and tighten to specifications. *NOTE* - Bottom edge of screen must be parallel to oil pan rails

COOLING SYSTEM

WATER PUMP

ALL ENGINES

WATER PUMP REMOVAL: (All Eng.) Drain radiator, remove water inlet hose and heater hose from pump housing. Remove water pump to cylinder block bolts and remove pump from engine *NOTE* - On 6 Cyl. engine, pull pump straight out of block to avoid damage to impeller and shaft.

Disassembly - (All Eng.) Remove fan and pulley. On V8, remove back plate screws and gasket. Support hub in press and force shaft out of hub (use ½" x 2" pin). Support pump in press (use blocks under housing) and press shaft and impeller out of pump. *NOTE - Apply pressure on outer race of bearing only.* Place Tool J-5855 in press, support impeller on seal surface and press shaft out of impeller with ½" x 2" pin. Discard old seal.

Reassembly - 1) On 235", 261", 283" Eng., install shaft and bearing assembly into pump body (from front side) until bearing is flush with front of pump body. **On 348" Eng.,** install shaft and bearing assembly into pump body (from rear side) until bearing is flush with front of pump body. *CAUTION - Apply pressure to out r race of bearing only.*

2) Coat outer diameter of seal with sealing compound and press on outer flange with Tool J-5590 until seal bottoms with outer flange against pump body.

3) Press hub on shaft using Tool J-5775 (235", 261" and 283"), Tool J-7034 (348") to locate hub on shaft to insure proper belt alignment.

4) To check position of hub, place straightedge across front face of hub and insert correct tool (from rear) into one bolt hole. Straightedge should lightly contact short step on Tool J-5775(6 Cyl.), end of Tool J-5775 (283"), short step on Tool J-7034 (348") plus or minus .005".

5) Support pump on hub and install impeller. *NOTE - Clearance between vanes and pump body should b .010-.035". Bend feeler gauge to check 348".* Install cover and gasket, tightening screws diagonally. Install pulley and fan.

Installation - Reverse removal procedure using new gasket between pump and cylinder block. Adjust fan belt tension.

►*JACKING & HOISTING CAUTION (ALL MODELS) B for jacking or hoisting, se "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Secti n*

① - Except 1300 Engine

►*1300 ENGINE NOTE:* This engine used in Biscayne 1300 Series Fleet Cars only Engine is basically the same as that used in standard cars except for use of economy carburetor and mechanical valve lifters (different valve lift and valve timing)

TUNE-UP

COMPRESSION PRESSURE: 130 lbs minimum at cranking speed with all cylinders equal within 20 lbs
VACUUM READING: 17-21" steady, at idling speed
VALVE TAPPET CLEARANCE: (Exc. 1300 with 3-Speed Trans.) - Zero lash Hydraulic lifters With engine at operating temperature and idling, loosen locknut and back off adjusting screw (one at a time) until rocker arm clatters, then turn adjusting screw down until clatter stops, plus 1½ turns and tighten locknut *For Initial Valve Adjustment, see VALVES*
(1300 with 3-Speed Trans.) 006- 011" Intake, 013- 018" Exhaust
MANIFOLD HEAT CONTROL: Thermostatic type Check for free operation Should require ½ turn from unhooked to hooked position Replace a distorted spring
CRANKCASE VENTILATION VALVE: Service at regulator intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles *See "Closed Crankcase Ventilation Systems" in Carburetion Section*

IGNITION

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: 035"
Spark Plugs - AC No 45 (Std), No 46 (Hotter), No C-43COM or 44 (Colder) *C-43 COM preferred NOTE - These spark plugs supersede previous recommendations*
14mm Torque to 20-25 ft lbs
COIL: Delco-Remy 1115120.
Ignition Current - 1 8amps idling, 4 0 amps stopped
Resistor - Resistance type cable (1 8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation) Bypassed during cranking when coil energized directly from starter solenoid bypass terminal
DISTRIBUTOR: Delco-Remy 1112403.
Condenser - Delco-Remy 1928111 **Capacity** 18- 23 mfd
Contact Point Set - Delco-Remy 1924571
Breaker Gap - 016"
Cam Angle - 28-35° with 016" gap
►*BREAKER GAP CAUTION* Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points
Breaker Arm Spring Tension - 19-23 ozs
Rotation - Clockwise viewed from above

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		375	0-4		750
4-6		700	8-12		1400
9-11		1350	18-22		2700
12-14		1750	24-28		3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center "O" position

Vacuum Spark Control: Delco-Remy No 1116140 or 1116089

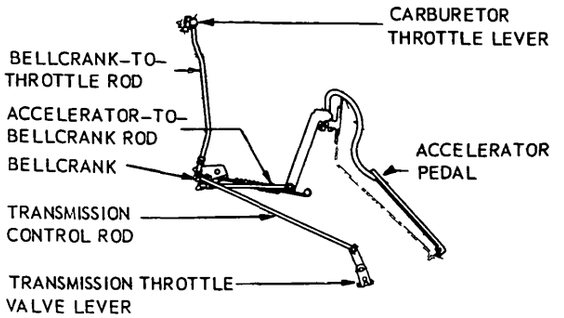
Vacuum Advanc - 1116140

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	4-6
11	22	15-16

Vacuum Advance - 1116089

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	4-6
7 5	15	7 5-10

IGNITION TIMING



Setting - 5° BTDC at idle speed with vacuum line disconnected Allowable range 0° to 8° BTDC
Timing Mark - First short vertical line on flywheel, clockwise from steel ball (TDC) insert This line should align with pointer in inspection hole in right front face of housing with Octane selector set on "O"

CARBURETOR

►*CARBURETOR APPLICATION Roch st r BC singl barrel carburetor used*

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): 1) Disconnect control rod from throttle lever at transmission cover Remove lower bolt at rear of transmission side cover Rotate throttle valve control outer lever counterclockwise to open throttle position
2) Hold lever in this position and with throttle valve outer lever Gauge J-5906 set at 7 09", measure distance from left side cover lower rear bolt to hole in throttle lever If pins of gauge will enter holes, adjustment is correct If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary Reconnect throttle rod
3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever Disconnect accelerator-to-bellcrank rod at bellcrank
4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position
5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTIONS: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own. 6 cyl. valve-in-head

Bore	Stroke	Displacement
3 9/16"	3 15/16"	235.5 cu. in.
Compr. Ratio	**Rated HP**	**Developed HP**
8.25-1	30.4	135 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data*

OIL PAN REMOVAL: Drain crankcase and cooling system, raise and support car, remove radiator. Disconnect battery ground strap at engine, fuel pump inlet line at pump, and accelerator control rod at accelerator control rod lever. Remove overdrive solenoid Disconnect power brake hose at check valve, and remove oil filter and support bracket assembly. Disconnect exhaust pipe from exhaust manifold, and transmission lower control rods at transmission shifter levers Disconnect clutch fork pushrod at clutch fork and all clutch controls from engine. Loosen transmission mounting bolts and disconnect engine front mounts from engine. Remove hood. Raise engine approximately 3" until valve rocker cover contacts dash upper panel Remove flywheel underpan extension and remove oil pan *NOTE* - Rotate crankshaft as necessary for oil pan to clear counterweights

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

►*ENGINE DATA NOTE:* Data following includes both Pass. Car & Trucks as noted.

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".

Removal - Pistons and rods removed from above.

Clearance - (235" Pass.) .0005-.0011"; (235" Trk.) .0006-.0010"; (261") .0012-.0016".

►*STANDARD & .001" PISTON NOTE:* Standard and .001" pistons are furnished in two sizes as follows:

235" Engine - Std. - Marked **S4** (3.5625-3.5630"), **S5** (3.5630-3.5635"), **.001" Oversize** - Marked **S6** (3.5635-3.5640"), **S7** (3.5640-3.5645").

261" Engine - Std. - Marked **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **.001" Oversize** - Marked **S6**(3.7510-3.7515"), **S7** (3.7515-3.7520").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

Replacement Pistons: Furnished Std. & .001", .020", .030", .040" Oversize.

PISTON PIN

Locked in rod. No bushing used in piston

Diameter - 235" Eng. - .8660-.8665" **261" Eng.** - .9270-.9275".

Pin Fit in Piston - .00015-.00025" clearance. With both piston and pin at 70°F, and light film of oil on pin, pin should hold own weight in either piston pin boss. It should be possible to install pin in piston with thumb pressure.

Replacement Pins: Furnished Std. & .0015", .003", .005" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1 & 2).	.0930-.0935"	①	②

② - (235") .002-.004". (261") 002-.0035".

③ - (235" Pass) .184-188", (235", 261" Truck) 177-182"

④ - On rails.

Replacement Rings: Furnished Std., .020", .030" and .040" Oversize.

►*RING INSTALLATION CAUTION* Install Compression rings with side marked "GM" up.

CONNECTING ROD

Length - 6.81" Center-to-center.

Crankpin Journal Diameter - 2.311-2.312".

Lower Bearing - Replaceable precision type.

Clearance - 001-.003" (New), .001-004" (Used).

Sideplay - .005-.012".

Replacement Bearings: Std. & .001", .002", .010", 020" Undersize.

Installing Rods: Install rods with piston pin clamp and number on rod lower end toward camshaft.

CRANKSHAFT

Journal Diameters - (1) 2.6835-2.6845", **(2)** 2.7145-2.7155", **(3)** 2.7455-2.7465", **(4)** 2.7765-2.7775".

Clearance - (235" Pass.) .0008-.0024" (No. 1,2), .0010-0026" (No 3,4)

(235", 261" Trk.) New - .001-.003". Used - (235") .001-.004", (261") .001-0045".

Bearing - Thin wall babbitt with steel back.

Bearing Adjustment: Precision type. Replace bearings.

End Thrust - Taken by No. 3 (rear intermediate) main bearing.

Endplay - .0035-.0095" (Pass.), .003-.009" (Trk.).

Replacement Bearings: Furnished Std. & 002", 010", .020", .030" Undersize.

Bearing Installation: Can be replaced without removing engine.

See "Crankshaft & Main Bearings" in Chevrolet Special Data

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data*

CAMSHAFT

Journal Diameters - (1) 2.1537-2.1547", **(2)** 2.0912-2.0922", **(3)** 2.0287-2.0297", **(4)** 1.9662-1.9672".

►*NOTE:* Journal out-of-round limits .001". Run-out limits .002"

Bearing Type - Steel backed babbitt lined bushings, no reaming required.

Clearance - .0015-.0035".

End Thrust: Controlled by spacer and thrust plate behind camshaft sprocket.

Endplay - .001-.005".

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each lobe *See "Camshaft & Bearings" in Chevrolet Special Data*

Timing Gear: Fibre camshaft gear, steel crankshaft gear.

Back Lash - .003-.005".

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data*

Camshaft Setting: Timing is correct when timing marks on gears are together.

Camshaft Removal & Replacement: *See "Camshaft & Bearings" in Chevrolet Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data*

VALVES

Tappet Clearance: (1300 with Synchro-mesh) 006-011" Intake, 013-018" Exhaust

Others - Zero lash, hydraulic lifters *NOTE - For "Initial Valve Adjustment" see below*

Initial Valve Adjustment (Hydraulic Lifters): Use distributor rotor position for determining when lifter is on base circle of cam. With rotor pointing at No 1 cylinder (points open) turn adjusting screw down until all lash is removed (by checking pushrod side play), then turn screw down an additional 1½ turns and tighten locknut. Repeat on other valve for that cylinder Continue to adjust valves for each cylinder using firing order sequence

Trucks - (235") .006" Intake, .018" Exhaust. (261") .006" Intake, 020" Exhaust. All Hot.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.870-1.880"	3410-.3417"	①
Exhaust	1.495-1.505"	③	②

Valve	Seat Angle	Lift	Stem Clearance
Intake	④ 31°	⑤ .3275"	.0010-.0027"
Exhaust	④ 46°	⑤ .3275"	⑥

① - (235" Pass.) 6.376-6.396"; (235" & 261" Trk.) 6.364-6.394"

② - (235" Pass.) 4.913-4.933"; (235" Trk) 4.905-4.930", (261" Trk.) 4.902-4.932".

③ - .001" taper 3410-3417" (top), 3400-3407" (bottom)

④ - Valve face angle 30° Intake (All Engines), 45° Exhaust (235"), 46° (261" - see "Caution" below)

⑤ - (1300 with Synchro-mesh) .3105" Intake, .3325" Exhaust

⑥ - .0016-.0033" (Pass Cars), .0013-.0030" (Trucks)

►*VALVE GRINDING CAUTION:* Replacement valves are furnished with face angles of 30° and 45°. When seats are ground to recommendations of 30° and 45°. valves must be faced to recommended angle of 29° Intake, 44° Exhaust.

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

►*VALVE STEM END GRINDING CAUTION (261" Eng)* DO NOT grind hardened valve stem tip excessively on 261" Engine

►*261" EXHAUST VALVE SEAT & FACE ANGLE NOTE & VALVE GRINDING CAUTION* **Exhaust valves** on 261" engine have 46° valve face and seat angles Exhaust valves have a hardened stellite face When refacing valves and seats, grind each to 46° angle for parallel fit

Valve Seat Width - 235" Eng 1/16-3/32" (Int & Exh) **261" Eng** - 1/16 3/32" (Int), 3/32 1/8" (Exh)

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data*

Valve Guides: Precision type, pressed in head

Valve Guide Installation - *See "Valve System" in Chevrolet Special Data*

Valve Springs: Install springs with closed coil end down **Free Length** - Pass 2 16" 235" truck 2 156" 261" truck 2 281"

Spring Specifications (Pass)

Valve	Pressure	Length
Closed	62 68 lbs	1 858"
Open	158-168 lbs	1 528"

Spring Specifications (Trucks)

Engine	Pressure	Length
235"	65 lbs	1 27/32"
261"	78 lbs	1 27/32"

►*VALVE SPRING HEIGHT CAUTION* Check installed height of valve springs If distance from spring seat in head to top of valve spring exceeds 1 7/8", install shims under spring to bring installed height within limits of 1 51/64-1 7/8"

Valve Lifters (Pass) Hydraulic standard except Biscayne Fleetmaster 1300 Series which has mechanical type *See 'Valve System' in Chevrolet Special Data* **(Trucks)** - Mechanical type

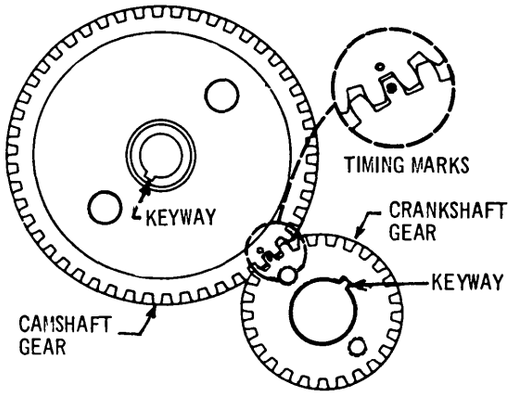
Valve Rotators: Rotocoil type used on some engines

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

Valve Timing Specifications (Pass. Exc 1300 with 3-Speed Trans.)



Intake Valves - Open 16° BTDC Close 48° ALDC
Exhaust Valves - Open 46° 30' BLDC Close 17° 30' ATDC

(1300 with 3-Speed Trans)

Intake Valves - Open 1° ATDC Close 39° ALDC
Exhaust Valves - Open 42° BLDC Close 9° ATDC

(235" Truck)

Intake Valves - Open 28° BTDC Close 68° ALDC
Exhaust Valves - Open 56°30'42" BLDC Close 23° 30'42" ATDC

CHEVROLET 6 CYL. VALVE TIMING MARKS

(261" Truck)

Intake Valves - Open 11°30' BTDC Close 52°30' ALDC
Exhaust Valves - Open 51° BLDC Close 13° ATDC
Valve Timing Check - *NOTE - Mechanical type lifter must be used when making valve timing check* Remove all tappet clearance from No 1 exhaust valve Turn engine over until this valve opens and just starts to close and until triangular flywheel mark (19° BTDC) lines up with pointer on right face of flywheel housing Mount dial indicator on rocker arm shaft with stem of indicator contacting No 1 exhaust valve adjusting screw and set dial indicator to 043" (235"), 063" (261") Turn crankshaft until indicator hand just stops moving Timing is correct if indicator reading is ZERO plus or minus 005" A greater or lesser reading indicates either excessive gear wear or improperly installed timing gears Reset tappet clearance to specifications

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data*

Crankcase Capacity: (235") 5 qts (261") 6 qts Add 1 qt for filter

Normal Oil Pressure: 35 lbs at 2000 RPM

Pressure Regulator Valve - In oil pump body Not adjustable

Oil Pressure Indicator - Light located on left side of instrument panel, controlled by pressure switch AC No 1508753 located in main oil gallery on left side of engine Switch closes when pressure drops to 4-7 lbs

Oil Pump: Gear type Located in crankcase, driven by distributor gear

Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data*

Oil Filter Element: Replacement element AC No 115 Replace every 4000 miles

Crankcase Ventilation (Standard): Air intake through breather filter in valve rocker arm cover and outlet through crankcase breather pipe on right side of engine **Servicing** - Clean breather filter in a good solvent every 2,000 miles, then oil mesh with light engine oil

Crankcase Ventilation (Optional): Positive Type. Two types used as follows 1) Conventional road draft tube replaced by a crankcase outlet pipe with baffles in upper end Ventilation valve in upper end of outlet pipe is connected to intake manifold by a hose 2) Same as Type 1) above with additional fresh air intake from carburetor air cleaner to valve rocker cover Oil filler breather cap is replaced by solid non-breather type *Both types are serviced in same manner See "Closed Crankcase Ventilation Systems" in Carburetion Section*

ENGINE COOLING SYSTEM

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS) Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material*

Water Capacity: 17 qts (Synchro-mesh), 16½ qts (Powerglide) without heater Add 1 qt for heater

Pressure Valve: Radiator filler cap, AC No 850800 Type RC-6, 13 lb

Thermostat: Pellet type In cylinder head water outlet 170°F Std , 160°F & 180°F Optional Use 160°F thermostat with Methanol type anti freeze

Temperature Gauge: AC Electric

Dash Unit - AC No 1514346

Engine Unit - AC No 1513321

Water Pump: Packless type with sealed ball bearing *See "Cooling System" in Chevrolet Special Data*

LUBRICATION

POWERGLIDE AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 1000 miles Drain and refill only when transmission removed and disassembled for repairs Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used)

Checking Fluid Level: Check with engine idling, transmission at normal operating temperature, and selector lever in "N" (neutral) position Dipstick located under hook on right side of engine Add fluid only when level near "Add" mark on dipstick, do not fill above "Full" mark on dipstick Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used)

Capacity - 3½ qts (transmission only), 10½ qts (transmission & converter)

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*JACKING & HOISTING CAUTION (ALL MODELS)* *B fore jacking, hoisting, towing or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section*

TUNE-UP

COMPRESSION PRESSURE: 283" Pass. - 2-Bbl Carb 150 lbs , 4-Bbl Carb & Fuel Injection 160 lbs
348" Pass. - 160 lbs Highest and lowest cylinder must be within 20 lbs

VALVE TAPPET CLEARANCE: Hydraulic Lifters - *See "Valve System" in Chevrolet Special Data and note "Production Change & Caution" below*
Mechanical Lifters - 348" & 409" - 008" Intake, 018" Exhaust, Hot **Corvette** - 012" Intake, 018" Exhaust, Hot

►*HYDRAULIC LIFTER PRODUCTION CHANGE & ADJUSTMENT CAUTION* Early cars use "long travel" lifters, later cars use "short travel" type Adjustment is different for each type and proper lifter identification must be made to prevent extensive engine damage *For lifter identification and adjustment, see "Hydraulic Lifter Adjustment" in Chevrolet Special Data*

MANIFOLD HEAT CONTROL: Heat control valve and thermostatic coil assembly located between right exhaust manifold and crossover pipe (Single Exhaust), exhaust pipe (Dual Exhaust) Assembly not used in fuel injection cars Make sure valve shaft is free to turn If sticking, free up with G M Manifold Heat Control Solvent or equivalent

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles *See "Closed Crankcase Ventilation Systems" in Carburetion Section*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7
SPARK PLUG GAP: 035" (033- 038")
Spark Plugs - AC. Used as follows *NOTE - Following spark plugs supersede previous recommendations* 14mm Torque to 20-25 ft lbs

Model	Std.	Hotter	Colder
283" Pass (Std)	45	46	①C43COM
283" Corvette (1 or 2 Carbs)	45	46	②
283" Corvette (Fuel Inj)	44	45 or 46	②
348" Std Cam③	44N		43N
348" Special Cam④	43N	44N	C42N-COM

① - Or 44 C43COM preferred
② C43COM (Heavy Duty), C42-1COM (Road Racing)
③ - Except 3 Carb Engines FH, FJ, GD
④ - Including 3 Carb Engines FH, FJ GD

COIL: D lco-Remy. 283" - No 1115115
Corv tt - No 1115091 (Std), No 1115107 (Fuel Inj)
348" - No 1115083 (250,305 HP), No 1115156 (280 HP), No 1115107 (340 HP), No 1115157 (350 HP)
Ignition Current - 1 8 amps idling, 4 0 amps stopped
Resistor (348" Eng. with Thr 2-Bbl. Carbs. and Special Camshaft) - Delco-Remy No 1931385
Resistor (Others) - Resistance type cable (1 8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation) Bypassed during cranking when coil energized directly from starter solenoid bypass terminal

DISTRIBUTOR: Delco-Remy. Used as follows

Application	D lco-R my No
283" (2-Bbl Carb)	1110947
283" (4-Bbl Carb)	1110946
348" (Std Cam)	1110948
348" (Sp Cam)	1110919
Corvette (4-Bbl Carb)	1110946
Corvette (Dual 4-Bbl Carb)	1110891
Corvette (Fuel Inj Std Cam)	1110915
Corvette (Fuel Inj Spec Cam)	1110914

►*DISTRIBUTOR NOTE* Different types used as follows
Models 1110915, 46, 47, 48 - External adjustment "Window" type
Models 1110891, 914, 919 - Double breaker with conventional distributor cap (not window type) Vacuum spark control not used (centrifugal weight advance only)
Condenser - Delco-Remy No 1932004 (Std), No 1869704 (2 Carb Engines), No 1942284 (348" & Fuel Inj)
Condenser Capacity - 18- 23 mfd
Contact Point Set - Delco-Remy No 1938330 - 2 sets (2 Carb Engines), No 1931988 - As Required (All (Others)
Breaker Gap (Window Typ) - Gap (016") will be correct when cam angle correctly set (see below)
Breaker Gap (Double Break r) - 014- 018" (new points)
Cam Angle (Window Type) - 28-32° Set at 30° Gives 016" point opening
Cam Angle (Double Breaker) - Adjust each set of points to 29°±1° with other set blocked open with 025" thick insulator Cam angle for both sets of points operating together should be 34°±1°
Breaker Arm Spring Tension - 19 23 ozs
Rotation - Clockwise viewed from above

►*AIR CONDITIONING FAST IDLE CAUTION:* Adjust stop on dash Fast Idle Control Wire to provide 900 RPM engine speed when knob is pulled out. Make sure knob is pushed in when making normal fast idle adjustment and that Air Conditioning Fast Idle Control Linkage **does not** interfere.

THROTTLE LINKAGE ADJUSTMENT: Powerglide Cars - Remove lower control rod and loosen transmission throttle lever clamp screw. Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline. With gauge in place and holding lever clamp in full detent position (rotated counterclockwise), tighten lever to clamp and remove gauge. Install lower control rod. Disconnect upper control rod from throttle lever on carburetor and open throttle. Adjust upper control rod length for free entry into throttle lever. Check adjustment by releasing linkage to its idle position then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection. Readjust upper throttle rod if rod deflects. Place ½" (Pass Car), 85" (Corvette), wood block under accelerator pedal rod, depress accelerator against block and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position. Readjust length of accelerator rod when detent is not felt before reaching wide open throttle.

CONTINUED ON NEXT PAGE

POWERGLIDE & TURBOGLIDE THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

Turboglid Cars - Disconnect transmission throttle valve rod and accelerator rod from carburetor throttle lever Pull throttle valve rod forward to full limit of its travel and then adjust swivel for free entry into carburetor throttle lever with lever in wide open position Attach swivel to lever To check adjustment, put carburetor throttle lever in wide open position and push downward (counterclockwise) on transmission throttle valve lever If transmission throttle valve rod attached to carburetor throttle lever deflects (transmission not on internal stop) or carburetor throttle lever will not reach wide open position, repeat adjustment Now place carburetor throttle lever at wide open throttle and depress accelerator pedal to hold pedal lever in contact with stop Adjust swivel on accelerator rod for free entry into carburetor throttle lever Secure swivel to lever Depress accelerator pedal by hand Detent should be felt before accelerator pedal rod strikes carpet.

THROTTLE RETURN CHECK ADJUSTMENT (Turboglid Cars): With fast idle screw on high step of fast idle cam, hold plunger with an open end wrench and turn plunger screw so it just contacts carburetor throttle lever To check, make a full throttle start, then release accelerator and apply brakes simultaneously If engine remains at high RPM turn plunger screw clockwise ½-turn If engine stalls, turn screw ½-turn counterclockwise

ROCHESTER 2GC 2-BARREL

Rochester 2GC 7019007 (Std. Trans.), 7019008 (Auto. Trans.), 7019018 (Air Cond.). Idle Compensator (thermostatically controlled idle air bypass) used on air conditioned cars

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls 2-3-5-8, LEFT barrel feeds 1-4-6-7*

►*IDLE COMPENSATOR CAUTION* When making idle Setting & Idle Speed adjustments, Idle Compensator must be in closed position Depress button on back side of float bowl

Idle Setting - Initial setting 1½ turns open Adjust both screws alike After idle speed set to correct specifications (see "Idle Speed" below), turn both idle mixture screws for smoothest idle with highest vacuum reading and RPM *NOTE* - Approximate adjustment can be obtained by setting screws lean to moderate rough idle and then backing out ¼ turn

Idle Speed - 475 RPM (Std Trans) 450 RPM (Auto Trans in "D") with Idle Compensator button pushed in, on air conditioned car (Idle Compensator "off")

Float Level - 1 23/64" (Gauge BT-152) With air horn inverted and gasket in place, position float level gauge over float, so it rests against pump side of power piston shaft, with outer gauge leg in line with center of float Bend float arm to adjust

Float Drop - Bend float tang as required to obtain a distance of 1 29/32" (Gauge BT-152) from gasket surface to bottom of float, with air horn upright and float hanging free Use scale or scribed mark on float and pump gauge

Automatic Choke Setting: Centered at index (7019008, 9018) 1 notch lean (7019007)

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See 'Rochester 2G & 2GC Carburetors" in Carburetion Section*

ROCHESTER 4GC 4-BARREL

Engine	Rochester No.
283" Pass Auto Trans (Std) Early	7019004
283" Pass Auto Trans (Std) Later	7019014
283" Pass Auto Trans (Air Cond) Early	7015010
283" Pass Auto Trans (Air Cond) Later	7019010
348" Pass Auto Trans (Std)	7019006
348" Pass Auto Trans (Air Cond)	7015012

►*LATER PRODUCTION CARBURETOR NOTE* These carburetors provide smoother acceleration and improved wide open throttle torque

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls 2-3-5-8, LEFT barrels feed 1-4-6-7*

►*IDLE COMPENSATOR CAUTION:* Idle compensator (thermostatically controlled idle air bypass) used on air conditioned cars and must be in closed position when making Idle Setting and Idle Speed adjustments Remove air cleaner and insert pencil or suitable tool in throttle bore

Idle Setting - Initial setting 1½ turns open After idle speed correctly set (see "Idle Speed" below), turn each idle mixture screw for smoothest idle with highest vacuum reading and RPM *NOTE* - Approximate adjustment can be obtained by setting screws lean to moderate rough idle and then backing out ¼ turn

Idle Speed - 450 RPM in "D" (Drive) with Idle Compensator closed

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Rochester 4G & 4GC Carburetors" in Carburetion Section*

CARTER WCFB 4-BARREL

Engine	Carter No.
283" Pass (Std Trans)	3059S
283" Corv (All Trans)	3059S
348" Pass (3,4-Speed Trans)	3060S
348" Pass (Auto Trans)	3061S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls 2-3-5-8, LEFT barrels feed 1-4-6-7*

Idle Setting - ½-2 turns open Turn both screws alike Turn screws out for richer mixture

Idle Speed - 475 RPM (Std Trans), 450 RPM (Auto Trans in "D")

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA· See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section*

CARTER AFB 4-BARREL

Engine	Carter No.
348" (305 & 340 HP)	3012S
348" (305 HP 9 5-1 Early, 11-1 All)	3012S
348" (305 HP 9 5-1 Later)	3221S
348" (340 HP)	3012S
409"	3270S

Idle Setting - ½-2 turns open Turn both screws alike Turn screws out for richer mixture

Idle Speed - **(305 HP)** 475 RPM (Std Trans), 450 RPM (Auto Trans in "D")

(340 HP) 600 RPM (3,4-Speed Trans)

(409") - 650 RPM

Throttle Linkag Adjustment· *See CARBURETOR above*

►*OTHER DATA See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

CARTER WCFB 4-BARREL (Tw Carbur tors)

Engin	Cart r Carb. N . Front	Rear
Corv Hyd Lifters	2626S	2627S
Corv Hyd Lifters Ⓒ	3181S	2627S
Corv Mech Lifters	2613S	2614S
Corv Mech Lifters Ⓒ	3182S	2614S

Ⓒ - With Crankcase Ventilation

Idle Setting - 1/8-1 1/4 turns open (2613S,2614S, 3182S), 1/4-1 1/4 turns (2626S,2627S,3181S) Adjust all four mixture screws equally

Idle Speed - (Hyd. Lifters) 475 RPM (Std Trans), 450 RPM (Auto Trans in "D")

(Mech. Lifters) 600 RPM

Interconnecting Linkage Adjustment: Adjust rear accelerator rod so that rear carburetor throttle valves are wide open when accelerator pedal is ¾" from toe board With rear carburetor throttle valves wide open, adjust front carburetor control shaft until throttle valves of front carburetor are wide open and adjust throttle stop When linkage properly adjusted, front carburetor throttle valves will be open when rear carburetor throttle valves are approximately at half throttle

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section*

TRIPLE CARBURETORS (Rochester 2G & 2GC)

Engine	Rochester Carburetor N . Front	Center	Rear

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

Air Cleaner: Pass Car - Dry paper element type Check for restriction every 5000 miles and replace as required
Corvette - With Carburetor - Oil wetted polyurethane element type Remove element from screen, rinse in solvent or kerosene every 5000 miles, squeeze lightly, reoil with clean engine oil, and carefully reinstall
With Fuel Injection - Dry paper element type Check for restriction every 5000 miles and replace as required
Fuel Filter, In fuel inlet line at carburetor Clean with solvent and compressed air Replace every 15,000 miles
Cruise Control: Automatic speed control *See 'Cruise Control" in Carburetion Section*

BATTERY

6 Cyl., 283" (Pass. & Corvette) - Delco No. 458. 12 volt, 9 plate, 53 ampere hour capacity (20 hr rate)
348" - Delco No. 558. 12 volt, 11 plate, 61 ampere hour capacity (20 hr rate)
Battery Ground - Negative, to engine
Engine Ground - Engine to cowl

STARTER

Delco-Remy. Used as follows

Engine	Delco-Remy No.
6 Cyl (All)	1107888 or 1107652
283" (Exc Turboglide)	1107889 or 1107664
283" (Turboglide)	1107892 or 1107694
348" (Exc Turboglide)	1107891 or 1107688
348" (Turboglide)	1107890 or 1107687

Armature - Delco-Remy 1932185 (6 Cyl), 1935829 (V8)
Rotation - Counterclockwise at commutator end
Brush Spring Tension - 35 ozs minimum

Performance Data
(1107652,664,694,888,889,892)

1105116	35	14	1730
1106679	50	13	1600

Rotation - Counterclockwise at commutator end
Brush Spring Tension - 28 ozs
Field Current - 1 48-1 62 amps (1102043), 1 69-1 79 amps (1102096, 097, 173, 174), 2 73-3 00 amps (1105123,116), 2 14-2 28 amps (1106679,81) All at 12 volts and 80°F
Belt Adjustment: 3/8" (6 Cyl) 3/4" (283"), 13/16" (348") with 15 lb pressure, 7/16-1/2" (Corv) with light thumb pressure midway between generator and fan pulleys

GENERATOR REGULATOR

Delco-Remy. Used as follows

Regulator	Generator No.
1119001 (6 Cyl , 283")	1102043, 096, 097
1119261 (6 Cyl , 283") Replacement	1102043, 096, 097
1119002 (6 Cyl , 283")	1102173, 174
1119234 (348")	1102097
1119261 (348") Replacement	1102097
1119235 (348")	1102173, 174
1119002 (348") Replacement	1102173, 174
1119610	1105123
1119619	1106679 & 1106681
1119604	1105116

►*DOUBLE CONTACT REGULATOR NOTE Regulators 1119604, 610 & 619 have double contacts for voltage regulation*
NOTE - Specifications below are 'Normal settings

Cutout Relay

Cuts In - 11 8-13 5 volts (1119001, 002, 234, 235, 261) 11 8-13 0 volts (1119604,610,619)
Cuts Out (1119261) - 1-4 amperes reverse current at 12 5 volts for relay points to open
Contact Gap - 020"
Air Gap - 023" (1119261), 020" (Others)

Voltage Regulator

Setting (1119001, 002, 234, 235, 261) - 13 8-14 7 volts at 125°F
Setting (1119604,610,619) - 13 8-14 6 volts at 125°F ambient temperature when operating on upper contacts 1- 3 volts lower when operating on lower contacts
Contact Gap (1119604, 610 & 619) - 016" (upper contacts) with lower contacts just touching
Air Gap - 075" (1119001, 002, 234, 235, 261), 067" (1119604,610,619) with armature pressed down to point where contacts just touch

Current Regulator

Setting - 27 0-31 0 amps (1119001,234,261), 31 0-35 5 amps (1119002,235,604), 36 0-40 5 amps (1119610), 46 0-50 5 amps (1119619) at 125°F ambient temperature
Air Gap - 070" (1119261) 075" (Others) with armature pressed down to point where contacts just touch

►*OTHER DATA See "Delco-Remy 1119000 Series (Single Contact) Regulators" and "Delco-Remy 1119600 Series (Double Contact) Regulators" in Electrical Section*

ALTERNATOR & REGULATOR

Delco-Remy Alternator No. 1117070 with Transistorized Regulator No 9000554 and separately mounted Field Relay No. 1116895.
Rotation - Clockwise at drive end
Brush Spring Tension - 13 ozs
Field Current - 5 6-6 3 amperes at 12 volts and 80°F
Rated Output - 60 amperes (hot) - 58 amperes at 14 volts and 2500 RPM (Cold - 70°F)
►*OTHER DATA See "Delco-Remy Alternators (Internal Rectifier) and Transistorized Regulators" in Electrical Section*

MISC. ELECTRICAL

►*DIRECTION SIGNAL FLASHER USAGE CAUTION*
"Two Bulb" type (operates 1 parking light and 1 tail light at a time) used on Biscayne, Brookwood, Bel Air, and Parkwood models "Three Bulb" type (operates 1 parking light and 2 tail lights) used on Impala and Nomad models *DO NOT INTERCHANGE FLASHERS*
Autronic Eye - *See Electrical Section*
Lighting Switch Removal - Pull handle out to "ON" position Depress switch shaft retainer (under dash) and remove knob and shaft assembly Remove retaining ferrule and escutcheon then remove switch assembly Disconnect multi-plug connector *NOTE* - Use screwdriver inserted in side of switch to pry plug from switch
Stop Light Switch Location Mechanical type mounted under dash in contact with brake pedal
Adjustment - Adjust position of switch so that stop light comes on when brake pedal is depressed 5/8" from fully released position
Instrument Cluster Console Removal Loosen and slide upwards upper mast jacket retaining clamp to release mast jacket Loosen lower mast jacket retaining clamp and drop mast jacket and steering wheel down Disconnect speedometer cable from speedometer Remove console-to-instrument panel attaching screws and lean console forward onto mast jacket Remove individual instruments as required or remove console as a unit by unsnapping all wire connectors

Speedometer Cluster Removal - After Instrument Cluster Console removed (above), unsnap instrument light sockets from speedometer cluster, remove two attaching nuts and remove cluster

CIRCUIT BREAKER 15 ampere circuit breaker in main lighting switch protects headlights, beam indicator and parking lights
FUSES - Fuses contained in fuse block located under dash on left side except as noted
15 Ampere - Tail, Stop, License, Body, Glove Box lights (also Corvette Parking Brake Warning Light)
10 Ampere - Back-up lights, Clock Parking Brake Warning light (Pass)
10 Ampere - Heater Blower
9 Ampere - Overdrive In wiring harness on engine side of dash
7 5 Ampere - Deluxe Radio
4 Amp r Standard Radio
3 Ampere - All Instrument Panel lights
20 Ampere Air Conditioning Blower

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*NOTE: Engines with special camshaft use mechanical valve lifters. In the following data, engines will be referred to by "Special Cam".*

ENGINE SPECIFICATIONS: Own V8, valve-in-head, 283" and 348" engines of same design used previously.

Engine	Bore	Stroke	Rated HP	Displacement
283"	3.875"	3.0"	48	283 cu. in.
348"	4.125"	3.25"	54.5	348 cu. in.

Engine	Compr. Ratio	Developed HP
283" Pass. ①	8.5-1	170 at 4200 RPM
283" Pass & Corv. ②	9.5-1	230 at 4800 RPM
283" Corv. ③	9.5-1	245 at 5000 RPM
283" Corv. ④	9.5-1	270 at 6000 RPM
283" Corv. ⑤	11.0-1	275 at 5200 RPM
283" Corv. ⑥	11.0-1	315 at 6200 RPM
348" Pass. ⑦	9.5-1	250 at 4400 RPM
348" Pass. ⑧	9.5-1	280 at 4800 RPM
348" Pass. ⑦	9.5-1	305 at 5200 RPM
348" ⑦ ⑩	11.0-1	305 at 5200 RPM
348" Pass. ⑦ ⑩	11.25-1	340 at 5800 RPM
348" Pass. ⑨	11.25-1	350 at 6000 RPM

① - One 2-Bbl. Carb. ② - One Carter WCFB 4-Bbl. Carb.
③ - Two 4-Bbl. Carbs.
④ - Two 4-Bbl. Carbs. & Sp. Camshaft.
⑤ - Fuel Injection & Std. Camshaft.
⑥ - Fuel Injection & Special Camshaft.
⑦ - One Carter AFB 4-Bbl. Carb.
⑧ - Three 2-Bbl. Carbs. & Std. Camshaft.
⑨ - Three 2-Bbl. Carbs. & Special Camshaft.
⑩ - Special Camshaft.

►*409" ENGINE NOTE:* This engine is basically the same as the 348" Engine with increased bore and stroke.

Compression & Vacuum Reading - *See TUNE-UP.*

►*CORVETTE (FUEL INJECTION) CYLINDER HEAD NOTE:* Aluminum cylinder head used with fuel injection high compression engines.

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Chevrolet Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

PISTONS

Cast aluminum alloy, autothermic type with piston pin offset .060" toward major thrust side.

283" Eng. - Flat head, slipper skirt with machined relief for valve clearance (Std.) or domed piston having machined relief (Fuel Injection).

348" Eng. - Peak roof, slipper skirt (Std.), half flat with machined relief for valve clearance and half slanted downward 16° (With Special Cam).

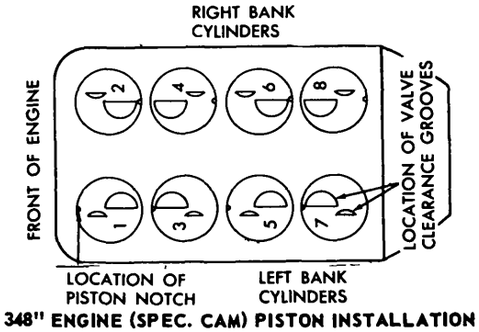
Removal - Pistons & rods removed from above.

Replacement Pistons: Furnished Std., & .001", .020", .030", .040" Oversize (Exc. 283" Fuel Inj., or 348" Special Cam); Std., .001", .030" (283" Fuel Inj. or 348" Sp. Cam) with fitted pins.

►*STANDARD & .001" OVERSIZE PISTON NOTE:* These pistons furnished in TWO sizes as follows:

283" Eng. - Std. - Marked **S4** (3.8750-3.8755"); **S5** (3.8755-3.8760"); **.001" Oversize** - Marked **S6** (3.8760-3.8765"), **S7** (3.8765-3.8770").

348" Eng. - Std. - Marked **S4** (4.1250-4.1255"), **S5** (4.1255-4.1260"); **.001" Oversize** - Marked **S6** (4.1260-4.1265"), **S7** (4.1265-4.1270").



Clearance - As follows:

Engine	Piston Clearance
283" & 348" (8.5 & 9.5-1 ratios)	.0006-.0010"
283" Corvette (11.0-1 ratio)	.0016-.0020"
348" (11.0-1 & 11.25-1 ratios)	.0026-.0030"

Fitting New Pistons (.0006-.0010" Clearance): Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder until center of piston pin is flush with top of cylinder block (283"), flush with counterbore of cylinder block (348"), feeler 90° from pin hole. Pull required to withdraw feeler should be 4-6 lbs. (283"), 5-9 lbs. (348").

Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block, except 348" Eng. with Special Cam (see NOTE below). *See Rod Installation.*

►*348" ENGINE WITH SPECIAL CAMSHAFT NOTE:* Pistons used with these engines extend into combustion chamber and must be installed as shown in diagram.

348" ENGINE (SPEC. CAM) PISTON INSTALLATION

PISTON PIN

Pin is press fit in connecting rod.

Diameter - (283" Eng.) .9270-.9273". (348" Eng.) .9895-.9898".

Length - (283" Eng.) 2.990-3.010". (348" Eng.) 3.250-3.270".

Pin Fit in Piston - .00015-.00025". With piston and pin at 60°F, and light film of oil on pin, pin should support own weight in either pin boss.

Pin Fit in Connecting Rod - Press fit in rod. Special procedure used for removal & installation, see *"Piston Pins" in Chevrolet Special Data.*

Replacement Pins: Furnished in assembly with new pistons. Replace with new piston and fitted pin assembly.

PISTON RINGS

Compression rings are plain cast alloy iron, with chrome plated upper and wear resistant coating lower. Oil ring is 3-piece type with chrome plate O.D. rails and stainless steel spacer. *NOTE* - 348" (Special Cam) has cast alloy oil ring.

283" Engine

Ring	Width	End Gap	Side Clearance
Comp. (1&2) ①	.0775-.0780"	.010-.020"	.0012-.0032"
Oil	.184-.188"	②.015-.055"	.0006-.0084"

348" Engine

Ring	Width	End Gap	Side Clearance
Comp. (1&2)	.0770-.0780"	.015-.025"	Free
Oil	③ .184-.188"	⑨.015-.055"	

① - Upper ring .0770-.0780" with Fuel Inj. & Special Cam
② - On rails.
③ - .0855-.1865" with Triple Carbs.
⑨ - .013-.025" with Triple Carbs.

Replacement Rings: Service type rings furnished Std., .020", .030", .040" Oversize.

Installing Rings: Install compression rings with mark "GM" up.

CONNECTING ROD

Length (Center-to-Center) - (283") 5.699-5.701". (348") 6.134-6.136".

Weight - (283") 19.02 ozs. (348") 19.20" ozs.

Crankpin Journal Diameter - (283") 1.999-2.000". (348") 2.199-2.200".

Lower Bearing - Replaceable precision type. **Std.** - Steel backed babbitt. **Special Cam Eng. (Exc. 348" with Auto. Trans.)** Premium aluminum bearings.

Clearance - .001-.003". Wear limit .004".

Sideplay - .008-.014" (two rods).

Replacement Bearings: Std., .001", .002", .010", .020" Undersize.

Installing Rods: *NOTE - See diagram for 348" Eng. (Special Cam) piston installation.* Install rod in piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (marked by cast depression in head of piston and "F" mark on piston strut) on Nos. 1-3-5-7 pistons, and flange on rod to **rear** of piston on Nos. 2-4-6-8 pistons. Install rod and piston assembly in cylinder with cast depression in head and "F" mark on strut toward front of cylinder block. Oil hole in connecting rod will be toward center of engine.

CRANKSHAFT

Journal Diameter - (283") 2.2978-2.2988", (348") 2.4980-2.4990".

Bearings - Replaceable precision type. **Std.** - Steel backed babbitt. **Special Cam Eng. (Exc. 348" with Auto. Trans.)** Premium aluminum bearings used No. 1 through No. 4. No. 5 steel backed babbitt.

Clearance - .0008-.0034". Wear limit .004".

End Thrust - Taken by rear (No. 5) main bearing.

Endplay - .002-.006" (283"); .002-.007" (348").

Replacement Bearings: Std., .001", .002", .010", .020", .030" Undersize.

Bearing Installation: Not necessary to remove engine from car, *see "Crankshaft & Main Bearings" in Chevrolet Special Data.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*SPECIAL CAMSHAFT NOTE: Special camshaft used in various engines. Mechanical valve lifters used with these camshafts.*

►*CAMSHAFT LOBE LIFT NOTE:* When improper valve operation is indicated, check lift of each lobe. *See "Camshaft & Bearings" in Chevrolet Special Data.*

Journal Diameter - (All) 1.8682-1.8692".

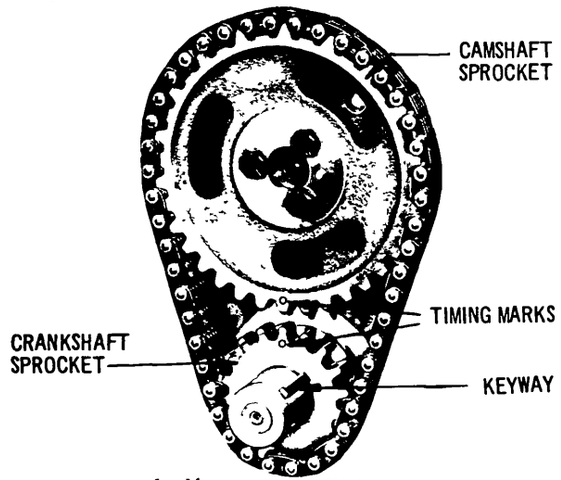
Bearings - Steel backed babbitt lined bushings.

Clearance - .0015-.0035".

Replacement Bearings: "Precision" type (do not require reaming). Use Tool J-6098 to remove and install bearings.

Camshaft Setting: Both Sprockets marked "0". Install chain with sprocket marks adjacent and in line with straightedge across shaft centers.

►*CAUTION:* When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket in place.



Camshaft Removal & Installation: *See "Camshaft & Bearings" in Chevrolet Special Data.*

Timing Chain: Link belt type. See below for specifications.

Engine	Width	Pitch	Length (Links)
283"	.875"	.500"	46
348"	.88"	.500"	48

Installation & Removal - *See "Timing Chain" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

CHEVROLET V8 VALVE TIMING MARKS

VALVES

Tappet Clearance: Mechanical Lifters - 348" - .008" Intake, .018" Exhaust, Hot. **Corvette** - .012" Intake, .018" Exhaust, Hot.

Hydraulic Lifters - *See "Hydraulic Lifter Adjustment" in Chevrolet Special Data and note "Production Change & Caution" below.*

Valve Adjustment (Mechanical Lifters): Turn rocker arm stud nut as required for desired clearance.

Valve Adjustment (Hydraulic Lifters): *See "Hydraulic Lifter Adjustment" in Chevrolet Special Data and note "Production Change & Caution" below.*

►*HYDRAULIC LIFTER PRODUCTION CHANGE & ADJUSTMENT CAUTION:* Early cars use "long travel" lifters, later cars use "short travel" type. Adjustment is different for each type and proper lifter identification must be made to prevent severe engine damage. *For lifter identification and adjustment, see "Hydraulic Lifter Adjustment" in Chevrolet Special Data.*

283" Engine

Valve	Head Diam.	① Stem Diam.	Length
Intake	② 1.715-1.725"	.3410-.3417"	③ 4.9024-4.9224"
Exhaust	1.495-1.505"	④	⑤ 4.9130-4.9330"

Valve	Seat Angle	Lift	Stem Clearance
Intake	⑥ 46°	⑦	.0010-.0027"
Exhaust	⑥ 46°	⑦	.0016-.0033"

348" Engine

Valve	Head Diam.	① Stem Diam.	Length
Intake	⑧ 1.935-1.945"	.3715-.3722"	⑨ 5.10-5.11"
Exhaust	⑩ 1.655-1.665"	⑪	⑨ 5.11-5.12"

Valve	Seat Angle	Lift	Stem Clearance
Intake	⑥ 46°	⑪ .4005"	⑫ .0010-.0027"
Exhaust	⑥ 46°	⑪ .4119"	⑬ .0021-.0038"

① - Standard stem diameter. Furnished .003", .015" & .030" Oversize.

② - 1.935-1.945" Corvette with Fuel Inj. & Special Cam.

③ - 4.870-4.890" Corvette with Fuel Inj. & Special Cam.

④ - .001" taper. .3410-.3417" top, .3400-.3407 bottom.

⑤ - 4.891-4.911" Corvette with Special Cam.

⑥ - Valve Face Angle 45°.

⑦ - .330" (2-Bbl. Carb.); .3987" (1 or 2 4-Bbl. Carbs. Reg. Cam & Fuel Inj. Reg. Cam); .394" Intake, .400" Exhaust (Fuel Inj. & Special Cam).

⑧ - 2.065-2.070" on Special Cam (except 305 HP Special Cam) & 305 HP Std. Cam Engines.

⑨ - 5.09-5.11" on Special Cam (except 305 HP Special Cam) & 305 HP Std. Cam Engines.

⑩ - 1.715-1.725" on Special Cam (except 305 HP Special Cam) & 305 HP Std. Cam Engines.

⑪ - .4058" Intake, .4120" Exhaust on Special Cam Engines (except 305 HP Special Cam).

⑫ - Wear limit .004". ⑬ - Wear limit .005".

Valve Rotators - Used on some engines.

Valve Seat Width - 1/16-3/32" (283" All, 348" Exhaust); 3/64-1/16" (348" Intake).

Valve Stem Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .003", .015", .030" Oversize. Use Reamer Set J-5830 (283"), or J-7049 (348").

Valve Springs: Install springs with closed end of coil toward cylinder head and oil shield over spring.

►*348" ENGINE VALVE SPRING NOTE:* 305 HP Engine with Std. Cam, and Engines with Special Cam (except 305 HP with Special Cam) use inner and outer springs

283" Engine (2-Bbl. Carb.)

Valve	Lbs. Pressure	Length
Closed	76-84	1.696"
Open	155-165	1.366"

283" Engine (4-Bbl. Carb.) Corvette (All Equipment)

Valve	Lbs. Pressure	Length
Closed	69-79	1.696"
Open	159-169	1.306"

348" Engine - Single Springs

Valve	Lbs. Pressur	Length
Closed	78-86	1.626"
Open	184-196	1.230"

348" Engine - Inner & Outer Springs

	Outer Spring		Inner Spring	
Valve	Lbs. Pressure	Length	Lbs. Pressure	Length
Closed	76-84	1.696"	20-24	1.488"
Open	155-165	1.306"	55-61	1.06"

►*VALVE SPRING HEIGHT CAUTION:* Check installed height of valve spring by measuring distance from surface of spring seat in head to top of valve spring shield. *NOTE - If measurement taken to top of valve spring, subtract 1/32" from specifications given below.* If measurement exceeds maximum, add 1/32" shims to bring height to preferred specifications (see below).

Valve Spring Height Specifications

Engine	Max. Height	Preferred Hgt.	Shim No.
283" All	1 23/32"	1 21/32"	3731058
348" Hydr. Lifters	1 23/32"	1 5/8"	3731058
348" Mech. Lifters	1 23/32"	1 21/32"	3764539

Valve Lifters: Hydraulic lifters standard except on engines with special camshaft. *See "Valve System" in Chevrolet Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement - *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT below.

Valve Timing Specifications (283" Engine (2-Bbl. Carb.)

Intake Valves - Open 18° BTDC. Close 54° ALDC.

Exhaust Valves - Open 52° BLDC. Close 20° ATDC.

(283" Pass. & Corvette 4-Bbl. Carb.) (Corvette, Two 4-Bbl. Carbs. & Fuel Inj., Reg. Cam)

Intake Valves - Open 12°30' BTDC. Close 57°30' ALDC.

Exhaust Valves - Open 54°30' BLDC. Close 15°30' ATDC.

(348" Engine - Regular Cam)

Intake Valves - Open 18°30' BTDC. Close 67°30' ALDC.

Exhaust Valves - Open 68°30' BLDC. Close 25°30' ATDC.

(Corvette Two 4-Bbl. Carbs. & Fuel Inj. Sp. Cam)

Intake Valves - Open 35° BTDC. Close 72° ALDC.

Exhaust Valves - Open 76° BLDC. Close 31° ATDC.

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

(348" Engine - Special Cam - except 305 HP)
Intake Valves - Open 49° 37' 40" BTDC. Close 86° 37' 40" ALDC.
Exhaust Valves - Open 77° 31' 38" BLDC. Close 32° 31' 38" ATDC.

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*
Crankcase Capacity: 4 qts. (Pass.), 5 qts. (Corvette) refill. Add 1 qt. when filter changed.
Normal Oil Pressure - 45 lbs. at 2000 RPM.

Pressur Relief Valv - In oil pump. Not adjustable.
Oil Pressure Indicator (Std. V8) - Light located at left side of instrument panel, controlled by a pressure Switch AC No. 1508753 (283"), 1508754 (348") located in main oil gallery adjacent to distributor. Switch closes when pressure drops to 4-7 lbs.
Oil Pressure Gauge (Corvette) - AC No. 1508895.
Oil Filter: Full flow type standard on all V8 Engines. Replace element every 4,000 miles or less under extreme driving conditions.
Replacement Filter Element - AC No. PF-141.
Oil Pump: Spur gear type. Located in crankcase, driven by distributor gear.
Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*

Crankcas Ventilati n: Standard Cars - Air intake through oil filler breather cap and outlet at crankcase ventilator pipe.

Positiv Crankcase Ventilati n Cars - Road draft tube is replaced by an adapter to which is connected the ventilation valve and a hose which runs to an adapter plate between the carburetor and intake manifold. Fresh air is drawn into engine through oil filler breather cap. *To prevent ignition or carburetion troubles and to insure proper operation of system, entire system must be disassembled and cleaned every 10,000 miles or sooner if needed. See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

►*RADIATOR REMOVAL CAUTION (Auto. Trans.):* Transmission oil cooler is part of radiator lower tank and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.
►*WATER BY-PASS NOTE:* 283" engine utilizes hole in cylinder block for water by-pass. 348" engine has by-pass at top of water pump which is connected to inlet manifold which has crossover passages to cylinder head.
►*CORVETTE RADIATOR NOTE:* Aluminum cross-flow radiator used. Avoid use of salt based inhibited anti-freeze.
►*FLUID FAN NOTE:* Viscous Coupling Fan standard on 348" Engines and optional on all engines with Air Conditioning.
Water Capacity: Pass. - 17½ qts. (283" Synchro-mesh), 17¼ qts. (283" Auto. Trans.), 21 qts. (348"). **Corvette** - 15½ qts. **All Cars** - Add 1 qt. for heater.
Pressure Valve: Radiator filler cap, used as follows:

Model	AC No.	Pressure	AC Type
Pass. Cars	850800	13 lb.	RC-6
Corvette	861753	13 lb.	RC-21

Thermostat: Pellet type, in intake manifold water outlet. 170°F Part No. 3138868.

Temperatur Gaug : AC Electric.
Dash Unit - AC No. 1514346 (Pass.), No. 1514185 (Corvette).
Engine Unit - AC No. 1513321 (All).
Water Pump: Packless, sealed ball bearing type.
Overhaul - *See "Cooling System" in Chevrolet Special Data.*

LUBRICATION

POWERGLIDE & TURBOGLIDE AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 1000 miles. Drain and refill only when transmission removed and disassembled for repairs. Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used).
Checking Fluid Level (Powerglide): Check with engine idling, transmission at normal operating temperature, and selector lever in "N" (Neutral) position. Dipstick located under hood on right side of engine. Add fluid only when level near "Add" mark on dipstick, do not fill above "Full" mark on dipstick. Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used).
Capacity - 3½ qts. (transmission only), 10½ qts. (transmission and converter).
Checking Fluid Level (Turboglide): Check with engine running at 800-1000 RPM, transmission at normal operating temperature, and selector lever in "N" (Neutral) position. Check fluid level on dipstick under hood at right side of engine and maintain level at "Full" mark on dipstick. Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used).
Capacity - 3½ qts. (transmission only), 9½ qts. (transmission and converter).

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

►*FOR "GREENBRIER" & "95" TRUCKS, SEE CORVAIR DATA PAGES (FOLLOWING)*

►*JACKING & HOISTING NOTE: For jacking or hoisting, see "Jacking & Hoisting" in Suspension & Wheel Alignment Section*

MODEL IDENTIFICATION

APACHE (Light Duty)

Typing & Rating	Series
½ to 1½ Ton Conventional	C10, C20, C30, C40
½ & ¾ Ton 4-Wheel Drive	K10, K20
½ to 1 Ton Forward Control	P10, P20, P30

ENGINE NUMBER: 6 Cyl. Stamped on right side of block next to distributor

V8 Eng. Stamped on forward edge of block under right cylinder head

NOTE - Number (example below) includes identification data as indicated ① ② ③

F 1210 P

① - Engine Plant **F** - Flint **T** - Tonawanda
② - Code number indicating month (Dec) and day (10th) of manufacture This is not an individual or continuous number ③ - Engine Type See table below

Engin Typ

J, K - 235" (JB, JC, JG, JH, JK, KA indicate clutch and transmission options)
L - 261" (LB, LD, LE, LF, LG, LJ, LK, LM indicate transmission, brake and steering options)
M, N, P - 283" (MA, NA, NB, ND, NE, NF, NG, NH, NM, PA, PD indicate transmission and brake options)

TUNE-UP

COMPRESSION PRESSURE: 6 Cyl. 130 lbs min **V8** - 140 lbs min All cylinders alike within 20 lbs

VACUUM READING: 17-21" at idle speed

VALVE TAPPET CLEARANCE: 235" - 006" Intake, 018" Exhaust, Hot **261'** - 006" Intake, 020" Exhaust, Hot **283"** - Hydraulic lifters *See 'Valve System" in Chevrolet Special Data and note "Production Change & Caution" below*

►*HYDRAULIC LIFTER PRODUCTION CHANGE & ADJUSTMENT CAUTION* Early engines use "long travel" lifters, later engines use "short travel" type Adjustment is different for each type and proper lifter identification must be made to prevent extensive engine damage *For lifter identification and adjustment, see "Hydraulic Lifter Adjustment' in Chevrolet Special Data*

MANIFOLD HEAT CONTROL: Thermostatic coil spring type located between manifold and exhaust pipe Valve must operate freely

CRANKCASE VENTILATION VALVE: Service at regular intervals and check operation before performing a "Tune-Up" for ignition and carburetion troubles *See "Closed Crankcase Ventilation Systems' in Carburetion Section*

IGNITION

FIRING ORDER: 6 Cyl. - 1-5-3-6-2-4 **V8** - 1-8-4-3-6-5-7-2. **Cylinders (V8)** - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7

SPARK PLUG GAP: 035"

Spark Plugs - Series 10, 20, 30, 40, 50 (235" & 283" Lt. Dty. Engines) - AC 45 (Std), AC 46 (Hotter), AC C43COM (Colder) 14mm torque to 20-25 ft lbs

Series 60 (261" & 283" Hvy. Dty. Engines) - AC C42-1COM (Std), AC C43COM (Hotter) 14mm torque to 20-25 ft lbs

COIL: Delco-Remy No. 1115087.

Ignition Current - 1 8 amps idling, 4 0 amps stopped

Resistor - Resistance type cable (1 8 ohms) used in harness between bulkhead disconnect plug and starter solenoid bypass terminal (in coil primary circuit for regular operation) Bypassed during cranking when coil energized directly from starter solenoid bypass terminal

DISTRIBUTOR: Delco-Remy. Conventional type used on 6 Cyl models Two types of "Window" distributors used on V8 - centrifugal with vacuum Advance and centrifugal advance only

Delco-Remy Distributors

Engine	Delco-Remy No
6 Cyl	1112403
2800 RPM Sch Bus (Gov)	① 1112702
283" Std	1110947

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

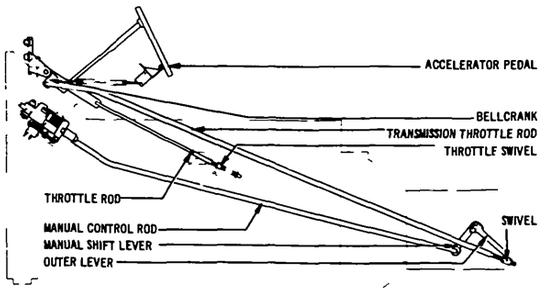
CARBURETOR

Engine	CARBURETOR APPLICATION	Carburetor
6 Cyl	(Exc. Fwd. Contr.)	Rochester B
6 Cyl.	(Fwd. Contr)	Carter BB
V8		Rochester 2G 2-Bbl

THROTTLE LINKAGE ADJUSTMENT (HYDRA-MATIC):

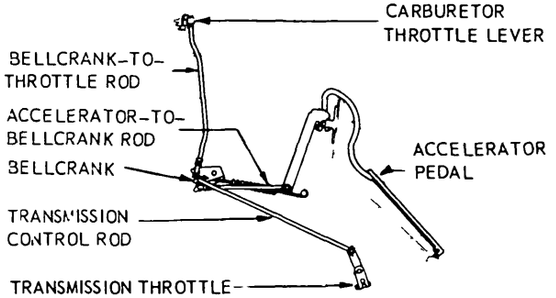
Forward Control Models - With engine at normal operating temperature and idle speed set at 400-450 RPM. Insert 1/8" diameter pin into gauge pin hole in mounting bracket of accelerator pedal lever Adjust length of throttle rod so that swivel just enters throttle lever Remove swivel from outer lever and move lever back against transmission stop. Check distance from hole in outer lever to rear face of transmission with Checking Gauge J-2545-C, bending lever as necessary (Tool J-5260) to allow entry of gauge into hole *CAUTION Do not apply force against stop at either end of lever travel* Adjust transmission throttle rod so that swivel at transmission case just enters outer lever, then **shorten** throttle rod **three and one-half turns** of jam nut

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE):



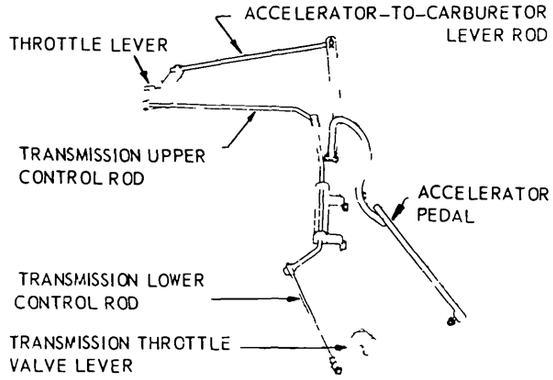
6 Cyl. - 1) Disconnect control rod from throttle lever at transmission cover. Remove lower bolt at rear of transmission side cover. Rotate throttle valve control outer lever counterclockwise to open throttle position. 2) Hold lever in this position and with throttle valve outer lever Gauge J-5906 set at 7.09", measure distance from left side cover lower rear bolt to hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust lever on throttle shaft as necessary. Reconnect throttle rod.

3) Disconnect bellcrank-to-transmission throttle lever rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.



4) Force bellcrank-to-transmission throttle lever rod forward against its stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position. 5) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE):



V8 - Remove lower control rod, loosen transmission throttle lever clamp screw Insert Tool J-5906 between transmission left hand side cover lower front bolt and hole in lever. Distance should be 3.60", as indicated on gauge, from centerline of bolt to hole centerline With gauge in place and holding lever clamp in full detent position (rotate clockwise), tighten lever to clamp and remove gauge Install lower control rod Disconnect upper control rod from throttle lever on carburetor Adjust upper control rod length for free entry into throttle lever with transmission throttle lever pulled forward against transmission internal stop Attach

6 CYL. (FORWARD CONTROL) HYDRA-MATIC THROTTLE LINKAGE

6 CYL. POWERGLIDE THROTTLE LINKAGE

V8 POWERGLIDE THROTTLE LINKAGE

throttle rod to carburetor lever Check adjustment by releasing linkage to its idle position, then hold carburetor throttle lever in wide open position and press downward on transmission outer throttle lever and check for deflection Readjust upper throttle rod if rod deflects Place ½" wood block under accelerator pedal rod, depress accelerator against block, and adjust swivel on accelerator-to-carburetor throttle lever rod for free entry into throttle lever when held in wide open position Readjust length of accelerator rod when detent is not felt before reaching wide open throttle

ROCHESTER "B" (SINGLE BARREL)

Engine	Rochester Carb. No.
235" (Std.)	7015011
235" (Economy)	7015021
261"	7015013

Idle Setting - 1½-2½ turns open. Turn screw out for richer mixture.

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto Trans. in "D").

Float Level - 1 9/32" from bottom of each float to cover gasket (do not remove gasket). Use Gauge M-250. With assembly inverted, place gauge with projection inserted in discharge nozzle. Carefully bend float lip vertically so that each float just touches top portion of gauge. Bend float arms to bring them into alignment and to center them in gauge. Tilt assembly 90° on each side and check to see that floats do not touch gauge.

Float Drop - Turn cover right side up so float drops down. Distance from gasket on cover to bottom of each float should be 1¾" on all models. Adjust by bending tang at rear of each float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump - No seasonal adjustment.

Choke Adjustment: Manual choke used.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Rochester B & BC Carburetors" in Carburetion Section*

ROCHESTER 2G (2-BARREL)

Engine	Rochester Carb. No.
283" Std.	7015015
283" (Velocity Governor)	7013011
283" (Vacuum Governor)	7015017

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8. LEFT barrel feeds 1-4-6-7.*

Idle Setting - Initial setting 1½ turns open. After idle speed set to correct specifications (see below), turn both idle mixture screws for smooth idle with highest vacuum reading and RPM

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans, in "D").

Float Level - 1 23/64" (Gauge BT-152) with air horn inverted and gauge placed over float so it rests against pump side of power piston shaft and outer gauge leg in line with center of float. Adjust by bending float arm (Tool BT-69) between pivot and float.

Float Drop - 1 29/32" (Gauge BT-152) from air horn gasket to bottom of float with air horn held upright. To adjust, bend float tang.

Choke Setting: Manual choke used

Throttle Linkage Adjustment: *See CARBURETOR abov .*

►*OTHER DATA: See "Rochester 2G & 2GC Carburetors" in Carburetion Section.*

CONTINUED ON NEXT PAGE

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

CONTINUED FROM PRECEDING PAGE

CARTER BB (UPDRAFT)

Carter (BB) 871SC (Forward Control Models). Single barrel updraft type with manual choke.

Idle Setting - ½-1½ turns open (turn screw out for richer mixture).

Idle Speed - 475 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

Float Level - Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed).

Accelerating Pump - Inner hole (in plunger shaft and throttle lever) Summer. Outer hole, Winter.

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Carter BB (Updraft) Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC used as follows:

Model	AC No.
6 Cyl. Std.	4434
6 Cyl. Fwd. Contr. & Flat Faced Cowl	4666
V8	4701

Pressure - 3½-4½ lbs. (6 Cyl.), 5¼-6½ lbs. (V8) steady at 450-1000 RPM.

Gasoline Gauge: AC Electric.

Dash Unit - (Flat faced cowl) AC No. 5643021. (Others) AC No. 5643018.

Tank Unit - Various types used. Replace with same type as original equipment.

BATTERY

Delco. 2SMR53, 12 volt, 9 plate, 53 ampere hour capacity (20 hr. rate).

668. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

3SMR72, 12 volt, 11 plate, 72 ampere hour capacity (20 hr. rate).

Ground - Negative.

Engine Ground - Engine to frame (6 Cyl.), to dash (V8).

STARTER

Delco-Remy. As follows:

	Starter	Armature
6 Cyl. Std.	1107652	1932185
6 Cyl. Fwd. Contr.	1107677	1926626
V8	1107664	1935829

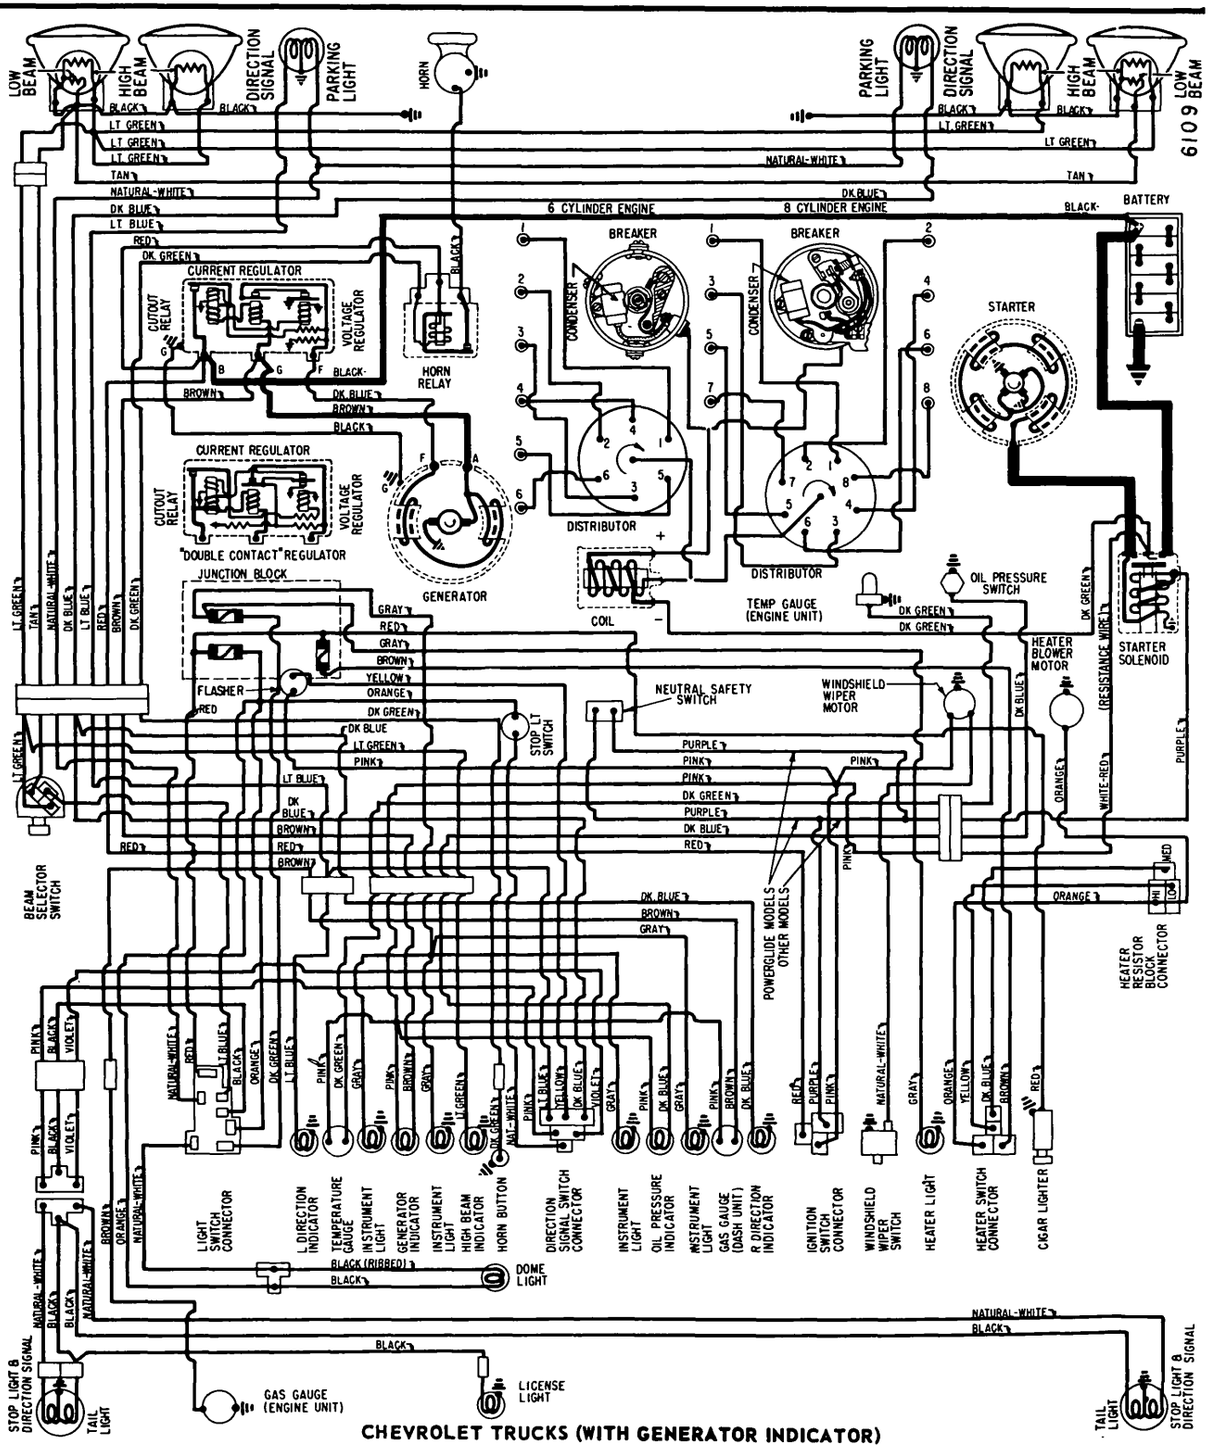
Drive - Overrunning clutch with solenoid pinion shift.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 35 ozs. min.

Performance Data - 1107652,64

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	6200-9400	10.6	49-76
	Lock	4.3	270-310



Performance Data - 1107677

Torque	RPM	Volts	Ⓒ Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Ⓒ - Includes Solenoid.

Starting Switch: Delco-Remy Solenoid No. 1119910 (1107652 & 664 Starters), No. 1119793 (1107677 Starter) mounted on starter and controlled by Ignition & Starter

CONTINUED ON NEXT PAGE

CHEVROLET TRUCKS (WITH GENERATOR INDICATOR)

CONTINUED FROM PRECEDING PAGE

Switch, Delco-Remy No 1116579 (Forward Control), No 1116567 (Others)

N utral Safety Switch: Delco-Remy No 1998677 (Powerglide), No 1998110 (Hydra-Matic) mounted on steering column

Adjustm nt - *See "Powerglide" or "Dual-Range Hydra-Matic Drive" in Transmission Section*

GENERATOR

Delco-Remy. Used as follows

Applicati n	G nerator	Armature
6 Cyl & V8 Std.	1102096	1923535
6 Cyl & V8 Optl	1102173, 174	1948005
Special Equipment	1105123	1945922
Special Equipment	1106681	1927074

Perf rmance Data - Cold (70°F)

Generator	Amperes	Volts	RPM
1102096	30	14 0	2240
1102173, 174	35	14 0	2630
1105123	40	14 0	1930
1106681	45	13 0	1400

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 28 ozs

Fi ld Current - 1 69-1 79 amps (1102096, 173, 174), 2 73-3 00 amps (1105123), 2 14-2 28 amps (1106681) All at 12 volts and 80°F

Belt Adjustm nt: 3/8" (6 Cyl), 3/4" (V8) deflection with light pressure midway between water pump and generator pulleys

►*GENERATOR PULLEY INSTALLATION CAUTION· To prev nt brin lling of b aring races, following pulley installation procedure must be followed exactly* Cradle generator in a fixture with a back-up plate against rear bearing cap Insert key into keyway in shaft, supporting lower side of shaft Align pulley with key and keyway and mount on shaft using steady pressure Tighten pulley attaching nut to 50-60 ft lbs

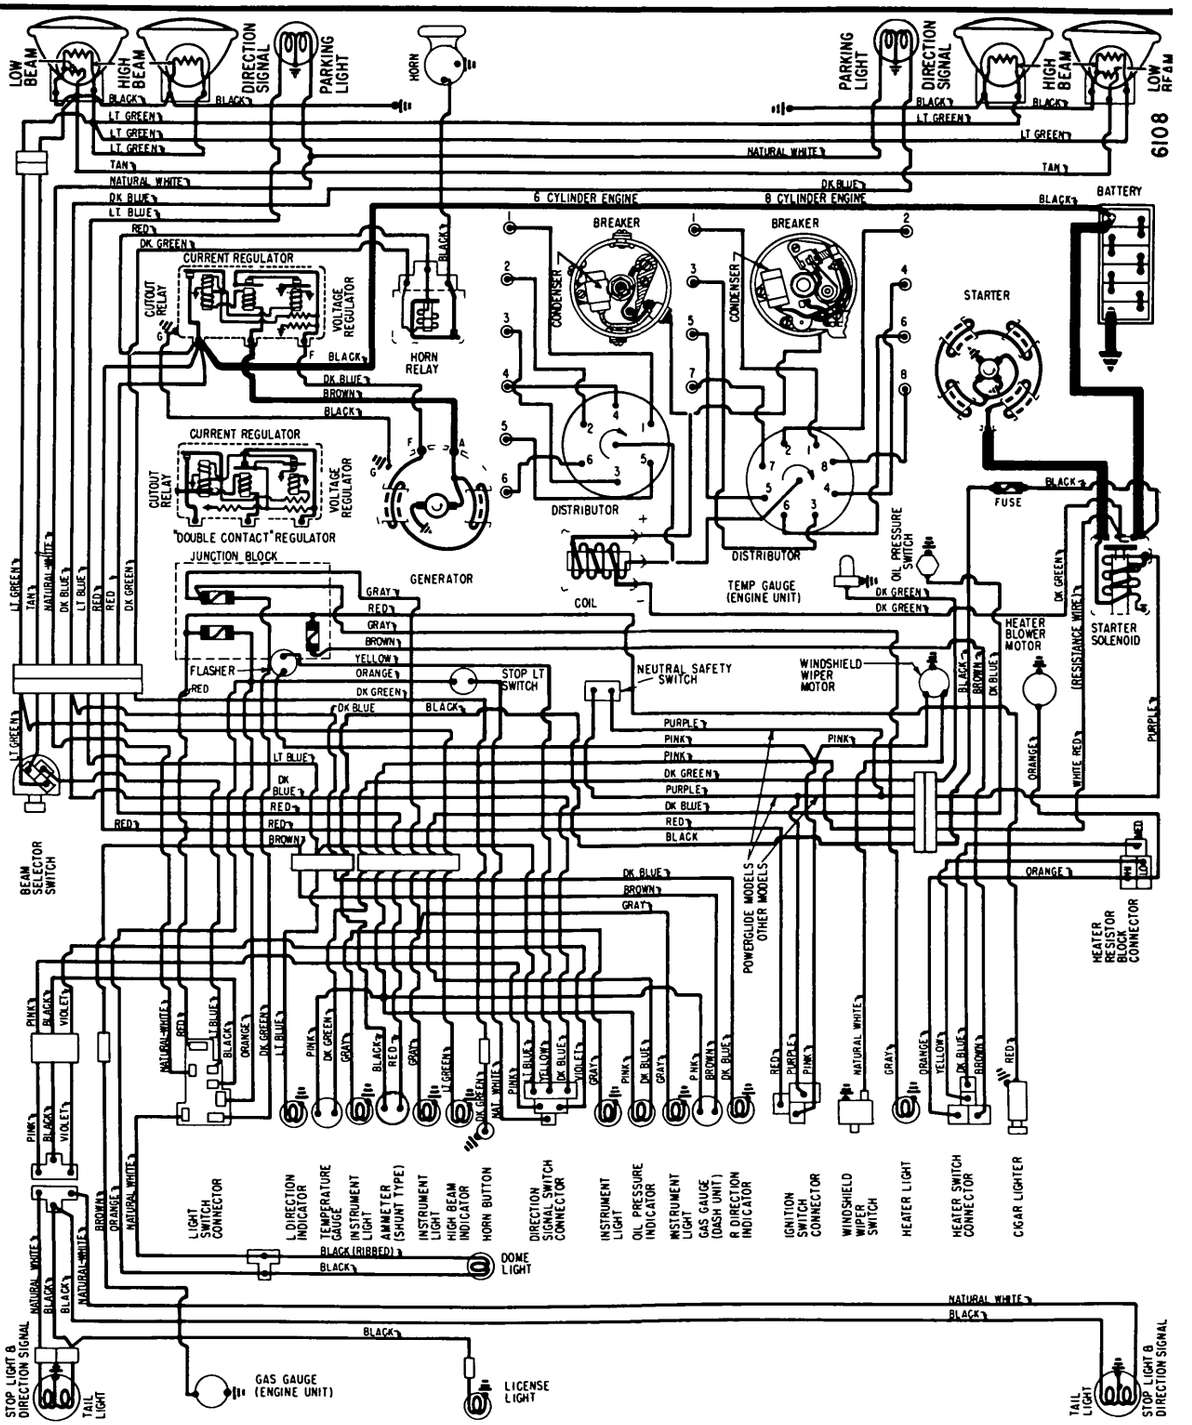
AMMETER: "Shunt" type with only small part of charging current routed through ammeter Ammeter is calibrated to indicate entire charging current rather than current actually in ammeter circuit

►*AMMETER WIRING CAUTIONS·* Red wire from ammeter to regulator must be connected to regulator "BAT" terminal If wire connected to another regulator terminal, a dead short would burn ammeter circuit instantly Ammeter circuit also protected by a 3 amp fuse in wiring harness just ahead of dash connector on engine side of firewall

GENERATOR REGULATOR

D lco-R my. Used as follows

Regulator	Generator No.
1119001 (30 Amp)	1102096
1119261 (30 Amp Replacement)	1102096
1119002 (35 Amp)	1102173, 174
1119610 (40 Amp)	1105123
1119619 (45 Amp)	1106681



►*DOUBLE CONTACT REGULATOR NOTE Regulators 1119610 & 619 have double contacts for voltage regulation*

NOTE - Sp cifications b low are "Normal" setting

Cutout Relay

Cuts In - 11 8-13 5 volts (1119001, 002, 261), 11 8-13 0 volts (1119610 & 619)

CONTINUED ON NEXT PAGE

CHEVROLET TRUCKS (WITH AMMETER)

CONTINUED FROM PRECEDING PAGE

Cuts Out (1119261) - 1-4 amperes reverse current at 12.5 volts for relay points to open.
Contact Gap - .020".
Air Gap - .023" (1119261), .020" (Others).

Voltage Regulator

Setting (1119001, 002, 261) - 13.8-14.7 volts at 125°F.
Setting (1119610, 619) - 13.8-14.6 volts at 125°F ambient temperature when operating on upper contacts. .1-.3 volts lower when operating on lower contacts.
Contact Gap (1119610, 619) - .016" (upper contacts) with lower contacts just touching.
Air Gap - .075" (1119001, 002, 261); .067" (1119610, 619) with armature pressed down to point where contacts just touch.

Current Regulator

Setting - 27.0-31.0 amps. (1119001, 261); 31.0-35.5 amps. (1119002); 36.0-40.5 amps. (1119610); 46.0-50.5 amps. (1119619) at 125°F ambient temperature.
Air Gap - .070" (1119261), .075" (Others) with armature pressed down to point where contacts just touch.

►*OTHER DATA: See "Delco-Remy 1119000 Series (Single Contact) Regulators" and "Delco-Remy 1119600 Series (Double Contact) Regulators" in Electrical Section.*

ALTERNATOR & REGULATOR

Delco-Remy Alternator No. 1117070 with Transistorized Regulator No. 9000554 and separately mounted Field Relay No. 1116895.
Rated Output - 60 amperes (hot) - 58 amperes at 14 volts and 2500 RPM (Cold - 70°F).
Rotation - Clockwise at drive end.

►*OTHER DATA: See "Delco-Remy (Internal Rectifier) Alternators & Transistorized Regulators" in Electrical Section.*

MISC. ELECTRICAL

Lighting Switch Removal: Remove connector from switch. Depress switch shaft retainer (on top of switch) and remove knob and shaft. Remove retaining ferrule and switch assembly.
Stop Light Switch: Located on underside of dash panel brace. Adjust switch position to make electrical contact with 5/8" brake pedal travel.
Instrument Cluster Removal: Disconnect battery. Disconnect oil pressure line, speedometer cable, and air gauge pipe from instruments. Remove cluster-to-dash retaining screws. Remove cluster from panel, disconnect electrical leads and snap out bulb sockets. Individual instruments may be removed as required.

CIRCUIT BREAKERS: Located on lighting switch.

FUSES: Located on junction block mounted on upper inside of dash panel to left of steering column.

ENGINE

Engine Model	Type
Thriftmaster	235" 6 Cyl.
Jobmaster	261" 6 Cyl.
Trademaster	283" V8

ENGINE SPECIFICATIONS: 6 Cyl. & V8 Valve-in-Head.

Engine	Bore	Stroke	Displacement
Thriftmaster(Std.)	3 9/16"	3 15/16"	235 cu. in.
Thriftmaster(Econ.)	3 9/16"	3 15/16"	235 cu. in.
Jobmaster	3 3/4"	3 15/16"	261 cu. in.
Trademaster	3 7/8"	3"	283 cu. in.

Engine	Compr. Ratio	Rated HP	Valved HP
Thriftmaster(Std.)	8.25-1	30.4	135 at 4000 RPM
Thriftmaster(Econ.)	8.25-1	30.4	110 at 3200 RPM
Jobmaster	8.00-1	33.7	150 at 4000 RPM
Trademaster	8.50-1	48.0	160 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: (6 Cyl. Engines) - Raise front of vehicle and place on stands, drain lubricant and remove bolts and screws. *NOTE* - Turn crankshaft as necessary to allow clearance at front crossmember.

OIL PAN REMOVAL: (V8 Engine) - Raise front of vehicle and place on stands. Drain lubricant. Remove bolts and screws and remove oil pan.

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chevrolet Special Data.*

►*OTHER 6 CYL. ENGINE DATA: See Chevrolet 6 Cyl. Car Model pages.*

►*OTHER V8 ENGINE DATA: See Chevrolet V8 Car Model pages.*

ENGINE OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Chevrolet Special Data.*

Crankcase Capacity: 235" - 5 qts. refill. 261" - 6 qts. refill. 283" - 4 qts. refill. All - Add 1 qt. with filter change.
Normal Oil Pressure - 6 Cyl. - 35 lbs. at 2000 RPM. V8 - 30 lbs. at 1170-1200 RPM.
Pressure Regulator Valve - In pump body, not adjustable.
Oil Pressure Indicator (exc. Forward Control & Flat Cowl): Indicator light on instrument panel. Controlled by pressure switch, AC No. 1508753.
Oil Pressure Gauge (Forward Control & Flat Face Cowl Models): AC No. 1508246 (Forward Control), No. 1508014 (Flat Face Cowl). Not electric.
Oil Pump: Gear type. Located in crankcase, driven by distributor gear.
►*OIL PUMP SCREEN NOTE:* Oil pickup pipe should be installed so that bottom of pickup screen is parallel with oil pan rails.
Oil Pump Overhaul - *See "Oiling System" in Chevrolet Special Data.*
Oil Filter: AC partial flow (235"), full flow (261" & 283").
Replacement Filter Element - (235") AC-P-115 or AC-P-117 partial flow. **(261" & 283")** AC-PF-141 full flow.
Filter Valve Replacement (283") - Drain crankcase, remove filter and cartridge. Remove oil filter valve bolts, valve and seal. *NOTE* - Check valve for cracks, replace if broken. A 10 lb. valve must be used. Position valve away from engine when reinstalling.
Crankcase Ventilation (Standard): Air intake through oil filler cap, outlet through road draft tube at rear of engine.
Servicing - Clean oil filler cap in solvent and reoil with light engine oil every 2000 miles, or more often if required by operating conditions.
Crankcase Ventilation (Optional): Positive Type (6 Cyl.). Two types used as follows: 1) Conventional road draft tube replaced by a crankcase outlet pipe with baffles in upper end. Ventilation valve in upper end of outlet pipe is connected to intake manifold by a hose.
2) Same as Type 1) above with additional fresh air intake from carburetor air cleaner to valve rocker cover. Oil filler breather cap is replaced by solid non-breather type. *Both types are serviced in same manner. See "Closed Crankcase Ventilation Systems" in Carburetion Section.*
Positive Type (V8) - Road draft tube is replaced by an adapter to which is connected the ventilation valve and a hose which runs to an adapter plate between the carburetor and intake manifold. Fresh air is drawn into engine through oil filler breather cap. On some heavy duty applications, fresh air intake is through the carburetor air cleaner to the oil filler tube, with breather cap replaced by a solid type cap. *To prevent ignition or carburetion troubles and to insure proper operation of system, entire system must be disassembled and cleaned every 10,000 miles or sooner if needed. See "Closed Crankcase Ventilation Systems" in Carburetion Section.*

ENGINE COOLING SYSTEM

Water Capacity: In quarts for each type engine.

Standard Cooling System

Series	235"	261"	283"
10, 20, 30 Synchro-mesh	17.25		17.25
10, 20 Auto. Trans.	17.75		18.25
40 Synchro-mesh	17.75		18.25
P20, P30 Synchro-mesh	17,00		
50 Synchro-mesh	17.25		18.25
60 Synchro-mesh (Exc. T60)	17.25		18.25
60 Auto. Trans. (Exc. T60)	21.25		
T60 Synchro-mesh	25.30		26.00
T60 Auto. Trans.			26.00

NOTE - Add 7/8 qt. for heater.

Pressure Valve: Radiator filler cap. 9 lb. (Std. Cooling System, except T60); 7 lb., AC No. RC 1 (T60 & Heavy Duty Cooling System).
Thermostat: Harrison poppet valve (235" & 283" except 5-speed trans.); Dole pellet bypass (261" & 283" with 5-speed trans.).
Replacement Thermostats - Harrison No. T180, Dole No. DV50. All thermostats start to open at 157-163°F and are fully open at 182°F.
Temperature Gauge: AC Electric type.
Dash Unit - AC No. 1513381 (Forward Control), 1513853 (Flat Face Cowl), 1513850 (Others).
Engine Unit - AC No. 1513321 (All Series).
Water Pump: Packless type with sealed ball bearing.
Pump Removal & Overhaul - *See "Cooling System" in Chevrolet Special Data.*

LUBRICATION

AUTOMATIC TRANSMISSION LUBRICATION: Check fluid level every 1,000 miles. Drain and refill every 25,000 miles (Hydra-Matic), only when transmission disassembled for repairs (Powerglide). Use Automatic Transmission Fluid Type A, Suffix A (Type A can be used).
Checking Fluid Level: Check with engine idling, Transmission at normal operating temperature, and selector lever in "N" (Neutral). Dipstick located under hood on right side of engine. Add fluid when level at "L" (1 qt. low) on Hydra-Matic Models or at "ADD" mark on Powerglide Models. Do not fill above full mark on dipstick. Use Automatic Fluid Type A, Suffix A (Type A can be used).

See INDEXES on Pgs. 4 to 9 for complete CARBURETION, ELECTRICAL, MECHANICAL data.

TIGHTENING SPECIFICATIONS

►*TIGHTENING CAUTION: Due to use of aluminum crankcase, rear axle housing, cylinder heads, and other parts, bolt and stud torques must be held as close as possible to specifications in table below to avoid overstress of base metal parts and stripped threads.*

	Inch-Lbs.	Ft. Lbs.
Cylinder Head		27-33
Exhaust Manifold		23-27
Rocker Arm Stud		27-33
Rocker Arm Stud Nut	55-125	
Rocker Arm Cover	30-50	
Oil Pan	40-60	
Oil Cooler		8-12
Oil Cooler Adapter		7-13
Oil Cooler Shroud	60-80	
Oil Pump Cover	60-80	
Oil Filter & Gen. Adapter		7-13
Connecting Rod Caps		20-26
Crankcase Rear Housing		7-13
Crankcase Halves (7/16")		42-48
Crankcase Halves (5/16")		7-13
Crankcase Cover		7-13
Drive Flange or Flywheel		20-26
Flywheel Housing		20-30
Engine Rear Mount Bolt		50-60
Engine Rear Mount Bracket Nut		40-50
Engine Front Insulator-to-Frame		25-35
Engine Front Mount Bracket-to-Trans.		20-30
Engine Front Insulator-to-Bracket		60-80
Skid Plate-to-Rear Housing		20-30
Clutch Cover		15-20

POWER TRAIN

POWER TRAIN REMOVAL. *NOTE - Complete assembly (engine, transmission, and rear axle) must be removed from car as a unit. To separate transaxle from engine, see "Corvair Transaxle" in Transmission Section.*

PASSENGER CARS

1) Remove spare tire (coupe & sedan), engine access cover (station wagon). Remove carburetor air cleaners. Disconnect air heater return air hose. Remove engine-to-body front seal retainer. Disconnect left carburetor return spring and throttle rod at cross shaft. Disconnect main choke cable at firewall.

2) Make the following electrical disconnections: Battery positive terminal cable, generator ground strap and leads to voltage regulator, ignition leads from starter motor harness connector, right and left engine-to-body ground straps, coil and oil and temperature switch wires.

3) Raise car on hoist and remove battery cable and ignition leads from starter solenoid. Remove engine rear grille and skid plate, rear and side seal engine retainers. Disconnect parking brake spring from crossmember. Pull choke cable forward to clear front engine mount. Disconnect accelerator control rods at idler lever and push lever-to-carburetor rod into engine compartment. Disconnect fuel line and speedometer cable. Disconnect air heater flexible hoses from engine. Disconnect gasoline heater fuel line.

4) Remove axle shafts (see Rear Axle Section), and pull universal joints from differential carrier.

5) On Synchro-mesh cars, disconnect shift tube coupling at transmission shifter shaft, then loosen coupling clamp nut and push shift tube coupling into tube until clear of engine front mount. Disconnect clutch return spring and clutch pull rod. Remove clutch cross shaft from front mount. Unfasten clutch cable sheath clamp from engine front mount and drop clutch cable and cross shaft clear of power train. Remove back-up light switch from 4-speed transmission housing (switch is below normal oil level).

6) On Powerglide cars, disconnect transmission shift cable from transmission case. Rotate transmission throttle valve lever fully counterclockwise and remove cable from transmission case. Remove transmission filler tube (use a container to catch oil).

7) Position a hydraulic transmission jack stand under engine assembly, using Tool J-7894 (adapter), and lock tool in place with attached locking knob and additional bolt and nut. Remove cotter pins and castellated nuts from front engine mount (at transmission) and from rear engine mount. *NOTE - If front mounting bracket and shims are removed from transmission, the same amount of shims removed must be replaced. Rear "toe-in" will be affected if shims are changed.* Lower power train gradually and watch for possible interference at rear mount and left rear lower control arm. Remove exhaust pipe and muffler assembly.

TRUCKS

Procedure is same as for Passenger Car Power Train Removal except as noted below.

On Synchro-mesh trucks, disconnect clutch return spring at clutch housing and at pull rod idler lever. Remove clutch cable retainer from engine front mount, then remove pull rod clevis, idler lever and cable clevis. On Powerglide trucks, disconnect transmission oil cooler lines at transmission.

ENGINE SERVICE

►*ENGINE FRONT & REAR IDENTIFICATION: All reference to engine and components is to position installed in car. FRONT of engine is flywheel end toward front of car. REAR of engine is accessory drive end toward rear of car.*

►*ANTI-SEIZE COMPOUND NOTE: Permatex No. 404 Anti-Seize Compound (or equivalent) must be used on threads of all bolts, studs and capscrews entering an aluminum part to prevent thread seizure and damage.*

►*ALUMINUM THREAD REPAIR NOTE: A thread repair kit, Part No. 3780960, is available for repairing stripped or damaged threads in aluminum parts.*

►*ALUMINUM PARTS CAUTION: Aluminum components of engine are relatively soft and easily damaged. Use extreme care not to nick, scratch or otherwise distort mating or bearing surfaces.*

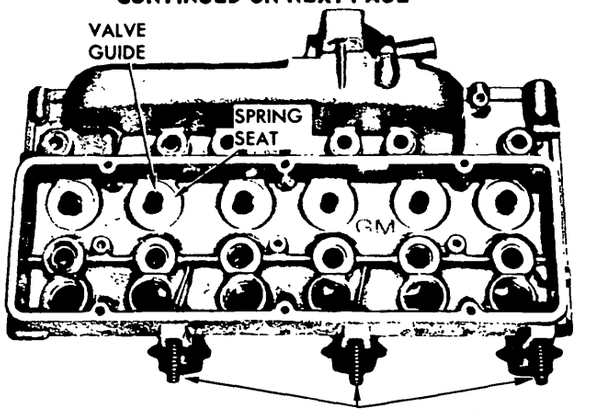
CRANKCASE & CYLINDER HEAD STUD REPLACEMENT: Coat stud threads with anti-seize compound (see above) and install into cylinder head or crankcase with special detail of Tool J-8354 to projected length as follows: *NOTE - Measure projected length from shoulder of tool (installed on stud) to surface of crankcase or cylinder head.*

Stud	Projected Length	Tool Detail
Carb. Mounting (Outboard)	4 3/16"	2
Carb. Mounting (Inboard)	1 5/8"	2
Exhaust Manifold	31/32"	3
Cylinder (Long - Upper)	8 9/32"	1
Cylinder (Short - Lower)	7 9/16"	1
Rear Housing Mounting	4 9/16"	3
Distributor Holding	1 1/8"	

►*CYLINDER STUD TORQUE NOTE:* Maximum torque should be 30 ft. lbs., minimum torque 10 ft. lbs. If under 10 ft. lbs., install either .003" or .006" oversize studs as necessary.

EXHAUST MANIFOLD SLEEVE REPLACEMENT: *CAUTION - Remove sleeves from cylinder head only if absolutely necessary.* Remove sleeves by turning gradually with a pipe wrench. **Do not** pry or tap sleeves to remove. To install, coat new sleeves with anti-seize compound (see above). Insert sleeves into dry ice for about 10 minutes and at same time heat cylinder head to 200°F (do not use open flame). Remove sleeves from dry ice and tap into cylinder head bores making sure sleeves are true with bores, *NOTE - Replacement sleeves furnished Std., .002", & .010" Oversize.*

EXHAUST MANIFOLD INSTALLATION: Place manifold on sleeve gaskets, tap manifold lightly to insure alignment with gaskets, then firmly seat manifold with a soft hammer. Install manifold clamps and french locks. Torque attaching nuts to 23-27 ft. lbs., then bend tab on locks.



ENGINE MOUNTS: Front Mount Removal - Remove clutch lever control cable cross shaft ball stud at front mount bracket or Powerglide control cable. Support engine and remove insulator-to-bracket nuts. Remove shift rod coupling from transmission shift rod. Lower engine about 2" so front engine bracket clears mount stud. Disconnect parking brake cable from mounting bracket. Remove front mount and insulator. *CAUTION - Shims between transmission and mounting bracket control rear wheel toe-in and must be replaced in original positions.*

Rear Mount Removal: Support engine and remove rear center shield. Remove bracket-to-skid plate nuts; lower engine and remove engine-to-bracket mount assembly.

CRANKCASE COVER, BLOWER & BLOWER BEARING REMOVAL: **1)** Disconnect battery ground cable, accelerator and fuel lines, then remove oil level gauge and carburetor air cleaners and supports. Remove spare tire. Remove carburetor vacuum balance tube and retaining strap at engine upper shroud assembly and front shield.

2) Remove pulley belt and distributor wire harness, then remove carburetor cross shaft and choke cable assembly

CONTINUED ON NEXT PAGE

CORVAIR CYLINDER HEAD

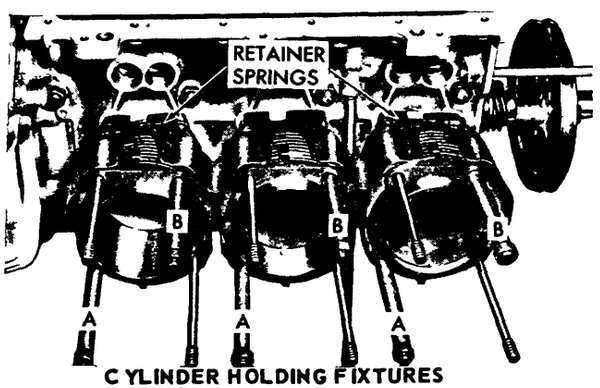
CONTINUED FROM PRECEDING PAGE

from carburetors. Disconnect generator brace and swivel it away from upper shroud. Remove engine upper shroud.

3) Remove four retaining bolts from blower pulley and remove pulley and blower from bearing hub assembly. Remove crankcase cover and blower bearing assembly as a unit. Remove crankcase-to-crankcase vent gasket and crankcase vent.

Blower Bearing Replacement: Use hypoid lubricant on bearing shaft and press bearing on crankcase cover so distance from crankcase cover gasket rail to top surface of large diameter of hub assembly is 4.520-4.530".

OIL COOLER REMOVAL: Remove all screws retaining cooler to engine shrouds, shields and cylinder head, then remove oil cooler access hole cover and remove long oil cooler mounting bolt. Remove oil cooler.

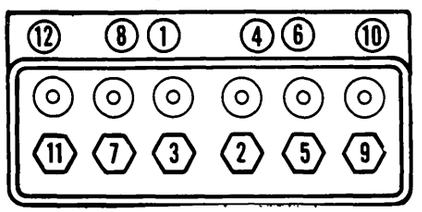


CYLINDER HEAD: Removal - *NOTE - When removing right hand cylinder head, disconnect coil, oil pressure and cylinder head temperature sending unit wires in addition to following procedure.*

1) Drain crankcase and disconnect battery cables from battery and generator. Disconnect radio ground strap. Remove air cleaner, accelerator return spring and air cleaner support. Disconnect accelerator rod from carburetor and remove cross shaft retainer at shaft support. Disconnect cross shaft support from carburetor. Disconnect fuel line and choke cable from carburetor. Remove carburetor and long (outboard) carburetor mounting stud from manifold. Disconnect vacuum balance tube from intake manifold.

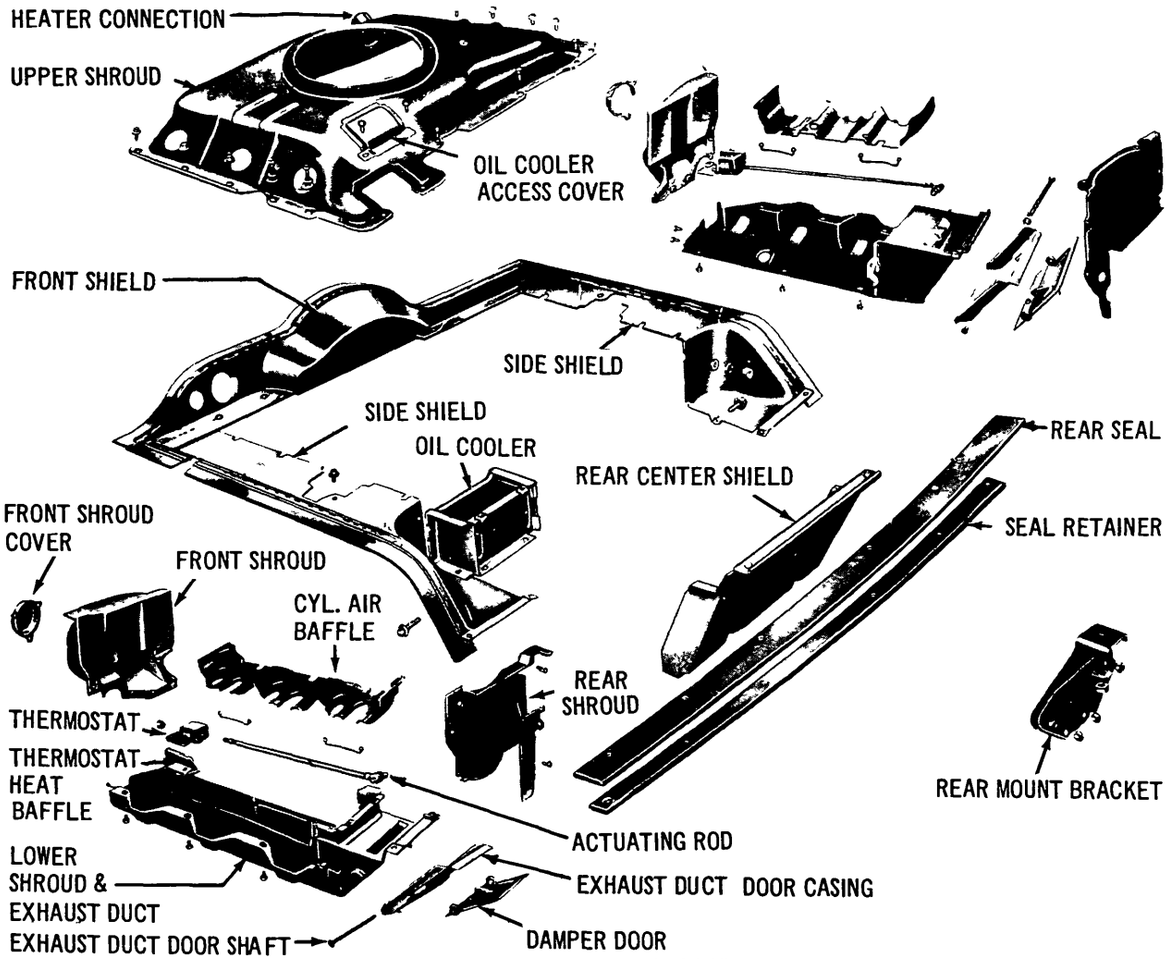
2) Disconnect generator mounting bracket and swivel bracket up and away from engine upper shroud. Remove spark plugs. Remove engine side shield. Remove oil cooler.

3) Raise car on a hoist and attach Tool J-7894 (adapter) to underside of engine. Remove both engine side seal retainers and rear seal retainers. Remove engine rear center shield and seal assembly. Remove lower engine shroud and exhaust duct, then remove exhaust pipe-to-manifold nuts and remove exhaust manifold. Remove engine rear mounting nut and washer from below body rear mounting bracket.



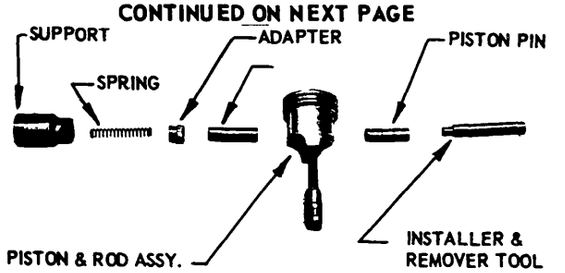
4) Remove valve rocker cover (catch oil draining from cylinder head), then remove rocker arms, pushrods, rocker arm studs and pushrod guides. Remove "O" rings from cylinder head and from bottom of pushrod drain tubes, then remove drain tubes.

CYLINDER HOLDING FIXTURES



5) Remove cylinder head nuts and flat washers, then carefully lower engine assembly approximately 3" to clear cylinder head carburetor flange. Remove cylinder head from crankcase studs.

►*CAUTION: Do not rotate crankshaft with cylinder head removed unless holding fixtures are installed on studs to hold cylinder in place. ½" O.D. steel tubes 4¼" long should be installed on one long stud and ½" O.D. steel tubes 3½" long should be installed one diagonally opposite short stud of each cylinder. See Illustration.*



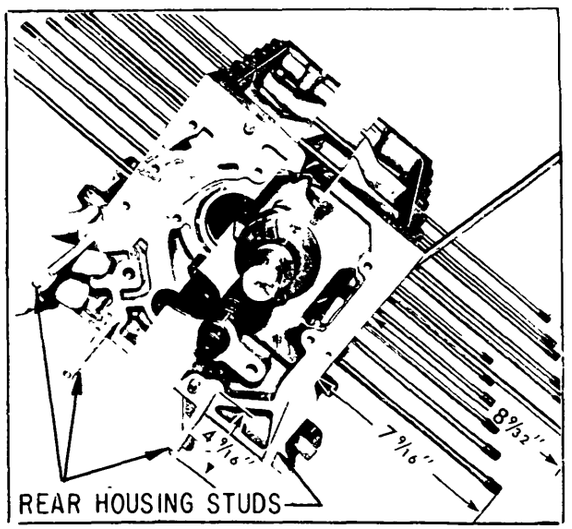
CORVAIR CYLINDER HEAD

Installation - To install head, reverse removal procedure and note the following: Use anti-seize compound

CORVAIR ENGINE SHROUDING

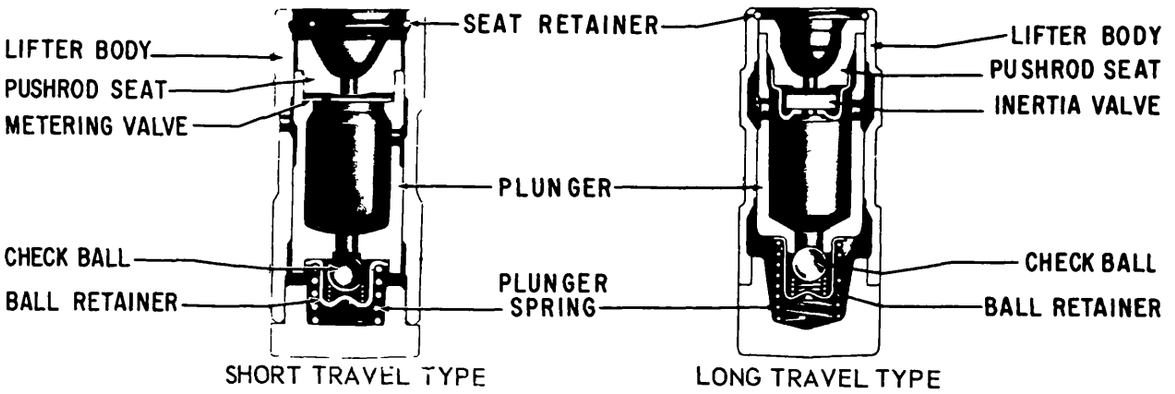
CONTINUED ON NEXT PAGE

CORVAIR PISTON PIN ASSEMBLY



CONTINUED FROM PRECEDING PAGE

such as Permatex No. 404 or its equivalent on the threads of all bolts, studs and capscrews entering aluminum parts. Tighten cylinder head retaining nuts and rocker arm stud nuts (rocker arm studs have internal threads at lower end that thread over cylinder head studs and act as cylinder head nuts) to 27-33 ft. lbs. in the sequence shown in diagram. Install pushrods with the .050" side oil hole upward (next to rocker arm). Install rocker arms and adjust to proper position *(see "Hydraulic Lifter Adjustment" below)*. Tighten rocker arm cover screws to 30-50 inch-lbs.



CYLINDER REMOVAL: *NOTE - Cylinder can be removed with engine in car.* Remove cylinder heads and install holding fixtures (see above). Remove crankcase cover and blower assembly (see above). Remove cylinder air baffles (secured by retainer spring clips at base of cylinder). Turn crankshaft and remove connecting rod caps. Remove cylinder holding fixture and remove cylinder, piston and rod as an assembly. *NOTE - If desired, cylinder can be removed without removing piston and connecting rod. In this case, use Tool J-8356 to compress piston rings when installing cylinder.* **Installation** - Install new copper gasket over cylinder pilot and install cylinder into crankcase. Reverse removal procedure.

PISTON PIN REMOVAL & INSTALLATION: Use Tool Set J-8355 to remove and install piston pin in piston and connecting rod (see illustration). When installing, press pin in until pilot of tool bottoms on adapter and support.

CONNECTING ROD BEARING REPLACEMENT: *NOTE - Bearings can be replaced without removing engine from car.* Remove crankcase cover and blower assembly (see above). Remove spark plugs. Remove connecting rod bearing caps (turn crankshaft to position rods for access to cap bolts).

CRANKCASE STUD DIMENSIONS

CORVAIR HYDRAULIC VALVE LIFTER

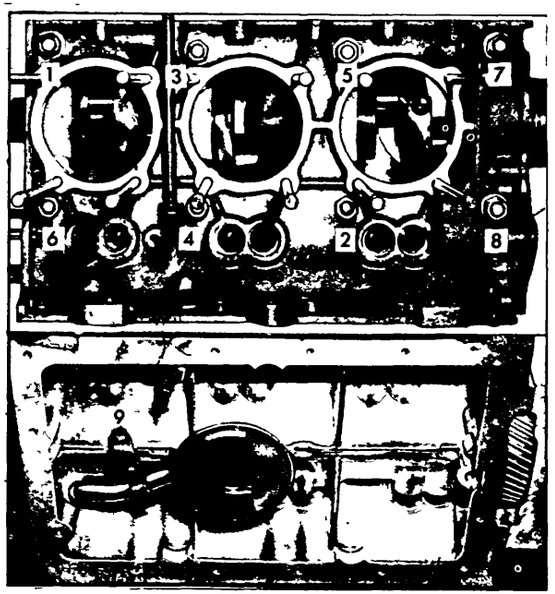
FLYWHEEL HOUSING: Crankshaft Front Oil Seal Replacement - Tap out old seal, clean surface in housing and check for nicks. Coat beaded outer surface of seal with lubriplate and install with Tool J-2221-A or suitable installer. *CAUTION : Sealing lips of seal must be packed with a good grade of cup grease with a minimum melting point of 350°F.*

ENGINE REAR HOUSING REPLACEMENT: Observe the following: 1) Grooved pin holding oil pump pressure regulator valve must be installed with a suitable drift. 2) Oil pump gallery plug must be flush with counterbore (use sealing compound). 3) Distributor holding stud should project 1 1/8" from distributor mounting pad on housing.

CRANKSHAFT PULLEY REMOVAL: *Following procedure supersedes previous recommendations.* Rework Crankshaft Pulley Remover J-6978-1 by drilling two 7/16" holes through puller. Place holes 180° apart on a 2¼" circle which is concentric with screw hole in center of tool. Proceed as follows:

1) Raise and support rear of car. Loosen blower belt, remove oil filter assembly, and remove engine grille. Remove engine rear sealing strip retainer and sealing strip, then remove engine rear center shield.

2) Support rear of engine, disconnect and remove rear engine mount and remove mount bracket from engine. *NOTE - On trucks, lower rear of engine to obtain sufficient clearance.* Remove pulley attaching bolt, then remove pulley using reworked Puller J-6978-1 (see above).



Crankshaft Rear Oil Seal: *See CAUTIONS below.* Tap out old seal, clean surface in housing and check for nicks. Coat beaded outer surface of seal with lubriplate and install with Tool J-270-6 or suitable installer. *CAUTION - Sealing lips of seal must be packed with a good grade of cup grease with a minimum melting point of 350°F.*

CRANKCASE SEPARATION: After cylinders, rear housing, and flywheel housing removed, loosen crankcase holding bolts. Tilt crankcase on right side at about 15° angle to prevent camshaft and crankshaft falling out. Remove holding bolts and remove crankcase left half.

CRANKCASE ASSEMBLY: Make sure split line surfaces are free of nicks and scratches. Install main bearing inserts in right half and install crankshaft. Install camshaft, guiding thrust washer into groove in crankcase and index timing marks on camshaft and crankshaft gears. Install main bearing inserts in left half and carefully install left half to right half. Torque holding nuts to proper specifications in sequence shown in diagram. *CAUTION - Hold bolt head and tighten nuts. DO NOT tighten at bolt head.*

MAIN BEARING REPLACEMENT: When testing bearing clearance, crankcase must be assembled without camshaft exactly as indicated under "Crankcase Assembly" above.

CRANKSHAFT DRIVE FLANGE: Drive flange and crankshaft timing gear are a one-piece unit with a tight press fit on crankshaft. A hydraulic press is necessary to remove and install gear and flange. To remove, use Support Plate J-358-1, Adapter Rings J-7028, and a

CONTINUED FROM PRECEDING PAGE

hydraulic press. To install, support crankshaft between front crankshaft throw and front journal (support must clear thrust face of No. 6 crankpin). Install woodruff key and install crankshaft gear. Press gear on shaft with Tool J-6175 and a hydraulic press.

►*FLYWHEEL SEALING CAUTION:* Flywheel or flex plate-to-crankshaft gear bolts must have sealing compound applied before installation to prevent oil leakage.

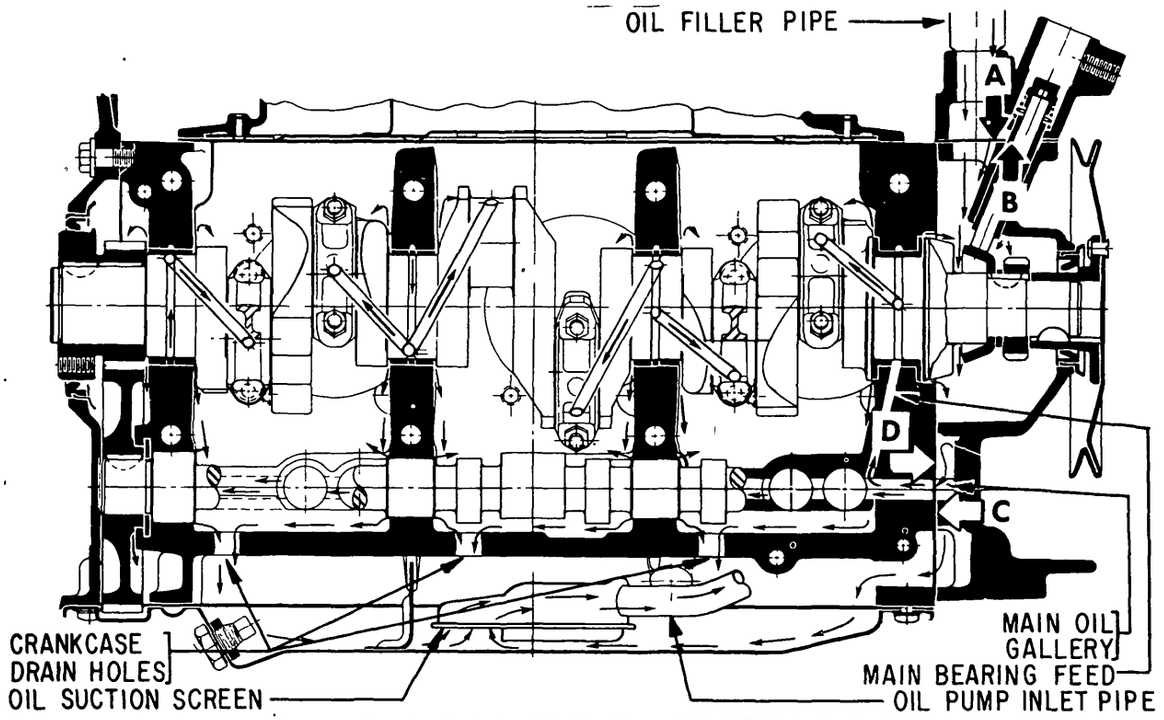
CAMSHAFT GEAR REMOVAL & INSTALLATION: Remove gear by supporting gear with Tool J-971 and pressing out shaft with an arbor press. To install, support camshaft at back of front journal, install thrust washer and woodruff key and press gear on shaft with an arbor press (support gear with Tool J-971) until gear bottoms on thrust washer.

PUSHROD, PUSHROD GUIDE & DRAIN TUBE INSTALLATION: Place "O" rings on each end of drain tubes and install with long end of tube toward cylinder head. Insert pushrods into drain tubes with .050" side oil hole at rocker arm end (pushrod marked with blue paint). Install pushrod guides and rocker arm studs. Install rocker arms and make valve lifter adjustment.

HYDRAULIC LIFTER ADJUSTMENT: For initial adjustment after overhaul, proceed as follows: Set distributor at No. 1 firing position and crankshaft pulley notch at 0° on timing tab. Adjust No. 1, 3, 6 Intake and No. 1, 4, 5 Exhaust valves as follows: Turn rocker arm adjusting nut down until no axial movement of pushrod is felt, then turn adjusting nut 1 turn additional. With distributor at No. 2 firing position (pulley notch at 0°), adjust No. 2, 4, 5 Intake and No. 2, 3, 6 Exhaust valves. *NOTE - Above adjustment applies to all 1961 lifters, whether "long travel" or "short travel" or whether used in Std. or Hi Perf. engines.*

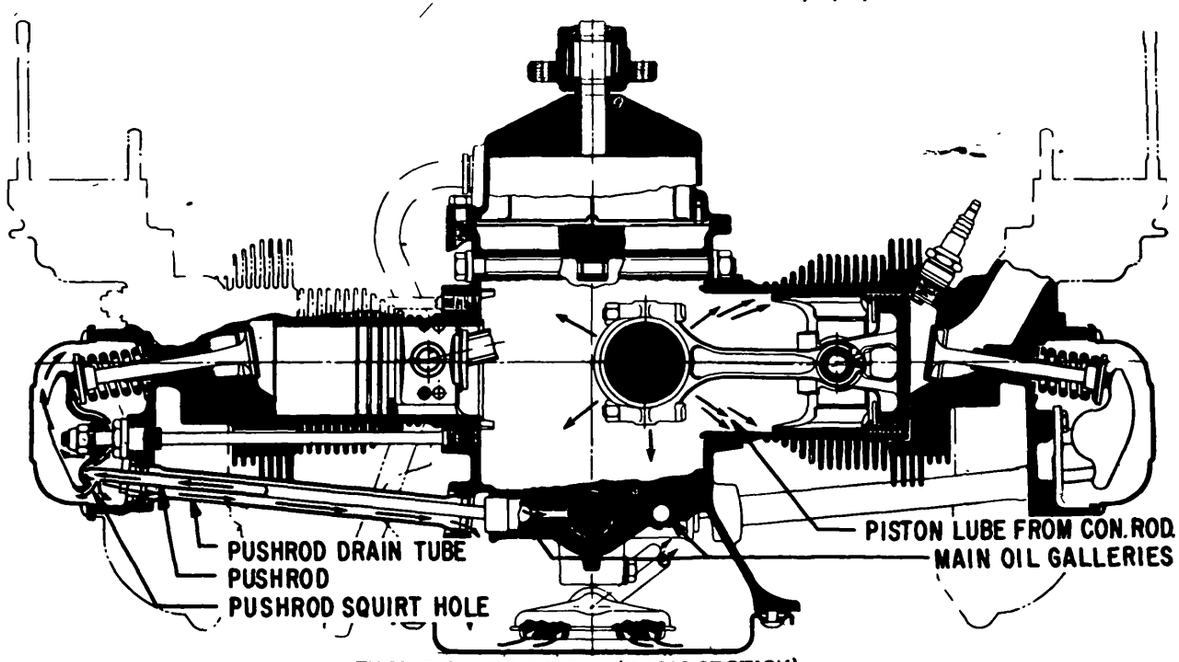
HYDRAULIC LIFTERS: Removal - Lifters are removed from lifter bores after pushrods and drain tubes removed by means of a magnet or wire hook and should be reinstalled in same bore from which removed.

Disassembly - Hold plunger down and remove pushrod seat retainer. Remove pushrod seat and inertia or metering valve assembly, plunger, and spring from lifter body. Remove check ball retainer, ball and spring. *NOTE* - Replace entire lifter if any part damaged.



Reassembly - Insert check ball in plunger, place spring in seat in ball retainer and insert retainer on plunger. Place plunger spring over ball retainer and slide lifter body over spring and plunger. Install pushrod seat and inertia or metering valve assembly into plunger and install retainer. *NOTE - Fill lifter with SAE 10 engine oil at reassembly and before installing in engine.*

OILING SYSTEM



ENGINE LUBRICATION: Force feed type with oil under full pressure supplied to all crankshaft, camshaft, and connecting rod bearings, and to hydraulic valve lifters. Oil metered by lifters lubricates pushrods and rocker arms. All other parts are lubricated by oil spray.

OPERATION: Oil pump located in engine rear housing & driven by distributor shaft which is driven by crankshaft. Pump draws oil through fixed oil screen and intake pipe in crankcase and delivers oil to full-flow type filter mounted on Filter & Generator Adapter which is mounted on engine rear cover. Oil is then directed through oil cooler (mounted on side of engine

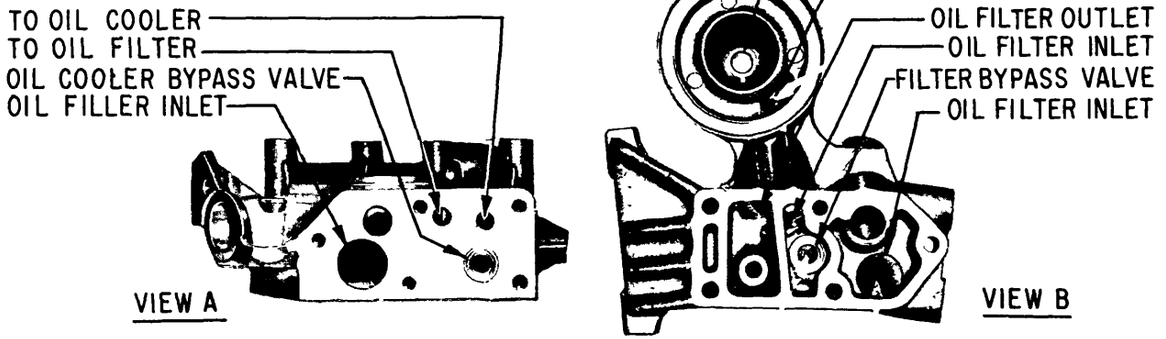
rear cover) and then to the two main oil galleries (one on either side of camshaft) which extend entire length of crankcase. Oil is distributed through the main galleries as detailed below. *NOTE - See Engine Rear Cover and Filter & Generator Adapter illustrations for location of chann ls and passages in these parts and for location of bypass valves for oil filter and oil cooler.*

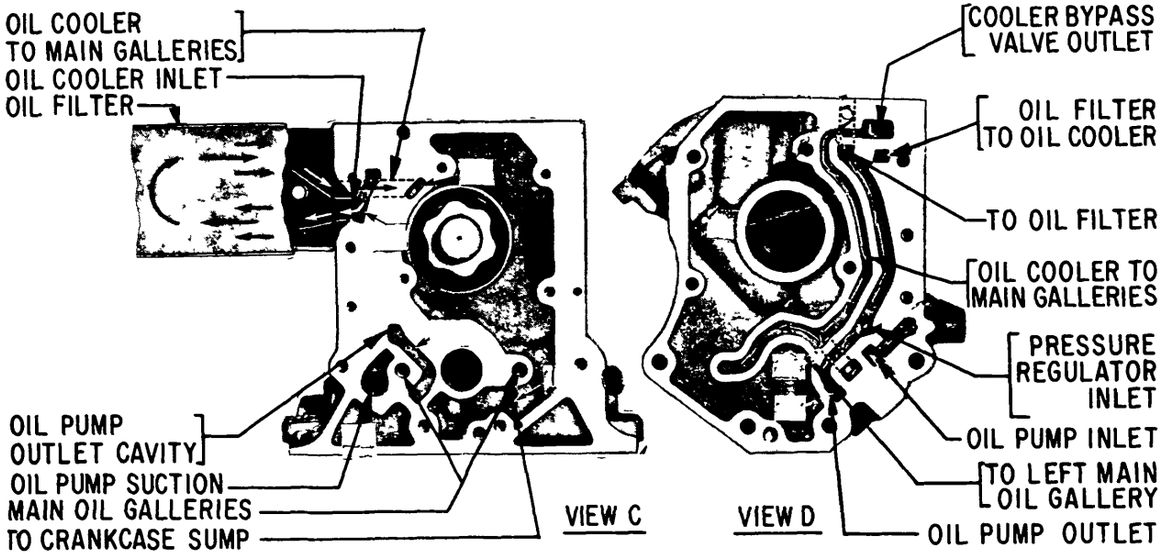
Crankshaft & Camshaft Bearings - Lubricated through passages in crankcase webs from main oil galleries. Individual bearings are lubricated from right or left main oil galleries as follows: **Crankshaft Bearings** - Nos. 1 & 3 (right gallery), Nos. 2 & 4 (left gallery). **Camshaft B arings** - Nos. 1, 3, 4 (right gallery), No. 2 (left gallery).

C nn cting Rod B arings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.



Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from ends of connecting rod bearings.

Timing Gears - Lubricated by oil spray from forward end of crankshaft and camshaft No. 1 bearings.



Fu l Pump Eccentric & Distributor Drive Gear - Lubricated through drilled orifice and pressed in nozzle in engine rear housing which directs oil on these parts (early cars), lubricated by overspray from No. 1 (rear) main bearing (later cars - orifice and nozzle omitted from rear housing).

Hydraulic Valve Lifters - Main oil galleries intersect lifter bores and lifters are supplied with oil directly from these galleries.
